I am writing to express my concerns regarding the EPA's draft clean up plan for the Willamette River Superfund Site

My specific concerns are

1. The dirty leaves far too many of the river contaminated for generations to come. I believe at least 1000 acre of polluted sediment should be removed from the river

2. The plan relies too heavily on "monitored natural recovery" a do nothing strategy that leaves pollution in the river in the hope it will eventually be covered over or flushed downstream

3. The clean up plan must result in the removal of the Fish Consumption Advisory so eating fish from the lower Willamette is just as safe as eating

fish anywhere else in the Willamette River System. This must occur in a 10-20 year time frame

4. Creating a toxic waste disposal dump in our river is not acceptable. Toxic dredged sediments must be taken to an appropriate land fill.

5 Entities with liability for the pollution must be held accountable and pay for a comprehensive cleanup that will protect the health of our community, our environment and our wildlife
