Data Evaluation Summary Memorandum – Phase 2 Investigation

1. Introduction

This technical memorandum summarizes the Phase 2 investigation activities conducted by AECOM at the Lower Neponset River Superfund Site from May 2024 through May 2025. The Lower Neponset River Superfund Site (the Site) is located in Boston and Milton, Massachusetts, and consists of a 3.7-mile section of the Neponset River between its confluence with the Mother Brook and the Walter Baker Chocolate Dam (see **Figure 1**). The Phase 2 investigation included activities in the Phase 2 reach, Pine Tree Brook, and at select locations in the Phase 1 reach. The Phase 2 reach of the Site includes the stretch of the Site between the Walter Baker Chocolate Dam and the Tileston and Hollingsworth (T&H) Dam , from approximately river mile (RM) 0.0 to 2.7 (see **Figure 1**). Pine Tree Brook is a tributary of the Lower Neponset River flowing into the river at approximately RM 0.45 (see **Figure 1**). The Phase 1 reach includes the upper one-mile stretch of the Site between the T&H Dam to the confluence of the Mother Brook and Neponset River, from approximately RM 2.7 to 3.7 (see **Figure 1**). The multi-media sampling data from the Phase 2 investigation will be used to support the comprehensive Remedial Investigation/Feasibility Study (RI/FS) for the 3.7-mile Site that will be conducted in the future. Part of the recent sampling included fish and mussel tissue sampling. The tissue sampling will be used to develop a methodology and baseline (pre-remediation) tissue dataset that can be used to support the establishment of a post-remediation monitoring plan, if needed. Note that given the staged nature of the sampling programs for each medium, AECOM previously provided validated data for each medium to the United States Environmental Protection Agency (USEPA) as the data became available.

The memorandum is organized into the following sections:

- Section 2 – Phase 2 Investigation Overview
- Section 3 – Data Quality Objectives
- Section 4 – Field Activities
- Section 5 – Analytical Results
- Section 6 – Data Gaps
- Section 7 – References

2. Phase 2 Investigation Overview

The Phase 2 investigation was conducted in accordance with the following addenda to the Uniform Federal Policy Quality Assurance Project Plan (UFP-QAPP) (AECOM, 2023a):

- Final Remedial Investigation/Feasibility Study Quality Assurance Project Plan Addendum 1 Revision 0 (AECOM, 2024a);
- Final Remedial Investigation/Feasibility Study Quality Assurance Project Plan Addendum 1 Revision 1 (AECOM, 2024b);
- Final Remedial Investigation/Feasibility Study Quality Assurance Project Plan Addendum 2 Revision 0 (AECOM, 2024c); and
- Final Remedial Investigation/Feasibility Study Quality Assurance Project Plan Addendum 2 Revision 1 (AECOM, 2024d).

An overview of the data quality objectives (DQOs) of the Phase 2 investigation, completed field activities, UFP-QAPP deviations, analytical results, and field parameters are provided in the following sections. Additional information is provided as attachments, which are listed below. This data evaluation summary memorandum also describes potential data gaps from the Phase 1 and 2 investigations.

- **Attachment 1**: Field Forms
- **Attachment 2**: Soil Boring Logs
- **Attachment 3**: Soil Photo Log
- **Attachment 4**: Mussel Program Photo Log
- **Attachment 5**: Sediment Coring Logs
- **Attachment 6**: Sediment Photo Log
- **Attachment 7**: Fish Sampling Photo Log
- **Attachment 8**: Non-Conformance Reports
- **Attachment 9**: Field Modifications

3. Data Quality Objectives (DQOs)

The DQOs of the Phase 2 investigation were defined in the approved Addendum 1 and Addendum 2 of the UFP-QAPP. DQOs in Addendum 1 were as follows:

- DQO1: Collect floodplain soil samples throughout the Phase 2 reach and in the depositional area upstream of Dana Avenue in the Phase 1 reach to evaluate the presence or absence of target constituents, evaluate potential data gaps, and support the evaluation of receptor pathways.
- DQO2: Collect floodplain soil throughout the Phase 2 reach and in the depositional area upstream of Dana Avenue in the Phase 1 reach to develop a dataset that can be used to support the comprehensive RI/FS for the 3.7-mile Site, including a risk assessment, that will be completed in the future.
- DQO3: Collect “pre-deployment” mussels for determination of pre-exposure chemical concentrations in field-collected mussels used in the caged mussel study. The pre-deployment tissue concentrations may be subtracted from the exposed tissue concentrations to focus the ecological risk assessment on analyte concentrations accumulated during the exposure period.
- DQO4: Deploy shellfish cages containing freshwater mussels for tissue analysis at select locations throughout the entire 3.7-miles of the Site to develop a shellfish tissue dataset that can be used to support the comprehensive RI/FS for the 3.7-mile Site, including a risk assessment that will be completed in the future.

- DQO5: Deploy shellfish cages containing freshwater mussels for tissue analysis at select locations throughout the entire 3.7-miles of the Site to develop a methodology and baseline (pre-remediation) shellfish tissue dataset that can be used to support the establishment of a post-remediation monitoring plan in the future, if needed.

DQOs in Addendum 2 were as follows:

- DQO1: Perform an ecological characterization and evaluation along the Phase 2 reach and along the south bank of the river upstream of the T&H Dam in the area of the Phase 1 reach that could not be evaluated in 2023 due to access issues, to delineate wetlands, assess wetland functions and values, and make observations of vegetation and wildlife.
- DQO2: Collect sediment in the Phase 2 reach to develop a dataset that can be used to support the comprehensive RI/FS for the 3.7-mile Site, including a risk assessment that will be completed in the future.
- DQO3: Collect surface sediment from Pine Tree Brook to evaluate the presence or absence of target analytes.
- DQO4: Collect surface water samples from the Phase 2 reach to document changes to surface water quality due to river stage (high/low) at several fixed points and to assess presence or absence of target analytes from two high flow discharges to the Lower Neponset River.
- DQO5: Collect freshwater mussels from shellfish cages and fish at select locations throughout the entire 3.7-miles of the Site to develop shellfish and fish tissue datasets that can be used to support the comprehensive RI/FS for the 3.7-mile Site, including a risk assessment, that will be completed in the future.
- DQO6: Collect freshwater mussels from shellfish cages and fish at select locations throughout the entire 3.7-miles of the Site to develop a methodology and baseline (pre-remediation) tissue datasets that can be used to support the establishment of a post-remediation monitoring plan in the future, if needed.
- DQO7: Install and monitor a pressure transducer in the Phase 2 reach to provide river water elevations for future evaluation of stream flow and sediment fate and transport.

The data summarized in this memorandum were collected to address all the DQOs of the Phase 2 investigation except DQO1 and DQO7 from Addendum 2. DQO1 from Addendum 2 addresses ecological characterization and evaluation in the Phase 2 reach and in an area of the Phase 1 reach that could not be surveyed previously. Data from the ecological characterization and evaluation were previously summarized in the Draft Phase 2 Site Reconnaissance Memorandum that was submitted to the USEPA on December 16, 2024 (AECOM, 2024e). DQO7 from Addendum 2 addresses the installation of a pressure transducer to monitor water levels in the Phase 2 reach. The transducer was installed on July 2, 2025 and remained in place until the end of November 2025 (i.e., just before freezing conditions set in). The transducer data will be provided to USEPA as a separate deliverable.

4. Field Activities

Field activities included floodplain soil sampling, sediment sampling, surface water sampling, collection of freshwater mussels from shellfish cases, fish sampling, and IDW management. Data related to the field activities were recorded in EQuIS Collect, logbooks, and field data collection sheets. Copies of the logbooks and field data collection sheets are included in **Attachment 1**. Daily field reports are also included in **Attachment 1**.

Activities completed within the Phase 2 reach included:

- Floodplain soil boring attempted at 217 locations between May 22 and July 17, 2024. Of the 217 locations where borings were attempted, it was possible to collect samples from 213 of the locations (four locations were abandoned). Samples from two of the abandoned locations were re-allocated to two additional locations in the Phase 2 reach that were approved by the USEPA;
- Sediment sampling attempted at 86 grab locations and 72 coring locations between September 16 and October 24, 2024. Of the 158 locations where sediment sampling was attempted, it was possible to collect samples at all the locations, however, at two of the coring locations, only grab samples could be collected. Samples were also collected from three additional coring locations in the Phase 2 reach that were approved by the USEPA; and

- Surface water sampling completed under low flow conditions at three locations on October 30, 2024 and under high-flow conditions at two locations on May 10, 2025.

Activities completed within Pine Tree Brook included:

- Surface sediment sampling completed at 10 grab locations between October 7 and October 8, 2024; and
- Surface water sampling completed at one location in Pine Tree Brook at the confluence with the Lower Neponset River under low-flow and high-flow conditions on October 30, 2024 and May 10, 2025, respectively.

Activities completed at select locations within the Phase 1 reach included:

- Floodplain soil sampling completed at three locations in the depositional area upstream of Dana Avenue on June 10, 2024; and
- Surface water sampling completed at one location immediately downstream of the outfall at RM 2.77 under low-flow and high-flow conditions on October 30, 2024 and May 10, 2025, respectively.

Activities completed at select locations throughout the entire 3.7-miles of the Site included:

- Deployment of freshwater mussels in cages at eight locations between June 19, and June 21, 2024 with monitoring of water quality and cages until retrieval of the mussels on September 24, 2024; and
- Fish sampling for brown bullhead and white sucker between October 10, and November 1, 2024.

The Phase 2 investigation also included collection of “pre-deployment” mussels and investigation derived waste (IDW) management.

4.1 Sample Nomenclature

In accordance with the UFP-QAPP, samples collected during Phase 2 field activities were identified using sample IDs structures in the following format:

{Event}-{Location}-{Depth, Replicate, Sequence, or Fish Species}{Type}[-{Flow Condition}][-{Filtered}]

Event = the last two digits of the year and the event within that year:

- “24A” identified the 2024 sediment sampling
- “24B” identified the 2024 low-flow surface water sampling
- “24D” identified the 2024 soil sampling
- “24E” identified the 2024 mussel tissue sampling
- “24F” identified the 2024 fish tissue sampling
- “25A” identified the 2025 high-flow surface water sampling

Location = 4-digit sequential number starting with 0001. For fish sampling 0001 represented the Phase 1 reach and 0002 represented the Phase 2 reach. This also served as the month and day for blanks in MMDD format. This also served as the month followed by T0 for the time zero mussel samples.

Depth, Replicate, Sequence, or Fish Species = One to four characters that represented one of the following:

- The relative depth interval for field collected samples, with “A” being most surficial, and “B”, “C”, “D”, etc. being assigned with increasing depths. “X” for samples without depths (e.g., mussel tissue sampling and equipment rinsate blanks);
- The replicate (e.g., 1 or 2) for mussel samples with replicate cages;
- The sequence was the number of trip blanks from the same day (e.g., 1 is first, 4 is fourth); or
- The fish species (e.g., WS – white sucker, BB – brown bullhead) followed by fish number represented as two digits (e.g., 01 is first).

Type of sample = S – primary sample, D – field duplicate, R – equipment rinsate blank, T – trip blank

Flow Condition. [optional] used “L” for surface water samples collected under low flow conditions, “H” for surface water samples collected under high flow conditions.

Filtered. [optional] used “F” for filtered samples ONLY

4.2 Floodplain Soil Sampling

Floodplain soil sampling was conducted within the Phase 2 reach at locations 24D-0001 to 24D-0214, 24D-0218, and 24D-0219 between May and July 2024 and in the depositional area upstream of Dana Avenue in the Phase 1 reach at locations 24D-0215 to 24D-0217 on June 10, 2024 (**Figure 2**). Floodplain soil sampling was not conducted in reference areas consistent with the approved Addendum 1 of the UFP-QAPP. Addendum 1 of the UFP-QAPP included 97 unbiased boring locations in the floodplain along the northern bank of the Phase 2 reach, 117 unbiased boring locations in the floodplain along the southern bank of the Phase 2 reach, and three locations to provide spatial coverage of the depositional area upstream of Dana Avenue. Locations were flagged in advance and adjusted when in the vicinity of outfalls, the dams, and based on sampling feasibility per the Sampling Approach Memorandum that was provided in Attachment C of Addendum 1 of the UFP-QAPP. Of the 217 floodplain soil sampling locations proposed in Addendum 1 of the UFP-QAPP, soil was collected at 213 locations, and 4 locations were abandoned due to access and/or sampling constraints. Samples from two of the abandoned locations were re-allocated to two additional locations in the Phase 2 reach (24D-0218 and 24D-0219) that were approved by the USEPA. Details on each sampling location including the boring date, total boring depth, depth to water, any comments noted by the field staff, as well as the reasons why certain locations were abandoned or shifted are included in **Table 2**. Locations where floodplain soil was collected are depicted on **Figure 2** and coordinates are provided in **Table 1A**. The respective RM is also provided in **Table 1A** for floodplain soil sampling locations.

Borings were advanced by AECOM to a target depth that was the shallower of: 3 feet or refusal using hand augers or tile spades. Total boring depths for each location are included in **Table 2** and ranged from 0.4 to 3 feet. Borings were visually logged by a field geologist for lithologic characteristics, screened with a photoionization detector, and photographed. Lithologic information and photoionization detector readings are presented on the soil boring logs included in **Attachment 2**. Photographs taken during soil sampling are included in the photo log in **Attachment 3**.

From each boring, samples were collected from three 1-foot surface soil increments (0-1 feet, 1-2 feet, and 2-3 feet), when possible. Sampling intervals are summarized in **Table 2**. Samples were submitted for analysis of polychlorinated biphenyl (PCB) congeners, polychlorinated dibenzodioxins/furans (PCDD/Fs), target analyte list (TAL) metals and mercury, target compound list (TCL) semi-volatile organic compounds (SVOCs), and TCL volatile organic compounds (VOCs). Of the total Phase 2 reach floodplain soil samples (number=498) and depositional area samples (number=7), a limited number had insufficient soil mass for all the target analytes. When this was the case, a sample was not collected for VOCs (number=22 samples) and sample jars were filled in the following order of preference: PCB congeners and PCDD/Fs, TAL metals, then TCL SVOCs. There was also one sample, 24D-0068-CS, which was received by the laboratory for analysis of PCBs and PCDD/Fs, however the glassware was broken. This sample was analyzed for the other analytes, and another location (24D-1068) was advanced in the vicinity of location 24D-0068 to collect a sample from the CS depth interval for PCBs and PCDD/F analysis, only. The analyte list for each sample is summarized in **Table 3**. Analytical methods and the laboratories that performed the analyses for the Phase 2 investigation are summarized in **Table 4A.**

Quality assurance/quality control (QA/QC) samples consisting of sample duplicates, matrix spike/matrix spike duplicates (MS/MSDs), equipment blanks, performance evaluation (PE) samples, and trip blanks were collected in association with the floodplain soil sampling in accordance with approved Addendum 1 of the UFP-QAPP.

4.3 Surface Water Sampling

Surface water sampling was conducted within the Phase 2 reach at stations 0002, 0003, and 0005, downstream of the outfall at RM 2.77 at station 0001, and in Pine Tree Brook upstream of the confluence with the Lower Neponset River at station 0004. Locations where surface water was collected are depicted on **Figure 3**, and coordinates are provided in **Table 1C.** In order to collect data to address DQO4, surface water sampling was proposed in Addendum 2 of the UFP-QAPP during low-flow and high-flow conditions. Low-flow conditions were defined as rain no more than 0.1 inches in the past seven days or flows less than 100 cubic feet per second (cfs) for the past seven days. High-flow conditions were defined as rainfall over 0.5 inches, flows greater than 400 cfs, or a flow increase of more than 100% (e.g. from 150 to 300 cfs) in a few hours. The official monitoring point for flows was the United States Geological Survey (USGS) gaging station Neponset River at Milton Village – 01105556. Regional hydrographic gages were also monitored, as the USGS gaging station 01105556 does not provide predictive flows.

The regional hydrographic gages that were monitored included the Neponset River at Norwood National Oceanic and Atmospheric Administration (NOAA) ID NRWM3, the Charles River at Dover NOAA ID DOVM3, NOAA's unofficial forecast for the Neponset River at Milton (NOAA ID MLTM3), and NOAA's unofficial forecast for the Charles River at Mother Brook (NOAA ID DDHM3).

Low-flow sampling was initiated and completed on October 30, 2024, after there had been no precipitation and flows were less than 100 cfs for the prior 7 days. High-flow sampling was initiated and completed on May 10, 2025 after flow had increased from approximately 318 cfs on the evening of May 9, 2025 to 540 cfs on the morning of May 10, 2025, and the amount of rain that fell on Milton between 13:52 on May 9, 2025 and 13:53 on May 10, 2025 was 1.27 inches according to the National Weather Service.

Surface water samples were collected by AECOM using a peristaltic pump, immersing dedicated tubing into the water column at each location. At each location the water column depth was measured. The target sample depth at a location was then set to the approximate mid-point of the water column depth. Sampling depths are summarized in **Table 5**. During low-flow sampling three locations were sampled from the bank adjacent to the sampling location. At the two other locations, suitable water depth could not be accessed from the bank, and the locations were accessed by wading. During high-flow sampling all locations were sampled from the bank adjacent to the sampling location. When a location was accessed from the bank, the peristaltic pump tubing was positioned in the water and held at mid depth several feet from the bank in undisturbed water.

During sampling the intake tubing for the peristaltic pump was placed at the target sample depth, and surface water was pumped until a volume equal to three times the tubing volume had been purged. During low-flow sampling, a YSI was used to collect field parameters during purging. Field parameters were not recorded during high-flow sampling as discussed in non-conformance report NC-20250510-01 in **Attachment 8**. Field parameters are included in the analytical results tables, when available. A filter was then attached to the end of the tubing and samples for dissolved constituents (i.e., TAL metals and mercury) were collected. Once the bottles for field-filtered dissolved TAL metals and mercury were filled, the filter was removed. Samples were then collected for target TCL pesticides, PCB congeners, PCDD/Fs, total TAL metals and mercury, and total cyanide. Once the bottles for these parameters were filled, a sample for TCL VOCs was collected using the "soda straw" method. All samples had sufficient surface water for analysis of the complete set of target analytes. Analytical methods and the laboratories that performed the analysis are summarized in **Table 4C**.

QA/QC samples consisting of one sample duplicate, one MS/MSD, one equipment blank, and one trip blank were collected during each sampling event. A PE sample was also collected during the low-flow sampling event.

4.4 Mussel Sampling

Freshwater mussels (*Elliptio complanata*) were deployed in shellfish cages for approximately 90 days at eight locations within the Phase 1 and 2 reaches (**Figure 4**). Normandeau Associates (Normandeau) and AECOM staff collected and deployed the mussels and Normandeau staff constructed the cages. AECOM staff monitored the cages during the exposure period and retrieved the mussels and cages after approximately 90 days. Photographs of the mussels, cages, and selected deployment locations are included in the photo log in **Attachment 4**.

Freshwater mussel collection was conducted on June 19, 2024. A total of 367 freshwater mussels were collected from Willet Pond, an unimpacted waterbody near the Site. Mussels were placed in coolers with a mixture of Willet Pond and Neponset River water to acclimate the mussels to Site conditions prior to deployment. The average mussel shell length was 68.9 millimeters (mm) (standard deviation of 5.5 mm) which was within the target range of 60 to 80 mm identified in UFP-QAPP Addendum 1. A subset of five mussels were shucked and weighed prior to deployment to approximate the wet weight of the mussels. Mussels averaged 7.5 grams each which allowed for a reduction in the number of mussels per cage (from 20 identified in UFP-QAPP Addendum 1 to 15) without compromising the efficacy of the analysis (sufficient tissue mass for analyses could be obtained from fewer mussels per cage).

A subset of 15 mussels collected from Willet Pond were reserved in a separate cooler for determination of pre-exposure chemical concentrations. The Willet Pond mussels reserved to represent pre-exposure chemical concentrations were held for 24 hours in clean water to depurate sediment before being frozen and shipped to SGS-Wilmington for later chemical analysis. This sample represents time 0 'pre-deployment' mussel concentrations of the target analytes (PCB congeners, PCDD/Fs, polycyclic aromatic hydrocarbons (PAHs), metals, pesticides, mercury, methyl mercury).

Mussel cages were deployed at eight sites within the Phase 1 and 2 reaches over a three-day period, from June 19 through June 21, 2024. Site 6 cages were deployed on June 19, 2024. Site 5, 7, 8, and 9 cages were deployed on June 20, 2024, and

Site 1, 3, and 4 cages were deployed on June 21, 2024. Two replicate cages were deployed at each site within a target radius of 10-meters from each other, with two additional replicate cages for QA/QC deployed at Site 7, for a total of 18 cages. Global positioning system (GPS) coordinates were collected midway between the replicate cages at each site (**Table 1E**).

During the deployment of the cages, there were some deviations from UFP-QAPP Addendum 1 related to the spacing of cages and the number of mussels added to certain cages. As indicated in NC-20240708-01 provided in **Attachment 8**, the cage spacing described in UFP-QAPP Addendum 1 included one site with two additional QA/QC cages located within 1 meter of one of the replicate cages. Site 7 was selected for the deployment of the QA/QC replicate cages (two additional cages to be deployed near the Site 7 replicate cages); however, due to a lack of locations with mussel habitat near the Site 7 replicate cages that could be hidden from public view and with sufficient water depth, cage spacing was greater than specified in UFP-QAPP Addendum 1 (cages were deployed as two sets of replicate cages approximately 40 meters apart). Therefore, these cages were not used for QA/QC purposes, and the locations were renamed as Sites 7A and 7B (only cages from Site 7A were selected for tissue analysis). NC-20240708-01 also indicates that additional mussels were added to the cages at Site 6, bringing the total to 42 and 44 mussels in the replicate cages. Mussels from the replicate cages at Site 6 were used for QA/QC purposes. As indicated in NC-09182024-01, the distance between replicate cages at Site 4 was approximately 45 meters, due to the soft substrate and steep bank at this location.

Cage checks were conducted over the course of the deployment period to monitor mussel health and mortality, verify cage placement and structural integrity, and remove debris. Water quality parameters (pH, specific conductivity, turbidity, temperature, dissolved oxygen [DO], oxidation reduction potential [ORP]) were also recorded during each check. Water quality measurements are included in the cage check forms provided in **Attachment 1**. During checks mussel cages were observed through a borescope or lifted to the surface if water clarity was low. Cages were checked by AECOM staff on July 2, 8, 9, and 24, August 19, and September 12, 2024. Cage checks were planned to occur approximately 14, 30, and 60 days after deployment. Cages were deployed over multiple days and cage checks were typically completed within a single day (with the exception of the first check), so actual planned checks occurred on Days 17 to 19, Days 33 to 35, and Days 59 to 61. An unplanned check was conducted on September 12, 2024 (Days 83 to 85) to confirm that all mussels were underwater after water levels decreased due to dam management activities. All cages were covered in water, and cages at Sites 6, 7A, and 8 were precautionarily relocated into deeper water. GPS coordinates for the relocated cages are provided in **Table 1E**. A single dead mussel was observed at Site 6 during this check, but all other mussels appeared alive and in good condition.

Mussel retrieval took place on September 24, 2024. Due to the deployment of mussel cages occurring over multiple days and retrieval occurring in a single day, mussel exposures ranged from 95 to 97 days (95 days for cages at Sites 1, 3, and 4; 96 days for cages at Sites 5, 7, 8, and 9; 97 days for cages at Site 6). During retrieval, field staff recorded water quality parameters, water depth, mussel condition, and shell length at each site. Mussels from each cage were put into separate mesh bags and held in coolers overnight to depurate sediment. Mussels were then transferred to zip closed bags, frozen, and shipped to SGS-Wilmington for homogenization and tissue analysis. SGS-Wilmington analyzed the samples for PCB congeners, PCDD/Fs, lipids, and percent moisture, then shipped appropriate quantities of the homogenized sample to ALS-Kelso for analysis of TCL pesticides, to SGS-Dayton for analysis of PAHs and TAL metals, and to Brooks Applied Labs for analysis of mercury and methyl mercury. The analyte list for each sample is summarized in **Table 6**. Analytical methods and the laboratories that performed the analysis are summarized in **Table 4E**.

QA/QC samples consisting of one sample duplicate from Site 6, one MS/MSD from Site 6, and a PE sample were collected in association with the mussel tissue sampling in accordance with the approved addenda of the UFP-QAPP.

4.5 Sediment Sampling

Sediment sampling was conducted at locations within the Phase 2 reach at locations 24A-0001 to 24A-0158, 24A-0169, 24A-0170, and 24A-0171 between September and October 2024 and in Pine Tree Brook at locations 24A-0159 to 24A-0168 on October 7, and October 8, 2024 (**Figures 5** and **6**). Addendum 2 of the UFP-QAPP included proposed locations in the Phase 2 reach in the areas of Pool 1, 2, 3, 4, and Pine Tree Brook. Further descriptions of the areas can be found in the Sampling Approach Memorandum that was provided in Attachment C of Addendum 2 of the UFP-QAPP. Proposed locations in the areas included the following:

- Pool 1: Five unbiased grab locations, one biased grab location
- Pool 2: Eight unbiased grab locations, two biased grab locations
- Pool 3: Eight unbiased grab locations, four biased grab locations

- Pool 4: 58 unbiased grab locations, 54, biased hand auger locations, 18 unbiased vibracore locations
- Pine Tree Brook: 10 unbiased grab locations

Sediment samples were collected from all of the locations proposed in Addendum 2 of the UFP-QAPP. Samples were also collected from three additional locations in the vicinity of the Walter Baker Chocolate Dam that were added in the field with USEPA approval. Additional details about the locations that were added in the field can be found in field modification FM-20240716-01 in **Attachment 9**. Locations where sediment was collected within the Phase 2 reach and Pine Tree Brook are depicted on **Figures 5** and **6**, respectively, and coordinates are provided in **Table 1B**.

At grab locations within the Phase 2 reach surface sediment grabs were collected by Ocean Surveys Inc (OSI) from a vessel using a Petit Ponar Grab Sampler and post hole digger. At grab locations in Pine Tree Brook surface sediment grabs were collected by AECOM using a hand auger and locations were accessed by wading. Grab samples were collected from the surface interval (0-0.5 feet).

At sediment coring locations on the Braided Channel Island, cores were advanced by AECOM using hand augers and locations were accessed by foot. At coring locations in the Walter Baker Chocolate Dam impoundment, cores were advanced by OSI from a vessel using vibracoring methods. The target depth of the augers and vibracores was 6 feet. Multiple cores and/or surface sediment grabs were collected to augment sample volume when necessary. Total core depths for each location are included in **Table 7** and ranged from 0.3 feet to 6 feet. Samples were collected from the augers and cores from the surface interval (0-0.5 feet), 0.5 feet to an intermediate depth, and the intermediate depth to the bottom of the core, when possible. The intermediate depth used for sampling was half the depth from 0.5 feet to the bottom of the core, or the depth at which there was a visible change in lithology. Sampling intervals are summarized in **Table 7**.

Cores and grabs were visually logged by a field geologist for lithologic characteristics, screened with a photoionization detector, and photographed. Lithologic information and photoionization detector readings are depicted on the sediment coring logs included in **Attachment 5**. Photographs taken during sediment sampling are included in the photo log in **Attachment 6**.

Samples were submitted for analysis of PCB congeners, PCDD/Fs, TAL metals and mercury, TCL SVOCs, TCL VOCs, total organic carbon (TOC), and grain size. Of the total Phase 2 reach sediment samples (number=303) and Pine Tree Brook samples (number=10), a limited number had insufficient sediment mass for all the target analytes. When this was the case (number=18), the UFP-QAPP specified that a sample should not be collected for VOCs and sample jars should be filled in the following order of preference: PCB congeners and PCDD/Fs, TOC, TAL metals and mercury, TCL SVOCs, and grain size. This approach was followed for nine of the samples that had insufficient sediment mass. For the remaining nine samples, the order of preference was not followed, as described further in nonconformance report NC-20240926-01, which is provided in **Attachment 8**. The analyte list for each sample is summarized in **Table 8**. Analytical methods and the laboratories that performed the analysis are summarized in **Table 4B.**

QA/QC samples consisting of sample duplicates, MS/MSDs, equipment blanks, PE samples, and trip blanks were collected in association with the sediment sampling in accordance with approved Addendum 2 of the UFP-QAPP.

4.6 Fish Sampling

Fish sampling was conducted within the Phase 1 and 2 reaches between October 9, and November 1, 2024. The UFP-QAPP specified that white sucker would initially be targeted for the bottom feeder species and that largemouth bass would be targeted for the predatory/gamefish species. The UFP-QAPP also specified that species composition would be evaluated during the first few days of sampling by the field team and if sufficient numbers of the initial target species could not be obtained due to low catch per unit effort, that alternate target species representative of the species present at the Site would be taken as substitutes. Substitute species listed in the UFP-QAPP included black bullhead and common carp for bottom feeder species and chain pickerel, black bullhead, and white perch for predatory/gamefish species. Based on the species composition observed during the first few days of sampling and with USEPA concurrence[1], white sucker was selected as the target bottom feeder species and brown bullhead was selected as the target predatory/gamefish species.

Fish samples were collected by AECOM from a vessel, from shore, or by wading in shallow waters. Several collection methods were attempted including rod and reel, electrofishing, gill nets, and trot lines. Rod and reel, electrofishing, and gill net methods had limited effectiveness. Most of the fish were caught using trot lines after the lines had been left overnight. The coordinates

[1] October 16, 2024 email from Natalie Burgo, USEPA Region 1, to Kristine Carbonneau, AECOM.

for fish that were submitted for analysis are included in **Table 1D** and shown on **Figure 7;** however, it should be noted that the typical home ranges of the target species comprise most of the area of each reach.

The UFP-QAPP specified that five predatory/gamefish (brown bullhead) and five bottom feeding fish (white sucker) would be collected within the Phase 1 reach and 10 fish from each species would be collected within the Phase 2 reach. The UFP-QAPP also specified that for each species, fish of similar size would be targeted such that the smallest fish sampled was no less than 75% the length of the largest fish. Additionally, the UFP-QAPP presented a target mass of 92 grams or greater for each tissue type per fish (i.e., fillet and carcass [offal]). **Table 9a** includes a fish sampling summary for brown bullhead and white sucker.

During the sampling program, 20 brown bullhead were caught from the Phase 1 reach and 13 brown bullhead were caught from the Phase 2 reach that were large enough to be evaluated for potential sampling. Following field evaluation, three of the brown bullhead were released and the remaining 30 specimens were frozen until the end of the sampling program. At the end of the sampling program the lengths and weights of the fish were measured. Based on the lengths and weights, 21 of the 30 specimens were submitted for analysis including nine from the Phase 1 reach and 12 from the Phase 2 reach (nine were not sampled). The weights of the brown bullhead that were submitted for analysis were generally above 0.5 pounds (lbs) and the lengths ranged from 245 to 324 millimeters (mm). The length of the smallest fish was approximately 76% of the length of the largest fish. Four fish submitted to the laboratory were put on hold (one from the Phase 1 reach and three from the Phase 2 reach) due to their small size and uncertainty whether tissue mass would be sufficient for the complete analyte list Photos of a subset of the collected brown bullhead are included in the photo log in **Attachment 7**.

A total of eight white sucker were caught from the Phase 1 reach and six were caught from the Phase 2 reach that were large enough to be evaluated for potential sampling. The specimens were brought back to the field trailer and frozen until the end of the sampling program. Towards the end of October, the field team attempted to catch additional white sucker from the Phase 2 reach in order to meet the target number of 10 fish specified in the UFP-QAPP; however, the efforts were not successful. USEPA concurred with ceasing the fish sampling program in early November[2]. All 14 of the white suckers from both reaches were submitted to the laboratory for analysis. The weights of the white sucker specimens ranged from 2.37 to 4.13 lbs and the lengths ranged from 462 to 541 mm. The length of the smallest fish was approximately 85% of the length of the largest fish. Photos of a subset of the collected white suckers are included in the photo log in **Attachment 7**.

During the sampling, species other than brown bullhead and white sucker were also caught. **Table 9b** summarizes the types and number of other fish that were caught.

Throughout the fish tissue sampling, surface water quality measurements (pH, specific conductivity, turbidity, temperature, DO, and ORP) were recorded. When fish were processed at the field lab before shipping, weight, deformities, and parasites were also recorded. The water quality measurements can be found in the field notes included in **Attachment 1**. Fish length, weight, and any observations of parasite and deformities are noted in **Table 9a**.

The fish were sent to SGS-Wilmington where fillet and carcass (offal) samples were prepared, weighed, and homogenized in accordance with the laboratory's Standard Operating Procedure for the Preparation of Fish Tissue sample for HRMS/ID analyses, Rev 6, 11/21/2022. The weights of the fillet and carcass (offal) samples prior to homogenization are provided in **Table 10**. Following homogenization, SGS-Wilmington analyzed the samples for percent moisture and lipids and then shipped appropriate quantities of the homogenized sample to other labs designated in the UFP-QAPP for the analysis of PCB congeners, PCDD/Fs, TAL metals, mercury, methyl mercury, and TCL pesticides. Of the 31 fillet samples, 15 had insufficient tissue mass for all of the target analytes. For these 15 fillet samples, chemicals for analysis were prioritized in concert with USEPA. All fillet samples were analyzed for PCBs, PCDD/Fs, TCL pesticides and lipids, but not all were analyzed for TAL metals and mercury. All of the carcass (offal) samples had sufficient tissue mass for all of the target analytes. **Table 11** summarizes the analyte list for each sample. Analytical methods and the laboratories that performed the analysis are summarized in **Table 4D**.

QA/QC samples consisting of lab duplicates, MS/MSDs, and PE samples were collected in accordance with approved Addendum 2 of the UFP-QAPP. The only deviation from the UFP-QAPP was not achieving the target number of 10 white sucker samples in the Phase 2 reach (six samples were obtained) despite extensive fishing effort. As noted above, the decision to cease sampling was made in concert with USEPA.

[2] November 6, 2024 email from Natalie Burgo, USEPA Region 1, to Kristine Carbonneau, AECOM.

4.7 Investigation Derived Waste (IDW) Management

During the sampling programs, all efforts were taken to reduce the amount of IDW generated. No IDW was generated during the surface water sampling program. During the soil sampling program, soil remaining after sample collection was placed within its respective borehole. IDW generated during the September/October 2024 sediment program was placed in two 55-gallon drums following sample processing. IDW drums are being stored temporarily in a secure Conex box at the Neponset Esplanade Park staging area until disposal can be arranged.

On July 3, 2025, a representative sample of the IDW material was collected by compositing and homogenizing subsamples from the two drums. These samples were submitted for analysis of VOCs, SVOCs, Resource Conservation and Recovery Act (RCRA) 8 Metals, PCBs, total petroleum hydrocarbons (TPH), reactivity, corrosivity, flammability, ignitability, herbicides and pesticides.

AECOM provided the analytical results of the July 3, 2025 IDW sampling and a copy of USEPA's Off-Site Rule Compliance Request Form to USEPA's designated IDW subcontractor (Mill City Environmental). Mill City Environmental picked up the IDW on November 20, 2025 under AECOM oversight, which was disposed of at Triumvirate's disposal facility in Lowell, MA (a USEPA approved disposal facility).

4.8 UFP-QAPP Deviations

During field activities there were several deviations from the UFP-QAPP. The deviations were documented in nonconformance reports or field modifications, which are provided in **Attachments 8** and **9**, respectively.

5. Analytical Results

Following receipt of the analytical results, AECOM validated the data except for high-resolution method results for fish and surface water, which were validated by Environmental Services Assistance Team (ESAT). Details of the validation are provided in the Phase 2 Data Validation Report (AECOM, 2025a). Validated results for floodplain soil are presented in **Tables 12** and **13** for the Phase 2 reach and depositional area (Phase 1 reach), respectively**.** Validated results for low-flow surface water, high-flow surface water, time zero mussel tissue, and mussel tissue are shown in **Tables 16, 17, 20,** and **21,** respectively**.** Validated results for sediment are presented in **Tables 28** and **29** for the Phase 2 reach and Pine Tree Brook, respectively**.** Validated results for fish tissue are presented in **Table 32.**

The tables include homolog group sums for PCDD/Fs and PCB congeners, and total PCB congeners. The homolog group sums and total PCB congeners were calculated by summing the detected congeners in each group. If no congeners in a group were detected, the maximum reported detection limit for any individual congener in that homolog group was used. Note that the homolog group sums for PCDD/Fs and PCBs and total PCB congeners for fish tissue and surface water reported by ESAT differ from what is reported herein for consistency between media per EPA direction.

The tables for mussel tissue also include total PAHs, total high molecular weight (HMW) PAHs, and total low molecular weight (LMW) PAHs. Total PAHs, total HMW PAHs, and total LMW PAHs were calculated as the sum of all or select detected concentrations of the following: acenaphthene (LMW), acenaphthylene (LMW), anthracene (LMW), fluorene (LMW), 2-methylnaphthalene (LMW), naphthalene (LMW), phenanthrene (LMW), benzo(a)anthracene (HMW), benzo(b)fluoranthene (HMW), benzo(k)fluoranthene (HMW), benzo(g,h,i)perylene (HMW), benzo(a)pyrene (HMW), chrysene (HMW), dibenzo(a,h)anthracene (HMW), fluoranthene (HMW), indeno(1,2,3-cd)pyrene (HMW), and pyrene (HMW); if no PAHs in a group were detected, the maximum reported detection limit for any individual PAH in that group was used for the total result.

The tables for soil, sediment, mussel, fish tissue, and surface water also include toxic equivalencies (TEQs) for PCDD/Fs and PCB congeners. For soil, the TEQ calculation details can be found in the notes in **Tables 12, 13,** and **51**. For sediment, the TEQ calculation details can be found in the notes in **Tables 28, 29,** and **51**. For mussel tissue, the TEQ calculation details can be found in the notes in **Tables 20**, **21,** and **51**. For fish tissue, the TEQ calculation details can be found in the notes in **Table 32** and **51**. For surface water, the TEQ calculation details can be found in the notes in **Tables 16, 17,** and **51**.

The tables for fish tissue include calculated whole-body concentrations. Whole-body concentrations were calculated using the following equation:

$$\text{Whole Body Concentration} = Fillet\ Concentration\ x\ \frac{Fillet\ Weight}{Total\ Fish\ Weight} + Offal\ Concentration\ x \frac{Offal\ Weight}{Total\ Fish\ Weight}$$

If one of the concentrations used in the equation was a non-detect (i.e., below the analytical detection limit), then it was treated as zero for the calculation and was therefore not included in the whole-body concentration. If both the fillet and offal concentrations were non-detect, the maximum reported detection limit between the fillet and offal samples was used for the whole-body result. When only an offal concentration was available for a fish sample or the fillet concentration was analyzed, but the result was rejected, the offal concentration was used as the whole-body concentration. When this was the case, the whole-body concentration was marked with a "*O" qualifier.

Summary statistics including the number of samples, number of detections, and minimum, maximum, and average detected values are presented by area for soil in **Tables 14** and **15**, presented by flow condition for surface water in **Tables 18** and **19**, presented by reach for mussel tissue in **Tables 24** through **27**, presented by area for sediment in **Tables 30** and **31**, and presented for fish tissue by fish type, tissue type, and reach in **Tables 35** through **50**.

5.1 Comparison of Analytical Results with Project Action Limits (PALs)

Analytical results are compared with the human health and ecological project action limits (PALs), where applicable. The PALs were established in Worksheet #15 of Addendum 1 and 2 of the UFP-QAPP to achieve an appropriate level of data quality. The PALs represent the lowest of the relevant human health and ecological screening levels that may be used in this or later stages of the RI/FS process, if applicable. Analytical results were compared to the PALs for information purposes, and the comparison is not an indication of risk. The basis for the PALs for each medium is discussed below.

The selected human health and ecological PALs for floodplain soil are:

- Human health: USEPA Regional Screening Levels (RSLs) for residential soil based on a target hazard quotient of 0.1 and a target risk level of 1E-06 (USEPA, 2024a).
- Ecological: The lower of the ecological soil screening levels for soil invertebrates, plants, birds, and mammals derived in accordance with USEPA guidance (USEPA, 2005) and the USEPA Region 4 soil screening values for soil invertebrates, plants, birds, and mammals (USEPA, 2018).

The selected human health and ecological PALs for surface water are:

- Human health: The lower of the Massachusetts surface water quality standards (SWQS) human health criteria for drinking water plus fish and shellfish consumption (MassDEP, 2022), Massachusetts maximum contaminant levels (MassDEP, 2020), National Recommended Water Quality Criteria for human health for consumption of water and organisms (HHWQC) (USEPA, 2024d), USEPA maximum contaminant levels (USEPA, 2024b), and USEPA RSLs for tap water based on a target hazard quotient of 0.1 and a target risk level of 1E-06 (USEPA, 2024a).
- Ecological: The lower of the Massachusetts SWQS aquatic life criterion continuous concentration values for freshwater (MassDEP, 2022), National Recommended Water Quality Criteria aquatic life criterion continuous concentration values for freshwater (USEPA, 2024c), and USEPA Region 4 freshwater chronic screening values (USEPA, 2018).

The selected human health and ecological PALs for sediment are:

- Human health: USEPA RSLs for residential soil based on a target hazard quotient of 0.1 and a target risk level of 1E-06 (USEPA, 2024a).
- Ecological: USEPA Region 4 ecological screening values for freshwater sediment (USEPA, 2018).

The selected human health and ecological PALs for fish tissue are:

- Human health: Lower of RSL for cancer and noncancer effects (hazard quotient of 0.1) for fish tissue calculated using the May 2024 RSL Calculator (USEPA 2024e). Preliminary fish tissue screening levels were conservatively calculated using Mass DEP's default fish consumption rate of 32 grams/day (MassDEP, 2008) and USEPA RSL Calculator default exposure assumptions and toxicity values (USEPA 2024e).
- Ecological: The lower of the lowest acceptable tissue level protective of individual birds and mammals for chemicals in fish/shellfish consumed by wildlife derived by Oregon Department of Environmental Quality (DEQ (2007) and the critical tissue level for chemicals in fish, shellfish and other aquatic organisms derived by Oregon DEQ (2007).

The ecological PALs for mussel tissue were selected based on tissue concentrations derived by the Oregon DEQ (2007) to be protective of birds and mammals consuming fish/shellfish and protective of the fish, shellfish, and other aquatic organisms themselves. The lower of the concentrations based on wildlife and aquatic life were selected as the PAL for mussel tissue. There are no human health PALs for mussel tissue, as mussel sampling was conducted to support the ecological risk assessment only.

It should be noted that PALs for TEQ and total PCBs were not included in Worksheet #15. The human health and ecological PALs for TEQ and total PCBs are presented in **Tables 52** and **53** below, respectively:

Table 52 – Human Health PALs for Total PCBs and PCB and PCDD/F TEQs

Matrix/Analyte	Units	Human Health Value	Basis
Soil – Total PCB Congeners	ng/g	120	USEPA RSL for Aroclor 1254 for residential soil (non-cancer)
Surface Water – Total PCB Congeners	pg/L	64	Massachusetts and National HHWQC for PCBs for consumption of water and organisms
Surface Water - Total PCDD/F TEQ (Mammal)	pg/L	0.005	Massachusetts and National HHWQC for 2,3,7,8-TCDD (Dioxin) for consumption of water and organisms
Surface Water - Total PCB TEQ (Mammal)	pg/L	0.005	Massachusetts and National HHWQC for 2,3,7,8-TCDD (Dioxin) for consumption of water and organisms
Sediment – Total PCB Congeners	ng/g	120	USEPA RSL for Aroclor 1254 for residential soil (non-cancer)
Fish Tissue – Total PCB Congeners	ng/kg	3510	USEPA RSL Calculator for Aroclor 1254/high risk PCBs for fish tissue consumption
Fish Tissue – Total PCDD/F TEQ (Mammal)	ng/kg	0.054	USEPA RSL Calculator for 2,3,7,8-TCDD for fish tissue consumption
Fish Tissue – Total PCB TEQ (Mammal)	ng/kg	0.054	USEPA RSL Calculator for 2,3,7,8-TCDD for fish tissue consumption

Notes:
HHWQC – human health water quality criterion
ng/g – nanograms per gram
ng/kg – nanograms per kilogram
PCBs – polychlorinated biphenyls
PCDD/F - polychlorinated dibenzodioxins/furans
pg/L – picograms per liter
RSL – Regional Screening Level
TCDD – tetrachlorodibenzo(p)dioxin
TEQ - toxic equivalency
USEPA – United States Environmental Protection Agency

Table 53 – Ecological PALs for Total PCBs and PCB and PCDD/F TEQs

Matrix/Analyte	Units	Ecological Value	Basis
Soil – Total PCB Congeners	ng/g	41	USEPA Region 4 for Total PCBs
Surface Water – Total PCB Congeners	pg/L	14000	Massachusetts SWQS for aquatic life (Total PCBs)
Surface Water - Total PCDD/F TEQ (Mammal)	µg/L	3.1E-9	USEPA Region 4 for 2,3,7,8-TCDD (Dioxin) (Wildlife Based)
Surface Water - Total PCB TEQ (Mammal)	µg/L	3.1E-9	USEPA Region 4 for 2,3,7,8-TCDD (Dioxin) (Wildlife Based)
Sediment – Total PCB Congeners	ng/g	14	USEPA Region 4 (Total PCBs; wildlife)
Fish & Mussel Tissue – Total PCB Congeners	ng/kg	35000	Lowest of Oregon DEQ Aroclor 1254 values protective of birds and mammals consuming

Matrix/Analyte	Units	Ecological Value	Basis
			fish/shellfish and values protective of fish, shellfish, and other aquatic organisms [Tables A-3 & A-4]
Fish & Mussel Tissue - Total PCDD/F TEQ (Bird)	ng/kg	8	Lowest of Oregon DEQ 2,3,7,8-TCDD values protective of birds consuming fish/shellfish [Table A-3]
Fish & Mussel Tissue - Total PCDD/F TEQ (Fish)	ng/kg	6.4	Lowest of Oregon DEQ 2,3,7,8-TCDD values protective of fish, shellfish, and other aquatic organisms [Table A-4]
Fish & Mussel Tissue - Total PCDD/F TEQ (Mammal)	ng/kg	0.58	Lowest of Oregon DEQ 2,3,7,8-TCDD values protective of mammals consuming fish/shellfish [Table A-3]
Fish & Mussel Tissue - PCB-TEQ (Bird)	ng/kg	8	Lowest of Oregon DEQ 2,3,7,8-TCDD values protective of birds consuming fish/shellfish [Table A-3]
Fish & Mussel Tissue - PCB-TEQ (Fish)	ng/kg	6.4	Lowest of Oregon DEQ 2,3,7,8-TCDD values protective of fish, shellfish, and other aquatic organisms [Table A-4]
Fish & Mussel Tissue - PCB-TEQ (Mammal)	ng/kg	0.58	Lowest of Oregon DEQ 2,3,7,8-TCDD values protective of mammals consuming fish/shellfish [Table A-3]

Notes:
DEQ – Department of Environmental Quality
ng/g – nanograms per gram
ng/kg – nanograms per kilogram
PCBs – polychlorinated biphenyls
PCDD/F - polychlorinated dibenzodioxins/furans
pg/L – picograms per liter
RSL – Regional Screening Level
SWQS – Surface Water Quality Standard
TCDD – tetrachlorodibenzo(p)dioxin
TEQ - toxic equivalency
µg/L – micrograms per liter
USEPA – United States Environmental Protection Agency

Total PCB congeners in Phase 2 reach floodplain soil, depositional area floodplain soil (Phase 1 reach), low-flow surface water, high-flow surface water, mussel tissue, Phase 2 reach sediment, and Pine Tree Brook sediment are depicted on **Figures 8, 9, 11, 12, 13, 14,** and **15**, respectively.

On **Figures 8** and **9**, PCB results for soil that were not detected above the reported detection limit are depicted by gray symbols, results less than 1 mg/kg are depicted by blue symbols, results greater than or equal to 1 mg/kg and less than 10 mg/kg are depicted by green symbols, results greater than or equal to 10 mg/kg and less than 50 mg/kg are depicted by yellow symbols, and results greater than or equal to 50 mg/kg are depicted by red symbols, as requested by USEPA.

On **Figures 14** and **15**, PCB results for sediment below the 25th percentile, between the 25th and 50th percentile, between the 50th and 75th percentile, and above the 75th percentile are depicted by blue, green, yellow, and red symbols, respectively. The percentiles were calculated using results from within the Phase 2 reach and were used in the legend to show the spatial distribution in concentrations.

On the surface water and mussel tissue figures (**Figures 11**, **12**, and **13**), PCB results are presented as concentrations.

5.2 Floodplain Soil Analytical Results

Total PCB congeners for the Phase 2 reach and depositional area (Phase 1 reach) are depicted on **Figure 8** and **Figure 9,** respectively. PCB results for soil that were not detected above the reported detection limit are depicted on the figures by gray symbols, results less than 1 mg/kg are depicted by blue symbols, results greater than or equal to 1 mg/kg and less than 10 mg/kg are depicted by green symbols, results greater than or equal to 10 mg/kg and less than 50 mg/kg are depicted by yellow symbols, and results greater than or equal to 50 mg/kg are depicted by red symbols as requested by USEPA.

Validated floodplain soil analytical results are presented in **Tables 12** and **13** for the Phase 2 reach and depositional area (Phase 1 reach), respectively. Summary statistics of the validated results including the number of samples, number of detections, and minimum, maximum, and average detected values are presented in **Tables 14** and **15** for the Phase 2 reach and depositional area, respectively. As noted above, not all samples were analyzed for all constituents as a result of sample mass limitations. **Table 12** presents the analytical results for the 498 floodplain soil samples (including 25 field duplicates) from the Phase 2 reach and **Table 14** includes summary statistics for the samples. **Table 14** indicates that detections in floodplain soil in the Phase 2 reach include all PCDD/Fs, all PCB congeners except one (PCB-186), all metals, 33 of the 54 VOCs that were analyzed, and 32 of the 69 SVOCs that were analyzed. Based on a comparison of the results with the human health and ecological PALs, the following observations are made:

- PCDD/Fs: Of the 17 PCDD/Fs congeners analyzed, 13 were detected above their respective human health PALs and 15 were detected above their respective ecological PALs. The congener with the most exceedances of its human health PAL was 1,2,3,4,6,7,8-HpCDD; 280 out of 497 samples exceeded the human health PAL. The congener with the most exceedances of its ecological PAL was 2,3,4,7,8-PeCDF; 317 out of 497 samples exceeded the ecological PAL. The PCDD/F congener with the highest toxicity, 2,3,7,8-TCDD, was detected above the human health and ecological PAL in 42 and 79 out of 497 samples, respectively.
- PCB Congeners: The concentration of total PCB congeners (calculated as the sum of detected congeners) exceeded its human health and ecological PAL in 426 and 450 out of 497 samples, respectively.
- Metals: Of the 23 metals analyzed, 13 were detected above their respective human health PALs and 15 were detected above their respective ecological PALs. The metals with the most exceedances of their human health PALs were chromium and arsenic; 492 and 481 out of 492 samples exceeded the human health PALs for these metals, respectively. The metals with the most exceedances of their ecological PALs were vanadium, lead, and mercury; 462, 431, and 431 out of 492 samples exceeded the ecological PALs for these metals, respectively.
- SVOCs: Of the 69 SVOCs analyzed, seven PAHs and three non-PAHs were detected above their respective human health PALs and 14 PAHs and nine non-PAHs were detected above their respective ecological PALs. The SVOC with the most exceedances of its human health PAL was benzo(a)pyrene; 205 out of 487 samples exceeded the human health PAL for this SVOC. The SVOC with the most exceedances of its ecological PAL was bis(2-ethylhexyl) phthalate; 159 out of 487 samples exceeded the ecological PAL for this SVOC.
- VOCs: Of the 54 VOCs analyzed, one was detected above its respective human health PAL and 12 were detected above their respective ecological PALs. The only VOC detected above its human health PAL was 1,2-dibromo-3-chloropropane, which was only detected in one out of 476 samples. The VOC with the most exceedances of its ecological PAL was carbon disulfide; four out of 476 samples exceeded the ecological PAL for this VOC.

Table 13 shows the analytical results for the seven floodplain soil samples (including one field duplicate) from the depositional area upstream of Dana Avenue and **Table 15** includes summary statistics for the samples. **Table 15** indicates that detections in floodplain soil in the depositional area include all PCDD/Fs except 1,2,3,7,8,9-HxCDF and 2,3,7,8-TCDD, all PCB congeners except 15 (PCB-14, 36, 62, 65, 76, 111/117, 155, 161, 165, 169, 181, 184, 186, 188, 204), all metals except beryllium, cadmium, and selenium, three of the 54 VOCs that were analyzed, and 26 of the 69 SVOCs that were analyzed. Based on a comparison of the results with the human health and ecological PALs, the following observations are made:

- PCDD/Fs: Of the 17 PCDD/Fs congeners analyzed, only 2,3,4,7,8-PeCDF was detected above its respective human health and ecological PAL. Two out of seven samples exceeded the human health PAL for 2,3,4,7,8-PeCDF. Six out of seven samples exceeded the ecological PAL for 2,3,4,7,8-PeCDF. The congener 2,3,7,8-TCDD was not detected in any of the samples.
- PCB Congeners: The concentration of total PCB congeners (calculated as the sum of detected congeners) exceeded its human health and ecological PAL in all seven samples.
- Metals: Of the 23 metals analyzed, six were detected above their respective human health PALs and eight were detected above their respective ecological PALs. The metals with the most exceedances of their human health PALs were arsenic, total chromium, and iron; seven out of seven samples exceeded the human health PAL for each of these metals. The metals with the most exceedances of their ecological PALs were lead, copper, manganese, and zinc; seven, six, six, and six out of seven samples exceeded the ecological PAL for these metals, respectively.
- SVOCs: Of the 69 SVOCs analyzed, six PAHs and two non-PAHs were detected above their respective human health PALs and 10 PAHs and six non-PAHs were detected above their respective ecological PALs. The SVOC with the most exceedances of its human health PAL was benzo(a)pyrene; six out of seven samples exceeded the human

health PAL for this SVOC. The SVOCs with the most exceedances of their ecological PAL were carbazole and fluoranthene; five out of seven samples exceeded the ecological PAL for each of these SVOCs.

- VOCs: Of the VOCs analyzed, none were detected above their respective human health or ecological PALs.

Figure 10 depicts total PCBs congeners in floodplain soil in the Phase 2 reach, light detection and ranging (LiDAR) data, and the distance of a location from the edge of the 100-year floodplain and ordinary high-water mark (OHWM) if the location falls beyond one or more of these features. The LiDAR data were collected by USEPA in March 2023, the edge of the 100-year floodplain was based on Federal Emergency Management Agency (FEMA) data, where available, and the OHWM was flagged by AECOM as part of the ecological evaluations that were conducted in August and December 2024. Additional information on the LiDAR data can be found in the Site Reconnaissance Summary (AECOM, 2023b) for the Phase 1 investigation. Additional information on the OHWM flags can be found in the Phase 2 Site Reconnaissance Summary (AECOM, 2024e), which was submitted in draft format to USEPA on December 16, 2024.

5.3 Low-Flow Surface Water Analytical Results

Total PCB congeners concentrations for low-flow surface water are depicted on **Figure 11.** Validated low-flow surface water analytical results are presented in **Table 16**. Summary statistics of the validated results including the number of samples, number of detections, and minimum, maximum, and average detected values are presented in **Table 18**. **Table 16** presents the analytical results for the six filtered (including one duplicate) and six total fraction low-flow surface water samples (including one duplicate). **Table 18** indicates that of the chemical parameters analyzed for in the low-flow surface water samples, detections include four of the 17 PCDD/F congeners, two of eight PCDD/F homolog sums, 91 individual or co-eluting PCB congeners, eight of 10 PCB homolog sums, 17 and 15 of the 23 metals in total fraction and filtered samples, respectively, and 3 of the 54 VOCs. TCL pesticides and total cyanide were not detected in any of the samples. Based on a comparison of the results with the human health and ecological PALs, the following observations are made:

- PCDD/Fs: Of the 17 PCDD/F congeners analyzed, one was detected above its respective human health PAL and three were detected above their respective ecological PALs. The PCDD/F congener 1,2,3,4,6,7,8-heptachlorodibenzo-p-dioxin exceeded its human health PAL in one of six samples. The three PCDD/F congeners that exceeded their respective ecological PALs, exceeded the PAL in one of six samples; these congeners were 1,2,3,4,6,7,8-heptachlorodibenzofuran, 1,2,3,4,6,7,8-heptachlorodibenzo-p-dioxin, and octachlorodibenzo-p-dioxin. The most toxic of all PCDD/F congeners, 2,3,7,8-TCDD, was not detected in any of the six samples.
- PCDD/F TEQ: Total TCDD/F TEQ (mammal) was above its respective human health and ecological PAL in three of six samples and four of six samples, respectively.
- PCB Congeners: Total PCB congeners were detected above both the human health PAL and ecological PAL in five of six samples. No PCB congeners were detected in the sample collected in Pine Tree Brook (24B-0004-ASL).
- PCB TEQ: Total PCB TEQ (mammal) was above its respective human health and ecological PAL in three of six samples and five of six samples, respectively.
- Total Metals: Of the 23 metals analyzed, five were detected above their respective human health PALs and six were detected above their respective ecological PALs. The metal responsible for the most exceedances of its human health PAL was manganese; all six samples exceeded the human health PAL for this metal. The metals responsible for the most exceedances of their ecological PALs were lead, manganese, and zinc; lead and zinc exceeded their ecological PALs in all six samples and manganese exceeded its ecological PAL in five of the six samples.
- Dissolved Metals: Of the 23 filtered metals analyzed, three were detected above their respective human health PALs and four were detected above their respective ecological PALs. The metal responsible for the most exceedances of its human health PAL was manganese; five of six samples exceeded the human health PAL for this metal. The metals responsible for the most exceedances of their ecological PALs were manganese and zinc; four and five of the six samples exceeded the ecological PAL for these metals, respectively.
- VOCs: Of the 54 VOCs analyzed, only three were detected and none were detected above their respective human health or ecological PALs.
- TCL Pesticides: TCL pesticides were not detected above the reported detection limit.
- Total Cyanide: Total cyanide was not detected above the reported detection limit.

5.4 High-Flow Surface Water Analytical Results

Total PCB congeners concentrations for high-flow surface water are depicted on **Figure 12**. Validated high-flow surface water analytical results are presented in **Table 17** and summary statistics of the validated results are provided in **Table 19**. **Table 17** shows the analytical results for the five filtered (including one duplicate) and five total fraction high-flow surface water samples (including one duplicate). **Table 19** indicates that of the chemical parameters analyzed in the high-flow surface water samples, detections include all of the 17 PCDD/F congeners, three of eight PCDD/F homolog sums, all 162 individual or co-eluting PCB congeners, all 10 PCB homolog sums, 14 metals in the total fraction and 14 metals in the filtered fraction of the 23 metals , and cyanide. TCL pesticides and TCL VOCs were not detected in any of the samples. Based on a comparison of the results with the human health and ecological PALs, the following observations are made:

- PCDD/Fs: Of the 17 PCDD/F congeners analyzed, one was detected above its respective human health PAL and three were detected above their respective ecological PALs. The PCDD/F congener 1,2,3,4,6,7,8-heptachlorodibenzofuran exceeded its human health PAL in two of five samples. The three PCDD/F congeners that exceeded their respective ecological PALs were 1,2,3,4,6,7,8-heptachlorodibenzofuran, octachlorodibenzofuran, and octachlorodibenzo-p-dioxin; four, one, and four out of five samples exceeded the PALs for these PCDD/F congeners, respectively. The most toxic of all PCDD/F congeners, 2,3,7,8-TCDD, was not detected in any of the five samples.
- PCDD/F TEQ: Total PCDD/F TEQ (mammal) was above its respective human health and ecological PAL in four of five samples.
- PCB Congeners: Total PCB congeners were detected above the human health PAL in all five samples. Total PCB congeners were not detected above the ecological PAL.
- PCB TEQ: PCB TEQ (mammal) was above its respective human health and ecological PAL in three of five samples and four of five samples, respectively.
- Total Metals: Of the 23 metals analyzed, three were detected above their respective human health PALs and six were detected above their respective ecological PALs. The metals responsible for the most exceedances of their human health PALs were arsenic and manganese; all five samples exceeded the human health PAL for both of these metals. The metals responsible for the most exceedances of their ecological PALs were aluminum, copper, lead, manganese, and zinc; all five samples exceeded the ecological PAL for these five metals.
- Dissolved Metals: Of the 23 filtered metals analyzed, two were detected above their respective human health PALs and four were detected above their respective ecological PALs. All five samples exceeded the human health PAL for both arsenic and manganese. The metals responsible for the most exceedances of their ecological PALs were lead, manganese, and zinc; all five samples exceeded the ecological PAL for these three metals.
- VOCs: VOCs were not detected above the reported detection limit.
- TCL Pesticides: TCL pesticides were not detected above the reported detection limit.
- Total Cyanide: Total cyanide was detected in three of five samples; all three detections were above its human health PAL and ecological PAL.

As depicted on the figures, total PCBs congeners were higher in surface water during low-flow conditions than high-flow conditions. During low-flow conditions surface water collected from the four stations within the Lower Neponset River had total PCB congener concentrations ranging from 42 nanograms per liter (ng/L) to 86 ng/L and PCB congeners were not detected in surface water from Pine Tree Brook (24B-0004-ASL). During high-flow conditions surface water collected from the three stations within the Lower Neponset River had total PCB congener concentrations ranging from 4.8 ng/L to 10 ng/L and total PCB congeners were detected in surface water from Pine Tree Brook (24B-0004-ASL) at a relatively low concentration of 0.27 ng/L.

5.5 Mussel Tissue Analytical Results

Total PCB congener concentrations for mussel tissue are depicted on **Figure 13**. Validated mussel sample analytical results are presented in **Tables 20** and **21** for the time 0 ‘pre-deployment’ and site samples, respectively. The tables include homolog group sums for PCDD/Fs and PCB congeners, total PCB congeners, total PAHs, total HMW PAHs, and total LMW PAHs. TEQs were also calculated for PCDD/Fs and PCB congeners. TEQ calculation details can be found in the notes in **Tables 20** and **21**.

Tables 22 and **23** compare the PCDD/F TEQs, PCB TEQs, total PCB congeners, mercury, methyl mercury, individual pesticides, individual metals (excluding essential nutrients), and individual PAH concentrations to the ecological PALs for the time 0 'pre-deployment' and Site samples, respectively. **Tables 24** and **25** present summary statistics of the validated results including the number of samples, number of detections, and minimum, maximum, and average detected values for results from the Phase 1 and Phase 2 reaches, respectively. **Tables 26** and **27** summarize the number of PCDD/F TEQs, PCB TEQs, total PCB congeners, mercury, methyl mercury, individual pesticides, individual metals (excluding essential nutrients), and individual PAHs that exceed the PALs, where available, for results from the Phase 1 and Phase 2 reaches, respectively.

Table 20 shows the analytical results for the time 0 'pre-deployment' sample. The table indicates that detections in the time 0 'pre-deployment' sample include three of the 17 PCDD/Fs that were analyzed, 91 of the 173 PCB congeners that were analyzed, 10 of the 22 metals that were analyzed, mercury, methyl mercury, and three of the 20 pesticides that were analyzed. PAHs were not detected. Based on a comparison of the results with the ecological PALs in **Table 22**, all concentrations were below the PALs.

Table 21 shows the analytical results for the samples from the cages that were deployed in the Phase 1 and 2 reaches. In the Phase 1 reach, replicate cages were deployed at three locations, resulting in six mussel tissue samples. In the Phase 2 reach, replicate cages were deployed at five locations, resulting in 11 mussel tissue samples (including one duplicate).

5.5.1 Phase 1 Reach Mussel Tissue

Table 24 presents summary statistics for the mussel tissue results from the Phase 1 reach. **Table 24** indicates that detections in the samples from the Phase 1 reach include all PCDD/Fs except four, 164 of the 173 PCB congeners that were analyzed, 14 of the 22 metals that were analyzed, mercury, methyl mercury, three of the 17 PAHs that were analyzed, and four of the 20 pesticides that were analyzed. The results from the Phase 1 reach are compared with the ecological PALs in **Table 23** and summarized in **Table 26** (note that PALs are not available for all analytes). Based on a comparison of the Phase 1 results with ecological PALs, the following observations are made:

- PCDD/F TEQ: Of the three PCDD/Fs TEQs that were calculated, only total PCDD/F TEQ (mammal) was above its ecological PAL; one of six samples slightly exceeded the ecological PAL for total PCDD/F TEQ (mammal).
- PCB TEQ: Of the three PCB TEQs that were calculated, PCB-TEQ (bird) and PCB-TEQ (mammal) were above their respective ecological PALs in all six samples.
- Total PCB Congeners: Total PCB Congeners were detected above the ecological PAL in all six samples.
- Metals: Of the 20 metals analyzed, three were detected above their respective ecological PALs. These three metals were cadmium, lead, and selenium; four, five, and six of six samples exceeded their ecological PAL, respectively.
- Mercury: Mercury and methyl mercury were detected in all six samples but were below their respective ecological PALs.
- PAHs: Of the 17 PAHs analyzed, none were detected above their respective ecological PALs.
- TCL Pesticides: Of the 20 pesticides analyzed, none were detected above their respective ecological PALs.

5.5.2 Phase 2 Reach Mussel Tissue

Table 25 presents summary statistics for the mussel tissue results from the Phase 2 reach. **Table 25** indicates that detections in the samples from the Phase 2 reach include all PCDD/Fs except five, 161 of the 173 PCB congeners that were analyzed, 13 of 22 metals that were analyzed, mercury, methyl mercury, one of the 17 PAHs that were analyzed, and four of the 20 pesticides that were analyzed. The results from the Phase 2 reach are compared with the ecological PALs in **Table 23** and summarized in **Table 27**. Based on a comparison of the Phase 2 results with ecological PALs, the following observations are made:

- PCDD/F TEQ: Of the three PCDD/F TEQs that were calculated, none were detected above their respective ecological PALs.
- PCB TEQ: Of the three PCB TEQs that were calculated, PCB-TEQ (bird) and PCB-TEQ (mammal) were above their respective ecological PALs; 11 and 10 out of 11 samples exceeded the ecological PAL for PCB-TEQ (bird) and PCB-TEQ (mammal), respectively.
- Total PCB Congeners: Total PCB Congeners were detected above the ecological PAL in 11 of 11 samples.

- Metals: Of the 20 metals analyzed, three were detected above their respective ecological PALs. These three metals were cadmium, lead, and selenium; two, ten, and nine of 11 samples exceeded the ecological PAL, respectively.
- Mercury: Mercury was detected above its ecological PAL in two of six samples.
- PAHs: Of the 17 PAHs analyzed, only indeno(1,2,3-cd)pyrene was detected; a PAL is not available for the single detection of indeno(1,2,3-cd)pyrene.
- TCL Pesticides: Of the 20 pesticides analyzed, none were detected above their respective ecological PALs.

5.6 Sediment Analytical Results

Total PCB congeners for sediment in the Phase 2 reach and in Pine Tree Brook are depicted on **Figures 14** and **Figure 15**, respectively. PCB results for sediment below the 25th percentile, between the 25th and 50th percentile, between the 50th and 75th percentile, and above the 75th percentile are depicted on the figures by blue, green, yellow, and red symbols, respectively. The percentiles were calculated using results from within the Phase 2 reach and were used in the legend to show the spatial distribution in concentrations.

Validated sediment sampling analytical results are presented for the Phase 2 reach and Pine Tree Brook in **Tables 28** and **29**, respectively. Summary statistics of the validated results including the number of samples, number of detections, and minimum, maximum, and average detected values are provided in **Tables 30** and **31** for the Phase 2 reach and Pine Tree Brook, respectively. As noted above, not all samples were analyzed for all constituents as a result of sample mass limitations. **Table 28** shows the analytical results for the 303 sediment samples (including 16 field duplicates) from the Phase 2 reach and **Table 30** includes summary statistics for the samples.

Table 30 indicates that detections in sediment in the Phase 2 reach include all PCB congeners except PCB-076, all PCDD/F congeners except 1,2,3,7,8,9-HxCDF, all metals, 29 of the 69 SVOCs that were analyzed, 23 of the 54 VOCs that were analyzed, and TOC. Based on a comparison of the results with the human health and ecological PALs, the following observations are made:

- PCDD/Fs: Of the 17 PCDD/Fs congeners analyzed, 13 were detected above their respective human health PALs and 16 were detected above their respective ecological PALs. The congener with the most exceedances of its human health PAL was 1,2,3,4,6,7,8-HpCDD; 191 of 303 samples exceeded the human health PAL. The congener with the most exceedances of its ecological PAL was 2,3,4,7,8-PeCDF; 280 of 303 samples exceeded the ecological PAL. The PCDD/F congener with the highest toxicity, 2,3,7,8-TCDD, was detected above the human health and ecological PAL in 28 and 186 of 303 samples, respectively.
- PCB Congeners: The concentration of total PCB congeners (calculated as the sum of detected congeners) exceeded its human health PAL and ecological PAL in 292 and 303 of 303 samples, respectively.
- Metals: Of the 23 metals analyzed, 13 were detected above their respective human health PALs and 13 were detected above their respective ecological PALs. The metals with the most exceedances of their human health PALs were total chromium (human health PAL for hexavalent chromium was used to evaluate total chromium as a screening-level approach), arsenic, iron, and cobalt; 293, 289, 287, and 274 of 293 samples exceeded the human health PALs for these metals, respectively. The metals with the most exceedances of their ecological PALs were barium, lead, and mercury; 277, 246, and 211 of 293 samples exceeded the ecological PALs for these metals, respectively.
- SVOCs: Of the 69 SVOCs analyzed, four PAHs and one non-PAH were detected above their respective human health PALs and 17 PAHs and 9 non-PAHs were detected above their respective ecological PALs. The SVOC with the most exceedances of its human health PAL was benzo(a)pyrene; 85 of 289 samples exceeded the human health PAL for this SVOC. The SVOCs with the most exceedances of their ecological PALs were benzo(a)anthracene and pyrene; 127 and 125 of 289 samples exceeded the ecological PALs for these SVOCs, respectively.
- VOCs: Of the 54 VOCs analyzed, none were detected above their respective human health PALs and two were detected above their respective ecological PALs. The two VOCs that exceeded their ecological PALs were acetone and toluene; 37 and 7 of 286 samples exceeded the ecological PALs for these VOCs, respectively.

Table 29 shows the analytical results for the 10 sediment samples from Pine Tree Brook and **Table 31** includes summary statistics for the samples. **Table 31** indicates that detections in sediment in Pine Tree Brook include 48 of the 167 PCB congeners that were analyzed, all PCDD/Fs congeners, 19 of the 23 metals that were analyzed, 12 of the 69 SVOCs that were

analyzed, two of the 54 VOCs that were analyzed, and TOC. Based on a comparison of the results with the human health and ecological PALs, the following observations are made:

- PCDD/Fs: Of the 17 PCDD/Fs congeners analyzed, one was detected above its respective human health PAL and six were detected above their respective ecological PALs. 1,2,3,4,6,7,8-HpCDD was the only congener detected above its respective human health PAL; one of 10 samples exceeded the human health PAL. The PCDD/F congener with the most exceedances of its ecological PAL was 2,3,4,7,8-PeCDF; five of 10 samples exceeded the ecological PAL. The PCDD/F congener with the highest toxicity, 2,3,7,8-TCDD, was detected in one of the 10 samples, but did not exceed its human health or ecological PAL.
- PCB Congeners: The concentration of total PCB congeners (calculated as the sum of detected congeners) exceeded its human health PAL and ecological PAL in one and seven of 10 samples, respectively.
- Metals: Of the 23 metals analyzed, five were detected above their respective human health PALs and four were detected above their respective ecological PALs. The metals with the most exceedances of their human health PALs were arsenic and total chromium (human health PAL for hexavalent chromium was used to evaluate total chromium as a screening-level approach; all 10 samples exceeded the human health PAL for each of these metals. The metals with the most exceedances of their ecological PALs were barium and lead; five of 10 samples exceeded the ecological PAL for each of these metals.
- SVOCs: Of the 69 SVOCs analyzed, none were detected above their respective human health PALs and six PAHs were detected above their respective ecological PALs. The SVOCs with the most exceedances of their ecological PALs were benzo(a)anthracene and benzo(b)fluoranthene; two of 10 samples exceeded the ecological PAL for each of these SVOCs.
- VOCs: Of the 54 VOCs analyzed, none were detected above their respective human health or ecological PALs.

The sediment data will also be incorporated into a 3-dimensional (3-D) visualization along with the bathymetry data. The bathymetry survey for the Phase 2 reach was conducted in August 2025 and is pending data gap evaluation. Once the bathymetric data have been processed, the 3-D visualization will be completed and provided to USEPA as a separate deliverable.

5.7 Fish Tissue Analytical Results

Figures were not generated for the fish tissue results because fish were collected in both the Phase 1 and 2 reaches and the typical home ranges of the target species comprise most of the area of each reach. Validated fish sample analytical results are presented in **Table 32**. Concentrations of PCDD/F TEQ (mammal), PCB TEQ (mammal), mercury, methyl mercury, individual pesticides, and individual metals (excluding essential nutrients) in fillet samples compared to the human health PALs are presented in **Table 33**. Calculated whole-body concentrations compared to ecological PALs for the same set of parameters are presented in **Table 34**, in addition to PCDD/F TEQ (fish), PCDD/F TEQ (bird), PCB TEQ (fish), and PCB TEQ (bird).

Tables 35, 36, 37, and **38** present summary statistics for brown bullhead by reach and tissue type (fillet and whole-body) including the number of samples, number of detections, and minimum, maximum, and average detected values. **Tables 39, 40, 41,** and **42** present summary statistics for white sucker by reach and tissue type (fillet and whole-body). **Tables 43, 44, 45,** and **46** summarize the number of PCDD/F TEQs, PCB TEQs, total PCB congeners, mercury, methyl mercury, individual pesticides, and individual metals (excluding essential nutrients) that are above PALs for brown bullhead by reach and tissue type (fillet and whole-body). **Tables 47, 48, 49,** and **50** summarize the numbers of concentrations that are above PALs for white sucker by reach and tissue type (fillet and whole-body) for the same set of parameters. The following sections discuss the results by fish type, reach, and tissue type (fillet and whole-body).

5.7.1 Fillet Concentrations in Phase 1 Reach – Brown Bullhead

Table 35 summarizes the fillet concentrations of brown bullhead from the Phase 1 reach. The table indicates that detections include two of the 17 PCDD/Fs congeners that were analyzed, 143 of the 166 PCB congeners that were analyzed, 6 of the 20 pesticides that were analyzed, two of the 22 metals that were analyzed, mercury, and methyl mercury. The results are compared with the human health PALs in **Table 33** and summarized in **Table 43**. Based on a comparison of the results with the human health PALs, the following observations are made:

- PCDD/F TEQ (Mammal): Total PCDD/F TEQ (mammal) was detected above the human health PAL in one of eight samples.

- PCB TEQ (Mammal): Total PCB TEQ (mammal) was detected above the human health PAL in all eight samples.
- PCB Congeners: Total PCB congeners were detected above the human health PAL in all eight samples.
- TCL Pesticides: Of the 20 pesticides analyzed, none were detected above their respective human health PALs.
- TAL Metals: Of the 18 metals that were compared to the human health PALs, only zinc and potassium were detected, and all detections were below the human health PAL.
- Mercury: Mercury and methyl mercury were detected above their respective human health PALs in all six samples.

5.7.2 Calculated Whole-Body Concentrations in Phase 1 Reach – Brown Bullhead

Table 36 summarizes the calculated whole-body concentrations of brown bullhead from the Phase 1 reach. The table indicates that detections include eight of the 17 PCDD/F congeners that were analyzed, 146 of 166 PCB congeners that were analyzed, seven of the 20 pesticides that were analyzed, five of the 22 metals that were analyzed, mercury, and methyl mercury. The results are compared with the ecological PALs in **Table 34** and summarized in **Table 44**. Based on a comparison of the results with the ecological PALs, the following observations are made:

- PCDD/F TEQ: Of the three PCDD/F TEQs that were calculated, only total PCDD/F TEQ (mammal) was above its ecological PAL; three of eight samples had a PCDD/F TEQ (mammal) concentration above the PAL.
- PCB TEQ: Of the three PCB TEQs that were calculated, two were above their respective ecological PAL in one or more samples; seven and eight out of eight samples exceeded the ecological PAL for PCB TEQ (bird) and PCB TEQ (mammal), respectively.
- PCB Congeners: Total PCB congeners were detected above the ecological PAL in all eight samples.
- TCL Pesticides: Of the 20 pesticides analyzed for, p,p'-DDE (4,4'-DDE) was the only pesticide detected above its respective ecological PAL; four of eight samples had p,p'-DDE (4,4'-DDE) concentrations above the PAL.
- TAL Metals: Of the 18 metals that were compared to the ecological PALs, none were detected above their respective PALs.
- Mercury: Mercury and methyl mercury were detected above their respective ecological PALs in all eight samples.

5.7.3 Fillet Concentrations in Phase 2 Reach – Brown Bullhead

Table 37 summarizes the fillet samples of brown bullhead from the Phase 2 reach. The table indicates that detections include five of the 17 PCDD/F congeners that were analyzed, 147 of the 166 PCB congeners that were analyzed, seven of the 20 pesticides that were analyzed, two of the 22 metals that were analyzed, mercury, and methyl mercury. The results are compared with the human health PALs in **Table 33** and summarized in **Table 45**. Based on a comparison of the results with the human health PALs, the following observations are made:

- PCDD/F TEQ (Mammal): Total PCDD/F TEQ (Mammal) was detected above the human health PAL in one of nine samples.
- PCB TEQ (Mammal): Total PCB TEQ (mammal) was detected above the human health PAL in all nine samples.
- PCB Congeners: Total PCB congeners were detected above the human health PAL in all nine samples.
- TCL Pesticides: Of the 20 pesticides analyzed, dieldrin was the only pesticide detected above its respective human health PAL; one of nine samples had a dieldrin concentration above the PAL.
- TAL Metals: Of the 18 metals that were compared to the human health PALs, only zinc was detected and detections were below the PAL.
- Mercury: Mercury and methyl mercury were detected above their respective human health PALs in all three samples.

5.7.4 Calculated Whole-Body Concentrations in Phase 2 Reach – Brown Bullhead

Table 38 summarizes the calculated whole-body concentrations of brown bullhead from the Phase 2 reach. The table indicates that detections include 10 of the 17 PCDD/F congeners that were analyzed, 155 of the 166 PCB congeners that were analyzed, seven of the 20 pesticides that were analyzed, 9 of the 22 metals that were analyzed, mercury, and methyl mercury. The results

are compared with the ecological PALs in **Table 34** and summarized in **Table 46**. Based on a comparison of the results with the ecological PALs, the following observations are made:

- PCDD/F TEQ: Of the three PCDD/F TEQs that were calculated, only PCDD/F TEQ (mammal) was above its ecological PAL; one of nine samples had a PCDD/F TEQ (mammal) concentration above the PAL.
- PCB TEQ: Of the three PCB TEQs that were calculated, two were above their respective ecological PAL in one or more samples; six and nine of nine samples exceeded the ecological PAL for PCB TEQ (bird) and PCB TEQ (mammal), respectively.
- PCB Congeners: Total PCB congeners were detected above the ecological PAL in all nine samples.
- TCL Pesticides: Of the 20 pesticides analyzed, none were detected above their respective ecological PALs.
- TAL Metals: Of the 18 metals that were compared to the ecological PALs, only lead was detected above the PAL; one of nine samples had a lead concentration above the PAL.
- Mercury: Mercury and methyl mercury were detected above their respective ecological PALs in nine and eight of nine samples, respectively.

5.7.5 Fillet Concentrations in Phase 1 Reach – White Sucker

Table 39 summarizes the fillet samples of white sucker from the Phase 1 reach. The table indicates that detections include nine of the 17 PCDD/F congeners that were analyzed, 150 of the 166 PCB congeners that were analyzed, seven of the 20 pesticides that were analyzed, three of the 22 metals that were analyzed, mercury, and methyl mercury. The results are compared with the human health PALs in **Table 33** and summarized in **Table 47**. Based on a comparison of the results with the human health PALs, the following observations are made:

- PCDD/F TEQ (Mammal): Total PCDD/F TEQ (mammal) was detected above the human health PAL in all eight samples.
- PCB TEQ (Mammal): Total PCB TEQ (mammal) was detected above the human health PAL in all eight samples.
- PCB Congeners: Total PCB congeners were detected above the human health PAL in all eight samples.
- TCL Pesticides: Of the 20 pesticides analyzed, dieldrin, p,p'-DDD (4,4'-DDD), and p,p'-DDE (4,4'-DDE) were the only pesticides detected above their respective human health PALs; seven, one, and eight of eight samples had dieldrin, p,p'-DDD (4,4'-DDD), and p,p'-DDE (4,4'-DDE) concentrations above the PALs, respectively.
- TAL Metals: Of the 17 metals that were compared to the human health PALs, only zinc was detected, and detections were below the PAL.
- Mercury: Mercury and methyl mercury were detected above their respective human health PALs in all eight samples.

5.7.6 Calculated Whole-Body Concentrations in Phase 1 Reach – White Sucker

Table 40 summarizes the calculated whole-body concentrations of white sucker from the Phase 1 reach. The table indicates that detections include 14 of the 17 PCDD/F congeners that were analyzed, 152 of the 166 PCB congeners, 7 of 20 pesticides that were analyzed, eight of the 22 metals that were analyzed, mercury, and methyl mercury. The results are compared with the ecological PALs in **Table 34** and summarized in **Table 48**. Based on a comparison of the results with the ecological PALs, the following observations are made:

- PCDD/Fs TEQ: Of the three PCDD/F TEQs that were calculated, all three were above their respective ecological PAL in one or more samples; seven, four, and eight out of eight samples exceeded the ecological PAL for PCDD/F TEQ (bird), PCDD/F TEQ (fish), and PCDD/F TEQ (mammal), respectively.
- PCB TEQ: Of the three PCB TEQs that were calculated, all three were above their respective ecological PAL in one or more samples; eight, one, and eight out of eight samples exceeded the ecological PAL for PCB-TEQ (bird), PCB-TEQ (fish), and PCB-TEQ (mammal), respectively.
- PCB Congeners: Total PCB congeners were above the ecological PAL in all eight samples.
- TCL Pesticides: Of the 20 pesticides that were analyzed, p,p'-DDD (4,4'-DDD) and p,p'-DDE (4,4'-DDE) were the only pesticides that were detected above their respective ecological PALs; p,p'-DDD (4,4'-DDD) and p,p'-DDE (4,4'-DDE) were above their respective PALs in two and eight of eight samples, respectively.

- TAL Metals: Of the four metals that were compared to the ecological PALs, none were detected above their respective PALs.
- Mercury: Mercury and methyl mercury were detected above their respective ecological PALs in all eight samples.

5.7.7 Fillet Concentrations in Phase 2 Reach – White Sucker

Table 41 summarizes the fillet samples of white sucker from the Phase 2 reach. The table indicates that detections include 10 of the 17 PCDD/F congeners that were analyzed, 142 of the 166 PCB congeners that were analyzed, seven of the 20 pesticides that were analyzed, three of the 22 metals that were analyzed, mercury, and methyl mercury. The results are compared with the human health PALs in **Table 33** and summarized in **Table 49**. Based on a comparison of the results with the human health PALs, the following observations are made:

- PCDD/F TEQ (Mammal): Total PCDD/F TEQ (mammal) was detected above the human health PAL in all six samples.
- PCB TEQ (Mammal): Total PCB TEQ (mammal) was detected above the human health PAL in all six samples.
- PCB Congeners: Total PCB congeners were detected above the human health PAL in all six samples.
- TCL Pesticides: Of the 20 pesticides analyzed, dieldrin, heptachlor epoxide, p,p'-DDD (4,4'-DDD), and p,p'-DDE (4,4'-DDE) were the only pesticides detected above their respective human health PALs; six, one, two, and five of six samples had dieldrin, heptachlor epoxide, p,p'-DDD (4,4'-DDD), and p,p'-DDE (4,4'-DDE) concentrations above the PALs, respectively.
- TAL Metals: Of the 18 metals that were compared to the human health PALs, only zinc was detected and had an ecological PAL, and detections were below the PAL.
- Mercury: Mercury and methyl mercury were detected above their respective human health PALs in all six samples.

5.7.8 Calculated Whole-Body Concentrations in Phase 2 Reach – White Sucker

Table 42 summarizes the calculated whole-body concentrations for white sucker from the Phase 2 reach. The table indicates that detections include 12 of the 17 PCDD/Fs congeners that were analyzed, 145 of the 166 PCB congeners that were analyzed, seven of the 20 pesticides that were analyzed, seven of the 22 metals that were analyzed, mercury, and methyl mercury. The results are compared with the ecological PALs in **Table 34** and summarized in **Table 50**. Based on a comparison of the results with the ecological PALs, the following observations are made:

- PCDD/Fs: Of the three PCDD/F TEQs that were calculated, all three were above their respective ecological PAL in one or more samples; five, three, and six out of six samples exceeded the ecological PAL for PCDD/F TEQ (bird), PCDD/F TEQ (fish), and PCDD/F TEQ (mammal), respectively.
- PCB TEQ: Of the three PCB TEQs that were calculated, all three were above their respective ecological PAL in one or more samples; six, one, and six out of six samples exceeded the ecological PAL for PCB-TEQ (bird), PCB-TEQ (fish), and PCB-TEQ (mammal), respectively.
- PCB Congeners: Total PCB congeners were above the ecological PAL in all six samples.
- TCL Pesticides:. Of the 20 pesticides that analyzed, p,p'-DDD (4,4'-DDD) and p,p'-DDE (4,4'-DDE) were the only pesticides that were detected above their respective ecological PALs; p,p'-DDD (4,4'-DDD) and p,p'-DDE (4,4'-DDE) were above their respective PALs in three and six of six samples, respectively.
- TAL Metals: Of the four metals that were compared to the ecological PALs, none were detected above their respective PALs.
- Mercury: Mercury and methyl mercury were detected above their respective ecological PALs in all six samples.

5.8 Field Parameters

Water quality measurements (DO, ORP, pH, specific conductance, temperature and turbidity) were collected during surface water sampling, mussel cage deployment, retrieval, and checks, and fish sampling. Water quality measurements recorded during low-flow surface water sampling are presented in **Table 16**. Water quality measurements were not recorded during high-flow sampling as discussed in NC-20250510-01 (**Attachment 8**). Water quality measurements recorded during caged mussel and fish sampling are included in the field forms in **Attachment 1**.

6. Data Gaps

This section discusses potential data gaps from the Phase 1 and Phase 2 investigations with respect to the project DQOs and future phases (e.g., pre-design investigation). The DQOs for the Phase 2 investigation are presented in Section 3 of this memorandum. The DQOs for the Phase 1 investigation are presented in the Phase 1 Data Evaluation Summary Memorandum (AECOM, 2024e).

The results of the Phase 1 investigation were summarized in the Site Reconnaissance Summary Memorandum (AECOM, 2023b) and the Phase 1 Data Evaluation Summary Memorandum (AECOM, 2024e). Data collected during the Phase 1 investigation included:

- a geospatial survey completed within the Phase 1 reach;
- a historical and cultural resources survey completed within the entire 3.7-mile stretch of the Site;
- a sediment profile imaging survey completed within the Phase 1 reach;
- ecological evaluations including a wetland survey completed within the Phase 1 reach;
- analytical results and lithologic characteristics of sediment within the Phase 1 reach and reference locations in the Mother Brook and Upper Neponset River;
- sediment probing result within the Phase 1 reach;
- analytical results and lithologic characteristics of floodplain soil within the Phase 1 reach;
- analytical results and water quality measurements of surface water within the Phase 1 reach and reference locations in the Mother Brook and Upper Neponset River;
- analytical results for pore water within the Phase 1 reach; and
- water levels measured at a transducer that was located 500 feet upstream of the T&H Dam.

The results of the Phase 2 investigation are summarized in this memorandum and the Draft Phase 2 Site Reconnaissance Summary Memorandum (AECOM, 2024g). Data collected during the Phase 2 investigation included:

- floodplain soil reconnaissance, which included observations of outfalls, completed within the Phase 2 reach;
- mussel placement and fish sampling reconnaissance completed within the entire 3.7-mile stretch of the Site;
- sediment sampling reconnaissance, which included observations of outfalls and sounding depth measurements, completed within the Phase 2 reach;
- ecological evaluations including a wetland survey completed within the Phase 2 reach;
- analytical results and lithologic characteristics of floodplain soil within the Phase 2 reach and depositional area upstream of Dana Avenue within the Phase 1 reach;
- analytical results and water quality measurements of surface water during high and low-flow conditions at select locations throughout the 3.7-mile Site including at the confluence with Pine Tree Brook;
- analytical results for caged mussels that were deployed for approximately 90 days at select locations throughout the 3.7-mile Site;
- analytical results and lithologic characteristics of sediment within the Phase 2 reach and Pine Tree Brook; and
- analytical results, fish length, weight, and observations of any parasite and deformities for brown bullhead and white sucker from the Phase 1 and 2 reaches.

A bathymetry survey, water level monitoring, and pore water sampling are also being conducted as part of the Phase 2 investigation. The bathymetry survey was completed in August 2025 and is pending data gap review. Information from the survey will be included as part of a future revision to the Phase 2 Site Reconnaissance Summary Memorandum (AECOM, 2024g) once the data have been processed and evaluated. A transducer was installed in the vicinity of Blue Hill Avenue in July 2025 and remained in place until the end of November 2025 (i.e., just before freezing conditions set in). The water level data from the transducer will be submitted to USEPA as a separate deliverable once available. Pore water sampling was conducted

in October 2025 and analyses are underway; results will be submitted to USEPA as a separate deliverable. Additionally, Phase 2 investigation results will be incorporated into a future revision of the Conceptual Site Model (CSM) (AECOM, 2024f).

The data collected during the Phase 1 and 2 investigations will be used to support the comprehensive RI/FS for the 3.7-mile Site, including a risk assessment that will be conducted in the future. Based on the available Site data and current understanding of the CSM, the following potential data gaps are noted:

- The Engineering Evaluation and Cost Analysis (EE/CA) for a non-time-critical removal action (NTCRA) in the Phase 1 reach presented four removal alternatives (AECOM, 2025a). Based on the alternative that is selected, there may be data gaps in the vertical and/or horizontal extent of soil and/or sediment impacts that would need to be investigated further during the RI/FS and/or pre-design investigation.
- A data gap associated with the NTCRA is whether there is a potential for recontamination of soil and/or sediment within the Phase 1 reach from migration of groundwater following implementation of the selected remedy.
- The CSM (AECOM, 2024f) presented a discussion of the potential sources of PCB contamination, which included the Mother Brook, the Neponset River upstream of its confluence with the Mother Brook, facilities adjacent to the Site, and outfalls. There are 11 outfalls in the Phase 1 reach listed in the 2022 Boston Stormwater Management Report (Boston Water and Sewer Commission, 2023), although the exact number of outfalls and their location in the Phase 1 reach should be confirmed. The extent of upstream and adjacent sources of contamination may warrant further investigation.
- Soil samples collected in the Phase 1 reach were mostly from shallow depth intervals; additional subsurface samples may be required.
- In many areas of the Phase 2 reach, hard bottom was encountered in the riverbed and only surficial sediment grab samples were collected. Additional sampling may not be feasible or required to complete the RI/FS as the extent of contamination would be limited to the material above the hard bottom.
- Soil sampling was not possible in select locations due to lack of access and/or health and safety considerations; the extent that these locations pose concern may warrant further evaluation.
- A limited number of floodplain soil samples in the Phase 2 reach did not have sufficient mass for all target analytes; however, analyses were prioritized in accordance with the UFP-QAPP, and all samples were analyzed for the primary Site constituent PCBs. It is expected that the floodplain soil data set is sufficient for a future RI/FS and risk assessment and is not identified as a data gap.
- Surface water sampling in Pine Tree Brook was limited to one location. If Pine Tree Brook is used as a reference area during a risk assessment, additional surface water sampling may be required to more adequately characterize background surface water conditions.
- Pore water samples were collected from five locations within the Phase 1 reach; no pore water samples were collected from the Phase 2 reach. Additional pore water samples needed to calculate an exposure point concentration for use in the ecological risk assessment are currently being collected to address this data gap.
- Following processing of the brown bullhead samples, fillet issue mass for some specimens was insufficient for all target analytes. In accordance with the UFP-QAPP, analyses were prioritized, and all samples were analyzed for PCBs, as well as PCDD/DFs and pesticides. It is expected the brown bullhead fillet tissue data are sufficient for a future RI/FS and risk assessment and is not identified as a data gap.
- The target number of white sucker were not obtained in the Phase 2 reach despite significant fishing effort; however, it is expected the total number of white sucker obtained (n=14) is sufficient for a future RI/FS and risk assessment and is not identified as a data gap.

Notes:
(a) The horizontal datum is North American Datum 1983
Massachusetts State Plain 2001 Feet.
(b) The sample container from the CS depth interval from 24D-0068-CS
was broken when received by SGS. Another location (24D-1068) was advanced in the
vicinity of location 24D-0068 to collect a sample from the CS depth interval.

Notes:
(a) The horizontal datum is North American Datum 1983
Massachusetts State Plain 2001 Feet.
(b) Location was proposed for core collection, however, only a grab was possible.
(c) At select locations material from the location and an offset location were combined to meet sample volume requirements.
(d) Sampling locations 24A-0159 through 24A-0169 are located in Pine Tree Brook. Pine Tree Brook enters the Lower Neponset River at approximately river mile 0.22.

Notes:
(a) The horizontal datum is North American Datum 1983
Massachusetts State Plain 2001 Feet.
Coordinates represent the location where a fish was caught and submitted for analysis, however, the typical home ranges of the target species comprise most of the area of each reach.

24E-0009	770385.043155	2923684.716810	0.49

Notes:
UFP-QAPP - Unified Federal Policy - Quality Assurance Project Plan
QA/QC - Quality Assurance/Quality Control
(a) Two replicate cages were placed at each location. Per the UFP-QAPP replicate cages were placed within a 10-meter radius of each other. However, the space between the replicate cages at location 24E-0004 was aproximately 45 meters. This deviation is discussed in NC-09182024-01.
(b) Coordinates were collected between the replicate cages at each site.
(c) The horizontal datum is North American Datum 1983 Massachusetts State Plain 2001 Feet.
(d) Due to low water conditions mussel cages at locations 24E-0006, 24E-0007A, and 24E-0008 were moved to nearby deeper water on 9/12/2024. See NC-09182024-01 in Attachment 8.
(e) The UFP-QAPP included one site with two additional QA/QC cages to be located within 1 meter of one of the replicate cages. The additional cages were deployed at location 24E-0007. However, the cages at location 24D-0007 were deployed as two sets of replicate cages approximately 40 feet apart. As a result these cages were not used for QA/QC purposes and one set of cages was named location 24E-0007A and the other set of cages was named location 24E-0007B. Only cages from location 24E-0007A were submitted for analysis.

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0001	6/3/2024	1.5	0.95	24D-0001-AS	0 - 1 ft	Semi-open flat area at toe of bank. Deadfall in water, cavities present along shoreline. Woody debris and trees present. (4) total attempts. Refusal at 1.5 ft on cobbles. 24D-0001-BS sample composite from (2) adjacent boring holes with comparable elevation/topography, each with 0.5 ft recovery from 1.0-1.5 ft intervals.
				24D-0001-BS	1 - 1.5 ft	
24D-0002	6/3/2024	1.9	0.35	24D-0002-AS	0 - 1 ft	Relatively flat, open, silty depositional outcropping. Wooden snags, brush, river birch trees on edge. Sparse herbaceous plants spread across mud flat. 1.9 ft max penetration.
				24D-0002-BS	1 - 1.9 ft	
24D-0003	6/3/2024	1.5	0.9	24D-0003-AS	0 - 1 ft	Target on small grassy patch of soils surrounded by moss, exposed intermittently coarse sediment along shoreline, woody shrubs, thorny vines. Woody debris in water with trees overhanging. Roots present on approximately 10-15° slope.
				24D-0003-BS	1 - 1.5 ft	
24D-0004	5/29/2024	1.4	0.9	24D-0004-AS	0 - 1 ft	8 feet downstream of target location, within 10 ft radius. Approximately 2 feet from current river level, 1.5 ft above. Maple and river birch canopy. Semi-open mossy area with gravel and roots present on surface.
				24D-0004-BS	1 - 1.4 ft	
24D-0005	5/29/2024	0.8	-	24D-0005-AS	0 - 0.8 ft	Approximately 20° slope. Large maple and oak canopy. Woody shrubs and poison ivy in understory. Deadfall and snags in water downstream. Shallow topsoil with cobble and roots throughout surface. Refusal at max penetration of 0.8 ft.
24D-0006	5/29/2024	2.4	0.4	24D-0006-AS	0 - 1 ft	Upstream of revetment and rubble dam. Rocky, woody area with vines and shrubs. Small mudflat area sampled within 10 ft of target.
				24D-0006-BS	1 - 2 ft	
				24D-0006-CS	2 - 2.4 ft	
24D-0007	Flag location too close to dam, unsafe for sample collection.					
24D-0008	6/18/2024	2.3	0.5	24D-0008-AD; 24D-0008-AS	0 - 1 ft	Location adjusted out of river and downstream of large fallen tree.
				24D-0008-BS	1 - 2 ft	
				24D-0008-CS	2 - 2.3 ft	
24D-0009	6/18/2024	3	0.5	24D-0009-AD; 24D-0009-AS	0 - 1 ft	Location adjusted out of river onto edge of river. Approximately 15-20 ft from bottom embankment.
				24D-0009-BS	1 - 2 ft	
				24D-0009-CS	2 - 3 ft	
24D-0010	6/18/2024	3	1.1	24D-0010-AS	0 - 1 ft	Location adjusted 7 ft +- inland out of river.
				24D-0010-BS	1 - 2 ft	
				24D-0010-CS	2 - 3 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0011	6/18/2024	3	1.1	24D-0011-AS	0 - 1 ft	Location flagged at 10.5 ft. north, which was located in the river. This location, however, is on a large leaf litter berm. Attempting to sample first foot, returned 0.7 ft leaf litter and 0.3 ft sand. It was not possible to dig through the roots to obtain enough sample to jar for AS horizon and likely difficult to go deeper. After conferring with team lead we moved the point an additional 23 ft away from the river to the backside of the berm. Toe of slope to the embankment is another 10-5 ft. GPS accuracy low at new location but much higher at initial location. Final point was measured at 23 ft inland of initial location.
				24D-0011-BS	1 - 2 ft	
				24D-0011-CS	2 - 3 ft	
24D-0012	6/17/2024	2.5	0.8	24D-0012-AS	0 - 1 ft	Refusal on cobble at 2.5 ft max penetration.
				24D-0012-BS	1 - 2 ft	
				24D-0012-CS	2 - 2.5 ft	
24D-0013	6/17/2024	2.1	-	24D-0013-AS	0 - 1 ft	Sample location on bank upgradient from open mud flat. Deadfall, leaf litter, and cobble at surface. Dense maple canopy overhead. Refusal on gravel at 2.1 ft max penetration.
				24D-0013-BS	1 - 2 ft	
				24D-0013-CS	2 - 2.1 ft	
24D-0014	6/17/2024	1.6	-	24D-0014-AS	0 - 1 ft	Location upslope on bank. Maple trees surrounding area. Leaf litter, roots, cobbles around surface. Refusal on large roots at 1.6 ft max penetration. No sample collected from CS interval.
				24D-0014-BS	1 - 1.6 ft	
24D-0015	6/17/2024	1	-	24D-0015-AS	0 - 1 ft	Sampling location on wooded downslope. Woody debris & shrubs, roots, leaf litter, vines present in the understory. Volume for MS/MSD at AS horizon. Loose dry silt and gravel sidewall collapse preventing further advancement past 1.0 ft max penetration. No samples collected from BS or CS intervals.
24D-0016	6/14/2024	1.3	0.3	24D-0016-AS	0 - 1 ft	Location sampled downgradient of outfall. Sand and gravel sidewall collapse preventing further advancement past 1.3 ft max penetration.
				24D-0016-BS	1 - 1.3 ft	
24D-0017	6/14/2024	0.4	-	24D-0017-AS	0 - 0.4 ft	Majority of 10 ft radius covered with poison ivy, thorny vines, and large dead trees. No samples collected from BS or CS intervals. Refusal on large roots at 0.4 ft max penetration.
24D-0018	6/14/2024	1	0.7	24D-0018-AS	0 - 1 ft	Vegetated mud flat with woody shrubs and vines. Little overhanging tree cover. Sample collected at AS horizon. No samples collected from BS or CS intervals. Attempt #1: refusal on large cobble layer and broken glass at 1.0 ft (AS sample collected) Attempt #2: refusal on large cobble layer at 1.0 ft Attempt #3: sidewall collapse from wet silt and organics preventing further advancement past 1.0 ft max penetration.
24D-0019	6/14/2024	1.6	0.8	24D-0019-AS	0 - 1 ft	Open mud flat under maple tree canopy. Posion ivy, thorny vines, dense roots, and woody shrubs up beyond shelf upgradient from sample location. Approximately 5 ft from water line. (2) attempts 0.0-1.0 ft with 1 ft recovery each; composited volume for MS/MSD needed for AS horizon. Remaining BS sample collected from Attempt #1. No sample collected from CS interval. Sand & gravel sidewall collapse preventing further advancement past 1.6 ft max penetration.
				24D-0019-BS	1 - 1.6 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0020	6/5/2024	3	0.7	24D-0020-AS	0 - 1 ft	Paint can location. Couple cans noted. While sampling, a currugated steel culvert was noted directly above the sampling point. Appears to be drainage from properties located above sampling spot. Was not noted initially due to growth.
				24D-0020-BS	1 - 2 ft	
				24D-0020-CS	2 - 3 ft	
24D-0021	6/5/2024	3	0.9	24D-0021-AS	0 - 1 ft	
				24D-0021-BS	1 - 2 ft	
				24D-0021-CS	2 - 3 ft	
24D-0022	6/7/2024	1.9	0.4	24D-0022-AS	0 - 1 ft	Open mud flat with overhanging trees and woody debris in water downstream of sample location. 2 adjacent boring holes (Attempt #1 & Attempt #2, each 0.0-1.0 ft) used for volume to composite sample for AS horizon. Boring hole Attempt #2 used to reach max penetration for BS sample 1.0-1.9 ft. Sidewall collapse beneath water table preventing further advancement. No sample collected from CS interval.
				24D-0022-BS	1 - 1.9 ft	
24D-0023	6/25/2024	2	0.5	24D-0023-AS	0 - 1 ft	Sample location just downstream and downgradient of outfall. Large cobbles and roots at surface. Sand and gravel sidewall collapse preventing further advancement past 2.0 ft max penetration. No sample collected from CS interval.
				24D-0023-BS	1 - 2 ft	
24D-0024	6/24/2024	3	1.8	24D-0024-AS	0 - 1 ft	Sample location on shelf of mossy bank.
				24D-0024-BS	1 - 2 ft	
				24D-0024-CS	2 - 3 ft	
24D-0025	6/24/2024	0.6	-	24D-0025-AD; 24D-0025-AS	0 - 0.6 ft	Sample location downgradient of outfall. Dense overhead canopy. Refusal on rip rap at 0.6 ft max penetration. No samples collected from BS or CS intervals.
24D-0026	6/24/2024	3	1.05	24D-0026-AS	0 - 1 ft	Sample location on shelf of bank at the toe of vegetated downslope. Canopy overhanging.
				24D-0026-BS	1 - 2 ft	
				24D-0026-CS	2 - 3 ft	
24D-0027	6/24/2024	1	0.9	24D-0027-AS	0 - 1 ft	Outfall upstream. Sample location on bank. Refusal on cobbles at 1.0 ft max penetration. No samples collected from BS or CS intervals.
24D-0028	6/21/2024	1.6	1.4	24D-0028-AS	0 - 1 ft	Narrow shelf along river bank. Roots, dead trees, vines, gravel present at surface. Canopy overhanging. Refusal on cobbles at 1.6 ft max penetration. No sample collected from CS interval.
				24D-0028-BS	1 - 1.6 ft	
24D-0029	6/21/2024	1.5	0.5	24D-0029-AS	0 - 1 ft	Sample location downstream of outfall. Coarse gravel and roots present at surface. Refusal on gravel at 1.5 ft max penetration. No sample collected from CS interval.
				24D-0029-BS	1 - 1.5 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0030	6/21/2024	1.3	-	24D-0030-AS	0 - 1 ft	Sample location on relatively open downslope under dense oak and maple canopy. Sand and gravel sidewall collapse preventing further advancement past 1.3 ft max penetration. No sample collected from CS interval.
				24D-0030-BS	1 - 1.3 ft	
24D-0031	6/21/2024	1.8	-	24D-0031-AS	0 - 1 ft	Refusal on cobble at 1.8 ft max penetration. No sample collected from CS interval. Midway between outfall and canoe ramp.
				24D-0031-BS	1 - 1.8 ft	
24D-0032	6/24/2024	0.6	-	24D-0032-AS	0 - 0.6 ft	Sample location on revetment downgradient of retaining wall. Refusal on revetment at 0.6 ft max penetration. No samples collected from BS or CS intervals.
24D-0033	7/10/2024	1.9	1.7	24D-0033-AS	0 - 1 ft	Sample location along rocky shoreline at toe of steep slope. Large cobbles present at surface. Refusal on large cobbles at 1.9 ft max penetration. No sample collected from CS interval.
				24D-0033-BS	1 - 1.9 ft	
24D-0034	7/15/2024	0.9	-	24D-0034-AS	0 - 0.9 ft	Located along the rapids. River runs pretty straight. Gravel/cobble banks. Refusal on roots and cobbles. Deepest of three attempts was 0.9 ft. No samples collected from BS or CS intervals.
24D-0035	7/15/2024	0.9	-	24D-0035-AS	0 - 0.9 ft	Flag moved within 10 ft radius upstream towards observed outfall. The observed outfall does not appear to be functioning based on the amount and type of vegetation covering the pipe. Refusal on gravel layer and heavy/thick roots. 3 attempts made - no samples collected from BS or CS intervals. Located at the end of the rapids, just around the start of a bend in the river.
24D-0036	7/15/2024	2.5	1.4	24D-0036-AD; 24D-0036-AS	0 - 1 ft	Hole located on the inside of a turn in the river; near the apex of the bend. Sand and cobbles at surface suggest high velocity/powered portion of stream. Hole refused 2.5 ft after auger hit a cobble and went off plum and locked up in sand and gravel.
				24D-0036-BS	1 - 2 ft	
				24D-0036-CS	2 - 2.5 ft	
24D-0037	7/15/2024	1.5	-	24D-0037-AS	0 - 1 ft	Located near the end of the turn in the river on north bank. Point is just downstream of a rock wall/damn in the river. Hole refused at 1.5 ft due to gravel and coarse sands and hole collapse. Three attempts could not keep hole open. No sample collected from CS interval.
				24D-0037-BS	1 - 1.5 ft	
24D-0038	7/15/2024	3	1.8	24D-0038-AS	0 - 1 ft	On river, at point nearest Neponset Trailway bridge (over Mattapan).
				24D-0038-BS	1 - 2 ft	
				24D-0038-CS	2 - 3 ft	
24D-0039	7/16/2024	1.2	1.1	24D-0039-AS	0 - 1 ft	Location extremely gravely and sandy with cobbles. Located by outfall (operable) along a straight stretch of the river. Refusal at 1.2 ft. No sample collected from CS interval.
				24D-0039-BS	1 - 1.2 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0040	7/16/2024	1	-	24D-0040-AS	0 - 1 ft	Located approximately 125 ft upstream of the Mattapan tressle/station amidst cobbles and boulders. River runs mostly straight. Refusal at 1 ft. Between cobbles/gravel and collapse unable to go deeper. Sample only collected from AS interval.
24D-0041	7/16/2024	1	0.4	24D-0041-AS	0 - 1 ft	Located just upstream of Massachusetts Bay Transit Authority (Mattapan Station) property, point shifted 5 ft south of flagged location due to rocks. Point is closer to stream amd further from the tressle. Hole continually collapsing. Cobbles, gravel, and coarse sands. Sample only collected from AS interval.
24D-0042	7/11/2024	3	2.2	24D-0042-AS	0 - 1 ft	Sample location on open relatively flat vegetated sandy outcropping. Coarse woody debris and deadfall present along shoreline.
				24D-0042-BS	1 - 2 ft	
				24D-0042-CS	2 - 3 ft	
24D-0043	7/11/2024	3	2.3	24D-0043-AS	0 - 1 ft	Sample location on open relatively flat vegetated sandy outcropping. Coarse woody debris and deadfall present along shoreline.
				24D-0043-BS	1 - 2 ft	
				24D-0043-CS	2 - 3 ft	
24D-0044	7/9/2024	3	0.8	24D-0044-AS	0 - 1 ft	On non vegetated sloping bank.
				24D-0044-BS	1 - 2 ft	
				24D-0044-CS	2 - 3 ft	
24D-0045	7/9/2024	1	-	24D-0045-AS	0 - 1 ft	On top of steeply sloped bank.
24D-0046	7/9/2024	1.6	-	24D-0046-AS	0 - 1 ft	Mossy flat area with woody debris present. Refusal on large gravel at 1.6 ft. No sample collected from CS interval.
				24D-0046-BS	1 - 1.6 ft	
24D-0047	7/9/2024	1	-	24D-0047-AS	0 - 1 ft	Upon rocky bank supported by dense tree root structure.
24D-0048	7/9/2024	0.8	-	24D-0048-AS	0 - 0.8 ft	Near top of steep bank, very rocky with structure supported by dense root structure.
24D-0049	5/28/2024	2	0.9	24D-0049-AS	0 - 1 ft	Location adjusted to be out of the river. Hole collapse prevented collection of sample from CS interval.
				24D-0049-BS	1 - 2 ft	
24D-0050	5/29/2024	3	1.2	24D-0050-AS	0 - 1 ft	Location started 5/28/24. AS sample collected. 5/29/24 BS and CS collected, the latter from second location 1 ft to the east of the initial hole. Outfall pipe upstream. Water curently discharging from outfall pipe.
				24D-0050-BS	1 - 2 ft	
				24D-0050-CS	2 - 3 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0051	5/29/2024	3	0.6	24D-0051-AS	0 - 1 ft	No outfall pipe near by. BS and CS intervals were not full recoveries due to collapse in hole.
				24D-0051-BS	1 - 1.7 ft	
				24D-0051-CS	2 - 2.7 ft	
24D-0052	5/29/2024	2	1.35	24D-0052-AS	0 - 1 ft	Location adjacent to outfall pipe. No flow at time of sample.
				24D-0052-BS	1 - 2 ft	
24D-0053	5/31/2024	2.5	0.8	24D-0053-AS	0 - 1 ft	First attempt recovery 1 ft, AS sample collected. Moved 6 ft east along contour for second attempt. Second attempt less than 6 inches, large roots and boulder. Third attempt moved 6 ft to west along contour. BS collected and CS collected. CS refused at 2.5 ft, in combination with caving soils only 1/2 ft recovery.
				24D-0053-BS	1 - 2 ft	
				24D-0053-CS	2 - 2.5 ft	
24D-0054	5/31/2024	1.5	0.35	24D-0054-AS	0 - 1 ft	Original location 1 ft into elevated river. Moved point 2 ft north and 3 ft east. Three attempts, max 1.5 ft. Coarse sand, cobbles and gravel combined with caving prevented getting deeper.
				24D-0054-BS	1 - 1.5 ft	
24D-0055	5/31/2024	1.7	1.9	24D-0055-AS	0 - 1 ft	Flagged location at edge of water. Shifted 2 ft away from river and 4 fet downstream parallel river. Three attempts made, but no sample was collected from CS interval due to thick roots and gravel at 2 ft.
				24D-0055-BS	1 - 1.7 ft	
24D-0056	5/31/2024	1.8	0.4	24D-0056-AS	0 - 1 ft	Mud flat at edge of water. Approximately 15-20 ft south of Neponset Trail footpath. Relatively open understory with upper canopy extending over water.
				24D-0056-BS	1 - 1.8 ft	
24D-0057	5/31/2024	1	0.35	24D-0057-AS	0 - 1 ft	Biased location downstream of outfall. Trees growing out of water south of outfall. Approximately 15° slope with sample area close to water line. 8+ attempts, 1.0 ft max penetration not met or exceeded (refusal on cobble, gravel, roots).
24D-0058	5/31/2024	3	0.25	24D-0058-AS	0 - 1 ft	Target location on surfaced mud flat downstream of woody shrubs. Inundated soils with standing water between target and sloped bank lined with hardwood trees.
				24D-0058-BS	1 - 2 ft	
				24D-0058-CS	2 - 3 ft	
24D-0059	5/31/2024	1.5	0.15	24D-0059-AS	0 - 1 ft	Three attempts, two augers stopped 1.5 ft. Root mat so thick could not shovel through to enlarge/deepen hole.
				24D-0059-BS	1 - 1.5 ft	
24D-0060	5/31/2024	1.4	0.5	24D-0060-AS	0 - 1 ft	Exposed mud flat downgradient of outfall. Target location adjusted to account for the outfall present. Max penetration at 1.4 ft. Catch basin observed near trail upgradient of outfall.
				24D-0060-BS	1 - 1.4 ft	
24D-0061	6/3/2024	1	-	24D-0061-AS	0 - 1 ft	Sample only collected from AS horizon, could not bypass heavy/thick tree roots.

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0062	6/3/2024	3	0.6	24D-0062-AS	0 - 1 ft	No PID, waiting for replacement. No staining or odors noted.
				24D-0062-BS	1 - 2 ft	
				24D-0062-CS	2 - 3 ft	
24D-0063	6/3/2024	2	0.3	24D-0063-AD; 24D-0063-AS	0 - 1 ft	Three attempts to collect sample from CS interval, but high water and coarse sand causing the hole to continuously collapse. Last attempt refused on gravel/cobble.
				24D-0063-BS	1 - 2 ft	
24D-0064	6/3/2024	2.8	0.2	24D-0064-AS	0 - 1 ft	
				24D-0064-BS	1 - 2 ft	
				24D-0064-CS	2 - 2.8 ft	
24D-0065	6/5/2024	1.2	0.9	24D-0065-AS; 24D-0065-AD	0 - 1 ft	At the toe of the slope. Woody debris and trees overhanging. Refusal on cobble at 1.2 ft. No sample collected from CS interval.
				24D-0065-BS	1 - 1.2 ft	
24D-0066	6/4/2024	1.8	0.5	24D-0066-AS	0 - 1 ft	Gradually sloped mud flat. Overhanging trees present. Sample boring approximately 3 ft from edge of water. Little to no woody debris in open flowing river next to location. No sample collected from CS interval, refusal on gravel layer at max penetration of 1.8 ft. (5) additional attempts made.
				24D-0066-BS	1 - 1.8 ft	
24D-0067	6/4/2024	2.5	0.35	24D-0067-AS	0 - 1 ft	Exposed mudflat near edge of water. Trees overhanging semi-open sampling area. Deadfall and woody shrubs present. Outfall observed approximately 20 ft upstream from sampling location; unnecessary to adjust location based on proximity. MS/MSD collected at AS horizon. Max penetration at 2.5 ft, refusal on gravel layer.
				24D-0067-BS	1 - 2 ft	
				24D-0067-CS	2 - 2.5 ft	PICTURE NOT TAKEN FOR 24D-0067-BS SAMPLE/LITHOLOGY; however lithology from AS continues through entire BS interval.
24D-0068	6/4/2024	2.3	1.1	24D-0068-AS	0 - 1 ft	Flagged location was on mud flat near river edge. Sampled approximately 4 ft upgradient on low slope ground.
				24D-0068-BS	1 - 2 ft	
				24D-0068-CS	2 - 2.3 ft	
24D-0069	6/5/2024	1.8	0.35	24D-0069-AS	0 - 1 ft	On a broad, vegetated mud flat. No sample collected from CS interval, max penetration at 1.8 ft.
				24D-0069-BS	1 - 1.8 ft	
24D-0070	6/5/2024	3	0.65	24D-0070-AS	0 - 1 ft	Open mud flat. Sample location approximately 20 ft from edge of water.
				24D-0070-BS	1 - 2 ft	
				24D-0070-CS	2 - 3 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0071	6/5/2024	2.6	0.85	24D-0071-AS	0 - 1 ft	Open vegetated mud flat. Sand and gravel collapse preventing further advancement past max penetration of 2.6 ft.
				24D-0071-BS	1 - 2 ft	
				24D-0071-CS	2 - 2.6 ft	
24D-0072	6/5/2024	2.4	1.1	24D-0072-AS	0 - 1 ft	On slight vegetated berm adjacent to the edge of water. Mud flat present between target sample location and steep bank covered with leaf litter, woody debris, poison ivy, and thorny vines. MS/MSD taken for AS horizon. Refusal on gravel layer at 2.4 ft max penetration.
				24D-0072-BS	1 - 2 ft	
				24D-0072-CS	2 - 2.4 ft	
24D-0073	6/6/2024	1.4	-	24D-0073-AS	0 - 1 ft	Location downstream of Boston Water and Sewer Commission Stormwater Outfall #209. No sample collected from CS interval; refusal at 1.4 ft due to gravel layer, increasing grain size with depth.
				24D-0073-BS	1 - 1.4 ft	
24D-0074	6/6/2024	2.9	0.9	24D-0074-AS	0 - 1 ft	Semi open, relatively flat vegetated area at toe of slope. Sharp bank dropoff at water edge. Refusal at 2.9 ft on cobble.
				24D-0074-BS	1 - 2 ft	
				24D-0074-CS	2 - 2.9 ft	
24D-0075	6/28/2024	3	0.6	24D-0075-AS	0 - 1 ft	Location on vegetated mud flat.
				24D-0075-BS	1 - 2 ft	
				24D-0075-CS	2 - 3 ft	
24D-0076	6/28/2024	2.9	0.55	24D-0076-AS	0 - 1 ft	On edge of densely vegetated shoreline. Refusal on cobble at 2.9 ft max penetration.
				24D-0076-BS	1 - 2 ft	
				24D-0076-CS	2 - 2.9 ft	
24D-0077	6/28/2024	2.7	0.8	24D-0077-AS	0 - 1 ft	Vegetated mud flat. Refusal on cobble at 2.7 ft max penetration.
				24D-0077-BS	1 - 2 ft	
				24D-0077-CS	2 - 2.7 ft	
24D-0078	6/28/2024	2.8	1.15	24D-0078-AS	0 - 1 ft	Vegetated mud flat. Refusal on cobble at 2.8 ft max penetration. Attempt #1: AS, BS samples collected (refusal on cobble at 2.1 ft) Attempt #2: CS sample collected (refusal on cobble at 2.8 ft)
				24D-0078-BS	1 - 2 ft	
				24D-0078-CS	2 - 2.8 ft

Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0096	7/11/2024	3	-	24D-0096-AS	0 - 1 ft	
				24D-0096-BS	1 - 2 ft	
				24D-0096-CS	2 - 3 ft	
24D-0097	No access to property					
24D-0098	7/10/2024	0.75	-	24D-0098-AS	0 - 0.75 ft	Very steep shoreline with large boulders. Composite of 3 Attempts: Attempt #1: 0.75 ft Attempt #2: 0.6 ft Attempt #3: 0.5 ft Refusal on gravel and cobble at 0.75 ft max penetration. No samples collected from BS or CS intervals.
24D-0099	7/10/2024	0.4	-	24D-0099-AS	0 - 0.4 ft	Sample location up on vegetated bank with large cobbles and revetment present. Composite of 4 attemptes: Attempt #1: 0.6' Attempt #2: 0.6' Attempt #3: 0.95' Refusal on roots and rocks at 0.95' max pen. No BS or CS samples collected.
24D-0100	7/10/2024	0.95	-	24D-0100-AD; 24D-0100-AS	0 - 0.95 ft	Field duplicate collected at AS horizon. Sample location up on vegetated bank beneath overhanging canopy. Large revetment present. Composite of 3 attempts: Attempt #1: 0.6' Attempt #2: 0.6' Attempt #3: 0.95' Refusal on roots and rocks at 0.95' max pen. No BS or CS samples collected.
24D-0101	7/10/2024	0.95	-	24D-0101-AS	0 - 0.95 ft	Sample location up on back underneath canopy. Large trees and vines present. Refusal on revetment at 0.95 ft max penetration. No samples collected from BS or CS intervals.
24D-0102	Massachusetts Bay Transportation Authority Right of Way					
24D-0103	5/28/2024	0.4	-	24D-0103-AS	0 - 0.4 ft	Topsoil, mossy area in semi-open understory. Relatively flat downgradient of revetment. Abundant roots. East of large revetment area extending towards right of way. Refusal at maximum penetration of 0.4'= ft on rocks and roots. MS/MSD taken with 0.4 ft recovery.
24D-0104	5/28/2024	1.6	1.4	24D-0104-AS	0 - 1 ft	Short shelf of exposed soils with small and large roots present on the surface. Vines and poison ivy upgradient with decaying shrubs west and woody shrubs east. Cobble spread across shoreline with deadfalls and snag in water.
				24D-0104-BS	1 - 1.6 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0105	5/28/2024	1.9	-	24D-0105-AS	0 - 1 ft	Semi-open sandy slope, rill erosion and bank destabilization (exposed roots, washout of top soils). Across from surfaced island. Poison ivy and large oak tree present.
				24D-0105-BS	1 - 1.9 ft	
24D-0106	5/28/2024	2.5	-	24D-0106-AS	0 - 1 ft	Approximately 5 ft from river and 3 ft above current level. Shallow slope near toe of steep bank. Roots and cobble on surface soils, vines and poison ivy throughout. Beaver activity present.
				24D-0106-BS	1 - 2 ft	
				24D-0106-CS	2 - 2.5 ft	
24D-0107	5/24/2024	0.5	-	24D-0107-AS	0 - 0.5 ft	Moved location from mapped and flagged location to be downstream of outfall. New location is approximately 10 ft downstream of the outfall on a narrow shelf approximately 1.5 ft above current river level. Steeply sloping bank above location. Fill and concrete slabs present. Very strong foul odor coming from outfall. 24D-0107-AS sample composite of (4) attempts with the following penetration: Attempt #1: 0.0-0.4 ft Attempt #2: 0.0-0.5 ft Attempt #3: 0.0-0.2 ft Attempt #4: 0.0-0.4 ft GPS coordinates taken in the middle of the (4) shallow boring holes.
24D-0108	5/23/2024	2	-	24D-0108-AD; 24D-0108-AS	0 - 1 ft	Boring hole located on downslope bank. Open area with trees upgradient. Rocks, cobble, moss, leaves and woody debris present. Thunderstorm rain delay.
				24D-0108-BS	1 - 2 ft	
24D-0109	5/23/2024	1.7	-	24D-0109-AS	0 - 1 ft	Wooded downslope with vines, moss, and cobble at surface. Steep 1-2 ft dropoff from bank to the river. Chain-linked fence along upper plateau area.
				24D-0109-BS	1 - 1.7 ft	
24D-0110	5/24/2024	1.8	-	24D-0110-AS	0 - 1 ft	Open, approximately 15° rocky slope 3-4 ft from edge of water. Dense canopy with beech and maple trees. Leaf litter and woody debris in understory. AS sample at original boring hole attempt 0.0-1.0 ft. BS sample composite of 2 boring holes: 1.0-1.4 ft (original boring hole) 1.0-1.8 ft (second boring hole) GPS point taken between 2 boring holes, both within 10 ft radius of target flag.
				24D-0110-BS	1 - 1.8 ft	
24D-0111	5/24/2024	1.8	-	24D-0111-AS	0 - 1 ft	Dense maple and ash wooded slope with moss, vines, cobble and leaf litter present. Just upstream of rubble dam. Woody debris and bark present on slope. Poison ivy intermittently spread across understory.
				24D-0111-BS	1 - 1.8 ft	
24D-0112	5/23/2024	1.4	-	24D-0112-AS	0 - 1 ft	Location is on river bank approximately 2 ft above current river level and below steep slope. Very rocky with heavy root content. GPS taken from midpoint of three holes used to composite sample in A interval. Max penetration of 1.0 ft. Able to penetrate to 1.4 ft for BS sample after moving rock and roots.
				24D-0112-BS	1 - 1.4 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0113	6/13/2024	2.2	-	24D-0113-AD; 24D-0113-AS	0 - 1 ft	Sample location on wooded slope upgradient of sandy shoreline. Next to pine tree by chain-linked fence at the top of slope. Downstream of rubble dam. Refusal on gravel, also sidewall collapse from sand and gravel, max penetration 2.2 ft.
				24D-0113-BS	1 - 2 ft	
				24D-0113-CS	2 - 2.2 ft	
24D-0114	6/13/2024	2.6	-	24D-0114-AS	0 - 1 ft	Dry clay density increasing with depth and compaction preventing further advancement past 2.6 ft max penetration.
				24D-0114-BS	1 - 2 ft	
				24D-0114-CS	2 - 2.6 ft	
24D-0115	6/13/2024	1.6	-	24D-0115-AD; 24D-0115-AS	0 - 1 ft	Sample location on wooded slope upgradient from relatively open dry mud flat. Refusal on cobble at 1.6 ft max penetration. No sample collected from CS interval.
				24D-0115-BS	1 - 1.6 ft	
24D-0116	6/13/2024	2.8	1.6	24D-0116-AS	0 - 1 ft	Open and relatively flat understory with little vegetation. Dense canopy overhead hanging over the water line. Location approximately 8-10 ft from the water line. Refusal on gravel at 2.8 ft max penetration.
				24D-0116-BS	1 - 2 ft	
				24D-0116-CS	2 - 2.8 ft	
24D-0117	6/12/2024	3	-	24D-0117-AS	0 - 1 ft	Wooded area with woody debris, leaf litter and poison ivy present.
				24D-0117-BS	1 - 2 ft	
				24D-0117-CS	2 - 3 ft	
24D-0118	6/12/2024	0.7	-	24D-0118-AS	0 - 0.7 ft	Outfall present upgradient/slightly upstream from sample location. Mostly all revetment, boulders, armor. Refusal on revetment/armor at max penetration of 0.7 ft. Samples collected only at AS horizon.
24D-0119	6/12/2024	0.6	0.4	24D-0119-AS	0 - 0.6 ft	Outfall present upgradient/slightly upstream from sample location. Mostly all revetment, boulders, armor. Refusal on revetment/armor at max penetration of 0.6 ft in Attempt #1 and 0.4 ft in Attempt #2. Samples collected only at AS horizon from composite of Attempt #1 and Attempt #2. No samples collected from BS or CS intervals.
24D-0120	6/12/2024	0.7	-	24D-0120-AD; 24D-0120-AS	0 - 0.7 ft	Sample location on shelf >5 ft from water line. Cobbles, woody debris, leaf litter, roots present at surface. Refusal on cobble and large roots at 0.7 ft max penetration. No samples collected from BS or CS intervals.
24D-0121	6/11/2024	1.5	-	24D-0121-AS	0 - 1 ft	Sample location upgradient on slope with grass and poison ivy throughout. Refusal on gravel layer at 1.5 ft. No sample collected from CS interval.
				24D-0121-BS	1 - 1.5 ft	
24D-0122	6/11/2024	2.6	-	24D-0122-AS	0 - 1 ft	Semi-open shelf with woody debris, leaves, moss, and roots present. Large area of poison ivy. 2.6 ft max penetration, refusal on gravel.
				24D-0122-BS	1 - 2 ft	
				24D-0122-CS	2 - 2.6 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0123	6/11/2024	0.6	-	24D-0123-AS	0 - 0.6 ft	Outfall just upstream/upgradient of sample location. Most of 10 ft radius covered with poison ivy. (4) total attempts, AS sample taken from Attempt #1 max penetration 0.6 ft. Refusal on roots.
24D-0124	6/11/2024	3	-	24D-0124-AS	0 - 1 ft	Semi-open downslope with moss, trees, poison ivy, and exposed soils. Roots, gravel, and cobble on surface. Large area of exposed soils with broad cavity underneath.
				24D-0124-BS	1 - 2 ft	
				24D-0124-CS	2 - 3 ft	
24D-0125	6/10/2024	2	0.5	24D-0125-AD; 24D-0125-AS	0 - 1 ft	Trees, woody debris, shrubs, roots, leaf litter, Japanese Knotweed present along shoreline. Sand and gravel sidewall collapse beneath water table preventing further advancement past 2.0 ft max penetration at Attempt #1 boring hole. (4) total attempts. No sample collected from CS interval.
				24D-0125-BS	1 - 2 ft	
24D-0126	6/10/2024	1.9	-	24D-0126-AS	0 - 1 ft	Very steep slope, shoreline covered with cobble, gravel, roots, large maple tree. Leaf litter present. Sand and gravel cave-in preventing advancement past max penetration of 1.9 ft; no sample collected from CS interval.
				24D-0126-BS	1 - 1.9 ft	
24D-0127	6/10/2024	0.9	-	24D-0127-AS	0 - 0.9 ft	Sample location on steep mossy downslope with trees present. Large roots and cobble exposed at surface. Location approximately 5-10 ft from water line. 24D-0127-AS sample composite of (4) attempts with max penetration of 0.9 ft: Attempt #1: 0.0-0.6 ft Attempt #2: 0.0-0.9 ft Attempt #3: 0.0-0.5 ft Attempt #4: 0.0-0.7 ft Refusal on large roots at each attempt. No samples collected from BS or CS intervals.
24D-0128	6/10/2024	2.4	1.8	24D-0128-AS	0 - 1 ft	Outfall present just upstream/upgradient of sample location. Location approximately 10-15 ft from shoreline. Overhanging canopy. Attempt #1: AS (0.0-1.0 ft) Refusal on gravel at 1.0 ft during Attempt #1. Attempt #2: BS (1.0-2.0 ft) Attempt #3: CS (2.0-2.4 ft) Sidewall collapse beneath water table preventing further advancement past max penetration at 2.4 ft.
				24D-0128-BS	1 - 2 ft	
				24D-0128-CS	2 - 2.4 ft	
24D-0129	6/7/2024	2	0.8	24D-0129-AS	0 - 1 ft	Samples taken for AS, BS horizons. No sample collected from CS interval due to sand and gravel sidewall collapse.
				24D-0129-BS	1 - 2 ft	
24D-0130	6/7/2024	2.1	-	24D-0130-AS	0 - 1 ft	On mossy shelf 2-3 ft from water line. Dense overhead canopy with semi open understory. Woody debris, roots, gravel, leaf litter present. Refusal on gravel and cobble.
				24D-0130-BS	1 - 2 ft	
				24D-0130-CS	2 - 2.1 ft	
24D-0131	6/7/2024	1.4	-	24D-0131-AS	0 - 1 ft	Sample on downslope approximately 5 ft upgradient from water line. Poison ivy abundant. Sand and gravel sidewall collapse preventing further advancement past max penetration at 1.4 ft. No sample collected from CS interval.
				24D-0131-BS	1 - 1.4 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0132	6/7/2024	2	0.8	24D-0132-AS	0 - 1 ft	Small open exposed mudflat downgradient of large swath of poison ivy. Large deadfall, snags, woody debris in water. BS composite of (2) boring holes (Attempt #2 and Attempt #3 from 1.0-1.4 ft and 1.4-2.0 ft), respectively. Refusal on gravel and cave in at max penetration of 2.0 ft. No sample collected from CS interval.
				24D-0132-BS	1 - 2 ft	
24D-0133	6/27/2024	1.9	0.75	24D-0133-AS	0 - 1 ft	Sample location just downstream & downgradient of outfall. Mud flat outcropping. Refusal on cobble at 1.9 ft max penetration. No sample collected from CS interval.
				24D-0133-BS	1 - 1.9 ft	
24D-0134	6/27/2024	2	1	24D-0134-AS	0 - 1 ft	Near toe of slope on flat area 5 ft from river level at time of sampling. MS/MSD at AS horizon. No sample collected from CS interval - coarse material below water table falls out of auger, not recoverable.
				24D-0134-BS	1 - 2 ft	
24D-0135	6/27/2024	0.8	-	24D-0135-AS	0 - 0.8 ft	Sample location on side of steep slope near septic tank-like structure. Refusal on roots at 0.8 ft max penetration. No samples collected from BS or CS intervals.
24D-0136	6/25/2024	3	1.5	24D-0136-AS	0 - 1 ft	Location on relatively flat vegetated outcropping downstream of rubble dam. MS/MSD at AS horizon.
				24D-0136-BS	1 - 2 ft	
				24D-0136-CS	2 - 3 ft	
24D-0137	6/25/2024	2	-	24D-0137-AS	0 - 1 ft	Location near top of steep rocky downslope under dense canopy. Refusal on cobbles at 2.0 ft max penetration. No sample collected from CS interval.
				24D-0137-BS	1 - 2 ft	
24D-0138	6/25/2024	0.8	0.4	24D-0138-AS	0 - 0.8 ft	Location along rocky shoreline downgradient of steep vegetated shelf. MS/MSD at AS horizon. Refusal on cobbles at 0.8 ft max penetration. No samples collectedf rom BS or CS intervals.
24D-0139	6/25/2024	2	0.6	24D-0139-AS	0 - 1 ft	Location along rocky shoreline downgradient of steep vegetated shelf. Dense sand collapse preventing further advancement past 2.0 ft max penetration. No sample collected from CS interval.
				24D-0139-BS	1 - 2 ft	
24D-0140	6/26/2024	2	0.8	24D-0140-AS	0 - 1 ft	In washed out bank alluvium on slope. Refusal at 2 ft due to fine sand caving into boring.
				24D-0140-BS	1 - 2 ft	
24D-0141	6/26/2024	1.4	-	24D-0141-AS	0 - 1 ft	Above bankfull level on shallow wooded slope. Refusal on cobbles. No sample collected from CS interval.
				24D-0141-BS	1 - 1.4 ft	
24D-0142	6/26/2024	1.5	-	24D-0142-AS	0 - 1 ft	
				24D-0142-BS	1 - 1.5 ft	
24D-0143	6/26/2024	1.2	-	24D-0143-AS	0 - 1 ft	Shallow slope 10 ft from current river edge.
				24D-0143-BS	1 - 1.2 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0144	6/26/2024	1.3	-	24D-0144-AS	0 - 1 ft	No sample collected from CS interval due to cobble refusal.
				24D-0144-BS	1 - 1.3 ft	
24D-0145	6/27/2024	1.7	1.5	24D-0145-AS	0 - 1 ft	Refused - gravel/cobble and coarse soil collapse at 1.7 ft. No sample collected from CS interval.
				24D-0145-BS	1 - 1.7 ft	
24D-0146	6/20/2024	1	-	24D-0146-AS	0 - 1 ft	Vegetated downslope with large roots and cobbles present at the surface. Refusal on large cobble at 1.0 ft max penetration. No samples collected from BS or CS interval.
24D-0147	6/20/2024	1.7	-	24D-0147-AS	0 - 1 ft	Sample location on downslope with cobble, large roots, and moss present at the surface. Dense canopy overhead with a mostly open understory. Refusal on large cobble at 1.7 ft max penetration. No sample collected from CS interval.
				24D-0147-BS	1 - 1.7 ft	
24D-0148	6/20/2024	2.3	-	24D-0148-AS	0 - 1 ft	Approximately 45° vegetated downslope with coarse gravel across surface. Maple dominant canopy overhead. Refusal on large cobble at 2.3 ft max penetration.
				24D-0148-BS	1 - 2 ft	
				24D-0148-CS	2 - 2.3 ft	
24D-0149	6/20/2024	2	0.6	24D-0149-AS	0 - 1 ft	Sample location downstream of outfall. On bank with roots near edge of canopy and water line. Sand and gravel sidewall collapse preventing further advancement past 2.0 ft max penetration. No sample collected from CS interval.
				24D-0149-BS	1 - 2 ft	
24D-0150	6/20/2024	1.2	-	24D-0150-AS	0 - 1 ft	Steep vegetated downslope. Woody debris, leaves, cobble, and bark present. Sidewall collapse preventing further advancement past 1.2 ft max penetration. No sample collected from CS interval.
				24D-0150-BS	1 - 1.2 ft	
24D-0151	6/24/2024	1.5	-	24D-0151-AS	0 - 1 ft	Location on narrow shelf on bank downstream of outfall. Roots, moss, gravel present at surface. Sand and gravel sidewall collapse preventing further advancement past 1.5 ft max penetration. No sample collected from CS interval.
				24D-0151-BS	1 - 1.5 ft	
24D-0152	7/15/2024	3	-	24D-0152-AS	0 - 1 ft	Sample location up on downslope. Canopy overhanging. Large cobbles and boulders present at surface. Moss, leaf litter, woody debris present.
				24D-0152-BS	1 - 2 ft	
				24D-0152-CS	2 - 3 ft	
24D-0153	7/11/2024	1.2	-	24D-0153-AS	0 - 1 ft	Vegetated bank at toe of steep slope. Refusal on large cobbles at 1.2 ft max penetration. No sample collected from CS interval.
				24D-0153-BS	1 - 1.2 ft	
24D-0154	7/11/2024	1.8	-	24D-0154-AS	0 - 1 ft	Sample location under canopy. Relatively open rocky understory. Refusal on cobble at 1.8 ft max penetration. No sample collected from CS interval.
				24D-0154-BS	1 - 1.8 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0155	7/12/2024	3	2	24D-0155-AD; 24D-0155-AS	0 - 1 ft	On broad shallow floodplain.
				24D-0155-BS	1 - 2 ft	
				24D-0155-CS	2 - 3 ft	
24D-0156	7/12/2024	3	2.2	24D-0156-AS	0 - 1 ft	On broad flat floodplain.
				24D-0156-BS	1 - 2 ft	
				24D-0156-CS	2 - 3 ft	
24D-0157	7/12/2024	3	2	24D-0157-AS	0 - 1 ft	On shallow sloped floodplain.
				24D-0157-BS	1 - 2 ft	
				24D-0157-CS	2 - 3 ft	
24D-0158	7/12/2024	1.9	-	24D-0158-AS	0 - 1 ft	On upland slope.
				24D-0158-BS	1 - 1.9 ft	
24D-0159	7/12/2024	0.7	-	24D-0159-AS	0 - 0.7 ft	On upland slope.
24D-0160	7/15/2024	3	-	24D-0160-AD; 24D-0160-AS	0 - 1 ft	Dense canopy overhead open understory. Sample location up on downslope. Leaf litter and woody debris present at surface. Attempt #1: AS sample collected (refusal on gravel at 1.0 ft) Attempts #2-3: immediate refusal on gravel Attempt #4: BS, CS samples collected
				24D-0160-BS	1 - 2 ft	
				24D-0160-CS	2 - 3 ft	
24D-0161	7/15/2024	1.6	-	24D-0161-AS	0 - 1 ft	Dense canopy overhead open understory. Sample location up on downslope upgradient of exposed mud flat. Leaf litter and woody debris present at surface. Refusal on large cobbles and roots at 1.6 ft max penetration. No sample collected from CS interval.
				24D-0161-BS	1 - 1.6 ft	
24D-0162	7/15/2024	1.5	-	24D-0162-AS	0 - 1 ft	Dense canopy overhead open understory. Sample location up on downslope upgradient of exposed mud flat. Leaf litter, woody debris, woody shrubs, and cobbles present at surface. Loose gravel and dry silt sidewall collapse preventing further advancement past 1.5 ft max penetration. No sample collected from CS interval.
				24D-0162-BS	1 - 1.5 ft	
24D-0163	7/16/2024	0.9	-	24D-0163-AS	0 - 0.9 ft	Sample location at toe of wooded downslope at beginning of mud flat. Refusal on gravel and roots at 0.9 ft max penetration. No samples collected from BS or CS interval.
24D-0164	7/16/2024	2.5	1.1	24D-0164-AS	0 - 1 ft	Outfall present upstream. Trees, woody shrubs, poison ivy present. Dense maple canopy overhead. Refusal on gravel at 2.5 ft max penetration.
				24D-0164-BS	1 - 2 ft	
				24D-0164-CS	2 - 2.5 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0165	7/16/2024	1.5	-	24D-0165-AS	0 - 1 ft	Sample location up on downslope. Dense canopy. Abudant leaf litter present. Loose sidewall collapse preventing further advancement past 1.5 ft max penetration.
				24D-0165-BS	1 - 1.5 ft	
24D-0166	7/16/2024	2.6	1.6	24D-0166-AS	0 - 1 ft	Sample location on vegetated mud flat outcropping. Abundant woody debris. Refusal on gravel at 2.6 ft max penetration.
				24D-0166-BS	1 - 2 ft	
				24D-0166-CS	2 - 2.6 ft	
24D-0167	7/16/2024	2	1.5	24D-0167-AS	0 - 1 ft	Sample location at toe of slope on mud flat. Refusal on cobble at 2.0 ft max penetration. No sample collected from CS interval.
				24D-0167-BS	1 - 2 ft	
24D-0168	6/13/2024	2.6	1.75	24D-0168-AS	0 - 1 ft	Sample location shifted 9.5 ft towards river. Flagged location among large roots.
				24D-0168-BS	1 - 2 ft	
				24D-0168-CS	2 - 2.6 ft	
24D-0169	6/13/2024	2.4	2.2	24D-0169-AS	0 - 1 ft	
				24D-0169-BS	1 - 2 ft	
				24D-0169-CS	2 - 2.4 ft	
24D-0170	6/13/2024	1.6	-	24D-0170-AS	0 - 1 ft	Very dry gravely soils. No sample collected from CS interval due to constant collapse of hole.
				24D-0170-BS	1 - 1.6 ft	
24D-0171	6/17/2024	2.6	1.7	24D-0171-AD; 24D-0171-AS	0 - 1 ft	Moved 4 ft closer to river due to thick roots.
				24D-0171-BS	1 - 2 ft	
				24D-0171-CS	2 - 2.6 ft	
24D-0172	6/17/2024	3	1.3	24D-0172-AS	0 - 1 ft	Slightly upslope from edge of river.
				24D-0172-BS	1 - 2 ft	
				24D-0172-CS	2 - 3 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0173	6/17/2024	3	0.4	24D-0173-AS	0 - 1 ft	On mud flat approx 10 ft from bottom slope.
				24D-0173-BS	1 - 2 ft	
				24D-0173-CS	2 - 3 ft	
24D-0174	6/17/2024	2.5	-	24D-0174-AS	0 - 1 ft	Approximately 6 ft upslope of edge mud flat. Roots too thick, moved 8 ft along contour.
				24D-0174-BS	1 - 2 ft	
				24D-0174-CS	2 - 2.5 ft	
24D-0175	6/17/2024	2.3	1	24D-0175-AS	0 - 1 ft	At foot of slope.
				24D-0175-BS	1 - 2 ft	
				24D-0175-CS	2 - 2.3 ft	
24D-0176	6/18/2024	3	-	24D-0176-AD; 24D-0176-AS	0 - 1 ft	Wooded downslope with dense canopy and semi open understory. Abundant leaf litter present. Island surfaced in the river. Walking path and chain-linked fence uphill.
				24D-0176-BS	1 - 2 ft	
				24D-0176-CS	2 - 3 ft	
24D-0177	6/18/2024	1.1	-	24D-0177-AS	0 - 1 ft	Wooded downslope. Island surfaced in the river. Walking path and chain-linked fence uphill. Refusal on cobble at 1.1 ft max penetration. No sample collected from CS interval.
				24D-0177-BS	1 - 1.1 ft	
24D-0178	6/18/2024	1.5	-	24D-0178-AS	0 - 1 ft	Wooded downslope. Walking path and chain-linked fence uphill. Refusal on cobbles at 1.5 ft max penetration. No sample collected from CS interval.
				24D-0178-BS	1 - 1.5 ft	
24D-0179	6/18/2024	1.6	-	24D-0179-AD; 24D-0179-AS	0 - 1 ft	Sample location on downslope from walking path. By end of chain-linked fence and curb. Near the base of a maple tree. Refusal on gravel and sidewall collapse. No sample collected from CS interval.
				24D-0179-BD; 24D-0179-BS	1 - 1.6 ft	
24D-0180	6/18/2024	1.8	-	24D-0180-AS	0 - 1 ft	Sample location on downslope off walking path. Rotting trees surrounding area, but dense canopy remains. Open understory.
				24D-0180-BS	1 - 1.8 ft	
24D-0181	6/18/2024	3	1.8	24D-0181-AS	0 - 1 ft	Wooded downslope between walking path and river. Moss and roots present at surface. Branches and deadfall overhanging.
				24D-0181-BS	1 - 2 ft	
				24D-0181-CS	2 - 3 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0182	6/19/2024	3	-	24D-0182-AS	0 - 1 ft	Wooded downslope between walking path and river. Abundant leaf litter and woody debris across surface. MS/MSD at AS and BS horizons.
				24D-0182-BS	1 - 2 ft	
				24D-0182-CS	2 - 3 ft	
24D-0183	6/19/2024	1.8	-	24D-0183-AS	0 - 1 ft	Sample location at toe of wooded downslope between walking path and river. Attempt #1: (refusal on large root) Attempt #2: (AS sample collected, refusal on cobble/gravel) Attempt #3: (BS sample collected, refusal on gravel and cobble layer at 1.8 ft max penetration)
				24D-0183-BS	1 - 1.8 ft	
24D-0184	6/19/2024	2.7	-	24D-0184-AS	0 - 1 ft	On broad shallow bank next to large stick structures. Refusal on gravel layer at 2.7 ft max penetration.
				24D-0184-BS	1 - 2 ft	
				24D-0184-CS	2 - 2.7 ft	
24D-0185	6/19/2024	3	2.5	24D-0185-AS	0 - 1 ft	At toe of downslope at vegetated mud flat.
				24D-0185-BS	1 - 2 ft	
				24D-0185-CS	2 - 3 ft	
24D-0186	6/21/2024	1.4	-	24D-0186-AD; 24D-0186-AS	0 - 1 ft	Multiple attempts could not pass 1.4 ft due to cobbles and collapse in hole. No sample collected from CS interval.
				24D-0186-BS	1 - 1.4 ft	
24D-0187	6/21/2024	1.5	-	24D-0187-AS	0 - 1 ft	Dense cobble layer at 1.5 ft. Three attempts same refusal. Moved location 10 ft towards river.
				24D-0187-BS	1 - 1.5 ft	
24D-0188	6/21/2024	3	-	24D-0188-AS	0 - 1 ft	Location shifted 5 ft closer to river due to roots. MS/MSD at AS horizon.
				24D-0188-BS	1 - 2 ft	
				24D-0188-CS	2 - 3 ft	
24D-0189	6/24/2024	1.8	-	24D-0189-AS	0 - 1 ft	No sample collected from CS interval, thick roots at 1.8 ft. Three attempts.
				24D-0189-BS	1 - 1.8 ft	
24D-0190	6/24/2024	3	0.85	24D-0190-AS	0 - 1 ft	
				24D-0190-BS	1 - 2 ft	
				24D-0190-CS	2 - 3 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0191	6/24/2024	2.3	2.1	24D-0191-AS	0 - 1 ft	Refusal at 2.3 ft. Cobbles increasing with depth.
				24D-0191-BS	1 - 2 ft	
				24D-0191-CS	2 - 2.3 ft	
24D-0192	6/24/2024	3	1.9	24D-0192-AS	0 - 1 ft	
				24D-0192-BS	1 - 2 ft	
				24D-0192-CS	2 - 3 ft	
24D-0193	6/27/2024	2.5	-	24D-0193-AS	0 - 1 ft	Sample location near bottom of slope downgradient from walking path. Dense canopy with open understory. MS/MSD at AS horizon. Refusal on gravel, 2.5 ft max penetration.
				24D-0193-BS	1 - 2 ft	
				24D-0193-CS	2 - 2.5 ft	
24D-0194	6/28/2024	2.6	0.4	24D-0194-AS	0 - 1 ft	Poor GPS reception. Refusal 2.6 ft, on cobble/boulder.
				24D-0194-BS	1 - 2 ft	
				24D-0194-CS	2 - 2.6 ft	
24D-0195	6/6/2024	1	-	24D-0195-AS	0 - 1 ft	Near the toe of slope, upgradient of large vegetated mud flat. Dense canopy with relatively open understory. No samples collected from BS and CS intervals due to refusal on large/coarse gravel and large roots. Volume collected for MS/MSD at AS horizon.
24D-0196	6/28/2024	1.4	0.8	24D-0196-AS	0 - 1 ft	Attempted three times. Refusal at 1.4 ft on large cobbles and small boulders.
				24D-0196-BS	1 - 1.4 ft	
24D-0197	6/6/2024	2.4	-	24D-0197-AS	0 - 1 ft	On steep slope between foot path and mud flats.
				24D-0197-BS	1 - 2 ft	
				24D-0197-CS	2 - 2.4 ft	
24D-0198	6/28/2024	1.9	-	24D-0198-AD; 24D-0198-AS	0 - 1 ft	Only able to auger to 1.5 ft. Made three attempts including with tile spade. 1.5-1.9 ft all cobbles and all loose. Holes kept collapsing. No sample collected from CS interval.
				24D-0198-BS	1 - 1.5 ft	
24D-0199	No access to property.					

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0200	6/28/2024	1.6	-	24D-0200-AS	0 - 1 ft	Top 10 foot slope, very steep. Soils bony, hole refused three times deepest obtained 1.6 ft. No sample collected from CS interval.
				24D-0200-BS	1 - 1.6 ft	
24D-0201	6/28/2024	2	-	24D-0201-AS	0 - 1 ft	Poor GPS signal. Refusal on cobble and roots max penetration 2.0 ft.
				24D-0201-BS	1 - 2 ft	
24D-0202	7/1/2024	0.8	0.3	24D-0202-AS	0 - 0.8 ft	Original location on top bedrock cliff approximately 10-14 ft above river and in the center of a dense briar patch. Location was adjusted roughly 5-7 ft off cliff towards water. Today water level is higher and location cannot be safely accessed. Moved point 15-20 ft up stream for safety concerns. After three attempts deepest obtained 0.8 ft, refused on cobble/boulder.
24D-0203	7/1/2024	2.9	-	24D-0203-AS	0 - 1 ft	
				24D-0203-BS	1 - 2 ft	
				24D-0203-CS	2 - 2.9 ft	
24D-0204	5/22/2024	1.9	-	24D-0204-AS	0 - 1 ft	Just downgradient of the footpath, downstream of Pine Tree Brook and the Central Ave bridge. Leaf litter and woody debris abundant over soils. Next to very large oak tree.
				24D-0204-BS	1 - 1.9 ft	
24D-0205	5/22/2024	2	0.3	24D-0205-AS	0 - 1 ft	At toe of slope downgradient from footpath. Adjacent to likely temporarily open flooded stagnant wetland. Woody debris and vines present.
				24D-0205-BS	1 - 2 ft	
24D-0206	5/22/2024	3	2.2	24D-0206-AS	0 - 1 ft	Flat floodplain with native soils/sediment. Detritus and deadfall present. Approximately halfway between footpath and river.
				24D-0206-BS	1 - 2 ft	
				24D-0206-CS	2 - 3 ft	
24D-0207	5/22/2024	1.4	-	24D-0207-AS	0 - 1 ft	Near foot path, heavy tree canopy, on slope with soils consisting of slate pieces with heavy organics.
				24D-0207-BS	1 - 1.4 ft	
24D-0208	7/10/2024	3	0.8	24D-0208-AS	0 - 1 ft	Flag was laying flat in field. Unable to determine if flag was at actual location. Assumed flag did not move far as location appears to be correct relative to 207, the pedestrian bridge, and the DCR trail.
				24D-0208-BS	1 - 2 ft	
				24D-0208-CS	2 - 3 ft	
24D-0209	7/10/2024	1.7	-	24D-0209-AS	0 - 1 ft	Refusal at 1.7 ft. Refusal likely bedrock.
				24D-0209-BS	1 - 1.7 ft	

Table 2
Soil Boring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date of Boring	Total Boring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24D-0210	7/1/2024	0.4	-	24D-0210-AS	0 - 0.4 ft	Location originally adjusted towards river. Located on bedrock adjacent outcrop. Moved 4 ft closer to river. Refusal on bedrock 0.4 ft. All 4 attempts.
24D-0211	7/1/2024	0.8	-	24D-0211-AD; 24D-0211-AS	0 - 0.8 ft	Three attempts, refusal at 0.8 ft, boulder/bedrock.
24D-0212	7/1/2024	1.4	-	24D-0212-AS	0 - 1 ft	Location up against pilings. Hole refused at 1.4 ft on roots.
				24D-0212-BS	1 - 1.4 ft	
24D-0213	7/1/2024	1	-	24D-0213-AS	0 - 1 ft	Located on river side of pilings. Root refusal at two locations. Final location approximately 8 ft downstream and 4 feet closer to stream. Trees and wild life habitat. Holes all refused. Deepest 1 foot. No samples collected from BS and CS intervals.
24D-0214	7/10/2024	2	-	24D-0214-AS	0 - 1 ft	Location shifted 3 ft towards river from flag due to roots.
				24D-0214-BS	1 - 2 ft	
24D-0215	6/10/2024	1.5	0.4	24D-0215-AD; 24D-0215-AS	0 - 1 ft	Point bar sampling by Dana Ave. bridge. No sample collected from CS interval. Sediments too coarse, could not maintain open hole. Continual collapse both with auger and shovel. 3 attempts were made.
				24D-0215-BS	1 - 1.5 ft	
24D-0216	6/10/2024	2	0.4	24D-0216-AS	0 - 1 ft	Point bar sampling by Dana Ave. bridge. No sample collected from CS interval. Sediments too coarse, could not maintain open hole. Continual collapse both with auger and shovel. 3 attempts were made.
				24D-0216-BS	1 - 1.5 ft	
24D-0217	6/10/2024	2	0.3	24D-0217-AS	0 - 1 ft	Point bar sampling by Dana Ave. bridge. No sample collected from CS interval. Sediments too coarse, could not maintain open hole. Continual collapse both with auger and shovel. 3 attempts were made.
				24D-0217-BS	1 - 1.7 ft	
24D-0218	7/17/2024	3	2.2	24D-0218-AS	0 - 1 ft	Location added with EPA approval in area regularly used by the public for gardening. Sample location on elevated vegetated mud flat. Large boulder-like revetment present. Downgradient from retaining wall.
				24D-0218-BS	1 - 2 ft	
				24D-0218-CS	2 - 3 ft	
24D-0219	7/17/2024	1.5	-	24D-0219-AS	0 - 1 ft	Location added with EPA approval in area regularly used by the public for gardening. Sample location up on vegetated bank. Large revetment, bricks, and trash present. Adjusted downstream of outfall in retaining wall. Refusal on bricks at 1.5 ft max penetration. No sample collected from CS interval.
				24D-0219-BS	1 - 1.5 ft	
24D-1068	6/10/2024	2.4	1.35	24D-1068-CS	2 - 2.4 ft	The sample container from the CS depth interval from 24D-0068-CS was broken when received by SGS. Another location (24D-1068) was advanced in the vicinity so that another sample from CS depth interval could be collected.

24D-1068-CS (a)	2 - 2.4 ft	X	X			

Notes:
PCB - polychlorinated biphenyl
PCDD/F - dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list
SVOCs - semi-volatile organic compounds
VOCs - volatile organic compounds
(a) The sample container for PCBs and PCDD/F analysis from the CS depth interval at location 24D-0068-CS was broken when received by SGS. Another location (24D-1068) was advanced in the vicinity of location 24D-0068 to collect a sample from the CS depth interval for PCBs and PCDD/F.

Table 4A
Soil Analytical Program Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston, Massachusetts

Analyte Group	Method	Laboratory
Soil		
PCB Congeners	USEPA 1628	SGS - Wilmington
PCDD/F	USEPA 1613B	SGS - Wilmington
TCL VOCs	SFAM01.1	Alliance Technical Group
TCL SVOCs	SFAM01.1	Alliance Technical Group
TAL Metals (ICP-MS) Mercury (CVAA)	SFAM01.1	Chemtex

Notes:
CVAA – cold vapor atomic absorption
ICP-MS – inductively coupled plasma mass spectrometry
PCB – polychlorinated biphenyl
PCDD/F – dibenzodioxins/furans
SVOCs – semi-volatile organic compounds
TCL – target compound list
VOCs – volatile organic compounds

Table 4B
Sediment Analytical Program Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston, Massachusetts

Analyte Group	Method	Laboratory
Sediment		
TCL VOCs	SFAM01.1	Alliance Technical Group
TCL SVOCs	SFAM01.1	Alliance Technical Group
PCB Congeners	USEPA 1628	SGS - Wilmington
PCDD/F	USEPA 1613B	SGS - Wilmington
TOC	Lloyd Kahn	Eurofins Lancaster
TAL Metals (ICP-MS) Mercury (CVAA)	SFAM01.1	Alliance Technical Group
Grain Size	ASTM D422 Modified	Eurofins Lancaster

Notes:
CVAA – cold vapor atomic absorption
ICP-MS – inductively coupled plasma mass spectrometry
PCB – polychlorinated biphenyl
PCDD/F – dibenzodioxins/furans
SVOCs – semi-volatile organic compounds
TCL – target compound list
TOC – total organic carbon
VOCs – volatile organic compounds

Notes:
(a) Mussel cages were retrieved on 9/24/24 after being deployed for periods ranging from 95 to 97 days.

(b) 24E-06T0-XS represents time 0 'pre-deployment' mussel concentrations. This sample was composed of 15 mussels collected from Willet Pond that were reserved in a separate cooler for determination of pre-exposure chemical concentrations. Mussels were held for 24 hours in clean water to depurate sediment before being frozen and shipped to the laboratory.

PAH – polycyclic aromatic hydrocarbon
PCB – polychlorinated biphenyl
PCDD/F – dibenzodioxins/furans
TAL - target analyte list
TCL – target compound list

Table 7
Sediment Coring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date	Location Type	Total Coring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24A-0001	10/29/2024	Grab	0.5	N/A	24A-0001-AS	0 - 0.5 ft	N/A
24A-0002	10/29/2024	Grab	0.5	N/A	24A-0002-AS	0 - 0.5 ft	Under railroad bridge. Higher velocity area, mostly coarser material - gravel and coarse sand.
24A-0003	10/29/2024	Grab	0.5	N/A	24A-0003-AS	0 - 0.5 ft	GPS coordinates put station on middle of island. Collected approximately 30 feet east of main channel.
24A-0004	10/29/2024	Grab	0.5	N/A	24A-0004-AD; 24A-0004-AS	0 - 0.5 ft	N/A
24A-0005	10/29/2024	Grab	0.5	N/A	24A-0005-AS	0 - 0.5 ft	N/A
24A-0006	10/29/2024	Grab	0.5	N/A	24A-0006-AS	0 - 0.5 ft	GPS put station on rubble dam. Moved downstream 5 to 10 ft to a location out of flow. Some sheen observed in water during sample collection.
24A-0007	10/28/2024	Grab	0.5	N/A	24A-0007-AS	0 - 0.5 ft	N/A
24A-0008	10/28/2024	Grab	0.5	N/A	24A-0008-AS	0 - 0.5 ft	N/A
24A-0009	10/28/2024	Grab	0.5	N/A	24A-0009-AS	0 - 0.5 ft	N/A
24A-0010	10/28/2024	Grab	0.5	N/A	24A-0010-AS	0 - 0.5 ft	N/A
24A-0011	10/28/2024	Grab	0.5	N/A	24A-0011-AS	0 - 0.5 ft	N/A
24A-0012	10/28/2024	Grab	0.5	N/A	24A-0012-AS	0 - 0.5 ft	N/A
24A-0013	10/28/2024	Grab	0.5	N/A	24A-0013-AS	0 - 0.5 ft	N/A
24A-0014	10/28/2024	Grab	0.5	N/A	24A-0014-AD; 24A-0014-AS	0 - 0.5 ft	N/A
24A-0015	10/28/2024	Grab	0.5	N/A	24A-0015-AS	0 - 0.5 ft	N/A
24A-0016	10/28/2024	Grab	0.5	N/A	24A-0016-AS	0 - 0.5 ft	N/A
24A-0017	10/25/2024	Grab	0.5	N/A	24A-0017-AS	0 - 0.5 ft	N/A
24A-0018	10/25/2024	Grab	0.5	N/A	24A-0018-AS	0 - 0.5 ft	N/A
24A-0019	10/25/2024	Grab	0.5	N/A	24A-0019-AS	0 - 0.5 ft	N/A
24A-0020	10/25/2024	Grab	0.5	N/A	24A-0020-AS	0 - 0.5 ft	N/A
24A-0021	10/25/2024	Grab	0.5	N/A	24A-0021-AS	0 - 0.5 ft	Multiple grabs were very different. One was light brown medium sand. Another was gravel with darker brown medium sand. Another was gravel with darker brown sand with some silt.
24A-0022	10/25/2024	Grab	0.5	N/A	24A-0022-AS	0 - 0.5 ft	N/A
24A-0023	10/25/2024	Grab	0.5	N/A	24A-0023-AS	0 - 0.5 ft	N/A
24A-0024	10/25/2024	Grab	0.5	N/A	24A-0024-AS	0 - 0.5 ft	N/A
24A-0025	10/25/2024	Grab	0.5	N/A	24A-0025-AS	0 - 0.5 ft	N/A
24A-0026	10/25/2024	Grab	0.5	N/A	24A-0026-AS	0 - 0.5 ft	N/A
24A-0027	10/25/2024	Grab	0.5	N/A	24A-0027-AS	0 - 0.5 ft	N/A
24A-0028	10/25/2024	Grab	0.5	N/A	24A-0028-AS	0 - 0.5 ft	N/A
24A-0029	10/24/2024	Grab	0.5	N/A	24A-0029-AS	0 - 0.5 ft	N/A
24A-0030	10/24/2024	Grab	0.5	N/A	24A-0030-AS	0 - 0.5 ft	N/A
24A-0031	10/24/2024	Grab	0.5	N/A	24A-0031-AD; 24A-0031-AS	0 - 0.5 ft	N/A
24A-0032	10/24/2024	Grab	0.5	N/A	24A-0032-AS	0 - 0.5 ft	N/A
24A-0033	10/24/2024	Grab	0.5	N/A	24A-0033-AS	0 - 0.5 ft	N/A
24A-0034	10/24/2024	Grab	0.5	N/A	24A-0034-AS	0 - 0.5 ft	N/A
24A-0035	10/24/2024	Grab	0.5	N/A	24A-0035-AS	0 - 0.5 ft	N/A
24A-0036	10/24/2024	Grab	0.5	N/A	24A-0036-AD; 24A-0036-AS	0 - 0.5 ft	N/A
24A-0037	10/24/2024	Grab	0.5	N/A	24A-0037-AS	0 - 0.5 ft	Samplers had to move around to find location in otherwise rocky area.
24A-0038	10/24/2024	Grab	0.5	N/A	24A-0038-AS	0 - 0.5 ft	Some sheen observed during sample collection.
24A-0039	10/24/2024	Grab	0.5	N/A	24A-0039-AD; 24A-0039-AS	0 - 0.5 ft	N/A
24A-0040	10/24/2024	Grab	0.5	N/A	24A-0040-AS	0 - 0.5 ft	N/A

Table 7
Sediment Coring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date	Location Type	Total Coring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24A-0041	10/1/2024	Core	3	2.3	24A-0041-AS; 24A-0041-AD	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from fine sand to clay. Refusal on large stone layer, max penetration 3.0 ft.
					24A-0041-BS	0.5 - 1.7 ft	
					24A-0041-CS	1.7 - 3 ft	
24A-0042	10/4/2024	Core	2.1	-0.5	24A-0042-AS	0 - 0.5 ft	Adjusted point approximately 45 ft downstream to feasible sampling conditions. Adjacent boring hole to get volume for CS interval. Segregated BS and CS intervals due to change in lithology from silt to sand with gravel. Refusal on gravel at 2.1 ft penetration.
					24A-0042-BS	0.5 - 1.3 ft	
					24A-0042-CS	1.3 - 2.1 ft	
24A-0043	9/18/2024	Core	3.4	3.1	24A-0043-AS	0 - 0.5 ft	Segregated BS and CS intervals due to lithology change from silt to sand. Refusal on cobble - max penetration 3.4 ft.
					24A-0043-BS	0.5 - 1.7 ft	
					24A-0043-CS	1.7 - 3.4 ft	
24A-0044	9/18/2024	Core	3.6	3.1	24A-0044-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from silt to sand. Refusal on cobble - max penetration 3.6 ft.
					24A-0044-BD; 24A-0044-BS	0.5 - 1.7 ft	
					24A-0044-CS	1.7 - 3.6 ft	
24A-0045	10/24/2024	Grab	0.5	N/A	24A-0045-AS	0 - 0.5 ft	Sheen observed in sample and in water while collecting sample.
24A-0046	9/18/2024	Core	5.4	2.8	24A-0046-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from sand to silt. Refusal from cave in with sand and gravel, max penetration 5.4 ft.
					24A-0046-BS	0.5 - 2.5 ft	
					24A-0046-CS	2.5 - 5.4 ft	
24A-0047	9/24/2024	Core	2.2	N/A	24A-0047-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from sand to silt. Max penetration 2.2 ft due to refusal on layer of gravel and thick roots.
					24A-0047-BS	0.5 - 1.7 ft	
					24A-0047-CS	1.7 - 2.2 ft	
24A-0048	9/24/2024	Core	2.7	N/A	24A-0048-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from sand to silt. Refusal on large stone layer and hole collapsing. Max penetration 2.7 ft.
					24A-0048-BS	0.5 - 2 ft	
					24A-0048-CS	2 - 2.7 ft	
24A-0049	9/24/2024	Core	5	2.7	24A-0049-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from cobble to fine sand - along with color change. Hole collapsing, max penetration 5 ft.
					24A-0049-BS	0.5 - 2.8 ft	
					24A-0049-CS	2.8 - 5 ft	
24A-0050	9/18/2024	Core	4.5	2.5	24A-0050-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to change of color and strong miscelleanous odor. Refusal on hole collapsing, max penetration 4.5 ft.
					24A-0050-BS	0.5 - 2.2 ft	
					24A-0050-CS	2.2 - 4.5 ft	
24A-0051	10/24/2024	Grab	0.5	N/A	24A-0051-AS	0 - 0.5 ft	N/A
24A-0052	9/17/2024	Core	3.5	3.4	24A-0052-AD; 24A-0052-AS	0 - 0.5 ft	Segregated BS and CS intervals at 2 ft due to presence of gravel in silt and unknown strong odor.
					24A-0052-BS	0.5 - 2 ft	
					24A-0052-CS	2 - 3.5 ft	
24A-0053	9/24/2024	Core	2.5	2.3	24A-0053-AS	0 - 0.5 ft	Segregated between BS ad CS intervals due to change of color. Refusal on gravel and thick stone layer at 2.5 ft.
					24A-0053-BS	0.5 - 1.3 ft	
					24A-0053-CS	1.3 - 2.5 ft	
24A-0054	9/17/2024	Core	1.9	1.85	24A-0054-AS	0 - 0.5 ft	Segregated between AS and BS intervals due to slight darkening of color and gravel component. Refusal on coarse gravel and cobbles. Max penetration 1.9 ft.
					24A-0054-BS	0.5 - 1 ft	
					24A-0054-CS	1 - 1.9 ft	
24A-0055	10/23/2024	Grab	0.5	N/A	24A-0055-AS	0 - 0.5 ft	N/A
24A-0056	9/25/2024	Core	3.1	1.1	24A-0056-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from silt to sand. Refusal on gravel layer. Max penetration 3.1 ft.
					24A-0056-BS	0.5 - 2.3 ft	
					24A-0056-CS	2.3 - 3.1 ft	

Table 7

					24A-0074-BS	0.5 - 2 ft	
					24A-0074-CS	2 - 2.8 ft	

Table 7
Sediment Coring and Sampling Interval Summary
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Location ID	Date	Location Type	Total Coring Depth (feet)	Depth to Water (feet)	Sample IDs	Sample Depth	Comments
24A-0075	9/23/2024	Core	3.8	1.8	24A-0075-AS	0 - 0.5 ft	Differentiated between BS and CS intervals due to lithology change from silt to sand and gravel at 2.9 ft. Max penetration at 3.8 ft with refusal on gravel.
					24A-0075-BS	0.5 - 2.9 ft	
					24A-0075-CS	2.9 - 3.8 ft	
24A-0076	9/23/2024	Core	3.3	1	24A-0076-AD; 24A-0076-AS	0 - 0.5 ft	Moved location after discussion with project team. Stations 0075 and 0076 are paired with one intended to be near channel edge and one inland. Sampled 0075 via GPS positioning at inland spot. Collected 0076 near current river edge approximately 20 feet south of 0075. Collected from two adjacent holes to get volume for field duplicate from AS interval (0 to 0.5 ft). Segregated between BS and CS intervals by lithology. Max penetration at 3.3 ft on gravel layer.
					24A-0076-BS	0.5 - 2.3 ft	
					24A-0076-CS	2.3 - 3.3 ft	
24A-0077	9/16/2024	Core	3.5	N/A	24A-0077-AS	0 - 0.5 ft	N/A
					24A-0077-BS	0.5 - 2.3 ft	
					24A-0077-CS	2.3 - 3.5 ft	
24A-0078	9/23/2024	Core	4.9	N/A	24A-0078-AS	0 - 0.5 ft	Segregated between BS and CS intervals at thin layer of grey to brown compacted drier silt. Moist and brown above and below. Gravel layer encountered in bottom 0.2 ft of boring with max penetration of 4.9 ft. Refusal on collapsing gravel. Insufficient material in sandy gravel for sample collection.
					24A-0078-BS	0.5 - 3.3 ft	
					24A-0078-CS	3.3 - 4.9 ft	
24A-0079	9/23/2024	Core	4.9	2.1	24A-0079-AS	0 - 0.5 ft	Segregated BS and CS intervals by lithology change. Max penetration at 4.9 ft on gravel.
					24A-0079-BS	0.5 - 4.2 ft	
					24A-0079-CS	4.2 - 4.9 ft	
24A-0080	10/23/2024	Grab	0.5	N/A	24A-0080-AS	0 - 0.5 ft	N/A
24A-0081	10/3/2024	Core	4.2	-0.2	24A-0081-AD; 24A-0081-AS	0 - 0.5 ft	Adjacent boring for required volume for AS interval duplicate. Segregated BS and CS intervals due to lithology break from silt to sand. Sidewall collapse preventing further advancement past 4.2 ft max penetration.
					24A-0081-BS	0.5 - 3 ft	
					24A-0081-CS	3 - 4.2 ft	
24A-0082	10/1/2024	Core	4.2	2	24A-0082-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to lithology change from fine sand to fine sand with gravel. Refusal on hole collapsing, max penetration 4.2 ft.
					24A-0082-BS	0.5 - 2.3 ft	
					24A-0082-CS	2.3 - 4.2 ft	
24A-0083	9/19/2024	Core	3.1	1.5	24A-0083-AS	0 - 0.5 ft	Segregated between BS and CS intervals due to change in litholgy from gray sandy horizon to brown silty horizon. Refusal on gravel layer at 3.1 ft max penetration.
					24A-0083-BS	0.5 - 1.5 ft	
					24A-0083-CS	1.5 - 3.1 ft	
24A-0084	9/19/2024	Core	3	0.4	24A-0084-AS	0 - 0.5 ft	Hole collapse refusal at 3.0 ft max penetration. Segregated between BS & CS intervals due to break from predominately silt to sand with gravel.
					24A-0084-BS	0.5 - 1.9 ft	
					24A-0084-CS	1.9 - 3 ft
