Table 34
Whote Body Tissue Analytical Results Compared to Ecological PALs
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Notes:
(a) Yellow highlighted values represent detection of the compound at a concentration above the human health PAL; underlined values represent detection of the compound at a concentration above the ecological PAL.
(b) Comparison of the data to the PALs is for informational purposes only and is not an indication of risk.
(c) Bold font indicates detected concentration.
(d) Whole-body concentrations were calculated by AECOM as detailed in the text.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Project Action Limits (PALs):
A blank cell for the PAL indicates no PAL is available.
See Table 51 for additional details.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Qualifiers:
U - Both the fillet and offal concentration were non-detect.
O* - Fillet concentration was not available or rejected. Offal concentration was used as the whole-body concentration.

Sample Type:
N - normal

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
% - percent
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.
(b) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details.
(c) Whole-body concentrations were calculated by AECOM as detailed in the text.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
% - percent
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.
(b) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details.
(c) Whole-body concentrations were calculated by AECOM as detailed in the text.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
% - percent
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.
(b) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details.
(c) Whole-body concentrations were calculated by AECOM as detailed in the text.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
% - percent
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.
(b) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details.
(c) Whole-body concentrations were calculated by AECOM as detailed in the text.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Project Action Limits (PALs):
A blank cell for the PAL indicates no PAL is available.
See Table 51 for additional details.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
% - percent
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.
(b) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details.
(c) Whole-body concentrations were calculated by AECOM as detailed in the text.

Project Action Limits (PALs):
A blank cell for the PAL indicates no PAL is available.
See Table 51 for additional details.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Project Action Limits (PALs):
A blank cell for the PAL indicates no PAL is available.
See Table 51 for additional details.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans

Notes:
(a) The number of samples shown and the calculation of summary statistics treated the parent and field duplicate as individual samples.

Sums and TEQ:
(a) The homolog groups sums for PCBs and PCDD/Fs were calculated by summing the detected congeners in each group; if no congeners in a group were detected, the maximum reporting detection limit for any individual congener in that homolog group was used.
(b) The concentration of total PCB congeners was calculated as the sum of detected congeners in each sample.
(c) PCDD/F TEQ and PCB Toxic Equivalency (TEQ) values were calculated by summing the detected compounds in each group that have been multiplied by their specific Toxic Equivalency Factors (TEFs); see Table 51 for more details. For any sample that did not have any detected compounds, the resulting TEQ is shown as a zero.
(d) For coelution of dioxin-like (DL) and non-DL congeners, TEF is applied to the full reported concentration.
(e) Calculated total values are inclusive of Estimated Maximum Possible Concentration (EMPC) results.

Project Action Limits (PALs):
A blank cell for the PAL indicates no PAL is available.
See Table 51 for additional details.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TCL - target compound list

Units:
% - percent
ng/g - nanograms per gram
ng/kg - nanograms per kilogram
mg/kg - miligrams per kilogram
ug/kg - micrograms per kilogram

Table 51
Toxicity Equivalency Factors (TEF) and Calculation of Toxic Equivalency (TEQ) for Dioxin-Like Compounds
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Notes:
(1) Van den Berg et al. 2006. The 2005 World Health Organization Re-evaluation of Human and Mammalian Toxicity Equivalency Factors for Dioxins and Dioxin-like Compounds. Toxicological Sciences 2006 93(2):223-241
(2) Van den Berg et al. 1998. Toxic Equivalency Factors (TEFs) for PCBs, PCDDs, PCDFs for Humans and Wildlife. Environmental Health Perspectives Volume 106, Number 12, December 1998.
Please note that the laboratory did not provide individual results for "2,3,3',4,4',5-HxCB (156)" and "2,3,3',4,4',5'-HxCB (157)", but instead provided a combined result for the "PCB-156/157" coeluter group. This combined result was used in lieu of the individual results.

Ecological Project Action Limits (PALs):

Fish and Mussel:
The ecological PALs were presented in Worksheet #15 of the Quality Assurance Project Plan and are the lowest of the tissue concentrations derived by the Oregon Department of Environmental Quality to be protective of birds and mammals consuming fish/shellfish and tissue concentrations protective of the fish, shellfish, and other aquatic organisms themselves (Oregon DEQ, 2007).
TEQ and total PCBs were not included in Worksheet #15.
The ecological PALs for TEQ and total PCBs are based on the following:

Analyte	Ecological PAL	Units	Basis
Total PCDD/F TEQ (Bird)	8	ng/kg	2,3,7,8-TCDD value protective of birds consuming fish/shellfish [Table A-3] (Oregon DEQ, 2007)
Total PCDD/F TEQ (Fish)	6.4	ng/kg	2,3,7,8-TCDD value protective of fish, shellfish, and other aquatic organisms [Table A-4] (Oregon DEQ, 2007)
Total PCDD/F TEQ (Mammal)	0.58	ng/kg	2,3,7,8-TCDD value protective of mammals consuming fish/shellfish [Table A-3] (Oregon DEQ, 2007)
PCB-TEQ (Bird)	8	ng/kg	2,3,7,8-TCDD value protective of birds consuming fish/shellfish [Table A-3] (Oregon DEQ, 2007)
PCB-TEQ (Fish)	6.4	ng/kg	2,3,7,8-TCDD value protective of fish, shellfish, and other aquatic organisms [Table A-4] (Oregon DEQ, 2007)
PCB-TEQ (Mammal)	0.58	ng/kg	2,3,7,8-TCDD value protective of mammals consuming fish/shellfish [Table A-3] (Oregon DEQ, 2007)
Total PCB Congener	35000	ng/kg	Lowest of Aroclor 1254 values protective of birds and mammals consuming fish/shellfish and values protective of fish, shellfish, and other aquatic organisms [Table A-3 & A-4] (Oregon DEQ, 2007)

Surface Water:
The ecological PALs are the lowest of the Massachusetts surface water quality standards, aquatic life criterion continuous concentration values for freshwater (MassDEP, 2022), National Recommended Water Quality Criteria aquatic life criterion continuous concentration values for freshwater (USEPA, 2024c), and USEPA Region 4 freshwater chronic screening values (USEPA, 2018).
TEQ and total PCBs were not included in Worksheet #15.
The ecological PALs for TEQ and total PCBs are based on the following:

Analyte	Ecological PAL	Units	Basis
Total PCB Congener	14000	pg/L	MA SWQS aq. (Total PCBs)
Total PCDD/F TEQ (Mammal)	0.0031	pg/L	USEPA Region 4 for 2,3,7,8-TCDD (Dioxin) (Wildlife Based)
Total PCB TEQ (Mammal)	0.0031	pg/L	USEPA Region 4 for 2,3,7,8-TCDD (Dioxin) (Wildlife Based)

Human Health Project Action Limits (PALs):

Fish:
The human health PALs were presented in Worksheet #15 of the Quality Assurance Project Plan and are the lower of the United States Environmetal Protection Agency regional screening levels calculated for fish tissue using Massachusetts Department of Environmental Protections' default fish consumption rate of 32 grams/day (MassDEP, 2008) and United States Environmetal Protection Agency Regional Screening Level Calculator default exposure assumptions and toxicity values, based on a target hazard quotient of 0.1 and a target risk level of 1E-06 (USEPA, 2024a).
TEQ and Total PCBs were not included in Worksheet #15.
The human health PALs for TEQ and total PCBs are based on the following:

Analyte	Human Health PAL	Units	Basis
Total PCDD/F TEQ (Mammal)	0.054	ng/kg	Value for 2,3,7,8-TCDD
PCB TEQ (Mammal)	0.054	ng/kg	Value for 2,3,7,8-TCDD
Total PCB Congener	3510	ng/kg	High risk value for PCBs/Aroclor 1254.

Surface Water:
The human health PALs were presented in Worksheet #15 of the Quality Assurance Project Plan and are the lower of the Massachusetts surface water quality standards, human health criteria for drinking water plus fish and shellfish consumption (MassDEP, 2022), Massachusetts maximum contaminant levels (MassDEP, 2020), National Recommended Water Quality Criteria for human health for consumption of water and organisms (USEPA, 2024d), USEPA maximum contaminant levels (USEPA, 2024b), and USEPA regional screening levels for tap water based on a target hazard quotient of 0.1 and a target risk level of 1E-06 using the November 2024 RSL table (USEPA, 2024a).
TEQ and Total PCBs were not included in Worksheet #15.
The human health PALs for TEQ and total PCBs are based on the following:

Table 51
Toxicity Equivalency Factors (TEF) and Calculation of Toxic Equivalency (TEQ) for Dioxin-Like Compounds
Phase 2 Data Evaluation Summary Memorandum
Lower Neponset River
Boston and Milton, Massachusetts

Analyte	Human Health PAL	Units	Basis
Total PCB Congener	64	pg/L	Massachusetts and National Recommended Water Quality Criterion for PCBs for human health consumption of water and organisms.
Total PCDD/F TEQ (Mammal)	0.005	pg/L	Massachusetts and National Recommended Water Quality Criterion for 2,3,7,8-TCDD for human health consumption of water and organisms.
Total PCB TEQ (Mammal)	0.005	pg/L	Massachusetts and National Recommended Water Quality Criterion for 2,3,7,8-TCDD for human health consumption of water and organisms.

Analytes:
PCB - polychlorinated biphenyl
PCDD/F - polychlorinated dibenzodioxins/furans
TAL - target analyte list
TEQ - toxic equivalency
TCL - target compound list

Units:
ng/g - nanograms per gram
pg/L - picograms per liter

5/31/2024

0710 Silas & Josie arrive onsite. Meet at field trailer to prepare for sampling. We will be sampling along the LNR trail. projected to go to locations 53, 54 & 55. The second field team Walter & Steve will go to 56, 57 & 58.

0750 Bill on-site.

0815 Head to Ryan playground to park and walk to first location (0053).

0848 sample time for 24D-0053-AS

0900 first attempt for 24D-0053-Bs.

0920 SE moving to second attempt 6 feet east

5/31/24

Rite in the Rain

from original hole. too many roots and gravel.

0925 second attempt had too many large roots and a giant boulder. Moving to third attempt 6 feet west along contour.

0930 sample time for 24D-0053-BS. Third attempt.

1007 sample time for 24D-0053-CS. Because of refusal and caving, this was not a full suite.

1015 Silas not feeling well, sent back to staging area.

1030 Walk over to 24D-0054 and noticed flagging submerged in water.

JMS 5/31/24

1036 Collected gps point & moved it 2 feet north 3 feet east from original flagging.

1055 sample time for 24D-0054-AS.

1120 sample time for 24D-0054-BS. could not get VOCs due to volume and coarse sand / gravel.

1135 3 attempts for 24D-0054-CS were not successful due to hole caving & coarse sand / gravel.

1150 Walked over to 24D-0055.

1215 moved original flagging point 2 feet away from the river

JMS 5/31/24

Rite in the Rain.

and 4 feet parallell due to the flag being submerged.

1220 sample time for 24D-0055-AS.

1253 sample time for 24D-0055-BS.

1310 attempt number 1 for 24D-0055-CS.

1328 second and third attempt were a fail due to not being able to get passed 2 feet. Heavy root and gravel at the bottom.

1335 Head over to station 24D-0059-.

1355 sample time for 24D-0059-AS.

1420 sample time for 24D-0059-BS.

5/31/24

no VOCs - not enough volume.

1430 could not get 0059-CS due to roots & caving.

1445 Bill leaves to go back to staging area. Josie stays to help other land team finish 0060.

1505 Josie, Walter & Steve leave Ryans playground to head back to staging area.

0815 WM AELOM onsite w/ DS f/ ↳ JL, RP onsite US Env
~0815-0830 TN, SH AELOM onsite
~0845 Review safety, scope of work, short-term plans ↳ SSA into tailgate form
0915 WM, SH begin going through inventory/prep equipment for sampling
- Start GPS - connect to Milton, MA local RTK
- print/generate insert for truck dashboard
- create Excel sheet w/ added locations flagged on Friday 5/17/2024 per email f/ GK on 5/14/2024
0935 Teams call w/ GK, KC regarding sample location addition/adjustment
- KC → review EQuIS w/ SH, talk to DCR/Forks regarding dam water releases
~1025 WM reach back out to M Flynn DCR regarding gate ~~RM 2.5~~ the Rains

P5 8/8

5/20/2024 LNR PHII Soils

1030 WM, SH go through equipment, * decon sampling materials, pack truck w/ misc. items
↳ S/ Teams call (0935 5/20) agreed plan to begin sampling w/ approval on 5/21 working DS → US starting at loc. staging grid 24D-021 onwards
plan
- ↳ TGB onsite 5/21
- ↳ DCR RM 2.5 gate opened
- ↳ AECOM/TGB flag water loc. US → DS starting by T&H dam
- ↳ WM, SH sample as described above

↳ SH calibrated Arrow GNSS GOLD GPS to ~5.0 m accuracy when using Eos Tools Pro application

1034 phone call w/ M. Flynn DCR
↳ WM mob to gate to get pictures of lock,

532/9

5/20/2024 LNR PHII Soils

GPS coordinates

1056 M. Flynn confirms DCR to meet WM AECOM @ gate at 1200

1100 SH finish decon sample equipment, obtain WM pack buckets of supplies used for upcoming sampling

1140 check scales, charge scales

1150 begin PID calibration check (pull out materials)
↳ paused: to be continued after DDD meeting w/ DCR

1155 WM @ DCR gate RM 2.5

1209 DCR onsite
↳ gate was dummy locked, lift up & push
John Rogers > DCR
Roberto Estrada
↳ confirmed cannot launch 3 DCR property (MDC sign)
↳ John Rogers to call Matt Flynn

1217 DCR, WM leave gate

1224 WM back @ staging area

1233 Notify Milton MA PD of our residence here next 3 days.

533/9

1236 mob to Elliot St / Extra Storage parking to continue flagging

1245 connect w/ Extra Space Storage contact:
Christopher Malon
↳ we have granted access been to park in lot

1308 @ 24D-0207
↳ no change req' feasible w/in 10 ft

1315 @ 24D-0206
↳ need to adjust based on existing field conditions.
↳ slate, till, shallow rock layer w/ small thin organic layer on top
↳ walk perpendicular towards shoreline until soil becomes feasible

1330 @ 0205 → similar conditions to 0206
↳ more perpendicular to shoreline until feasible soil reached

pg 4/9

MADE IN TACOMA
— SINCE 1916 —
Rite in the Rain®
— DEFYING MOTHER NATURE —

Yes, *Rite in the Rain* is a wood-based & recyclable paper, but unlike plain paper... it won't turn to mush when exposed to:

ALL-WEATHER TOUGH!™

USE WET OR DRY
most pens stop writing when wet
- ALL PENCILS
- *RITE IN THE RAIN PENS*
- WAX MARKERS
- CRAYONS
- OIL PASTELS / PAINT

WHEN DRY ONLY
what you write won't wash off
- PERMANENT MARKERS
- STANDARD BALLPOINTS

WON'T WORK
water-based inks bead off sheet
- GEL PENS
- MOST HIGHLIGHTERS
- FOUNTAIN PENS
- WATER COLORS
- ACRYLIC PAINT

BRAND HISTORY

The *Rite in the Rain* story began a century ago in the forests of the Great Pacific Northwest. Entrepreneur Jerry Darling recognized the logging industry's need for a durable material that could be written on and survive in poor weather conditions. Jerry developed a special coating that created a unique moisture shield on the hand-dipped sheets of paper that he and his wife, Mary, processed at their home. From these humble beginnings our first all-weather paper was born. Over the many years we've perfected and patented our environmentally responsible coating process. Still located in Tacoma, our continued mission is to provide innovative products for professionals and enthusiasts who brave the outdoors.

LNR Phase II Sediment Sampling
10/14/24 - 10/18/24
Processing Team 2

CONTENTS

PAGE	REFERENCE	DATE

Location Lower Neponset River Date 10/14/2024

Project / Client EPA 60703400

P. Winchell mobilizes @ Pocasset office and drives to Central Ave canoe launch location to meet up with OSI staff
- Morgan Barrett
- Aiden
- Evan

They are assembling Pondu and preparing to launch. They have a jon boat for maneuvering people/cores.

OSI leaves the shore and heads towards sta 24A-0141. They do not have room on the jon boat for any AECOM personnel.

1154 They are set up at station 24A-0141. They probed the area and it is hard - no penetration. They tried 3 grab attempts and didn't get any sediment.

1300 ~~1258~~ Begin coring @ 24A-0141.

Rite in the Rain

Location LNR Date 10/4/2024

Project / Client EPA 60703400

The core liner is not penetrating at all. It's just skating around on the bottom.

P. Winchell calls K. Durako and explains what happened first attempt. She says to try probing all around the areas halfway between Sta 24A-0141 and 24A-0143 and the stations in the middle to see if we can find any areas of soft sediment. If we can't find any soft sediment we call it no recovery and move to the next station. If we don't get anything at 24A-0143 either we should spend the time probing the remainder of the stations to see if we find softer material at any - and tell Maddy and shore staff which station(s) might be viable.

PSW 10/4/24

Location LNR Date 10/4/2024

Project / Client EPA 60703400

24A-0141 - probing seemed to find one area maybe 20.5' of softer sediment, but grab attempts only brought up leaves and twigs.
Attempt 3 had some sediment along w/ leaves - put into a pan. Will try for additional sediment Attempts 4, 5, 6, 7, 8, & 9 fill the pan enough to hopefully get the volume needed to sample

24A-0143

1400 collect a grab at 0143 - seems better than 0141.

1420 Try for a core @ 24A-0143 penetrated ~6" but nothing was retained in the core liner. They will try with a shorter piece of liner. Probing here indicated coring might be possible, but not sure of the grain size (need coarse sand max) Retained on 10/5/24

Location LNR Date 10/14/2024
Project / Client EPA 60703400

24A-0143 continued

1438 StaA coring attempt 2 with 0 core catcher and 3' core liner. Retained ~ 0.5' of sediment. Cut the core ~1" above sediment interface but sed. still settling. Looks to be ~1.5' of sediment. Since the liner is only 3" they will get a 2nd core here for volume.

1516 Begin core #3 @24A-0143.

1520 End coring. Looks to be the same pen/recovery as attempt 2. Not quite. Push ~1 foot.

1545 Cores transfered to P. Winchell on the shore. S Howe will come to get them.

1548 OSI begins probing the area to see where we might be able to get a successful

10/14/2024

Location LNR Date 10/14/2024
Project / Client EPA 60703400

core tomorrow morning.

1645 OSI back at the canoe launch area. There is no security detail here yet, but not due until 1700. Demob occurring.

1655 Security detail arrives

1700 P. Winchell & M. Barrett head to site trailer to pick up key & plug battery in.

1720 P. Winchell off site.

10/14/2024

Rite in the Rain

Location LNR Date 10/15/24

Project / Client EPA 60703400

0630 P. Winchell arrives @ site trailer. Wait for M. Barrett to arrive to pick up battery. Pick up some supplies from the conex box.

0705 Head to canoe launch. OSI - Aiden & Evan already on-site. Safety meeting held before launching boats.

0750 Pondu arrives at footbridge and coring area. They need to set up lines - anchor spread.

0825 On Station 24A-0157 Probe goes in ~4ft.

0853 Begin coring

0855 End coring - no additional penetration - hit refusal on rock.

Core is 2.5' pen 2.5' recovery

10/15/24

Location LNR Date 10/15/24

Project / Client EPA 60703400

0913 Grab sample taken for extra volume.

P. Winchell had asked S. Howe if a core & grab was enough volume, or if they needed 2 cores. He said 1 core & 1 grab is good.

Set up on 24A-0155 this is a duplicate on B - we will need 2 cores here.

0946 Begin first core @ 24A-0155
0947 End coring - hit refusal on rock

1025 Begin coring core 2 of 24A-0155
1021 End coring - hit refusal on rock

Cores transferred to P. Winchell on land. S Howe coming to pick them up.

Heading to 24A-0154

1057 Cores & grab sediment transferred to processing team.

10/15/24

Rite in the Rain

Location LNR Date 10/15/24

Project / Client EPA 60703400

24A-0154

1103 Begin coring

1105 End coring - refusal on rock
Pen 1.0' Rec 0.5' not retained

They are probing for a better area to core. The best location they found without going more than halfway to the next stations the probe went in ~2ft. They will attempt a core here.

1155 Begin coring at best location

1158 End coring - refusal on rock
pen 1.6' rec 1.6'

1210 Grab taken

1217 M. Barrett transfers core & grab to PWinchell on shore

Heading to 24A-0152
Will probe along the way as they get past halfway from 0154, and continue around station.

10/15/24

Location LNR Date 10/15/24

Project / Client EPA 60703400

They found a location with ~2' of penetration with the probe.

24A-0152

1242 begin coring

1245 end coring - hit refusal on rock
1.5 pen 1.1 rec

Because recovery is <80% they will try for another core, but will retain the first core.

1307 Begin coring attempt 2

1311 End coring - refusal on rock
1.5 pen 1.5 rec.

Can use 24A-0152 first attempt for extra A layer volume.

Head to 24A-0156. Probing on station is hard-rock, probing further out heading towards 24A-0152 is softer. They will core where probe went in furthest.

10/15/24

Rite in the Rain

Project / Client EPA 60703400

24A-0156

1358 Begin coring

1401 End coring - refusal on rocks
Pen 1.8' Rec 1.6'

1416 Grab for volume - added from 3 different attempts

Head to 24A-0158 - they need to move one of the anchor ropes so the 3-pt spread can reach the station.

Probing - getting dense gravel ~0.5' down at the station location. They will probe around to see if they can find a better location.

24A-0158

1452 Begin coring

1454 End coring - refusal on rock
2.0 pen 1.9 rec.

AMW 10/15/24

Location LNR Date 10/15/24

Project / Client EPA 60703400

1510 24A-0158
Grab

Heading to station 24A-0151
They tried probing on the station - it was hard, went upstream and towards shore - not better. They went downstream a bit and it seems like they might be able to get something.

24A-0151

1548 Begin coring

1551 End coring - refusal on rock
Pen 2.6' Rec 2.8'
There is a lot of sand in the core and it expanded with the vibrations.

1604 Grab collected but it's all water

1607 Attempt 2 - has some sediment

1612 DSI begins to pick up anchor lines. Then they

Pete in station 10/15/24

Location LNR Date 10/15/24

Project / Client EPA 60703400

will travel upstream to the canoe launch for the night.

1630 OSI back at canoe launch to de mob & wait for security.

P. Winchell will transport the last core & grab to the site trailer for cold storage overnight.

1720 PWinchell off site

10/15/24

Location LNR Date 10/16/24

Project / Client EPA 60703400

0630 PWinchell arrives @ site trailer. M. Barrett (OSI) will arrive by 0700 to pick up battery. Vibracoring near dam to continue today - we have 9 of 18 stations left.

0700 MBarrett picks up battery - all head to canoe launch. Andrea & Evan already on-site & have relieved the security guard.

0740 OSI heads downstream

They cannot get Pondu under the bridge. They have to disassemble part of the frame over the moon pool to be able to get under the bridge.

0816 Pondu makes it under the bridge. Now they have to re-assemble the parts they had to remove.

10/16/24

Rain in the Rain

16

Location LNR Date 10/16/24

Project / Client EPA 60703400

0811 Call to M Fasca to explain the situation and asked her to call K Carbonneau to ~~not~~ explain and ask if DCR has a boat to add any additional boards - or to see if they might be able to remove a layer to allow more water through

0827 Begin to set out anchor lines.

Probing around sta 24A-0149 to find a good coring location

0900 They found one area that they got 2' of penetration with the probe. They will core there.

24A-0149

0910 Begin coring

0913 End coring - hit refusal on rock.
Pen 1.3' Rec 1.1'

0929 Grab obtained

10/16/24

Location LNR Date 10/16/24

17

Project / Client EPA 60703400

Will head to 24A-0146

Probing around the station indicates there is one area with softer layer approx 2' deep, over rock. They will core there.

1000 Begin coring

1003 End coring - refusal on rock
2.0 pen 2.1 rec

1010 Grab

S. Howe will come for the cores/grabs. M. Barrett transfers to P. Winchell on shore.

DSI heads to 24A-0148

Cores & grabs transferred to S. Howe.

0ST found 1 location by probing - only penetrated 1 ft. max

Rite in the Rain

Location LNR Date 10/16/24

Project / Client EPA 60703400

24A-0148

1104 Begin coring

1106 End coring - hit refusal on rock.
Pen 1.4' Rec 1.4'

1120 Grab obtained

Head to 24A-0150
probing around the station to find the best location for coring.

24A-0150

1145 Begin coring

1147 End coring - hit refusal on rock
2.0' pen 1.8' rec

1155 Grab sampling begins - not much sediment coming up in the grabs. It's mostly organic matter sticks, leaves, etc.

1207 Grab attempts end - 12 attempts made in that timeframe.

S. Howe picks up cores & grabs for processing

10/16/24

Location LNR Date 10/16/24

Project / Client EPA 60703400

DST heading to 24A-0153
probing at station and around to the south (towards shore) finds only 0.5' as the best penetration. They will try further north - towards the middle, but w/out crossing more than 50% to the next station location. P. Windell is concerned that all the "best" locations are towards the center and stations will be grouped too close together. Calls K. Durocher to ask if it's better to get actual station locations, or to get "best" locations. She said to go with QAPP - take an attempt at the actual, then find the "best" location. Since we aren't getting C-horizons (only 1 so far) we have extra samples that can be obtained from other new locations.

Sta 24A-0153

24A-0144 cont.
Core attempt 3 - moved a bit more to the middle of the river, but not more than 1/2 to adjacent stations.

1033 Attempt 3
Open core - the core was skating around on rocks.

Called M Fasca to see what we should do here - and ask about the remainder of the day. It's not clear what the rest of the day will be yet. We will try 5 grab attempts at the location of core attempt 2 to see if we can get any sediment to sample.

1050 Grab 1, 2, nothing, 4 little organics + sediment, 5 same as 3, There is some sediment in the pan - we'll send back for

RMW 10/17/24

Location LNR Date 10/17/24

Project / Client EPA 60703400

processing whatever is there.

M. Fasca texts that K. Durocher sent an email that they are working on approval for additional stations. We will stay in general area - will return to cars, but will stay along this stretch of river (between dam & canoe launch).

The plan is for us to collect grabs for the rest of the day. P. Winchell will process VOA vials on shore - the rest of the sediment will be returned to site for additional processing. P. Winchell returns to site trailer to pick up supplies needed.

1140 Return to canoe launch and tell OSI the plan. We'll figure out some logistics and sample ASAP.

RMW 10/17/24

Location LNR Date 10/17/24

Project / Client EPA 60703400

Grab samples will begin at Sta 24A-0139 - an MS/MSD station. They will need to fill 3 pans.

1330 Grabs begin - they fill 3 pans
1335 pan 2
1340 pan 3

3 sets of VOA vials

1330 24A-0139-AS MEOH 5.03g 5.03g
H2O 5.14g
H2O 4.88g
MEOH 4.64g H2O 4.91 : 4.61g
" 5.13g " 5.04g ; 5.24g

24A-0140
Nothing at original station location - offset
1357 Grabs
1440 Samples MEOH 5.24g
P. Winchell having difficulty filling the vials. The pan is full of decaying leaves and

10/17/24

Location LNR Date 10/17/24

Project / Client EPA 60703400

silty water. No real sediment.
S. Howe comes to pick up and P. Winchell asks him about 24A-0140. He thought they "might" be able to get a PCB jar out of the whole pan but then VOCs aren't needed. Evan brings 24A-0137 collected @ 1435. S. Howe says it's better than 24A-0140, but still wouldn't be enough to collect all analytes so if used VOC's aren't needed. The pan was full of plants w/sediment adhered to roots. Evan said they will try again at both 24A-0140 and 24A-137 - trying to find better sediment.

1455 24A-0140 3-grabs to fill pan for volume. The pan had a lot of gravel. Not sure there would be enough good sediment.

10/17/24

Location LNR Date 10/7/24

Project / Client EPA 60703400

for all analytes.

24A-0137 2nd attempt
Grabs begin @ 1510 - took 9 grabs for the pan transfered to P. Winchell

1521 VOCs MEOH 5.33g
H_2O 4.80g & 5.02g

1530 Sta 24A-0138 - offset from actual station
took 9 attempts, but pan does not have enough volume to fill all jars. P. Winchell doesn't take VOC's. Sampling plan states "Up to 3 attempts will be made to collect an acceptable grab and sufficient sample volume at each station. The field team will attempt up to 2 alternate station locations. 1 attempt at first alt - 2 add'l attempts may be made. If no acceptable sample, 1 attempt

AMW 10/17/24

Location LNR Date 10/7/24

Project / Client EPA 60703400

will be made at the 2nd alt. location. Up to 2 add'l attempts may be made at the 2nd alt location." Therefore, a total of 9 grab attempts/station. OSI has been taking more than that - or if they stop @ 9 there is not enough volume for all jars. We need to discuss the sampling methodology & priorities. If more grabs are needed/station do we need fewer stations to offset?

1550 We end the day so OSI can get Ponder back to Sanoe launch + demob; and so P. Winchell can discuss priorities going forward.

1010 S Howe picks up remaining pans & vials.

1613 P Winchell will return to car, then site trailer

AMW 10/17/24

Location LNR Date 10/17/24

Project / Client EPA

P. Winchell discusses issues with K. Cadmus on drive home. K. Cadmus informs her they will do as many grabs as needed to get volume (in an area where sediment is obtainable).

P. Winchell left site ~ 1655.

10/17/24

Location LNR Date 10/18/24

Project / Client EPA 60703400

0630 P. Winchell on site at trailer - looking at coring locations on figure sent out by K. Durocher on 10/17/24 and approved for collection. These are additional cores to be obtained closer to the dam, but not more than 150 feet from it.

0700 At Central Ave canoe launch with M. Barnett, E. Shalagan & A. Hubble discussing plan for the day. K. Durocher calls P. Winchell to explain coring locations and why chosen - try to avoid collecting where previous cores have been collected, try to get something in middle.

0740 Leave w/ Pondu + jon boat to head downstream to dam area.

0755 Pondu in area, setting up anchor lines.

10/18/24

Location LNR Date 10/18/24

Project / Client EPA 60703400

0805 On station and setting up for coring. They probe around the station area as well.
24A-0169

0831 Coring begins

0833 Coring ends - hit refusal on rock
pen 2.0' rec 1.8'

0847 Grab attempt 1 - sand & gravel
attempt 2 - same

Will move to sta. 24A-0170

24A-0170

0912 Begin coring

0914 End coring - hit refusal on rock
pen 2.5 rec 2.5

0927 Grab attempt 1
attempt 2 & 3

0950 At Sta 24A-0171
doing some probing to find the best coring location

AHW 10/18/24

Location LNR Date 10/18/24

Project / Client EPA 60703400

Sta 24A-0171

1001 Begin coring

1003 End coring - refusal on rock
3.5 pen 3.0 rec

1020 Grab - 3 attempts

All 3 coring stations have been obtained. We will switch over to get more grab stations. P. Winchell heads to site trailer to get supplies, OSI brings Ponder back to the canoe launch and will work off the jonboat.

1120 Back at pedestrian bridge to try to get Stations 24A-0135 and 24A-0136.

1155 Return w/ 24A-0136

1200 VOC's - P Winchell can't get VOC's out of either of the 2 pans they sent back. One is

AHW 10/18/24

Location LNR Date 10/18/24

Project / Client EPA 60703400

all gravel, the other is all decaying leaves & silty water. Texted S. Howe.

1205 Sta 24A-0135 grab 1 obtained - 3 attempts

1218 SVOCs MeOH 513g
H_2O

Battery on the scale dies before the 3rd VOC is obtained. M. Fasca will bring another battery here.

1245 M Fasca brings battery & picks up the pans & vials. P. Winchell packs up, then will go check on OSI at the canoe launch.

OSI continuing to demob Pond 1. PWinchell returns to site trailer and helps process cores/grabs for the rest of the day.

10/18/24

End of day - C. Steve Howe takes notes for rest of grab stas.

CONTENTS

PAGE	REFERENCE	DATE
	Lower Nepaset River Mussels	6/24

Acclimation from (Site 6) started

6/19/24 - ~~Willet Pond~~ WQ 0733
Temp: 23.49 DO: 7.51 mg/L
cond: 0.348 mS/cm pH: 7.28

6/19/24 : Willet Pond [Source] WQ 0855
Temp: 26.25 DO: 8.61 mg/L
cond: 0.222 mS/cm pH: 7.64
Sunny pond is likely ↑ DO because of respiring phytoplankton. Temp is also higher here because of sun. Snorkelers noted many "pockets" of cooler water

6/9/24 Mussels - Wednesday 1st day

0630 - Meet @ Field Office @ Esplanade Park
Field Safety meeting w/ NAI and AECOM
Risk Purky led a ground walk
took WQ on site and cooler of water for acclimation
0730 - leave and drive to 4 Creeks
on the North end of Willet Pond. Parked at the fish and game club. Worked west from the entrance to the Parking lot along shoreline in water 0-3ft deep. Collected mussels by wading with a view tub and shallow Snorkelling. Targeted 50-90mm with a percentage for 60-80mm. Pictures taken. took WQ.

60g target for analysis per cage
leave room for mortality (+15%) = 9g extra
69 total/g

10 mussels subsample - Selected 5 out of that 10

Measure, in mm
70, 62, 76, 48, 63, 71, 73, 62, 82, 71

weight in g
4.1, 3.6.7, 13.8, 4.9, 8.8

37.5g / 5 mussels = 7.5g average | 69g / 8.6.7.8

Grey Clipboard - Calipers

15/cage will allow some extra
If all survive, we will have ~112.5g per cage. 52.5g extra per cage

Complete Collection @ 1230 37°F Kept
Coolers are holding water temp steadily
~~Used~~ mixed 50/50 water in coolers gradually
Kept 15 aside for depuration as T-0
1315
T-0 mussels placed in trailer @ 74°F which is same as native waters with bubblers
1330
Installed mussels that are hidden near the Nearest Esplanade under an overhanging tree in the water. ~120 meters OS of Canoe launch

Installation
4 size bins 60-80, 5mm bins
4,4, 4,3 for 16 sets and 4,5, 4,2 for last 2

1st Set - Area G

Set in Area G (New Trailer) @ 2:30

cont. 2 Pgs

Access

River Street Access River Street Terrace
US & T & H Dam. Drop gear & go
For areas 1-4
Lands Cleared may have access - There is
Billy & Rick something going on

Walter Baker Down parking
Christopher Malone - Extra Space Storage
Knows us

1st Set cont - Area 6 (From pg 3)

Hard to conceal - will grow per playbook soon
Through Spe datasheet for more info
Investigated access and water flow routes
Off site @ 5pm

6/25/24 - Sets 7, 8, 9 + 5

Thursday (2nd day)

OC/S arrive @ trailer - mob, get mussels in cooler. Decide on boat operations. Check T0 mussels - All good

Create cages, get mussels + measure into bags. Load trucks. 0800 drive to Ryan Playground.

Build Raft. Bird cages and load raft with cages + components

0900 leave from Ryan Playground access. Backtrack w/ Jack to go get life vests in trailer

Set 7, 8, + 9 down in River - smelled, downed ~~1130~~ - and petroleum smell @ Site 9. a little slower + deeper.

1230 - pulled out @ Central Isle Canoe Launch, de canned, got lunch, gas Had a break.

1330 - arrived at trailer talked to Bart Hoskins (EPA, had lunch, Shared boat pictures, Joe talked them for ~ 1 hour discussed future studies

1500 Mixed a set of cages and went to Area 5, below T + M dam.

Saved Dinah along Transect Highway 61 Burning locked gate as OSM Access. got Dinah set behind the island DS from the access stairs.

1700 - Return to trailer, sign out, clean cooler with mussels

1750 - leave site and finish notes

1430 - pulled T0 mussels from depuration and put in Freezer. put Sample # information on bag. They will try it for processing and sending on Friday after frozen

8

06/21/24 - Mussel Cage Set 4, 3, +1

0630 arrive @ trailer
Make for setting in Phase I area
Safety meeting - discuss access
0800 - leave and go to areas to scope crossings: ① Near train Station (Fairmont Jct) ② the end of River St Terrace.
Started DS and moved up
Set 4 near the T+H dam
area may have frequent foot traffic
Set 3 is upstream of the River St terrace where revetement begins and trail goes up. Setting traps in this muddy polluted area with very steep shores was very difficult. We set with pedestrian (wading) access since there's no boot access in PH I, the mussels prefer shallower water, and to make checks feasible.
~1430 Set #1 was placed in an access area behind Truman Apartments. Similar problems were expected here as in the other PH I sets.
1300 back @ the trailer to work on gear, check datasheets + leave @ [redacted] ~1430
Post note: There was some confusion with marking the location of sets 3+4 as we tried to find suitable areas

07/08/24 Mussel Cage Check # 1 day

Sets #6, 5, 1, 3, 4 in order
Weather: 93 high, felt like 96
0630 - Inspect + pack, safety meeting

0715: check, set #6, measure additional mussels added to this set on last day. Use camera + inspection scope to see mussels feeding, took picture. Remove all mussels and measure ~87 mussels

1030 - go to #5 below T+H dam open + inspect.

1230 - go to Phase I area ~ #1 behind Truman Apartments. pick up cages b/c banks too steep. Replant cages fix the anchor on the DS cage

1430 - Access 3+4 from Phase I trail. Much poison ivy. Could not load to the of #4 cages. Looked for 1 hour, wading is difficult, water is murky, Cage was likely pushed into the deep water off of the steep shore or otherwise vandalized

1545 return to trailer - recuperate from

Input and plan for tomorrow; store equipment and clean

1745 - off site

Note: Water levels appeared to have dropped by ~ 3-8 inches depending on site (.025-.33ft)

07/09/24 Mussel Cage Check #1 day 2

Sets # 7, 8, 9

0630 met @ trailer decon + clean equipment

0800 check set 3+4 area for last pole, found it.

0820 Park @ Ryan Playground walk/wade to Sites 7, 8, 9. Bring view tube minimally invasive checks see data sheets for more notes All cages + mussels were good Site 9 is on the South side and has the trail beside it. We waked upstream to find good footing to exit. ~ Deer in an area with a dugout hole in the bank.

out @ 12:00 grabbed lunch and download worked on datasheet QC and stored materials for next time. off site 1355

@Trailer

Pack list Mussel Checks

- Polarized Sunglasses
- ✓ extra zipties (Heavy Duty)
- dry bag
- data sheets

Mussel Check #2 07/24/24

~30 day check

Arrive on Site @ 0640

Mobe for checking gather materials discuss safety

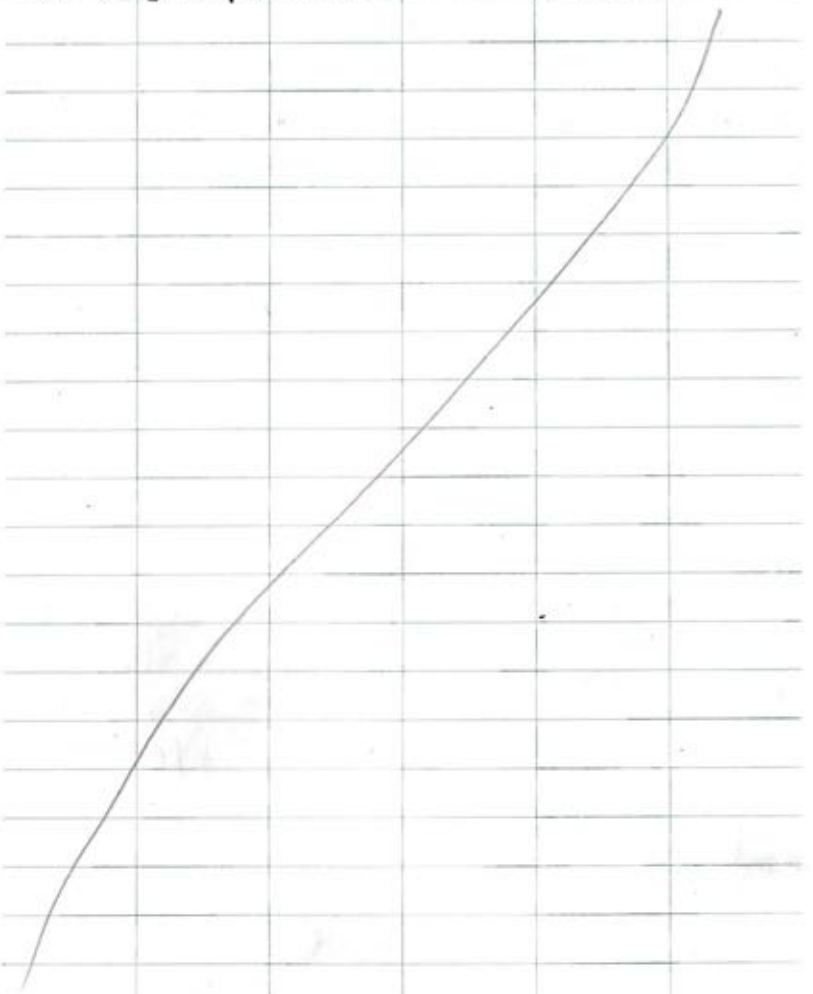
observed water levels dropped by ~0.75 Feet since last check @ the river by the trailer

~0800 went and checked #6

~0900 went and did 5, 4, + 3 in that order. See datasheets for detail

Found the other cage @ 4

1220 - lunch



Note - we estimated the numbers of live mussels by counting those that were visible and moving some rocks to count. This reduced disturbance in areas where the habitat was good we were fairly certain that there was 100% survival

320 - check 7, 8, 9

all good took separate WQ @ 2 sites for 7 and saw differences.

1600 Recovered and unpacked @ Site. Went to Walter Baker Dam to take pictures @ 1650.

left site from there ~ 17 13

Caged Mussel Deployment - Location Description

Lower Neponset River Superfund Site

Site #1

General Site Information

Staff: CML, JCM, JCS, RLB, JD Sean M.

Location ID: 24E- 0001

Health & Safety Concerns: Steep bank

GPS Coordinates

Northing: 42.2520504

Easting: -71.1207364

Date & Time: 6/21 1100

Weather Conditions: Full Sun, High 70s

Photos: Yes

Waterbody Details

Water depth (ft): 2ft - 2.5

Water velocity (ft/sec): 1 ft/s

Has there been heavy rain within last 7 days? (Y) / N

Water Quality Parameters Temp.: 26.38 pH: 6.97 DO: 4.96 (4.96) Sp. Cond.: 0.490 Turbidity: moderate Tannic

Discharge pipe(s) present? (Y) / N

Actively flowing? Y / (N)

Evidence of discharge? (Y) / N

Pipe diameter (ft): 8 in ~

Pipe construction: Metal (Concrete, Metal, Plastic, etc...)

Odor: petroleum (Sewage, Chlorine, etc...) odor from site

General composition of substrate (circle all that apply):

Bedrock | (Boulder (>10 in) 10) | (Cobble (2.5-10 in) 20%) | (Gravel (0.1-2.5 in) 10) | (Sand (coarse) 30%) | Detritus

(Silt (fine) 30%) | Marl (shells) | Clay (slick) | Muck (fine/black) | Debris | Concrete

Surrounding habitat: Tree line, apartments, railroad

Land use: Urban

Riparian areas? (Y) / N, however very slender and impaired

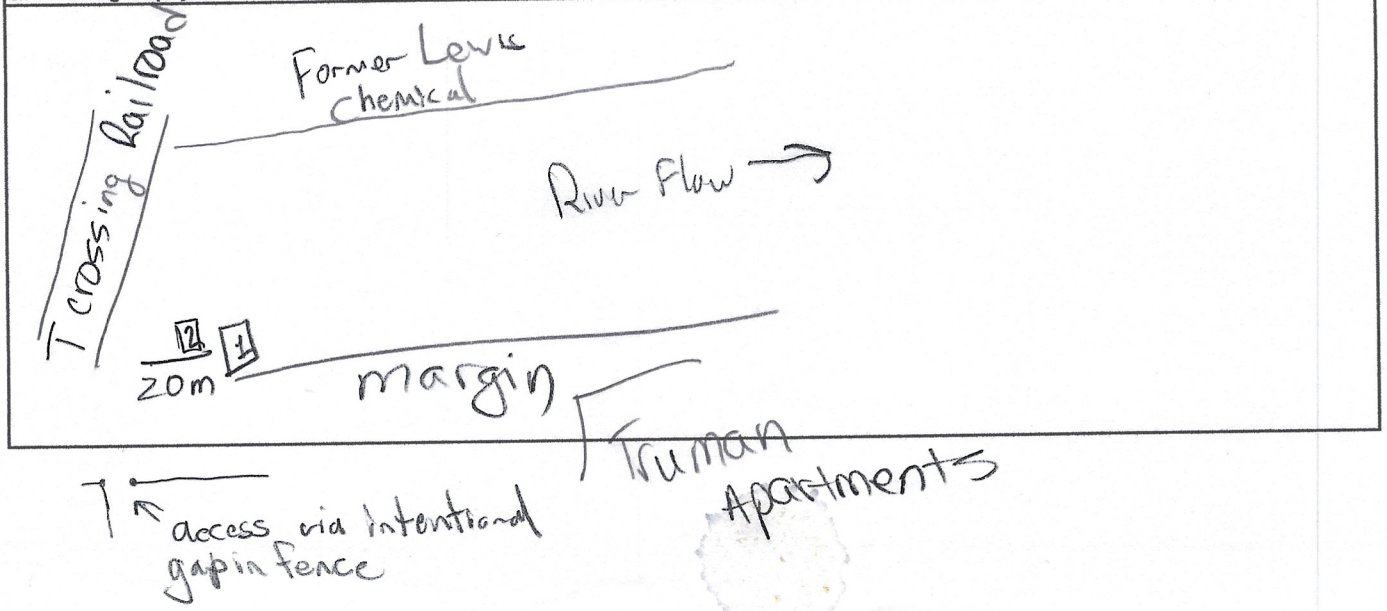
Shaded or Unshaded: Shaded

Trash/debris? (Y) / N

Bank slope, height: Steep

Discharges in or out? (Y) / N stormwater

Overhanging vegetation: Yes



Wetlands present? (Y) / N

Signs of potential human use? (Y) / N behind apartments slight signs, but Poison Ivy on banks and very steep access, do not lend this site for summer use

Vegetation and Biota

Fish observed:	(Y) / N	Type: Minnows
Invertebrates observed:	Y / (N)	Type:
Aquatic vegetation observed:	Y / (N)	Type (emergent, submergent, floating):
Birds observed:	Y / (N)	Type:
Mammals observed:	(Y) / N	Type:

Caged Mussel Deployment - Location Description

Lower Neponset River Superfund Site

Site # 5

General Site Information

Staff: JCS, RLB, CMM, JCM, Sean M

Location ID: 24E-0005

Health & Safety Concerns:

GPS Coordinates

Northing: 42.260678

Easting: -71.107475

Date & Time: 6/20 1614

Weather Conditions: Hot, Humid 94°F

Photos: Yes

Waterbody Details

Water depth (ft): 2'

Water velocity (ft/sec): 1ft/s

Has there been heavy rain within last 7 days? (Y) / N

Water Quality Parameters Temp.: 26.6C pH: 7.1 DO: 7.7 Sp. Cond.: .44 Turbidity: MODERATE/TAN

Discharge pipe(s) present? Y / (N) Actively flowing? Y / N Evidence of discharge? Y / N

Pipe diameter (ft): Pipe construction: (Concrete, Metal, Plastic, etc...) Odor: (Sewage, Chlorine, etc...)

General composition of substrate (circle all that apply):

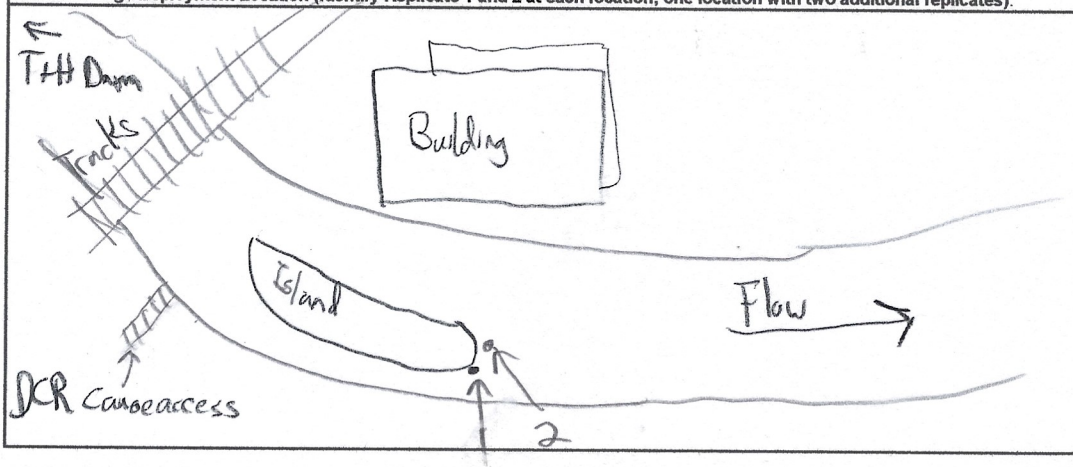
Bedrock	Boulder (>10 in)	Cobble (2.5-10 in)	(Gravel (0.1-2.5 in)) 40%	(Sand (coarse)) 50%	(Detritus) 20%
(Silt (fine)) 10%	Marl (shells)	Clay (slick)	Muck (fine/black)	Debris	Concrete

Surrounding habitat: PALUSTRINE SS WETLAND Land use: URBAN/ FORESTED

Riparian areas? (Y) / N Shaded or Unshaded: SHADED

Trash/debris? (Y) N Bank slope, height: 30% 10'

Discharges in or out? Y / (N) Overhanging vegetation: YES



Wetlands present? (Y) / N

Signs of potential human use? Y / (N)

Vegetation and Biota

Fish observed:	(Y) N	Type:
Invertebrates observed:	(Y) N	Type: Mussels + Shells
Aquatic vegetation observed:	(Y) N	Type (emergent, submergent, floating):
Birds observed:	(Y) N	Type:
Mammals observed:	(Y) N	Type:

Caged Mussel Deployment - Location Description

Lower Neponset River Superfund Site

Site #Co #

General Site Information

Staff: CML/JCS

Location ID: 24E-0006

Health & Safety Concerns: N/A

GPS Coordinates

Northing: 42.265783

Easting: -71.095253

Date & Time: 6/19 - 1500

Weather Conditions: 75 Partly Cloudy

Photos: Yes

Waterbody Details

Water depth (ft): ~2ft

Water velocity (ft/sec): 0.75 - 1ft/sec

Has there been heavy rain within last 7 days? Y / (N)

Water Quality Parameters Temp.: 23.49°C pH: 7.28 DO: 7.57 Sp. Cond.: 0.398 Turbidity: low

Discharge pipe(s) present? (Y) / N

Actively flowing? Y / (N)

Evidence of discharge? (Y) / N

Pipe diameter (ft): 10 - 12 in

Pipe construction: Metal (Concrete, Metal, Plastic, etc...)

Odor: Petroleum (Sewage, Chlorine, etc...)

General composition of substrate (circle all that apply): Note: Detritus is above substrate and is separate from composition

Bedrock | Boulder (>10 in) | (Cobble (2.5-10 in) 60%) | (Gravel (0.1-2.5 in) 20%) | (Sand (coarse) 15%) | (Detritus) 20%

(Silt (fine)) 5% | Marl (shells) | Clay (slick) | (Muck (fine/black)) | Debris | Concrete

Detritus 15% coverage

Surrounding habitat: wooded and urban

Land use: Urban

Riparian areas? (Y) / N

Shaded or Unshaded: Shaded

Trash/debris? (Y) / N

Bank slope, height: 45°, 20 ft

Discharges in or out? (Y) / N

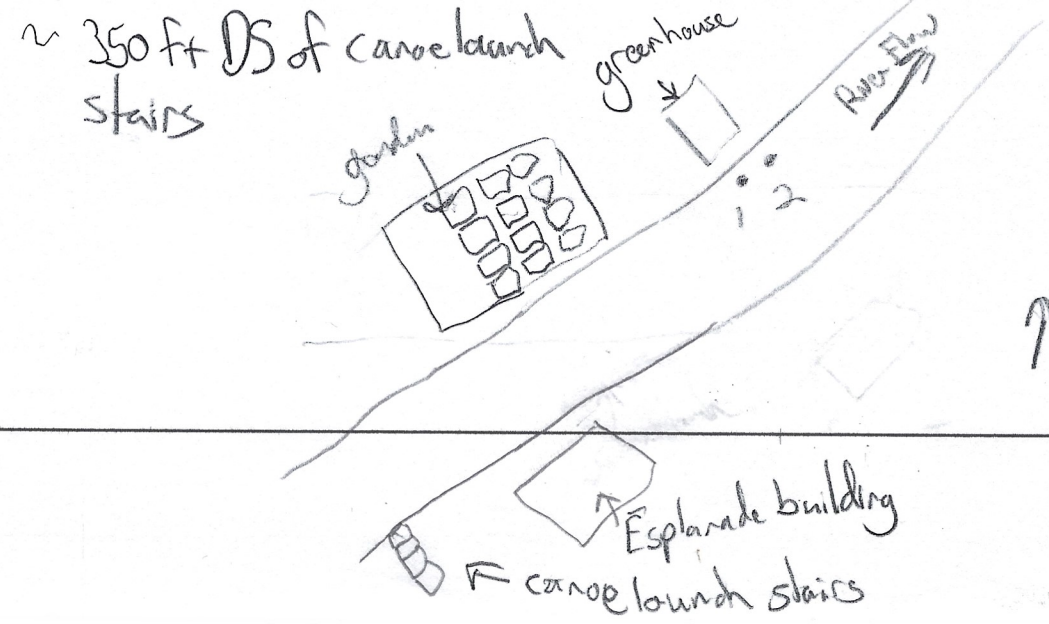
Overhanging vegetation: Trees

Wetlands present? Y / (N)

Signs of potential human use? (Y) N Nearby park - but no signs immediately @ site

Vegetation and Biota

Fish observed: (Y) / N Type:



Invertebrates observed: (Y) / N Type: Mussel shells

Aquatic vegetation observed: (Y) / N Type (emergent, submergent, floating):

Birds observed: (Y) / N Type: woodpecker

Mammals observed: Y / (N) Type:

Waterbody Details

Water depth (ft): 1.5 - 3 =

Water velocity (ft/sec): 1.0

Has there been heavy rain within last 7 days? (Y) / N

Water Quality Parameters Temp.: 25.8 pH: 6.87 DO: 5.85 Sp. Cond.: 445.0 Turbidity: 4.90 NTU

ORP: 103.8

Vegetation and Biota

Fish observed: Y (N)

Invertebrates observed: (Y) / N Type: Worms on Cage

Aquatic vegetation observed: Y / (N) Type (emergent, submergent, floating):

Birds observed: (Y) / N Type: Passerine

Mammals observed: (Y) / N Sign Type: Beaver Sign

Mussel Observations

Replicate 1

Number of dead mussels: Ø

Number of live mussels: 15

Do mussels close when tapped? Yes

Other cage or mussel observations.

Replicate 2

Number of dead mussels: Ø

Number of live mussels: 15

Do mussels close when tapped? Yes

Other cage or mussel observations.

Additional information: No signs of vandalism. Opened up both cages and inspected directly. There were no extra mussels as noted during deployment. Will add a note to the deployment datasheet PDF

Caged Mussel Study - Water Quality and Cage Check

Has there been heavy rain within last 7 days? Y / (N)

Water Quality Parameters Temp.: 26.3 pH: 6.89 DO: 5.61 Sp. Cond.: 438.9 Turbidity: ~~100.3~~ 10.33 NTU

ORP: 80.8

Vegetation and Biota

Fish observed:	Y / (N)	Type:
Invertebrates observed:	(Y) / N	Type: worm castings on cage
Aquatic vegetation observed:	Y / (N)	Type (emergent, submergent, floating):
Birds observed:	(Y) / N	Type: passerine
Mammals observed:	Y / (N)	Type:

Mussel Observations

Replicate 1

Number of dead mussels: 0

Number of live mussels: 15

Do mussels close when tapped? Yes

Other cage or mussel observations.

Replicate 2

Number of dead mussels: 0

Number of live mussels: 15

Do mussels close when tapped? Yes

Other cage or mussel observations.

Additional information:

Cages are where trail goes up where the fortified bank starts

New coordinates: 42.2597740, -71.1125000

Not near log upstream from Apartments as shown

Caged Mussel Study - Water Quality and Cage Check

Lower Neponset River Superfund Site

General Site Information

Staff: Walter McKenna, Sean Maxwell

Location ID: 24E-0004

Health & Safety Concerns: Steep slope

GPS Coordinates

Northing: Same except for Replicate #1 (below)

Easting:

Date & Time: 7/8/24 mid 90's

Weather Conditions: ~~Hot 80s~~ P.C. hazy

Photos: No

Waterbody Details

Water depth (ft): 2 ft

Water velocity (ft/sec): 0.5 → 0.7

Has there been heavy rain within last 7 days? (Y) N

Water Quality Parameters: Temp.: 26.5 pH: 6.89 DO: 5.75 Sp. Cond.: 439.4 Turbidity: 6.43 NTU

ORP: 104.4

Vegetation and Biota

Fish observed:	Y (N)	Type:
Invertebrates observed:	(Y) / N	Type: worms and worm castings
Aquatic vegetation observed:	Y / (N)	Type (emergent, submergent, floating):
Birds observed:	(Y) / N	Type: Passerine
Mammals observed:	Y (N)	Type:

Mussel Observations

Replicate 1

Number of dead mussels:

Number of live mussels:

Do mussels close when tapped?

Other cage or mussel observations: Did not find; likely vandalized, even though well concealed. Could have become dislodged and slipped down the bank in loose mud

Replicate 2

Number of dead mussels: 0

Number of live mussels: 15

Do mussels close when tapped? Yes

Other cage or mussel observations: picked up cage to observe in murky water. Could not observe from inspection scope

Additional information:

Staff: Walter McKenna, Sean Maxwell
Location ID: 24E-0006
Health & Safety Concerns: N/A

GPS Coordinates
Northing: Same
Easting:

Date & Time: 7/8/24 07:55
Weather Conditions: High 70s partly cloudy
Photos: Yes 3 in Viewtube 1 over view

Waterbody Details

Water depth (ft): 1.5- 2ft
Water velocity (ft/sec): 2.5
Has there been heavy rain within last 7 days? Y / N

Water Quality Parameters: Temp.: 24.6 pH: 7.00 DO: 7.30 mg/L Sp. Cond.: 44.6 ms/cm Turbidity: 4.65 NTU
ORP: 94.7

Vegetation and Biota

Fish observed:	(Y) / N	Type: minnows
Invertebrates observed:	(Y) / N	Type: Some type of stone fly larvae on rocks
Aquatic vegetation observed:	(Y) / N	Type (emergent, submergent, floating): Sparse Submerged + floating
Birds observed:	(Y) / N	Type: Passerine, heron tracks by bank
Mammals observed:	(Y) / N Sign	Type: tracks - raccoon + muskrat, opossum & beaver

Mussel Observations

Replicate 1

Number of dead mussels: Ø
Number of live mussels: 42
Do mussels close when tapped? Yes, when open mussels were tapped all were closed
Other cage or mussel observations. mussels closed when lid opened

Replicate 2

Number of dead mussels: Ø
Number of live mussels: 44
Do mussels close when tapped? N/A for - Yes, mussels observed to be open closed when tapped
Other cage or mussel observations. No evidence of disturbance
Periphyton camouflaged cage

Additional information:

Disturbed fine sediment/depositions in order to remove mussels. Inspected with camera + viewtube before opening took pictures periphyton covered cages and helped camouflage. Took additional measurements for mussels deposited in cage

Location ID: 24E- 0001

Health & Safety Concerns: Slope, PI

GPS Coordinates

Northing: Same

Easting:

Date & Time: 0815 8/12/2024

Weather Conditions: 70°F, cloudy

Photos: none

Waterbody Details

Water depth (ft): 1.5'

Water velocity (ft/sec): 0.8 ft/s

Has there been heavy rain within last 7 days? Y / (N)

Water Quality Parameters: Temp: 21.4°C pH: 6.72 DO: 5.51 Sp. Cond.: 482.1 Turbidity: 8.3 NTU

ORP: 77.9

Vegetation and Biota

Fish observed:	Y / (N)	Type
Invertebrates observed:	Y / (N)	Type
Aquatic vegetation observed:	Y / (N)	Type (emergent, submergent, floating)
Birds observed:	(Y) N	Type Passerine
Mammals observed:	Y / (N)	Type

Mussel Observations

Replicate 1

Number of dead mussels: 0

Number of live mussels: 15 estimate

Do mussels close when tapped? Y

Other cage or mussel observations. N

Replicate 2

Number of dead mussels: 0

Number of live mussels: 15

Do mussels close when tapped? Y

Other cage or mussel observations. N

Additional information:

Mussel cages had not been displaced/dislodged since last check. No apparent signs of vandalism. Opened replicate 2, lifted & viewed replicate 1 only to reduce disturbing sediment - could not inspect each mussel in rep #1 w/out causing excessive disturbance. Mussels seen in good condition.

Work Completed

Surface Water Sample Collection Progress:

- Collected surface water samples from 4 locations

Sampling Plan 05/10/25:

Samples collected for the following Analyses: VOCs, Pesticides, Dioxin/Furans, PCB 209 Congeners, total ICP-MS Metals/Mercury, and dissolved ICP-MS Metals/Mercury.

- 25A-0001-ASH and 25A-0001-ASH-F
- 25A-0002-ASH and 25A-0002-ASH-F
- 25A-0004-ASH and 25A-0004-ASH-F (Parent/MS/MSD)
- 25A-0005-ASH and 25A-0005-ASH-F (Parent)
- 25A-005-ASH-CS and 25A-0005-ASH-CS-F (Field Duplicate)
- Trip Blank: 25A-0002-2T
- Equipment Blank: 25A-0001-XR and 25A-0001-XR-F

Additional Recon:
Based on direction from Natalie Burgo, RP ground-truthed a number of DO NOT SAMPLE locations that had already been flagged ahead of time. Locations surveyed include: 0196 & 0198. Natalie stated that based on the map these locations appeared to need to be moved away from the tracks. RP ground-truthing confirmed that locations are not close to train tracks in real-time and are directly adjacent to the river (approx. 6 feet distance.) Locations 0196 & 0198 are ~100 feet from the train tracks and do not appear to be located on MBTA right-of-way.

Plan for Tomorrow:

1) **Flagging Team: Continue to flag along the North side of the river on DCR property. Locations 0072-0081 ON FOOT.**
2) **Sampling Team: Work with TG&B to collect samples from locations flagged on 5/22/24, 0105, 0106, 0107, 0110, BY BOAT.**

Flagging Team:

5/24/2024	24D-0049	Moved 5 feet north out of River
5/24/2024	24D-0050	Moved 14 feet NNE out of River and downstream outfall pipe
5/24/2024	24D-0051	Moved 4 feet north out of River
5/24/2024	24D-0052	Moved 7 feet north out of River.
5/24/2024	24D-0053	Moved 7 feet north out of River.
5/24/2024	24D-0054	TARGET FLAG NOT CHANGED
5/24/2024	24D-0055	Moved 4 feet north out of River
5/24/2024	24D-0056	Moved 8 feet north our of River
5/24/2024	24D-0057	Moved 12 ft. Downstream (east) and 2 ft. north out of river.
5/24/2024	24D-0058	TARGET FLAG NOT CHANGED

Plan for Tuesday 5/28/24:

1) **Sampling Team (Boat): Work with TG&B to collect samples from locations flagged on 5/22/24, 0102-0106**
2) **Sampling Team (Land): Flagging team will switch to sampling for Tuesday 5/28/24 as many more locations have been flagged than samples collected. Land sampling team will slightly increase the rate of sampling collection as it makes sense in the schedule.**

Notes:

1) **SGS samples are all off-site for the weekend. As CLP labs are unable to receive samples tomorrow 5/25/24 for the holiday weekend, samples collected today (5/24/24) are being held in refrigerated storage over the weekend and VOCs are frozen to increase hold time from 48 hours to 14 days with chemist and PM approval.**

Plan for Week of 6/3/24:

1) **Two sampling teams for day of 6/3/24:**
    a. **Sampling Team (Boat): Work with TG&B to collect samples from locations flagged on 5/22/24, 0102; 0001-0003, 0102 if not on restricted property. After completion, boat will be pulled from the water and dropped off in the section between the two rubble dams. Locations 0113-0132 on the south side and 0008-0022 on the north side are in this stretch.**
    b. **Sampling Team (Land): Continue sampling land stretch from 0061-0074. This stretch is projected to take until mid-next week (6/6/24).**
2) **Beginning on Tuesday 6/4/24:**
    a. **Flagging team on boat w/ TG&B begin flagging locations 0113-0132 and 0008-0022 between the two rubble dams.**
    b. **Sampling Team (Land): See above**
3) **After flagging team completes flagging of this section, sampling team will switch to sample by boat.**

Weekly Sample Summary (week of 5/28/24):

1) **Locations sampled: 20**
2) **Locations eliminated: 1 (0007)**
3) **Samples collected: 40**

Health and Safety Issues

N/A

Deviations from Approved Plan and NCR ID

1. Location 0060 nearby an outfall that was previously unknown. Sample flag adjusted to be downstream of outfall with approval of RP and notification of PM team.

Plan for remainder of Week 6/3/24:

1) **Flagging Team (Boat): Begin flagging locations 0113-0134 on the south side of the river and locations 0008-0022 on the north side of the river. This is projected to be completed by Thursday 6/6/24 at the earliest. After the flagging team has finished this section, the sampling team will begin sampling it by boat beginning next week (6/10/24).**

2) **Sampling Team (Land): Continue sampling land stretch from 0065-0074. This stretch is projected to take until mid-week (6/6/24).**

Health and Safety Issues

High need for Tecnu in second area of boat launch. Potential need for Tyvek for field team accessing river through the woods.

Plan for remainder of Week 6/4/24:

1) **6/5/24: Flagging Team (Boat): Finish flagging following locations on the North side of the river.**

6/5/2024	24D-0014		Original	via boat
6/5/2024	24D-0015			via boat
6/5/2024	24D-0016			via boat
6/5/2024	24D-0017			via boat
6/5/2024	24D-0018			via boat
6/5/2024	24D-0019			via boat
6/5/2024	24D-0020			via boat
6/5/2024	24D-0021			via boat
6/5/2024	24D-0022			via boat

   After the flagging team has finishes this section (projected to take 2-3 hrs), they will sample locations 0020-0022.
2) **Sampling Team (Land): Continue sampling land stretch for locations 0065, 0069-0071. This stretch is currently flagged until Location 0074 and is projected to be completed on Thursday, 6/6/24.**
3) **Beginning on 6/7/24, one sampling team will be sampling from boat locations 0113-0132, 0008-0022. This stretch is projected to take approximately 2 weeks (until 6/21/24.)**

Health and Safety Issues

Addition to Daily report for 06/03/24: Safety observation/near miss.

Trailer staff is packing ice by conex and is approached by man dressed in everyday clothes. Man asks if he is able to park in front of dumpster/whether it is getting picked up or not as he is going along the Neponset Greenway for a walk. When walking away, trailer staff notices a gun in the man's holster in addition to radio & handcuffs. Man is not shown to be in any police uniform or to have a badge, so unknown the status of this individual near site working area. License plate is procured and notated and incident is recorded in IndustrySafe and SSHO is called & notified.

Upcoming Plans:

1) **6/7/24: Sampling Team on water to collect samples from the following locations:**
    i. **0022**
    ii. **00132**
    iii. **0131**
    iv. **0130**
2) **Flagging team:**
    i. **Flag locations 0152-0170**

ii. 

3) **Next Week (Week of 6/10/24):**
   a. **Sampling Team: Continue sampling via boat locations 0113-0129, 0008-0019**
   b. **Flagging team: Continue flagging locations 0171-0191, begin sampling locations 0033-0048 once flagging is completed**

Flagging Team Progress:

6/12/2024	24D-0193	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-22 inches, no MTBA issues, Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0194	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-27 inches, no MTBA issues, Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0195	Actual Sample Location: 2923659.28 ft. N, 770756.67 ft. East		Adjusted	via land, +-25 inches, location flagged based on Phase 2 Waypoints list rather than Table 1. Actual sample location was 6 feet (SW) of Target location, away from river.	NO MTBA ISSUES
6/12/2024	24D-0196	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-24 inches, Point moved 8 ft. 9 in. (N) toward river. Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0197	Actual Sample Location: 2923695.76 ft. N, 770971.02 ft. East		Adjusted	via land, +-19 inches, location flagged based on Phase 2 Waypoints list rather than Table 1. Actual sample location aproximately 5.5 feet further from rive than target location.	NO MTBA ISSUES
6/12/2024	24D-0198	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-23 inches. Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0199	29233757.71	771158.16	Adjusted	via land, +-23 inches. Adjusted downslope 10 ft. (N) toward river. Based on Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0200	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-19 inches . Location on precipitous edge approx 10-12 feet above river, potential location at bottom of embankment. Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0201	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-25 inches. Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0202	2923783.29	771449.23	Adjusted	via land, +-25 inches, Location adjusted 10 ft. horizontally towards river due to steep slopes and heavy bramble. Corrected based on Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0203	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-20 inches. Located behind dead/fallen tree. Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0204	Actual Sample Location: 2923801.91 ft. N, 771811.77 ft. East		Adjusted	via land, +-23 inches, location flagged based on Phase 2 Waypoints list rather than Table 1. Target location was located 7 ft. towards river from sample location.	NO MTBA ISSUES
6/12/2024	24D-0205	Actual Sample Location: 2923834.47 ft. N, 771897.48 ft. East		Adjusted	via land, +-22 inches, location flagged based on Phase 2 Waypoints list rather than Table 1. Sample location was 12 feet (N) towards the river from Table 1 waypoint target.	NO MTBA ISSUES
6/12/2024	24D-0206	Actual Sample Location: 2923895.98 ft. N, 771991.37 ft. East		Adjusted	via land, +-19 inches, location flagged based on Phase 2 Waypoints list rather than Table 1. Sample location was 47 feet (N) towards the river from Table 1 waypoint target.	NO MTBA ISSUES
6/12/2024	24D-0207	Actual Sample Location: 2923863.40 ft. N, 772107.75 ft. East		Adjusted	via land, +-19 inches, location flagged based on Phase 2 Waypoints list rather than Table 1. Sample location was 10 feet (E) parrallel the river from Table 1 waypoint target.	NO MTBA ISSUES
6/12/2024	24D-0208	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-30 inches, Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0209	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-20 inches, Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0210	2923874.83	772466.46	Adjusted	via land, +-20 inches, adjusted 5 feet towards river (N). Adjusted based on Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0211	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-25 inches, Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0212	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-27 inches, Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0213	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-32 inches, Corrected to Waypoint Table 1	NO MTBA ISSUES
6/12/2024	24D-0214	TARGET FLAG NOT CHANGED (corrected)		Original	via land, +-23 inches, Corrected to Waypoint Table 1	NO MTBA ISSUES

6/11/2024	24D-0170	TARGET FLAG NOT CHANGED		Original	via land, +-22 inches
6/11/2024	24D-0171	TARGET FLAG NOT CHANGED		Original	via land, +-20 inches
6/11/2024	24D-0172	TARGET FLAG NOT CHANGED		Original	via land, +-23 inches
6/11/2024	24D-0173	TARGET FLAG NOT CHANGED		Original	via land, +-23 inches
6/11/2024	24D-0174	TARGET FLAG NOT CHANGED		Original	via land, +-30 inches, Location is roughly 30 feet downstream of drainage swale.
6/11/2024	24D-0175	TARGET FLAG NOT CHANGED		Original	via land, +-27 inches
6/11/2024	24D-0176	TARGET FLAG NOT CHANGED		Original	via land, +-20 inches
6/11/2024	24D-0177	TARGET FLAG NOT CHANGED		Original	via land, +-22 inches
6/11/2024	24D-0178	TARGET FLAG NOT CHANGED		Original	via land, +-24 inches
6/11/2024	24D-0179	TARGET FLAG NOT CHANGED		Original	via land, +-27 inches
6/11/2024	24D-0180	TARGET FLAG NOT CHANGED		Original	via land, +-19 inches
6/11/2024	24D-0181	TARGET FLAG NOT CHANGED		Original	via land, +-23 inches
6/11/2024	24D-0182	TARGET FLAG NOT CHANGED		Original	via land, +-19 inches
6/11/2024	24D-0183	TARGET FLAG NOT CHANGED		Original	via land, +-18 inches
6/11/2024	24D-0184	TARGET FLAG NOT CHANGED		Original	via land, +-19 inches, Significant anthropogenic material, teepees built from drift wood.
6/11/2024	24D-0185	TARGET FLAG NOT CHANGED		Original	via land, +-19 inches
6/11/2024	24D-0186	TARGET FLAG NOT CHANGED		Original	via land, +-27 inches
6/11/2024	24D-0187	TARGET FLAG NOT CHANGED		Original	via land, +-23 inches
6/11/2024	24D-0188	TARGET FLAG NOT CHANGED		Original	via land, +-25 inches
6/11/2024	24D-0189	2923510.75 ft. N, 770191.01 ft. E		Adjusted	via land, +-24 inches, Location adjusted ~4 ft. northerly towards river, due to tree.
6/11/2024	24D-0190	2923553.28 ft. N, 770331.47 ft. E		Adjusted	via land, +-25 inches, Location adjusted ~11 ft. northerly off slope of drainage swale towards river.
6/11/2024	24D-0191	TARGET FLAG NOT CHANGED		Original	via land, +-25 inches
6/11/2024	24D-0192	TARGET FLAG NOT CHANGED		Original	via land, +-23 inches

Upcoming Plans:

1) **Thursday 6/13/24:**
    a. **Water team continues to collect samples from the following locations:**
        i. **0113-0116:**
            1. **Offset distances based on Phase2 Distance Tab:**
                a. **116: 1 foot**
                b. **115: 23 feet**
                c. **114: 14 feet**
                d. **113: 18 feet**
    b. **Land team samples locations 0168-0171.**

Upcoming Plans:

1) **Tuesday 6/18/24:**
    a. **Bill A-D and Silas Bucco will reflag locations 0008-0011 on the water based on Table 1, samples from those locations:**
    b. **Land team samples from the following locations:**
        i. **0176**
        ii. **0177**
        iii. **0178**
        iv. **0179**
        v. **0180**

Health and Safety issues upcoming:

There is an anticipated heat wave near project site from 6/18-6/21, peaking on Thursday 6/20/24. Team will identify locations easily accessible to car/AC and in the shade for Health and Safety.

Equipment Blanks	9	4	5

Upcoming Plans:

1) **Wednesday 6/18/24:**
    a. **Boat team Bill A-D and Silas Bucco assist TG&B with bringing the boat over the rubble dam, begin flagging the following locations:**
        i. **23-32**
        ii. **146-151**
    b. **Land team finishes sampling at 0181-CS and shoots points for locations 0180 and 0181**
    c. **Continues sampling following locations:**
        i. **0182**
        ii. **0183**
        iii. **0184**
        iv. **0185**
        v. **0186**
    d. **Sean Maxwell & mussel team on-site for the first day for mussel collection**

Health and Safety issues upcoming:

Anticipated heat wave near project site from 6/18-6/21. Sample collection will be modulated based on weather.

Upcoming Plans:

1) **Personnel:**
    a. **Wednesday 6/26/24:**
        i. **Boat team (sample): Steve & Silas**
    b. **Thursday 6/27/24:**

i. Boat Team (sample, flag): Bill, Silas
ii. Land Team (sample): Walter, Steve, Josie

c. Friday 6/28/24:
i. Boat Team (flag, sample): Bill & Silas
ii. Land Team (sample): Walter, Steve, Josie

d. Monday 7/1/24:
i. Boat team (sample): Walter & Steve
ii. Land team (sample): Bill, Silas, Josie

e. Tuesday 7/2/24: NO SAMPLING
i. Land team (flag): Bill, Silas

f. Wednesday 7/3/24: NO SAMPLING
i. Land team (flag): Bill, Josie

2) Wednesday's sampling locations:
a. Boat Team:
i. 0140 (EPA courtesy call)
ii. 0141 (EPA courtesy call)
iii. 0142 (EPA courtesy call)
iv. 0143 (EPA courtesy call)
v. 0144 (EPA courtesy call)

3) Activity projection from 6/27/24—7/2/24:
a. Thursday 6/27/24:
i. Boat team:
1. Finish sampling location 0145, pull boat and drop it in at the Braided Channel
2. Begin flagging the Braided Channel locations 0075-0097, with the following exceptions: do not flag locations 0093, 0094, 0096 and 0097 until/unless we get approval from EPA and communication from Gemma and Kristen.
3. If time, sample locations 0075 and 0076
ii. Land Team:
1. Sample Locations 01333-0135, 0193

b. Friday 6/28/24:
i. Boat team:
1. Sample Locations 0077-0078, 0084-0085
ii. Land team:
1. Sample Locations 0194, 0196, 0198, 200

c. Monday 7/1/24:
i. Boat team:
1. Finish flagging approved for Braided channel locations between 0075-0097

2. **Sample locations 0086—0089**

ii. **Land team:**

1. **Sample locations 0079-0083**

d. **Tuesday 7/2/24:**

i. **Re-flagging:**

1. **Reflag locations 0033-0048 and 0152-0167 to the correct Table 1 coordinates**

e. **Wednesday 7/3/24:**

i. **Contingency day to finish reflagging**

f. **The goal is to finish all flagging/reflagging work by 7/3/24, and begin running two sampling teams full-time starting 7/8/24 through the end of the event. Projected event end date is 7/15/24 or 7/16/24.**

Upcoming Plans:

1) **Personnel:**
    a. **Monday 7/1/24:**
        i. **Boat team (sample): Walter & Steve**
        ii. **Land team (sample): Bill, Silas, Josie**
    b. **Tuesday 7/2/24: NO SAMPLING**
        i. **Land team (flag): Bill, Silas**
    c. **Wednesday 7/3/24: NO SAMPLING**
        i. **Land team (flag): Bill, Josie**
2) **Activity projection from 7/1/24—7/3/24:**
    a. **Monday 7/1/24:**
        i. **Boat team:**
            1. **Finish flagging the approved Braided channel locations between 0075-0097**
            2. **Sample locations 0086—0089**
        ii. **Land team:**
            1. **Sample locations 0202 & 0203, 0210 – 0213**
    b. **Tuesday 7/2/24:**
        i. **Re-flagging:**
            1. **Reflag locations 0033-0048, 0152-0167 to the correct Table 1 coordinates**
    c. **Wednesday 7/3/24:**
        i. **Contingency day to finish reflagging**
    d. **The goal is to finish all flagging/reflagging work by 7/3/24, and begin running two sampling teams full-time beginning on 7/8/24 through the end of the event. Projected event end date is 7/15/24 or 7/16/24.**

Work Completed (Samples collected and Shipped)

Mussel monitoring (checks) is required in three rounds at approximately 14, 30, and 60 days after deployment. The first round of checks proceeded for a full day on Monday 7/8/24 and a ¾ day on Tuesday 7/9/24. Weather was hot and humid (highs in the mid 90's).
Objectives for mussel monitoring and basic procedure are summarized below. A datasheet was filled for each mussel cage set (2 cages or 4 for a duplicate set) that includes environmental conditions such as water depth, water velocity, water quality, and notes on ecological observations (vegetation, animals, animal sign). We noted the number of alive and dead mussels. We also noted details on the cage configurations and condition.

Objectives

- Verify cages are firmly planted and structurally intact without debris or other potential issues
- Verify mussel habitat (substrate in cage, water level, etc.) is still viable.
- Verify mussels are alive.
- Monitor water quality parameters.

Procedure

- Inspect for vandalism and any damage from environmental factors.

- Open and inspect the cage and mussels while minimizing disturbance to the mussels as much as feasible using an underwater viewing tube and borescope inspection camera. If water clarity is low, then lift the cages near the surface to inspect. Mussels that are dead will be slightly open, but will not close when disturbed.

Results

- We completed all 3 QAPP monitoring obligations for mussel monitoring: 1-assess mortality of shellfish, 2-remove debris from around cages, and 3-monitor water quality parameters.
- All mussels were alive. Many were observed feeding before disturbing the cages for monitoring purposes.
- All cages were located where we placed them except for one. One cage in set #4 could not be located. It was apparent that it had moved, but the disposition is unknown. As designed, sufficient tissue mass should be available from one cage.

Work Completed (Samples collected and Shipped)

Mussel monitoring (checks) proceeds in three rounds at approximately 14, 30, and 60 days after deployment. The second round of checks proceeded for a full day on Wednesday 7/24/24. Weather was seasonably cool (70's) and cloudy with occasional drizzle. Sets were checked in the following order: 6, 5, 1, 4, 3, 7, 8, 9. They were checked via wading at access points along the river. Sets 6, 5, and 1 were accessed individually. Sets 4 and 3 were checked from a common access point. Sets 7, 8, and 9, were accessed by walking and wading a distance through the river.

Objectives for mussel monitoring and basic procedure are summarized below. A datasheet was filled for each mussel cage set (2 cages; or 4 for a duplicate set) that includes environmental conditions such as water depth, water velocity, water quality, and notes on ecological observations (vegetation, animals, animal sign). We noted the number of alive and dead mussels. We also noted details on the cage configurations and condition.

Objectives

- Verify cages are firmly planted and structurally intact without debris or other potential issues
- Verify mussel habitat (substrate in cage, water level, etc.) is still viable.
- Verify mussels are alive.
- Monitor water quality parameters.

Procedure

- Inspect for vandalism and any damage from environmental factors.
- Inspect the cage and mussels while minimizing disturbance to the mussels as much as feasible using an underwater viewing tube and borescope inspection camera. If water clarity is low, then lift the cages near the surface to inspect. Mussels that are dead will be slightly open, but will not close when disturbed.

Results/Observations

- We completed all 3 QAPP monitoring obligations for mussel monitoring: 1-assess mortality of shellfish, 2-remove debris from around cages, and 3-monitor water quality parameters.
- All mussels were alive. Many were observed feeding before disturbing the cages for monitoring purposes.
- All cages were located. The one cage in set #4 (Rep #1) that could not be located in the murky water was located and all of the mussels were alive. The cage was still firmly attached to the bottom but had slid deeper off of the bank. Lower water levels (0.5 to 0.75 feet lower) and lower turbidity helped us locate this cage.
- The lower water levels allowed us to observe the abundant wild mussel populations from the T&H dam down through the braided channel.

We also took pictures of the Walter Baker Dam at the current flow at the end of the day.

Deviations from Approved Plan and NCR ID

The distance between cages at Site 4 was greater than identified in QAPP Addendum 1 for the 2 replicates (10 meters) due to the soft substrate and steep bank at this location.

Work Completed (Samples collected and Shipped)

Mussel monitoring (checks) proceeds in three rounds at approximately 14, 30, and 60 days after deployment. The third round of checks proceeded for a full day on Monday 8/19/24. Weather was cloudy and in the 70s with some light rain. Sets were checked in the following order: 1, 3, 4, 5, 6,7 A, 7B, 8, 9. They were checked via wading at access points along the river. Sets 6, 5, and 1 were accessed individually. Sets 4 and 3 were checked from a common access point. Sets 7, 8, and 9, were accessed by walking and wading a distance through the river.

Objectives for mussel monitoring and basic procedure are summarized below. A datasheet was filled for each mussel cage set (2 cages; or 4 for a duplicate set) that includes environmental conditions such as water depth, water velocity, water quality, and notes on ecological observations (vegetation, animals, animal sign). If water clarity is low, then lift the cages near the surface to inspect. Mussels that are dead will be slightly open, but will not close when disturbed.

Results/Observations

- We completed all 3 QAPP monitoring obligations for mussel monitoring: 1-assess mortality of shellfish, 2-remove debris from around cages, and 3-monitor water quality parameters.
- All mussels were alive and appeared to be on good condition.
- No signs of vandalism were observed.
- New cleat was installed on Replicate #1 at Site 4.
- One cage at Site 7B had drifted somewhat due to slack in the line (Replicate #4).
- Minimal trash/debris observed on or in cages (observed material was removed).

Work Completed (Samples collected and Shipped)

This unplanned cage check was conducted on Thursday 9/12/24 to confirm that all mussels were underwater. Weather was sunny and in the 70s during this check.

Observations made by field staff on Tuesday 9/10/24 indicated that the water levels in the river had dropped since the last cage check on 8/19/24. Communications with Department of Conservation and Recreation staff (Bill Gode-von Aesch) indicated that the lower water levels were not the result of dam management activities. Therefore, it appeared that the change in water levels was due to weather conditions and significant rainfall was not predicted for another week. The purpose of this cage check was to assess the status of the mussels and cages and to move cages to deeper water nearby the original location if the water level did not cover the cages completely.

A datasheet was filled for each mussel cage set (2 cages per site; 4 for a duplicate set) that includes environmental conditions such as water depth, water velocity, water quality, and notes on ecological observations (vegetation, animals, animal sign). We noted the number of alive and dead mussels for cages that needed to be moved based on low water levels.

Objectives

- Assess whether mussels within cages are covered with water.
- Verify water level covers the top of the cage. Relocate cages if water level is below the top of the cage.
- Verify mussels are alive.
- Monitor water quality parameters.
- Verify there are no other obvious issues with cage conditions that could be a concern for mussel health.

Procedure

- Visually inspect cages to assess water levels are sufficient. Move cages to deeper water, if necessary.
- If cages are submerged, cages do not need to be accessed and no detailed mussel observations are needed.
- If cages need to be moved due to low water levels, inspect the cage and mussels while minimizing disturbance to the mussels as much as feasible. Mussels that are dead will be slightly open, but will not close when disturbed. Move the cage to the closest location with sufficient water to cover the cage.

Results/Observations

- All mussels were covered with water.
- Cages at sites 1, 3, 4, 5, and 7 B were submerged and did not need to be moved.
- Cages at sites 1, 3, and 4 were not opened.
- Cages at sites 6, 7A, 8, and 9 were re-located into deeper water.
- A single dead mussel was observed in Replicate #1 at site 6. All other mussels appeared to be alive and in good condition.

Mussel Program: WM, JL sourced water from Willett Pond for subsequent overnight aeration of mussel cage retrieval.

Sampling Plan 09/24/24:

Sediment:

1. Sampling team will sample at locations 0047, 0048, 0049, and 0053 in the Braided Channel

Mussels

2. Mobilization for and execution of mussel collection tasks

Mussel Retrieval:

- Retrieved mussels from 8 sites (18 cages total)
- Mussels were counted and had their condition assessed(dead/alive)
- Measured mussels shell lengths
- Mussels placed in mesh bags to depurate for 24 hours
- One dead mussel at site 3 replicate 2
- All cages had sufficient mass for samples

N/A

Work Completed (Samples collected and Shipped)

- **Recon fish habitat in phase 2 near the impoundment above Walter Baker Dam and set stationary fish gear**
- **Installed 3 additional trot lines in phase 2 in the morning, checked gear set in the morning, and re-baited the trot line upstream of the staging area that was installed on 10/9/24**
- **Collected one fish for potential sample (small Brown Bullhead) from a trot line that was set overnight**
- **Installed two gillnets in phase 2**

Sampling Plan 10/10/24:

- **Continue fishing in Phase 2 reach area**
- **Check and retrieve the gear that we have set out**
- **Electrofish wadable areas in Phase 2**

Work Completed

- **Collected fish for potential sample from trot lines set near pedestrian bridge**
  - **4 brown bullhead (235mm – 324mm); smallest released**
  - **1 white sucker (535mm)**
- **Collected fish for potential sample from trot line set downstream of Milton Falls MBTA bridge**
  - **1 brown bullhead (245mm)**
- **Check and retrieve remaining trot lines and gill nets from Phase 2 area.**
- **Electrofish wadable areas in Phase 2, upstream of Neponset Esplanade Park. Many eels observed. No fish collected.**

Sampling Plan 10/14/24:

- **Reconnaissance in Phase 1 reach area**
- **Set trot lines and gill nets as appropriate**

Fish Collection Progress:

- Installed 2 new trot lines in Phase 1
- Checked and rebaited the 5 existing trot lines installed on 10/14 in Phase 1
- Checked and rebaited the 2 new trot lines throughout the workday
- Electrofish in Phase 2- sampled a ¼ mile stretch of river upstream from the Ryan Playground access with a gillnet set at the upstream end
- Collected fish for potential sample from trot lines in Phase 1 reach
    - 5 Brown Bullhead (271mm, 251mm, 250mm, 243mm, 254mm)
    - 6 Yellow Perch (300mm, 313mm, 256mm, 292mm, 290mm, 272mm)
    - 2 White Sucker (524mm and 523mm)
- Made 3 new trot lines
- Pulled gillnets installed on 10/14

Total Fish Count within each Phase

	Phase 1	Phase 2
White Sucker	**4**	**1**
Brown Bullhead	**5**	**5**
Yellow Perch	**7**	**0**
Large Mouth Bass	**0**	**1**

Sampling Plan 10/16/24:

Sediment:

- Continue collecting samples via vibracore

Fish Collection:

- Check and potentially rebait 5 trot lines in Phase 1
- Pull 2 trot lines from Phase 1 and reinstall in Phase 2
- Electrofish in Phase 2

- Checked and rebaited the 13 trot lines in Phase 2
- Pulled the 13 trot lines in Phase 2
- Collected fish for potential sample from trot lines in Phase 2 reach
    - 4 Brown Bullhead (268mm, 262mm, 264mm, 262mm)
    - 4 White Sucker (541mm, 511mm, 499mm, 535mm)

Total Fish Count within each Phase

	Phase 1	**Phase 2**
White Sucker	**6**	**6**
Brown Bullhead	**6**	**10**
Yellow Perch	**8**	**0**
Largemouth Bass	**0**	**1**

Table last updated on 10/18.

4 more white suckers and a larger (field duplicate>1 lb) brown bullhead are needed to complete this effort. The larger brown bullhead is not statistically likely, but we have collected a bullhead that is close at ~0.9 lbs.

Sampling Plan 10/21/24:

Sediment:

- Sample locations 24A-0133, 24A-0134, 24A-0132, 24A-0131, 24A-0130, 24A-0129, 24A-0128, 24A-0127

Fish Collection:

- Install 13 trot lines in the Phase 2 reach
- Rod and Reel in Phase 2 reach

Fish Collection Progress:

- **Checked and rebaited 12 trot lines in Phase 2**
- **Installed 2 additional trot lines in Phase 2 reach area**
- **Collected <u>one</u> brown bullhead for potential sample (253mm, 274g)**

Total Fish Count within each Phase

	Phase 1	**Phase 2**
White Sucker	**6**	**6**
Brown Bullhead	**6**	**11**

Table last updated on 10/23.

<u>Sampling Plan 10/24/24:</u>

Sediment:

- Sample locations 24A-0051, 24A-0045, 24A-0040, 24A-0039, 24A-0029, 24A-0030, 24A-0031, 24A-0032, 24A-0033, 24A-0034, 24A-0035,24A-0036,24A-0037,24A-0038

Fish Collection:

- Check and potentially rebait the 14 trot lines in Phase 2 reach
- Potentially move 3 trot lines to different areas in Phase 2
- 4 more white suckers and a larger (field duplicate >1 Ib) brown bullhead are needed to complete this effort. The larger brown bullhead is not statistically likely, but we have collected a bullhead that is close at ~0.9 Ibs.
- **More bullheads are being collected while searching for white suckers because six previously collected specimens were an acceptable size but below the ideal weight.**

Fish Collection Progress:

- Checked 14 trot lines in Phase 2, pulled 12 trot lines and rebaited 2
- Collected one brown bullhead for potential sample in Phase 2
- After correspondence with EPA project leadership, the team shifted efforts to collect white suckers in Phase I due to no catches after 4 days of increased and targeted effort in Phase 2.
- Set 5 trot lines in Phase 1 to remain overnight

Total Fish Count within each Phase

	Phase 1	**Phase 2**
White Sucker	**6**	**6**
Brown Bullhead	**6**	**12**

Table last updated on 10/24.

Sampling Plan 10/25/24:

Sediment:

- Sample locations 24A-0028, 24A-0027, 24A-0026, 24A-0025, 24A-0024, 24A-0023, 24A-0022, 24A-0021, 24A-0020, 24A-0019, 24A-0018,24A-0017,

Fish Collection:

- Check and rebait 5 trot lines in Phase 2
- Check and pull 2 trot lines in Phase 2
- Install trot lines in Phase 1 as time allows, pull all trot lines at the end of the day
- 4 more white suckers and a larger (field duplicate >1 Ib) brown bullhead are needed to complete this effort. The larger brown bullhead is not statistically likely, but we have collected a bullhead that is close at ~0.9 Ibs.
- More bullheads are being collected while searching for white suckers because six previously collected specimens were an acceptable size but below the ideal weight.
- Up to 3 additional larger bullheads will be targeted to achieve optimal mass for sampling in Phase 1.

Fish Collection Progress:

- After correspondence with EPA project leadership, the team fully shifted efforts to collect white suckers in Phase I due to no catches after 4 days of increased and targeted effort in Phase 2.
- Installed 3 additional trot lines in Phase 1
- Checked/rebaited 5 trot lines set yesterday in Phase 1
- Checked/pulled 2 trot lines set yesterday in Phase 2
- Checked/pulled 8 trot lines set today in Phase 1
- Collected three brown bullhead for potential sample from Phase 1

Total Fish Count within each Phase

	Quota	**Phase 1**	**Phase 2**
White Sucker- Bottom feeder	**15**	**6**	**6**
Brown Bullhead- Predator	**15**	**6**	**12**

Table last updated on 10/25.

Sampling Plan 10/28/24:

Sediment:

- Sample locations 24A-0016, 24A-0015, 24A-0014, 24A-0013, 24A-0012, 24A-0011, 24A-0010, 24A-0009, 24A-0008,24A-0007

Fish Collection:

- Plan for upcoming Monday: install as many trot lines as time allows in Phase 1
- 4 more white suckers and are needed to complete this effort. A larger (field duplicate >1 Ib) brown bullhead would be optimal. This larger brown bullhead is not statistically likely, but we have collected a bullhead that is close at ~0.9 Ibs.
- More bullheads will be collected while searching for white suckers because three previously collected specimens were an acceptable mass but below the ideal minimum mass.

Surface Water Sampling progress:

Locations for low flow conditions collected:

- 24B-0001
  - Sample ID: 24B-0001-ASL
- 24B-0002
  - Sample ID: 24B-0002-ASL
  - Duplicate collected at this location (24B-0002-ADL)
- 24B-0003
  - Sample ID: 24B-0003-ASL (Sample Designated as MS/MSD)
- 24B-0004
  - Sample ID: 24B-0004-ASL
- 24B-0005
  -Sample ID: 24B-0005-ASL

PE Samples Sent

- 24B-R10162401-1
- 24B-R10162401-2
- 24B-R10162401-3
- 24B-R10162401-4
- 24B-R10162401-5
- 24B-101124R-1
- 24B-PCB-01

The location for sample 24B-0004 at Pine Tree Brook was relocated due to was water backup and pooling at the planned location. The sample location was moved approximately 20 feet upstream of the Elliot St crossing of Pine Tree Brook.

Fish Collection Progress:

- After correspondence with EPA project leadership on Thursday 10/24/24, the team fully shifted efforts to collect white suckers in Phase I due to no catches after 4 days of increased and targeted effort in Phase 2.
- Checked and rebaited the 14 trot lines installed in Phase 1.
- Collected fish for potential sample from trot lines in Phase 1 reach
    - 4 Brown Bullhead (252mm, 249mm, 245mm, 251mm)
    - 1 White Sucker (515mm)

Total Fish Count within each Phase

	Quota	**Phase 1**	**Phase 2**
White Sucker- Bottom feeder	**15**	**8**	**6**
Brown Bullhead- Predator	**15**	**11**	**12**

Table last updated on 10/30.

<u>Sampling Plan 10/31/24:</u>
Fish Collection:

- **Check and rebait the 14 trot lines installed in Phase 1**
- 2 more white suckers and are needed to complete this effort. A larger (field duplicate >1 Ib) brown bullhead would be optimal. This larger brown bullhead is not statistically likely, but we have collected a bullhead that is close at ~0.9 Ibs.
- More bullheads will be collected while searching for white suckers because three previously collected specimens were an acceptable mass but below the ideal minimum mass.

Fish Collection Progress:

- Checked and rebaited the 14 trot lines installed in Phase 1.

Total Fish Count within each Phase

	Quota	**Phase 1**	**Phase 2**
White Sucker- Bottom feeder	**15**	**8**	**6**
Brown Bullhead- Predator	**15**	**11**	**12**

Table last updated on 10/30.

Sampling Plan 11/1/24:

Fish Collection:

- **Check and pull the 14 trot lines installed in Phase 1**
- 1 more white sucker is needed to complete this effort with the assumption that the quotas can be adjusted for available fish and habitat. i.e. - 9 of each species can be used as samples in Phase 1 and 6 can be used in Phase 2. More bullheads will be collected while searching for white suckers because some previously collected specimens were an acceptable mass, but below the ideal minimum mass.

Depth	Recovery (%)	PID	Sample ID	Graphic	Material Description
0.0	100	4	24A-0156-AS		Silt (ML), approximately 50% organic materials (leaves, small plants, woody debris, root fibers). [SEDIMENT] - Brown to black, wet - Peaty odor
0.5		0.2			Well-graded sand with silt (SW-SM), fine to medium, subangular, 5-15% silt, approximately 15% organic material (leaves, sticks, woody debris). [SEDIMENT] - Gray, wet - No odor, no staining
1.0			24A-0156-BS		Silty sand (SM), fine to medium, subangular, 10-20% silt. Thin layer of leaves. Approximately 60% organic matter (leaves) in silty sand. [SEDIMENT] - Wet - No odor, no staining
1.5					Well-graded sand with silt (SW-SM), fine to coarse, angular, 5-15% silt. A few sticks and pieces of plastic found in this section. [SEDIMENT] - Gray, wet - No odor, no staining
2.0					Silt with sand (ML), 10-20% fine to medium sand, approximately 30% organic material (leaves, sticks, woody debris). [SEDIMENT] - Black, wet - No odor, no staining
2.5					Boring terminated at 1.5 feet
3.0

Attachment 8 Non-Conformance Log and Reports

Nonconformance Report
Lower Neponset River Superfund Site
Remedial Investigation/Feasibility Study
Project No. 60703400

Nonconformance Number:	NC-20240522-01
Document (plan or SOP title and date)	Quality Assurance Project Plan Addendum 1, Revision 1, June 2024
Activity • Soil sample collection	
Nonconformance • The quality assurance project plan specified that soil samples were to be collected by hand auger, Soil samples were collected with the use of a hand auger and tile spade. The tile spade was used to increase the chance of sample recovery and increase the chance of reaching the target depth of 3 feet.	
Date of Nonconformance	5/22/2024 to 7/17/2024
Ramifications and Correction Actions • Samples were obtained at the majority of proposed locations. Many of these locations would have had less recovery and shallower boring depths if only a hand auger had been used. • All sampling gear was decontaminated between stations. • No ramification to sample integrity is expected from this nonconformance. • No corrective actions are needed.

Remedial Investigation/Feasibility Study

Project No. 60703400

Nonconformance Number:	NC-20240604-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 1, Revision 1, June 2024
Activity • Soil sample collection and shipping	
Nonconformance • The sample container from soil sample 24D-0068-CS that was collected on 6/4/2024 for the analysis of polychlorinated biphenyls (PCBs) and dioxins/furans was broken upon receipt at the laboratory, SGS, with no recoverable volume. Location (24D-1068) was advanced in the vicinity on 6/10/2024 so that another sample could be collected from the CS depth interval for PCB and dioxin/furan analysis.	
Date of Nonconformance	06/04/2024
Ramifications and Correction Actions • No ramification to sample integrity is expected from this nonconformance. • The corrective action included advancing an additional location directly adjacent to the original location so that the CS horizon sample could be re-collected.

Nonconformance Report

Lower Neponset River Superfund Site

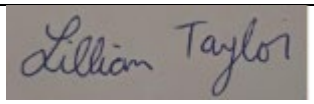
Remedial Investigation/Feasibility Study

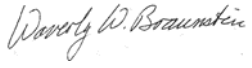
Project No. 60703400

Nonconformance Number:	NC-20240607-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 1, Appendix C Sampling Approach Memorandum

Activity

- Soil sample collection





Nonconformance

- The sampling approach memorandum included randomization of the soil boring locations in two directions: 1) along the water's edge and 2) perpendicular to the river centerline on each bank within the floodplain.
- The randomization was conducted in the Sampling Approach Memorandum by determining the coordinates of points along the water's edge, then moving the points a certain distance into the floodplain, and generating updated coordinates.
- Ahead of sampling a field team flagged sampling locations using coordinates that had been uploaded to global position system (GPS) units by the rental company before the units were shipped to the Site. Per the Sampling Approach Memorandum the location that was flagged could have been moved away from the coordinates due to vicinity to outfalls, vicinity to the dams, and/or sampling feasibility. The sampling team targeted soil sampling within a 10-foot radius of the flag.
- A few weeks into the program it was determined that the coordinates that were in the GPS units were for the position of points along the water's edge and not the updated coordinates that distributed the points throughout the floodplain.
- The coordinates in the GPS units were corrected on 6/7/24 and locations that had been flagged, but not sampled yet were re-flagged using the correct coordinates.

Date of Nonconformance	5/20/2024 – 6/7/2024

Ramifications and Correction Actions

- For locations that were sampled prior to 6/7/2024 and flagged at the coordinates in the GPS units, soil samples may have been collected closer to the water's edge than was proposed, depending on where the sampling was conducted within the 10-foot target radium around the flag. For locations that were sampled prior to 6/7/2024 and flagged at locations that were moved away from the coordinates due to outfalls, the dams, and/or sampling feasibility, the locations were field based and relied less on the coordinates from the GPS units.
- Corrective action included correcting the coordinates in the GPS units and re-flagging any locations that had been flagged, but not sampled yet.

Project Manager Approval	 Kristine Carbonneau 8/28/2025

Nonconformance Report
Lower Neponset River Superfund Site
Remedial Investigation/Feasibility Study
Project No. 60703400

Nonconformance Number:	NC-20240708-01
Document (plan or SOP title and date)	Quality Assurance Project Plan Addendum 1 Revision 1, June 2024, Worksheet 14

Activity

- This nonconformance includes two activities related to the deployment of shellfish cages:
    - At location (24E-0006), the number of individuals per cage
    - At location (24E-0007), the spacing of cages for QC purposes

Nonconformance

- Number of Individuals: The QAPP indicated that up to 20 mussels would be added to each cage and that the final number of mussels per cage would be based on obtaining a target mass of 60 grams wet weight for laboratory analysis at the end of the 90-day exposure period. During the collection of mussels from Willet Pond, it was determined that sufficient mass could be achieved by adding 15 mussels to each cage.
    - Mussel cages were set at 24E-0006 on 6/19/24. Normandeau informed AECOM that additional mussels were added to these cages at the completion of deployment (on 6/21/24) but did not provide the actual number. These additional mussels were not measured or otherwise recorded.
    - During the first cage check at location 24E-0006 (7/8/24), 42 mussels were counted in the Replicate 1 cage and 44 mussels in the Replicate 2 cage.
    - AECOM recorded the shell lengths for all mussels in these cages during the first cage check.
- QC Cages: The QAPP indicated that at one location, two additional cages were to be deployed (for a total of 4 cages) to provide additional tissue for QA/QC purposes.
    - Per the QAPP, the replicate cages were to be placed within a 10-meter radius of each other (consistent with the deployment at other stations). For QA/QC purposes, two additional cages would be located within 1-meter of one of the replicate cages.
    - During deployment, there were insufficient places nearby that could be hidden from public view and with sufficient depth for concealment and habitat. So, the four cages at location 24E-0007 (two replicate cages and two QC cages) were placed as two pairs with the pairs located approximately 40 meters apart. This was intended to be a balance between site security, habitat requirements, and study design.

Date of Nonconformance	6/19/2024 – 6/21/2024

Ramifications and Correction Actions

- Number of individuals
  - This nonconformance did not impact data quality.
  - Given the size of the cages, the water flow, habitat at location 24E-0006, and the typical density of mussels in a similar natural setting, the additional mussels placed in these replicate cages were not expected to be stressed by overcrowding.
    - Survival of the mussels in these cages (and others) were monitored during regular cage checks during deployment. Survival within these cages was high over the course of the deployment indicating that the individuals were not overly stressed by conditions within the cages.
  - Given that the QAPP references a mussel count based on a target tissue mass at test termination (and the mass per the QAPP is expected to be met in these cages), placement of additional mussels was not expected to impact the data quality or use.
  - AECOM reached out to Normandeau who said they added the extra mussels in case of mortality or other loss.
    - It is noted that the cages for this station were the last ones loaded during the deployment effort.
  - Because the survival of individual mussels within these cages were acceptable compared to other cages, the additional mass from the cages deployed at 24E-0006 were used for QC purposes.
  - The root cause of the nonconformance was lack of communication and documentation by the subcontractor (Normandeau) when the additional mussels were added to these cages. As a corrective action during the remainder of the mussel program, AECOM:
    - Discussed each day's objectives with staff and subcontractors
    - Provided full oversight of subcontractors
    - Confirmed activities at the end of each day
- QC Cages
  - This nonconformance did not impact data quality.
  - One replicate cage deployment location should have had three cages located within 1-meter of each other (i.e., the typical replicate cage plus two QC cages). This was intended to provide triplicate mass to be used for tissue QC.
  - At location 24E-0007, each of the four cages (i.e., the typical two replicate cages plus two intended QC cages) contained 15 mussels and, based on initial weights for the Time 0 mussels, each cage contained approximately 170 grams of tissue at deployment. This mass exceeded the mass required for analysis of the primary analytes in each cage (60 grams) and could provide sufficient additional mass for QC analyses.
  - However, the distance of the pairs of cages at location 24E-0007 (approximately 40 meters) precludes these cages being used as QC samples as planned; therefore, these pairs were treated as two separate sample locations. Identification of these samples was modified to be "24E-0007A" and "24E-0007B". Data was recorded during field checks using these designations.
  - Only one of the two locations (24E-0007A) was analyzed to represent the 24E-0007 station.
    - Both locations had a similar number of shellfish alive at the end of the exposure period.
  - The root cause of the nonconformance was a misunderstanding of the QAPP directive regarding QC locations and a field decision based on multiple constraining factors. As a corrective action during the remainder of the mussel program, AECOM:

	▪ Confirmed the AECOM team understands the objectives of the program and the directives in the QAPP ▪ Provided clearer documentation in the QAPP such as example figures showing layout of cage deployment ▪ Confirmed activities at the end of each day

AECOM

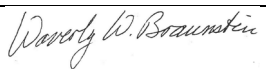
Nonconformance Report
Lower Neponset River Superfund Site
Remedial Investigation/Feasibility Study
Project No. 60703400

Nonconformance Number:	NC-20240918-01
Document (plan or SOP title and date)	Quality Assurance Project Plan Addendum 1 Revision 1, June 2024, Worksheet 14

Activity

- This nonconformance includes one activity related to the deployment of shellfish cages:
  - At location (24E-0004), the spacing of cages for replicate cages is greater than specified in Quality Assurance Project Plan (QAPP) Addendum 1

Nonconformance



- Distance between replicate cages: QAPP Addendum 1 indicated that replicate cages would be placed within a 10-meter radius of each other.
  - During cage deployment at 24E-0004 on 6/21/24, the soft substrate and steep slope did not allow for the two replicate cages to be located within 10 meters of each other.
  - During the cage check on 7/24/24, the distance between the cages was measured at approximately 45 meters

Date of Nonconformance	6/21/2024

Ramifications and Correction Actions

- Distance between replicate cages:
  - This nonconformance did not impact data quality.
  - Replicate cages were installed to allow tissues from all of the living mussels from the replicate cages at a station to be combined together for chemical analysis if sufficient tissue mass was not available from a cage (e.g., due to mortality).
  - Survival of mussels was monitored during cage checks conducted during deployment.
  - Survival within these cages was high over the course of the deployment and there was no need to combine mussels from replicate cages to obtain the necessary tissue mass (i.e., sufficient tissue mass for analysis was available in each replicate cage).
  - The root cause of the nonconformance was the conditions within the river along the northern shoreline just upstream from the Tileston & Hollingsworth dam within the area identified for the placement of the two 24E-0004 replicate cages.
    - The soft substrate and steep slope made placement of the cages challenging and there was not enough space to securely anchor the two cages closer together.

Project No. 60703400

Nonconformance Number:	NC-20240926-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 2, Revision 1, October 2024

Activity

- Sediment sampling – prioritizing analytes due to inadequate volume

Nonconformance

- Worksheet 11 and Appendix D of the QAPP provide a preferential order for filling sampling containers. The preferential order of the analytes was provided for the team to use in instances where the sediment volume obtained in the field was not adequate to fill all sampling containers.
- When there was inadequate sediment volume, the QAPP states that a sample for TCL VOCs will not be collected and sample containers will be filled for the remaining analytes in the order listed in Appendix D, Sampling Approach Memorandum with a priority given to contaminants of concern (COCs)
- Per Appendix D:
    - If volume requirements are not met, then the sediment will be homogenized with the sediments collected from the grab sample and samples will be collected for analytes in the following order until the sediment is exhausted:
        i. PCB congeners and polychlorinated dibenzo-p-dioxins and furans (PCDD/F)
        ii. Total organic carbon (TOC)
        iii. Target analyte list (TAL) metals and mercury
        iv. Target compound list (TCL) semi-volatile organic compounds (SVOCs)
        v. Grain size
- During the filling of laboratory containers for nine of the samples, this order was not followed:
    - Collected grain size before SVOCs for samples; inadequate volume to collect SVOCs:
        i. 24A-0060-BS 10/02/2024
        ii. 24A-0099-BS 09/30/2024
        iii. 24A-0169-CS 10/18/2024
    - Collected grain size before metals, mercury, and SVOCs for samples; inadequate volume to collect these COCs:
        i. 24A-0072-CS 09/27/2024
        ii. 24A-0106-CS 09/26/2024
        iii. 24A-0149-BS 10/16/2024
        iv. 24A-0143-BS 10/15/2024
        v. 24A-0153-BS 10/16/2024
    - Collected grain size and VOCs before SVOCs for samples; inadequate volume to collect SVOCs:
        i. 24A-0147-BS 10/17/2024
- These actions resulted in data gaps in the sediment sampling for Phase 2.

Date of Nonconformance	Initial on 09/26/2024 and other dates (see above)

Ramifications and Correction Actions

- The prioritization order for filling containers was developed to provide the field team a set of rules to follow that would produce data from the priority COCs first. TOC was included on the list as the second container to provide data necessary to fully evaluate the potential bioavailability and mobility of PCBs and PCDD/Fs in the sediment (i.e., TOC is a binding factor for these constituents, reducing their potential toxicity and uptake through the food chain).
- Per QAPP Worksheet 19/30, the containers for TOC and grainsize were both 4-oz glass jars. As both were going to the same laboratory (ELLE), one jar was filled and provided the volume adequate to analyze both analytes. Therefore, when TOC data were collected as the #2 priority analyte container, grainsize was included by default. The field team did not fill separate grain size containers.
- The nonconformance for eight of the samples described above was related to the bottleware (i.e., TOC and grainsize from one container) rather than the order of filling.
- For 24A-0147-BS, SVOC data were not collected; but VOCs were. Since VOCs are collected prior to sediment homogenization, the team looked at the volume for this interval and pre-determined that there should be adequate sediment volume to fill all containers. Therefore, they collected the VOCs immediately, per the QAPP.
- The data gaps from inadequate volume were predicted and the response actions were provided in the QAPP and Appendix D. Due to the laboratory combining TOC and grainsize into one container, collection of grainsize data prior to other analytes occurred.
- For the SVOCs missing from 24A-0147-BS, the team did not realize an inadequate volume of sediment was included in the BS horizon. As such, this is a data gap.
- No corrective actions were necessary.

Nonconformance Report
Lower Neponset River Superfund Site
Remedial Investigation/Feasibility Study
Project No. 60703400

Nonconformance Number:	NC-20240930-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 2, Revision 1, September 2024, Worksheet 20

Activity

- Sediment sample collection and shipping

Nonconformance

- The sample container for sediment sample 24A-0108-CS was received broken by the Tier IV laboratory, Eurofins-Lancaster, with no recoverable volume. The associated analytical methods are total organic carbon (TOC), grain size, and percent moisture. Containers for the AS and BS sample depths at that same location were received intact with no issues to the sample volume.

Date of Nonconformance	09/30/2024

Ramifications and Correction Actions

- The lack of analysis for certain analytes would be a data gap in the field program. The impact of the missing TOC and grain size is limited to sample 24A-0108-CS for that sample shipment. TOC and grain size results were unimpacted for the previous sample depths at that same location.
- The contract laboratory (CLP) laboratory that received sample volume from this same location for analysis of different methods was able to forward spare volume to Eurofins, who received and logged it for TOC and grain size. Therefore, there is no impact to data completeness or usability.

Lower Neponset River Superfund Site
Remedial Investigation/Feasibility Study
Project No. 60703400

Nonconformance Number:	NC-20241030-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 2, Revision 1, October 2024

Activity

- Validation of high-res methods in surface water and fish tissue matrices was performed by ESAT.

Nonconformance

- AECOM did not perform validation of the Phase 2 surface water and fish tissue data for the PCB congener and dioxin/furan methods as outlined in Worksheet #36 of the project quality assurance project plan (QAPP).
- Per Region 1 policy, validation of all HRSM02.1 data is to be performed by ESAT whenever the associated analysis is performed by a contract laboratory program (CLP) laboratory.
- All high-res analysis that was performed by a Tier IV laboratory during Phase 2 was validated by AECOM.

Date of Nonconformance	10/30/2024

Ramifications and Correction Actions

- Future QAPP iterations will denote in Worksheet #36 that the environmental protection agency (EPA) will facilitate validation of high-res methods when a CLP laboratory performs the analysis.
- Validated files provided by Region 1 will be compiled with all other validation performed by AECOM for other methods.

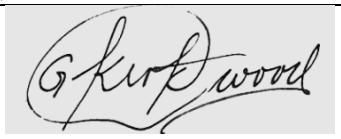
Remedial Investigation/Feasibility Study
Project No. 60703400

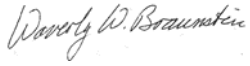
Nonconformance Number:	NC-20241101-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 2, Revision 1, October 2024

Activity

- Number of fish submitted for analysis during fish sampling.

Nonconformance





- The quality assurance project plan (QAPP) specified that five predatory/gamefish and five bottom feeding fish would be targeted within the Phase 1 reach and 10 fish from each species would be targeted within the Phase 2 reach.
- Based on the species composition observed during the first few days of sampling and with the Environmental Protection Agency (EPA) approval, brown bullhead was selected as the target predatory/gamefish species and white sucker was selected as the target bottom feeder species.
- Eight brown bullhead were submitted for analysis from the Phase 1 reach, which was above the targeted number of 5 specific in the QAPP. One brown bullhead was also submitted to the laboratory from Phase 1 and put on hold due to its small size and uncertainty in whether it would have sufficient tissue mass for the complete analyte list.
- Nine brown bullhead were submitted for analysis from the Phase 2 reach, which is below the targeted number of 10 specified in the QAPP. Three brown bullhead were also submitted to the laboratory from Phase 2 and put on hold due to their small size and uncertainty in whether they would have sufficient tissue mass for the complete analyte list.
- Eight white sucker were submitted for analysis from the Phase 1 reach, which was above the targeted number of 5 specified in the QAPP.
- Six white sucker were submitted for analysis from the Phase 2 reach, which is below the targeted number of 10 specified in the QAPP.

Date of Nonconformance	11/01/2024

Ramifications and Correction Actions

- There were two data quality objectives for the fish tissue: 1) to collect fish at select locations throughout the entire 3.7-miles of the Site to develop a fish tissue dataset that can be used to support the comprehensive Remedial Investigation/Feasibility Study (RI/FS) for the 3.7-mile Site, include a risk assessment, that will be completed in the future, and 2) to collect fish at select locations throughout the entire 3.7-miles of the Site to develop a methodology and baseline (pre-remediation) tissue datasets that can be used to support the establishment of a post-remediation monitoring plan in the future, if needed.
- Data quality ramifications related to the first objective include the number of samples that can be used to calculate upper confidence limits (UCLs) when a risk assessment is conducted in the future. A minimum of eight samples is typically used to calculate UCLs. There are at least eight samples for brown bullhead in both reaches and white sucker from the Phase 1 reach. However, there are less than eight samples for white sucker from the Phase 2 reach.

- There are no data quality ramifications related to the second objective. The fish sampling allowed for the development of sampling methods and produced data that can be used as a baseline dataset that could be used to establish a post-remediation plan in the future, if needed.
- The non-conformance reflects that fish collection is uncertain and unpredictable. Factors contributing to the uncertainty may include:
  - low fish populations
  - low diversity of fish
  - small sizes of fish
  - limited areas of suitable habitat for larger fish
  - high mass requirements
  - no previous studies on fish populations at the site
- Corrective actions included trying many methods of fishing and extending the duration of the sampling.
  - Gillnets, trot lines, backpack electrofishing, and rod and reel fishing were attempted. Hoop nets, seines, and fyke nets were also made available, but those methods were not attempted because they did not coincide with the habitats and species observed on site. Ultimately, trot lines were found to be the most effective method.
  - The sampling duration was tentatively planned for two weeks (10 days). The sampling duration was extended to 15.5 days.
- Despite the corrective actions, the targeted number of fish were not caught in the Phase 2 reach.

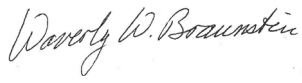
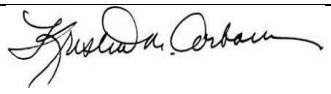
Nonconformance Number:	NC-20241217-01
Document (plan or SOP title and date)	Quality Assurance Project Plan Addendum 2, Revision 1, October 2024, Appendix D Sampling Approach Memo

Activity

- Sediment sample collection





Nonconformance

- Sediment samples collected by OSI in pools 1, 2, 3a, 3b, 4a, 4b, 4c, and 4d (grab station locations) were obtained without obtaining water depths. The need for water depths was not discussed with the OSI field team. Water depth is required for vibracoring stations to determine the length of liner/piping that is needed to penetrate to the proposed sampling depth. When using grab equipment, the water depth is irrelevant to the sampler, therefore the OSI field team did not collect water depths at grab stations.

Date of Nonconformance	October 2024

Ramifications and Correction Actions

- The depth of water in the Neponset River fluctuates based on many factors: rain, flood control actions, dam height, evaporation, etc. The water depth measured at the time of sampling would have been a snapshot in time and not indicative of the water depth that might be found upon revisiting the same station location.
- No ramification to sample integrity is expected from this nonconformance.
- Subcontractors and all field staff must be provided with the project documentation in advance, so all understand the complete scope of work to be performed.

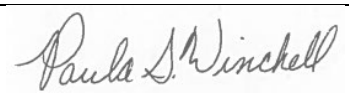
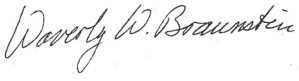
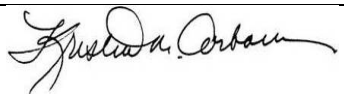
Document (plan or SOP title and date)	Quality Assurance Project Plan Addendum 2, Revision 1, October 2024, Appendix D Sampling Approach memo

Activity

- Sediment sample collection







Nonconformance

- Sediment samples collected by OSI in pools 1, 2, 3a, 3b, 4a, 4b, 4c, and 4d were obtained for the most part utilizing a post hole digger rather than a petite ponar or other type of grab to penetrate the heavy vegetation and/or organic matter (leaf litter, etc) and gravel encountered at the sediment surface. They made several unsuccessful attempts with a petite ponar grab early in the project and it would not penetrate the surficial obstacles (gravel, vegetation, etc).

Date of Nonconformance	October 2024

Ramifications and Correction Actions

- Samples were obtained at all proposed locations which would have otherwise been abandoned due to the number of unsuccessful attempts in primary and secondary locations.
- All samples were examined for completeness – surface sediment intact and penetration to six inches below the surface before being added to the pan for sample processing.
- All sampling gear was decontaminated between stations.
- No ramification to sample integrity is expected from this nonconformance.
- No corrective actions are needed.

Document (plan or SOP title and date)	Quality Assurance Project Plan Addendum 2, Revision 1, October 2024, Appendix D Sampling Approach memo

Activity

- High-flow surface water sampling

Nonconformance

- During the high-flow surface water sampling event no yellow spring instrument (YSI) was rented and therefore no field measurements of dissolved oxygen, oxidation-reduction potential, pH, specific conductance, temperature, or turbidity were made.

Date of Nonconformance	05/10/2025

Ramifications and Correction Actions

- There will not be a comparison of field data from the low-flow event to the high-flow event.
- No ramification to sample integrity is expected from this nonconformance.
- Subcontractors and all field staff must be provided with all project documentation (sample plan and quality assurance project plan) in advance, so all understand the complete scope of work to be performed.

Attachment 9 Field Modifications Log and Reports

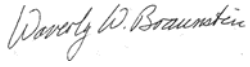
Field Modification Form
Lower Neponset River Superfund Site
Remedial Investigation/Feasibility Study
Project No. 60703400

Field Modification Number:	FM-20240716-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 1, Revision 1, October 2024 Appendix C Sampling Approach for Floodplain Soils

Activity

- Floodplain soil sampling

Proposed Modification



- On July 2, 2024, the environmental protection agency (EPA) was notified of four soil locations where either sampling was not attempted due to health and safety issues (24D-0007) or where access was not permitted (24D-0096, 24D-0097, 24D-0199).
    - Of the four locations not sampled (see above), EPA agreed to move two locations to between RM 1.6 and 1.7. The locations were assigned IDs 24D-0218 and 24D-0219.
- During reconnaissance, four areas were noted as not feasible for soil sampling. These areas included the following:
    - Near river mile (RM) 2.65 on the North Bank of the river at Bay State Paper property, rip rap, large rocks, and trash would need to be moved with notification to the property owner.
    - Near RM 2.3 on the North Bank where the boat would need to be used to access the location.
    - Near RM 1.65 on the North Bank where the boat would need to be used to access the location.
    - Near RM 1.4 on the South Bank near an industrial property.
- Due to changes in conditions on the river, these locations were re-evaluated for sampling based on current conditions
    - EPA requested moving soil sampling locations to either between RM 1.3 and 1.5 or between RM 1.6 and 1.7.
    - Further reconnaissance showed the access to the area between RM 1.3 and 1.5 was limited due to construction of a new fence.
    - Two soil samples were not collected. The data collected will be evaluated to determine if they meet the data quality objectives (DQOs) from the Quality Assurance Project Plan. If the data do not meet DQOs, this will be noted in the Remedial Investigation report.

Effective Date:	July 16, 2024

Rationale

- Safety and access prevented sampling a few locations. Two new locations were identified.

Field Modification Number:	FM-20240716-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 2, Revision 1, October 2024 Appendix D Sampling Approach for Sediment in the Phase 2 Reach

Activity

- Sediment sampling

Proposed Modification

- The sediment coring field team had only one core remaining to collect on the final sampling day. To optimize cost for rental of the vessel and subcontractor day rates, AECOM recommended collecting three additional sediment cores.

Effective Date:	October 17, 2024

Rationale

- The original sampling plan included a 250-foot safety buffer upstream of the Walter Baker Dam. The flows in the river during sampling were such that the vessel operators felt confident they could safely core an additional 100 feet downstream.
- The historic data included PCBs in this area but additional cores were needed on the north side of the thalweg where bathymetry suggests that sediment accretion had been occurring.
- The filling of data gaps in this area would help the nature and extent determination in this most downstream reach.

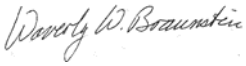
Field Modification Number:	FM-20250422-01
Document (plan or SOP title and date)	Quality Assurance Project Plan, Addendum 2, Revision 1, October 2024 Appendix D Sampling Approach for Sediment in the Phase 2 Reach

Activity

- High-flow surface water sampling



Proposed Modification

- EPA requested via email on April 8, 2025 that one of the five surface water sampling locations be removed from the sampling plan due to budget constraints. All five locations were sampled during the low-flow event but with this change only four would be sampled during the high-flow event.
- AECOM reviewed the data from the low-flow sampling event and the rationale for each sampling location.
- AECOM recommended eliminating Station 0003 just above the Pine Tree Brook confluence.

Effective Date:	April 22, 2025

Rationale

- Station 0003 was recommended for elimination as the data from that sampling point could be covered by data from the three stations surrounding that location (i.e., Station 0002 upstream of this location, Station 0005 downstream of this location, and Station 0004 withinputs from Pine Tree Brook). Station 0003 is located at RM 0.25, established at the Central Avenue Bridge, just above the confluence of Pine Tree Brook.
- The rationale for the inclusion of the remaining four stations (Station 001, 002, 004, and 005) is provided below.
    - 24B-0001 is located immediately downstream of the outfall at river mile (RM) 2.77, upstream of the T&H Dam. While the Phase 1 reach was sampled previously, the data quality objective did not address the potential inputs to the river during higher flows. Revisiting this location will provide:
        - conditions in the river upstream of the Phase 1 Reach, and
        - a measure of potential input from the outfall.
        - The highest concentrations of COCs in surface water during low-flow sampling were detected at this location
    - 24B-0002 is located at RM 1.55. The inflow from this point is immediately upstream of Blue Hills Avenue. Ocean Surveys, Inc. noted the inflow of an unnamed tributary or “aqueduct” during the site reconnaissance.
    - 24B-0004 is located in Pine Tree Brook where the confluence with the Lower Neponset River at RM 0.23. The sampling location was established within 20 feet of the confluence with access from the Neponset Trail. Concentrations were low to non-detect during the low-flow sampling round and it would be important to see if anything mobilizes at higher flow.

○ 24B-0005 is located directly upstream of the Walter Baker Chocolate Dam at RM 0.00. The concentrations during low-flow sampling round were relatively low compared to the other sampling Stations. Station 0005 is the only sampling location downstream of the confluence of the Pine Tree Brook, and is located in an area of the River where PCBs were detected in high concentration during sediment samling.
