I am writing to express my concerns regarding the EPA's dirty cleanup plan for the Willamette River Superfund Site

My specific concerns are

1. The dirty leaves far too much of the river contaminated for generations to come. I believe at least 1,000 acres of polluted sediment be removed from the river
2. The plan relies to heavily on a monitored natural recovery" a "do nothing strategy" that leaves pollution in the river in the hopes that it will either be covered over or flushed downstream
3. The clean up plan must result in the removal of the fish consumption advisory so eating fish from the lower Willamette is just as safe as eating fish anywhere else in the Willamette River System. This must occur in a 10-20 year time frame

4. Creating a toxic waste disposal dump in our river is not acceptable - toxic dredged sediments must be taken to an appropriate land fill

5. Entities with liability for the pollution must be held accountable and pay for a comprehensive cleanup that will protect the health of our communities, our environment and our wildlife.
