The pump at Area D failed by mid-afternoon. The pump used on the dredge was removed after 8 hours and placed at Area D. Both Area D and the dredge were monitored for their full time intervals. The pump for the duplicate at Area C shut down sometime after inspection. Because it didn't run for at least 12 hours, the sample was discarded. Due to a laboratory error, all ND results (less than 1.39 ng/m³) were rejected as a result of data validation. These are indicated by ND _R .

Note Pearl (#58) pump had stopped in mid-collection. The dredge pump (#53) had only run for 40 minutes prior to shutdown. The dredge pump (#53) was placed at #58 Pearl for remainder of day to collect a 6.5 m³ sample. The dredge pump (#53) was placed onboard the dredge the following day (3/9/17) to collect a total sample of 2.15 m³. This was also the first round that was analyzed entirely by the low resolution mass spec method.

Notes:

d = field duplicate result

NA = sample collected but not analyzed

ng/m³ = nanograms per cubic meter of air

NS = not sampled

PCB = polychlorinated biphenyl

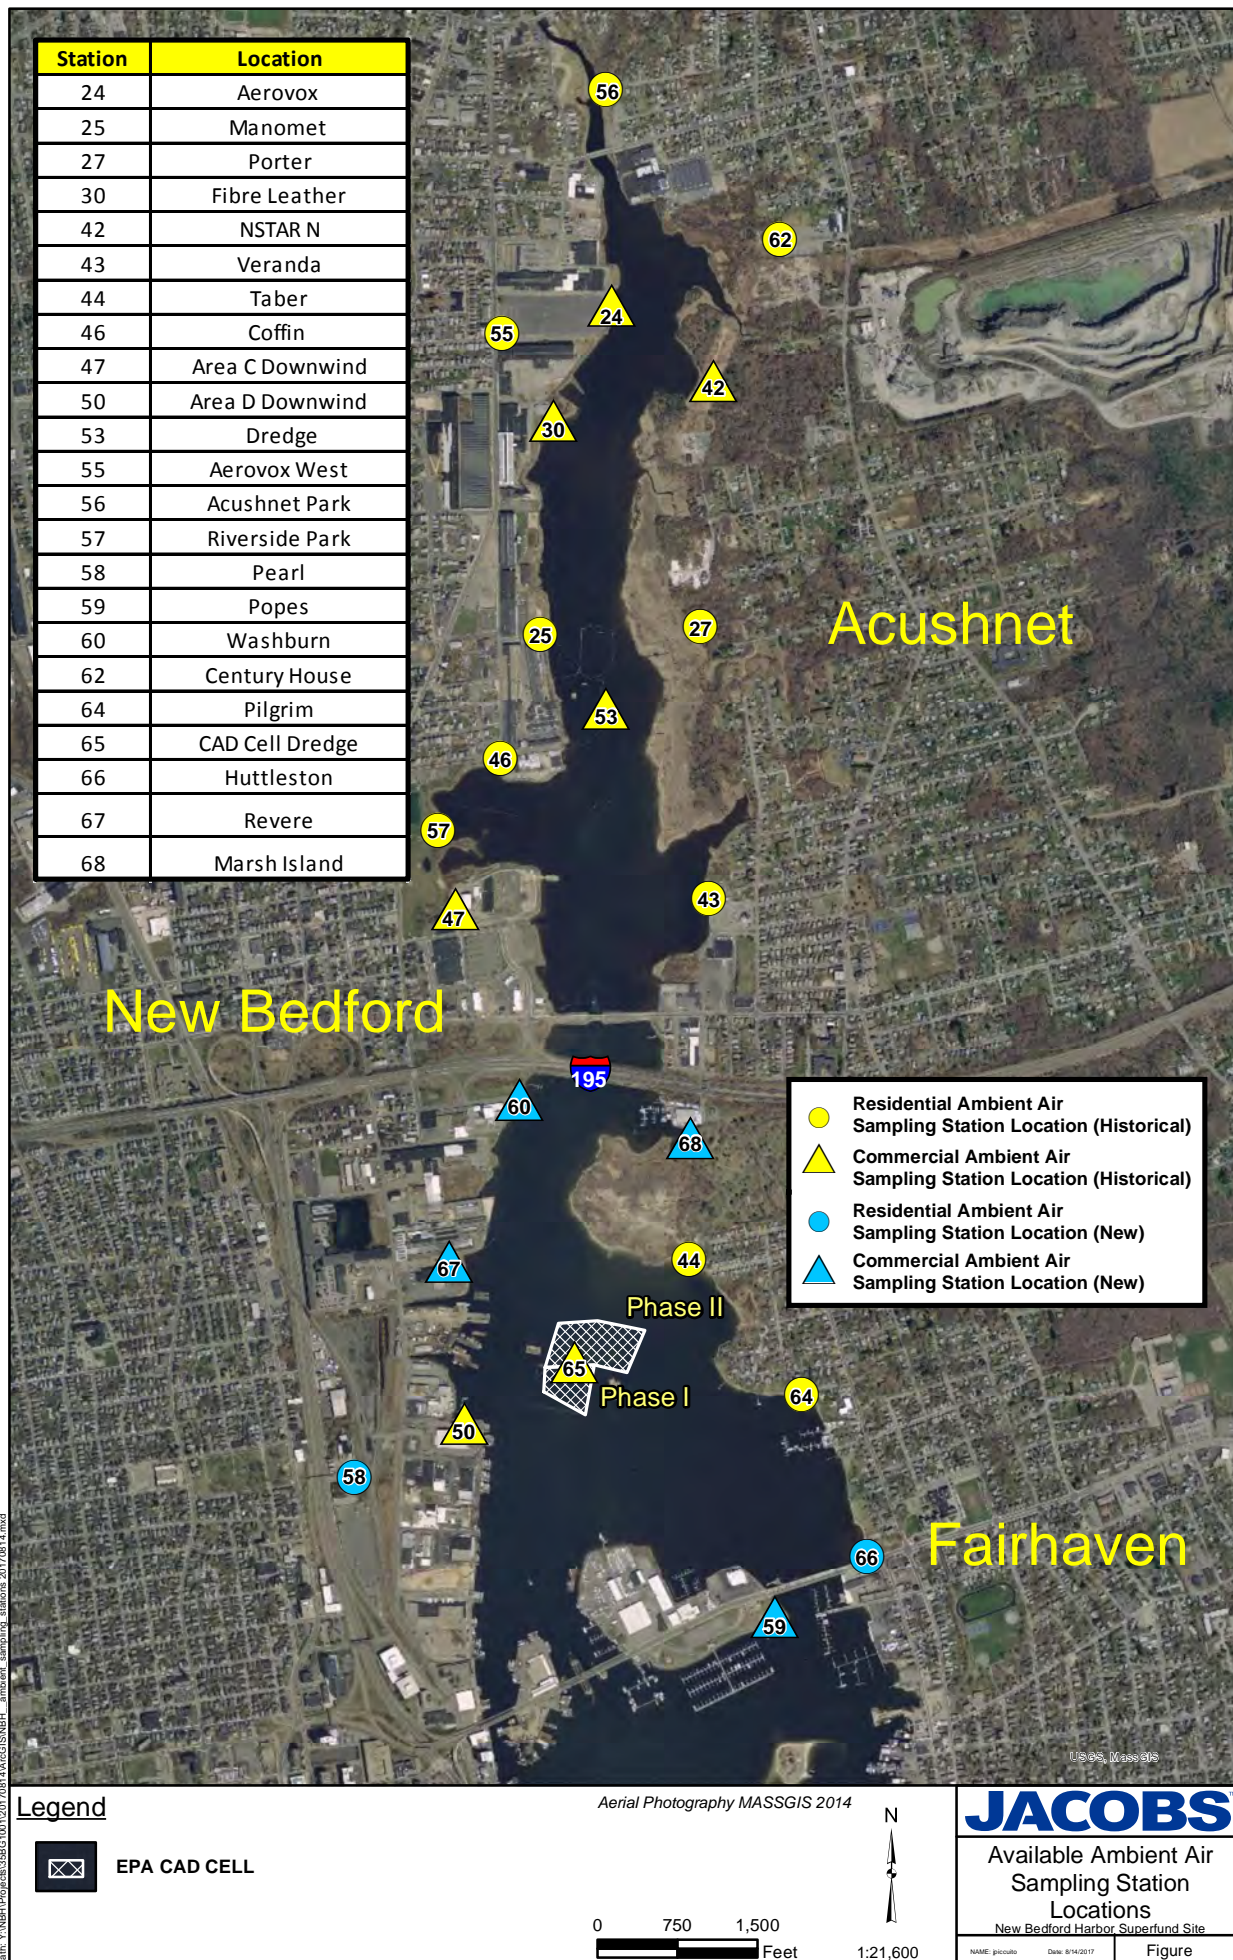

ND = no detections (non-detect)

P = Pending results

¹24-hour time-weighted average does not apply to Stations #53 and #65 (dredge/barge) which are on a 8-hr collection period

Sample station with gray blocking is a newer station added to the air sampling program or discontinued station (no activity).
