Re: GE-Pittsfield/Housatonic River Site
Rest of River (GECD850)
Baseline Monitoring Program: Data Summary Report for 2024

Dear Mr. Fontaine:

In March 2025, GE requested an extension of time to submit the 2024 Data Summary Report (DSR) on the Baseline Monitoring Program to 30 days after receipt of all validated 2024 PCB analytical data, including PCB congener data. That request was approved by EPA on April 1, 2025, both for this report and all future annual baseline monitoring data summary reports. All PCB analytical data from the 2024 samples have been received and validated, with the last of those data validated in early October 2025. The enclosed Baseline Monitoring Program DSR for 2024 presents a summary of the 2024 baseline sampling activities and results.

Please let me know if you have any questions about the enclosed report.

Very truly yours,

Kevin G. Mooney
Senior Project Manager

1 Introduction

1.1 Background

On December 16, 2020, pursuant to the Consent Decree for the GE-Pittsfield/Housatonic River Site (EPA and GE 2000), the U.S. Environmental Protection Agency (EPA) issued to the General Electric Company (GE) a Revised Final Corrective Action Permit under the Resource Conservation and Recovery Act (Revised Final Permit; EPA 2020), specifying a Remedial Action to address polychlorinated biphenyls (PCBs) in the Rest of River (ROR) portion of that site. The ROR extends from the Confluence of the East and West Branches of the Housatonic River in Pittsfield downstream through western Massachusetts and Connecticut.

The Revised Final Permit requires GE to conduct a Baseline Monitoring Program, which must include the collection of "PCB data in surface water, sediment, and biota (and other data) . . . to serve as a baseline for the evaluation of the potential impacts of the Corrective Measures [i.e., remediation activities] and project operations as well as to inform model parameterization in the model re-evaluation plan" (Section II.B.4.b.(1)(a)). Further, Section II.B.4.b.(2) of the Revised Final Permit states, "For areas where MNR [monitored natural recovery] is the Performance Standard, monitoring shall begin with baseline monitoring and shall continue throughout the Remedial Action and O&M [operation and maintenance]." To address these requirements, GE was required to submit a Baseline Monitoring Plan (BMP) to provide for the collection of baseline (i.e., pre-remediation) data on PCBs in surface water, sediments, and biota in the ROR area.

In accordance with similar requirements under a prior version of the Revised Final Permit, GE previously submitted an *Interim Baseline Monitoring Work Plan* on January 10, 2022 (Anchor QEA 2022), proposing surface water sampling at specified locations in the ROR. Following that sampling in 2022, GE submitted an *Interim Baseline Surface Water Monitoring Report* on March 6, 2023 (Anchor QEA and Arcadis 2023) summarizing the data collected, and that report was conditionally approved by EPA on April 4, 2023.

In the meantime, in accordance with directions from EPA under the Revised Final Permit, GE submitted an overall *Second Revised Baseline Monitoring Plan* (Second Revised BMP) on January 30, 2023 (Anchor QEA 2023), and that plan was conditionally approved by EPA on February 16, 2023.

Section 5 of Second Revised BMP states that the results of baseline monitoring conducted during each year of such monitoring will be presented in an annual Baseline Data Summary Report (BDSR). It provides that each BDSR is to present a summary of the work performed during the previous year and is to be submitted by March 31 of the following year. Baseline monitoring was initiated in 2023 and included surface water and fish collection. Following receipt and validation of the laboratory

analytical data for 2023, GE submitted the 2023 BDSR on January 29, 2025 (Anchor QEA et al. 2025), and that report was conditionally approved by EPA on May 29, 2025.

Baseline monitoring activities continued in 2024 and included collection and analysis of surface water, fish, surface sediment, waterfowl, and benthic invertebrate samples. Due to a delay in receipt of all laboratory analytical data for 2024, GE requested that the submittal date for the 2024 BDSR be revised to 30 days after receipt and validation of all 2024 PCB analytical data, including the PCB congener data from the 2024 fish and waterfowl samples; and that request was approved by EPA on April 1, 2025. Those data have now been received and validated, with the last of the PCB congener data from the 2024 fish samples received in September 2025 and validated in October 2025. This BDSR for 2024 provides a summary of the 2024 baseline sampling activities and results.

1.2 Site Description

The ROR area consists of the portion of the Housatonic River and its backwaters and floodplain (excluding portions of certain residential properties) downstream of the Confluence (located approximately two miles downstream from the GE facility in Pittsfield). The ROR area is shown on Figure 1-1 and identified according to river reach designations established by EPA. Subreaches within Reaches 5 through 8 are shown on Figure 1-2.

2 Summary of 2024 Baseline Monitoring Activities

Pursuant to the schedule provided in Section 5 of the Second Revised BMP, the second year of baseline monitoring (i.e., 2024) included collection and analysis of surface water, fish, surface sediment, waterfowl, and benthic invertebrate samples. A summary of those activities and their results is provided in this section.

2.1 Surface Water Sampling and Analysis

Surface water sampling activities, which commenced in 2023, continued through 2024. Consistent with the Second Revised BMP, as supplemented by the *Interim Baseline Surface Water Monitoring Report*, surface water samples were collected monthly from January through December 2024 for a total of 12 sampling events. Sampling was generally performed in accordance with the Second Revised BMP and *Interim Baseline Surface Water Monitoring Report* (as modified by EPA's April 4, 2023 conditional approval letter for the latter report). The locations sampled in 2024 were the same as those sampled during 2023.[1]

In addition, GE previously proposed, and EPA approved, the use of automated surface water samplers at Woods Pond Dam and Rising Pond Dam for the baseline monitoring program. In EPA's April 4, 2023 conditional approval letter for GE's *Interim Baseline Surface Water Monitoring Report*, EPA noted that it had a practical concern regarding the use of automated samplers because of the potential for clogging of the autosampler system due to high amounts of suspended solids/algae during warmer months. Therefore, EPA directed GE to provide a proposal for coincident manual and automated grab sampling at the dam wing walls for a period of time to demonstrate the comparability of those two methods. To address this concern, in a letter to EPA dated September 6, 2023, GE proposed to perform coincident sampling at each dam (i.e., composite grab samples collected at each wing wall manually and using the automated sampler) on a monthly basis for a period of six months during the warmer months of the year (June through September). That proposal was conditionally approved by EPA on September 28, 2023.

[1] As described in the BDSR for the 2023 sampling, several modifications/adjustments had been made in 2023 to specific sampling locations and sample collection methods described in the Second Revised BMP prior to the start of the program. These modifications were reviewed with EPA prior to initiation of the program and documented in an email to EPA dated April 20, 2023. Most of these modifications were minor and were made to address health and safety concerns and/or access limitations associated with the originally proposed sampling locations. The most substantive changes included the following: (1) moving the sampling location at Bulls Bridge Dam upstream to the Route 341 Bridge in Kent, Connecticut; (2) moving the Bleachery Dam/Boardman Road sampling location downstream to the Route 202 Bridge in New Milford, Connecticut; and (3) moving the Lake Zoar/Stevenson Dam and Lake Housatonic Dam/Derby Dam sampling locations in Connecticut to locations along the north and south shorelines just upstream of the dams. These modifications were approved by EPA in an email dated April 24, 2023.

Construction of the automated samplers could not be completed until July 2024; therefore, the coincident sampling was initiated in August 2024. Specifically, coincident manual and automated grab sampling was performed during the August, September, and October 2024 sampling events.[2]

Surface water sampling and analysis activities conducted during 2024 are summarized further in the remainder of this section.

2.1.1 Sample Collection

Arcadis U.S., Inc. (Arcadis), on behalf of GE, performed the 2024 surface water sampling during 12 events at 14 locations, including one location in the East Branch (Pomeroy Avenue Bridge) and 13 locations in the ROR—namely, near the Pittsfield Wastewater Treatment Plant (WWTP) and at New Lenox Road Bridge, Woods Pond Dam (wing walls), Old Pleasant Street Bridge (immediately upstream of the Route 102 bridge in Lee, Massachusetts), Rising Pond Dam (wing walls), Rannapo Road Bridge,[3] Falls Village Dam, Lime Rock Road/Route 7 Bridge located in Canaan, Connecticut (Canaan Town Line Bridge), Route 341 Bridge, Route 202 Bridge, Shepaug Dam, Stevenson Dam, and Lake Housatonic Dam (Derby Dam). Sample locations are shown on Figures 2-1a through 2-1n.

As in 2023, sampling methods at Pomeroy Avenue Bridge, near the Pittsfield WWTP, and at New Lenox Road Bridge, Old Pleasant Street Bridge, Rannapo Road Bridge, Canaan Town Line Bridge, Route 341 Bridge, Route 202 Bridge, and Shepaug Dam involved the collection of composite grab samples at each location, representative of three stations laterally across the river (25%, 50%, and 75% of the total river width at each location) and 50% of the total river depth at each station. Shepaug Dam locations were shifted slightly to avoid the spillway. Sampling methods at Woods Pond Dam and Rising Pond Dam involved the collection of composite grab samples at each location, representative of two stations laterally (three feet from the eastern edge and three feet from the western edge of the river/wing wall) and 50% of the total river depth at each station. Sampling methods at Falls Village Dam, Stevenson Dam, and Derby Dam involved the collection of composite grab samples at each location, representative of two stations laterally (near the shoreline on both sides of the river, just upstream of the respective dams) and 50% of the total river depth at each station. Field parameters (water temperature, pH, conductivity, turbidity, and dissolved oxygen) were measured at each location.

[2] The coincident sampling was extended beyond September into October to obtain additional data to better understand observed differences in TSS concentrations between the manual and automated grab samples collected at both locations during the August and September sampling events.

[3] Rannapo Road Bridge (listed as a possible alternate location to the Route 7A Bridge in the Second Revised BMP) replaced the Route 7A Bridge location starting in May 2023 due to the existence of more favorable river conditions for sampling at that location.

As described above, additional surface water grab samples were collected using the automated stations at Woods Pond Dam and Rising Pond Dam by Anchor QEA during the August, September, and October 2024 sampling events. These samples were collected coincidently with the manual grab samples collected by Arcadis at these locations during these events. As with the samples collected manually, samples collected using the automated samplers were mid-depth grab samples collected from both the east and west wing walls that were then composited on an equal-volume basis into a single sample for analysis from each dam location.

All samples were submitted to Pace Analytical Services, Inc. (Pace), in Minneapolis, Minnesota, for high-resolution PCB congener analysis using EPA Method 1668C, with congener-specific reporting limits ranging from 0.017 to 1.86 nanograms per liter, and to the Pace laboratory in Melville, New York, for total suspended solids (TSS) analysis using EPA Method SM 2540D. Table 2-1 summarizes the sample locations and analyses performed for each sample location.

Table 2-1
Summary of 2024 Surface Water Sampling and Analysis

Location	Sample Collection Method	Number of Samples Collected and Analyzed	
		PCB Congeners (Method 1668C)	TSS (SM 2540D)
Pomeroy Avenue	Grab Sampler	12	12
Near Pittsfield WWTP	Grab Sampler	12	12
New Lenox Road	Grab Sampler	12	12
Woods Pond Dam (Wing Walls)	Grab Sampler	12	12
	Automated Sampler	3	3
Old Pleasant Street Bridge	Grab Sampler	12	12
Rising Pond Dam (Wing Walls)	Grab Sampler	12	12
	Automated Sampler	3	3
Rannapo Road Bridge	Kemmerer	12	12
Falls Village Dam	Grab Sampler	12	12
Canaan Town Line Bridge	Kemmerer	12	12
Route 341 Bridge	Kemmerer	12	12
Route 202 Bridge	Grab Sampler	12	12
Shepaug Dam	Kemmerer	12	12
Stevenson Dam	Grab Sampler	12	12
Derby Dam	Grab Sampler	12	12
Total		**174**	**174**

Surface water samples were split with EPA at one location during each sampling event. EPA submitted those split samples to Eurofins in West Sacramento, California, for high-resolution PCB congener analysis by EPA Method 1668A.

2.1.2 Data Validation

Following receipt of the analytical results, the PCB and TSS data collected by GE underwent data review and validation in accordance with the pertinent procedures specified in GE's revised *Field Sampling Plan/Quality Assurance Project Plan* (Revised FSP/QAPP; Arcadis 2023). This included validation of all such data to a Tier I Plus level. The data validation reports are provided in Appendix A. As summarized in Table A-1 in Appendix A, 100% of both the PCB data and the TSS data are considered usable.

2.1.3 Results

The surface water analytical data collected during 2024 are summarized in Table 2-2 and in Tables B-1 and B-2 in Appendix B. Table 2-2 presents the validated total PCB congener and TSS analytical results, along with field parameter information, from each sampled location. Table B-1 provides individual PCB congener results. Table B-2 provides the individual PCB congener results from split samples collected by EPA in 2024 (and the corresponding GE sample results). Surface water total PCB congener concentrations are plotted by river mile on Figure 2-2.

2.2 Fish Sampling and Analysis

The design of the baseline sampling program for fish was partly based upon previous sampling of fish in the ROR as described in the Second Revised BMP, as well as the scope of future monitoring activities anticipated to occur during and after active remediation. Fish were collected at locations within each targeted river reach based on habitat availability. Because the Biota Performance Standards specified in the Revised Final Permit are based on PCB exposure in adult fish, baseline fish sampling included the collection and analysis of adult fish. Young-of-the-year (YOY) fish were also collected to provide additional lines of evidence for the evaluation of time trends. The Second Revised BMP required fish sampling to be performed during two separate events (the first event was conducted in 2023) to reach the target number of samples (i.e., a total of 20 adult fish and 14 YOY composite samples per species). For the first fish sampling event conducted in 2023, approximately half of the overall sample numbers (i.e., a total of 10 adult fish and seven YOY composite samples) were targeted per species within each of the target reaches. However, as described in the 2023 BDSR, those numbers were not achieved in all reaches. Therefore, additional effort (shocking seconds) was expended in 2024 to collect enough fish to achieve the total target sample count of 20 adult fish and 14 YOY fish samples per species in each reach. A description of the sampling approach for the collection of fish samples is provided in the following subsections.

2.2.1 Sample Collection

Anchor QEA and Arcadis, on behalf of GE, conducted the 2024 baseline fish sampling from September 9 through October 31, 2024. Sample collection during this period occurred on a total of 16 days during four separate mobilizations (September 9 through 12; September 16 through 19; September 30 through October 3; and October 28 through October 31, 2024). In accordance with the Second Revised BMP and a March 29, 2022 EPA conditional approval letter, 14 locations were sampled for adult fish, and eight of those locations included collection of YOY fish. Figures 2-3a through 2-3o show the baseline fish sampling locations in all reaches. Those locations were situated in Reaches 5A, 5B/5C, 6, 7D, 7G, 8, and 9 in Massachusetts and Reaches 10 through 16 in Connecticut. Sample collection areas within each reach were generally the same as in 2023 with the following exceptions:

- Reach 5A—Did not sample as far upstream due to low water levels
- Reach 5B/5C—Did not sample as far downstream
- Reach 10—Extended further upstream
- Reach 12—Extended further upstream
- Reach 13—Did not sample as far upstream
- Reach 15—Did not sample as far downstream
- Reach 16—Extended upstream

Adult fish species targeted in 2024 were consistent with those targeted in 2023, consisting of largemouth bass (*Micropterus salmoides*), yellow perch (*Perca flavescens*), and brown bullhead (*Ameiurus nebulosus*) at locations in Massachusetts and smallmouth bass (*M. dolomiueu*), yellow perch, brown bullhead, northern pike (*Esox lucius*) and fallfish (*Semotilus corporalis*) in the Connecticut reaches. In addition, due to a lack of observed brown bullhead in several reaches in 2023, white suckers (*Catostomus commersonii*) were collected as a substitute during both years of sampling. This proposed substitution was documented in a letter to EPA dated October 24, 2023, which was approved by EPA on December 6, 2023.

Because the Biota Performance Standards for fish apply to the edible portion for humans (i.e., fillets), collection of adult fish targeted the legal or edible size, which are fish greater than 305 millimeters (mm) for bass, 200 mm for bullhead, and 170 mm for yellow perch. Northern pike were targeted at a length greater than 660 mm, with some fish of lesser size being retained due to a lack of availability of larger pike. There were no minimum lengths specified for fallfish or white sucker. Reasonable efforts were made to obtain a representative sample of fish across age and size classes.

Target species for YOY fish included largemouth bass and yellow perch in Reaches 5A through 9 and smallmouth bass and yellow perch in Reach 11. Smallmouth bass were targeted in Reach 11 (rather

than largemouth bass) because of the low density of largemouth bass in that reach. YOY samples were composite samples consisting of fish of the same species of similar size. Each composite sample consisted of five individual fish per species.[4]

As described above, fish were targeted to reach a total count of 20 adult fish and 14 YOY composite fish samples per species per reach from the combined 2023 and 2024 sampling events. However, the target sample counts could not be obtained in several reaches due to a lack of preferred habitat for those species. Table 2-3 shows the actual sample counts by species and reach. Reasonable efforts were made to collect the target numbers, including multiple mobilizations to several of the reaches. Decisions regarding the adequacy of the sample collection efforts and decisions to discontinue sampling for the year at a given location were made in consultation with the EPA field representative.[5]

2.2.1.1 Methods

Sample collection was performed using electrofishing vessels. For reaches that had limited access and shallow water depths, a 14-foot jon boat was used. This boat was outfitted with a 10-horsepower outboard motor and Smith-Root VVP-158 electronics, powered by a 5,000-watt generator. Components were assembled on site, and the vessel was hand launched. For reaches with maintained boat ramps and deep water, a 16-foot Smith-Root electrofishing vessel powered by an outboard motor was used. This vessel included Apex electronics, powered by a gas generator.

Prior to sampling at each location, water quality data were collected with a YSI Pro DSS multi-parameter probe. Measurements included temperature (in °C), pH, conductivity (in millisiemens per centimeter), turbidity (in nephelometric turbidity units), and dissolved oxygen (in milligrams [mg] per liter). The water quality results are provided in Table 2-4. Electrofishing occurred generally along transects near the riverbanks, targeting areas of preferred habitat (e.g., vegetation, undercut banks, downed trees, and deep pools). GPS coordinates were logged with an onboard unit at the upstream and downstream extent of the transects at each sampling location. Shocking seconds were logged to document level of effort, as shown in Table 2-3.

[4] As described in the 2023 BDSR, the Second Revised BMP stated that YOY composite samples would consist of 10 individual whole-body fish per species; however, due to a lack of abundance in certain reaches, the number of YOY fish per composite was reduced to a minimum of five individual whole-body fish per species. This modification was documented in GE's October 24, 2023 letter, which was approved by EPA.

[5] In a letter dated February 24, 2025, GE proposed that an additional (third) round of fish collection be conducted in 2025 at the locations where sample sizes were not achieved during the combined 2023/2024 collection efforts. EPA approved that proposal in a letter dated March 5, 2025. GE performed that additional fish sampling during September 2025. Results of this additional sampling will be provided in a future report. On September 19, 2025, GE reported that some species target numbers had still not been obtained in certain reaches due to habitat limitations, and it proposed to conclude the BMP fish collections. On September 29, 2025, EPA concurred with that assessment and proposal.

Once collected, fish were kept in live-wells or coolers with wet ice until being transferred to the field processing team. Sample processing was performed at GE's Building 59 in Pittsfield. Each fish collected was weighed (to the nearest 1.0 gram for adult fish, nearest 10 grams for northern pike, and nearest 0.1 gram for YOY fish), and total length was measured (to the nearest mm) and recorded. These measurements were made as soon as possible following collection. Measurements were made with calibrated instruments. Each sample was wrapped in clean aluminum foil (shiny side out), labeled, placed in a plastic resealable storage bag, and frozen following data processing. In addition, observed external abnormalities were noted in the field log.

Chain-of-custody forms were generated after data were entered into the database, and samples were grouped by species and location. Samples were shipped frozen at the end of a sampling event to the Pace laboratory in Green Bay, Wisconsin.

2.2.1.2 Laboratory Sample Preparation

Details related to preparation of fish samples for analysis were summarized in GE's October 24, 2023 letter that was approved by EPA. All processing of fish samples for analysis was performed by Pace Green Bay. For adult fish, the portions of the fish generally eaten by humans (fillets) were analyzed. The adult fish samples were prepared by removing the left fillet, excluding the rib cage, and removing the skin for analysis; the right fillet was included in a few samples where needed for sufficient sample mass. The belly flap was also retained along with the fillet for analyses. Otoliths were removed from adult fish by the laboratory for use in future age determination if needed. For YOY fish, samples were analyzed as whole-body composites.

2.2.1.3 Laboratory Analysis

All fish samples collected were analyzed by Pace Green Bay for PCB Aroclors using EPA Method 8082A and for percent lipid content. The target reporting limit/practical quantitation limit for fish tissue PCB Aroclor analysis was approximately 0.05 milligrams per kilogram (mg/kg). Approximately 25% of the collected adult and YOY fish samples were split and sent to SGS Environmental Services (SGS) in Wilmington, North Carolina, for PCB congener analyses by EPA Method 1668C (in addition to the Aroclor analyses). The subset of fish that was selected for analysis of PCB congeners was determined in consultation with EPA. The sex of each individual fish was also determined by the laboratory independent of the field determination.

2.2.2 Data Validation

Following receipt of the analytical results, the PCB Aroclor and congener data collected by GE underwent data review and validation in accordance with the pertinent procedures specified in GE's Revised FSP/QAPP. This included validation of all such data to a Tier I Plus level. The data validation reports are provided in Appendix C. As summarized in Table C-1 in Appendix C, 99.97% of the PCB Aroclor data and 100% of the PCB congener data are considered usable.

2.2.3 Results

A total of 514 fish samples were collected in 2024 and submitted for PCB Aroclor analysis; these included 435 adult individual samples and 79 composite YOY fish samples. Approximately 25% of the samples (131 fish, including 102 adults and 29 YOY composites) were split and submitted for PCB congener analysis. Summary statistics for the PCB Aroclor and congener results are presented in Tables 2-5 and 2-6, respectively. Table 2-5 also includes summary statistics for lipid content. Figures 2-4a through 2-4g show the Aroclor results plotted by reach for all species. A tabulation of all fish Aroclor and congener data is provided in Appendix D.

In addition, general fish condition was assessed by field measurements and visual observation. Observed external abnormalities, where present, were recorded and are summarized in Table 2-7.

2.3 Fish Community Survey

As part of a separate baseline program, on February 20, 2023, GE submitted a *Revised Baseline Restoration Assessment Work Plan for Rest of River Reaches 5B Through 8* (Revised Reach 5B–8 BRA Work Plan; AECOM 2023), which was approved by EPA on March 8, 2023. The Revised Reach 5B–8 BRA Work Plan described GE's proposed process and activities to implement a baseline restoration assessment for the reaches downstream of Reach 5A in which remediation is required (i.e., Reaches 5B through 8). One element of that assessment was to conduct fish community surveys. As noted in that work plan, the fish community surveys in Reaches 5B through 8 would be performed at the same locations in those reaches where fish tissue sampling is being conducted as part of the Baseline Monitoring Program. Accordingly, fish community surveys were conducted in both 2023 and 2024 concurrently with, and at some of the same locations as, the Baseline Monitoring Program fish sample collections. While the community surveys are not part of the Baseline Monitoring Program, GE has elected for completeness to summarize the fish community data collected in 2024 in this BDSR, as it did in the 2023 BDSR for the fish community data collected in 2023.

The 2024 fish community survey was performed by AECOM, on behalf of GE, during fall of 2024 in tandem with fish tissue sample collection for PCB analysis described in Section 2.2. Sampling was conducted on September 9, 2024 in six reaches—namely, Reaches 5A, 5B/5C, 6, 7D, 7G, and 8. Electrofishing was used for fish collection in all reaches at the locations shown on Figures 2-3a through 2-3c and 2-3e through 2-3g. In each such reach, electrofishing was conducted along one or two transects, for a total of 11 transects. Each transect was sampled for approximately 30 to 45 minutes. This duration was chosen to catch enough fish to adequately represent the fish community for the habitat within each reach. Water quality measurements were also recorded in tandem with fish sampling for each location. In addition, in Reaches 5B/5C, four minnow traps were deployed at the locations shown on Figure 2-3b for approximately 22 to 24 hours to obtain

additional information on small fish species that may not have been affected or observed during the electrofishing.

For the fish collected by electrofishing, identified species were grouped into adult, juvenile, and YOY. Once each collection event was complete, collected fish were identified. All fish species not selected and retained for PCB analysis were returned to the water near the sampling location. The results of the electrofishing are summarized by species and reach, as well as overall, in tabular form in Appendix E. Coldwater fish species were prevalent in Reaches 5A and 7D. Warmwater species were found mainly in Reaches 6, 7G, and 8. Cool water species were common in nearly all locations sampled except Reach 7G, which was predominantly composed of warmwater species. A total abundance of 3,083 individual fish was enumerated in these reaches. Total sample time for electrofishing was approximately 498 hours. The total species richness across all locations sampled was 20.

In Reaches 5B/5C, the results from the minnow traps showed a low catch, with only two species caught (pumpkinseed and bluegill) and only at one station. This may have been influenced by the drought conditions during the time of the minnow trapping effort in October 2024.

In addition to the above description of the 2024 fish community survey, the 2023-2024 fish community data from Reaches 5B/5C were evaluated and presented in the *Baseline Restoration Assessment Report for Housatonic River Reaches 5B and 5C* (AECOM 2025a), which was submitted to EPA on February 28, 2025, and conditionally approved on September 23, 2025.[6] The collective 2023 and 2024 fish community survey data from Reach 6 (Woods Pond) were evaluated and presented in the *Revised Baseline Restoration Assessment Report for Reach 6* (AECOM 2025b), which was submitted to EPA on September 2, 2025, and approved on September 30, 2025. Fish community survey data from further downstream reaches will be presented and evaluated in future reach-specific baseline restoration assessment reports.

2.4 Surface Sediment Sampling and Analysis

Baseline surface sediment sampling was performed in 2024. In accordance with the Second Revised BMP, surface sediment samples were originally targeted at 810 discrete locations over 210 transects in Reaches 7A, 7D, 7F, and 7H and Reaches 9 through 16. As described in the Second Revised BMP, the baseline sediment sampling had two components: (1) sampling on systematic transects that were approximately equally spaced and constituted 80% of the sampling effort in each reach; and (2) sampling at random transects/locations that were placed to sample specific river features such as aggrading areas, sand bars, and depositional areas, which constituted 20% of the sampling effort in each reach. Also, in accordance with an EPA directive, a subset of the random locations needed to

[6] In accordance with EPA's conditional approval letter, that Baseline Restoration Assessment Report for Reaches 5B and 5C is under revision, and a revised report will be submitted on a schedule agreed upon with EPA.

include some beach areas and boat launches. Prior to initiating sampling, GE conducted a desktop exercise of identifying possible locations to site the random transects in each reach, and the results of this exercise were provided to EPA in an email dated May 31, 2024. GE and EPA then conducted joint field reconnaissance of those locations to reach agreement on a final set of random sampling locations. GE provided to EPA a summary of findings from the reconnaissance effort, including a recommendation for which of the locations were selected for sampling within each reach, in an email dated August 7, 2024 (the figures and summary table from which are provided in Appendix F). EPA approved that recommendation in an email dated August 18, 2024. The surface sediment sampling and analysis activities conducted during 2024 are summarized in the following subsections.

2.4.1 Sample Collection and Analysis

Anchor QEA, on behalf of GE, performed the surface sediment sampling from October 7 through December 20, 2024. As stated above, this included collection of sediment samples from 184 transects over 12 reaches. The number of transects collected within each reach are summarized in Table 2-8.

Table 2-8
Summary of 2024 Surface Sediment Sampling and Analysis

Sample Reach	Number of Sampling Transects Targeted	Number of Transects Which Sample Was Collected and Analyzed
7A	20	15
7D	40	37
7F	20	19
7H	20	5
9	20	20
10	15	15
11	15	15
12	10	10
13	10	9
14	20	20
15	10	10
16	10	9
Total	**210**	**184**

Each of the transects located in the Massachusetts reaches included three discrete samples per transect, one collected at approximately mid-river and one near each shore. Each of the transects located in the Connecticut reaches included five discrete samples, distributed at approximately equal intervals across the river. Several discrete sampling locations on a transect were moved or abandoned because of difficulty in locating recoverable sediment or health and safety considerations with fast moving water/rapids. If sediment was not found within 50 feet of a target transect, the

entire transect was abandoned. Any abandonment of discrete locations and/or transects was discussed with the EPA field representative. As shown in Table 2-8, out of the 210 targeted transects, 184 were sampled. A tabular summary of the target transect locations, actual sampling locations, and rationale for any movement or abandonment is provided in Table G-3 in Appendix G.

2.4.1.1 Methods

Sediment sample collection and processing were performed following the methodology specified in Appendix C1 to the Revised FSP/QAPP (Surface Sediment Probing and Sampling Collection). The sampling crew navigated to the proposed sediment sampling locations using a differential global positioning system (DGPS). Because river access and water depths varied by reach, sediment samples were collected from various types of vessels (i.e., canoe, jon boat, pontoon boat) or by personnel wading in the river. At each location where recoverable sediment was located, a surface sediment grab sampler (i.e., Petite Ponar or Van Veen sampler depending on water depth) was used to collect surface sediment. The discrete samples collected on each transect were then composited and homogenized into a single sample for analysis. As each discrete location was sampled, the coordinates were recorded by the DGPS. As noted above, it was necessary to adjust some of the target discrete sampling locations based on lack of recoverable sediment and unsafe flow conditions. These conditions were primarily encountered in Reaches 7A, 7D and 7H. Reasons for transect and/or discrete sample abandonment are provided in Table G-3 in Appendix G.

2.4.1.2 Laboratory Analysis

Each composite sediment sample was sent to SGS in Dayton, New Jersey, for analysis of PCB Aroclors using EPA Method 8082A, targeting a reporting limit/practical quantitation limit of approximately 10 mg/kg. Each sediment sample was also analyzed for moisture content, total organic carbon (TOC), and grain size. In addition, 10 field duplicate samples were sent to the laboratory for analysis.

2.4.1.3 Data Validation

Following receipt of the analytical results, the PCB, TOC, and grain-size data collected by GE underwent data review and validation in accordance with the pertinent procedures specified in GE's Revised FSP/QAPP. This included validation of all such data to a Tier I Plus level. The data validation reports are provided in Appendix H. As summarized in Table H-1 in Appendix H, 100% of the PCB data, TOC data, and grain-size data are considered usable.

2.4.2 Results

The surface sediment analytical data collected during 2024 are summarized in Tables 2-9a and 2-9b for total PCBs and TOC, respectively. Table G-1 in Appendix G presents the validated results for individual PCB Aroclors, total PCB Aroclors, TOC, and grain size from each sampled transect. Table G-2 in Appendix G provides the results for individual PCB Aroclors and total PCB Aroclors from

split samples collected by EPA in 2024 (and the corresponding GE sample results). Total PCB Aroclor concentrations (including EPA split samples) are shown graphically by reach on Figure 2-6. As shown, the PCB concentrations in surface sediment in these reaches were uniformly low (all below 1 mg/kg).

2.5 Waterfowl Sampling and Analysis

Waterfowl sampling activities were conducted from late summer through fall 2024. Consistent with the Second Revised BMP, waterfowl sample target species included mallards (*Anas platyrhynchos*) and wood ducks (*Aix sponsa*) within three areas: at or near Woods Pond and Rising Pond in Massachusetts and the Bulls Bridge impoundment in Connecticut. Specific sample locations within each area were established based on available waterfowl habitat and observations of the target species in those areas. Resident hatch-year mallards and wood ducks were targeted, and sampling was conducted prior to fall migration to reduce the possibility of collecting migrants originating from areas outside the vicinity of the Housatonic River as well as to avoid overlap of the hunting season for these species. A total of 20 mallards and 20 wood ducks were targeted at each of the three sample areas. Sampling activities were coordinated with the Massachusetts Division of Fisheries and Wildlife (MassDFW), the Connecticut Department of Energy and Environmental Protection, and the U.S. Fish and Wildlife Service (USFWS).

2.5.1 Sample Collection

Arcadis, on behalf of GE, performed waterfowl sampling from August 12 through September 27, 2024. Bait and trap locations are shown on Figures 2-3b, 2-3c, 2-3g, and 2-3k. This sampling resulted in the collection of a total of seven mallards and 33 wood ducks within the sampling areas. Waterfowl samples collected at each of these three areas are summarized in Table 2-10. As indicated, only seven mallards were captured in the Woods Pond area, no waterfowl were captured at the Rising Pond area, and only wood ducks (13 individuals) were captured in the Bulls Bridge impoundment area.

Table 2-10
Summary of 2024 Waterfowl Sampling

Reach	Location Description	Number of Samples Collected	
		Mallard	Wood Duck
6	Woods Pond Area	7	20
8	Rising Pond Area	0	0
12	Bulls Bridge Impoundment Area	0	13
	Total	**7**	**33**

2.5.1.1 Methods

Waterfowl sample collection and processing were performed following the methodology specified in Appendix F4 to the Revised FSP/QAPP (Standard Operating Procedures for Waterfowl Sampling). Based on available habitat within each of the three sampling areas, potential trap sites were baited with cracked corn before walk-in or swim-in traps were deployed based on observations of birds using the bait. Game cameras were used to remotely monitor bait/trap locations and the field crew periodically conducted land-based and boat-based reconnaissance searching for the target species within the sample areas. When available, target species were collected by hand or netting. As noted above, waterfowl were captured at only the Woods Pond and Bulls Bridge areas, with none in the Rising Pond area, and the target numbers were met only for wood ducks at the Woods Pond area. Captured waterfowl were removed from the traps or nets, speciated, sexed, and aged. Adult birds collected at any location and wood ducks collected at Woods Pond in excess of the target sample size were released. Individual birds retained were euthanized and samples were processed by the field team. During processing, waterfowl breast tissue samples were prepared by removing and discarding the feathers from both sides of the breasts, cutting down the sternum and carving the tissue from the ribcage, and retaining the skin-on breast tissue for the sample.

2.5.1.2 Laboratory Analysis

Waterfowl tissue samples were sent to Pace Green Bay for analyses of PCB Aroclors using EPA Method 8082A and percent lipid content. Representative samples of the cracked corn bait were also analyzed for PCB Aroclors using EPA Method 8082. A subset of approximately 25% of the waterfowl tissue samples were selected in consultation with EPA for PCB congener analysis and were sent to SGS Wilmington for such analysis by EPA Method 1668C.

2.5.2 Data Validation

Following receipt of the analytical results, the PCB Aroclor and congener data collected by GE underwent data review and validation in accordance with the pertinent procedures specified in GE's Revised FSP/QAPP. This included validation of all such data to a Tier I Plus level. The data validation reports are provided in Appendix I. As summarized in Table I-1 in Appendix I, 100% of the Aroclor and congener data are considered usable.

2.5.3 Results

As described above, a total of 40 waterfowl tissue samples were collected in 2024 and submitted for PCB Aroclor and lipid analyses. Twelve (approximately 25%) of the samples were split and submitted for PCB congener analysis. Five representative cracked corn samples were submitted for Aroclor analysis. Summary statistics for the PCB Aroclor and congener results are presented in Tables 2-11 and 2-12, respectively, with all Aroclor and congener data reported in Appendix J. Total PCB concentrations are also shown graphically by reach on Figure 2-7.

2.6 Benthic Invertebrate Tissue Sampling and Analysis

Consistent with the Second Revised BMP and EPA's conditional approval letter dated February 16, 2023, benthic invertebrate tissue sampling and a benthic invertebrate community survey were performed within several reaches of the Housatonic River during the fall of 2024. This section describes the benthic invertebrate tissue sample collection and analysis, and Section 2.7 describes the benthic invertebrate community survey.

2.6.1 Sample Collection

Arcadis, on behalf of GE, conducted the benthic invertebrate tissue sampling from October 7 through October 10, 2024. Composite invertebrate tissue samples were collected within a total of six reaches. These consisted of five reaches in Massachusetts (Reaches 5A, 5B, 5C, 7D, and 7H) and one reach in Connecticut (West Cornwall, Reach 11). The tissue sampling locations are shown on Figures 2-3a, 2-3b, 2-3c, 2-3d, 2-3f, and 2-3j. One composite sample consisting of a mixture of available benthic invertebrates was collected at each of the reaches in Massachusetts (i.e., Reaches 5A, 5B, 5C, 7D, and 7H). In the Connecticut reach (Reach 11), to be consistent with historical sampling in that reach, three separate composite samples consisting of caddisflies, hellgrammites, and stoneflies were collected, including one composite for each species. This resulted in a total collection of eight invertebrate samples.

2.6.1.1 Methods

Benthic invertebrate sample collection and processing were performed following the methodology specified in Appendix F2 to the Revised FSP/QAPP (Standard Operating Procedures for Benthic Macroinvertebrate Tissue Sampling). Benthic invertebrate tissue samples were collected from approximately 150-foot-long stream sections. Sampling was conducted using kick and sweep methods with a D-frame net, combined with manual collection of organisms from rocks and woody debris. Collected invertebrates were placed in a labeled sample container, weighed to ensure tissue mass requirements for analyses were met, and sent to the contract laboratory for analyses.

2.6.1.2 Laboratory Analysis

All eight composite benthic invertebrate samples were sent to SGS Wilmington for analyses of PCB congeners by EPA Method 1668C, percent lipid content, and percent moisture.

2.6.2 Data Validation

Following receipt of the analytical results, the PCB congener data collected by GE underwent data review and validation in accordance with the pertinent procedures specified in GE's Revised FSP/QAPP. This included validation of all such data to a Tier I Plus level. The data validation report is provided in Appendix K. As summarized in Table K-1 in Appendix K, 100% of the PCB congener data are considered usable.

2.6.3 Results

As described above, a total of eight benthic invertebrate samples were collected in 2024 and submitted for PCB congener, lipid, and percent moisture analyses. A summary of total PCB and lipid results are presented in Table 2-13. A tabulation of all PCB results (including individual congener results) is provided in Appendix L. Total PCB concentrations are also shown graphically by reach on Figure 2-8.

2.7 Benthic Invertebrate Community Survey

A benthic invertebrate community survey was conducted in fall 2024. The objective of the invertebrate community survey was to obtain updated information on the general species composition and relative abundance in the prevalent benthic habitats in three Housatonic River reaches (Reaches 5B, 5C, and 7D).

2.7.1 Sample Collection

AECOM, on behalf of GE, performed benthic invertebrate community surveys in early October 2024 over a three-day period at two stations in Reach 5B, five stations in Reach 5C, and one station in Reach 7D. These locations are shown on Figures 2-3b, 2-3c, and 2-3d. Duplicate samples were collected in Reaches 5C (two duplicates) and 7D. Locations were selected to best represent the overall habitat characteristics of each respective reach. Sampling was performed using two standard sampling methods, including kick sampling in shallower areas and jab sampling in areas where wading was infeasible, combined with manual collection of organisms from rocks and woody debris. Water quality measurements were also recorded at each sampling location. A tabular summary of the sample locations and invertebrates collected from each location is provided in Appendix M.

2.7.1.1 Methods

Benthic invertebrate samples were collected from approximately 150-foot-long stream sections selected to represent the range of substrate types and flow conditions in the respective reach, while also considering potential human impacts. At each site, habitat documentation and a sketch map were prepared, noting underwater environmental conditions such as in-stream habitat features and flow direction. As noted above, sampling was conducted using standardized kick and jab methods with a D-net, combined with manual collection of organisms from rocks and woody debris. Twenty individual samples were taken per sampling area, proportionally distributed across available substrate types, and composited into a single sample preserved in ethanol. This process was repeated at each sampling area. This resulted in a total of eight composite samples plus the three duplicate samples from Reaches 5C and 7D.

2.7.1.2 Laboratory Sample Preparation and Analysis

Each composite sample was labeled with sampling date and collection location and sent to the Haley Ward (formerly Lotic Inc.) laboratory in Bangor, Maine, for taxonomic identification. Identifications were made to the species level where possible. As noted above, a total of eight primary composite samples plus three duplicate samples from two of the sample areas were sent to the laboratory for such identification. Samples were sorted with a target of 300 to 500 organisms in each sample. Following receipt of the taxonomic identification results, data were validated through a 10% quality control process in which 10% of the specimens were randomly selected and reviewed by a senior taxonomist. The identifications in the subsample that were reviewed by the senior taxonomist had greater than 90% agreement with the original identifications. The complete results were also reviewed by the senior taxonomist.

2.7.2 Results

A total of 11 benthic invertebrate samples (eight primary composite samples and three duplicates) were collected in 2024 for taxonomic identification. Average species richness was approximately 49, ranging from 42 to 60. Results of the identification are presented in tabular form in Appendix M.

Notes:

1. The August, September, and October 2024 "Auto" samples were coincident manual surface water grab samples collected using automated surface water sampling stations.
2. Y-axis is in logarithmic scale, base 10.
3. Duplicate results are averaged for presentation purposes.
4. For analytes that were not detected, the value presented is half the associated reporting limit.
5. ng/L = nanogram per liter; PCB = polychlorinated biphenyl; ROR = Rest of River

NOTES:

1. Aerial Imagery from MassGIS, 2023 and University of Connecticut, 2023
2. Fish Sampling Areas represent extent of survey area, actual survey locations within each sampling area varies by reach.
3. Due to low water levels and inaccessible habitats in Reach 5A in 2024, one pass of a 1,000 m reach via boat electrofishing was conducted for the fish community survey, instead of two passes of a 500 m reach, one on each shoreline, as done in 2023
4. Due to low water levels and inaccessible habitats in Reach 5A in 2024, the upstream extent of the area sampled for fish tissue samples in 2024 was reduced as compared to 2023 due to innaccessible boat passage.

Notes:

1. Composite samples from Reaches 5A, 5B, 5C, 7D and 7H consist of a mixture of available benthic invertebrates at each location. Composite samples from Reach 11 consist of three separate composites, one composite of caddisflies, one of hellgrammites, and one of stoneflies.

2. Reach 7H results represent the average of the parent and duplicate sample results.

Notes
[1] Coincident manual surface water grab samples were collected using an automated surface water sampling station.
ng/L = nanogram per liter
mg/L = milligram per liter
mS/cm = micro Siemens per centimeter
m = meter
°C = degrees centigrade
NTU = Nephelometric Turbidity unit
NA = Not Analyzed
ND = Analyte was not detected. The number in parentheses is the associated reporting limit.
J = Indicates the compound was positively identified; however, the associated numerical value is an estimated concentration only.
Field duplicate sample results are presented in brackets.

Notes:

YOY composite samples consist of 5 individuals

Target number for adult fish and YOY fish is 20 and 14 samples, respectively

Target sample count reached

Target sample count not reached

BB: Brown bullhead
FF: Fallfish
LMB: Largemouth Bass
NP: Northern Pike
SMB: Smallmouth Bass
TL: total length
WS: White sucker
YOY: young of year
YP: Yellow Perch

Table 2-4
Summary of Water Quality Data Collected During 2024 Fish Sampling

Notes:

Adult fish samples are analyzed as fillets (with skin off). Young-of-year fish samples are analyzed as whole-body composites.

PCB: polychlorinated biphenyl

YOY: young of year

Table 2-7
Observations of 2024 Fish Abnormalities

Reach	Species	Age	Sample ID	Abnormalities
R5A	Largemouth bass	Adult	HBMP-R05A-01LB-01-ADLT-241001	Possible tape worm
			HBMP-R05A-01LB-02-ADLT-241001	Damage or deformity to right operculum
			HBMP-R05A-01LB-04-ADLT-240911	Lesion on lower mandible, right side, yellow grub on anal fin
	White sucker	Adult	HBMP-R05A-01WS-07-ADLT-240911	deformed anal fin
			HBMP-R05A-01WS-10-ADLT-240911	topof caudal fin missing
	Yellow Perch	Adult	HBMP-R05A-01YP-03-ADLT-240911	Blackspot
			HBMP-R05A-01YP-10-ADLT-240911	Blackspot, yellow grubs below each eye
R5C	Largemouth bass	Adult	HBMP-R05C-01LB-04-ADLT-240910	Black spot
			HBMP-R05C-01LB-05-ADLT-240910	black spot
			HBMP-R05C-01LB-09-ADLT-240910	black spot
	Yellow Perch	Adult	HBMP-R05C-01YP-01-ADLT-240910	black spot
			HBMP-R05C-01YP-03-ADLT-240910	damage to caudal fin, black spot
			HBMP-R05C-01YP-05-ADLT-240910	black spot
			HBMP-R05C-01YP-06-ADLT-240910	abnormality/growth over eyes, black spot
			HBMP-R05C-01YP-07-ADLT-240910	black spot
			HBMP-R05C-01YP-08-ADLT-240910	black spot
			HBMP-R05C-01YP-10-ADLT-240910	black spot
R6	Yellow Perch	Adult	HBMP-R06-01YP-04-ADLT-240911	Blackspot
			HBMP-R06-01YP-05-ADLT-240911	Blackspot
R7G	Brown bullhead	Adult	HBMP-R07G-01BB-01-ADLT-240919	Melanoma
			HBMP-R07G-01BB-02-ADLT-240919	General fin erosion
			HBMP-R07G-01BB-08-ADLT-240919	General fin erosion
			HBMP-R07G-01BB-10-ADLT-240919	Leech on left pectoral fin, lesion on lower mandible, melanoma, spine damage
	Yellow Perch	Adult	HBMP-R07G-01YP-01-ADLT-240919	Blackspot
			HBMP-R07G-01YP-03-ADLT-241003	black spot,
R8	Brown bullhead	Adult	HBMP-R08-01BB-01-ADLT-240919	Erosion of right pectoral fin
			HBMP-R08-01BB-03-ADLT-240919	split dorsal spine
			HBMP-R08-01BB-04-ADLT-240919	Right pectoral fin erosion
	Largemouth bass	Adult	HBMP-R08-01LB-02-ADLT-240919	Wound on lower mandible
	Yellow Perch	Adult	HBMP-R08-01YP-01-ADLT-240919	Blackspot
			HBMP-R08-01YP-04-ADLT-240919	Blackspot
R9	Largemouth bass	Adult	HBMP-R09-01LB-02-ADLT-240912	wound on right side, yellow grub on caudal fin
R10	Brown bullhead	Adult	HBMP-R10-01BB-01-ADLT-240917	Missing barbel
			HBMP-R10-01BB-03-ADLT-240911	Leech on caudal fin
R11	Smallmouth Bass	Adult	HBMP-R11-01SB-06-ADLT-240917	Blackspot
			HBMP-R11-01SB-09-ADLT-240917	Blackspot
			HBMP-R11-01SB-10-ADLT-240917	Blackspot
R12	Brown bullhead	Adult	HBMP-R12-01BB-01-ADLT-240917	Leech attached to caudal fin
			HBMP-R12-01BB-01-ADLT-240918	Pectoral and dorsal fin erosion
			HBMP-R12-01BB-02-ADLT-240917	Right pectoral fin erosion
			HBMP-R12-01BB-05-ADLT-240917	General fin erosion
	Northern Pike	Adult	HBMP-R12-01NP-03-ADLT-241002	Blackspot
	Smallmouth Bass	Adult	HBMP-R12-01SB-02-ADLT-241002	Lesion on lower mandible
			HBMP-R12-01SB-04-ADLT-241002	Split caudal fin
			HBMP-R12-01SB-06-ADLT-241002	Lesion on caudal fin
			HBMP-R12-01SB-07-ADLT-241002	Split dorsal fin, missing lower end of caudal fin
	Yellow Perch	Adult	HBMP-R12-01YP-01-ADLT-241002	Abrasion on left side, wound on right side, blackspot, split spiny dorsal fin and split soft dorsal
			HBMP-R12-01YP-02-ADLT-240917	Blackspot
			HBMP-R12-01YP-03-ADLT-241002	Blackspot
			HBMP-R12-01YP-05-ADLT-240917	shallow laceration on left side
			HBMP-R12-01YP-06-ADLT-240917	Yellow grub on caudal fin and left eye

Table 2-7
Observations of 2024 Fish Abnormalities

Reach	Species	Age	Sample ID	Abnormalities
R13	Smallmouth Bass	Adult	HBMP-R13-01SB-01-ADLT-240913	black spot
			HBMP-R13-01SB-03-ADLT-240913	erosion to spiny dorsal fin
			HBMP-R13-01SB-07-ADLT-240913	damage to left mandible
			HBMP-R13-01SB-08-ADLT-240913	lesion on right pectoral fin and right peduncle, lesion on left caudal fin.
			HBMP-R13-01SB-09-ADLT-240913	left operculum damaged
	Yellow Perch	Adult	HBMP-R13-01YP-02-ADLT-240913	black spot
			HBMP-R13-01YP-04-ADLT-240913	black spot
			HBMP-R13-01YP-06-ADLT-240913	black spot
			HBMP-R13-01YP-14-ADLT-240913	black spot
			HBMP-R13-01YP-15-ADLT-240913	black spot
R14	Brown bullhead	Adult	HBMP-R14-01BB-02-ADLT-240917	Missing barbel, lesion on lower mandible
			HBMP-R14-01BB-03-ADLT-240917	Right pectoral fin
			HBMP-R14-01BB-04-ADLT-240917	Missing barbel
			HBMP-R14-01BB-06-ADLT-240917	Yellow grubs on caudal fins, fin erosion
	Northern Pike	Adult	HBMP-R14-01NP-03-ADLT-240918	Blackspot
			HBMP-R14-01NP-04-ADLT-240918	Blackspot
			HBMP-R14-01NP-06-ADLT-240918	Blackspot
			HBMP-R14-01NP-07-ADLT-240918	Blackspot
			HBMP-R14-01NP-08-ADLT-240918	Blackspot
	Smallmouth Bass	Adult	HBMP-R14-01SB-01-ADLT-240917	Absess on lower mandible
			HBMP-R14-01SB-04-ADLT-240917	Caudal fin erosion, split dorsal fin, lesion near the mouth
	Yellow Perch	Adult	HBMP-R14-01YP-05-ADLT-240913	black spot
			HBMP-R14-01YP-07-ADLT-240913	black spot
			HBMP-R14-01YP-09-ADLT-240913	black spot
R15	Brown bullhead	Adult	HBMP-R15-01BB-05-ADLT-240913	missing right barbel
			HBMP-R15-01BB-09-ADLT-240913	black spots
	Northern Pike	Adult	HBMP-R15-01NP-05-ADLT-240913	black spot
			HBMP-R15-01NP-10-ADLT-240913	black spot
			HBMP-R15-01NP-11-ADLT-240913	black spot
			HBMP-R15-01NP-12-ADLT-240913	deformity in caudal peduncle
	Yellow Perch	Adult	HBMP-R15-01YP-10-ADLT-240913	black spot
R16	Brown bullhead	Adult	HBMP-R16-01BB-01-ADLT-240918	General fin erosion
			HBMP-R16-01BB-03-ADLT-240918	Burned barbel, general fin erosion
			HBMP-R16-01BB-04-ADLT-240918	Missing bottom piece of caudal fin, melanoma, lesion in the mouth
			HBMP-R16-01BB-05-ADLT-240918	Fin erosion
			HBMP-R16-01BB-06-ADLT-240918	Right pectoral fin erosion, burned barbel, mouth lesion
			HBMP-R16-01BB-08-ADLT-240918	Missing left pelvic fin
			HBMP-R16-01BB-09-ADLT-240918	General fin erosion
	Northern Pike	Adult	HBMP-R16-01NP-03-ADLT-240919	blackspot, missing piece of soft dorsal fin
			HBMP-R16-01NP-04-ADLT-240919	Blackspot
			HBMP-R16-01NP-08-ADLT-240919	Lesion on upper mandible, blackspot, left eye clouded
	Smallmouth Bass	Adult	HBMP-R16-01SB-02-ADLT-240918	Blackspot
			HBMP-R16-01SB-03-ADLT-240918	Blackspot
			HBMP-R16-01SB-04-ADLT-240918	Blackspot
			HBMP-R16-01SB-07-ADLT-240918	Wound on the left side
			HBMP-R16-01SB-08-ADLT-240918	Blackspot, leech inside mouth
			HBMP-R16-01SB-10-ADLT-240918	Blackspot
	Yellow Perch	Adult	HBMP-R16-01YP-01-ADLT-240918	Blackspot
			HBMP-R16-01YP-02-ADLT-240918	Blackspot
			HBMP-R16-01YP-04-ADLT-240918	Blackspot
			HBMP-R16-01YP-05-ADLT-240918	Blackspot

1 Summary

This attachment summarizes the data validation review of Sample Delivery Groups (SDGs) 10682229, 10682325, 10682496, 10682513, 10682774, and 10682899 performed on behalf of the General Electric Company (GE) for surface water sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at a Tier I level and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1. SDG# 10682513 – As per COC, the sample WOODS POND DAM (LAB DUP)_20240125 (10682513002) submitted to laboratory for duplicate analysis. Hence, this sample was not considered as regular field sample in this data validation report.

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Method 1668C and Standard Method 2540D. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);
- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	14	1	1	0	0	0	16
TSS	14	1	0	0	0	0	15

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for Method SW-846 8270D-SIM and USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
SW-846 USEPA Method 1668C	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 5. Summary of Blank Contamination Qualifications

Note:
RL = Reporting limit

2.3 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 6. Summary of Field Duplicate Analysis

	PCB-99	0.264	0.230	13.8%

Note:
AC = Acceptable

The compound PCB-146 associated with sample locations RISING POND DAM_20240121 / HR-D1_20240124 exhibited a field duplicate RPD greater than the control limit. The associated sample results from sample locations for the analytes were qualified as estimated.

2.4 Compound Identification

PCB congeners by 1668C are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest". This value should be considered an elevated detection limit based on potential compound identification and quantitation interference. If the EMPC value is above the reporting limit, the qualifier UX has been added to the sample results to indicate the elevated detection limit as EMPC. If the EMPC value is below the reporting limit, the compound is reported as non-detect at the reporting limit and no qualification is added.

2.5 Data Validation Checklist for PCB Congeners

Table 7. Data Validation Checklist for Polychlorinated Biphenyls

PCB Congeners; EPA1668C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
HIGH RESOLUTION GAS CHROMATOGRAPHY/HIGH RESOLUTION MASS SPECTROMETRY (HRGC/HRMS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X		X	
B. Equipment blanks		X	X		
Field/Lab Duplicate (RPD)		X	X		
Dilution Factor		X		X	
Moisture Content	X				X
Ion abundance criteria for each instrument used		X	X		
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%RPD = Relative percent difference
%R = Percent recovery

When the laboratory case narrative outlines a quality issue and/or the laboratory applies qualifiers that exhibit potential QC issues beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

3 General Chemistry Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Specified Holding Time

Method	Matrix	Holding Time	Preservation
Total Suspended Solids (TSS) by SM2540D	Water	7 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criteria.

3.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 9. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
RISING POND DAM_20240124 / HR-D1_20240124	TSS	2.0	3.2	AC

Note:
AC = Acceptable

3.3 Data Validation Checklist for General Chemistry

Table 10. Data Validation Checklist for General Chemistry

General Chemistry: SM2540D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%R = Percent recovery
RPD = Relative percent difference

4 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation review. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 11. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0
TSS	100%	0

The data package completeness, as determined from the Tier I data review was used to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Conc = Concentration
EML =Method Specified Reporting Limit (1668C)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
R = Recovery outside of Method 1668C control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
X = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

1 Summary

This attachment summarizes the data validation review of Sample Delivery Groups (SDGs) 10684056, 10684109, 10684246, and 10684289 performed on behalf of the General Electric Company (GE) for surface water sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at a Tier I level and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Method 1668C, and Standard Method 2540D. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);
- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	14	1	1	0	0	0	16
TSS	14	1	0	0	0	0	15

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
SW-846 USEPA Method 1668C	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. PCB analysis requires that all surrogate compounds exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries were within control limits with the exceptions noted below.

Table 5. Surrogate Recoveries Outside Control Limits

Sample ID	Compounds	Surrogate	Recovery
Near Pittsfield WWTP	PCB 1 PCB 2	13C-2-MoCB	4%

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results are qualified as documented in the table below.

Table 6. Surrogate Recovery Evaluation Criteria

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Surrogates diluted below the calibration curve due to the high concentration of a target compounds	Non-detect	UJ1
	Detect	J1

Note:

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

2.3 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 7. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compounds	Sample Result (ng/L)	Duplicate Result (ng/L)	RPD
RISING POND DAM / HR-D1	PCB-1	0.102	0.108	AC

2.4 Compound Identification

PCB congeners by 1668C are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest". This value should be considered an elevated detection limit based on potential compound identification and quantitation interference. If the EMPC value is above the reporting limit, the qualifier UX has been added to the sample results to indicate the elevated detection limit as EMPC. If the EMPC value is below the reporting limit, the compound is reported as non-detect at the reporting limit and no qualification is added.

2.5 Data Validation Checklist for PCB Congeners

Table 8. Data Validation Checklist for Polychlorinated Biphenyls

PCB Congeners; EPA1668C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
HIGH RESOLUTION GAS CHROMATOGRAPHY/HIGH RESOLUTION MASS SPECTROMETRY (HRGC/HRMS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X		X	
B. Equipment blanks		X		X	
Field/Lab Duplicate (RPD)		X		X	
Dilution Factor		X		X	
Moisture Content	X				X

PCB Congeners; EPA1668C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Ion abundance criteria for each instrument used		X	X		
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%RPD = Relative percent difference
%R = Percent recovery

When the laboratory case narrative outlines a quality issue and/or the laboratory applies qualifiers that exhibit potential QC issues beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

3 General Chemistry Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 9. Specified Holding Time

Method	Matrix	Holding Time	Preservation
TSS by SM2540D	Water	7 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criteria.

3.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 10. Summary of Field Duplicate Analysis

SDG	Sample ID/Duplicate ID	Analyte	Sample Result (mg/L)	Duplicate Result (mg/L)	RPD
10684056	RISING POND DAM / HR-D1	TSS	2.0 U	2.0 U	AC

Note:
AC = Acceptable

3.3 Data Validation Checklist for General Chemistry

Table 11. Data Validation Checklist for General Chemistry

General Chemistry: SM2540D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%R = Percent recovery
RPD = Relative percent difference

4 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation review. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 12. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0
TSS	100%	0

The data package completeness, as determined from the Tier I data review was used to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

CHAIN-OF-CUSTODY Analytical Request Document

Pace Analytical®

Chain-of-Custody is a LEGAL DOCUMENT - Complete all relevent fields

LAB USE ONLY- Affix Workor

WO#: 10684109

10684109

ALL SHADED

Container Preservative Type: 4

** Preservative Types: (1) nitric acid, (2) sulfuric acid, (3) hydrochloric acid, (4) sodium hydroxide, (5) zinc acetate, (6) methanol, (7) sodium bisulfate, (8) sodium thiosulfate, (9) hexane, (A) ascorbic acid, (B) ammonium sulfate, (C) ammonium hydroxide, (D) TSP, (U) Unpreserved, (O) Other _____

Analyses: PCB 1668

Lab Profile/Line: 45643

Lab Sample Receipt Checklist:

Custody Seals Present/Intact	Y N NA
Custody Signatures Present	Y N NA
Collector Signature Present	Y N NA
Bottles Intact	Y N NA
Correct Bottles	Y N NA
Sufficient Volume	Y N NA
Samples Received on Ice	Y N NA
VOA - Headspace Acceptable	Y N NA
USDA Regulated Soils	Y N NA
Samples in Holding Time	Y N NA
Residual Chlorine Present	Y N NA
Cl Strips: _____	
Sample pH Acceptable	Y N NA
pH Strips: _____	
Sulfide Present	Y N NA
Lead Acetate Strips: _____	

LAB USE ONLY:
Lab Sample # / Comments:

Conc = Concentration
EML = Method Specified Reporting Limit (1668C)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
R = Recovery outside of Method 1668C control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
X = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

1 Summary

This attachment summarizes the data validation review of Sample Delivery Groups (SDGs) 10686579, 10686796, and 10686845 performed on behalf of the General Electric Company (GE) for surface water sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1. SDG# 10686845 – As per the COC, the sample WOODS POND DAM (LAB DUP)_20240314 (10686845014) was submitted to the laboratory for duplicate analysis. Hence, this sample was not considered as a regular field sample in this data validation report.

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) USEPA Method 1668C and Standard Method 2540D. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);
- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	0	0	0	14	1	1	16
TSS	0	0	0	14	1	0	15

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
USEPA Method 1668C	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 5. Summary of Blank Contamination Qualifications

Sample Locations	Compounds	Blank	Sample Result	Qualification
DERBY DAM_20240311	PCB-99	Equipment blank (HR-EB1.2308140830)	Detected sample results >RL and <BAL	"U" at detected sample concentration
HR-D1_20240313 NEAR PITTSFIELD WWTP_20240315 NEW LENOX RD BRIDGE_20240314 WOODS POND DAM_20240314	PCB-8			
POMEROY AVENUE BRIDGE_20240315	PCB-110/115 PCB-118 PCB-8 PCB-99			

Sample Locations	Compounds	Blank	Sample Result	Qualification
RT. 202 BRIDGE_20240312 STEVENSON DAM_20240311	PCB-110/115 PCB-118 PCB-4 PCB-99			
RT. 341 BRIDGE_20240312	PCB-118			
SHEPAUG DAM_20240311	PCB-110/115 PCB-118 PCB-99			

Note:
RL = Reporting limit

The Total PCBs as Congeners result is calculated post validation within the database; therefore, the total PCB results have not been adjusted on the attached laboratory forms.

2.3 System Performance

System performance and column resolution were acceptable.

2.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

2.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

2.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

All compounds associated with the calibrations were within the specified control limits.

2.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with labeled compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Analysis requires isotope dilution compounds exhibit recoveries within the laboratory-established acceptance limits.

All PCB congeners associated with the labeled compound analysis exhibited recoveries within the control limits.

2.6 Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

2.7 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis was not performed on samples associated with the SDG# 10686845.

2.8 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the EML. A control limit of 30% for water matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the EML, a control limit of one time the EML is applied for water matrices.

The laboratory duplicate analysis performed on sample Woods Pond Dam exhibited acceptable RPD values.

2.9 Ongoing Precision Result (OPR) / Laboratory Control Sample / Laboratory Control Sample Duplicate Analysis

The ongoing precision result (OPR) / laboratory control sample / laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the accuracy of the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the OPR/LCS/LCSD analysis must exhibit a percent recovery and RPD within the laboratory-established acceptance limits.

All compounds associated with the OPR/LCS/LCSD analysis exhibited recoveries and RPDs within the control limits.

2.10 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field

duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the EML, a control limit of two times the EML is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 6. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD

The compounds PCB-194, PCB-195, and PCB-49/69 associated with sample locations RISING POND DAM_20240313 and HR-D1_20240313 exhibited a field duplicate RPD greater than the control limit. The associated sample results from sample locations for the listed analyte were qualified as estimated.

2.11 Compound Identification

PCB congeners by 1668C are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest." This value should be considered an elevated detection limit based on potential compound identification and quantitation interference. If the EMPC value is above the reporting limit, the qualifier UX has been added to the sample results to indicate the elevated detection limit as EMPC. If the EMPC value is below the reporting limit, the compound is reported as non-detect at the reporting limit and no qualification is added.

2.12 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3 General Chemistry Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Total Suspended Solids (TSS) by SM 2540D	Water	7 days from collection to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

3.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the reporting limit (RL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were not detected above the RL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3.3 Matrix Spike/Matrix Spike Duplicate / Laboratory Duplicate Analysis

MS/MSD and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

3.3.1 Matrix Spike/Matrix Spike Duplicate Analysis

All analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory flag will be removed.

The MS/MSD analysis was not performed on samples associated with the SDGs# 10686579 and 10686796.

3.3.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to five times the RL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate

sample concentrations are less than or equal to five times the RL, a control limit of one time the RL is applied for water matrices and two times the RL for soil matrices.

The laboratory duplicate analysis performed on sample DERBY DAM_20240311 associated with the SDG# 10686579 and Pomeroy Avenue Bridge associated with SDG#10686796 exhibited RPDs within control limits.

3.4 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 9. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
SDG 10686579 RISING POND DAM_20240313/ HR-D1_20240313	TSS	3.6	4.4	AC

Note:
AC = Acceptable

The results between the parent sample and field duplicate were acceptable.

3.5 Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

All LCS recoveries were within control limits.

3.6 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.7 Data Validation Checklist for General Chemistry

Table 10. Data Validation Checklist for General Chemistry

General Chemistry: SM2540D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I/II Validation					
Holding Times/Preservation		X		X

Transcription/calculations acceptable		X		X	
Raw Data		X		X	
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%R = Percent recovery
RPD = Relative percent difference

4 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 11. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0
TSS	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Conc = Concentration
EML = Method Specified Reporting Limit (1668C)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
R = Recovery outside of Method 1668C control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
X = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

Conc = Concentration
EML = Method Specified Reporting Limit (1668C)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
R = Recovery outside of Method 1668C control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
X = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

1 Summary

This attachment summarizes the data validation review of Sample Delivery Groups (SDGs) 10689230, 10689293, 10689511, 10689785, 10690011, and 10690033 performed on behalf of the General Electric Company (GE) for surface water sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at a Tier I level and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods USEPA Method 1668C, and Standard Method 2540D. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);
- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	14	1	1	0	0	0	16
TSS	14	1	0	0	0	0	15

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for Method SW-846 USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
SW-846 USEPA Method 1668C	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 5. Summary of Blank Contamination Qualifications

SDG	Sample Locations	Compounds	Blank	Sample Result	Qualification
10689785	New Lenox Rd Bridge HR-D1 Pomeroy Avenue Bridge Rising Pond Dam Old Pleasant Street Bridge Woods Pond Dam	PCB-8	Equipment blank (HR-EB1)	Detected sample results >RL and <BAL	"U" at detected sample concentration
	Pomeroy Avenue Bridge	PCB-90/101/113			
	Pomeroy Avenue Bridge	PCB-95			
	Pomeroy Avenue Bridge	PCB-99			
	Pomeroy Avenue Bridge	PCB-110/115			
	Pomeroy Avenue Bridge	PCB-118			
	Pomeroy Avenue Bridge	PCB-132			

Note:
RL = Reporting limit

2.3 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 6. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
WOODS POND DAM / HR-D1	PCB-1	0.0643	0.0629	AC

Notes:
AC = Acceptable
The calculated RPDs between the parent sample and field duplicate were acceptable.

2.4 Compound Identification

PCB congeners by 1668C are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest". This value should be considered an elevated detection limit based on potential compound identification and quantitation interference. If the EMPC value is above the reporting limit, the qualifier UX has

been added to the sample results to indicate the elevated detection limit as EMPC. If the EMPC value is below the reporting limit, the compound is reported as non-detect at the reporting limit and no qualification is added.

2.5 Data Validation Checklist for PCB Congeners

Table 7. Data Validation Checklist for Polychlorinated Biphenyls

PCB Congeners; EPA1668C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
HIGH RESOLUTION GAS CHROMATOGRAPHY/HIGH RESOLUTION MASS SPECTROMETRY (HRGC/HRMS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Blanks					
A. Method blanks		X		X	
B. Equipment blanks		X	X		
Field/Lab Duplicate (RPD)		X		X	
Dilution Factor		X		X	
Moisture Content	X				X
Ion abundance criteria for each instrument used		X		X	
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%RPD = Relative percent difference
%R = Percent recovery

When the laboratory case narrative outlines a quality issue and/or the laboratory applies qualifiers that exhibit potential QC issues beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

3 General Chemistry Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Specified Holding Time

Method	Matrix	Holding Time	Preservation
Total Suspended Solids (TSS) by SM2540D	Water	7 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criteria.

3.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 9. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
WOODS POND DAM / HR-D1	TSS	2.4	4.0	AC

Note:
AC = Acceptable

3.3 Data Validation Checklist for General Chemistry

Table 10. Data Validation Checklist for General Chemistry

General Chemistry: SM2540D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%R = Percent recovery
RPD = Relative percent difference

4 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation review. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 11. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0
TSS	100%	0

The data package completeness, as determined from the Tier I data review was used to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Conc = Concentration
EML =Method Specified Reporting Limit (1668C)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
R = Recovery outside of Method 1668C control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
X = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

Conc = Concentration
EML =Method Specified Reporting Limit (1668C)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
R = Recovery outside of Method 1668C control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
X = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

1 Summary

This attachment summarizes the data validation review of Sample Delivery Groups (SDGs) 10693335 and 10693693 performed on behalf of the General Electric Company (GE) for surface water sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at a Tier I level and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

Table 1. Summary of Samples Subjected to Tier I Data Validation

SDGs	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis	
						PCB	TSS

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) SW-846 Methods USEPA Method 1668C, and Standard Method 2540D. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);

- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence

audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	14	1	1	0	0	0	16
TSS	14	1	0	0	0	0	15

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
USEPA Method 1668C	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 5. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
RISING POND DAM / HR-D1	PCB-1	0.0331	0.0348	AC
	PCB-4	0.783	0.865	10.0%

	PCB-195	0.188	0.192	AC
	PCB-196	0.214	0.226	5.4%
	PCB-197/200	0.0770	0.0816	AC
	PCB-198/199	0.520	0.506	2.7%
	PCB-201	0.0564	0.0589	AC
	PCB-202	0.0943	0.101	AC
	PCB-203	0.279	0.292	4.5%
	PCB-205	0.0256	0.0279	AC
	PCB-206	0.0986	0.105	6.3%
	PCB-208	0.0219 U	0.0220	AC

Notes:
AC = Acceptable
The calculated RPDs between the parent sample and field duplicate were acceptable.

2.3 Compound Identification

PCB congeners by 1668C are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or “estimated maximum possible concentration” designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated “as the compound of interest”. This value should be considered an elevated detection limit based on potential compound identification and quantitation interference. If the EMPC value is above the reporting limit, the qualifier UX has been added to the sample results to indicate the elevated detection limit as EMPC. If the EMPC value is below the reporting limit, the compound is reported as non-detect at the reporting limit and no qualification is added.

2.4 Data Validation Checklist for PCB Congeners

Table 6. Data Validation Checklist for Polychlorinated Biphenyls

PCB Congeners; EPA1668C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
HIGH RESOLUTION GAS CHROMATOGRAPHY/HIGH RESOLUTION MASS SPECTROMETRY (HRGC/HRMS)					
Tier I Validation					
Holding times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	
Dilution Factor		X		X	
Moisture Content	X				X
Ion abundance criteria for each instrument used		X	X		
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%RPD = Relative percent difference
%R = Percent recovery

When the laboratory case narrative outlines a quality issue and/or the laboratory applies qualifiers that exhibit potential QC issues beyond Tier I it will be added to the checklist above and the usability of the data will be addressed.

3 General Chemistry Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 7. Specified Holding Time

Method	Matrix	Holding Time	Preservation
Total Suspended Solids (TSS) by SM2540D	Water	7 days from collection to analysis	Cool to <6 °C.

All samples were analyzed within the specified holding time criteria.

3.2 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 8. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
RISING POND DAM / HR-D1	TSS	5.9	5.7	AC

Notes:
AC = Acceptable
The calculated RPDs between the parent sample and field duplicate were acceptable.

3.3 Data Validation Checklist for General Chemistry

Table 9. Data Validation Checklist for General Chemistry

General Chemistry: SM2540D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I Validation					
Holding Times		X		X	
Reporting limits (units)		X		X	
Field/Lab Duplicate (RPD)		X		X	
Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:
%R = Percent recovery
RPD = Relative percent difference

4 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation review. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 10. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0
TSS	100%	0

The data package completeness, as determined from the Tier I data review was used to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Sample pH Acceptable	Y N NA
pH Strips:	
Sulfide Present	Y N NA
Lead Acetate Strips:	

LAB USE ONLY:
Lab Sample # / Comments:

Customer Remarks / Special Conditions / Possible Hazards: Refer to Contract

Type of Ice Used: Wet Blue Dry None

Packing Material Used:

Radchem sample(s) screened (<500 cpm): Y N NA

SHORT HOLDS PRESENT (<72 hours): Y N N/A

Lab Tracking #: 2913778

Samples received via: FEDEX UPS Client Courier Pace Courier

Lab Sample Temperature Info:
Temp Blank Received: Y N NA
Therm ID#:
Cooler 1 Temp Upon Receipt: oC
Cooler 1 Therm Corr. Factor: oC
Cooler 1 Corrected Temp: oC

Method 1668C Polychlorobiphenyl Sample Analysis Results

Client - GE_Arcadis-NY

Client's Sample ID	HR-D1		
Lab Sample ID	10693693011		
Filename	P240609B_05		
Injected By	JRH		
Total Amount Extracted	1860 mL	Matrix	WATER
% Moisture	NA	Dilution	NA
Dry Weight Extracted	NA	Collected	05/15/2024
ICAL ID	P240609B02	Received	05/21/2024 09:45
CCal Filename(s)	P240609B_01	Extracted	06/04/2024 14:00
Method Blank ID	BLANK-113258	Analyzed	06/09/2024 18:52

PCB Isomer	IUPAC	RT	Ratio	ng's Added	ng's Found	% Recovery
Labeled Analytes						
13C-2-MoCB	1	9.191	3.09	2.0	0.889	44

Conc = Concentration
EML =Method Specified Reporting Limit (1668C)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
R = Recovery outside of Method 1668C control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
X = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

Method 1668C Polychlorobiphenyl Sample Analysis Results

Client Sample ID	Woods Pond Dam
Lab Sample ID	10693693013
Filename	P240609B_07

Congener Group	Concentration ng/L
Total Monochloro Biphenyls	0.0849
Total Dichloro Biphenyls	3.73
Total Trichloro Biphenyls	5.37
Total Tetrachloro Biphenyls	18.0
Total Pentachloro Biphenyls	12.7
Total Hexachloro Biphenyls	24.4
Total Heptachloro Biphenyls	16.8
Total Octachloro Biphenyls	3.76
Total Nonachloro Biphenyls	0.277
DecachloroBiphenyls	ND
Total PCBs	85.2

ND = Not Detected

Method 1668C Polychlorobiphenyl Sample Analysis Results

Client Sample ID	Near Pittsfield WWTP
Lab Sample ID	10693693016
Filename	Y240613B_11

Congener Group	Concentration ng/L
Total Monochloro Biphenyls	0.0479
Total Dichloro Biphenyls	4.12
Total Trichloro Biphenyls	3.61
Total Tetrachloro Biphenyls	7.23
Total Pentachloro Biphenyls	6.62
Total Hexachloro Biphenyls	12.9
Total Heptachloro Biphenyls	8.29
Total Octachloro Biphenyls	1.88
Total Nonachloro Biphenyls	0.103
DecachloroBiphenyls	ND
Total PCBs	44.8

ND = Not Detected

1 Summary

This attachment summarizes the data validation review of Sample Delivery Groups (SDGs) 10698286, 10698296, 10698585, and 10698693 performed on behalf of the General Electric Company (GE) for surface water sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1. SDG# 10698693 – As per the COC, the sample WOODS POND DAM (LAB DUP)_20240626 (10698693008) was submitted to the laboratory for duplicate analysis. Hence, this sample was not considered as a regular field sample in this data validation report.

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) USEPA Method 1668C and Standard Method 2540D. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);
- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	0	0	0	14	1	1	16
TSS	0	0	0	14	1	0	15

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
USEPA Method 1668C	Water	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 5. Summary of Blank Contamination Qualifications

2.3 System Performance

System performance and column resolution were acceptable.

2.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

2.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

2.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

All compounds associated with the calibrations were within the specified control limits.

2.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with labeled compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Analysis requires isotope dilution compounds exhibit recoveries within the laboratory-established acceptance limits.

All PCB congeners associated with the labeled compound analysis exhibited recoveries within the control limits.

2.6 Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

2.7 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis was not performed on samples associated with the SDGs# 10698286 and 10698693.

2.8 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the EML. A control limit of 30% for water matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the EML, a control limit of one time the EML is applied for water matrices.

The laboratory duplicate analysis performed on sample Woods Pond Dam exhibited acceptable RPD values.

2.9 Ongoing Precision Result (OPR) / Laboratory Control Sample / Laboratory Control Sample Duplicate Analysis

The ongoing precision result (OPR) / laboratory control sample / laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the accuracy of the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the OPR/LCS/LCSD analysis must exhibit a percent recovery and RPD within the laboratory-established acceptance limits.

All compounds associated with the OPR/LCS/LCSD analysis exhibited recoveries and RPDs within the control limits.

2.10 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the EML, a control limit of two times the EML is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 6. Summary of Field Duplicate Analysis

Note:
AC = Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

2.11 Compound Identification

PCB congeners by 1668C are identified by using the compound's ion abundance ratios, signal-to-noise values, and relative retention times.

All identified compounds met the specified criteria.

2.12 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3 General Chemistry Analyses

3.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 8. Specified Holding Times

Method	Matrix	Holding Time	Preservation
Total Suspended Solids (TSS) by SM 2540D	Water	7 days from collection to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

3.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the reporting limit (RL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were not detected above the RL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3.3 Matrix Spike/Matrix Spike Duplicate / Laboratory Duplicate Analysis

MS/MSD and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

3.3.1 Matrix Spike/Matrix Spike Duplicate Analysis

All analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS/MSD recovery control limits do not apply for MSMSD performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MSMSD concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory flag will be removed.

The MS/MSD analysis was not performed on a sample within this dataset.

3.3.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to five times the RL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate

sample concentrations are less than or equal to five times the RL, a control limit of one time the RL is applied for water matrices and two times the RL for soil matrices.

The laboratory duplicate analysis was not performed on a sample associated within this dataset.

3.4 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 9. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
SDG 10686579 RISING POND DAM_20240626/ HR-D1_20240626	TSS	4.7	3.4	AC

Note:
AC = Acceptable

The results between the parent sample and field duplicate were acceptable.

3.5 Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

All LCS recoveries were within control limits.

3.6 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

3.7 Data Validation Checklist for General Chemistry

Table 10. Data Validation Checklist for General Chemistry

General Chemistry: SM2540D	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
Miscellaneous Instrumentation					
Tier I/II Validation

Notes:
%R = Percent recovery
RPD = Relative percent difference

4 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 11. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0
TSS	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

CB Congener Totals Summary

Method 1668C

Client Sample ID: **Falls Village Dam**
Lab Sample ID: 10698693003
Lab File ID: P240821A_09
Matrix: Water
Percent Solids: N/A
Date Collected: 06/25/2024 12:30
Date Received: 07/02/2024 09:50
Date Extracted: 08/12/2024 14:00
Date Analyzed: 08/21/2024 15:57
Method Blank ID: BLANK-114208
Lab Spike ID(s): LCS-114209/LCSD-114

Prep. Technique: Liquid/Liq
Total Amount Extracted: 1710mL
Dry Weight Extracted: N/A
Extract Volume: 20 uL
Dilution Factor: 1.0
Injection Volume: 1 uL
Injected By: AH5
Instrument ID: 10MSHR09 (P)
GC Column ID: 285759-02
Ical ID: P240821A02
CCal File(s): P240821A_01

Homologue	Concentration (ng/L)	Q
Total MoCB	ND	
Total DiCB	0.087	
Total TrCB	0.069	
Total TeCB	0.98	
Total PeCB	1.2	
Total HxCB	2.4	
Total HpCB	1.5	
Total OcCB	0.33	
Total NoCB	ND	
DeCB	ND	
Total PCBs	6.6

Sample Analysis Summary

Method 1668C

Client Sample ID: **Old Pleasant Street Bridge**
Lab Sample ID: 10698693007
Lab File ID: P240821B_06
Matrix: Water
Percent Solids: N/A
Date Collected: 06/26/2024 14:10
Date Received: 07/02/2024 09:50
Date Extracted: 08/12/2024 14:00
Date Analyzed: 08/22/2024 02:11
Method Blank ID: BLANK-114208
Lab Spike ID(s): LCS-114209/LCSD-114

Prep. Technique: Liquid/Liq
Total Amount Extracted: 1720mL
Dry Weight Extracted: N/A
Extract Volume: 20 uL
Dilution Factor: 1.0
Injection Volume: 1 uL
Injected By: AH5
Instrument ID: 10MSHR09 (P)
GC Column ID: 285759-02
Ical ID: P240821B02
CCal File(s): P240821B_01

CB Congener Totals Summary

Method 1668C

Client Sample ID: **Old Pleasant Street Bridge**
Lab Sample ID: 10698693007
Lab File ID: P240821B_06
Matrix: Water
Percent Solids: N/A
Date Collected: 06/26/2024 14:10
Date Received: 07/02/2024 09:50
Date Extracted: 08/12/2024 14:00
Date Analyzed: 08/22/2024 02:11
Method Blank ID: BLANK-114208
Lab Spike ID(s): LCS-114209/LCSD-114

Prep. Technique: Liquid/Liq
Total Amount Extracted: 1720mL
Dry Weight Extracted: N/A
Extract Volume: 20 uL
Dilution Factor: 1.0
Injection Volume: 1 uL
Injected By: AH5
Instrument ID: 10MSHR09 (P)
GC Column ID: 285759-02
Ical ID: P240821B02
CCal File(s): P240821B_01

Homologue	Concentration (ng/L)	Q
Total MoCB	0.11	
Total DiCB	3.2	
Total TrCB	4.9	
Total TeCB	19	
Total PeCB	12	
Total HxCB	19	
Total HpCB	11	
Total OcCB	2.7	
Total NoCB	0.16	
DeCB	ND	
Total PCBs	72

Sample Analysis Summary

Method 1668C

Client Sample ID: **New Lenox Rd Bridge**
Lab Sample ID: 10698693010
Lab File ID: P240821B_09
Matrix: Water
Percent Solids: N/A
Date Collected: 06/26/2024 17:00
Date Received: 07/02/2024 09:50
Date Extracted: 08/12/2024 14:00
Date Analyzed: 08/22/2024 05:15
Method Blank ID: BLANK-114208
Lab Spike ID(s): LCS-114209/LCSD-114

Prep. Technique: Liquid/Liq
Total Amount Extracted: 1730mL
Dry Weight Extracted: N/A
Extract Volume: 20 uL
Dilution Factor: 1.0
Injection Volume: 1 uL
Injected By: AH5
Instrument ID: 10MSHR09 (P)
GC Column ID: 285759-02
Ical ID: P240821B02
CCal File(s): P240821B_01

Sample Analysis Summary

Method 1668C

Client Sample ID: **Near Pittsfield WWTP**
Lab Sample ID: 10698693011
Lab File ID: P240821B_10
Matrix: Water
Percent Solids: N/A
Date Collected: 06/27/2024 15:00
Date Received: 07/02/2024 09:50
Date Extracted: 08/12/2024 14:00
Date Analyzed: 08/22/2024 06:17
Method Blank ID: BLANK-114208
Lab Spike ID(s): LCS-114209/LCSD-114

Prep. Technique: Liquid/Liq
Total Amount Extracted: 1740mL
Dry Weight Extracted: N/A
Extract Volume: 20 uL
Dilution Factor: 1.0
Injection Volume: 1 uL
Injected By: AH5
Instrument ID: 10MSHR09 (P)
GC Column ID: 285759-02
Ical ID: P240821B02

CB Congener Labeled Analyte Summary

Method 1668C

Client Sample ID: **Pomeray Avenue Bridge**
Lab Sample ID: 10698693012
Lab File ID: P240821B_11
Matrix: Water
Percent Solids: N/A
Date Collected: 06/27/2024 18:30
Date Received: 07/02/2024 09:50
Date Extracted: 08/12/2024 14:00
Date Analyzed: 08/22/2024 07:18
Method Blank ID: BLANK-114208
Lab Spike ID(s): LCS-114209/LCSD-114210

Prep. Technique: Liquid/Liq
Total Amount Extracted: 1790mL
Dry Weight Extracted: N/A
Extract Volume: 20 uL
Dilution Factor: 1.0
Injection Volume: 1 uL
Injected By: AH5
Instrument ID: 10MSHR09 (P)
GC Column ID: 285759-02
Ical ID: P240821B02
CCal File(s): P240821B_01

Sample Analysis Summary

Method 1668C

Client Sample ID: **HR-EB1**
Lab Sample ID: 10698693013
Lab File ID: P240821B_12
Matrix: Water
Percent Solids: N/A
Date Collected: 06/25/2024 08:30
Date Received: 07/02/2024 09:50
Date Extracted: 08/12/2024 14:00
Date Analyzed: 08/22/2024 08:19
Method Blank ID: BLANK-114208
Lab Spike ID(s): LCS-114209/LCSD-114

Prep. Technique: Liquid/Liq
Total Amount Extracted: 1830mL
Dry Weight Extracted: N/A
Extract Volume: 20 uL
Dilution Factor: 1.0
Injection Volume: 1 uL
Injected By: AH5
Instrument ID: 10MSHR09 (P)
GC Column ID: 285759-02
Ical ID: P240821B02
CCal File(s): P240821B_01
