Appendices

Appendix A Chain of Custody
Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-197198-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier and Tier II Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
PZ-2022-1 (12.0-16.0)	480-197198-1	Soil	04/25/22			X	X	X	X	X
PZ-2022-1 (15.0)	480-197198-2	Soil	04/25/22		X					
PZ-2022-1 (28.0-32.0)	480-197198-3	Soil	04/25/22			X	X	X	X	X
PZ-2022-1 (29.0)	480-197198-4	Soil	04/25/22		X					
PZ-2022-1 (45.0-49.0)	480-197198-5	Soil	04/25/22			X	X	X	X	X
PZ-2022-1 (48.0)	480-197198-6	Soil	04/25/22		X

PZ-2022-1 (59.0)	480-197198-8	Soil	04/26/22		X					
PZ-2022-1 (72.0-76.0)	480-197198-9	Soil	04/26/22			X	X	X	X	X
PZ-2022-1 (75.0)	480-197198-10	Soil	04/26/22		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7470A, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and

- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence

audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	5	0	0	0	0	0	5
SVOCs	5	0	0	0	0	0	5
PCBs	5	0	0	0	0	0	5
PEST	5	0	0	0	0	0	5
HERB	5	0	0	0	0	0	5
PCDD/PCDF	5	0	0	0	0	0	5
Metals	5	0	0	0	0	0	5
MISC	5	0	0	0	0	0	5

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

Note:
s.u. = standard units

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and column resolution		X		X	

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis was performed on sample PZ-2022-1 (45.0-49.0). The MS/MSD analysis exhibited acceptable recoveries and RPDs with the exceptions noted in the table below.

Table 6. Samples with Matrix Spike / Matrix Spike Duplicate Recoveries Outside Control Limits

Sample ID	Compound	MS Recovery	MSD Recovery
PZ-2022-1 (45.0-49.0)	Benzidine	< 10%	< 10%
	Kepone	< 10%	AC
	p-Phenylene diamine	< 10%	< 10%

Note:
AC Acceptable

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Table 7. Matrix Spike / Matrix Spike Duplicate Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 Laboratory Control Sample Analysis

The Laboratory Control Sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits with the exceptions noted in the table below.

Table 5. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Compound	LCS Recovery
PZ-2022-1 (12.0-16.0) PZ-2022-1 (28.0-32.0) PZ-2022-1 (45.0-49.0) PZ-2022-1 (58.0-62.0) PZ-2022-1 (72.0-76.0)	Famphur	< 10%
	p-Phenylene diamine	< 10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 6. Laboratory Control Sample Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.5 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS)		X	X		
Laboratory Control Sample Duplicate(LCSD)	X				X
LCS/LCSD Precision (RPD)	X				X
Matrix Spike (MS) %R		X	X		

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Matrix Spike Duplicate (MSD) %R		X	X		
MS/MSD Precision (RPD)		X		X	
System performance and column resolution		X		X	

Notes:
%R Percent recovery
RPD Relative percent difference

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 10. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and column resolution		X		X	

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 11. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

5.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were

greater than the BAL resulted in the removal of the laboratory qualifier (B). Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 12. Summary of Blank Contamination Qualifications

Sample ID	Compound	Sample Result	Qualification
PZ-2022-1 (12.0-16.0) PZ-2022-1 (28.0-32.0) PZ-2022-1 (45.0-49.0) PZ-2022-1 (58.0-62.0) PZ-2022-1 (72.0-76.0)	4,4'-DDT	Detected sample results <RL and <BAL	"U" at the RL

Note:
RL Reporting limit

5.3 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (RPD) of detected sample results must be less than 25%.

Table 7. Dual Column Analysis Exhibiting RPD Outside the Control Limit

Sample ID	Compound	RPD
PZ-2022-1 (72.0-76.0)	4,4'-DDT	62.7%

The criteria used to evaluate the RPD are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Table 8. Evaluation Criteria for Dual Column Analysis RPD

Control Limit (RPD)	Qualification
>25% to 70%	J
>70% to 100%	JN
>100% [1]	R
>100% to 200% (Interference detected)[2]	J or JN
>50% (PCB sample results less than the RL)	U

When the sample results are less than the RL and the RPD greater than 50% the sample result are raised to the RL and reported as non-detect.

Note 1: If the pattern is confirmed sample results will be qualified as estimated (J). If pattern exhibits interference or if the pesticide/herbicide cannot be positively determined due to weathering the sample results will be qualified as tentative identification estimate (JN).

Note 2: If interference is detected in either column the sample results will be qualified as tentative identification estimate (JN).

5.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.5 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Blanks					
Method blanks		X	X		
Column (RPD) (If dual column is performed-not confirmation purposes only)		X	X		
System performance and column resolution		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 15. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation

SW-846 8290A	Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 16. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
PZ-2022-1 (12.0-16.0)	1,2,3,4,7,8,9-HpCDF	Detected sample results <RL and <BAL	“U” at the RL

RL – Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required

System performance and column resolution		X		X	
Compound identification and quantitation		X	X		

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 17. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Holding Times		X		X	
Reporting limits (units)		X		X	

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 18. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

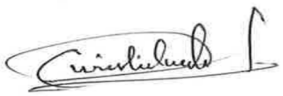
8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	

9 Overall Data Usability



This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 19. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.1%	12
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification *Unconfirmed*	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Appendix A Chain of Custody
Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-197341-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier and Tier II Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
PZ-2022-2 (43.0-45.0)	480-197341-1	Soil	04/28/22			X	X	X	X	X
PZ-2022-2 (44.0)	480-197341-2	Soil	04/28/22		X					
PZ-2022-2 (58.0-62.0)	480-197341-3	Soil	04/28/22			X	X	X	X	X
PZ-2022-2 (59.0)	480-197341-4	Soil	04/28/22		X					
PZ-2022-2 (75.0-78.0)	480-197341-5	Soil	04/28/22			X	X	X	X	X
PZ-2022-2 (76.0)	480-197341-6	Soil	04/28/22		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X

7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7470A, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in

the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	3	0	0	0	0	0	3
SVOCs	3	0	0	0	0	0	3
PCBs	3	0	0	0	0	0	3
PEST	3	0	0	0	0	0	3
HERB	3	0	0	0	0	0	3
PCDD/PCDF	3	0	0	0	0	0	3
Metals	3	0	0	0	0	0	3
MISC	3	0	0	0	0	0	3

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

Note:
s.u. = standard units

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and column resolution		X		X	

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Laboratory Control Sample Analysis

The Laboratory Control Sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits with the exceptions noted in the table below.

Table 6. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Compound	LCS Recovery
PZ-2022-2 (43.0-45.0) PZ-2022-2 (58.0-62.0) PZ-2022-2 (75.0-78.0)	Famphur	< 10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 7. Laboratory Control Sample Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.4 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS)		X	X		
Laboratory Control Sample Duplicate(LCSD)	X				X
LCS/LCSD Precision (RPD)	X				X
System performance and column resolution		X		X	

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					

Notes:
%R Percent recovery
RPD Relative percent difference

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Reporting limits (units)		X		X	
System performance and column resolution		X		X	

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8141B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil	7days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

5.2 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (RPD) of detected sample results must be less than 25%.

Table 10. Dual Column Analysis Exhibiting RPD Outside the Control Limit

Sample ID	Compound	RPD
PZ-2022-2 (58.0-62.0)	4,4'-DDT	52.6%
PZ-2022-2 (75.0-78.0)	4,4'-DDT	69.9%

The criteria used to evaluate the RPD are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Table 11. Evaluation Criteria for Dual Column Analysis RPD

Control Limit (RPD)	Qualification
>25% to 70%	J

Control Limit (RPD)	Qualification
>70% to 100%	JN
>100% [1]	R
>100% to 200% (Interference detected)[2]	J or JN
>50% (PCB sample results less than the RL)	U

When the sample results are less than the RL and the RPD greater than 50% the sample result are raised to the RL and reported as non-detect.

Note 1: If the pattern is confirmed sample results will be qualified as estimated (J). If pattern exhibits interference or if the pesticide/herbicide cannot be positively determined due to weathering the sample results will be qualified as tentative identification estimate (JN).

Note 2: If interference is detected in either column the sample results will be qualified as tentative identification estimate (JN).

5.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.4 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Column (RPD) (If dual column is performed-not confirmation purposes only)		X	X		
System performance and column resolution		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 12. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 13. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
PZ-2022-2 (43.0-45.0)	1,2,3,4,6,7,8-HpCDD	Detected sample results <RL and <BAL	“U” at the RL
	1,2,3,6,7,8-HxCDD		
	1,2,3,7,8,9-HxCDD		
	1,2,3,7,8-PeCDF		

Sample ID	Compounds	Sample Result	Qualification
	2,3,7,8-TCDF		
	OCDD		
	Total HpCDD		
	Total HxCDD		
	Total PeCDF		
	Total TCDF		
PZ-2022-2 (58.0-62.0)	1,2,3,4,6,7,8-HpCDD	Detected sample results <RL and <BAL	“U” at the RL
	1,2,3,7,8-PeCDF		
	2,3,7,8-TCDF		
	OCDD		
	Total HpCDD		
	Total PeCDF		
	Total TCDF		
PZ-2022-2 (75.0-78.0)	1,2,3,4,6,7,8-HpCDD	Detected sample results <RL and <BAL	“U” at the RL
	1,2,3,4,7,8-HxCDF		
	1,2,3,7,8,9-HxCDD		
	1,2,3,7,8-PeCDF		
	2,3,7,8-TCDF		
	OCDD		
	OCDF		
	Total HpCDD		
	Total HxCDD		
	Total HxCDF		
	Total PeCDF		
	Total TCDF		

Notes:
MB – Method blank
RL – Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound’s ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes

System performance and column resolution		X		X	
Compound identification and quantitation		X	X		

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 14. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 15. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

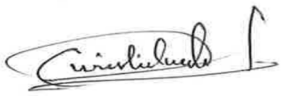
8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	

9 Overall Data Usability



This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 16. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	99.2%	3
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-197287-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier and Tier II Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
PZ-2022-2 (0.0-0.1)	480-197287-1	Soil	04/27/22			X	X	X	X	X
PZ02022-2 (0.5)	480-197287-2	Soil	04/27/22		X					
PZ-2022-2 (12.0-16.0)	480-197287-3	Soil	04/27/22			X	X	X	X	X
PZ-2022-2 (14.0)	480-197287-4	Soil	04/27/22		X					
PZ-2022-2 (26.0-30.0)	480-197287-5	Soil	04/27/22			X	X	X	X	X
PZ-2022-2 (29.0)	480-197287-6	Soil	04/27/22		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7470A, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in

the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	3	0	0	0	0	0	3
SVOCs	3	0	0	0	0	0	3
PCBs	3	0	0	0	0	0	3
PEST	3	0	0	0	0	0	3
HERB	3	0	0	0	0	0	3
PCDD/PCDF	3	0	0	0	0	0	3
Metals	3	0	0	0	0	0	3
MISC	3	0	0	0	0	0	3

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

Note:
s.u. = standard units

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and column resolution		X		X	

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Laboratory Control Sample Analysis

The Laboratory Control Sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits with the exceptions noted in the table below.

Table 6. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Compound	LCS Recovery
PZ-2022-2 (0.0-0.1) PZ-2022-2 (12.0-16.0) PZ-2022-2 (26.0-30.0)	Famphur	< 10%
	p-Phenylene diamine	< 10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 7. Laboratory Control Sample Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.4 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS)		X	X		
Laboratory Control Sample Duplicate (LCSD)	X				X
LCS/LCSD Precision (RPD)	X				X

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
System performance and column resolution		X		X	

Notes:
%R Percent recovery
RPD Relative percent difference

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and column resolution		X		X	

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

5.2 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (RPD) of detected sample results must be less than 25%.

Table 10. Dual Column Analysis Exhibiting RPD Outside the Control Limit

Sample ID	Compound	RPD
PZ-2022-2 (26.0-30.0)	4,4'-DDT	81.1%

The criteria used to evaluate the RPD are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Table 11. Evaluation Criteria for Dual Column Analysis RPD

Control Limit (RPD)	Qualification
>25% to 70%	J
>70% to 100%	JN
>100% [1]	R
>100% to 200% (Interference detected)[2]	J or JN
>50% (PCB sample results less than the RL)	U

When the sample results are less than the RL and the RPD greater than 50% the sample result are raised to the RL and reported as non-detect.

Note 1: If the pattern is confirmed sample results will be qualified as estimated (J). If pattern exhibits interference or if the pesticide/herbicide cannot be positively determined due to weathering the sample results will be qualified as tentative identification estimate (JN).

Note 2: If interference is detected in either column the sample results will be qualified as tentative identification estimate (JN).

5.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.4 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Column (RPD) (If dual column is performed-not confirmation purposes only)		X	X		
System performance and column resolution		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 12. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 13. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
PZ-2022-2 (0.0-0.1)	1,2,3,4,7,8-HxCDD	Detected sample results <RL and <BAL	“U” at the RL
	1,2,3,6,7,8-HxCDD

	Total HpCDD		
	Total HpCDF		
	Total HxCDD		
	Total HxCDF		
	Total PeCDF		

Notes:
MB – Method blank
RL – Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
System performance and column resolution		X		X	
Compound identification and quantitation		X	X		

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 14. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 15. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 16. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.4%	6
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality.

These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months
Deliverable Requested: I, II, III, IV, Other (specify) — Primary Deliverable Rank: 2	Special Instructions/QC Requirements:

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-199073-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
MW-2022-1 (1)	480-199073-1	Soil	6/15/2022		X					
MW-2022-1 (0-2)	480-199073-2	Soil	6/15/2022			X	X	X	X	X
MW-2022-1 (15)	480-199073-3	Soil	6/15/2022		X					
MW-2022-1 (15-19)	480-199073-4	Soil	6/15/2022			X	X	X	X	X
MW-2022-1 (29)	480-199073-5	Soil	6/15/2022		X					
MW-2022-1 (28-32)	480-199073-6	Soil	6/15/2022			X	X	X	X	X
MW-2022-1 (43)	480-199073-7	Soil	6/15/2022		X					
MW-2022-1 (40-44)	480-199073-8	Soil	6/15/2022			X	X	X	X	X

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD / PCDFs = Polychlorinated Dibenzodioxins / Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7470A, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in

the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	4	0	0	0	0	0	4
SVOCs	4	0	0	0	0	0	4
PCBs	4	0	0	0	0	0	4
PEST	4	0	0	0	0	0	4
HERB	4	0	0	0	0	0	4
PCDD/PCDF	4	0	0	0	0	0	4
Metals	4	0	0	0	0	0	4
MISC	4	0	0	0	0	0	4

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

Note:
s.u. = standard units

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 6. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

The LCS analysis exhibited acceptable recoveries with the exceptions noted in the table below.

Table 7. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Compounds	LCS Recovery
MW-2022-1 (0-2) MW-2022-1 (15-19) MW-2022-1 (28-32) MW-2022-1 (40-44)	Famphur	< 10%
	p-Phenylene diamine	< 10%

The criteria used to evaluate the LCS/LCSD recoveries are presented in the following table. In the case of an LCS / LCSD deviation, the sample results are qualified as documented in the table below.

Table 8. Laboratory Control Sample Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.4 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
System performance and Overall Assessment		X		X	

Notes:
%R Percent recovery
RPD Relative percent difference

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.					

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
System performance and Overall Assessment		X		X	

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 10. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B / 8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil	7days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

The analyses that exceeded the holding times are presented in the following table.

Sample ID	Holding Time	Criteria
MW-2022-1 (0-2) MW-2022-1 (15-19) MW-2022-1 (28-32) MW-2022-1 (40-44)	Samples were extracted 9th day from collection	7 days from collection to extraction

Sample results associated with samples analyzed by analytical method SW-846 8141B were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed greater than two times holding time	J	R

5.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.3 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 14. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 15. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
MW-2022-1 (0-2)	1,2,3,4,7,8-HxCDD (MB)	Detected sample results <RL and <BAL	“U” at the RL
MW-2022-1 (0-2) MW-2022-1 (40-44)	1,2,3,4,7,8-HxCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL
MW-2022-1 (0-2) MW-2022-1 (15-19) MW-2022-1 (28-32)	1,2,3,7,8,9-HxCDD (MB)	Detected sample results <RL and <BAL	“U” at the RL
MW-2022-1 (15-19) MW-2022-1 (28-32) MW-2022-1 (40-44)	OCDD (MB)	Detected sample results <RL and <BAL	“U” at the RL

MW-2022-1 (0-2) MW-2022-1 (15-19) MW-2022-1 (28-32)	Total HxCDD (MB)	Detected sample results <RL and <BAL	“U” at the RL

Sample ID	Compounds	Sample Result	Qualification
MW-2022-1 (0-2) MW-2022-1 (15-19) MW-2022-1 (40-44)	Total HxCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL

Notes:
MB – Method blank
RL – Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound’s ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest.” This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as “I” (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 16. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 17. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 18. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.4%	8
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-198548-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

Sample Location	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
MW-2022-3 (26-30)	480-198548-1	Soil	6/1/2022			X	X	X	X	X
MW-2022-3 (29)	480-198548-2	Soil	6/1/2022		X					
FB-060122	480-198548-3	Water	6/1/2022		X	X	X	X	X	X
TRIP BLANK	480-198548-4	Water	6/1/2022		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD / PCDFs = Polychlorinated Dibenzodioxins / Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7470A, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and

- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence

audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	1	0	2	0	0	0	3
SVOCs	1	0	1	0	0	0	2
PCBs	1	0	1	0	0	0	2
PEST	1	0	1	0	0	0	2
HERB	1	0	1	0	0	0	2
PCDD/PCDF	1	0	1	0	0	0	2
Metals	1	0	1	0	0	0	2
MISC	1	0	1	0	0	0	2

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2 s.u.

Note:
s.u. = standard units

All samples were analyzed within the specified holding time criterion.

Note: The target compound 2-chloroethyl vinyl ether degrades in the presence of acid used to preserve the aqueous samples. Therefore, sample FB-060122 and Trip blank results for 2-chloroethyl vinyl ether have been qualified as rejected.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds acetone and toluene were detected in field blank sample FB-060122 and method blank batch 628503 respectively. The associated sample results were non-detect. Hence, qualification was not required.

2.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.4 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Blanks					
A. Method blanks		X		X	
B. Equipment / Field blanks		X		X	
C. Trip blanks		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 6. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds 4-Chloro-3-methylphenol and Isophorone were detected in field blank sample FB-060122. The associated sample results were non-detect. Hence, qualification was not required.

3.3 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

The LCS analysis exhibited acceptable recoveries with the exceptions noted in the table below.

Table 7. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample Location	Compounds	LCS Recovery
FB-060122	Kepone	< 10%
	p-Phenylene diamine	< 10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 8. Laboratory Control Sample Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.5 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Blanks					
A. Method blanks		X		X	
B. Equipment / Field blanks		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
System performance and Overall Assessment		X		X	

Notes:
%R Percent recovery
RPD Relative percent difference

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil / Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 10. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B / 8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8081B / 8151A	Water	7days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil / Water	7days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

The analyses that exceeded the holding times are presented in the following table.

Method	Sample Location	Holding Time	Criteria
SW-846 8141B	MW-2022-3 (26-30)	Samples were extracted 23rd day from collection	7 days from collection to extraction

Sample results associated with samples analyzed by analytical method SW-846 8141B were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

5.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compound 4,4'-DDT was detected in preparation batch 629497. The associated sample results were non-detect. Hence, qualification was not required.

5.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.4 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Tier I Validation					
Holding times		X	X		
Blanks					
A. Method blanks		X		X	
B. Equipment / Field blanks		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

Notes:
%RSD Relative standard deviation
%R Percent recovery

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 14. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Soil / Water	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the "B" qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 15. Summary of Blank Contamination Qualifications

Sample Location	Compounds	Sample Result	Qualification
MW-2022-3 (26-30)	1,2,3,4,6,7,8-HpCDD	Detected sample results <RL and <BAL	"U" at the RL
	1,2,3,4,6,7,8-HpCDF		
	1,2,3,4,7,8-HxCDD		
	1,2,3,7,8,9-HxCDD		
	1,2,3,7,8-PeCDD		
	OCDD		
	Total HpCDD		
	Total HpCDF		
	Total HxCDD		
	Total PeCDD		

Note:
RL – Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
B. Equipment / Field blanks		X		X	
Compound identification and quantitation		X	X		
System performance and overall assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 16. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times

7.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analyte zinc was detected in were detected in field blank sample FB-060122 and method blank batch 628578 respectively. However, the associated sample results were greater than the BAL. Therefore, sample results greater than the BAL resulted in the removal of the laboratory qualifier (B). No other qualification of the sample results was required.

7.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.4 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Blanks					
A. Method Blanks		X		X	
B. Equipment / Field blanks		X		X	
Reporting limits (units)		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 17. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Cyanide, total was detected in method blank batch 629993; however, the associated sample is a QA sample (field blank); therefore, no qualification necessary.

8.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.4 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Blanks					
A. Method blanks		X		X	
B. Equipment / field blanks		X		X	
Reporting limits (units)		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 18. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	98.8%	2
SVOCs	99.2%	2
PCBs	100%	0
PEST	50%	7
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-199125-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

Sample Location	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
MW-2022-1 (60)	480-199125-1	Soil	6/16/2022		X					
MW-2022-1 (60-64)	480-199125-2	Soil	6/16/2022			X	X	X	X	X

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD / PCDFs = Polychlorinated Dibenzodioxins / Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X

10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020 and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations

and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	1	0	0	0	0	0	1
SVOCs	1	0	0	0	0	0	1
PCBs	1	0	0	0	0	0	1
PEST	1	0	0	0	0	0	1
HERB	1	0	0	0	0	0	1
PCDD/PCDF	1	0	0	0	0	0	1
Metals	1	0	0	0	0	0	1
MISC	1	0	0	0	0	0	1

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 Hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

The analysis that exceeded the holding time are presented in the following table.

Sample Location	Holding Time	Criteria
MW-2022-1 (60)	Sample was extracted 6th day from collection	48 Hours from collection to analysis, if samples are not frozen

Sample results associated with sample locations analyzed by analytical method SW-846 8260C were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X	X		
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 6. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

The LCS analysis exhibited acceptable recoveries with the exceptions noted in the table below.

Table 7. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample Location	Compounds	LCS Recovery
MW-2022-1 (60-64)	Famphur	< 10%
	Kepone	< 10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 8. Laboratory Control Sample Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review,

the overall data quality is within the guidelines specified in the method.

3.4 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
System performance and Overall Assessment		X		X	

Notes:
%R Percent recovery
RPD Relative percent difference

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 10. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B / 8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil	7days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

The analyses that exceeded the holding times are presented in the following table.

Method	Sample Location	Holding Time	Criteria
SW-846 8141B	MW-2022-1 (60-64)	Samples were extracted 8th day from collection	7 days from collection to extraction

Sample results associated with samples analyzed by analytical method SW-846 8141B were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

5.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.3 Data Validation Checklist

%R Percent recovery

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 14. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 15. Summary of Blank Contamination Qualifications

Sample Location	Compounds	Sample Result	Qualification
MW-2022-1 (60-64)	OCDD	Detected sample results <RL and <BAL	“U” at the RL
	Total HxCDD		

Sample Location	Compounds	Sample Result	Qualification
	Total HxCDF		

Note:
RL – Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
Compound identification and quantitation		X	X		

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
System performance and overall assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 16. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required

Reporting limits (units)		X		X	

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 17. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times. Sample MW-2022-1 (60-64) for cyanide analysis was re-extracted (run#2) past hold time due to LCS recovery outside control limits. Hence, the run#1 analysis is considered as not reportable.

The analysis that exceeded the holding times are presented in the following table.

Method	Sample Location	Holding Time	Criteria
SW-846 9012B	MW-2022-1 (60-64)	Samples were analyzed 16th day from collection	14 days from collection to extraction

Sample results associated with samples analyzed by analytical method SW-846 9012B were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X	X		
Reporting limits (units)		X		X	

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 18. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.4%	2
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0

Parameter	Percent Usability	Rejected Data
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Data Validation Report

PDI Summary Report for Upland Disposal Facility Area

GE-Pittsfield/Housatonic River Site

Pittsfield, Massachusetts

Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans, Metals, and Miscellaneous Analyses

SDG # 480-197966-1

Analyses Performed By:
Eurofins Lancaster Laboratories LLC,
Lancaster, Pennsylvania, USA

Eurofins Buffalo, Amherst, New York, USA

Eurofins Pittsburgh, Pennsylvania, USA

Report #47630R
Review Level: Tier I
Project: 30150026.3000

Contents

1 Summary 4
1.1 Analytical Data Package Documentation 4
1.2 Data Validation Procedures 5
2 Volatile Organic Compound Analyses 7
2.1 Holding Times 7
2.2 System Performance and Overall Assessment 8
2.3 Data Validation Checklist 8
3 Semi-volatile Organic Compound Analyses 8
3.1 Holding Times 8
3.2 Laboratory Control Sample Analysis 8
3.3 System Performance and Overall Assessment 9
3.4 Data Validation Checklist 9
4 Polychlorinated Biphenyl Analyses 10
4.1 Holding Times 10
4.2 System Performance and Overall Assessment 10
4.3 Data Validation Checklist 10
5 Pesticide/Herbicide Analyses 10
5.1 Holding Times 10
5.2 System Performance and Overall Assessment 11
5.3 Data Validation Checklist 11
6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis 11
6.1 Holding Times 11
6.2 Blank Contamination 12
6.3 Compound Identification 13
6.4 System Performance and Overall Assessment 13
6.5 Data Validation Checklist 13
7 Metals Analyses 14
7.1 Holding Times 14
7.2 System Performance and Overall Assessment 14
7.3 Data Validation Checklist 15
8 General Chemistry Analyses 15
8.1 Holding Times 15

8.2 System Performance and Overall Assessment 15
8.3 Data Validation Checklist for General Chemistry 16
9 Overall Data Usability 16

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-197966-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Organophosphorous Compounds, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/PCBs /HERB/OPC	PCDD/ PCDF	MET	MISC
B2022-2 (77-81)	480-197966-1	Soil	05/13/2022			X	X	X	X	X
B-2022-2 (79)	480-197966-2	Soil	05/13/2022		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
OPC- Organophosphorous Compounds
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations

and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	1	0	0	0	0	0	1
SVOCs	1	0	0	0	0	0	1
PCBs	1	0	0	0	0	0	1
PEST	1	0	0	0	0	0	1
OPC	1	0	0	0	0	0	1
HERB	1	0	0	0	0	0	1
PCDD/PCDF	1	0	0	0	0	0	1
Metals	1	0	0	0	0	0	1
MISC	1	0	0	0	0	0	1

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Samples associated with LCS analysis exhibiting recoveries outside of the control limits presented in the following table.

Table 6. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Batch	Compounds	LCS Recovery
B2022-2 (77-81)	Prep Batch: 626297	Famphur	<10%
		Kepone	<10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 7. Laboratory Control Sample Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.4 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Water/Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the specified holding time criterion.

5.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.3 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 10. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Water/Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 11. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
B2022-2 (77-81)	1,2,3,4,6,7,8-HpCDD (MB) 1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,4,7,8,9-HpCDF (MB) 1,2,3,4,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDD (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,7,8-PeCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL

Sample ID	Compounds	Sample Result	Qualification
	OCDD (MB)		
	OCDF (MB)		
	Total HpCDD (MB)		
	Total HpCDF (MB)		
	Total HxCDD (MB)		
	Total HxCDF (MB)		
	Total PeCDD (MB)		
	Total PeCDF (MB)		

Notes:
MB Method blank
RL Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
Compound identification and quantitation		X	X		
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 12. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 13. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 14. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.4%	2
PCBs	100%	0
PEST	100%	0
OPC	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Client Information (Sub Contract Lab)	Sampler:	Lab PM: Schmiggel, John R	Carrier Tracking No(s):	COC No: 480-72260-1
Client Contact: Shipping/Receiving	Phone:	E-Mail: John.Schmiggel@eurofinsus.com	State of Origin: Massachusetts	Page: Page 1 of 1
Company: Eurofins Lancaster Laboratories Environm		Accreditations Required (See note): State - Massachusetts		Job #: 480-137366-1
Address: 2425 New Holland Pike,	Due Date Requested: 5/23/2023	Analysis Requested		Preservation Codes: A - HCL, B - NaOH, C - Zn Acetate, D - Nitric Acid, E - NaHSO4, F - MeOH, G - Amchlor, H - Ascorbic Acid, I - Ice, J - DI Water, K - EDTA, L - EDA, M - Hexane, N - None, O - AsNaO2, P - Na2O4S, Q - Na2SO3, R - Na2S2O3, S - H2SO4, T - TSP Dodecahydrate, U - Acetone, V - MCAA, W - pH 4-5, Y - Trizma, Z - other (specify), Other:
City: Lancaster	PO #:			
State, Zip: PA, 17601	WO #:			
Phone: 717-656-2300(Tel)	Project #: 48025475			
Email:	SSOW#:			
Project Name: GE Woods Pond Parcel				
Site:				

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	8260B/MOD_Sor Diluvial & Fractured Rock_11 Isomers + Total	Total Number of Containers	Special Instructions/Note:
			Preservation Code:						
62[illegible]-2 (17-01) (480-137366-1)	5/15/23	10:45 Eastern		Solid			X	1	

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification: Unconfirmed	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month): Return To Client / Disposal By Lab / Archive For ___ Months
Deliverable Requested: I, II, III, IV, Other (specify)	Primary Deliverable Rank: 2
Empty Kit Relinquished by:	Date: Time: Method of Shipment:

Appendix B

Annotated Sample Analysis Data Sheets

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Client Sample ID: B2022-2 (77-81)
Date Collected: 05/13/22 09:45
Date Received: 05/14/22 10:00

Lab Sample ID: 480-197966-1
Matrix: Solid
Percent Solids: 79.2

Method: 8270D - Semivolatile Organic Compounds (GC/MS)

Appendices

Appendix A Chain of Custody

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-198018-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Organophosphorous Compounds, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/PCBs /HERB/OPC	PCDD/ PCDF	MET	MISC
B-2022-1 (0-1)	480-198018-1	Soil	05/16/2022			X	X	X	X	X
B-2022-1 (0.5)	480-198018-2	Soil	05/16/2022		X					
B-2022-1 (12-16)	480-198018-3	Soil	05/16/2022			X	X	X	X	X
B-2022-1 (14)	480-198018-4	Soil	05/16/2022		X					
B-2022-1 (28-32)	480-198018-5	Soil	05/16/2022			X	X	X	X	X
B-2022-1 (29)	480-198018-6	Soil	05/16/2022		X					
B-2022-1 (43-47)	480-198018-7	Soil	05/16/2022			X	X	X	X	X
B-2022-1 (44)	480-198018-8	Soil	05/16/2022		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
OPC = Organophosphorous Compounds
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and

- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence

audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	4	0	0	0	0	0	4
SVOCs	4	0	0	0	0	0	4
PCBs	4	0	0	0	0	0	4
PEST	4	0	0	0	0	0	4
OPC	4	0	0	0	0	0	4
HERB	4	0	0	0	0	0	4
PCDD/PCDF	4	0	0	0	0	0	4
Metals	4	0	0	0	0	0	4
MISC	4	0	0	0	0	0	4

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criterion.

2.2 Matrix Spike/Matrix Spike Duplicate Analysis

Matrix Spike / Matrix Spike Duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis performed on sample B-2022-1 (0.5) exhibiting recoveries outside of the control limits are presented in the following table.

Table 5. Samples with Matrix Spike / Matrix Spike Duplicate Recoveries Outside Control Limits

Sample ID	Compound	MS Recovery	MSD Recovery
B-2022-1 (0.5)	Vinyl acetate	<10%	10%

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Table 6. Matrix Spike / Matrix Spike Duplicate Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

2.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.4 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Matrix Spike (MS) %R		X	X		
Matrix Spike Duplicate (MSD) %R		X	X		
System performance and Overall Assessment		X		X	

Note:
%R Percent recovery

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 7. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis performed on sample B-2022-1 (0-1) exhibiting recoveries outside of the control limits are presented in the following table.

Table 8. Samples with Matrix Spike / Matrix Spike Duplicate Recoveries Outside Control Limits

Sample ID	Compounds	MS Recovery	MSD Recovery
B-2022-1 (0-1)	a,a-Dimethylphenethylamine	<10%	<10%
	Benzidine	<10%	<10%
	Kepone	<10%	<10%
	p-Phenylene diamine	<10%	<10%

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Table 9. Samples with Matrix Spike / Matrix Spike Duplicate Recoveries Outside Control Limits

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Samples associated with LCS analysis exhibiting recoveries outside of the control limits presented in the following table.

Table 10. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Batch	Compounds	LCS Recovery
B-2022-1 (0-1)	Prep Batch: 626542	Famphur	<10%

Sample ID	Batch	Compounds	LCS Recovery
B-2022-1 (12-16) B-2022-1 (28-32) B-2022-1 (43-47)		Kepone	<10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 11. Laboratory Control Sample Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.5 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required

System performance and Overall Assessment		X		X	

Note:
%R Percent recovery

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 12. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X

Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 13. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Water/Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the specified holding time criterion.

5.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.3 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 14. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Water/Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to

method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 15. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
B-2022-1 (0-1)	1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,6,7,8-HxCDF (MB) Total HxCDD (MB) Total HxCDF (MB) Total PeCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL
B-2022-1 (12-16)	1,2,3,4,6,7,8-HpCDD (MB) 1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,4,7,8,9-HpCDF (MB) 1,2,3,4,7,8-HxCDD (MB) 1,2,3,4,7,8-HxCDF (MB) 1,2,3,6,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDD (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,6,7,8-HxCDF (MB) 2,3,4,7,8-PeCDF (MB) OCDD (MB) OCDF (MB) Total HpCDD (MB) Total HpCDF (MB) Total HxCDD (MB) Total HxCDF (MB) Total PeCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL

Sample ID	Compounds	Sample Result	Qualification
B-2022-1 (28-32)	1,2,3,4,6,7,8-HpCDD (MB) 1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,4,7,8-HxCDD (MB) 1,2,3,4,7,8-HxCDF (MB) 1,2,3,6,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDD (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,6,7,8-HxCDF (MB) 2,3,4,7,8-PeCDF (MB) OCDD (MB) OCDF (MB) Total HpCDD (MB) Total HpCDF (MB) Total HxCDD (MB) Total HxCDF (MB) Total PeCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL
B-2022-1 (43-47)	1,2,3,4,6,7,8-HpCDD (MB) 1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,4,7,8,9-HpCDF (MB) 1,2,3,4,7,8-HxCDD (MB) 1,2,3,4,7,8-HxCDF (MB) 1,2,3,6,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDD (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,6,7,8-HxCDF (MB) 2,3,4,7,8-PeCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL

Sample ID	Compounds	Sample Result	Qualification
	OCDD (MB) OCDF (MB) Total HpCDD (MB) Total HpCDF (MB) Total HxCDD (MB) Total HxCDF (MB) Total PeCDF (MB)		

Notes:
MB = Method blank
RL = Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
Compound identification and quantitation		X	X		
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 16. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 17. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 Matrix Spike/Matrix Spike Duplicate/Laboratory Duplicate Analysis

MS/MSD and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

8.2.1 Matrix Spike/Matrix Spike Duplicate Analysis

All analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125% for water matrices and laboratory control limits for soils. The MS/MSD recovery control limits do not apply for MSMSD performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MSMSD concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory flag will be removed.

The MS/MSD analysis performed on sample B-2022-1 (0-1) exhibiting recoveries outside of the control limits are presented in the following table.

Table 18. Samples with Matrix Spike / Matrix Spike Duplicate Recoveries Outside Control Limits

Sample ID	Analyte	MS Recovery	MSD Recovery
B-2022-1 (0-1)	Cyanide	9%	12%

The criteria used to evaluate MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified. The qualifications are applied to the parent sample result for the analyte cyanide associated with this SDG.

Table 19. Matrix Spike / Matrix Spike Duplicate Recovery Evaluation Criteria and Qualifications

Control limit	Sample Result	Qualification
MS/MSD percent recovery <30%	Non-detect	R
	Detect	J

8.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.4 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Reporting limits (units)		X		X	
Matrix Spike (MS) %R		X	X		
Matrix Spike Duplicate (MSD) %R		X	X		
System performance and Overall Assessment		X		X	

Note:

%R Percent recovery

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 20. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	99.54%	1
SVOCs	97.80%	11
PCBs	100%	0
PEST	100%	0
OPC	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	87.50%	1

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being requested, this status should be brought to Eurofins Environment Testing Northeast, LLC's attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Appendix B

Annotated Sample Analysis Data Sheets

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

Dioxin

Qualifier	Qualifier Description
*5-	Isotope dilution analyte is outside acceptance limits, low biased.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
V	Serial Dilution exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-198049-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Organophosphorous Compounds, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/PCBs /HERB/OPC	PCDD/ PCDF	MET	MISC
B-2022-1 (58-66)	480-198049-1	Soil	05/17/2022			X	X	X	X	X
B-2022-1 (59)	480-198049-2	Soil	05/17/2022		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
OPC = Organophosphorous Compounds
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations

and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	1	0	0	0	0	0	1
SVOCs	1	0	0	0	0	0	1
PCBs	1	0	0	0	0	0	1
PEST	1	0	0	0	0	0	1
OPC	1	0	0	0	0	0	1
HERB	1	0	0	0	0	0	1
PCDD/PCDF	1	0	0	0	0	0	1
Metals	1	0	0	0	0	0	1
MISC	1	0	0	0	0	0	1

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 6. Summary of Blank Contamination Qualifications

Sample ID	Compound	Sample Result	Qualification
B-2022-1 (58-66)	Di-n-butyl phthalate (MB)	Detected sample results >RL and <BAL	"U" at detected sample concentration

Notes:
MB = Method blank
RL = Reporting limit

3.3 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Samples associated with LCS analysis exhibiting recoveries outside of the control limits presented in the following table.

Table 7. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Batch	Compounds	LCS Recovery
B-2022-1 (58-66)	Prep Batch: 627444	Famphur	<10%
		Kepone	<10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 8. Laboratory Control Sample Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.5 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Blanks					
A. Method blanks		X	X		
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
System performance and Overall Assessment		X		X	

Note:
%R Percent recovery

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 10. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Water/Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the specified holding time criterion.

5.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.3 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 11. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Water/Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 12. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
B-2022-1 (58-66)	1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,7,8-PeCDF (MB) OCDD (MB) OCDF (MB) Total HpCDF (MB) Total HxCDF (MB) Total PeCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL

Notes:
MB = Method blank
RL = Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound’s ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals

eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
Compound identification and quantitation		X	X		
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 13. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 14. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 15. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.4%	2
PCBs	100%	0
PEST	100%	0
OPC	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Appendix B

Annotated Sample Analysis Data Sheets

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Client Sample ID: B-2022-1 (58-66)

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-198104-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Organophosphorous Compounds, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/PCBs /HERB/OPC	PCDD/ PCDF	MET	MISC
B-2022-1 (74-80)	480-198104-1	Soil	05/18/2022			X	X	X	X	X
B-2022-1 (75)	480-198104-2	Soil	05/18/2022		X					
FB-051822	480-198104-3	Water	05/18/2022		X	X	X	X	X	X
TRIP BLANK	480-198104-4	Water	05/18/2022		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
OPC = Organophosphorous Compounds
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7470A, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in

the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	1	0	2	0	0	0	3
SVOCs	1	0	1	0	0	0	2
PCBs	1	0	1	0	0	0	2
PEST	1	0	1	0	0	0	2
OPC	1	0	1	0	0	0	2
HERB	1	0	1	0	0	0	2
PCDD/PCDF	1	0	1	0	0	0	2
Metals	1	0	1	0	0	0	2
MISC	1	0	1	0	0	0	2

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2 s.u.
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

Note:
s.u. = standard units

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 6. Summary of Blank Contamination Qualifications

Sample ID	Compound	Sample Result	Qualification
B-2022-1 (74-80)	Di-n-butyl phthalate (MB)	Detected sample results >RL and <BAL	“U” at detected sample concentration

Notes:
MB = Method blank
RL = Reporting limit

3.3 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Samples associated with LCS analysis exhibiting recoveries outside of the control limits presented in the following table.

Table 7. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Batch	Compounds	LCS Recovery
FB-051822	Prep Batch: 627299	p-Phenylene diamine	<10%
B-2022-1 (74-80)	Prep Batch: 627444	Famphur	<10%
		Kepone	<10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 8. Laboratory Control Sample Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.5 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Blanks					
A. Method blanks		X	X		
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
System performance and Overall Assessment		X		X	

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					

Note:
%R Percent recovery

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 10. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Water/Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the specified holding time criterion.

5.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.3 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 11. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Water/Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 12. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
B-2022-1 (74-80)	1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,7,8-PeCDF (MB) OCDD (FB, MB) OCDF (FB, MB) Total HpCDF (FB, MB) Total HxCDF (FB, MB) Total PeCDF (FB, MB)	Detected sample results <RL and <BAL	“U” at the RL
	1,2,3,4,6,7,8-HpCDF (FB) 1,2,3,4,7,8,9-HpCDF (FB) 1,2,3,4,7,8-HxCDF (FB)	Detected sample results <RL and <BAL	“U” at the RL

Notes:
MB = Method blank
FB = Field blank
RL = Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound’s ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest.” This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as “I” (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
B. Field blanks		X	X		
Compound identification and quantitation		X	X		
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 13. Holding Time for Method SW-846 6010C/7470A/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.

Method	Matrix	Holding Time	Preservation
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.
SW-846 7470A	Water	28 days from collection to analysis	Preserved to a pH of less than 2.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7470A/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 14. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil		Cool to <6 °C.
Sulfide by SM 4500 S2 F	Water	7 days from collection to analysis	Zinc acetate; preserved to a pH of greater than 9
	Soil	14 days from collection to analysis	Cool to <6 °C.

The analyses that exceeded the holding time are presented in the following table.

Table 15. Summary of Holding Time Exceedances

Sample ID	Holding Time	Criteria
FB-051822	9 days from collection to analysis (Sulfide)	7 days from collection to analysis (Water)

Sample results associated with sample locations analyzed by analytical method SM 4500 S2 F were qualified, as specified in the table below. All other holding times were met.

Table 16. Summary of Holding Time Qualifications

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required

Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 17. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.8%	3
PCBs	100%	0
PEST	100%	0
OPC	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/method/matrix being requested, this reflects the laboratory's capability to perform the analysis. Eurofins Environment Testing Northeast, LLC attests that all analyses will be performed in accordance with the Eurofins Environment Testing Northeast, LLC Quality Assurance Manual unless otherwise specified. Eurofins Environment Testing Northeast, LLC is a subsidiary of Eurofins Environment Testing America, LLC which is a wholly owned subsidiary of Eurofins Environment Testing North America, Inc.

Definitions/Glossary

Client: ARCADIS U.S. Inc
Job ID: 480-198104-1
Project/Site: GE Woods Pond Parcel

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-197432-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Organophosphorous Compounds, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/PCBs /HERB/OPC	PCDD/ PCDF	MET	MISC
MW-2022-5(54-58)	480-197432-1	Soil	05/02/2022		X	X	X	X	X	X
MW-2022-5(61-64)	480-197432-2	Soil	05/02/2022		X	X	X	X	X	X
MW-2022-6(0-1)	480-197432-3	Soil	05/02/2022		X	X	X	X	X	X

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
OPC = Organophosphorous Compounds
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in

the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	3	0	0	0	0	0	3
SVOCs	3	0	0	0	0	0	3
PCBs	3	0	0	0	0	0	3
PEST	3	0	0	0	0	0	3
OPC	3	0	0	0	0	0	3
HERB	3	0	0	0	0	0	3
PCDD/PCDF	3	0	0	0	0	0	3
Metals	3	0	0	0	0	0	3
MISC	3	0	0	0	0	0	3

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

Note:
s.u. = standard units

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Samples associated with LCS analysis exhibiting recoveries outside of the control limits presented in the following table.

Table 6. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Batch	Compounds	LCS Recovery
MW-2022-5(54-58) MW-2022-5(61-64) MW-2022-6(0-1)	Prep Batch: 624769	Famphur	<10%
		Kepone	<10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 7. Laboratory Control Sample Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.4 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
System performance and Overall Assessment		X		X	

Note:
%R Percent recovery

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Water/Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the specified holding time criterion.

5.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 10. Summary of Blank Contamination Qualifications

Sample ID	Method	Compound	Sample Result	Qualification
MW-2022-5(54-58) MW-2022-5(61-64) MW-2022-6(0-1)	SW-846 8081B	4,4'-DDT (MB)	Detected sample results <RL and <BAL	"U" at the RL

Notes:
MB Method blank
RL Reporting limit

5.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.4 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 11. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Water/Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 12. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
MW-2022-5(54-58)	1,2,3,4,6,7,8-HpCDD (MB) 1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,4,7,8,9-HpCDF (MB) 1,2,3,4,7,8-HxCDD (MB)	Detected sample results <RL and <BAL	“U” at the RL

Sample ID	Compounds	Sample Result	Qualification
	1,2,3,4,7,8-HxCDF (MB) 1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDD (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,7,8-PeCDF (MB) OCDD (MB) OCDF (MB) Total HpCDD (MB) Total HpCDF (MB) Total HxCDD (MB) Total HxCDF (MB) Total PeCDF (MB)		
MW-2022-5(61-64)	1,2,3,4,6,7,8-HpCDD (MB) 1,2,3,4,6,7,8-HpCDF (MB) 1,2,3,4,7,8,9-HpCDF (MB) 1,2,3,4,7,8-HxCDD (MB) 1,2,3,4,7,8-HxCDF (MB) 1,2,3,6,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDF (MB) 1,2,3,7,8,9-HxCDD (MB) 1,2,3,7,8,9-HxCDF (MB) 1,2,3,7,8-PeCDF (MB) 2,3,4,6,7,8-HxCDF (MB) 2,3,4,7,8-PeCDF (MB) OCDD (MB) OCDF (MB) Total HpCDD (MB) Total HpCDF (MB) Total HxCDD (MB)	Detected sample results <RL and <BAL	“U” at the RL

Sample ID	Compounds	Sample Result	Qualification
	Total HxCDF (MB) Total PeCDF (MB)		
MW-2022-6(0-1)	1,2,3,7,8,9-HxCDF (MB)	Detected sample results <RL and <BAL	"U" at the RL

Notes:
MB = Method blank
RL = Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Blanks					
A. Method blanks		X	X		
Compound identification and quantitation		X	X		
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 13. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.3 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 14. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 15. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.4%	6
PCBs	100%	0
PEST	100%	0
OPC	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*
Unconfirmed	☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Appendix B

Annotated Sample Analysis Data Sheets

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Client Sample ID: MW-2022-5(54-58)

Appendices

Appendix A Chain of Custody

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-197562-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

Sample Location	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
MW-2022-6 (12-16)	480-197562-1	Soil	5/3/2022			X	X	X	X	X

MW-2022-7 (43-47)	480-197562-12	Soil	5/4/2022			X	X	X	X	X
MW-2022-7 (43)	480-197562-13	Soil	5/4/2022		X					
MW-2022-7 (58-62)	480-197562-14	Soil	5/4/2022			X	X	X	X	X
DUP-3-050422	480-197562-15	Soil	5/4/2022	MW-2022-7 (43-47)	X	X	X	X	X	X
MW-2022-7 (58)	480-197562-16	Soil	5/4/2022		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds

PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD / PCDFs = Polychlorinated Dibenzodioxins / Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1. Performance was not acceptable for “requested analyses ad sample results” as the sample MW-2022-6 (28) (480-197562-4) was collected as per chain-of-custody (COC); however, the sample was not received by the laboratory. Hence, the analysis was cancelled.
2. The VOC analysis was marked on COC for sample MW-2022-7 (0-1) (480-197562-7) but the results were not included in the laboratory report.

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

U Compound considered non-detect at the listed value due to associated blank contamination.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	7	0	0	0	0	0	7
SVOCs	9	0	0	0	0	0	9
PCBs	9	0	0	0	0	0	9
PEST	9	0	0	0	0	0	9
HERB	9	0	0	0	0	0	9
PCDD/PCDF	9	0	0	0	0	0	9
Metals	9	0	0	0	0	0	9
MISC	9	0	0	0	0	0	9

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data

validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to freezing and 14 days from collection to analysis	Cool to <6 °C.
		48 Hours from collection to analysis, if samples are not frozen	

The analysis that exceeded the holding time are presented in the following table.

Sample Locations	Holding Time	Criteria
MW-2022-6 (14) MW-2022-6 (41)	Samples were arrived and preserved beyond 48 hours from collection	48 Hours from collection to analysis, if samples are not frozen

Sample results associated with sample locations analyzed by analytical method SW-846 8260C were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

2.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil.

A field duplicate DUP-3-050422 was collected at sample location MW-2022-7 (43-47). However, VOC analysis was not requested for parent sample but reported for duplicate sample. Hence, field duplicate was not evaluated.

2.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.4 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X	X		
Field Duplicate (RPD)		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

Sample locations associated with the MS/MSD exhibiting recoveries outside of the control limits are presented in the following table.

Table 6. Samples with Matrix Spike / Matrix spike Duplicate Recoveries Outside Control Limits

Sample Location	Compounds	MS Recovery	MSD Recovery
MW-2022-7 (58-62)	Benzidine	<10%	<10%
	Kepone	<10%	<10%
	p-Phenylene diamine	<10%	<10%
	a,a-Dimethylphenethylamine	AC	<10%

Note:
AC Acceptable

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Table 7. Matrix Spike / Matrix spike Duplicate Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

The LCS analysis exhibited acceptable recoveries with the exceptions noted in the table below.

Table 8. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample Locations	Compounds	LCS Recovery
MW-2022-6 (12-16) MW-2022-6 (26-30) MW-2022-6 (40-44) MW-2022-7 (0-1) MW-2022-7 (12-16) MW-2022-7 (28-32) MW-2022-7 (43-47) MW-2022-7 (58-62) DUP-3-050422	Famphur	< 10%
	Kepone	< 10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 9. Laboratory Control Sample Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.4 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil. Results for duplicate samples are summarized in the following table.

Results for duplicate samples are summarized in the following table.

Table 10. Field Duplicate Sample Results

Sample ID/ Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
MW-2022-7 (43-47) / DUP-3-050422	Di-n-butyl phthalate	230 U	69 J	AC

Note:

AC Acceptable

The results between the parent sample and field duplicate were acceptable.

3.5 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.6 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Matrix Spike (MS)		X	X		
Matrix Spike Duplicate(MSD)		X	X		
Laboratory Control Sample (LCS) %R		X	X		
Field Duplicate (RPD)		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

Notes:
%R Percent recovery
RPD Relative percent difference

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 11. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil / Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrix.

Results for duplicate samples are summarized in the following table.

Table 12. Field Duplicate Sample Results

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
MW-2022-7 (43-47) / DUP-3-050422	All target compounds	U	U	AC

Note:

AC Acceptable

The results between parent and field duplicates were acceptable.

4.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.4 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Field Duplicate (RPD)		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 13. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B / 8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil / Water	7days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the holding time criterion.

5.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 14. Summary of Blank Contamination Qualifications

Sample Locations	Compound	Sample Result	Qualification
MW-2022-7 (0-1) DUP-3-050422	Endosulfan I	Detected sample results <RL and <BAL	"U" at the RL

Note:
RL Reporting limit

5.3 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrix.

Results for duplicate samples are summarized in the following table.

Table 15. Field Duplicate Sample Results

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
MW-2022-7 (43-47) / DUP-3-050422	Endosulfan I	2.2 U	0.67	AC

Note:

AC Acceptable

The results between parent and field duplicates were acceptable.

5.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.5 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation

Blanks					
A. Method blanks		X	X		
B. Equipment / Field blanks	X				X
Field Duplicate (RPD)		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 16. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the "B" qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 17. Summary of Blank Contamination Qualifications

Sample Location	Compounds	Sample Result	Qualification
MW-2022-6 (12-16)	1,2,3,4,6,7,8-HpCDF 1,2,3,4,7,8,9-HpCDF 1,2,3,4,7,8-HxCDD 1,2,3,4,7,8-HxCDF 1,2,3,6,7,8-HxCDD 1,2,3,6,7,8-HxCDF 1,2,3,7,8,9-HxCDD 1,2,3,7,8,9-HxCDF 1,2,3,7,8-PeCDF 2,3,4,6,7,8-HxCDF 2,3,4,7,8-PeCDF Total HpCDF Total HxCDD Total HxCDF Total PeCDF	Detected sample results <RL and <BAL	"U" at the RL

6.3 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrix.

Results for duplicate samples are summarized in the following table.

Table 18. Field Duplicate Sample Results

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
MW-2022-7 (43-47) / DUP-3-050422	1,2,3,4,6,7,8-HpCDF	0.32 J	0.30 J	AC
	1,2,3,4,6,7,8-HpCDD	0.72 J	0.64 J	AC
	1,2,3,4,7,8,9-HpCDF	0.054 J	0.048 J	AC
	1,2,3,4,7,8-HxCDF	0.085 J	0.069 J	AC
	1,2,3,6,7,8-HxCDF	0.048 J	0.053 J	AC

	1,2,3,7,8,9-HxCDF	0.069 J	0.049 J	AC
	1,2,3,7,8-PeCDF	0.082 J	0.063 J	AC
	2,3,4,6,7,8-HxCDF	0.068 J	0.037 J	AC
	2,3,4,7,8-PeCDF	0.035 J	0.078 J	AC
	2,3,7,8-TCDF	0.019 J	1.2 U	AC
	Total HpCDF	0.37 J	0.35 J	AC
	Total HpCDD	0.72 J	0.64 J	AC
	Total HxCDF	0.27 J	0.21 J	AC

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
	Total HxCDD	0.045 J	6.1 U	AC
	OCDF	1.1 J	0.94 J	AC
	OCDD	1.9 J	2.1 J	AC
	Total PeCDF	0.12 J	0.14 J	AC
	Total TCDF	0.019 J	1.2 U	AC

Note:

AC Acceptable

The calculated RPD between parent and field duplicates were acceptable.

6.4 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.5 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.6 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 19. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times

7.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 50% for soil matrix is applied to the RPD between the parent sample and the field

duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrix.

Results for duplicate samples are summarized in the following table.

Table 20. Field Duplicate Sample Results

Sample ID/Duplicate ID	Analytes	Sample Result	Duplicate Result	RPD
MW-2022-7 (43-47) / DUP-3-050422	Antimony	21.1 U	0.50 J	AC
	Arsenic	4.0	3.1	AC

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 21. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrix.

Results for duplicate samples are summarized in the following table.

Table 22. Field Duplicate Sample Results

Sample ID/Duplicate ID	Analytes	Sample Result	Duplicate Result	RPD
MW-2022-7 (43-47) / DUP-3-050422	Cyanide, Total	1.2 U	1.1 U	AC
	Sulfide	24.5 U	22 U	AC

Note:

AC Acceptable

The result between parent and field duplicates were acceptable.

8.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.4 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Field Duplicate (RPD)		X		X	
Reporting limits (units)		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation reviews. The

percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 23. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.13%	21
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Groups (SDGs) 480-197622-1 and 480-197622-2 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

Sample Location	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	MET	MISC
MW-2022-7 (80-84)	480-197622-1	Soil	5/5/2022			X	X	X	X	X
MW-2022-7 (80)	480-197622-2	Soil	5/5/2022		X					

Notes:
VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
PCDD / PCDFs = Polychlorinated Dibenzodioxins / Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1. Performance was not acceptable for “requested analyses ad sample results” as the sample MW-2022-6 (28) (480-197562-4) was collected as per chain-of-custody (COC); however, the sample was not received by the laboratory. Hence, the analysis was cancelled.
2. The VOC analysis was marked on COC for sample MW-2022-7 (0-1) (480-197562-7) but the results were not included in the laboratory report.

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined

to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	1	0	0	0	0	0	1
SVOCs	1	0	0	0	0	0	1
PCBs	1	0	0	0	0	0	1
PEST	1	0	0	0	0	0	1
HERB	1	0	0	0	0	0	1
PCDD/PCDF	1	0	0	0	0	0	1
Metals	1	0	0	0	0	0	1
MISC	1	0	0	0	0	0	1

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criterion.

2.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.3 Data Validation Checklist

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X	X		
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 5. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

The LCS analysis exhibited acceptable recoveries with the exceptions noted in the table below.

Table 6. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample Location	Compounds	LCS Recovery
MW-2022-7 (80-84)	Famphur	< 10%
	Kepone	< 10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 7. Laboratory Control Sample Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.4 Data Validation Checklist

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Laboratory Control Sample (LCS) %R		X	X		

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

Notes:
%R Percent recovery
RPD Relative percent difference

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.3 Data Validation Checklist

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B / 8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Soil	7days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the holding time criterion.

5.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing

concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compound Endosulfan I was detected in method blank batch 624981. However, the associated sample result was non-detect. Hence, qualification was not required.

5.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.4 Data Validation Checklist

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Blanks					
A. Method blanks		X		X	
B. Equipment / Field blanks	X				X
Reporting limits (units)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 10. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 11. Summary of Blank Contamination Qualifications

Sample Location	Compounds	Sample Result	Qualification
MW-2022-7 (80-84)	1,2,3,4,6,7,8-HpCDD 1,2,3,4,6,7,8-HpCDF 1,2,3,4,7,8,9-HpCDF 1,2,3,4,7,8-HxCDF 1,2,3,6,7,8-HxCDD 1,2,3,6,7,8-HxCDF 1,2,3,7,8,9-HxCDD 1,2,3,7,8,9-HxCDF 1,2,3,7,8-PeCDF 2,3,4,6,7,8-HxCDF 2,3,4,7,8-PeCDF OCDD OCDF Total HpCDD Total HpCDF Total HxCDD Total HxCDF Total PeCDF	Detected sample results <RL and <BAL	“U” at the RL

Note:
RL – Reporting limit

6.3 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.4 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.5 Data Validation Checklist

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Blanks					
A. Method blanks		X	X		
B. Equipment / Field blanks	X				X
Compound identification and quantitation		X	X		
Reporting limits (units)		X		X	
System performance and overall assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 12. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criterion.

The analyses that exceeded the holding time are presented in the following table.

Sample Location	Holding Time	Criteria
MW-2022-7 (80-84)	Sample was extracted and analyzed on 29th day from collection	28 days from collection to analysis

Sample results associated with sample locations analyzed by analytical method SW-846 7471B were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

7.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All analytes associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the analytes listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) from the data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 13. Summary of Blank Contamination Qualifications

Sample Location	Analyte	Sample Result	Qualification
MW-2022-7 (80-84)	Selenium	Detected sample results <RL and <BAL	"U" at the RL

Note:

RL = Reporting limit

7.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.4 Data Validation Checklist

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X	X		
Blanks		X		X	
A. Method Blanks		X	X		
B. Equipment / Field Blanks		X		X	

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Reporting limits (units)		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 14. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

The analyses that exceeded the holding time are presented in the following table.

Sample Location	Method	Holding Time	Criteria
MW-2022-7 (80-84)	SW-846 9012B	Sample was extracted and analyzed on 40th day from collection	14 days from collection to analysis
	SM 4500 S2 F	Sample was analyzed on 36th day from collection	14 days from collection to analysis

Sample results associated with sample locations analyzed by analytical methods SW-846 9012B and SM4500 S2 -F were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

8.2 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.3 Data Validation Checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X	X		
Reporting limits (units)		X		X	

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 15. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.4%	2
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0

Parameter	Percent Usability	Rejected Data
MISC	0%	2

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Appendices

Appendix A Chain of Custody

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-197946-1 performed on behalf of the General Electric Company (GE) for soil sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Organophosphorous Compounds, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier I Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis					
					VOCs	SVOCs	PEST/PCBs/HERB/OPC	PCDD/PCDF	MET	MISC
B-2022-2 (0.0-1.0)	480-197946-1	Soil	05/12/22			X	X	X	X	X
B-2022-2 (0.5)	480-197946-2	Soil	05/12/22		X					
B-2022-2 (12.0-16.0)	480-197946-3	Soil	05/12/22			X	X	X	X	X
B-2022-2 (14.0)	480-197946-4	Soil	05/12/22		X					
B-2022-2 (26.0-30.0)	480-197946-5	Soil	05/12/22			X	X	X	X	X
B-2022-2 (29.0)	480-197946-6	Soil	05/12/22		X					
B-2022-2 (43.0-47.0)	480-197946-7	Soil	05/12/22			X	X	X	X	X
B-2022-2 (44.0)	480-197946-8	Soil	05/12/22		X					
B-2022-2 (58.0-62.0)	480-197946-9	Soil	05/12/22			X	X	X	X	X
B-2022-2 (59.0)	480-197946-10	Soil	05/12/22		X					
DUP-3-051222	480-197946-11	Soil	05/12/22	B-2022-2 (0.5) & B-2022-2 (0-0-1.0)	X	X	X	X	X	X

Notes:

VOCs = Volatile Organic Compounds
SVOCs = Semi-volatile Organic Compounds
PEST = Pesticides
PCBs = Polychlorinated Biphenyls
HERB = Herbicides
OPC- Organophosphorous Compounds
PCDD/PCDFs = Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans
MET = Metals
MISC = Miscellaneous analyses (cyanide, sulfide)

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013, and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017, and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020, and approved by EPA on July 23, 2020).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	5	1	0	0	0	0	6
SVOCs	5	1	0	0	0	0	6
PCBs	5	1	0	0	0	0	6
PEST	5	1	0	0	0	0	6
OPC	5	1	0	0	0	0	6
HERB	5	1	0	0	0	0	6
PCDD/PCDF	5	1	0	0	0	0	6
Metals	5	1	0	0	0	0	6
MISC	5	1	0	0	0	0	6

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criterion.

2.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices or 50% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water/three times the RL is applied for soil. Results for duplicate samples are summarized in the following table.

Table 5. Field Duplicate Sample Results

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
B-2022-2 (0.5) / DUP-3-051222	All target compounds	U	U	AC

Note:
AC Acceptable

The results between the parent sample and field duplicate were acceptable.

2.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.4 Data Validation Checklist

Table 6. Data validation checklist for VOCs

VOCs: SW-846 8260C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

3 Semi-volatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 7. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criterion.

3.2 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis performed on sample B-2022-2 (12.0-16.0) exhibiting recoveries outside of the control limits are presented in the following table.

Table 8. Samples with Matrix Spike / Matrix Spike Duplicate Recoveries Outside Control Limits

Sample ID	Compounds	MS Recovery	MSD Recovery
B-2022-2 (12.0-16.0)	Benzidine	<10%	<10%
	Kepone	<10%	<10%
	p-Phenylene diamine	< 10%	< 10%

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Table 9. Matrix Spike / Matrix Spike Duplicate Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Parent sample concentration > four times the MS/MSD spiking solution concentration.	Detect	No Action
	Non-detect	

3.3 Laboratory Control Sample Analysis

The laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Samples associated with LCS analysis exhibiting recoveries outside of the control limits presented in the following table.

Table 10. Samples with Laboratory Control Sample Recoveries Outside Control Limits

Sample ID	Batch	Compounds	LCS Recovery
B-2022-2 (0.0-1.0) B-2022-2 (12.0-16.0) B-2022-2 (26.0-30.0) B-2022-2 (43.0-47.0) B-2022-2 (58.0-62.0) DUP-3-051222	Prep Batch: 626297	Famphur	<10%
		Kepone	<10%

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Table 11. Laboratory Control Sample Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
< 10%	Non-detect	R
	Detect	J

3.4 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices or 50% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water/three times the RL is applied for soil. Results for duplicate samples are summarized in the following table.

Table 12. Field Duplicate Sample Results

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
B-2022-2 (0.0-1.0) / DUP-3-051222	Bis(2-ethylhexyl) phthalate	190 U	120 J	AC

Note:
AC Acceptable

The results between the parent sample and field duplicate were acceptable.

3.5 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.6 Data Validation Checklist

Table 13. Data validation checklist for SVOCs

SVOCs: SW-846 8270D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Laboratory Control Sample (LCS) %R		X	X		
Matrix Spike (MS)		X	X		
Matrix Spike Duplicate (MSD)		X	X		
Field/Lab Duplicate (RPD)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 14. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Soil	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices and 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrix.

Results for duplicate samples are summarized in the following table.

Table15. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compounds	Sample Result (mg/kg)	Duplicate Result (mg/kg)	RPD
B-2022-2 (0.0-1.0) / DUP-3-051222	All target compounds	U	U	AC

Note:

AC = Acceptable

The results between the parent sample and field duplicate were acceptable.

4.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4.4 Data Validation Checklist

Table 16. Data validation checklist for PCBs

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	

PCBs; SW-846 8082A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 17. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Water/Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the specified holding time criterion.

5.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices and 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Table18. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Method	Compounds	Sample Result (ug/Kg)	Duplicate Result (ug/Kg)	RPD
B-2022-2 (0.0-1.0) / DUP-3-051222	8081B /8151A/8141B	All target compounds	U	U	AC

Note:

AC = Acceptable

The results between the parent sample and field duplicate were acceptable

5.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5.4 Data Validation Checklist

Table 19. Data validation checklist for SW-846 8081B/8141B/8151A

SW-846 8081B/8141B/8151A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY (GC/ECD)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 20. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation
SW-846 8290A	Water/Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 21. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Sample Result	Qualification
B-2022-2 (0.0-1.0)	1,2,3,4,7,8,9-HpCDF (MB) 1,2,3,4,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDD (MB) 1,2,3,6,7,8-HxCDF (MB)	Detected sample results <RL and <BAL	“U” at the RL

6.3 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices and 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Table22. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compounds	Sample Result (ug/Kg)	Duplicate Result (ug/Kg)	RPD
B-2022-2 (0.0-1.0) / DUP-3-051222	1,2,3,4,6,7,8-HpCDD	5.1 J	4.3 J	AC
	1,2,3,4,6,7,8-HpCDF	0.92 J	0.95 J	AC
	1,2,3,4,7,8,9-HpCDF	0.10 J	5.4 U	AC
	1,2,3,4,7,8-HxCDD	0.10 J	0.060 J	AC
	1,2,3,4,7,8-HxCDF	0.12 J	0.17 J	AC
	1,2,3,6,7,8-HxCDD	0.22 J	0.059 J	AC
	1,2,3,6,7,8-HxCDF	0.081 J	5.4 U	AC
	1,2,3,7,8,9-HxCDD	0.36 J	0.12 J	AC
	1,2,3,7,8,9-HxCDF	0.099 J	5.4 U	AC
	1,2,3,7,8-PeCDD	0.078 J	5.4 U	AC
	1,2,3,7,8-PeCDF	0.087 J	0.083 J	AC
	2,3,4,6,7,8-HxCDF	0.11 J	0.18 J	AC
	2,3,4,7,8-PeCDF	0.082 J	5.4 U	AC
	2,3,7,8-TCDD	0.034 J	1.1 U	AC
	2,3,7,8-TCDF	0.043 J	1.1 U	AC
	OCDD	50	32	AC

Sample ID/Duplicate ID	Compounds	Sample Result (ug/Kg)	Duplicate Result (ug/Kg)	RPD
	OCDF	2.6 J	3.8 J	AC
	Total HpCDD	5.1 J	4.3 J	AC
	Total HpCDF	1.0 J	0.95 J	AC
	Total HxCDD	0.68 J	0.24 J	AC
	Total HxCDF	0.41 J	0.35 J	AC
	Total PeCDD	0.078 J	5.4 U	AC
	Total PeCDF	0.17 J	0.083 J	AC
	Total TCDD	0.034 J	1.1 U	AC
	Total TCDF	0.043 J	1.1 U	AC

Note:

AC = Acceptable

The results between the parent sample and field duplicate were acceptable

6.4 Compound Identification

PCDD/PCDF compounds are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.5 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6.6 Data Validation Checklist

Table 23. Data validation checklist for PCDD/PCDF

PCDD/PCDF: SW-846 8290A	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier I Validation					
Holding times/Preservation		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X	X		
Compound identification and quantitation		X	X		
Field/Lab Duplicate (RPD)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

7 Metals Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 24. Holding Time for Method SW-846 6010C/7471B

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Soil	180 days from collection to analysis	Cool to <6 °C.
SW-846 7471B	Soil	28 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

7.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices and 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Table 25. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Method	Compounds	Sample Result (ug/Kg)	Duplicate Result (ug/Kg)	RPD
B-2022-2 (0.0-1.0) / DUP-3-051222	6020	Antimony	1.5 J	2.5 J	AC
		Arsenic	3.1	3.6	AC
		Barium	13.5	19.4	35.9%
		Beryllium	0.16 J	0.21	AC
		Cadmium	0.11 J	0.063 J	AC
		Chromium	3.9	5.2	28.6%
		Cobalt	4.3	5.6	26.3%
		Copper	6.5	7.1	8.8%
		Lead	4.7	6.0	AC
		Nickel	7.7	9.5	AC
		Selenium	0.65 J	0.85 J	AC
		Vanadium	5.3	6.7	23.3%
		Zinc	22.8	31.4	31.7%
	7471B	Mercury	0.0094 J	0.0077 J	AC

Note:

AC = Acceptable

The results between the parent sample and field duplicate were acceptable

7.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7.4 Data Validation Checklist

Table 26. Data validation checklist for Metals

METALS; SW-846 6010C/7471B	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Inductively Coupled Plasma-Atomic Emission Spectrometry (ICP-AES) Atomic Absorption – Manual Cold Vapor (CV)					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

8 General Chemistry Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 27. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012B	Soil	14 days from collection to analysis	Cool to <6 °C.
Sulfide by SM 4500 S2 F	Soil	14 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding times.

8.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices and 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Table28. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Method	Compounds	Sample Result (ug/Kg)	Duplicate Result (ug/Kg)	RPD
B-2022-2 (0.0-1.0) / DUP-3-051222	9012B	Cyanide, Total	0.99 U	0.99 U	AC
	SM 4500 S2 F	Sulfide	20.4 U	20.4 U	AC

Note:

AC = Acceptable

The results between the parent sample and field duplicate were acceptable

8.3 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.4 Data Validation Checklist for General Chemistry

Table 29. Data validation checklist for General Chemistry

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	

General Chemistry: SW-846 9012B/SM 4500 S2 F	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Field/Lab Duplicate (RPD)		X		X	
System performance and Overall Assessment		X		X	

When the laboratory case narrative outlines a quality issue beyond Tier I, it will be added to the checklist above and the usability of the data will be addressed.

9 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 30. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	100%	0
SVOCs	98.1%	14
PCBs	100%	0
PEST	100%	0
OPC	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample

analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

GENERAL NOTES

1. PROPERTY LINES AS DEPICTED HEREON, EXISTING TOPOGRAPHY, SITE DETAIL, AND UTILITIES WERE TAKEN FROM THE "TOPOGRAPHIC SURVEY" PLAN DATED JANUARY 27, 1995 PREPARED BY FORESIGHT LAND SERVICES, PITTSFIELD, MA.
2. PROPERTY LINES AS DEPICTED HEREON WERE TAKEN FROM DEEDS ON FILE WITH THE BERKSHIRE MIDDLE DISTRICT REGISTRY OF DEED – BOOK 1486 PAGE 272.

SPECIAL NOTATIONS

Ⓐ THE TOWN OF LEE PARCEL DESCRIBED HEREIN IS SUBJECT TO THE PROVISIONS OF M.G.L. C.111, S. 150A AND THE REGULATIONS AT 310 CMR 19.000. SAID PREMISES SHALL NOT BE USED FOR ANY USE OTHER THAN AS A LANDFILL WITHOUT PRIOR WRITTEN APPROVAL OF THE DEPARTMENT OF ENVIRONMENTAL PROTECTION. CONTINUED OPERATION OF THE SITE AS A LANDFILL REQUIRES THE TRANSFER OF THE PERMIT IN ACCORDANCE WITH PART I, 310 CMR 19.044. THE PROCEDURE FOR DEPARTMENT APPROVAL FOR ANY USE OTHER THAN AS A LANDFILL IS SET FORTH AT PART II, 310 CMR 19.143. SUCH DEPARTMENT APPROVAL OF OTHER USE IS TRANSFERABLE OR ASSIGNABLE ONLY UPON WRITTEN APPROVAL OF THE DEPARTMENT.

Ⓑ A LANDFILL CLOSURE CERTIFICATION REPORT SUBMITTED TO DEP IN FEBRUARY 1997 CONTAINS CLOSURE DETAILS AS REQUIRED BY 310 CMR 19.141.

MW 94-2	949.69	951.69	71.40	69.40
MW 84-3	949.83	948.19	80.83	82.47
MW 94-3M	949.99	950.27	81.48	81.20
MW 94-7S	950.21	950.47	84.02	83.76
MW 94-7D	954.24	953.19	80.27	81.32
CW 88-1S	950.11	950.93	67.62	66.80
CW 88-1M	949.77	950.94	66.57	65.40
CW 88-1D	951.53	952.61	66.73	65.65

Notes:

(1) Depth to water is a relative distance measured from the PVC, i.e., PVC top = 0

(2) Groundwater elevations are not included for MW-94-7M due to inadequate recharge due to grout intrusion in the screened interval.

(3) The groundwater elevations listed above are referenced from Mean Sea Level.

Re: Addendum to Hydrogeological
Study at Sanitary Landfill

Gentlemen:

On behalf of the Town of Lee, we are submitting to you herewith, our report entitled "Addendum to Hydrogeological Study of the Sanitary Landfill, Town of Lee" dated February, 1989.

The study was conducted to supplement and support information gathered in the 1986 Hydrogeological Study in response to DEQE's review and comments of the original report. Our basic conclusion from this Addendum is that the landfill has had little impact on the quality of the groundwater beneath and downgradient of the sanitary landfill when compared with other unlined municipal landfills. These results support the conclusions of the original study. The groundwater is not considered hazardous as defined in 310 CMR 30.00. Typically, for long term protection of groundwater, the remedial action will be conventional closure of the landfill at the end of its useful life.

Please refer to the report for details of the study which include information on: site history, bedrock and surficial geology, groundwater monitoring, analytical results and conclusions.

Please review the following report at your convenience. If you have any questions regarding this report please contact us.

Very truly yours,

TIGHE & BOND, INC.

David M. Lenart, P.E.

3.3 Monitoring Wells

A Review of Report letter from the DEQE dated October 5, 1988 gave approval to the location of the cluster well proposed for this study. Subsequent to the approval from the DEQE regarding the location, one set of cluster wells was installed downgradient of the landfill to provide permanent groundwater sampling and water level measuring capabilities. The wells were located to intercept the potential contaminant plume during both high and low groundwater situations. It was determined in the original 1986 hydrogeological study that the low groundwater flow direction is in a southwesterly direction instead of a westerly direction. This 1988 cluster of wells was installed to acquire supplemental and supporting data for the six (6) monitoring wells installed during the original study.

The new monitoring wells were installed during October, 1988. The cluster well consisted of three (3) monitoring wells installed within close proximity to one another with screens set at different depths. The pertinent well data and reference elevations are summarized in Table 3.1.

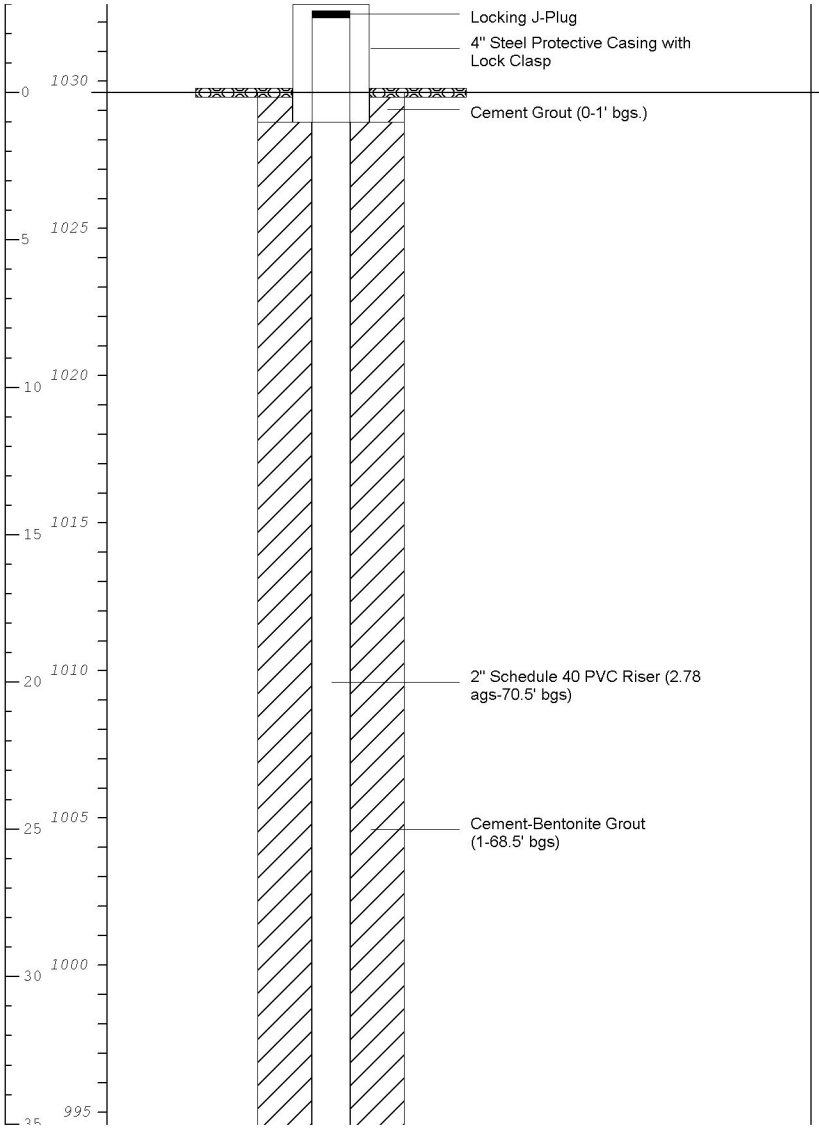
TABLE 3.1
Monitoring Well Elevation Data

Well I.D.	Ground Elevation	Well Bottom Elevation	Depth of Well, ft.	Screen Length, ft.
MW-84-1	1009.94	951.31	58.6	10
MW-84-2	1008.02	940.42	67.6	10
MW-84-3	1029.34	939.45	89.9	10
CW-1S	1015.69	940.38	75.3	20
CW-1M	1015.75	931.41	84.3	5
CW-1D	1015.50	926.79	88.7	5

Monitoring well installation was accomplished with hollow stem auger equipment. Soil samples were collected at the surface and at five (5) foot intervals with a split spoon sampler. Since cluster wells were located within close proximity to each other, only samples from the deep well were collected. Samples were retained for detailed classification and an organic vapor scan.

Soil samples were stored in glass jars and capped with an aluminum foil seal. The air space above the sample was analyzed for organic vapors using a photoionization detector (PID). Results from the vapor scan are attached in Appendix B. No samples showed readings higher than background levels.

Monitoring well completion was accomplished using 2" diameter, Schedule 40 PVC riser and (.01) inch slotted well screen with flush joint threads. Each well was backfilled with clean Ottowa sand around the screen with a 4-foot bentonite seal above the sand to prevent migration along the disturbed materials. All three wells were furnished with a locking protective casing cemented at the surface.



Boring logs for the cluster wells installed for this project and well details are included in Appendix C. The following is a summary of the stratigraphy encountered during drilling.

Well Cluster CW-1 was located west (downgradient) of the active landfill site between wells MW-84-2 and MW-84-3 which were installed in 1984. The deep well, CW-1D, encountered fine to medium sand and gravel with some fill from 0 to 7 feet below grade. From 7 feet to 30 feet below grade a reddish brown, silty sand with trace gravel and cobbles was encountered. From 30 feet to 75 feet below grade a dry to moist gray, very fine, silty sand was encountered. Prominent mottling of the sand was noted between 55 and 60 feet below grade with the water table evident at approximately 71 feet below grade. A strata change occurred between 73 and 85 feet below grade where samples graded from fine to coarse

General Electric Company

Data Validation Report

PDI Summary Report for Upland Disposal Facility Area

GE-Pittsfield/Housatonic River Site
Pittsfield, Massachusetts

Volatile Organic Compounds, Semivolatile Organic Compounds, Polychlorinated Biphenyls, Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDFs), Perfluoroalkyl Substances (PFAs), Metals, and Miscellaneous Analyses

SDGs # 480-199353-1

Analyses Performed By:
Eurofins
Amherst, New York, USA

Report #47702R
Review Level: Tier I/II
Project: 30131071.0003

Contents

1 Summary 1

Appendices

Appendix A Chain of Custody

Appendix B Annotated Sample Analysis Data Sheets

1 Summary

This document summarizes the data validation review of Sample Delivery Group (SDG) 480-199353-1 performed on behalf of the General Electric Company (GE) for groundwater sampling activities conducted as part of the Pre-Design Investigation for the Upland Disposal Facility associated with the Rest of River Remedial Action at the GE Company/Housatonic River Site in Pittsfield, Massachusetts. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain of custody (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1 for the following parameters as noted: Volatile Organic Compounds (VOCs), Semivolatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), Pesticides, Herbicides, Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans (PCDD/PCDF), Perfluoroalkyl Substances (PFAS), Metals, and Miscellaneous Analyses.

Table 1. Summary of Samples Subjected to Tier and Tier II Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis						
					VOCs	SVOCs	PEST/ PCBs/ HERB	PCDD/ PCDF	PFAS	MET	MISC
MW-2022-1D	480-199353-1	Water	6/23/2022			X	X	X	X	X	X
MW-2022-5	480-199353-2	Water	6/24/2022			X	X	X	X	X	X
MW-2022-1D	480-199379-1	Water	6/23/2022		X						
MW-2022-5	480-199379-2	Water	6/24/2022		X						
TRIP BLANK 062322	480-199379-3	Water	6/23/2022		X						
MW-2022-8	480-199379-4	Water	6/27/2022		X	X	X	X	X	X	X

Notes:
HERB = herbicides
MET = metals
MISC = miscellaneous analyses (cyanide, sulfide)
PEST = pesticides

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Notes:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods 8260C, 8270D, 8081B, 8141B, 8151A, 8082A, 8290A, 6010C, 7471B, 9012B, USEPA Modified method 537, and Standard Method 4500 S2 F. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, ARCADIS (Revision 5 submitted by GE on July 2, 2013 and approved by EPA on July 23, 2013);
- Addendum to the FSP/QAPP, General Electric Company, Pittsfield, Massachusetts, Arcadis (submitted by GE on August 23, 2017 and approved by EPA on August 28, 2017;
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines); and
- Revised Pre-Design Investigation Work Plan for Reach 5A Floodplain Residential properties (submitted by GE on July 9, 2020 and approved by EPA on July 23, 2020).
- USEPA Method 537 Modified, Eurofins Laboratories SOP BR-LC-009, Rev. 8.0 Per- and Poly-fluorinated Substances (PFAS) in Water, Soils, Sediments and Tissue (April 2022)
- Department of Defense (DoD) Quality Systems Manual (QSM) 5.3, USEPA Data Review and Validation Guideline for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537, (November 2018)

- DoD Final Data Validation Guidelines Module 3: PFAS, (May 2020)

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration I Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - U Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined

to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
VOCs	0	0	0	3	0	1	4
SVOCs	0	0	0	3	0	0	3
PCBs	0	0	0	3	0	0	3
PEST	0	0	0	3	0	0	3
HERB	0	0	0	3	0	0	3
PCDD/PCDF	0	0	0	3	0	0	3
PFAS	0	0	0	3	0	0	3
Metals	0	0	0	3	0	0	3
MISC	0	0	0	3	0	0	3

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Volatile Organic Compound Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 4. Holding Time for Method SW-846 8260C

Method	Matrix	Holding Time	Preservation
SW-846 8260C	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2 s.u.

Note:
s.u. = standard units

Note: The target compound 2-chloroethyl vinyl ether degrades in the presence of acid used to preserve the aqueous samples. Therefore, all sample results for 2-chloroethyl vinyl ether have been qualified as rejected.

All samples were analyzed within the specified holding time criterion.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were detected in the associated QA blanks; however, the associated sample results were greater than the BAL and/or were non-detect. No qualification of the sample results was required.

2.3 Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

2.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

2.4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

2.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (25%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits with the exceptions of the compounds presented in the following table.

Table 5. Summary of Compounds Outside Specified Calibration Control Limits

Sample Locations	Initial/Continuing	Compounds	Criteria
MW-2022-1D MW-2022-5 Trip Blank 062322 MW-2022-8	CCV %D	2-Chloro-1,3-butadiene	-27.1%%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Table 6. Initial and Continuing Calibration Evaluation Criteria and Qualifications

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF <0.05	Non-detect	R
		Detect	J
	RRF <0.01[1]	Non-detect	R
		Detect	J
	RRF >0.05 or RRF >0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 30% or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
	%RSD >90%	Non-detect	R
		Detect	J
Continuing Calibration	%D >25% (increase/decrease in sensitivity)	Non-detect	UJ

Initial/Continuing	Criteria	Sample Result	Qualification
		Detect	J
	%D >90% (increase/decrease in sensitivity)	Non-detect	R
		Detect	J

Note:

[1] RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

2.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries were within control limits.

2.6 Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

2.7 Matrix Spike/Matrix Spike Duplicate Analysis

Matrix Spike / Matrix Spike Duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

An MS/MSD analysis was not performed on a sample within this SDG.

2.8 Laboratory Control Sample/Laboratory Control Sample Duplicate Analysis

The Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits. LCSD was not performed.

2.9 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water. Results for duplicate samples are summarized in the following table.

A field duplicate analysis was not performed on a sample within this SDG.

2.10 Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

2.11 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.12 Data Validation Checklist

VOCs: SW-846 8260	Reported		Performance Acceptable		Not Required

3 Semivolatile Organic Compound Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 7. Holding Time for Method SW-846 8270D

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note:
s.u. = standard units

Sample MW-2022-8 was reanalyzed outside holding time due to continuing calibration failures and confirmed the results. The primary analysis will be reported. All other samples were analyzed within the specified holding time criterion.

3.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3.3 Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

3.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (25%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Table 8. Summary of Compounds Outside Specified Calibration Control Limits

Sample Locations	Initial/Continuing	Compounds	Criteria
MW-2022-8	CCV %D	p-Phenylene diamine	-45.7%
		1,3,5-Trinitrobenzene	+28.2%
		4-Nitroquinoline-1-oxide	-39.2%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Table 9. Initial and Continuing Calibration Evaluation Criteria and Qualifications

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF <0.05	Non-detect	R
		Detect	J
	RRF <0.01[1]	Non-detect	R
		Detect	J
	RRF >0.05 or RRF >0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 30% or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
	%RSD >90%	Non-detect	R
		Detect	J
Continuing Calibration	%D >25% (increase/decrease in sensitivity)	Non-detect	UJ
		Detect	J
	%D >90% (increase/decrease in sensitivity)	Non-detect	R
		Detect	J

Note:

[1] RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

3.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

Sample locations associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Table 10. Sample Locations with Surrogates Exhibiting Recoveries Outside Control Limits

Sample Locations	Surrogate	Recovery
MW-2022-1D	Phenol-d6	AC

Sample Locations	Surrogate	Recovery
	2-Fluorophenol	AC
	2,4,6-Tribromophenol	AC
	Nitrobenzene-d5	AC
	2-Fluorobiphenyl	AC
	Terphenyl-d14	< LL but > 10%

Notes:
LL Lower control limit
AC Acceptable

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results are qualified as documented in the table below.

Table 11. Surrogate Recovery Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

3.6 Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

3.7 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

An MS/MSD analysis was not performed on a sample within this SDG.

3.8 Laboratory Control Sample/Laboratory Control Sample Duplicate Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Sample locations associated with LCS/LCSD analysis exhibiting recoveries outside of the control limits presented in the following table.

Table 5. Samples with Laboratory Control Sample/Laboratory Control Sample Duplicate Recoveries Outside Control Limits

Sample Locations	Compounds	LCS Recovery	LCSD Recovery
MW-2022-1D MW-2022-5	Famphur	<LL but >10%	<10%
	Kepone	<LL but >10%	<LL but >10%
	p-Phenylene diamine	<10%	<10%
	2,4-Dinitrotoluene	AC	>UL
	4-Nitroaniline	AC	>UL
	Dinoseb	AC	>UL
MW-2022-8	Famphur	<LL but >10%	AC
	p-Phenylene diamine	<10%	<10%
	1,3-Dichlorobenzene	AC	<LL but >10%
	1,4-Dichlorobenzene	AC	<LL but >10%
	1-Naphthylamine	AC	<LL but >10%
	2-Methylnaphthalene	AC	<LL but >10%
	2-Naphthylamine	AC	<LL but >10%
	3,3'-Dimethylbenzidine	AC	<LL but >10%
	4-Aminobiphenyl	AC	<LL but >10%

The criteria used to evaluate the LCS/LCSD recoveries are presented in the following table. In the case of an LCS/LCSD deviation, the sample results are qualified as documented in the table below.

Table 6. Laboratory Control Sample/Laboratory Control Sample Duplicate Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

Sample locations associated with LCS/LCSD recoveries exhibiting an RPD greater than of the control limit presented in the following table.

Table 14. Samples with Relative Percent Difference Greater than Control Limits

Sample Locations	Compounds
MW-2022-1D MW-2022-5	1-Naphthylamine
	2-Naphthylamine
	2-Picoline
	3,3'-Dimethylbenzidine
	Benzidine
	Famphur
	Methapyrilene
MW-2022-8	1-Naphthylamine
	2-Naphthylamine
	2-Toluidine
	3,3'-Dichlorobenzidine
	3,3'-Dimethylbenzidine
	4-Aminobiphenyl

Sample Locations	Compounds
	4-Chloroaniline
	Benzidine
	Famphur

The criteria used to evaluate the RPD between the LCS/LCSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Table 7. Relative Percent Difference Evaluation Criteria and Qualifications

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

3.9 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water.

A field duplicate analysis was not performed on a sample within this SDG.

3.10 Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

3.11 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

4 Polychlorinated Biphenyl Analyses

4.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 16. Holding Time for Method SW-846 8082A

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

4.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

4.3 System Performance

System performance and column resolution were acceptable.

4.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

All Aroclors associated with calibrations were within the specified control limits for initial calibration and continuing calibration, as described below.

4.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. Multiple-point calibrations were performed for Aroclor 1016 and 1260 only. Single-point calibrations were performed for the remaining Aroclors.

4.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (15%).

4.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. PCB analysis requires that the two PCB surrogate compounds exhibit recoveries within the laboratory-established acceptance limits.

Samples associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Table17. Samples Associated with Surrogates Exhibiting Recoveries Outside of the Control Limits

Sample ID	Surrogates	Recovery
MW-2022-1D	Tetrachloro-m-xylene (Signal# 1)	<LL but >10%
	Tetrachloro-m-xylene (Signal# 2)	AC
	Decachlorobiphenyl (Signal# 1)	AC
	Decachlorobiphenyl (Signal# 2)	AC

Notes:
AC = Acceptable
UL = Upper control limit

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results are qualified as documented in the table below.

Table18. Evaluation Criteria for Surrogate Recoveries

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Surrogates diluted below the calibration curve due to the high concentration of a target compound.	Non-detect	UJ/J[1]
	Detect	

Note:
1. A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

4.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

An MS/MSD analysis was not performed on a sample within this SDG.

4.7 Laboratory Control Sample / Laboratory Control Sample Duplicate Analysis

The laboratory control sample / laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the accuracy of the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery and RPD within the laboratory-established acceptance limits.

All compounds associated with the LCS/LCSD analysis exhibited recoveries and RPDs within the control limits.

4.8 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrix.

A field duplicate analysis was not performed on a sample within this SDG.

4.9 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (RPD) of detected sample results must be less than 25%.

No Aroclors were detected within the samples.

4.10 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

5 Pesticide/Herbicide Analyses

5.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table20. Holding Time for Method SW-846 8081B/8141B/8151A

Method	Matrix	Holding Time	Preservation
SW-846 8081B/8151A	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
SW-846 8141B	Water/Soil	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

Note: The holding time for method SW-846 8141B is stated in the QAPP as 14 days; however, the method technical holding time is 7 days to extraction. The technical holding time of 7 days will be applied for this data review.

All samples were analyzed within the specified holding time criteria.

5.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compound Endrin aldehyde was detected in preparation blank batch 632086; however, the associated sample results were non-detect. Therefore, qualification was not required. .

5.3 System Performance

System performance and column resolution were acceptable.

5.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

All Aroclors associated with calibrations were within the specified control limits for initial calibration and continuing calibration, as described below.

5.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

5.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (15%).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Table 218. Summary of Compounds Outside Specified Calibration Control Limits

Sample Locations	Initial/Continuing	Compounds	Criteria
MW-2022-1D MW-2022-5 MW-2022-8	CCV %D (Column 1)	Heptachlor epoxide	+27.1%
		4,4'-DDE	+17.1%
		delta-BHC	+16.5%
		Endrin	+16.8%

Sample Locations	Initial/Continuing	Compounds	Criteria
		4,4'-DDD	+27.6%
		Endosulfan II	+16.0%
		Endrin aldehyde	+22.0%
		Endrin ketone	+19.4%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Table 22. Initial and Continuing Calibration Evaluation Criteria and Qualifications

Initial/Continuing	Criteria	Sample Result	Qualification
Initial Calibration	%RSD > 20%or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D >15% (increase/decrease in sensitivity)	Non-detect	UJ
		Detect	J

5.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Pesticides analysis requires that the two Pesticde surrogate compounds exhibit recoveries within the laboratory-established acceptance limits.

Samples associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Table 23. Samples Associated with Surrogates Exhibiting Recoveries Outside of the Control Limits

Sample ID	Surrogates	Recovery
MW-2022-8 (Method 8081)	Tetrachloro-m-xylene (Signal# 1)	> UL
	Tetrachloro-m-xylene (Signal# 2)	AC
	Decachlorobiphenyl (Signal# 1)	AC
	Decachlorobiphenyl (Signal# 2)	AC

Notes:
AC = Acceptable
UL = Upper control limit

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results are qualified as documented in the table below.

Table 24. Evaluation Criteria for Surrogate Recoveries

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Surrogates diluted below the calibration curve due to the high concentration of a target compound.	Non-detect	UJ/J[1]
	Detect	

Note:
1. A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

5.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

An MS/MSD analysis was not performed on a sample within this SDG.

5.7 Laboratory Control Sample / Laboratory Control Sample Duplicate Analysis

The laboratory control sample / laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the accuracy of the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery and RPD within the laboratory-established acceptance limits.

Sample locations associated with LCS/LCSD analysis exhibiting recoveries outside of the control limits presented in the following table.

Table25. Samples with Laboratory Control Sample/Laboratory Control Sample Duplicate Recoveries Outside Control Limits

Method	Sample Locations	Compounds	LCS Recovery	LCSD Recovery
SW846 8081B	MW-2022-1D MW-2022-5 MW-2022-8	4,4'-DDD	>UL	AC
		Endrin ketone	>UL	AC
		Heptachlor epoxide	>UL	AC

The criteria used to evaluate the LCS/LCSD recoveries are presented in the following table. In the case of an LCS/LCSD deviation, the sample results are qualified as documented in the table below.

Table 26. Laboratory Control Sample/Laboratory Control Sample Duplicate Recovery Criteria and Qualifications

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

5.8 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrix.

A field duplicate analysis was not performed on a sample within this SDG.

5.9 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (RPD) of detected sample results must be less than 25%.

No pesticide/herbicide compounds were detected in the samples.

5.10 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

6 Polychlorinated Dibenzodioxins And Polychlorinated Dibenzofurans Analysis

6.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 28. Holding Time for Method SW-846 8290A

Method	Matrix	Holding Time	Preservation

SW-846 8290A	Water/Soil	30 days from collection to extraction (one year if kept frozen) and 45 days from extraction to analysis	Cool to <6 °C.

Note:
s.u. = standard units

All samples were prepared and analyzed within the specified holding time criterion.

6.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (ten times for OCDD/F & total homologues) is calculated for QA blanks containing concentrations greater than the estimated detection limit (EDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the EDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B). The equipment blank is not subject to method blank contamination evaluation, and the “B” qualifiers were maintained. No other qualification of the sample results was required. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 29. Summary of Blank Contamination Qualifications

Sample Locations	Compounds	Sample Result	Qualification
MW-2022-1D	1,2,3,4,6,7,8-HpCDD 1,2,3,4,6,7,8-HpCDF 1,2,3,4,7,8,9-HpCDF 1,2,3,4,7,8-HxCDD 1,2,3,4,7,8-HxCDF 1,2,3,6,7,8-HxCDD 1,2,3,6,7,8-HxCDF 1,2,3,7,8,9-HxCDD 1,2,3,7,8,9-HxCDF 1,2,3,7,8-PeCDF	Detected sample results <RL and <BAL	““U” at the RL

RL = reporting limit
MB = method blank

6.3 Mass Spectrometer Tuning

Mass spectrometer performance was acceptable.

System performance and column resolution were acceptable.

6.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

6.4.1 Initial Calibration

A maximum relative standard deviation (RSD) of 15% is allowed for all non-labeled compounds (target) and 30% is allowed for all labeled compounds (internal standards and recovery standards).

6.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibited percent difference (%D) less than the control limit (20%).

All compounds associated with the calibrations were within the specified control limits.

6.5 Labeled Standard Performance

Labeled standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the labeled standards exhibit recoveries within the control limits of 40% to 135%.

All labeled standard responses were within control limits.

6.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

AN MS/MSD analysis was not performed on a sample within this SDG.

6.7 Ongoing Precision Result /Laboratory Control Sample Analysis

The Ongoing Precision Result/Laboratory Control Sample (OPR/LCS) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the OPR analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits.

6.8 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrix.

A field duplicate analysis was not performed on a sample within this SDG.

6.9 Compound Identification

PCDD/PCDF compounds are identified by using the compound’s ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the

compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference.

Sample results qualified by the laboratory as "I" (Value is EMPC (estimated maximum possible concentration)) have been qualified as estimated, tentatively identified. The reported qualifier will be JNX.

6.10 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

7 Perfluoroalkyl Substances Analyses

7.1 Holding Times

The specified holding times for the following methods are presented in the table below.

Table 30. Holding Time for Method 537

Method	Matrix	Holding Time	Preservation
USEPA Method 537 (Modified)	Water	28 days from collection to extraction and 28 days from extraction to analysis	Cool to <6 °C

Note:
s.u. = standard units

The holding time has been changed from the original holding time documented in EPA 537 of 14 days for extraction to 28 days. This was documented in EPA Technical Brief EPA/600/F-17/022h Updated January 2020. Utilizing the new guidance of 28 days all samples were analyzed within the specified holding time criteria.

All samples were analyzed within the specified holding time criterion.

7.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

7.3 Mass Calibration

Mass calibration and system performance were acceptable.

7.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

7.4.1 Initial Calibration

The percent relative standard deviation (%RSD) of the response factors (RF) must be less than 20%, or for linear calibration, $R^2 \geq 0.99$. Analytes must be within 70-130% of their true value for each calibration standard.

7.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits.

7.5 Isotopically Labelled Standards

7.5.1 Extracted Internal Standard

Labeled standards must be added to all field samples and QC samples prior to extraction. EIS recoveries must be within 50% to 150% of ICAL midpoint standard area or area measured in the initial CCV on days when ICAL not performed.

All EIS recoveries were within the specified control limits.

7.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD less than 30%. The MS/MSD recovery control limits do not apply when the concentration detected in the parent sample exceeds the MS/MSD spike level by a factor of four or greater.

An MS/MSD analysis was not performed on a sample within this SDG.

7.7 Laboratory Control Sample Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS/LCSD analysis exhibited recoveries within the control limits.

7.8 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water.

A field duplicate analysis was not performed on a sample within this SDG.

7.9 Compound Identification

PFC analytes are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

All identified compounds met the specified criteria.

7.10 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8 Metals Analyses

8.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 31. Holding Time for Method SW-846 6010C/7470A

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
SW-846 7470A	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.

All samples were analyzed within the specified holding times.

8.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

8.3 Calibration

Satisfactory instrument calibration is established to provide that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument's continuing performance is satisfactory.

8.3.1 Initial Calibration and Continuing Calibration

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 for all non-Inductively Coupled Plasma (ICP) analytes and all initial calibration verification standard recoveries were within control limits.

All initial and continuing calibration verification standard recoveries were within the control limit.

8.3.2 Lower Limit of Quantitation Check Standard

The lower limit of quantitation check (LLQC) check standard serves to verify the linearity of calibration of the analysis at the reporting limit. The LLQC recoveries must be within 70 to 130%, and 50 to 150% for antimony (Sb), lead (Pb), and thallium (Tl). The LLQC standard is not required for the analysis of aluminum (Al), barium (Ba), calcium (Ca), iron (Fe), magnesium (Mg), sodium (Na), and potassium (K). The criteria used to evaluate the LLQC standard analysis are presented below in the LLQC standards evaluation table (if applicable).

All LLQC standard recoveries were within control limits.

8.3.3 Inductively Coupled Plasma Interference Control Sample

The Interference Control Sample (ICS) verifies the laboratories interelement and background correction factors.

All ICS exhibited recoveries within the control limits.

8.4 Matrix Spike/Laboratory Duplicate Analysis

MS and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

8.4.1 Matrix Spike Analysis

All metal analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125% for water matrices and laboratory control limits for soils. The MS recovery control limits do not apply for MS performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory flag will be removed.

The MS/MSD analysis performed on sample location MW-2022-5 exhibited recoveries within the control limits.

8.4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the RL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of one time the RL is applied for water matrices and two times the RL for soil matrices

MS/MSD analysis was performed in replacement of the laboratory duplicate analysis. The MS/MSD recoveries exhibited acceptable RPD.

8.5 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrix.

Field duplicate analysis was not performed on a sample location within this SDG.

8.6 Laboratory Control Sample Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

The LCS analysis exhibited recoveries within the control limits.

8.7 Serial Dilution

The serial dilution analysis is used to assess if a significant physical or chemical interference exists due to sample matrix. Analytes exhibiting concentrations greater than 50 times the MDL in the undiluted sample are evaluated to determine if matrix interference exists. These analytes are required to have less than a 10% difference (%D) between sample results from the undiluted (parent) sample and results associated with the same sample analyzed with a five-fold dilution.

The serial dilution performed on sample location MW-2022-5 exhibited %D within the control limit.

8.8 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

8.9 Data Validation Checklist

9 General Chemistry Analyses

9.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 32. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
Sulfide by SM 4500 S2 F	Water	7 days from collection to analysis	Zinc acetate; preserved to a pH of greater than 9

All samples were analyzed within the specified holding times.

9.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

9.3 Calibration

Satisfactory instrument calibration is established to provide that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument's continuing performance is satisfactory.

9.3.1 Initial Calibration and Continuing Calibration

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration must be greater than 0.995 analytes and all initial and continuing calibration verification standard recoveries must be within the control limits of 85%-115%.

All initial and continuing calibration verification standard recoveries were within the control limit.

9.4 Matrix Spike/Matrix Spike Duplicate /Laboratory Duplicate Analysis

MS/MSD and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

9.4.1 Matrix Spike/Matrix Spike Duplicate Analysis

All analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125% for water matrices and laboratory control limits for soils. The MS/MSD recovery control limits do not apply for MSMSD performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MSMSD concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory flag will be removed.

The MS analysis performed on sample location MW-2022-5 exhibited recoveries within the control limits.

9.4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the RL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of one time the RL is applied for water matrices and two times the RL for soil matrices.

The laboratory duplicate analysis exhibited RPD within control limits.

9.5 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices and 50% for soil matrix is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

A field duplicate analysis was not performed on a sample within this SDG.

9.6 Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

The LCS analysis exhibited recoveries within the control limits.

9.7 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

10 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 33. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
VOCs	98.2%	4
SVOCs	99.0%	5
PCBs	100%	0
PEST	100%	0
HERB	100%	0
PCDD/PCDF	100%	0
PFAS	100%	0
Metals	100%	0
MISC	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality.

These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Preservation Codes:

A - HCL
B - NaOH
C - Zn Acetate
D - Nitric Acid
E - NaHSO4
F - MeOH
G - Amchlor
H - Ascorbic Acid
I - Ice
J - DI Water
K - EDTA
L - EDA
M - Hexane
N - None
O - AsNaO2
P - Na2O4S
Q - Na2SO3
R - Na2S2O3
S - H2SO4
T - TSP Dodecahydrate
U - Acetone
V - MCAA
W - pH 4-5
Y - Trizma
Z - other (specify)

Other:

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	8141B/3510C Appendix IX Pesticides	Total Number of containers	Special Instructions/Note:
			Preservation Code:						
MW-2022-8 (480-199379-4)	6/27/22	15 05 Eastern		Water			X	2	

Note. Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC

Possible Hazard Identification: Unconfirmed	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month): ☐ Return To Client ☐ Disposal By Lab ☐ Archive For ____ Months
Deliverable Requested I, II, III, IV, Other (specify) Primary Deliverable Rank 2	Special Instructions/QC Requirements

Client: ARCADIS U.S. Inc
Project/Site: GE Woods Pond Parcel

Job ID: 480-199353-1
SDG: 480-199353-1

Client Sample ID: MW-2022-8
Date Collected: 06/27/22 15:05
Date Received: 06/29/22 08:00

Lab Sample ID: 480-199379-4
Matrix: Water

Method: 8270D - Semivolatile Organic Compounds (GC/MS) (Continued)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
Hexachlorocyclopentadiene	ND		5.0	0.59	ug/L		06/30/22 08:47	07/01/22 19:42	1
