

2015 Community Involvement Training Conference

Making a Visible Difference In Communities

August 4-6, 2015
Atlanta, Georgia

www.epa.gov/ciconference/

Welcome to the 14th United States Environmental Protection Agency (EPA) Community Involvement Training Conference, “*Making a Visible Difference in Communities*” hosted by the EPA Office of Air and Radiation, the EPA Office of Environmental Justice, and EPA Region 4.

Strong community-based programs are vital to support the Agency's efforts to protect human health and the environment and to engage in a meaningful dialogue with an ever increasingly aware society. This conference will provide several interactive training sessions on community engagement and technological tools, as well as provide opportunities to connect with a variety of people within and outside the agency. Over the past year, the planning committee has worked diligently to plan and organize a high quality training conference that includes interesting, culturally diverse, and interactive sessions.

This year's training conference features twenty 90-minute information sessions and seventeen three-, four-, and seven-hour training sessions as well as plenary sessions featuring guest speakers with a variety of experience in community involvement. To view the impact of effective community involvement first-hand, we have scheduled four field trips in the Atlanta area. This year we have added an Eco Café area that will provide participants with a hands-on opportunity to learn from experts about different community involvement tools and resources. As with past training conferences, we have included an exhibit area and time for networking to add value and fun to the experience.

This booklet provides you with information about the training conference activities as well as transportation options. In accordance with the [EPA Green Meetings and Conferences Policy](#), to reduce waste, booklets will not be distributed at the training conference. However, copies of the booklet and presentation abstracts will be made available to review within each meeting room and the registration area. If you prefer your own copy, please print one beforehand to bring to the conference.

We sincerely hope you will enjoy the training conference and that your experience in Atlanta will provide you with new ideas and approaches for meeting the needs of your communities. Thank you for your participation in this training conference!

Holly Wilson

EPA Office of Air and Radiation
Co-Chair for the 2015 CITC
Phone: 919-541-5624
Email: wilson.holly@epa.gov

Changes to Your Registration

Once at the conference, you may check at the registration desk to see if it is possible to change your sessions.

Conference Activities

Plenary Sessions

Tuesday morning's plenary session will begin with a welcome by the EPA Region 4 Administrator, Heather McTeer Toney, followed by a speech from the Mayor of Atlanta, the Honorable Kasim Reed.

These remarks will be followed by a community panel on the topic of "*Making a Visible Difference in Communities.*" This panel will be moderated by Senior Advisor for Environmental Justice, Mustafa Ali. Panelists include, Na'Taki Osborne Jelks, Co-Founder of the West Atlanta Watershed Alliance; Deborah Scott, Executive Director of STAND-UP Georgia -A Think and Act Tank for Working Communities; and Harold Mitchell, Founder of ReGenesis.

Thursday morning's plenary session will begin with a welcome by Anne Heard, Deputy Regional Administrator, U.S. EPA, Region 4.

This welcome will be followed by presentations from Nathaniel Smith, Founder and Chief Equity Officer (CEqO/CEO), Partnership for Southern Equity, and Mildred McClain, Co-founder and Executive Director of Harambee House/Citizens for Environmental Justice.

The Plenary Session will conclude with closing remarks from Gregory Green, Division Director of U.S. EPA, Office of Air and Radiation, OAQPS, at which point the OAR will hand the conference over to Matthew Tejada, Director of the U.S. EPA's Office of Environmental Justice, who will chair the 2017 Conference.

Information and Training Sessions

The 2015 Community Involvement Training Conference will begin on Tuesday morning, August 4, 2015, and adjourn on Thursday, August 6 at 5:30 p.m. At this year's training conference, sessions are organized by the following four tracks:

- Track 1 — Where to Begin: Creating and Maintaining Effective Community Involvement
- Track 2 — The Art of Leveraging Existing Capacity and Resources in Community Involvement
- Track 3 — Healthy Environment & Healthy Economy = A Sustainable Community
- Track 4 — Communication & Community Engagement: Traditional Methods to Contemporary Technologies

This year's conference includes twenty 90-minute information sessions on a variety of topics and seventeen training sessions, varying in length from three to seven hours. The seven-hour sessions are being held on the last day of the conference, Thursday, August 6.

Eco Café

This year, instead of a formal poster session, we will be offering an Eco Café area. The Eco Café, which will be held in Georgia 2 during the entire training conference, will provide participants with a hands-on opportunity to learn from experts about different community involvement tools and resources. The Eco Café will be the main focus of the Tuesday evening reception and will be open throughout the entire conference.

Exhibits

Unmanned tabletop or free-standing exhibits that present community involvement programs, organizational information, tools and technologies, or examples of outreach, education, and other community involvement products will be displayed in the ballroom foyer. There will be no formal exhibit session, but exhibits will be displayed throughout the training conference.

Hotel and Travel Information

Hotel

The conference is being held at:

The Sheraton Atlanta

165 Courtland Street Northeast

Atlanta, GA 30303

Phone: (404) 659-6500 Toll Free: 1-800-325-3535

Conveniently located in downtown Atlanta, the Sheraton is a few MARTA stops away from the Midtown and Buckhead entertainment districts. It is also a short MARTA bus ride away from any point in the city including the Aquarium and Centennial Park, home of the 1996 Summer Olympic Games.

Amenities: The hotel's 763 guest rooms feature new modern furniture and floor-to-ceiling windows. Included in each room is a coffee maker with Starbucks and Tazo teas, 32-inch flat-panel HDTVs with cable, bath amenities, cotton bathrobes, iron and ironing board, laptop-sized safe, fitness center (cardiovascular equipment & free weights), and a heated pool located in the Garden Courtyard. The Sheraton Atlanta offers four different dining options, including two sit-down restaurants, a lounge, and a deli.

Hotel Parking: Discounted self-parking is \$7 per day for conference attendees.

Transportation

From Hartsfield-Jackson Atlanta International Airport:

The Sheraton Atlanta is located about 10 miles north of the airport. There are several options for getting to and from the airport and hotel.

Atlanta SuperShuttle Service: SuperShuttle's shuttles run every 30 minutes. The fare is \$16.50 per ride (\$29 round trip) and can be purchased at the SuperShuttle desk in the south-side baggage claim area. Reservations are required for Saturdays and Sundays. Reservations and prepayment can be made at anytime at:

<http://www.supershuttle.com/?Port=ATL>.

Taxi: Fares between the airport and Sheraton are approximately \$30, excluding tax and tip. Taxis may be found outside all terminals at Hartsfield-Jackson Atlanta International Airport.

MARTA (Metropolitan Area Rapid Transit Authority): There is a MARTA terminal at the end of baggage claim in the airport. Take any northbound train to the Peachtree Center MARTA station (stop N1). Fare is \$2.50 one way. After exiting the train, follow the signs pointing "To Harris Street." After walking through the fare gate, follow the signs "To Peachtree Street East."

At street level, turn left on Peachtree Street. Walk to the first intersection (look for Hard Rock Cafe) and turn left on Andrew Young International Boulevard. The entrance to the hotel is two blocks down at the intersection with Courtland Street.

Around Atlanta: MARTA offers city rail and bus service to points throughout downtown and greater Atlanta. MARTA opens at 4:45 am and closes at 1am on weekdays. On weekends, MARTA opens at 6 am and closes at 1 am. The hotel is just two blocks from the Peachtree Center Station stop, which serves the red and gold lines. The gold line is the only line that connects to downtown after 7pm. A full list of line schedules can be found at

<http://www.itsmarta.com/marta-mobile/Rail-Schedules.aspx>

Driving Directions

From Hartsfield-Jackson Atlanta International Airport:

Follow signs out of Atlanta International Airport to Interstate 85 North (I-85 N) by way of North Terminal Parkway. Merge onto I-85 N/GA-403 N toward I-75 N/I-20/Atlanta via exit ramp on right. From I-85 N, take exit 248C for Freedom Parkway towards GA-10 E/Andrew Young International Boulevard/Carter Center. Follow signs for Andrew Young International Boulevard/World Congress Center/Centennial Olympic Park/Aquarium. Keep left and follow the signs for Andrew Young International Boulevard. Turn left onto Andrew Young International Boulevard. Turn left on Courtland Street NE. The entrance to hotel will be immediately on your left.

Green Meeting Policy

As in past years, we are striving to make the Community Involvement Training Conference more earth-friendly. Some of the things we are doing to reduce the environmental impact of the conference include:

- Selecting a hotel that has instituted numerous energy and water efficiency projects, recycling and waste reduction initiatives, and measures to reduce the use of harsh cleaning products. For more on the hotel's environmental initiatives visit:
<http://www.sheratonatlantahotel.com/Press-Room/Press-Room/2009/THE-Greenest-Hotel-in-Atlanta-The-Sheraton-Downtown>
- Reducing printed conference documents by distributing documents electronically/online and minimizing handouts during the conference.
- Using only conference folders and necessary handouts printed on high post-consumer recycled content paper using vegetable-based ink.
- Reusing name-badge holders.
- Holding our traditional "Tote-Bag Exchange" instead of procuring new tote bags for conference participants.
- Encouraging conference participants to use public transportation or share rides when traveling between the airport and the hotel. If just 100 people share rides to and from the airport, we'll reduce the conference's carbon footprint by more than 1,000 pounds!

EPA Green Meeting and Conferences Policy, May 1, 2007

"The mission of the EPA is to protect human health and the environment. We expect that all Agency meetings and conferences will be staged using as many environmentally preferable measures as possible. Environmentally preferable means products or services that have a lesser or reduced effect on the environment when compared with competing products or services that serve the same purpose."

Please join us in reaching our goal and making the conference more earth friendly. What can you do to reduce your impact?

- Bring a reusable drinking container for water or coffee.
- Plan to bring new or gently-used tote-bags to use for yourself or to trade at the "Tote-Bag Exchange" to carry your conference materials.
- Take only materials and food that you need to minimize waste and look for recycling bins around the hotel for your recyclable materials.
- Return your name badge holder to the registration desk before you leave.
- Share a ride back to the airport with other conference participants. A sign-up sheet will be located in the conference registration area.

Session Abstracts

Tuesday, August 4: 8:30–10:00 a.m. (Plenary Session)

Tuesday morning's plenary session will begin with a welcome by the EPA Region 4 Administrator, Heather McTeer Toney, followed by a speech from the Mayor of Atlanta, the Honorable Kasim Reed.

These remarks will be followed by a community panel on the topic of "*Making a Visible Difference in Communities.*" This panel will be moderated by Senior Advisor for Environmental Justice, Mustafa Ali. Panelists include, Na'Taki Osborne Jelks, Co-Founder of the West Atlanta Watershed Alliance; Ralph McCullers, Environmental Director of the Poarch Band of Creek Indians; Deborah Scott, Executive Director of STAND-UP -A Think and Act Tank for Working Communities; and Harold Mitchell, Founder of ReGenesis.

Tuesday, August 4: 10:15–11:45 a.m. (90-Minute Information Session)

Where Do I Begin? Engaging in the STATE I'm in

Presenters: Melissa McGee-Collier, Mississippi Department of Environmental Quality; Richard Schulerbrandt Gragg, Florida A&M University, School of the Environment; Larry Taylor, Kentucky Department for Environmental Protection; Sonja Favors, Alabama Department of Environmental Management; Karen Sprayberry, South Carolina Department of Health and Environmental Control

Track: Track 1

What if the approach to influencing change was to use existing policies to compel that change? Communities across the U.S. have had varying degrees of success when it comes to influencing environmental policy. When community organizations know how to navigate existing laws and understand the permitting process, they have the potential to be a powerful driver in addressing environmental concerns. In this training, attendees will: 1) learn about permitting processes and existing opportunities for participation; 2) explore other existing environmental laws that mandate public involvement; 3) receive testimonials from other community leaders who worked with agencies to increase opportunities for participation; and 4) define what meaningful involvement looks like to their community.

Enhancing Community Involvement through University-Federal Agency Collaboration: Partners in Technical Assistance Program

Presenters: Melissa Dreyfus, U.S. Environmental Protection Agency, Office of Superfund Remediation and Technology Innovation; Alanna Conley, U.S. Environmental Protection Agency, Region 10; Alicia Lawson, National Institute of Environmental Health Sciences; Kathleen Gray, University of North Carolina Superfund Research Program; Sarah Wilkinson, University of Arizona Superfund Research Program, Naomi Hirsch, Oregon State University

Track: Track 2

Community involvement can be enhanced when federal agencies work together and leverage the resources of university partners. The potential benefits are exemplified by the recent collaboration between EPA's Superfund Community Involvement Program, which advocates and strengthens early and meaningful community participation during Superfund cleanups, and the NIEHS Superfund Research Program (SRP), which funds university-based, multidisciplinary research on human health and environmental issues, including community engagement activities designed to support the needs of communities impacted by hazardous-waste sites.

This session will explore the ways in which university-agency partnerships can enhance community involvement through an interactive dialogue on the pilot Partners in Technical Assistance Program (PTAP). Through PTAP, colleges and universities cooperate with EPA and voluntarily commit to assist communities with their unaddressed technical assistance needs. A team of federal and academic partners will relay their experiences collaborating on two PTAP pilot projects. The first project centered on a specific Superfund site (Black Butte Mine in rural Oregon) that brought together stakeholders at EPA, a local school, and the Oregon State University SRP to develop K-8 educational materials about mercury in the environment and its effects on human health. The second project more broadly targeted impacted communities at Superfund sites across the country and brought together EPA and the University of North Carolina at Chapel Hill and University of Arizona SRPs to develop informational materials and interactive activities to convey the relevance of bioavailability/relative bioavailability to site cleanups and human

health. University partners will share interactive exercises developed for community audiences and describe their implementation to date.

Successful EPA EWDJT Grantee Case Studies

Presenters: Kathleen Curry, U.S. Environmental Protection Agency, Region 4; Ann Terry, Memphis Bioworks Foundation; Pamela Scherer, Florida State College at Jacksonville; Art Shanks, Cypress Mandela Training Center

Track: Track 3

EPA's Environmental Workforce Development and Job Training (EWDJT) grants offer community stakeholders the opportunity to garner the skills needed to work in environmental jobs through training and job placement.

The grants focus on training in solid and hazardous waste remediation, environmental health and safety, and wastewater-related fields. Funding is competitively awarded annually to eligible entities, which include educational institutions, workforce development agencies and nonprofit organizations.

This year, EPA will award close to \$3.5 million to 17 cooperative agreement recipients at amounts of up to \$200,000 each. This panel will provide the opportunity for workshop attendees to hear from successful grant recipients about techniques and strategies for involving communities in making a visible difference in their communities through outreach, training and job placement. Each speaker will show that partnerships are paramount to ensuring a successful workforce development and job training program.

20 Years in Ashland; Reviving Trust and Engagement through Multi-method Communication

Presenter: Anke Corbeil and Liz Evans, Wisconsin Department of Health Services

Track: Track 4

Public health educator, Anke Corbeil, and epidemiologist, Liz Evans, will lead an interactive discussion on reviving community trust through communication and community involvement, using as their example a 20+ year cleanup of a former manufactured gas plant in downtown Ashland, Wisconsin. This very complex Superfund site has undergone wave after wave of outreach over the past 20 years, including countless public availability sessions, open houses, fact sheets and interagency stakeholder meetings. Directly adjacent to the site are an elementary school, RV park, hotels, homes, businesses, marina, and park. In 2014, ground was finally broken for the first phase of the cleanup (upland portion). As often is the case with long, drawn out, site investigation and remediation efforts, the community began to lose trust in the process, and communication and community involvement became more difficult. We will discuss and analyze how multiple new(er) methods of communication helped to reengage the community, including: call-in numbers, real-time air monitoring data, community bulletins, emergency tabletop exercises, community action groups, information sessions and Facebook. This session will redefine your interagency and stakeholder communication and help you realize the impact that your early and ongoing community engagement has at a complex cleanup site. No singular communication method is the answer, and in today's high-tech world, we cannot forget about low-tech options. During the session, participants will also complete a message map for their own site/need.

Leveraging Small Business Capacity

This session will also be streamed online

Presenter: Joan Rogers, Kimberly Patrick, Paula Hoag, Jennifer Tilden, Teree Henderson, U.S. Environmental Protection Agency, Office of Small Business Programs

Track: Track 3

This small business development session will feature a round of panelists split into four different areas of focus. The panelists will help local community practitioners understand how to leverage small business capacity for a stronger community. Attendees will learn how to access resources focused on starting and building a business, complying with environmental regulations, obtaining EPA and other federal grant dollars, as well as developing a sustainability plan specifically for small businesses. After each focus area, there will be time available to engage with the presenters and talk about local issues or constraints unique to the Atlanta, Georgia, area.

Panel Focus Areas:

- **Starting and Building Your Small Business.** Atlanta Small Business Administration (SBA) resources and training; SBA's Georgia District Office (Jennifer Tilden, SBA)
- **Complying with EPA Regulations.** Understanding, complying with and finding support for EPA regulations; EPA's Asbestos Small Business Ombudsman (Joan B. Rogers, EPA)
- **Greening your Small Business.** A guided approach to greening specifically for small business; EPA's Office of Small Business Programs (Paula Hoag, EPA)
- **EPA Grant Funding Opportunities.** The Disadvantaged Business Enterprise rule and understanding the EPA grant funding process; EPA's Office of Small Business Programs (Teree Henderson, EPA)

Tuesday, August 4: 1:00–2:30 p.m. (90-Minute Information Session)

More Than Just Meetings: Participatory Tools for Community Action

Presenter: Kyle Bozentko, Jefferson Center
Track: Track 1

The goal of this workshop is for attendees to explore opportunities to incorporate deliberative participation events into broader models of social and community action in response to the local impacts of climate change and other environmental challenges. The session will provide a case study of the Rural Climate Dialogues initiative led by the Jefferson Center and the Institute for Agriculture and Trade Policy as a model of participation that leads to broader community action. This model for community participation, deliberation, and organizing offers a new way to engage communities in discussions of climate change and related environmental challenges by focusing on local impacts and responses rather than promoting interventions that seem distant from day-to-day concerns of community residents. The program promotes active collaboration between technical experts, public and government agency officials, and community members through study, discussion, and joint action to address local climate change-related challenges.

This session will be valuable for practitioners seeking new ways to incorporate deliberative methods in their community involvement toolkits. Participants will interact with one another to determine how participation and deliberation can: 1) fit within broader community processes that expand awareness of climate change, extreme weather and environmental challenges; 2) improve community resilience in the face of climate change and other environmental threats by expanding the use of community involvement events to improve local public participation; 3) reinvigorate local networks and build related capacity to enhance community responses to future challenges; and 4) identify policy priorities to inform local, state and regional climate policy.

Success of Silver Jackets Interagency Flood Risk Management Teams

Presenters: Brandon Brummett, U.S. Army Corps of Engineers, Louisville District; Manuela Johnson, Indiana Department of Homeland Security
Track: Track 2

Since 2005, the U.S. Army Corps of Engineers has been participating in Interagency Flood Risk Management Teams known as "Silver Jackets" teams, which have grown from two initial teams, in Indiana and Ohio, to include active or developing teams in more than 40 states. Participants on the teams typically include federal agencies, state agencies, academia, nonprofits and local governments. Participation is voluntary, but this does not detract people from participating. In fact, some team members have chosen to continue participation within the teams after retiring from their agency. This presentation provides an overview of the Silver Jackets program and highlights examples of successful teams in Indiana and Kentucky. Examples of successes in these collaborative teams include leveraging of over \$6 million in federal, state, and local resources for flood risk management, community outreach, increased awareness and better understanding of flood risks, improved coordination and collaboration between different levels of government, better use of taxpayer dollars, and even a regional Emmy award. The presentation includes an overview of efforts undertaken in Indiana and Kentucky, as well as tips on what makes these teams so successful.

A Prepared Workforce for Sustainability

Presenter: Donele Wilkins, Green Door Initiative

Track: Track 3

The Green Door Initiative mission is to ensure that everyone is environmentally literate and capable of promoting and living a sustainable lifestyle. Sustainability in its truest form requires a balance between environmental protection, social equity, and economic vitality. Communities disproportionately impacted by historical legacies of contamination and vulnerabilities created by certain disasters are especially in need of a strategy that will create safe, healthy places to live and thrive. For environmental justice communities, striking this balance can be somewhat daunting and is often unattainable, however, not impossible. Workforce development focused on remediation, rebuilding, and recreating livable spaces is an approach with enormous potential. This workshop will highlight a job-training model that aims to address each area of sustainability to transform lives and communities.

Gowanus Canal: A Case Study in Community Involvement

Presenters: Natalie Loney, U.S. Environmental Protection Agency, Region 2; Joseph Alexiou, Freelancer

Track: Track 4

The Gowanus Canal, built in 1869, was once a major transportation route for the then separate cities of Brooklyn and Manhattan. As a result of years of discharges, stormwater runoff, sewer outflows and industrial pollutants from the many facilities that operated along the canal, it has become one of the nation's most extensively contaminated water bodies. Contaminants include PCBs, coal tar wastes, heavy metals, and volatile organics. The canal is located in a densely populated section of Brooklyn with over 100,000 residents living within two miles of the canal. Contamination poses a threat to residents who use the canal for fishing and recreation. This 90-minute presentation will explore both traditional and contemporary community engagement techniques used at the site. Topics of discussion will include: using social media to give voice to a community facing the challenges of a Superfund cleanup in a densely populated, diverse urban environment; effective community involvement through leveraging Community Advisory Group interaction; increasing EPA's visibility in the community through non-traditional methods like Facebook and TED talks; and using EJSCREEN as an effective community engagement tool. Participants also will hear from a local resident on effective methods to engage a community facing a variety of issues including gentrification, impacts of climate change, remedial actions in an urban setting, and the challenges of educating a community on highly technical concepts.

Taking Science to the Streets: Leveraging Local Knowledge for Community Change

This session will also be streamed online

Presenters: Na'Taki Osborne-Jelks and Darryl Haddock, West Atlanta Watershed Alliance; Tony Torrence, Community Improvement Association

Track: Track 2

This session will describe ongoing, successful community/citizen science efforts in Northwest Atlanta's Proctor Creek Watershed in which community residents are using community science to augment expert knowledge to improve environmental problem-solving and address health disparities. Proctor Creek used to be a source of pride for Northwest Atlanta communities—a place where children played, people fished, and people were baptized. Today, however, Proctor Creek is highly impacted by pollution and other stressors and does not meet its designated use for fishing. Many of the watershed's residents, who are primarily African American, experience social and economic disparities. Recently designated by EPA as an Urban Waters Federal Partnership site, this once "forgotten" area of Atlanta is now the subject of intense focus from multiple government stakeholders, academic institutions, local and national nonprofits, and private developers, in addition to residents and community organizations that have invested decades of sweat equity and activism to revitalize the watershed. Watershed residents want to ensure that solutions sought by government and private organizations are driven by community needs and include authentic engagement and collaborative problem-solving.

Specifically, this session will highlight three related yet distinct community/citizen science projects in which local, community knowledge has been leveraged and the capacity of watershed residents to engage in scientific research increased while empowering residents with tools to speak the language of decision-makers and influence local policy and practice to mitigate environmental risks, decrease potential vulnerabilities, and improve environmental quality and quality of life in the watershed.

Tuesday, August 4: 2:45–5:45 p.m. (Three-hour Training Sessions)

Beyond Town Hall Meetings: Multifaceted and Meaningful Citizen Engagement

Presenter: Misty Bruckner, Center for Urban Studies
Track: Track 1

The Hugo Wall School of Public Affairs at Wichita State University (HWS) will use a case study of a four-phase community engagement process by the City of Wichita/Sedgwick County that engaged thousands of citizens to explore with participants a new framework for citizen engagement. The HWS was the project coordinator for the Wichita/Sedgwick County community in developing an engagement process designed to actively engage citizens in defining the future of the community through a comprehensive planning process, including a "willingness to pay" component. Participants will explore the four phases of the engagement process that included: 1) issue identification; 2) citizen survey; 3) community conversations; and 4) plan development.

Specifically, the HWS will use the case study to explore how to engage citizens through special invitations, technology, and the "wedding crashers" approach for citizen participation. In addition, the HWS will share techniques to move beyond basic citizen satisfaction surveys, to surveys that evaluate a citizen's attachment to a community, trust of government, and willingness to pay for future investments. During this interactive presentation, participants will evaluate the real purpose of citizen engagement, explore new techniques for involving citizens, and create a process to include citizens in meaningful issues in the community. The session will explore lessons learned, common pitfalls, and courageous conversations for continual improvement in civic engagement. Most importantly, the session is designed to help participants think about planning for citizen engagement, designing impactful processes, and building civic infrastructure in communities.

Coalition Building: Mobilizing Community Capacity and Leveraging Productive Partnerships

Presenters: Vernice Miller-Travis and Sarah Malpass, Skeo Solutions; Stephanie Brown, U.S. EPA, Region 4; Vivian Starks, Northern Birmingham Community Coalition; Barbara Newman, Jefferson County Department of Health
Track: Track 2

Community Involvement Coordinators (CICs) are often the face of the federal government in communities impacted by pollution, environmental justice concerns, and long-term disinvestment. Too frequently, these communities have felt ignored by decision-makers and are faced with challenges that reach beyond environmental vulnerability, including poverty, health disparities, unsafe housing, limited access to healthy food, and unemployment/underemployment. With so many pressing community needs and a legacy of distrust between the community and government, it can be difficult for CICs to engage communities effectively about environmental cleanup.

At the 35th Avenue Superfund site, in Birmingham, Alabama, EPA found itself facing just such a challenge. With the leadership of a Superfund CIC, the Northern Birmingham Community Coalition (NBCC) formed in 2013 to plan for the revitalization of four neighborhoods impacted by the Superfund cleanup process. The NBCC has forged a shared vision and action plan to improve health, housing, and commercial revitalization. NBCC efforts have attracted significant attention from potential local and national partners, who have become resource partners invested in the implementation of the NBCC's Action Plan.

Come hear the story of the NBCC's formation, including how this investment built trust between residents and Agency representatives, created a venue to address a broader set of community needs, and allowed EPA to make progress on addressing the environmental conditions impacting the community! The session will include a fun and engaging interactive training designed to help you explore the steps and benefits of facilitating an effective coalition-building process in the communities in which you work.

Saving Lives and Transforming Communities through Green Jobs

Presenters: David Mauroff, Urban Strategies, Inc.; Tyrone Mullins, Shannon Watts, and Jammal Edwards, Green Streets; Sophie Constantinou, Citizen Film

Track: Track 3

"Green Streets" is a multimedia documentary collaboration between filmmakers and public housing residents transforming their marginalized neighborhoods—sites of trauma, poverty and turf warfare—into sustainable communities. This workshop, consisting of a film screening and interactive panel discussion, will illustrate how the social enterprise functions and how similar ventures can be launched.

The film follows Tyrone Mullins, Shannon Watts, Jammal Edwards and other young entrepreneurs as they turn trash into cash in their distressed San Francisco public housing communities. With mentorship from David Mauroff and Sophie Constantinou and through trial and error, Green Streets employees have learned to run a business and manage waste for many hundreds of low-income housing units, establishing recycling where previous efforts had failed.

Citizen Film produces and screens iterative versions of the film in partnership with Green Streets. In screenings across the country and throughout the Bay Area, we have convened public officials, property managers, waste management executives and other community and environmental stakeholders. The film tracks the evolution of the venture as designed by Mauroff and implemented by a crew of underemployed entrepreneurs. We will discuss how it works and how a diverse group of stakeholders—from government, the public and private sectors and community-based organizations—have contributed to its growth with the aim of activating similar initiatives.

"Green Streets" illustrates how community-focused, environmentally-conscious entrepreneurship can transform distressed communities. Approximately eight million people live in affordable-housing across the U.S. By engaging this population in recycling and composting, social entrepreneurs like Mullins, Watts, and Edwards can turn waste into a resource, providing workers with an opportunity to build skills and careers they need in order to take care of themselves, their families, and their communities.

Building Trust in EPA

Presenter: John Godec, The Participation Company

Track: Track 4

This introductory session will help you understand, prevent, and manage interactions with skeptical, angry and frightened citizens who oppose your policies, efforts, and decisions. We'll show you how to get people to trust you, work with you, and help you grow lasting credibility.

This session will be valuable to all professional staff and managers who have influence in the trustworthiness and credibility of EPA.

- You'll learn to manage projects and goals better in the current culture of pop-media and social media scrutiny and public and political polarity.
- Leave with a better understanding of public frustration and anger with public institutions and, more importantly, how to overcome the challenges with emotional intelligence and humanizing EPA.
- Understand the myths of opposition and conflict and why most judgments about angry people and their emotions are wrong in the first place.
- Learn to recognize and avoid the behaviors that you and your staff routinely demonstrate that only make people angrier.
- Know the most common behaviors and what to do to reduce public anger and opposition and increase your own trustworthiness, credibility, and effectiveness.

This workshop is a practical and active session dealing with the most current research from a variety of global sources applied to tested and proven real world experience.

Strategic Planning and Creating Measures That Matter

Presenter: Melissa Levy, Community Roots
Track: Track 1

This highly interactive session will introduce participants to an alternative process for strategic planning and measurement. Participants will have the opportunity to work through the process using a case study. The process moves from identifying goals to developing indicators of progress to designing measures, which helps identify the leverage points in an organization's work. Participants will work in groups and have an opportunity to experience the process firsthand. Participants will learn about the importance of defining terms and creating a shared language, as well as the difference between measuring outcomes and activities. Too often, organizations measure activities (how many meetings, how many people, etc.) rather than the true outcomes of their work (true behavioral change). This process helps to focus an organization's actions so they are more impactful. Participants also will learn how to create measures that matter and learn the importance of using the results of measurement to improve programs, communicate to stakeholders, and influence decision-makers.

The process has been used by the Ford Foundation, the Wallace Center for Sustainable Agriculture, the U.S. Forest Service, the U.S. Department of Agriculture, community foundations, nonprofit organizations, and state agencies. This workshop was very well-received at three previous EPA Community Involvement Conferences.

Tuesday, August 4: 2:30–5:30 p.m. (Field Trips)

Buses for the field trips will pick up and drop off in front of the Andrew International Boulevard entrance to the Sheraton. The Andrew International Boulevard Entrance is right behind the conference registration booth. Buses will be departing at 2:45 on Tuesday.

Proctor Creek/West Atlanta Watershed Alliance

Proctor Creek flows through Northwest Atlanta from downtown to the Chattahoochee River. The 23-square-mile watershed has a population of >51,000 people living in more than 38 neighborhoods, and it primarily traverses five City of Atlanta neighborhood planning units (NPIUs). The creek used to be a source of pride for Northwest Atlanta communities—a place where children played, where people fished, and where people were baptized. Today, however, Proctor Creek is highly impacted by pollution and other stressors and does not meet its designated use for fishing.

Despite a rich cultural legacy, many of the watershed's residents, who are primarily African American, experience social and economic disparities. After decades of public disinvestment and neglect, these residents are faced with multiple environmental challenges that may pose health risks including: illegal dumping, impaired water quality, aging sewer infrastructure, brownfields, and pervasive flooding.

What was once a "forgotten" area of the City of Atlanta is now the subject of intense focus from multiple government stakeholders; academic institutions; local and national non-profits; and private developers in addition to residents and community organizations that have invested decades of sweat equity and activism to revitalize the watershed. EPA recently selected Proctor Creek for the Urban Waters Federal Partnership, and a resident-led organization, the Proctor Creek Stewardship Council, has been established to harness collective assets, power, and voice among residents to ensure that solutions sought by other stakeholders are driven by community needs and include authentic engagement and principles of collaborative problem-solving.

This tour will take participants to this local waterway for a walking tour to examine trouble areas, such as flooding, erosion, and pollution, and discuss community efforts and other collaborative action, to lessen these challenges.

Key topics discussed on this tour

- Community activism and engagement
- Environmental justice
- Successful citizen science initiatives
- Workforce development
- Flood prevention and green infrastructure
- Public health near waterways
- Pollution control
- Investment and policy solutions

The Atlanta BeltLine Tour (Inner/Outer Beltline)

Registered conference attendees will board one of the Atlanta BeltLine 30-passenger buses and have a guided tour of the entire 22-mile BeltLine corridor.

The Atlanta BeltLine is the most comprehensive transportation and economic development effort ever undertaken in the City of Atlanta and among the largest, most wide-ranging urban redevelopment programs currently underway in the U.S. The Atlanta BeltLine is a sustainable redevelopment project that will provide a network of public parks, multi-use trails and transit along a historic 22-mile railroad corridor circling downtown and connecting many neighborhoods directly to each other.

The Atlanta BeltLine is transforming the city with a combination of rail, trail, greenspace, housing and art. It will ultimately connect 45 intown neighborhoods, provide first and last mile connectivity for regional transportation initiatives, and put Atlanta on a path to 21st century economic growth and sustainability. The beauty of the Atlanta BeltLine is that it offers not only modern conveyances and exciting new development, but it is a living, breathing part of our community; not simply a means of getting somewhere, but a destination unto itself. It offers a chance for Atlanta to redefine what it is to be a neighbor, to be a community, to be a region, and to share all that it has to offer.

Wednesday, August 5: 8:30–10:00 a.m. (90-Minute Information Sessions)

Using the Toxics Release Inventory to Encourage Community Involvement

Presenter: Ezequiel Velez; U.S. Environmental Protection Agency, Region 4

Track: Track 1

Success in motivating a community to become active in bringing environmental change requires creating awareness of what needs to change. Therefore, the starting point for any community leader who is determined to create effective community involvement is proving the need for change. Unfortunately, no one will ever change what they can't measure. Consequently, finding the right tool to measure change is key to creating community involvement.

Some tools are too expensive to obtain and others are too complicated to use. What if there was a no-cost, easy-to-use tool that will help you measure the environmental condition or the progress of a facility or a community? The good news is such a tool exists. It is called the "Toxics Release Inventory" (TRI), and it is available free of charge. Not only does it help you measure the current environmental condition of a community, but it also shows you the progress (or lack of it) that a facility or a community has had through the years. Through this presentation and an interactive exercise, you will learn how easy it is to use several TRI tools (Envirofacts, TRI Explorer).

Measuring the need for change doesn't guarantee change. For this reason, this presentation also will include a demonstration and an interactive case study exercise on how to use the Pollution Prevention Tool to engage your community in identifying effective environmental practices that other facilities have used to bring real environmental change to their communities.

Making a Visible Difference: The ATSDR Brownfield/Land Reuse Health Initiative

Presenters: Laurel Berman, Center for Disease Control and Prevention; Tina Forrester, Agency for Toxic Substances and Disease Registry (ATSDR); Monica Robinson, Fulton County Health Department; Miles Ballogg, Cardno TBE Group; Gita Rampersad, Health Care Consultant, BROWN Member

Track: Track 2

ATSDR's Brownfield/Land Reuse (BFLR) Health Initiative helps communities incorporate health considerations in land reuse decisions. People can turn vacant or underused land into places that benefit the whole community. ATSDR promotes community health as part of redevelopment and works with the EPA, state and local officials, developers, and communities to include health in these types of projects. Through its Community Partnerships project and with help from the Brownfield Reuse Opportunity Working Network (BROWN, a national partnership of public health leaders), the ATSDR BFLR Health Initiative assists communities in organizing to address identified health issues arising from brownfield and land reuse sites—old gas stations and abandoned buildings, former industrial sites, methamphetamine labs, vacant lots, and rural dumps—found throughout the U.S.

This informative and interactive presentation by a panel of health experts from the public and private sectors will provide an overview of the ATSDR BFLR Health Initiative, describe the formation and makeup of BROWN, provide direction on raising a community's voice on public health concerns and policies, and illustrate through exciting storytelling, rich partnerships driving innovative approaches to community health improvement.

Community Resiliency: Environmental Justice Communities Have Visions Too!

Presenters: Sheryl Good, U.S. Environmental Protection Agency, Region 4; Wannetta Mallette, City of North Charleston/Low Country Alliance for Model Communities; Mrya Reece, South Carolina Department of Environmental Health and Control; Reggie Barner, Graniteville Community Coalition/Community Development and Improvement Corporation

Track: Track 3

Numerous communities in South Carolina face disproportionate environmental health impacts and inequitable development. While individuals and grassroots organizations in these areas are passionate about neighborhood improvement, they lack the resources, political wherewithal and formal education that long-range planning requires.

In order to build resilience, environmental justice communities must plan for the long-term to ensure that they are able to recover faster and more efficiently, maintain local control over recovery, and take advantage of equitable redevelopment opportunities. The successful integration of planning and environmental justice is achieved when everyone enjoys the same degree of protection from environmental and health hazards and equal access to the decision-making process. This presentation provides an overview of how two grassroots organizations developed their vision (with the assistance of local, state, and federal agencies) and built resilience in light of the challenges posed by environmental impacts.

A collaborative partnership between EPA Region 4's Environmental Justice and Sustainability Office and the South Carolina Department of Health and Environmental Control funded an initiative to strengthen the leadership skills that these communities needed. This alliance was a pilot program based in South Carolina, which EPA Region 4 sought to replicate throughout the Southeast. These two governmental organizations formed the Leaders in Environmental Action Pilots Program (LEAP). The main goal of LEAP was to foster community-based leadership within these overburdened communities so that they may become vibrant, healthy, and economically stable.

Transdisciplinary Collaborations to Enhance Interactions with Communities at Contaminated Sites

Presenters: Ben Gerhardstein, Agency for Toxic Substances and Disease Registry; Amanda Pease, U.S. EPA, Region 9; Rose Eitemiller, Community Coalition of Dewey-Humboldt; Sarah Wilkinson, University of Arizona, Superfund Research Program; Monica Ramirez-Andreotta, University of Arizona

Track: Track 2

From health risks to clean-up options to research ideas, communities located near hazardous waste sites often have diverse and multifaceted needs, questions, and concerns that one organization alone cannot address. When government agencies, academic institutions, community leaders, and others work together as a transdisciplinary team at a site, they are better able to address community concerns and meet community involvement, education, and capacity building needs than each could acting alone. A transdisciplinary team includes members from diverse institutional (e.g., government, academic, community) and disciplinary (e.g., environmental scientist, public health professional, local expert) backgrounds. Effective collaboration involves a creative problem solving process where all parties contribute to identifying, defining, and resolving problems together.

This session will draw upon lessons learned from an ongoing transdisciplinary collaboration at the Iron King Mine and Humboldt Smelter Superfund site in Dewey-Humboldt, Arizona. There, a transdisciplinary team including federal (EPA and the Agency for Toxic Substances and Disease Registry), state (the Arizona Department of Health Services and the Arizona Department of Environmental Quality), academic (University of Arizona Superfund Research Program), and community (Community Coalition of Dewey-Humboldt) organizations collaborate to coordinate activities, develop public messages, and share information about community needs, concerns, feedback, and engagement opportunities. This interactive session will: 1) summarize the benefits of transdisciplinary collaboration at environmental contamination sites; 2) highlight lessons learned from the Iron King Mine site; and 3) facilitate a series of small group conversations (in a World Café format) to help attendees explore collaboration opportunities in their work.

Using Focused Conversations/Guided Discussion as an Early Outreach Tool

This session will also be streamed online

Presenters: Diane Russell, U.S. Environmental Protection Agency, Region 5; Doug Sarno, Forum Facilitation Group, David Sommers, Saginaw-Tittabawassee Rivers Contamination Community Advisory Group

Track: Track 1

Guided Discussion, also known as Focused Conversation, is a community involvement tool that provides meaningful information to the project team and also gives communities an opportunity to explore challenging issues early in the cleanup process. In this session, we will explore how to design and use this tool to engage the community early at a values level, and discuss how we can incorporate best practices for public participation into the Superfund process. Participants will have the opportunity to explore and discuss how such tools might be applicable to the challenges they are facing at their sites.

Diane Russell, EPA Region 5 Community Involvement Coordinator, will provide an overview of an EPA project that utilized this tool and helped EPA propose a cleanup plan that integrated community thoughts and values learned from community discussions. Doug Sarno, a leader in public participation and group facilitation, will then discuss the tools design and best practice. The presentation will conclude with thoughts from a participant of the community discussion, Dave Sommers, the President of the Saginaw-Tittabawassee Rivers Contamination Community Advisory Group.

After the presentation, session participants will engage in an interactive exercise where they will practice the use of this tool at a mock cleanup site. Participants will discuss trade-offs that come with various cleanup options and explore community values from differing perspectives. The session will conclude with a panel/participant discussion on the exercise and lessons learned.

Wednesday, August 5: 10:15–11:45 a.m. (90-Minute Information Sessions)

Finding a Facilitator for the Fuss (or Opportunity)

Presenters: Mary Apostolico, Steve Garon, and Lee-Ann Tracy, SRA International, Inc.

Track: Track 1

It is obvious when a community involvement event does not go well, but who really notices when it runs smoothly? This is one of the challenges associated with helping people understand the value of facilitation. High-quality facilitation is often defined by absence—the absence of drama, inefficiency, dysfunction, and acrimony. Given its benefits and utility, why don't more people use facilitation in the context of community involvement? In this presentation, we will suggest and explore three possible answers to this question:

1. Facilitation is viewed too narrowly; therefore, we will discuss and provide examples of the range of community involvement activities and services a facilitator can perform.
2. People do not know how to obtain facilitation services. Even if people understand and appreciate its benefits, they don't know how to obtain services or get a facilitator from "there" to "here;" hence, we will provide information on a variety of mechanisms for obtaining facilitation assistance.
3. People do not know what skills or qualities they are looking for in a facilitator. Even if people are familiar with where to get facilitation services, they don't know how to find the right person for the job; thus, we will offer guidance and a hands-on exercise on selecting an appropriate facilitator for a situation.

This presentation is for anyone who faces community involvement challenges or opportunities that would benefit from professional facilitation support. During the presentation, participants will be encouraged to discuss their own specific examples.

Reclaiming a Contaminated Site to Reclaim a Community

Presenters: Michael Deely and Sana Qureshi, New Jersey Department of Environmental Protection; Meishka Mitchell, Cooper's Ferry Partnership

Track: Track 2

The Salvation Army Camden Kroc Center Project is the perfect case study to demonstrate how leveraging existing capacity and resources in community involvement can lead to the transformation and redevelopment of a large contaminated landfill into a state-of-the-art community center that provides art, aquatics, fitness and learning programs, child care, employment and health services to the hard-working, ethnically diverse surrounding neighborhood. The New Jersey Department of Environmental Protection (NJDEP) collaborated with EPA, the Camden Redevelopment Agency, Salvation Army, Cramer Hill Development Corporation and the Cooper's Ferry Partnership to identify and maximize multi-agency funding sources that paid for the investigation and cleanup of the 85-acre Harrison Avenue Landfill, located in the Cramer Hill Brownfield Development Area. These funding sources, together with the partners' ability to harness existing community support and institutional knowledge, paved the way for a \$59 million grant from the Ray and Joan Kroc Foundation to fund the construction and operation of the innovative community center, which provides access to open space and recreation facilities that were otherwise absent in the area.

NJDEP and its partners were dedicated to creating a community-driven plan. The session will focus on the innovative approaches used to elicit input from local residents, business owners, institutions, students, community leaders and political representatives. Over 300 surveys were conducted to measure resident concerns on housing, open space, services, shopping, and quality-of-life issues. Many interviews, focus groups and public meetings were held to better understand the challenges and discuss the vision of the community.

It's All About the Green

Presenters: Sharon Turner, GREENHOOD; Melanie Wofford, Girls Inc.; Lucy LaVouille, Eco Training USA; Michelle Dawkins, Safety MD; Shannon Goodman, Lifecycle Building Center

Track: Track 3

The 3rd Track "Healthy Environment & Healthy Economy = Sustainable Community" will include the following topics of discussion: 1) Creating a Green Economy from a Community Perspective; 2) Green Infrastructure and Water Quality; 3) Environmental Justice + Workforce Development = Sustainable Economic Justice; 4) Converting Waste

into a Valuable Resource; and 5) Transformation of Food Deserts through Urban Agriculture and Agribusiness. This session will cover how the five presenters from combined grassroots and corporate perspectives have engaged or are currently engaging community residents, community-based organizations, and public and private partners in becoming environmental stewards in communities that have high levels of health and economic disparities through education, workforce development, research, and collaboration.

Eliminating Silos to Work Collectively and Implementing the Affordable Care Act (ACA) to Bring Change, Create Healthy Environments and Sustainable Communities

Presenters: Kedesch Altidor-Dorcély, Michelle Davis, and Tanya Pagán Raggio-Ashley, U.S. Department of Health and Human Services, Region II

Track: Track 3

This panel will address how we can work collaboratively to move from unhealthy environments, people and economies to healthy sustainable communities. A community's social, economic, and environmental conditions contribute to health. The more contaminants and pollution a person is exposed to, the higher the health risks. The built environment impacts different aspects of the human health. Moreover, in environmental justice communities the health disparities and inequalities are much greater and disproportionately affect low income and communities of color. A person's social circumstances affect how he/she lives, works, and plays. These conditions commonly referred to as "social determinants of health" (SDOH) influence health outcomes. Decreasing disparities and inequalities will provide communities with more viable opportunities while improving the individual's quality of life and life expectancy. Therefore, it is essential to place health at the forefront.

In order to address the health disparities accompanying unhealthy environments, there needs to be a coordinated effort with a wide range of stakeholders to address the various environmental and healthcare needs. One of these key partners is the U.S. Department of Health and Human Services (HHS) and all its sub-agencies (Opdivs). This session will address pulling their talents, resources, and programs to work more effectively and efficiently with community stakeholders to create healthy environments and communities, which can lead to turning around the economy and creating sustainable communities. In addition to HHS resources, we will share how the ACA prevention public health legislation and funding can be maximized to address insurance coverage, preventive services, community disease, prevention and health promotion, prevention research and models, employer wellness programs, education, and training of the health workforce to create healthier environments, economies and sustainable communities.

Planning for Long-Distance Engagement

This session will also be streamed online

Presenters: Margaret Ross, U.S. Environmental Protection Agency, Conflict Prevention and Resolution Center; Laura Knudsen, U.S. Environmental Protection Agency, Office of Solid Waste and Emergency Response (OSWER); Kay Morrison, U.S. Environmental Protection Agency, Region 10; Alexander Mandell, U.S. Environmental Protection Agency, Region 3; Jason Gershowitz, Kearns & West

Track: Track 4

Short on travel funds or time but still want to conduct community engagement? Have you ever considered long-distance engagement? The purpose of this session is to inform EPA staff and stakeholders about new planning tools for community engagement in situations where travel opportunities are minimal. OSWER's Office of Superfund Remediation and Technology Innovation, Community Involvement and Program Initiatives Branch has been working with the EPA Conflict Prevention and Resolution Center to develop guides to assist community involvement coordinators, public affairs specialists, and other EPA staff working with communities in planning for and executing community engagement using a variety of collaborative technologies. This session will include a presentation of a guide of currently available technologies and how to access them, a planning guide for online meetings, and a planning guide for hybrid (in person and online) meetings.

Wednesday, August 5: 1:00–5:00 p.m. (Four-hour Training Sessions)

Do We Involve or Negotiate with the Community?

Presenter: Alvin Chun

Track: Track 1

The goal of the session is to show participants that negotiation is an essential tool in their work with communities. Participants will be engaged in a thought-provoking discussion about their objectives for community involvement and how to succeed. The session leader will seek out opposing views and negotiate with the participants as they themselves might with a community to help them appreciate the attitudes and skills required for successful negotiation. Community involvement specialists, technical staff and managers who attend will gain new insights and useful techniques for their work.

Key topics of the session are:

- A Key to Successful Negotiations—Build Trust With Communities.
- Problem Solving—Acknowledge Both Your and Community Concerns and Resolve Differences Honestly and Transparently to Reach Agreement.
- Challenges for the Community Involvement Specialists and Their Team—Agreement on Attitudes, Behaviors and Goals.

EJSCREEN: EPA's New Screening and Mapping Tool for Environmental Justice Considerations

Presenters: Matthew Tejada and Kevin Olp, U.S. Environmental Protection Agency, Office of Environmental Justice

Track: Track 2

EJSCREEN is EPA's new publicly available environmental justice screening and mapping tool. It offers a variety of powerful data and mapping capabilities that enable users to access environmental and demographic information at high geographic resolution across the entire country, in order to highlight places that may warrant additional environmental justice considerations. This session will focus on how to use EJSCREEN to assist efforts by environmental justice stakeholders in identifying and addressing potential environmental disparities and other environmental justice issues. The session will have several components, including: 1) an overview of EJSCREEN and how it has been utilized by EPA; 2) a demonstration of the tool and a step-by-step walk through of the different features and data within the tool; 3) interactive case studies on how to use EJSCREEN in different situations to supplement and enhance local analyses in a variety of different geographic and stakeholder contexts; and 4) a dialogue on the different ways participants are interested in using the tool and feedback for how EPA can improve EJSCREEN in future updates with additional data and enhancements. This last section will be particularly important as EPA is actively seeking feedback from a wide variety of stakeholders to improve the tool and better meet the needs of its thousands of users outside the Agency.

Health Impact Assessment: Engaging Communities in Local Decisions

Presenter: Florence Fulk, U.S. Environmental Protection Agency, Office of Research and Development; Tami Thomas-Burton and David Egetter, U.S. Environmental Protection Agency, Region 4; James Dills, Georgia State University; Na'Taki Osborne-Jelks, West Atlanta Watershed Alliance

Track: Track 3

Health Impact Assessment (HIA) is an emerging decision-support tool that has shown promise in assisting local, state, and federal agencies in understanding the public health consequences of a project, plan, or policy. It is a structured approach that uses scientific data, professional expertise, and stakeholder input to identify and evaluate public health impacts of a pending decision or action. What makes HIA different from other health assessments commonly used, such as human health risk assessment or those conducted as part of an environmental impact statement, is that HIAs will often times focus on multiple determinants and dimensions of health in its assessment. In addition, as both a health protection and health promotion tool, HIA suggests potential actions that could minimize adverse health impacts and optimize beneficial health outcomes.

HIA is also a proven tool that is inclusive of community feedback and input. A core tenant of the HIA process is stakeholder and community involvement at all stages of the HIA process. Bringing community and stakeholders to the table early and often results in meaningful community engagement beyond the traditional norms of listening sessions and stakeholder forums.

During this training session participants will be introduced to the HIA process; gain a greater understanding of the determinants of health; explore the differences and similarities between HIA and other types of assessments; and engage in activities to demonstrate community and stakeholder participation in the HIA process. The HIA of the Boone Boulevard Green Street Project will be used to provide examples of community and stakeholder engagement during the HIA process and to share lessons learned to advance community and stakeholder engagement in similar projects. This HIA evaluated a pending decision by the City of Atlanta, Georgia, to implement a green infrastructure project in the Proctor Creek communities.

3D Democracy Design Tool: Bringing Best In-Person CI Practices Online

Presenters: Nancy Glock-Grueneich and Tim Bonnemann, Intellitics; Leanne Nurse, U.S. Environmental Protection Agency, Office of Policy

Track: Track 4

New to the use of digital tools in community involvement? Or an old hand? Here, we look at how digital tools can support the principles underlying all effective public engagement and how the right use of the right digital tools can make citizen engagement far more meaningful—easier to organize, more inclusive, more satisfying to all actors, and in the end, far more useful to agencies that are mandated to involve their communities.

Public engagement can be high stakes and high risk. New tools can substantially increase the payoffs for such work, but they also up the ante, raising expectations and adding many new factors to juggle, such as greater numbers, distance, diversity, and data.

This session presents a process design tool that accounts for these new variables while building on the best of community involvement practices from traditional in-person settings. The "3D Democracy Design" grid (a laminated fold-out available online and with links to further resources) is a tool that covers the factors, functions, and features to consider in designing community involvement for in-person, online, or hybrid situations. Participants will practice using the tool to analyze three distinct situations where digital technology, rightly used, could have a positive impact. There will also be time to reflect on how these technologies are changing the very nature of public engagement and your own roles in it.

Two free follow-on webinars will be offered at your job—the first a month or so after your return and the second to be determined.

Present Effectively with Style and Skill

Presenters: Pam Avery and Dominic Frederico, Turner4D

Track: Track 1

Community Involvement Coordinators and other EPA staffers often must present complex issues and complicated information to their many stakeholders, including community residents. How they present this information can make a big difference in how an EPA project, issue, and the organization in general is perceived by audiences. This course is designed to give participants the confidence they need to "stand up and deliver" effectively, even in difficult situations. This half-day, interactive workshop features videotaped examples of effective and ineffective presentations, message development, one-on-one exercises to enhance each participant's confidence as a public speaker, and tips on how to handle difficult situations or hostile encounters. Participants will work in groups to prepare a brief presentation based on a relevant EPA scenario that will be delivered in an on-camera session. Each presentation will be discussed and critiqued by workshop trainers and fellow participants, followed by an on-camera "re-take" of each presentation, as time permits.

The course is limited to 18 EPA or other federal or state government agency participants who must commit to attending the workshop at the 2015 Community Involvement Training Conference. Each participant will be contacted by email prior to the conference to determine level of presentation experience, issues faced during

presentations, and what he or she hopes to learn and practice during the workshop. A customized EPA "Present Effectively With Style and Skill" Training Manual will be handed out during the course.

Wednesday, August 5: 1:00–5:00 p.m. (Field Trips)

Buses for the field trips will pick up and drop off in front of the Andrew International Boulevard entrance to the Sheraton. The Andrew International Boulevard Entrance is right behind the conference registration booth. Buses will be departing at 1:00 on Wednesday.

Atlantic Station

Registered conference attendees will board a chartered bus and be transported over to Atlantic Station, where they will take a walking, guided tour of this major, mixed use development. Atlantic Station is a mixed use neighborhood development on the northwestern edge of Midtown Atlanta, Georgia, comprising a vibrant retail district, office space, condominiums, townhomes and apartment buildings. First planned in the mid-1990s and officially opened in 2005, the neighborhood's 138 acres are located on the former brownfield site of the Atlantic Steel mill. Atlantic Station has since become the downtown destination for festivals, shopping, dining, and entertainment.

The Atlanta BeltLine Tour (Inner/Outer Beltline)

Registered conference attendees will board one of the Atlanta BeltLine 30-passenger buses and have a guided tour of the entire 22-mile BeltLine corridor.

The Atlanta BeltLine is the most comprehensive transportation and economic development effort ever undertaken in the City of Atlanta and among the largest, most wide-ranging urban redevelopment programs currently underway in the U.S. The Atlanta BeltLine is a sustainable redevelopment project that will provide a network of public parks, multi-use trails, and transit along a historic 22-mile railroad corridor circling downtown and connecting many neighborhoods directly to each other.

The Atlanta BeltLine is transforming the city with a combination of rail, trail, greenspace, housing, and art. It will ultimately connect 45 intown neighborhoods, provide first and last mile connectivity for regional transportation initiatives, and put Atlanta on a path to 21st century economic growth and sustainability. The beauty of the Atlanta BeltLine is that it offers not only modern conveyances and exciting new development, but it is a living, breathing part of our community; not simply a means of getting somewhere, but a destination unto itself. It offers a chance for Atlanta to redefine what it is to be a neighbor, to be a community, to be a region, and to share all that it has to offer.

Thursday, August 6: 8:00–9:00 a.m. (Plenary Session)

Thursday morning's plenary session will begin with a welcome by Anne Heard, Deputy Regional Administrator, U.S. EPA Region 4.

This welcome will be followed by presentations from Nathaniel Smith, Founder and Chief Equity Officer (CEqO/CEO), Partnership for Southern Equity, and Mildred McClain, Co-founder and Executive Director of Harambee House/Citizens for Environmental Justice.

The Plenary Session will conclude with closing remarks from Gregory Green, Division Director of U.S. EPA Office of Air and Radiation, at which point the OAR will hand the conference over to Matthew Tejada, Director of the U.S. EPA's Office of Environmental Justice, who will chair the 2017 Conference.

Thursday, August 6: 9:15 a.m.–5:30 p.m. (Seven-hour Training Sessions)

Building Cultural Competence: Tools to Foster More Productive Community Relations

Presenters: Michael J. Lythcott, Vernice Miller-Travis, and Sarah Malpass, Skeo Solutions

Track: Track 1

Being seen as an "outsider," as part of a remedial project team, government agency, or as a neighborhood advocate in an affected community can be a difficult and frustrating experience. Building Cultural Competence takes a close look at the role of culture in our lives and work. Through interactive exercises and group discussions,

participants explore how they're "primed" to see the world based on several aspects of their own backgrounds. Then, participants consider the cultural backgrounds of other people and how they too are primed to view those they may consider "outsiders." The workshop helps participants circumvent many of the classic pitfalls of community engagement and generates new insights and opportunities for groups, neighborhoods, and organizations to move forward together.

The workshop can be helpful in multiple settings, including:

- Government agencies conducting community involvement in an atmosphere where there is little trust or limited working relationships.
- Groups that bring together people with different skills from across an organization to work on high priority projects.
- Community involvement projects that need to bring diverse groups together to work on environmental cleanup and redevelopment efforts.

Come learn how to create effective engagement between colleagues, community members and resource partners from other agencies and organizations! This highly interactive training includes challenging and fun activities designed to help participants stretch and gain new skills in cultural competency. It will also include a discussion of how this training has improved outcomes in communities experiencing strained relationships due to the legacies of long-term disinvestment and racial discrimination.

More Tools for Your Community Involvement Toolbox

Presenters: Stephani Roy McCallum and Erin Pote, Dialogue Partners

Track: Track 1

Running out of effective, constructive ways to bring people together in conversation? Have multiple issues to address? Are people passionate or emotional about the topics under discussion? Is what you have done before no longer working well? Fill your toolbox with some new, innovative, and effective community involvement techniques that will help you bring people together, achieve objectives, and ensure the opportunity for great conversations on important issues.

In this session, we will explore four new techniques tested by our team in multiple situations: Conversation Toolkit, Socratic Circle, Ideas Fair, and Culturally Sensitive Approaches to Community Involvement.

Through the use of case studies, multimedia presentation, and small group work, attendees will get to experience these four techniques first hand.

For each tool, participants will:

- Be introduced to a case study via experiential immersion in the situation and connect participants' hearts and minds to the issues.
- Test out the approach through small and large group work.
- Debrief the experienced to identify what works and what doesn't, debrief tips, tricks, and lessons learned.
- Be provided reference material for future use and application.

Risk Communication and Neuroscience: New Frontiers

Presenter: Vincent Covello, Center for Risk Communication

Track: Track 4

This training explores how findings from the field of neuroscience can help risk communicators become more effective. It will explore cognitive and physiological barriers to informing people about risks and building trust.

The idea of using neuroscience to enhance risk communication is one of the most exciting developments in the field of environmental risk communication. We are now better able to equip people to think at their best and make informed decisions.

Thursday, August 6: 9:15 a.m.–12:15 p.m. (Three-hour Training)

Using Current and Emerging Technology in Citizen Science

Presenters: Barbara Martinez, U.S. Environmental Protection Agency, Office of the Science Advisor; Rachel McIntosh-Kastrinsky, Association of Schools and Programs of Public Health Environmental Health Fellowship Participant

Track: Track 2

Are you a citizen science practitioner? Are you designing citizen science projects or have an interest in doing so? Technology can have a profound effect on citizen science efforts. Various technologies can improve communication between scientists and citizen scientists, enable or facilitate data collection and analysis, and enhance the experience and education of the citizen scientist. As technologies improve and become more affordable, these opportunities increase. There is great potential for scientists and researchers to conduct more and larger citizen science projects when improvements in technology are easily accessible.

We are conducting a comprehensive review of the technology currently being used in citizen science efforts. In this session, we will share the progress of this review with participants and explore ways to make the materials more accessible to citizen science practitioners (i.e., through a toolkit or web resource). In addition, we will explore new ways to use the technology that we identify in citizen science efforts, including identifying new areas of research that may benefit from technology currently being used. Finally, we will identify technologies that could be developed in the future that would be particularly useful for citizen science projects. The ideas from this workshop will inform a future report on the evolving role of technology in citizen science.

BUILT: An Engagement Tool for Community Dialogue and Understanding

Presenter: Paula Downs, Wichita State University

Track: Track 4

New models of citizen engagement are needed to address the challenges facing communities and their civic leaders. One innovative, new model is the BUILT game. This interactive game allows citizens and leaders to engage in a civic planning simulation designed to help identify values and priorities within a community.

BUILT allows participants to engage in an environmental equal playing field. Participants of all ages, backgrounds, and perspectives can provide insight about community values, vision and needs, creating a foundation for local jurisdictions to make community decisions around planning and resource allocation.

The BUILT game structure allows participants to identify their own and others' values. Through three rounds of game playing, there is an exchange of ideas requiring individuals to work together to develop their community and understand tradeoffs that often need to be made. The first round involves individuals making decisions about the area around their home and what is individually important. The second round asks individuals to work with neighbors to develop their neighborhood and requires adjusting values and priorities for the greater good. The third round brings two neighborhoods together to build a community. This round balances home owner preferences with functionality of a community and moves from "my" to "our" values.

Using the BUILT game fosters civil discourse about community planning and decision-making and engages participants in a process that allows local leaders to collect information which can be integrated into effective planning for sustainable community growth.

Thursday, August 6: 1:30–5:30 p.m. (Four-hour Training Sessions)

Ethical Challenges with Human Subjects Research Involving Communities

Presenters: Toby Schonfeld, U.S. Environmental Protection Agency, Office of the Science Advisor; Aric Edwards, Children's Healthcare of Atlanta

Track: Track 2

In this workshop, we will engage participants in activities to identify and address the ethical challenges around three broad themes:

1. Communities and community members as participants in research: Identifying relevant communities and engaging sensitively with the concerns, interests, and priorities of those communities is an important part of planning an ethically-robust research protocol. Workshop participants will learn of historical failure in this realm, as well as strategies for avoiding some common pitfalls.
2. Community-based participatory research (CBPR): Research protocol ideas may come from the community themselves or be developed through meaningful relationships with communities and community members. Participants will learn how anticipating the ethical challenges that arise from CBPR can enable researchers to partner with communities in a way that is mutually beneficial.
3. Citizen scientists: Increasingly, researchers rely on citizen scientists to engage in data collection. In this workshop, we will address both ethical issues that can arise with citizen scientists as researchers, as well as the challenges that are presented when the citizen scientists themselves are the subjects of the research (or are collecting data that qualifies as human subjects research).

Communities are important sources of information for understanding how individuals and groups interact with the environment. Yet community involvement in human subjects research may also present ethical challenges. We have assembled an array of professionals and community members who have experience in various aspects of human subjects research in order to introduce workshop participants to best practices in the conduct of human subjects research with communities.

Community Environmental Resilience: How to Identify, Support, and Improve It

Presenters: Keely Maxwell, Susan Julius, and Cynthia Yund, U.S. Environmental Protection Agency, Office of Research and Development

Track: Track 3

Community resilience to disasters and climate change is a necessary underpinning of long-term social, economic, and environmental well-being. Climate change, severe weather, natural disasters, and human-caused incidents all pose risks to communities. Federal policies provide guidance for federal agencies, including EPA, to incorporate resilience into their work in disasters, homeland security, and climate change. However, specifics are not provided and many questions arise: What is community resilience? Is the concept universal for all communities? What are the environmental aspects of resilience and what is EPA's role? How do we engage with communities on resilience? Are there metrics for community assessments, comparisons and progress?

This training prepares participants to understand the components of resilience and use that understanding to work with communities to build environmental resilience. First, we provide an overview of community resilience and the role EPA plays. We introduce participants to the concept of environmental resilience, which involves minimizing environmental risks associated with shocks or changes, assessing functionality of critical environmental and ecological services, and applying this learning process to reduce vulnerabilities and risks and facilitate recovery. Next, we present two scenarios: 1) climate change risks and potential responses in a major East Coast city; and 2) handling of post-flooding waste in a Midwestern town. Participants will use these scenarios to develop strategies to engage communities in building environmental resilience. We discuss how to develop and use metrics to assess resilience needs and track progress in a way that meaningfully reflects local vulnerabilities, assets, and values.

2015 U.S. EPA Community Involvement Training Conference Workgroup

The individuals listed below have provided an incredible amount of time, energy, and dedication to planning the 2015 U.S. EPA Community Involvement Training Conference. If any names have been left off the list below, we sincerely apologize.

The 2015 U.S. EPA Community Involvement Training Conference Co-Chairs – Holly Wilson (Office of Air and Radiation), Lena “Vickey” Epps-Price (Office of Air and Radiation), LaTonya Spencer (EPA Region 4), Jasmin Muriel (Office of Environmental Justice), and Laura Knudsen (Office of Solid Waste and Emergency Response) - would like to thank the following people who made this training event possible:

EPA Region 1

Sarah White

EPA Region 2

Larisa Romanowski

EPA Region 3

Jonathan Essoka
Helen Duteau
Reggie Harris
Gina Nappi

EPA Region 4

L’Tonya Spencer
Neema Atashi
Stephanie Brown
Kyle Bryant
Kerisa Coleman
Sherryl Lane
Angela Miller
Cynthia Peurifoy
Tiana Blount

EPA Region 5

Dave Novak (Retired)

EPA Region 6

Joan Drammeh
Bill Little
Jason McKinney

EPA Region 9

Viola Cooper

EPA Region 10

Debra Sherbina

EPA Office of Air and Radiation

Laura McKelvey

Office of Atmospheric Programs

Andrea Denny
Emma Zinsmeister

EPA Office of Chemical Safety and Pollution Prevention

Fred Jenkins

EPA Office of the Chief Financial Officer

Gabrielle Hanson

EPA Office of Environmental Information

Shelley Fudge

EPA Office of Environmental Justice

Marva King
Sheila Lewis

Office of Information and Regulatory Affairs

Tracy Enger

EPA Office of Pollution Prevention and Toxics

Aresia Williams

EPA Office of Research and Development

Barbara Martinez
Ed Washburn

EPA Office of Solid Waste and Emergency Response
