

# **PUBLIC NOTICE**

## **EPA TO BEGIN SOIL TRANSPORT AND DISPOSAL NEXT WEEK AT HAVERTOWN PCP SUPERFUND SITE**

**MAY 2010**

### **Soil Staged First**

**During the last few months, EPA has been digging up contaminated soil from an area known as the Recreational Open Space (ROS) area, owned by the township, behind Ritzenhouse Circle and adjacent to Washington Avenue, and along an abandoned sewer line on residential properties.**

**This soil has been covered and staged in the ROS area on protective liners awaiting removal and disposal. Now that the excavation is complete, EPA is preparing to truck this contaminated soil off-site and dispose of it as hazardous waste.**

### **Soil Removal Next**

**Starting next week, the contaminated soil will be loaded onto trucks with protective coverings and transported off-site to a hazardous waste landfill. The trucks will leave the ROS area via Harvard Road and turn right onto Darby Road making their way toward West Chester Pike.**

**Approximately 10-20 truck-loads will leave the site daily over 15 days. Truck traffic will only take place during the hours of 8:00 and 3:00 Monday through Friday. Police Orders for one-side of the street parking will be posted to allow safe access for the trucks and personnel. During that time, we are asking residents to be extra careful watching their children and pets.**
