Subject: RE: Arkema Stormwater Source Construction Photos
Date: 08/08/2012 11:13 AM
Attachments: IMGP6045.JPG

All,

This is the second of two e-mails I am going to send with photos of the Arkema stormwater source control work. The attached photo was take this Monday. It shows two of four walls which will be constructed in the detention basin. The wall on the west (right hand side of photo) will form a forebay with a weir. The second and remaining two walls (not yet started) to the left of the photo will be completed short of the basin slope creating a serpentine flow path for stormwater. The purpose of the detention basin is to drop out suspended solids containing DDT.

The elevated gravel roadways adjacent to the walls are to distribute the weight of the equipment so as not to damage liner. They will be removed after the concrete walls have been constructed.
