$\mathrm{ng} / \mathrm{m}^{3}=$ nanograms per cubic meter of air
d = duplicate sample result

## Notes:

(1) Sampled using EPA method TO-10A, analyzed using EPA method 1668A.
(2) Area D has three potential sampling stations \#50, \#51 and \#52 that represent the downwind sample location for the dewatering facility. Regardless of where the sample is collected that is, $\# 50$, $\# 51$ or \#52, it is reported as Station \#50.
(3) All results reported for 24 hour time-weighted average in nanograms per cubic meter of air ( $\mathrm{ng} / \mathrm{m}^{3}$ ) with the exception of Station 65 (Dredge) which is an 8 hour sample.
