5/6/16

Back in touch if advice changes.

Mike
Asked about liability and if Rules for home owners or lease should be changed to prevent This problem.
- I Advised that under CERCLA All parties involved may be held liable for cleanup cost but I could not say if they would be required to reimburs cleanup cost
- I advised They talk to attorney about rules or lease clauses

11:00 Julie Grable Toxicologist
- hepa vac deck and drive way
- reccommends scraping soil
- confirmation sampling should not be necessary since we are not leaving material behind
- Site manager (michael) said he will bring in gravel after that is added protection so confirmation sampling is not needed

5/6/16

- walk site after scraping soil look for sawdust with white foam from Roof as indicator if found remove that soil
- exposure pathway is most likely gardening ~ 1-2 hrs per day probably not daily
- Since plan is very concervative we are removing all contaminated material pathway is elimated.

- There can always be Free asbestos fibers floating around however if there is not ACM laying around then there is not a right to indicate sampling needed
