Table B-1
Individual Congener PCB Results

Baseline Monitoring Program: Data Summary Report for 2024
Housatonic River - Rest of River

Notes

ng/L = nanogram per liter

Field duplicate sample results are presented in brackets.

U = Indicates the compound was not detected above the reported sample quantitation limit.

J = Indicates the compound was positively identified; however, the associated numerical value is an estimated concentration only.

UX = The result is an estimated maximum possible concentration (EMPC).

Table B-2
PCB Congener Analytical Results from Split Samples Collected by GE and EPA

Baseline Monitoring Program: Data Summary Report for 2024
Housatonic River - Rest of River

Notes:
ng/L = nanogram per liter
NA = Not Analyzed
Field duplicate sample results are presented in brackets.
U = Indicates the compound was not detected above the reported sample quantitation limit.
J = Indicates the compound was positively identified; however, the associated numerical value is an estimated concentration only.
J+ = Indicates the compound was positively identified; however, the associated numerical value is an estimated concentration that is estimated high.
UJ = The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

ANCHOR QEA

Data Validation Report – EPA Stage 2A

August 22, 2025

Project: Housatonic Baseline Monitoring

Project Number: 230469-07.01

Validation ID: AQ-2024-0123

This report summarizes the review of analytical results for 88 fish tissue samples collected between September 11 and September 12, 2024. The samples were collected by Anchor QEA and submitted to Pace Analytical Services (Pace) in Green Bay, Wisconsin. The samples were analyzed for the following parameters:

- Polychlorinated biphenyls (PCBs) by U.S. Environmental Protection Agency (USEPA) method 8082A
- Lipids by Pace SOP analytical method ENVSOPGBAY0090-00

Pace sample delivery groups (SDG) 40284096, 40284097, and 40284098 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by Pace at the time of sample receipt; the samples were received in good condition.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within holding times with the following exceptions. 68 lipid results were analyzed out of the project-required holding time limit. The detected results were qualified "J" as estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with the exceptions of the lipids method blanks detected in analytical batches 498785, 498918, 499036, and 499257. Detected sample results that were not significantly greater (five times) than the concentration in the blank were qualified with "J" as potential high bias.

Field Quality Control

No field quality control samples were collected in associated with this SDG.

Surrogate Recoveries

Surrogates recovered within project-required control limits with several exceptions. Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits in these instances.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequencies and resulted in recoveries within project-required control limits.

Matrix Spike Samples

Matrix spike (MS) samples and matrix spike duplicate (MSD) samples were analyzed at the required frequencies. Sample results that are non-detect (ND) that have high MS and/or MSD recoveries were not qualified for high bias. Samples results that are 5X or greater than the spike amount were not qualified. Otherwise, recovery values and relative percent differences (RPDs) were within project-required control limits.

Laboratory Duplicates

Laboratory duplicates were analyzed for lipids at the required frequency. Recovery values were within project-required control limits with the following exception. In SDG 40284096, sample HBMP-R06-01BB-01-ADLT-240911 laboratory duplicate for lipids was above the project-required control limit. The sample result was qualified "J" as estimated.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the LCS and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the laboratory duplicate RPD values and MS/MSD RPD values, with exceptions noted above. Most data are acceptable as reported or qualified. Completeness was 100% and completeness goals were met. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

Data Validation Report – EPA Stage 2A

August 25, 2025

Project: Housatonic Baseline Monitoring

Project Number: 230469-07.01

Validation ID: AQ-2024-0124

This report summarizes the review of analytical results for 78 fish tissue samples collected between September 13, 2024. The samples were collected by Anchor QEA and submitted to Pace Analytical Services (Pace) in Green Bay, Wisconsin. The samples were analyzed for the following parameters:

- Polychlorinated biphenyls (PCBs) by U.S. Environmental Protection Agency (USEPA) method 8082A
- Lipids by Pace SOP analytical method ENVSOPGBAY0090-00

Pace sample delivery groups (SDG) 40284193, and 40284194 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by Pace at the time of sample receipt; the samples were received in good condition.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within holding times with the following exceptions: All lipid results were analyzed out of the project-required holding time limit. The detected results were qualified "J" as estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with the exceptions of the lipids method blanks detected in analytical batches 500254, 500372, and 500378. Detected sample results that were not significantly greater (five times) than the concentration in the method blank were qualified with "J" as potential high bias.

Field Quality Control

No field quality control samples were collected in associated with this SDG.

Surrogate Recoveries

Surrogates recovered within project-required control limits with several exceptions. Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits in these instances. When surrogates recovered above the control limit and sample results were not detected, no data were qualified. Surrogates recovered outside of control limits in some laboratory QC samples, however; data are not qualified for surrogate outliers in QC samples alone or when outlying surrogates are associated with the non-reporting column. Surrogate recoveries were otherwise within control limits except for the decachlorobiphenyl (DCB) surrogate recovering below LCL and the Tetrachloro-m-xylene (TMX) surrogate recovering above UCL for the following samples:

Table 2
Surrogate Recovery Summary

sys_sample_code	Lab Sample ID	SDG	Method	Surrogate Name	DF	%R	LCL	UCL

Notes:
DF= Dilution Factor
%R= Percent Recovery
LCL= Lower Control Limit
UCL= Upper Control Limit

The associated detected sample results were qualified "J" as estimated when detected, or "UJ" to indicate they are non-detect results and/or are estimates.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequencies and resulted in recoveries within project-required control limits.

Matrix Spike Samples

Matrix spike (MS) samples and matrix spike duplicate (MSD) samples were analyzed at the required frequencies. Recovery values and relative percent differences (RPDs) were within project-required control limits.

Laboratory Duplicates

Laboratory duplicates were analyzed for lipids at the required frequency. Recovery values were within project-required control limits.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the LCS and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the laboratory duplicate RPD values and MS/MSD RPD values, with exceptions noted above. Most data are acceptable as reported or qualified. Completeness was 100% and completeness goals were met. Table 3 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

ANCHOR QEA

Data Validation Report – EPA Stage 2A

August 26, 2025

Project: Housatonic Baseline Monitoring

Project Number: 230469-07.01

Validation ID: AQ-2024-0125

This report summarizes the review of analytical results for 51 fish tissue samples collected between September 13, 2024. The samples were collected by Anchor QEA and submitted to Pace Analytical Services (Pace) in Green Bay, Wisconsin. The samples were analyzed for the following parameters:

- Polychlorinated biphenyls (PCBs) by U.S. Environmental Protection Agency (USEPA) method 8082A
- Lipids by Pace SOP analytical method ENVSOPGBAY0090-00

Pace sample delivery groups (SDG) 40284195, and 40284196 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by Pace at the time of sample receipt; the samples were received in good condition.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within holding times with the following exceptions. Most lipid results were analyzed out of the project-required holding time limit. The detected results were qualified "J" as estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with the exceptions of the lipids method blanks detected in analytical batches 500161 and 500490. Detected sample results that were not significantly greater (five times) than the concentration in the blank were qualified with "J" as potential high bias.

Field Quality Control

No field quality control samples were collected in associated with this SDG.

Surrogate Recoveries

Surrogates recovered within project-required control limits with several exceptions. Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits in these instances. When surrogates recovered above the control limit and sample results were not detected, no data were qualified. Surrogates recovered outside of control limits in some laboratory QC samples, however; data are not qualified for surrogate outliers in QC samples alone or when outlying surrogates are associated with the non-reporting column. Surrogate recoveries were otherwise within control limits except for the decachlorobiphenyl (DCB) surrogate recovering below LCL in SDG 40284195, sample HBMP-R14-01YP-06-ADLT-240913 (75%). The associated detected sample results were qualified "J" as estimated when detected, or "UJ" to indicate they are non-detect results and/or are estimates.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequencies and resulted in recoveries within project-required control limits with the following exception. The LCS recovered above the control limit for Aroclor 1254 for prep batch 500172. Associated detected PCB results were qualified "J" to indicate a potential high bias.

Matrix Spike Samples

Matrix spike (MS) samples and matrix spike duplicate (MSD) samples were analyzed at the required frequencies. Recovery values and relative percent differences (RPDS) were within project-required control limits.

Laboratory Duplicates

Laboratory duplicates were analyzed for lipids at the required frequency. Recovery values were within project-required control limits.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the LCS and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the laboratory duplicate RPD values and MS/MSD RPD values, with exceptions noted above. Most data are acceptable as reported or qualified. Completeness was 100% and completeness goals were met. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

ANCHOR QEA

Data Validation Report – EPA Stage 2A

August 26, 2025

Project: Housatonic Baseline Monitoring

Project Number: 230469-07.01

Validation ID: AQ-2024-0126

This report summarizes the review of analytical results for 84 fish tissue samples collected between September 11, 2024 through September 18, 2024. The samples were collected by Anchor QEA and submitted to Pace Analytical Services (Pace) in Green Bay, Wisconsin. The samples were analyzed for the following parameters:

- Polychlorinated biphenyls (PCBs) by U.S. Environmental Protection Agency (USEPA) method 8082A
- Lipids by Pace SOP analytical method ENVSOPGBAY0090-00

Pace sample delivery groups (SDG) 40284200, 40284225, 40284227 and 40284229 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by Pace at the time of sample receipt; the samples were received in good condition.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within holding times with the following exceptions: All lipid results were analyzed out of the project-required holding time limit. The detected results were qualified "J" as estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with the exceptions of the lipids method blanks detected in analytical batches 500623, 500632, 500773, 500793 and 501010. Detected sample results that were not significantly greater (five times) than the concentration in the blank were qualified with "J" as potential high bias.

Field Quality Control

No field quality control samples were collected in associated with this SDG.

Surrogate Recoveries

Surrogates recovered within project-required control limits with several exceptions. Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits in these instances. When surrogates recovered above the control limit and sample results were not detected, no data were qualified. Surrogates recovered outside of control limits in some laboratory QC samples, however; data are not qualified for surrogate outliers in QC samples alone or when outlying surrogates are associated with the non-reporting column. Surrogate recoveries were otherwise within control limits except for the decachlorobiphenyl (DCB) surrogate recovering below LCL and the Tetrachloro-m-xylene (TMX) surrogate recovering above UCL for the following samples:

Table 2
Surrogate Recovery Summary

sys_sample_code	Lab Sample ID	SDG	Method	Surrogate Name	DF	%R	LCL	UCL
HBMP-R12-01BB-01-ADLT-240917	40284427001	40284427	SW8082A	DCB	1	75	78	120

HBMP-R12-01YP-06-ADLT-240917	40284427016	40284427	SW8082A	DCB	1	75	78	120
HBMP-R16-01YP-07-ADLT-240918	40284425027	40284425	SW8082A	DCB	1	75	78	120
HBMP-R16-01YP-08-ADLT-240918	40284425028	40284425	SW8082A	DCB	1	76	78	120
HBMP-R16-01YP-09-ADLT-240918	40284425029	40284425	SW8082A	DCB	1	73	78	120

Notes:
DF= Dilution Factor
%R= Percent Recovery
LCL= Lower Control Limit
UCL= Upper Control Limit

The associated detected sample results were qualified "J" as estimated when detected, or "UJ" to indicate they are non-detect results and/or are estimates.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequencies and resulted in recoveries within project-required control limit.

Matrix Spike Samples

Matrix spike (MS) samples and matrix spike duplicate (MSD) samples were analyzed at the required frequencies. Results that are non-detect (ND) and had high MS/MSD recoveries (high bias) were not qualified. Recovery values and relative percent differences (RPDs) were within project-required control limits with the following exceptions:

- The MS/MSD recovered below the control limit for Aroclor 1254 for sample HBMP-R06-01LB-05-ADLT-240911. Associated PCB results were qualified "R" as rejected result due to recovery below the rejection limit.

Laboratory Duplicates

Laboratory duplicates were analyzed for lipids at the required frequency. Recovery values were within project-required control limits.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the LCS and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the laboratory duplicate RPD values and MS/MSD RPD values, with exceptions noted above. Most data are acceptable as reported or qualified. Completeness was greater than 99% and completeness goals were met. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

R Indicates result is rejected and unusable

Data Validation Report – EPA Stage 2A

August 27, 2025

Project: Housatonic Baseline Monitoring

Project Number: 230469-07.01

Validation ID: AQ-2024-0127

This report summarizes the review of analytical results for 44 fish tissue samples collected between September 19, 2024. The samples were collected by Anchor QEA and submitted to Pace Analytical Services (Pace) in Green Bay, Wisconsin. The samples were analyzed for the following parameters:

- Polychlorinated biphenyls (PCBs) by U.S. Environmental Protection Agency (USEPA) method 8082A
- Lipids by Pace SOP analytical method ENVSOPGBAY0090-00

Pace sample delivery groups (SDG) 40284966, 40284969 and 40284970 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by Pace at the time of sample receipt; the samples were received in good condition.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within holding times with the following exceptions. All lipid results were analyzed out of the project-required holding time limit. The detected results were qualified "J" as estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with the exceptions of the lipids method blanks detected in analytical batches 500906, 501010, 501020, and 500793. Detected sample results that were not significantly greater (five times) than the concentration in the blank were qualified with "J" as potential high bias.

Field Quality Control

No field quality control samples were collected in associated with this SDG.

Surrogate Recoveries

Surrogates recovered within project-required control limits with several exceptions. Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits in these instances. When surrogates recovered above the control limit and sample results were not detected, no data were qualified. Surrogates recovered outside of control limits in some laboratory QC samples, however; data are not qualified for surrogate outliers in QC samples alone or when outlying surrogates are associated with the non-reporting column. Surrogate recoveries were otherwise within control limits. The associated detected sample results were qualified "J" as estimated when detected, or "UJ" to indicate they are non-detect results and/or are estimates.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequencies and resulted in recoveries within project-required control limit.

Matrix Spike Samples

Matrix spike (MS) samples and matrix spike duplicate (MSD) samples were analyzed at the required frequencies. Recovery values and relative percent differences (RPDs) were within project-required control limits.

Laboratory Duplicates

Laboratory duplicates were analyzed for lipids at the required frequency. Recovery values were within project-required control limits.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the LCS and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the laboratory duplicate RPD values and MS/MSD RPD values, with exceptions noted above. Most data are acceptable as reported or qualified. Completeness was 100% and completeness goals were met. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

Data Validation Report – EPA Stage 2A

September 3, 2025

Project: Housatonic Baseline Monitoring

Project Number: 190469-01.03

Validation ID: AQ-2025-0133

This report summarizes the review of analytical results for 169 fish tissue samples collected between September 10, 2024 and January 02, 2025. The samples were collected by Anchor QEA and submitted to Pace Analytical Services (Pace) in Green Bay, Wisconsin. The samples were analyzed for the following parameters:

- Polychlorinated biphenyls (PCBs) by U.S. Environmental Protection Agency (USEPA) method 8082A
- Lipids by Pace Standard Operating Procedure (SOP) ENVSOPGBAY0090-00

Pace sample delivery groups (SDGs) 40285236, 40285237, 40285238, 40287220, 40289411, 40284099, and 40284428 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by Pace at the time of sample receipt; the samples were received in good condition and frozen at the time of receipt.

Sample Preservation and Hold time

Samples were appropriately preserved and analyzed within project specified hold times except for lipids in 103 samples. Associated results were qualified "J" to indicate a low bias.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with the following exceptions:

- Conventionals: Lipids were detected all method blanks in the preparation batches. Detected sample results that were not significantly greater (five times) than the concentration in the blank were qualified "J" to indicate potential high bias.

- PCBs: Aroclor 1260 were detected method blanks in batches 501604 and 501612. All associated batch sample results were greater than five times concentrations detected in the blanks so no data were qualified.

Field Quality Control

No field quality control samples were collected in association with this SDG.

Surrogate Recoveries

Surrogate recoveries were not evaluated for samples analyzed at dilutions of 5 or greater since accurate quantification is not possible at elevated dilutions. Surrogates recovered within project-required control limits except for decachlorobiphenyl, which recovered below the project required control limit in sample HBMP-R12-01WS-03-ADLT-250102. Associated sample results were qualified "J" or "UJ" to indicate a low bias.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequencies and resulted in recoveries within project-required control limits.

Matrix Spike Samples

Matrix spike (MS) samples and matrix spike duplicate (MSD) samples were analyzed at the required frequencies. Recovery values and relative percent differences (RPDs) were within project-required control limits.

Laboratory Duplicates

Laboratory duplicates were analyzed for lipids at the required frequency. RPDs were within project-required control limits.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the LCS and MS/MSD recovery values. Precision was acceptable as demonstrated by the laboratory duplicate and MS/MSD RPD values. All data are acceptable as reported or qualified. Completeness goals were met. Table 3 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

ANCHOR QEA

Data Validation Report – EPA Stage 2A

September 5, 2025

Project: Housatonic Baseline Monitoring

Project Number: 190469-01.03

Validation ID: AQ-2025-0135

This report summarizes the review of analytical results for 49 fish tissue samples collected between September 13, 2024, and January 02, 2025. The samples were collected by Anchor QEA and submitted to SGS North America (SGS) in Wilmington, North Carolina. The samples were analyzed for polychlorinated biphenyl congeners (PCBs) by U.S. Environmental Protection Agency (USEPA) method 1668C.

SGS sample delivery groups (SDGs) C1718, C1719, and C1720 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Table 1
Sample IDs, Matrices, and Analyses

Sample ID	Lab Sample ID	Matrix	Analyses

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by SGS at the time of sample receipt; the samples were received in good condition and frozen at the time of receipt.

Sample Preservation and Hold time

Samples were appropriately preserved and analyzed within project specified hold times.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with some exceptions. Almost all sample results were significantly greater than (greater than five times) the level detected in the blank so only PCB-011 was qualified "U" as non-detect in 22 samples. A summary of qualifiers is listed in Table 2.

Field Quality Control

No field quality control samples were collected in association with this SDG.

Surrogate and Internal Standard Recoveries

Surrogates and internal standards (IS) were added to all samples at the required frequency. Surrogate recoveries were not evaluated for samples analyzed at dilutions of 5 or greater since accurate quantification is not possible at elevated dilutions. Surrogates recovered within project-required control limits. Internal standards recovered within laboratory control limits except for the extraction standard for 13C-PCB-180 in twelve samples and 13C-PCB-170 and 13C-PCB-189 in sample HBMP-R15-01BB-03-ADLT-240913 which were above the control limit. Associated congener and co-eluting congeners were qualified "J" to indicate a high bias.

Ongoing Precision and Recovery

Ongoing precision and recovery (OPR) samples were analyzed at the required frequency. All OPR recoveries were within method control limits with the exception of PCB-169 in OPR batch 22260 which recovered below the control limit. Associated batch sample results were qualified "J" to indicate a low bias.

Matrix Spike and Matrix Spike Duplicate Samples

Matrix spike samples were not analyzed for these samples since this is an isotope dilution method and labeled compounds were added to every sample.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequency against a 30% RPD as the control limit. When one result was less than five times the RL, they were evaluated by the difference between them using a control limit of ± twice the RL. Laboratory duplicate RPD or difference values were within project-required control limits except for 4 PCB congeners in samples HBMP-R06-01WS-05-ADLT-250143 and HBMP-R11-01SB-02-ADLT-240917, and 126 congeners in sample HBMP-R11-01SB-02-ADLT-240917. Associated parent sample results were qualified "UJ" or "J" to indicate they are estimated.

Estimated Maximum Possible Concentration

Results indicated as estimated maximum possible concentration (EMPC) have been qualified "J" to indicate they are estimated.

Compound Quantitation

All samples in C1718 and C1719 were analyzed at an initial dilution of 10X due to expected elevated concentrations of target analytes. The laboratory indicated that some samples had PCB concentrations that exceeded the linear range of calibration or saturated signal responses indicating high levels of target analytes. Associated samples were qualified "J" to indicate results may be biased low.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the OPR recovery values and precision was acceptable as demonstrated by the laboratory duplicate RPD values with exceptions noted above. All data are acceptable as reported or qualified. Completeness goals were met at greater than 99%. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

Table 2
Data Qualification Summary

Sample ID	Parameter	Analyte	Reported Result	Qualified Result	Reason
All Samples	PCBs	Various	Various	J	EMPC

Data Validation Report – EPA Stage 2A

September 9, 2025

Project: Housatonic Baseline Monitoring

Project Number: 190469-01.03

Validation ID: AQ-2025-0136

This report summarizes the review of analytical results for 56 fish tissue samples collected between September 10, 2024, and January 02, 2025. The samples were collected by Anchor QEA and submitted to SGS North America (SGS) in Wilmington, North Carolina. The samples were analyzed for polychlorinated biphenyl congeners (PCBs) by U.S. Environmental Protection Agency (USEPA) method 1668C.

SGS sample delivery groups (SDGs) C1738, C1739, and C1740 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Table 1

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by SGS at the time of sample receipt; the samples were received in good condition and frozen at the time of receipt.

Sample Preservation and Hold time

Samples were appropriately preserved and analyzed within project specified hold times.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with some exceptions. Almost all sample results were significantly greater than (greater than five times) the level detected in the blank so only PCB-011 was qualified "U" as non-detect in 37 samples. A summary of qualifiers is listed in Table 2.

Field Quality Control

No field quality control samples were collected in association with this SDG.

Surrogate and Internal Standard Recoveries

Surrogates and internal standards (IS) were added to all samples at the required frequency. Surrogate recoveries were not evaluated for samples analyzed at dilutions of 5 or greater since accurate quantification is not possible at elevated dilutions. Surrogates recovered within project-required control limits except for PCB-111-C13 in sample HBMP-R06-01LB-01-YOY-240911 which recovered above the control limit. The associated result was qualified "J" to indicate high bias. Internal standards recovered within laboratory control limits except for 27 extraction standards in 15

samples which were above the control limit. Associated congener and co-eluting congeners were qualified "J" to indicate a high bias.

Ongoing Precision and Recovery

Ongoing precision and recovery (OPR) samples were analyzed at the required frequency. All OPR recoveries were within method control limits except for PCB-169 in OPR batch 22267 which recovered above the control limit. One associated batch sample result was non-detect so results were not impacted.

Matrix Spike and Matrix Spike Duplicate Samples

Matrix spike samples were not analyzed for these samples since this is an isotope dilution method and labeled compounds were added to every sample.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequency against a 30% RPD as the control limit. When one result was less than five times the RL, they were evaluated by the difference between them using a control limit of ±2x RL. Laboratory duplicate RPD or difference values were within project-required control limits except for nine PCB congeners in sample HBMP-R05C-01LB-02-ADLT-240910, three congeners in HBMP-R05C-01WS-05-ADLT-250102 and 11 congeners for HBMP-R15-01NP-08-ADLT-240913. Associated parent sample results were qualified "UJ" or "J" to indicate they are estimated.

Estimated Maximum Possible Concentration

Results indicated as estimated maximum possible concentration (EMPC) have been qualified "J" to indicate they are estimated.

Compound Quantitation

Samples were analyzed at an initial dilution of 5X or 10X due to expected elevated concentrations of target analytes. The laboratory indicated that some samples had PCB concentrations that exceeded the linear range of calibration or saturated signal responses indicating high levels of target analytes. Associated samples were qualified "J" to indicate results may be biased low.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting

limit were reported to the MDLs as estimated values. Values were reported as undiluted or when diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the OPR recovery values and precision was acceptable as demonstrated by the laboratory duplicate RPD values with exceptions noted above. All data are acceptable as reported or qualified. Completeness goals were met at greater than 99%. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

Table 2
Data Qualification Summary

Sample ID	Parameter	Analyte	Reported Result	Qualified Result	Reason
All Samples	PCBs	Various	Various	J	EMPC
All Samples	PCBs	Various	Various	J	Linear range exceeded

ANCHOR QEA

Data Validation Report – EPA Stage 2A

October 7, 2025

Project: Housatonic Baseline Monitoring

Project Number: 190469-01.03

Validation ID: AQ-2025-0146

This report summarizes the review of analytical results for 26 fish tissue samples collected between September 11, 2024 and October 02, 2024. The samples were collected by Anchor QEA and submitted to SGS North America (SGS) in Wilmington, North Carolina. The samples were analyzed for polychlorinated biphenyl congeners (PCBs) by U.S. Environmental Protection Agency (USEPA) method 1668C.

SGS sample delivery groups (SDGs) C1856, and C1857 were reviewed in this report. Sample IDs and analyses are presented in Table 1.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Arcadis Quality Assurance Project Plan (QAPP; GE-Pittsfield/Housatonic River Site (GECD900) Second Revised Field Sampling Plan/Quality Assurance Project Plan 2023)
- *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (SW-846, Third Edition; USEPA 1986)
- *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a)
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by SGS at the time of sample receipt; the samples were received in good condition and frozen at the time of receipt.

Sample Preservation and Hold time

Samples were appropriately preserved and analyzed within project specified hold times.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes with some exceptions. Almost all sample results were significantly greater than (greater than five times) the level detected in the blank so only PCB-011 was qualified "U" as non-detect in 20 samples. A summary of qualifiers is listed in Table 2.

Field Quality Control

No field quality control samples were collected in association with this SDG.

Surrogate and Internal Standard Recoveries

Surrogates and internal standards (IS) were added to all samples at the required frequency. Surrogate recoveries were not evaluated for samples analyzed at dilutions of 5 or greater since accurate quantification is not possible at elevated dilutions. Surrogates recovered within project-required control limits.

Internal standards recovered within laboratory control limits except for 8 extraction standards in 7 samples which were above the control limit. Associated congener and co-eluting congeners were qualified "J" to indicate a high bias.

Ongoing Precision and Recovery

Ongoing precision and recovery (OPR) samples were analyzed at the required frequency. All OPR recoveries were within method control limits.

Matrix Spike and Matrix Spike Duplicate Samples

Matrix spike samples were not analyzed for these samples since this is an isotope dilution method and labeled compounds were added to every sample.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequency against a 30% RPD as the control limit. When one result was less than five times the RL, they were evaluated by the difference between them using a control limit of ± twice the RL. Laboratory duplicate RPD or difference values were within project-required control limits except for ten PCB congeners in samples HBMP-R05A-01LB-04-ADLT-240911, and HBMP-R14-01NP-01-ADLT-240913. Associated parent sample results were qualified "UJ" or "J" to indicate they are estimated.

Estimated Maximum Possible Concentration

Results indicated as estimated maximum possible concentration (EMPC) have been qualified "J" to indicate they are estimated.

Compound Quantitation

All samples in C1856 and C1857 were analyzed at an initial dilution of 10X due to expected elevated concentrations of target analytes. The laboratory indicated that some samples had PCB concentrations that exceeded the linear range of calibration or saturated signal responses indicating high levels of target analytes. Associated samples were qualified "J" to indicate results may be biased low.

Method Detection and Reporting Limits

Detection and reporting limits were acceptable as reported and all screening levels were met. All values were reported using the laboratory detection limits and results detected below the reporting limit were reported to the MDLs as estimated values. Values were reported as diluted, the detection and reporting limits reflect the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the OPR recovery values and precision was acceptable as demonstrated by the laboratory duplicate RPD values with exceptions noted above. All data are acceptable as reported or qualified. Completeness goals were met at greater than 99%. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

Table 2
Data Qualification Summary

Sample ID	Parameter	Analyte	Reported Result	Qualified Result	Reason
All Samples	PCBs	Various	Various	J	EMPC

LEGEND:

- Reach Boundaries
- River Access Locations[2]
- Biota Consumption Advisory Sign Locations

Systematic Sampling

- 5 Sediment Samples per Transect

Random Sampling [1]

- 5 Sediment Samples per Transect

NOTES:

1. A portion, as agreed upon by EPA, of the Random Transect Locations were visited during the July 2024 reconnaissance trip to confirm location and availability of soft sediment for collection.
2. River access locations identified during reconnaissance trip spring 2024.
3. Imagery from MassGIS 2023 and UConn 2019.

Sediment Sampling Locations

Reach	Random Transect ID	Primary or Backup	Selected for Final Sampling Transect?	Probe Penetration Depth	Water Depth	Substrate Type	Recon Access Type	Notes
7A	P01	Primary	No	—	3'	Cobble, rock, little to no fine sediment	Boat	—
7A	P02	Primary	No	2-3"	2'	Cobble, gravel, rock, little fine sediment between rocks	Boat	Check to relocate ~100' downstream (the substrate type for the location 100' downstream is fine sediment between cobbles)
7A	B01	Backup	Yes	6" on east side, 2-3" in middle	3' in middle	Coarse sand, gravel, cobble	Boat	Potentially two sampling points, gravel/sand bar on east side and cobble on west side
7A	B02	Backup	Yes	6" on east side, 1-2" in middle	4-5'	Coarse sand, gravel, cobble	Boat	Potentially two sampling points, coarse sand/gravel bar on east side and cobble on west side
7A	P03	Primary	Yes	—	3-4'	Coarse sand, gravel, cobble	Boat	Potentially two sampling points, coarse sand/gravel on edges and cobble in middle
7A	P04	Primary	Yes	—	—	Silt, fine sand	Boat	Potentially two sampling points, silt and fine sand on west bank extending out to middle
7A	B03	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
7D	B01	Backup	No	N/A	N/A	No sediment, cobbles, gravel, rock	Shoreline	Low clear water—able to visually recon from bank
7D	B02	Backup	No	N/A	N/A	Cobbles, gravel, no sediment	Shoreline	Low clear water—able to visually recon from bank
7D	P01	Primary	Yes	6"	—	Medium/coarse sand, gravel, and cobbles	Wading	Potentially two sampling points, sediment was probed on the southern tip of the island behind the ballfield off Route 7, cobbles and gravel in west channel
7D	B03	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
7D	P02	Primary	Yes	N/A	N/A	N/A	N/A	Did not visit this location during recon
7D	B04	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
7D	B05	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon

9	B11	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
9	P04	Primary	Yes	N/A	N/A	N/A	N/A	Did not visit this location during recon
10	P01	Primary	Yes	N/A	N/A	Fine sediment	Shoreline	Minimal flow, fine sediment observed on banks and nearshore areas, good sampling target
10	B01	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
10	P02	Primary	Yes	2' to the west and 4' to the east	2'	Fine sediment	Boat	18"-2' of fine sediment in the west, too deep to probe in the middle, 4' fine sediment in the east

Sediment Sampling Locations

Reach	Random Transect ID	Primary or Backup	Selected for Final Sampling Transect?	Probe Penetration Depth	Water Depth	Substrate Type	Recon Access Type	Notes
10	P03	Primary	Yes	36" to the east, no probing in the middle, 36" to the west	1' to the west and to the east	Fine sediment	Boat	—
10	B02	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
11	P01	Primary	No	24" to the west, 1" in the middle	1' to the west, 5' in the middle, 2' to the east	Fine sand, silt, coarse sand, gravel, cobbles	Boat	Potentially one sampling point, fine sand and silt to the west, coarse sand/gravel/cobbles in the middle, no probing in the east due to hard bottom
			Yes	36" to the west, no probing in the middle, 18" to the east	2' to the east and west	Fine sediment		Relocated ~200' downstream of first sampling location, too deep to probe in the middle, fine sand in the east and west
11	P02	Primary	Yes	12" to the west, no probing in the middle, 8" to the east	3' to the west and 1' to the east	Coarse sand, gravel, silt, fine/medium sand	Boat	Too deep to probe in the middle
11	P03	Primary	Yes	2" to the west, 3" in the middle, and 3" to the east	2' to the west, 12-18" in the middle, 2' to the east	Coarse sand/gravel, cobble, fine sand	Wading	Coarse sand/gravel and fine sand to the west, mostly cobble and gravel, with little fine sand in the middle, fine sand/gravel and cobble to the east
12	B01	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
12	P01	Primary	No	1"	1'	Cobble, gravel, traces of coarse sand	Boat	—
12	B02	Backup	No	1"	1'	Cobble, boulders, little coarse sand/gravel	Boat	—
12	P02	Primary	No	6" to the east, 1-2" in the middle	6-12" in the east, 6" in the middle	Fine sediment, coarse sand and gravel, some cobble	Boat	Potentially 1-2 sampling points on transect. Fine sediment with narrow deposits of sediment in the east, coarse sediment and gravel, with some cobble in the middle, no sediment in the west
12	B03	Backup	Yes	6-8" to the west and in the middle, 0.5" to the east	6" to west	Fine sand and silt, some gravel, coarse sand, cobble	Boat	Sediment deposit below island, middle (fine sand and silt), west (coarse sand, some silt, little gravel), east (cobble with trace coarse sand), no water depth recorded to the east and in the middle
12	NewLoc	New Location	Yes	6-12"	—	Sand, silt and some cobble	Wading	New location in R12 just upstream of the Kent School and near a back channel area (to the east), 6-12" of soft sediment
13	B01	Backup	Yes	3-4" to the west, 1-2" in the middle, 3" to the east	4' to the west, 3" to the east	Coarse sand/gravel, fine sand	Boat	Potentially 2 or 3 sampling points, no water depth recorded in the middle
13	P01	Primary	No	N/A	N/A	Cobble, gravel	Shoreline	Observed from shore - low water
13	P02	Primary	Yes	2" to the west, 6" in the middle, 3" to the east	3' to the west, 5' in the middle, 1' to the east	Fine sand, coarse sand/gravel, cobble	Boat	Middle (fine sand), east (coarse sand and gravel), west (coarse sand/gravel among cobble)
13	B02	Backup	No	3" to the west, 1-2" in the middle, 3" to the east	3' to the west, 5' in the middle, 4' to the east	Fine sand, coarse sand/gravel, cobble	Boat	West (fine sand), middle (coarse sand and gravel), east (coarse sand, gravel, and cobble)

Sediment Sampling Locations

Reach	Random Transect ID	Primary or Backup	Selected for Final Sampling Transect?	Probe Penetration Depth	Water Depth	Substrate Type	Recon Access Type	Notes
13	B03	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
14	P01	Primary	Yes	N/A	N/A	—	Shoreline	Observed from West Cove Marina shoreline. Vegetation and slow moving waters indicative of depositional environment.
14	B01	Backup	Yes	N/A	N/A	—	Shoreline	Observed from Lovers Leap State Park, slow moving waters with vegetation observed indicative of depositional environment.
14	B02	Backup	No	N/A	N/A	—	Shoreline	Observed B01 from Lovers Leap observation point. More vegetation with slow moving waters.
14	P02	Primary	Yes	N/A	N/A	—	Shoreline	Slackwater/vegetation, indicative of depositional environment
14	P03	Primary	No	—	—	—	—	Could not access from back due to private residence
14	B03	Backup	Yes	N/A	N/A	Sandy	Shoreline	Sand sediment observed from the shoreline with calm water conditions
14	P04	Primary	No	—	—	—	—	Not accessible for shoreline recon
15	P01	Primary	No	N/A	N/A	Coarse sand, gravel	Shoreline	Observed from eastern shoreline, coarse sand/gravel near shore, vegetation observed on the western shoreline
15	B01	Backup	No	N/A	N/A	Fine sand/silt	Shoreline	Observed from I-84 bridge—could see soft sediment present
15	B02	Backup	No	N/A	N/A	N/A	N/A	Did not visit this location during recon
15	P02	Primary	Yes	N/A	N/A	Fine sand/silt	Shoreline	Observed soft sediment and vegetation from the shoreline beach
15	B03	Backup	Yes	N/A	N/A	Soft sediment	Shoreline	Observed soft sediment from marina shoreline, calm body of water
16	B01	Backup	No	—	—	—	—	Not able to access location from shoreline
16	P01	Primary	Yes	N/A	N/A	Sandy sediment	Shoreline	Observed sandy sediment from outside Housatonic House Restaurant on east shoreline
16	P02	Primary	Yes	N/A	N/A	Soft sandy sediment	Shoreline	Observed soft sandy sediment from Indian Well State Park Beach
16	B02	Backup	No	N/A	N/A	Soft sediment with sands and silts	Shoreline	Observed soft sandy sediment with vegetation from the east bank, vegetation

Notes:

Reconnaissance completed July 22, 2024, through July 25, 2024

: Dark shading represents transects that have been screened out of final selection

N/A: not applicable

Table G-3
Field Summary

Reach	Random or Systematic	State	Transect ID	Discrete Location ID	Location Sampled	Location Abandoned	Location Notes[1]	Sediment Physical Characteristics[2]
7A	Random	MA	R7A-RT001	R7A-RT001-L1		X	Shifted transect approximately 62 ft downstream. Abandoned due to lack of recoverable material.	Fine sand, some medium sand, trace gravel
	Random	MA		R7A-RT001-L2	X		Shifted transect approximately 62 ft downstream	
	Random	MA		R7A-RT001-L3	X		Shifted transect approximately 62 ft downstream	
	Random	MA	R7A-RT002	R7A-RT002-L1		X	Three (3) attempts with insufficient recovery. Location abandoned.	Medium to fine sand, some gravel, trace silt, trace organics
	Random	MA		R7A-RT002-L2		X	Six (6) attempts with insufficient recovery. Location abandoned.	
	Random	MA		R7A-RT002-L3	X		Shifted approximately 10 ft west	
	Random	MA	R7A-RT003	R7A-RT003-L1	X		Shifted approximately 13 ft toward bank	Medium and fine sand, some silt, trace gravel, trace organics
	Random	MA		R7A-RT003-L2	X			
	Random	MA		R7A-RT003-L3	X			
	Random	MA	R7A-RT004	R7A-RT004-L1		X	Cobbles and large boulders. Location abandoned due to lack of viable area to make attempts.	Fine sand and silt, some organics, trace medium sand, moderate NAPL odor and sheen
	Random	MA		R7A-RT004-L2	X			
	Random	MA		R7A-RT004-L3	X			
	Systematic	MA	R7A-ST001	R7A-ST001-L1		X	Four (4) attempts with insufficient recovery. Location abandoned.	Medium sand, gravel, and trace organics
	Systematic	MA		R7A-ST001-L2		X	Three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7A-ST001-L3	X		Shifted approximately 13 ft toward center of river	
	Systematic	MA	R7A-ST002	R7A-ST002-L1		X	Cobbles, four (4) attempts with insufficient recovery. Location abandoned.	N/A
	Systematic	MA		R7A-ST002-L2		X	Cobbles, four (4) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7A-ST002-L3		X	Cobbles, four (4) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA	R7A-ST003	R7A-ST003-L1		X	Location abandoned due to exclusive presence of cobbles.	N/A
	Systematic	MA		R7A-ST003-L2		X	Location abandoned due to exclusive presence of cobbles.	
	Systematic	MA		R7A-ST003-L3		X	Location abandoned due to exclusive presence of cobbles.	
	Systematic	MA	R7A-ST004	R7A-ST004-L1		X	Three (3) attempts with insufficient recovery. Location abandoned.	N/A
	Systematic	MA		R7A-ST004-L2		X	Three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7A-ST004-L3		X	Three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA	R7A-ST005	R7A-ST005-L1	X		Shifted approximately 15 ft toward bank and downstream	Medium gravel
	Systematic	MA		R7A-ST005-L2		X	Boulders, cobbles, gravel and rapids. Three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7A-ST005-L3		X	Location abandoned due to boulders, cobbles, gravel and rapids.	
	Systematic	MA	R7A-ST006	R7A-ST006-L1	X		Shifted approximately 46 ft upstream	Medium sand, some gravel, trace fine sand and organics (plant debris)
	Systematic	MA		R7A-ST006-L2		X	Medium gravel. Four (4) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7A-ST006-L3	X		Shifted approximately 60 ft upstream	
	Systematic	MA	R7A-ST007	R7A-ST007-L1	X			Medium sand, some gravel
	Systematic	MA		R7A-ST007-L2		X	Abandoned due to lack of recoverable material.	
	Systematic	MA		R7A-ST007-L3	X			
	Systematic	MA	R7A-ST008	R7A-ST008-L1		X	Cobbles prevented sufficient recovery. Location abandoned.	N/A
	Systematic	MA		R7A-ST008-L2		X	Large gravel, and thin depositional layers prevented sufficient recovery. Location abandoned.	
	Systematic	MA		R7A-ST008-L3		X	Large gravel, and thin depositional layers prevented sufficient recovery. Location abandoned.	
	Systematic	MA	R7A-ST009	R7A-ST009-L1	X		Shifted transect approximately 25 ft downstream	Medium and fine sand, some gravel
	Systematic	MA		R7A-ST009-L2	X		Shifted transect approximately 25 ft downstream	
	Systematic	MA		R7A-ST009-L3		X	Shifted transect approximately 25 ft downstream. Location abandoned due to lack of recovery.	
	Systematic	MA	R7A-ST010	R7A-ST010-L1	X		Shifted approximately 15 ft downstream	Fine sand and silt, trace medium sand, some organics
	Systematic	MA		R7A-ST010-L2	X			
	Systematic	MA		R7A-ST010-L3	X			
	Systematic	MA	R7A-ST011	R7A-ST011-L1	X			Medium and fine sand, some gravel, trace organics
	Systematic	MA		R7A-ST011-L2	X		Shifted approximately 15 ft west	
	Systematic	MA		R7A-ST011-L3		X	Large cobbles. Location abandoned due to lack of recovery.	
	Systematic	MA	R7A-ST012	R7A-ST012-L1	X		Shifted transect 30 ft downstream to under the bridge	Medium and fine sand, some gravel
	Systematic	MA		R7A-ST012-L2		X	Shifted transect 30 ft downstream to under the bridge. Location abandoned due to presence of bedrock.	
	Systematic	MA		R7A-ST012-L3	X		Shifted transect 30 ft downstream to under the bridge	
	Systematic	MA	R7A-ST013	R7A-ST013-L1		X	Location abandoned due to large cobble and bedrock.	N/A
	Systematic	MA		R7A-ST013-L2		X	Location abandoned due to large cobble and bedrock.	
	Systematic	MA		R7A-ST013-L3		X	Location abandoned due to large cobble and bedrock.	
	Systematic	MA	R7A-ST014	R7A-ST014-L1	X			Coarse medium sand, some fines and gravel
	Systematic	MA		R7A-ST014-L2	X		Shifted location approximately 10 ft toward center of river	
	Systematic	MA		R7A-ST014-L3	X		Shifted location approximately 12 ft toward center of river	
	Systematic	MA	R7A-ST015	R7A-ST015-L1		X	Shifted transect approximately 60 ft downstream. Location abandoned due to lack of viable area to make attempts.	Coarse and fine medium sand, trace organics and gravel
	Systematic	MA		R7A-ST015-L2	X		Shifted transect approximately 60 ft downstream	
	Systematic	MA		R7A-ST015-L3	X		Shifted transect approximately 60 ft downstream	
	Systematic	MA	R7A-ST016	R7A-ST016-L1		X	Gravel and bedrock, three (3) attempts with insufficient recovery. Location abandoned.	Coarse, medium, and fine sand and silt, trace gravel and organics
	Systematic	MA		R7A-ST016-L2	X			
	Systematic	MA		R7A-ST016-L3	X			

Table G-3
Field Summary

Reach	Random or Systematic	State	Transect ID	Discrete Location ID	Location Sampled	Location Abandoned	Location Notes[1]	Sediment Physical Characteristics[2]
	Random	MA	R7D-RT001	R7D-RT001-L1	X		Shifted location approximately 20 ft more towards middle of river due to rapids and rocks	Fine and medium sand, silt and gravel, trace organics
	Random	MA		R7D-RT001-L2	X		Shifted location 6 ft off island due to exposed riverbed	
	Random	MA		R7D-RT001-L3	X		Shifted location approximately 20 ft closer to shore due to cobbles/rock in area	
	Random	MA	R7D-RT002	R7D-RT002-L1	X		Shifted approximately 12 ft closer to shore due to rocks and large cobbles	Silt and fine sand, organics
	Random	MA		R7D-RT002-L2		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Random	MA		R7D-RT002-L3		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Random	MA	R7D-RT003	R7D-RT003-L1		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	Coarse, medium, and fine sand, silt, gravel, and organics
	Random	MA		R7D-RT003-L2	X			
	Random	MA		R7D-RT003-L3	X			
	Random	MA	R7D-RT004	R7D-RT004-L1		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	N/A
	Random	MA		R7D-RT004-L2		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Random	MA		R7D-RT004-L3	X		Shifted 20 ft closer to shore due to large cobbles/rocks	
	Random	MA	R7D-RT005	R7D-RT005-L1	X			Gravel and coarse sand, some fine sand and silt
	Random	MA		R7D-RT005-L2		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Random	MA		R7D-RT005-L3	X			
	Random	MA	R7D-RT006	R7D-RT006-L1	X			Silt and fine sand, trace gravel
	Random	MA		R7D-RT006-L2	X			
	Random	MA		R7D-RT006-L3	X			
	Random	MA	R7D-RT007	R7D-RT007-L1	X		Shifted 15 ft closer to shore for softer sediment	Silt, fine and medium sand, gravel
	Random	MA		R7D-RT007-L2		X	Abandoned due to dense rock and cobble.	
	Random	MA		R7D-RT007-L3	X		Shifted 15 ft closer to shore for softer sediment	
	Random	MA	R7D-RT008	R7D-RT008-L1	X			Silt, fine sand, and organics
	Random	MA		R7D-RT008-L2	X			
	Random	MA		R7D-RT008-L3	X			
	Systematic	MA	R7D-ST001	R7D-ST001-L1		X	Abandoned due to large boulders and rocks in fast moving water.	Medium sand, fine sand, and silt
	Systematic	MA		R7D-ST001-L2	X		Shifted location approximately 16 ft downstream below rapids	
	Systematic	MA		R7D-ST001-L3	X		Shifted location approximately 16 ft downstream below rapids	
	Systematic	MA	R7D-ST002	R7D-ST002-L1	X		Shifted location approximately 10 ft downstream due to old bridge infrastructure embedded in riverbed here	Coarse and medium sand and gravel
	Systematic	MA		R7D-ST002-L2	X		Shifted location approximately 10 ft downstream due to old bridge infrastructure embedded in riverbed here	
	Systematic	MA		R7D-ST002-L3		X	Fast water. Abandoned due to insufficient recovery.	
	Systematic	MA	R7D-ST003	R7D-ST003-L1		X	Dense medium cobble. Three (3) attempts with insufficient recovery. Location abandoned.	Fine sand, silt, and organics
	Systematic	MA		R7D-ST003-L2		X	Dense medium cobble. Three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7D-ST003-L3	X		Shifted location approximately 25 ft upstream to soft sediment	
	Systematic	MA	R7D-ST004	R7D-ST004-L1		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	N/A
	Systematic	MA		R7D-ST004-L2		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7D-ST004-L3		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA	R7D-ST005	R7D-ST005-L1		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	N/A
	Systematic	MA		R7D-ST005-L2		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7D-ST005-L3		X	Dense cobble and gravel, three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA	R7D-ST006	R7D-ST006-L1	X			Coarse, medium, and fine sand, some gravel and silt
	Systematic	MA		R7D-ST006-L2		X	Large cobbles and boulders. Three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7D-ST006-L3	X			
	Systematic	MA	R7D-ST007	R7D-ST007-L1	X		Target location dry, shifted location downstream approximately 30 ft to be underwater	Silt and fine sand, some gravel and coarse sand
	Systematic	MA		R7D-ST007-L2	X		Cobbles/boulders in area, shifted location behind large rock where there was deposition	
	Systematic	MA		R7D-ST007-L3	X		Shifted location closer to shore to softer sediment	
	Systematic	MA	R7D-ST008	R7D-ST008-L1	X		Shifted location approximately 26 ft closer to shore for softer sediment	Silt, fine sand, and organics
	Systematic	MA		R7D-ST008-L2		X	Large cobbles/rocks. Three (3) unsuccessful attempts. Location abandoned.	
	Systematic	MA		R7D-ST008-L3	X		Shifted location a few ft closer to shore for softer sediment	
	Systematic	MA	R7D-ST009	R7D-ST009-L1	X		Shifted approximately 23 ft closer to shore due to large cobbles/rocks	Gravel and silt, medium and fine sand, some coarse sand, trace organics
	Systematic	MA		R7D-ST009-L2	X			
	Systematic	MA		R7D-ST009-L3	X		Shifted 20 ft closer to shore due to large cobbles/rocks	
	Systematic	MA	R7D-ST010	R7D-ST010-L1	X		Shifted entire transect approximately 50 ft upstream and slightly closer to shore for softer sediment due to rocks/cobble	Fine sand and silt, some organics
	Systematic	MA		R7D-ST010-L2		X	Large cobbles and boulders. Three (3) attempts with insufficient recovery. Location abandoned.	
	Systematic	MA		R7D-ST010-L3	X		Shifted entire transect approximately 50 ft upstream and slightly closer to shore for softer sediment due to rocks/cobble	
	Systematic	MA	R7D-ST011	R7D-ST011-L1		X	Location abandoned due to large cobbles and rocks.	Silt and fine sand, organics
	Systematic	MA		R7D-ST011-L2		X	Location abandoned due to large cobbles and rocks.	
	Systematic	MA		R7D-ST011-L3	X		Shifted approximately 60 ft downstream and closer to shore to only place with soft sediment in the area	
	Systematic	MA	R7D-ST012	R7D-ST012-L1	X			Coarse and fine sand, silt, gravel, and organics
	Systematic	MA		R7D-ST012-L2		X	All bedrock and cobbles in area. Location abandoned.	
	Systematic	MA		R7D-ST012-L3	X

Table G-3
Field Summary

Reach	Random or Systematic	State	Transect ID	Discrete Location ID	Location Sampled	Location Abandoned	Location Notes[1]	Sediment Physical Characteristics[2]
7F	Random	MA	R7F-RT001	R7F-RT001-L1	X			Coarse, medium, and fine sand, silt, some gravel, and organics
	Random	MA		R7F-RT001-L2	X			
	Random	MA		R7F-RT001-L3	X		Shifted approximately 15 ft downstream to directly under bridge	
	Random	MA	R7F-RT002	R7F-RT002-L1	X		Shifted approximately 13 ft toward bank	Fine sand, silt, and organics
	Random	MA		R7F-RT002-L2	X			
	Random	MA		R7F-RT002-L3	X			
	Random	MA	R7F-RT003	R7F-RT003-L1	X			Medium and fine sand, some silt and gravel, trace organics
	Random	MA		R7F-RT003-L2	X			
	Random	MA		R7F-RT003-L3	X			
	Random	MA	R7F-RT004	R7F-RT004-L1	X			Fine sand and silt, some coarse and medium sand, and organics
	Random	MA		R7F-RT004-L2	X			
	Random	MA		R7F-RT004-L3	X			
	Systematic	MA	R7F-ST001	R7F-ST001-L1	X		Shifted location approximately 10 ft closer to shore due to lack of sediment	Silt, fine and medium sand, some gravel, trace coarse sand, and some organics
	Systematic	MA		R7F-ST001-L2	X			
	Systematic	MA		R7F-ST001-L3	X			
	Systematic	MA	R7F-ST002	R7F-ST002-L1	X			Fine sand and silt, medium sand, and some organics
	Systematic	MA		R7F-ST002-L2		X	Area very rocky, several attempts with only water coming up the sampler. Location abandoned.	
	Systematic	MA		R7F-ST002-L3	X			
	Systematic	MA	R7F-ST003	R7F-ST003-L1	X		Shifted entire transect approximately 50 ft upstream due to rock/rapids	Silt, fine sand, trace gravel and medium sand, some organics
	Systematic	MA		R7F-ST003-L2	X		Shifted entire transect approximately 50 ft upstream due to rock/rapids	
	Systematic	MA		R7F-ST003-L3	X		Shifted entire transect approximately 50 ft upstream due to rock/rapids	
	Systematic	MA	R7F-ST004	R7F-ST004-L1	X			Coarse, medium, and fine sand, silt, gravel, and organics
	Systematic	MA		R7F-ST004-L2	X			
	Systematic	MA		R7F-ST004-L3	X			
	Systematic	MA	R7F-ST005	R7F-ST005-L1	X			Medium and fine sand, silt, some gravel and organics
	Systematic	MA		R7F-ST005-L2	X			
	Systematic	MA		R7F-ST005-L3	X			
	Systematic	MA	R7F-ST006	R7F-ST006-L1	X			Coarse, medium, and fine sand, some silt and gravel
	Systematic	MA		R7F-ST006-L2	X			
	Systematic	MA		R7F-ST006-L3	X			
	Systematic	MA	R7F-ST007	R7F-ST007-L1	X			Fine sand and silt, some gravel and medium sand, trace organics
	Systematic	MA		R7F-ST007-L2	X			
	Systematic	MA		R7F-ST007-L3	X			
	Systematic	MA	R7F-ST008	R7F-ST008-L1	X			Medium and fine sand, some coarse sand and silt, some gravel, and organics
	Systematic	MA		R7F-ST008-L2	X			
	Systematic	MA		R7F-ST008-L3	X			
	Systematic	MA	R7F-ST009	R7F-ST009-L1	X			Coarse and medium sand and gravel
	Systematic	MA		R7F-ST009-L2	X			
	Systematic	MA		R7F-ST009-L3	X			
	Systematic	MA	R7F-ST010	R7F-ST010-L1	X			Medium and fine sand, silt, gravel, and organics
	Systematic	MA		R7F-ST010-L2	X			
	Systematic	MA		R7F-ST010-L3	X			
	Systematic	MA	R7F-ST011	R7F-ST011-L1		X	Gravel and pebbles, no visible sediment in the area after three (3) attempts. . Location abandoned.	Gravel, some medium sand, trace organics
	Systematic	MA		R7F-ST011-L2	X			
	Systematic	MA		R7F-ST011-L3	X			
	Systematic	MA	R7F-ST012	R7F-ST012-L1	X			Silt and fine sand, some medium sand and organics
	Systematic	MA		R7F-ST012-L2	X		Shifted approximately 10 ft downstream	
	Systematic	MA		R7F-ST012-L3	X			
	Systematic	MA	R7F-ST013	R7F-ST013-L1	X		Shifted approximately 20 ft toward bank	Fine sand and silt, some medium sand
	Systematic	MA		R7F-ST013-L2	X			
	Systematic	MA		R7F-ST013-L3	X			
	Systematic	MA	R7F-ST014	R7F-ST014-L1	X			Silt, fine and medium sand
	Systematic	MA		R7F-ST014-L2	X			
	Systematic	MA		R7F-ST014-L3	X			
	Systematic	MA	R7F-ST015	R7F-ST015-L1	X			Silt, fine sand, and organics
	Systematic	MA		R7F-ST015-L2		X	Rocky area, gravel. Four (4) attempts with no recovery. Location abandoned.	
	Systematic	MA		R7F-ST015-L3	X			
	Systematic	MA	R7F-ST016	R7F-ST016-L1		X	Location abandoned due to very deep water, large rocks and boulders, and bedrock river bottom	N/A
	Systematic	MA		R7F-ST016-L2		X	Location abandoned due to very deep water, large rocks and boulders, and bedrock river bottom	
	Systematic	MA		R7F-ST016-L3		X	Location abandoned due to very deep water, large rocks and boulders, and bedrock river bottom

	Random	CT		R11-RT002-L2		X	Cobbles. Three (3) attempts with insufficient recovery. Location abandoned.	
	Random	CT		R11-RT002-L3		X	Cobbles and boulders. Three (3) attempts with insufficient recovery. Location abandoned.	
	Random	CT		R11-RT002-L4		X	Three (3) attempts with insufficient recovery due to dense cobble. Location abandoned.	
	Random	CT		R11-RT002-L5	X		Shifted approximately 15 ft towards shore due to substrate	
	Random	CT	R11-RT003	R11-RT003-L1	X		Shifted approximately 14 ft upstream due to dense cobble	Fine, medium, and coarse sand, and gravel
	Random	CT		R11-RT003-L2	X		Shifted approximately 13 ft upstream due to dense cobble	
	Random	CT		R11-RT003-L3	X		Shifted approximately 6 ft towards east bank due to dense cobble	
	Random	CT		R11-RT003-L4	X		Shifted approximately 9 ft upstream due to dense cobble	
	Random	CT		R11-RT003-L5	X		Shifted approximately 11 ft towards middle and upstream due to dense cobble	
	Systematic	CT	R11-ST001	R11-ST001-L1		X	Three (3) attempts with insufficient recovery due to large boulders, cobble, and gravel. Location abandoned.	Fine and medium sand, silt, and organics
	Systematic	CT		R11-ST001-L2		X	Three (3) attempts with insufficient recovery due to large boulders, cobble, and gravel. Location abandoned.	
	Systematic	CT		R11-ST001-L3		X	Three (3) attempts with insufficient recovery due to dense large cobble. Location abandoned.	
	Systematic	CT		R11-ST001-L4	X			
	Systematic	CT		R11-ST001-L5		X	Three (3) attempts with insufficient recovery due to dense cobble. Location abandoned.	
	Systematic	CT	R11-ST002	R11-ST002-L1	X		Shifted approximately 13 ft toward the bank due to cobble	Fine and medium sand, gravel and silt, trace organics
	Systematic	CT		R11-ST002-L2	X			
	Systematic	CT		R11-ST002-L3	X		Shifted approximately 15 ft upstream due to cobble	
	Systematic	CT		R11-ST002-L4		X	Three (3) attempts with insufficient recovery due to dense cobble. Location abandoned.	
	Systematic	CT		R11-ST002-L5		X	Three (3) attempts with insufficient recovery due to boulders. Location abandoned.	
	Systematic	CT	R11-ST003	R11-ST003-L1		X	Three (3) attempts with insufficient recovery due to cobble, boulder, and riprap. Location abandoned.	Medium and fine sand, gravel, some coarse sand and organics
	Systematic	CT		R11-ST003-L2		X	Three (3) attempts with insufficient recovery due to dense cobble. Location abandoned.	
	Systematic	CT		R11-ST003-L3	X		Shifted approximately 15 downstream due to cobble and boulders	
	Systematic	CT		R11-ST003-L4	X			
	Systematic	CT		R11-ST003-L5	X			
	Systematic	CT	R11-ST004	R11-ST004-L1	X		Shifted 5 ft towards shore	Fine and medium sand, silt, organics
	Systematic	CT		R11-ST004-L2		X	Three (3) attempts with insufficient recovery due to rock. Location abandoned.	
	Systematic	CT		R11-ST004-L3	X		Shifted approximately 8 ft downstream due to limited deposition	
	Systematic	CT		R11-ST004-L4	X			
	Systematic	CT		R11-ST004-L5	X			
	Systematic	CT	R11-ST005	R11-ST005-L1	X		Shifted approximately 16 ft toward bank due to dense cobble and limited deposition	Fine and medium sand, gravel, trace silt
	Systematic	CT		R11-ST005-L2	X		Shifted approximately 10 ft downstream due to dense cobble and limited deposition	
11	Systematic	CT		R11-ST005-L3		X	Three (3) attempts with insufficient recovery due to dense cobble. Location abandoned.	
	Systematic	CT		R11-ST005-L4	X		Shifted approximately 20 ft toward middle due to dense cobble and limited deposition	
	Systematic	CT		R11-ST005-L5	X		Shifted approximately 16 ft upstream due to dense cobble and limited deposition	
	Systematic	CT	R11-ST006	R11-ST006-L1	X		Shifted approximately 8 ft downstream due to cobble	Fine and medium sand, some gravel
	Systematic	CT		R11-ST006-L2	X			
	Systematic	CT		R11-ST006-L3		X	Three (3) attempts with insufficient recovery due to dense cobble and boulders. Location abandoned.	
	Systematic	CT		R11-ST006-L4		X	Four (4) attempts with insufficient recovery due to dense cobble and large boulders. Location abandoned.	
	Systematic	CT		R11-ST006-L5	X		Shifted approximately 15 ft upstream due to dense cobble and boulders	

Table G-3
Field Summary

	Systematic	CT		R11-ST009-L4	X			
	Systematic	CT		R11-ST009-L5	X			
	Systematic	CT	R11-ST010	R11-ST010-L1	X		Shifted approximately 8 ft upstream due to dense cobble and rocks	Coarse, medium, and fine sand, and gravel
	Systematic	CT		R11-ST010-L2	X		Shifted approximately 10 ft upstream due to dense cobble and rocks	
	Systematic	CT		R11-ST010-L3		X	Abandoned due to unsafe, fast-moving rapids.	
	Systematic	CT		R11-ST010-L4	X		Shifted approximately 11 ft downstream due to dense cobble and rocks	
	Systematic	CT		R11-ST010-L5	X		Shifted approximately 18 ft downstream due to dense cobble and rocks	
	Systematic	CT	R11-ST011	R11-ST011-L1	X			Coarse, fine, and medium sand with some gravel
	Systematic	CT		R11-ST011-L2	X		Shifted approximately 6 ft downstream due to dense cobble and boulders	
	Systematic	CT		R11-ST011-L3	X			
	Systematic	CT		R11-ST011-L4	X		Shifted approximately 8 ft towards middle and upstream due to dense cobble and boulders	
	Systematic	CT		R11-ST011-L5	X		Shifted approximately 10 ft upstream and towards shore due to dense cobble and boulders	
	Systematic	CT	R11-ST012	R11-ST012-L1	X			Coarse, fine, and medium sand, and gravel
	Systematic	CT		R11-ST012-L2	X			
	Systematic	CT		R11-ST012-L3	X		Shifted approximately 8 ft towards west bank due to dense cobble and boulders	
	Systematic	CT		R11-ST012-L4	X			
	Systematic	CT		R11-ST012-L5	X		Shifted approximately 15 ft towards bank and downstream due to dense cobble and boulders	
	Random	CT	R12-RT001	R12-RT001-L1	X		Shifted approximately 10 ft towards bank due to dense cobble and gravel	Fine and medium sand, and gravel
	Random	CT		R12-RT001-L2	X		Shifted approximately 15 ft towards bank due to dense cobble and gravel	
	Random	CT		R12-RT001-L3	X			
	Random	CT		R12-RT001-L4	X			
	Random	CT		R12-RT001-L5	X			
	Random	CT	R12-RT002	R12-RT002-L1	X			Fine and medium sand, gravel, trace silt
	Random	CT		R12-RT002-L2	X			
	Random	CT		R12-RT002-L3	X			
	Random	CT		R12-RT002-L4	X			
	Random	CT		R12-RT002-L5	X			
	Systematic	CT	R12-ST001	R12-ST001-L1		X	Three (3) attempts with insufficient recovery, abandoned due to bedrock and boulders.	Fine sand, some silt and medium sand, and gravel
	Systematic	CT		R12-ST001-L2		X	Three (3) attempts with insufficient recovery, abandoned due to bedrock and boulders.	
	Systematic	CT		R12-ST001-L3		X	Three (3) attempts with insufficient recovery, abandoned due to bedrock and boulders.	
	Systematic	CT		R12-ST001-L4	X		Shifted approximately 5 ft upstream to depositional area	
	Systematic	CT		R12-ST001-L5	X		Shifted approximately 10 ft towards middle, target location not submerged	
	Systematic	CT	R12-ST002	R12-ST002-L1	X		Shifted 10 ft downstream due to dense cobble	Coarse, medium, and fine sand, gravel, and trace silt
	Systematic	CT		R12-ST002-L2		X	Three (3) attempts with insufficient recovery, abandoned due to dense cobble.	
	Systematic	CT		R12-ST002-L3	X		Shifted approximately 15 ft towards bank due to dense cobble	
	Systematic	CT		R12-ST002-L4	X		Shifted approximately 10 ft downstream due to cobble	
	Systematic	CT		R12-ST002-L5	X			
	Systematic	CT	R12-ST003	R12-ST003-L1	X		Shifted approximately 5 ft upstream to depositional zone	Coarse, medium, and fine sand, gravel, and trace silt
	Systematic	CT		R12-ST003-L2	X		Shifted approximately 15 ft upstream behind boulder due to dense cobble	
	Systematic	CT		R12-ST003-L3	X		Shifted approximately 5 ft upstream behind boulder due to dense cobble	
	Systematic	CT		R12-ST003-L4	X		Shifted approximately 5 ft towards middle due to dense cobble, some pockets of sand behind cobble	
	Systematic	CT		R12-ST003-L5	X		Shifted approximately 5 ft upstream, target location not submerged	
	Systematic	CT	R12-ST004	R12-ST004-L1	X			Silt and fine sand, trace medium sand and gravel, some organics
	Systematic	CT		R12-ST004-L2	X			
	Systematic	CT		R12-ST004-L3	X		Shifted approximately 13 ft downstream, target location not submerged	
	Systematic	CT		R12-ST004-L4	X		Shifted approximately 5 ft upstream, target location not submerged, standing water w/ leaf litter	
	Systematic	CT		R12-ST004-L5	X		Shifted approximately 5 ft towards bank and downstream due to dense cobble	

Table G-3
Field Summary

Reach	Random or Systematic	State	Transect ID	Discrete Location ID	Location Sampled	Location Abandoned	Location Notes[1]	Sediment Physical Characteristics[2]
13	Systematic	CT	R12-ST005	R12-ST005-L1	X		Shifted approximately 7 ft upstream due to dense cobble	Fine and medium sand, gravel, some coarse sand and silt
	Systematic	CT		R12-ST005-L2	X		Shifted approximately 12 ft upstream due to dense cobble	
	Systematic	CT		R12-ST005-L3	X			
	Systematic	CT		R12-ST005-L4	X		Shifted approximately 11 ft downstream and towards bank due to dense cobble and boulders	
	Systematic	CT		R12-ST005-L5	X			
	Systematic	CT	R12-ST006	R12-ST006-L1	X			Fine sand and silt, gravel, some coarse sand and organics

	Systematic	CT		R12-ST007-L4	X			
	Systematic	CT		R12-ST007-L5	X			
	Systematic	CT	R12-ST008	R12-ST008-L1	X		Shifted approximately 30 ft due dense cobble and gravel	Silt and fine sand, some medium sand, trace coarse sand, some organics
	Systematic	CT		R12-ST008-L2	X			
	Systematic	CT		R12-ST008-L3	X			
	Systematic	CT		R12-ST008-L4	X			
	Systematic	CT		R12-ST008-L5	X			
	Random	CT	R13-RT001	R13-RT001-L1		X	Abandoned due to large cobble and boulders	Medium and fine sand, and gravel
	Random	CT		R13-RT001-L2	X			
	Random	CT		R13-RT001-L3	X			
	Random	CT		R13-RT001-L4	X			
	Random	CT		R13-RT001-L5		X	Abandoned. Point was not submerged. River was dry from bank to 5 ft from L4.	
	Random	CT	R13-RT002	R13-RT002-L1	X			Silt and fine sand, some medium sand and organics
	Random	CT		R13-RT002-L2		X	Abandoned due to dense cobble	
	Random	CT		R13-RT002-L3		X	Abandoned due to dense cobble	
	Random	CT		R13-RT002-L4	X		Shifted approximately 10 ft towards east bank due to dense cobble	
	Random	CT		R13-RT002-L5	X			
	Systematic	CT	R13-ST001	R13-ST001-L1		X	Abandoned due to dense cobble and boulders	Fine sand, gravel, and organics
	Systematic	CT		R13-ST001-L2		X	Abandoned due to bedrock, and fast-moving water	
	Systematic	CT		R13-ST001-L3		X	Abandoned due to bedrock and fast-moving water	
	Systematic	CT		R13-ST001-L4		X	Abandoned due to bedrock, boulders, and fast-moving water	
	Systematic	CT		R13-ST001-L5	X		Shifted approximately 27 ft towards bank due to bedrock	
	Systematic	CT	R13-ST002	R13-ST002-L1	X		Shifted approximately 6 ft towards bank due to dense cobble and boulders	Fine sand, some gravel and coarse sand, trace medium sand and organics
	Systematic	CT		R13-ST002-L2	X		Shifted approximately 15 ft upstream due dense cobble and boulders	
	Systematic	CT		R13-ST002-L3		X	Abandoned due to fast-moving water, unsafe	
	Systematic	CT		R13-ST002-L4	X		Shifted approximately 9 ft downstream towards middle due to dense cobble	
	Systematic	CT		R13-ST002-L5	X			
	Systematic	CT	R13-ST003	R13-ST003-L1	X			Medium and fine sand, gravel, and trace coarse sand
	Systematic	CT		R13-ST003-L2	X			
	Systematic	CT		R13-ST003-L3	X			
	Systematic	CT		R13-ST003-L4	X			
	Systematic	CT		R13-ST003-L5	X			
	Systematic	CT	R13-ST004	R13-ST004-L1	X		Shifted approximately 7 ft towards middle, target location not submerged	Coarse and fine sand, and gravel
	Systematic	CT		R13-ST004-L2	X			
	Systematic	CT		R13-ST004-L3		X	Abandoned due to dense cobble and boulders	
	Systematic	CT		R13-ST004-L4		X	Abandoned due to very dense cobble	
	Systematic	CT		R13-ST004-L5		X	Abandoned due to very dense cobble	
	Systematic	CT	R13-ST005	R13-ST005-L1	X			Fine sand and gravel, some silt and organics
	Systematic	CT		R13-ST005-L2		X	Abandoned due to large cobble and boulders	
	Systematic	CT		R13-ST005-L3		X	Abandoned due to large cobble and boulders	
	Systematic	CT		R13-ST005-L4		X	Abandoned due to large cobble and boulders	
	Systematic	CT		R13-ST005-L5	X		Shifted approximately 9 ft towards middle due to dense cobble and boulders	
	Systematic	CT	R13-ST006	R13-ST006-L1	X		Shifted approximately 20 ft towards bank due to dense cobble and boulders	Coarse, medium, and fine sand, silt, and organics
	Systematic	CT		R13-ST006-L2		X	Abandoned due to dense cobble and boulders	
	Systematic	CT		R13-ST006-L3		X	Abandoned due to dense cobble	
	Systematic	CT		R13-ST006-L4		X	Abandoned due to dense cobble	
	Systematic	CT		R13-ST006-L5	X		Shifted approximately 16 ft downstream towards bank due to dense cobble

Data Validation Report – EPA Stage 2A

September 2, 2025

Project: GE Housatonic River Floodplain

Project Number: 190469-01.03

DVR Number: AQ-2025-0114

This report summarizes the review of analytical results for 76 sediment samples, 4 field duplicate samples, and 3 equipment rinsate blanks collected October through December 2024. The samples were collected by Anchor QEA and AECOM and submitted to SGS North America (SGS) in Dayton, New Jersey. Samples were analyzed for the following parameters:

- Polychlorinated biphenyl Aroclors (PCBs) by U.S. Environmental Protection Agency (EPA) method 8082A
- Total organic carbon (TOC) by method Lloyd Kahn and USEPA 9060A
- Total solids (TS) by Standard Method 2540G
- Grain size (GS) by ASTM International Method D422

Sample IDs, associated sample delivery groups (SDGs), matrices, and analyses are presented in Attachment 1. Three SDGs were reviewed in this report.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/ quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Field Sampling Plan/Quality Assurance Project Plan, Revision1 (Arcadis 2023)
- EPA Test Methods for Evaluating Solid Waste: Physical/Chemical Methods (SW-846, Third Edition; EPA1986)
- Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (EPA 1996)
- EPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA 2020a)
- EPA National Functional Guidelines for Inorganic Superfund Methods Data Review (EPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by SGS at the time of sample receipt with the exception of SDG JD98197. Samples were received in good condition and within the recommended temperature range.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within the holding times with the exception of TOC. All sediment TOC results were analyzed outside of the 14-day holding time. TOC sediment results were qualified "J" to indicate they are estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes.

Field Quality Control

Field Quality Control (QC) included rinsate blanks and field duplicates. Field QC samples were collected at the required frequency.

Equipment Rinsate Blanks

Three equipment rinsate blanks were collected in association with these sample sets. All rinsate blanks were analyzed for PCBs and TOC. All PCB and TOC results were below detection.

Field Duplicates

Four field duplicates were collected in association with these sample sets. Detected results are summarized in Table 1. Field duplicate relative percent difference (RPD) values were assessed by the 50% RPD according to the QAPP. Results that were less than five times the method reporting limit (MRL) were assessed by the difference between them using ± 2 x MRL as the control limit. Parent sample and duplicate results associated with RPD or difference values above control limits have been qualified "J" to indicate they are estimated.

Notes:
CL: Control Limit
µg/kg: microgram per kilogram
mg/kg: milligram per kilogram

Surrogate Spike Recoveries

Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits. When surrogate recoveries were outside of the control limits in one column, but results were reported from the other column; no data were qualified. Surrogates recovered outside of control limits in some laboratory QC samples, however; data are not qualified for surrogate outliers in QC samples alone or when outlying surrogates are associated with the non-reporting column. Surrogates recovered within project-required control limits with several exceptions.

- Tetrachloro-m-xylene (TMX) and decachlorobiphenyl (DCB) recovered below the control limit for sample RB-2410181455. The sample results were qualified “UJ” to indicate a potential low bias.
- TMX and DCB recovered above the control limit for R7A-RT002-COMP-241009-00-0.25. Detected sample results were qualified “J” to indicate a potential high bias.

Column Confirmation Results

Second column confirmation results were within method requirements (40% RPD) for detected results.

Laboratory Control Samples and Laboratory Control Sample Duplicates

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the required frequency. No data were qualified when the LCS or LCSD recoveries were above the control limits and sample concentrations were not detected. No data were qualified when the surrogate recoveries were above the control limits and sample concentrations were not detected. LCS and LCSD recoveries and/or RPD values within project-required control limits with the following exceptions. The LCS and LCSD recovered below the project-required control limit for Aroclor 1016 in batch OP58836. Associated batch sample results were qualified "UJ" to indicate a potential low bias.

Matrix Spike and Matrix Spike Duplicate Samples

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at the required frequencies or MSDs were analyzed in place of laboratory duplicates. MS/MSD results reported for non-project samples were not evaluated. No data were qualified when native sample concentrations were greater than four times spike concentrations. No data were qualified when the recoveries and/or the RPD values were above the control limits and sample concentrations were not detected. Recoveries and/or RPD values were within project-required control limits with the following exceptions. Aroclor 1260 recovered above the control limit in the MS and/or MSD analyzed on samples R7A-RT001-COMP-241008-00-0.2 and R7D-ST015-COMP-241023-00-0.33. Detected sample results have been qualified "J" to indicate a potential high bias.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequency for total solids and grain size analyses and RPD values were within project-required control limits with the following exceptions. The RPD was above the laboratory-defined control limit for percent passing 50 micron sieve on sample R7A-ST006-COMP-241008-00-0.3 and gravel on sample R7F-ST011-COMP-241015-00-0.33. Sample results were qualified "J" to indicate they are estimated.

Method Reporting Limits

MRLs were acceptable as reported. All values were reported using the laboratory reporting limits. Values were reported as undiluted or when diluted, the reporting limit reflects the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and laboratory and field duplicate RPD or difference values, with the exceptions noted above. All data are acceptable as reported or qualified. Completeness was 100%; completeness goals were met. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

J Indicates an estimated value.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

Table 2
Data Qualification Summary

Sample ID	Parameter	Analyte	Reported Result	Qualified Result	Reason
R7A-RT001-COMP-241008-00-0.2	Conventionals	TOC	6850 mg/kg	6850J mg/kg	Holding time exceedance

Data Validation Report – EPA Stage 2A

September 2, 2025

Project: GE Housatonic River Floodplain

Project Number: 190469-01.03

DVR Number: AQ-2025-0115

This report summarizes the review of analytical results for 49 sediment samples, 3 field duplicate samples, and 3 equipment rinsate blanks collected November through December 2024. The samples were collected by Anchor QEA and AECOM and submitted to SGS North America (SGS) in Dayton, New Jersey. Samples were analyzed for the following parameters:

- Polychlorinated biphenyl Aroclors (PCBs) by U.S. Environmental Protection Agency (EPA) method 8082A
- Total organic carbon (TOC) by method Lloyd Kahn and USEPA 9060A
- Total solids (TS) by Standard Method 2540G
- Grain size (GS) by ASTM International Method D422

Sample IDs, associated sample delivery groups (SDGs), matrices, and analyses are presented in Attachment 1. Three SDGs were reviewed in this report.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/ quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Field Sampling Plan/Quality Assurance Project Plan, Revision1 (Arcadis 2023)
- EPA Test Methods for Evaluating Solid Waste: Physical/Chemical Methods (SW-846, Third Edition; EPA1986)
- Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (EPA 1996)
- EPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA 2020a)
- EPA National Functional Guidelines for Inorganic Superfund Methods Data Review (EPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by SGS at the time of sample receipt. Samples were received in good condition and within the recommended temperature range.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within the holding times with the exception of TOC. All sediment TOC results were analyzed outside of the 14-day holding time. TOC sediment results were qualified "J" to indicate they are estimated. Two of the equipment rinsate blanks were analyzed outside of the 28-day holding time. These results were qualified "UJ" to indicate they are estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes.

Field Quality Control

Field Quality Control (QC) included rinsate blanks and field duplicates. Field QC samples were collected at the required frequency.

Equipment Rinsate Blanks

Three equipment rinsate blanks were collected in association with these sample sets. All rinsate blanks were analyzed for PCBs and TOC. All PCB and TOC results were below detection.

Field Duplicates

Three field duplicates were collected in association with these sample sets. Detected results are summarized in Table 1. Field duplicate relative percent difference (RPD) values were assessed by the 50% RPD according to the QAPP. Results that were less than five times the method reporting limit (MRL) were assessed by the difference between them using ± 2 x MRL as the control limit. Parent sample and duplicate results associated with RPD or difference values above control limits have been qualified "J" to indicate they are estimated.

Table 1
Field Duplicate Summary

Analyte	R10-ST003-COMP-241113-00-0.25	R10-ST003-COMP-BD0001	RPD	Difference	Difference CL
Aroclor 1254	27.0 µg/kg	12.1 µg/kg	--	14.9 µg/kg	62 µg/kg

Analyte	R10-ST003-COMP-241113-00-0.25	R10-ST003-COMP-BD0001	RPD	Difference	Difference CL
Aroclor 1260	105 µg/kg	46.7 µg/kg	--	58.3 µg/kg	62 µg/kg
TOC	18700 mg/kg	39000 mg/kg	70%	--	--
Total solids	62.8%	73.3%	15%	--	--

Analyte	R14-ST004-COMP-241119-00-0.5	R14-ST004-COMP-BD0001	RPD	Difference	Difference CL
Aroclor 1260	92.4 µg/kg	61.7 µg/kg	--	30.7 µg/kg	98 µg/kg
TOC	29000 mg/kg	17900 mg/kg	47%	--	--
Total solids	39.3%	54.1%	32%	--	--

Analyte	R9-RT003-COMP-241112-00-0.33	R9-RT003-COMP-BD0001	RPD	Difference	Difference CL
Aroclor 1254	14.1 µg/kg	16.1 µg/kg	--	2 µg/kg	50 µg/kg
Aroclor 1260	66.5 µg/kg	70.9 µg/kg	--	4.4 µg/kg	50 µg/kg
TOC	2570 mg/kg	2430 mg/kg	6%	--	--
Total solids	80.5%	79.6%	1%	--	--

Notes:
CL: Control Limit
µg/kg: microgram per kilogram
mg/kg: milligram per kilogram

Surrogate Spike Recoveries

Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits. When surrogate recoveries were outside of the control limits in one column, but results were reported from the other column; no data were qualified. Surrogates recovered outside of control limits in some laboratory QC samples, however; data are not qualified for surrogate outliers in QC samples alone or when outlying surrogates are associated with the non-reporting column. Surrogates recovered within project-required control limits with the following exceptions. Tetrachloro-m-xylene (TMX) and decachlorobiphenyl (DCB) recovered below the control limit for samples RB-2411121500, RB-2411141200, and RB-2411271103. The sample results were qualified “UJ” to indicate a potential low bias.

Column Confirmation Results

Second column confirmation results were within method requirements (40% RPD) for detected results.

Laboratory Control Samples and Laboratory Control Sample Duplicates

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the required frequency. No data were qualified when the LCS or LCSD recoveries were above the control limits and sample concentrations were not detected. No data were qualified when the surrogate recoveries were above the control limits and sample concentrations were not detected LCS and LCSD recoveries and/or RPD values within project-required control limits with the following exceptions. The RPD between the LCS and LCSD recovered above the project-required control limit for Aroclor 1260 in batch OP60154. Associated batch sample results were not detected, so no qualifications were necessary.

Matrix Spike and Matrix Spike Duplicate Samples

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at the required frequencies or MSDs were analyzed in place of laboratory duplicates. MS/MSD results reported for non-project samples were not evaluated. No data were qualified when native sample concentrations were greater than four times spike concentrations. No data were qualified when the recoveries and/or the RPD values were above the control limits and sample concentrations were not detected. Recoveries and/or RPD values were within project-required control limits with the following exceptions. Aroclor 1254 recovered below the control limit in the MS and MSD analyzed on sample R15-ST005-COMP-241202-00-0.5. The Aroclor 1254 sample result was qualified "J' to indicate a potential low bias. Aroclor 1260 recovered above the control limit in the MSD analyzed on sample R14-RT003-COMP-241119-00-0.5. Detected sample results have been qualified "J" to indicate a potential high bias.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequency for total solids and grain size analyses and RPD values were within project-required control limits.

Method Reporting Limits

MRLs were acceptable as reported. All values were reported using the laboratory reporting limits. Values were reported as undiluted or when diluted, the reporting limit reflects the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and laboratory and field duplicate RPD or difference values, with the exceptions noted above. All data are acceptable as reported or qualified.

Completeness was 100%; completeness goals were met. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

J Indicates an estimated value.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

Table 2
Data Qualification Summary

Data Validation Report – EPA Stage 2A

September 2, 2025

Project:	GE Housatonic River Floodplain
Project Number:	190469-01.03
DVR Number:	AQ-2025-0116

This report summarizes the review of analytical results for 59 sediment samples, 3 field duplicate samples, and 4 equipment rinsate blanks collected October through December 2024. The samples were collected by Anchor QEA and AECOM and submitted to SGS North America (SGS) in Dayton, New Jersey. Samples were analyzed for the following parameters:

- Polychlorinated biphenyl Aroclors (PCBs) by U.S. Environmental Protection Agency (EPA) method 8082A
- Total organic carbon (TOC) by method Lloyd Kahn and USEPA 9060A
- Total solids (TS) by Standard Method 2540G
- Grain size (GS) by ASTM International Method D422

Sample IDs, associated sample delivery groups (SDGs), matrices, and analyses are presented in Attachment 1. Four SDGs were reviewed in this report.

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/ quality control (QA/QC) guidelines outlined in the analytical procedures. Laboratory results were reviewed using the following guidelines:

- Field Sampling Plan/Quality Assurance Project Plan, Revision1 (Arcadis 2023)
- EPA Test Methods for Evaluating Solid Waste: Physical/Chemical Methods (SW-846, Third Edition; EPA1986)
- Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (EPA 1996)
- EPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA 2020a)
- EPA National Functional Guidelines for Inorganic Superfund Methods Data Review (EPA 2020b)

Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by SGS at the time of sample receipt with the exception of SDG JE3356 where only the first

page of the COC was signed. Samples were received in good condition and within the recommended temperature range with the following exception.

The lab noted that the container for PCBs for sample RB-2412201300 was not received.

The lab noted that the container for PCBs, TOC, and TS was broken upon receipt for SDG JE515 sample R12-ST005-COMP-241030-00-0.17. The sample was able to be salvaged but may have been contaminated with the water in the cooler and glass. The PCBs results were qualified "J" and "UJ" as estimated.

Sample Preservation and Holding Times

Samples were appropriately preserved and analyzed within the holding times with the exception of TOC. Fifty-two sediment TOC results (all TOC sediment results in SDGs JE3356, JE512, and JE515) were analyzed outside of the 14-day holding time. These TOC sediment results were qualified "J" to indicate they are estimated.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies and were free of target analytes.

Field Quality Control

Field Quality Control (QC) included rinsate blanks and field duplicates. Field QC samples were collected at the required frequency.

Equipment Rinsate Blanks

Four equipment rinsate blanks were collected in association with these sample sets. Three rinsate blanks were analyzed for PCBs and all four rinsate blanks were analyzed for TOC. All PCB and TOC results were below detection. The PCBs container for rinsate blank RB-2412201300 associated with SDG JE3385 was not received at SGS. It should be noted that all PCB results for the samples in SDG JE3385 were not detected.

Field Duplicates

Three field duplicates were collected in association with these sample sets. Detected results are summarized in Table 1. Field duplicate relative percent difference (RPD) values were assessed by the 50% RPD according to the QAPP. Results that were less than five times the method reporting limit (MRL) were assessed by the difference between them using ± 2 x MRL as the control limit. Parent sample and duplicate results associated with RPD or difference values above control limits have been qualified "J" to indicate they are estimated.

Table 1
Field Duplicate Summary

Analyte	R12-RT001-COMP-241031-00-0.17	R12-RT001-COMP-BD0001	RPD	Difference	Difference CL
TOC	1040 mg/kg	1450 mg/kg	33%	--	--
Total solids	81.9%	83.3%	2%	--	--

Analyte	R13-RT002-COMP-241106-00-0.25	R13-RT002-COMP-BD0001	RPD	Difference	Difference CL
Aroclor 1260	11.5 µg/kg	10.3 µg/kg	--	1.2 µg/kg	54 µg/kg
TOC	3700 mg/kg	5750 mg/kg	43%	--	--
Total solids	74.6%	75.3%	1%	--	--

Analyte	R16-ST008-COMP-241219-00-0.25	R16-ST008-COMP-BD0001	RPD	Difference	Difference CL
TOC	4840 mg/kg	2250 mg/kg	73%	--	--
Total solids	75.3%	80.6%	7%	--	--

Notes:
CL: Control Limit
µg/kg: microgram per kilogram
mg/kg: milligram per kilogram

Surrogate Spike Recoveries

Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution of 5x or greater, no data were qualified when surrogate recoveries were outside of control limits. When surrogate recoveries were outside of the control limits in one column, but results were reported from the other column; no data were qualified. Surrogates recovered outside of control limits in some laboratory QC samples, however; data are not qualified for surrogate outliers in QC samples alone or when outlying surrogates are associated with the non-reporting column. Surrogates recovered within project-required control limits with the following exceptions. Decachlorobiphenyl (DCB) recovered above the control limit for 10 sediment samples in SDG JE3385. All PCB results were not detected and were not affected by the potential high bias. No qualifications were necessary.

Column Confirmation Results

Second column confirmation results were within method requirements (40% RPD) for detected results.

Laboratory Control Samples and Laboratory Control Sample Duplicates

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the required frequency. No data were qualified when the LCS or LCSD recoveries were above the control limits and sample concentrations were not detected. No data were qualified when the surrogate recoveries were above the control limits and sample concentrations were not detected LCS and LCSD recoveries and/or RPD values within project-required control limits.

Matrix Spike and Matrix Spike Duplicate Samples

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at the required frequencies or MSDs were analyzed in place of laboratory duplicates. MS/MSD results reported for non-project samples were not evaluated. No data were qualified when native sample concentrations were greater than four times spike concentrations. No data were qualified when the recoveries and/or the RPD values were above the control limits and sample concentrations were not detected. Recoveries and/or RPD values were within project-required control limits with the following exceptions. Aroclor 1254 recovered below the control limit in the MS and MSD in batch OP60580. The associated sample was qualified in another validation report. No samples from this validation were qualified.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequency for total solids and grain size analyses and RPD values were within project-required control limits with the following exceptions. The RPD was above the laboratory-defined control limit for gravel on sample R12-ST004-COMP-241031-00-0.33. The sample result was qualified "J" to indicate it is estimated.

Method Reporting Limits

MRLs were acceptable as reported. All values were reported using the laboratory reporting limits. Values were reported as undiluted or when diluted, the reporting limit reflects the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recovery values, with the exceptions noted above. Precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and laboratory and field duplicate RPD or difference values, with the exceptions noted above. All data are acceptable as reported or qualified. Completeness was 100%; completeness goals were met. Table 2 summarizes the qualifiers applied to the sample results reviewed in this report.

Data Qualifier Definitions

U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.

J Indicates an estimated value.

UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated.

1 Summary

This attachment summarizes the data validation review of Sample Delivery Group (SDG) JD99719 performed on behalf of the General Electric Company (GE) for waterfowl sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) USEPA Method 8082A. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023); and
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

	Tier I Only			Tier I &Tier II			
Parameter	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	Total
PCBs	0	0	0	20	1	0	21

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Aroclor Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 8082A

Method	Matrix	Holding Time	Preservation
USEPA Method 8082A	Solid	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

2.3 System Performance

System performance and column resolution were acceptable.

2.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

2.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. Multiple-point calibrations were performed for Aroclors 1016 and 1260 only. Single-point calibrations were performed for the remaining Aroclors. The initial calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

2.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (15%).

All compounds associated with the calibrations were within the specified control limits.

2.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with labeled compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Analysis requires isotope dilution compounds exhibit recoveries within the laboratory-established acceptance limits.

All Aroclors associated with the labeled compound analysis exhibited recoveries within the control limits.

2.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis performed on samples MAL-WPA-M-01 and MAL-WPA-F-06-DUP, exhibited acceptable recoveries and RPDs.

2.7 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the reporting limit (RL). A control limit of 30% for water matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of one time the RL is applied for water matrices.

The laboratory duplicate analysis was not performed on a sample from this SDG.

2.8 Laboratory Control Sample / Laboratory Control Sample Duplicate Analysis

The ongoing precision result laboratory control sample / laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the accuracy of the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery and RPD within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits.

2.9 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of two times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 5. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compounds	Sample Result	Duplicate Result	RPD
MAL-WPA-F-06 / MAL-WPA-F-06-DUP	Aroclor 1254	82.7	20 U	NC
	Aroclor 1260	426	476	11.1%

Note:
NC = Non-Compliance

The compound Aroclor 1254 associated with samples MAL-WPA-F-06 and MAL-WPA-F-06-DUP exhibited a field duplicate absolute difference greater than the control limit. The associated sample results from samples for the listed compound were qualified as estimated.

2.10 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (%RPD) of detected sample results must be less than 40%.

The dual column analysis exhibited an acceptable %RPD between columns.

2.11 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.12 Data Validation Checklist for PCBs

Table 6. Data Validation Checklist for Polychlorinated Biphenyls

PCBs; EPA8082A	Reported		Performance Acceptable		Not Required

Notes:
%RSD = Relative standard deviation
RPD = Relative percent difference
%D = Percent Deviation
%R = Percent recovery

3 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 7. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

1 Summary

This attachment summarizes the data validation review of Sample Delivery Group (SDG) JE572 performed on behalf of the General Electric Company (GE) for waterfowl sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at Tier I level and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

Table 1. Summary of Samples Subjected to Tier I Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis
					PCB

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) USEPA Method 8082A. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023); and
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	20	1	0	0	0	0	21

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Aroclor Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 8082A

Method	Matrix	Holding Time	Preservation
USEPA Method 8082A	Solid	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

2.3 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with labeled compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Analysis requires isotope dilution compounds exhibit recoveries within the laboratory-established acceptance limits.

Samples associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Table 5. Surrogate Recoveries Outside Control Limits

Sample ID	Surrogates	Recovery
WOD-BBA-M-06	Tetrachloro-m-xylene	> UL
	Decachlorobiphenyl	> UL

Note:
UL = Upper control limit

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results associated with the deviant fraction are qualified as documented in the table below.

Table 6. Surrogate Recovery Evaluation Criteria

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
D: Surrogates diluted below the calibration curve due to the high concentration of a target compounds	Non-detect	UJ[1]
	Detect	J[1]

Note:
[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

2.4 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis performed on samples WOD-WPA-M-14 and WOD-BBA-M-11-DUP, exhibited acceptable recoveries and RPDs.

2.5 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the RL. A control limit of 30% for water matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the EML, a control limit of one time the RL is applied for water matrices.

The laboratory duplicate analysis was not performed on a sample from this SDG.

2.6 Laboratory Control Sample / Laboratory Control Sample Duplicate Analysis

The ongoing precision result laboratory control sample / laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the accuracy of the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery and RPD within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits.

2.7 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit, a control limit of two times the reporting limit is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Table 7. Summary of Field Duplicate Analysis

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
WOD-BBA-M-11 / WOD-BBA-M-11-DUP	Aroclor 1260	844	757	10.9%

The calculated RPD between the parent sample and field duplicate were acceptable.

2.8 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (%RPD) of detected sample results must be less than 40%.

The dual column analysis exhibited an acceptable %RPD between columns.

2.9 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.10 Data Validation Checklist for PCBs

Table 8. Data Validation Checklist for Polychlorinated Biphenyls

RPD = Relative percent difference
%D = Percent Deviation

3 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under Tier I data validation review. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 9. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0

The data package completeness, as determined from the Tier I data review, was used to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

1 Summary

This attachment summarizes the data validation review of Sample Delivery Group (SDG) JD98142 performed on behalf of the General Electric Company (GE) for waterfowl sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis
					PCB
CRACKED CORN BAG 1	JD98142-1	Soil	08/21/2024		X
CRACKED CORN BAG 6	JD98142-2	Soil	08/28/2024		X
CRACKED CORN BAG 11	JD98142-3	Soil	09/06/2024		X
CRACKED CORN BAG 16	JD98142-4	Soil	09/18/2024		X
CRACKED CORN BAG 17	JD98142-5	Soil	09/19/2024		X

Note:
PCB = Polychlorinated Biphenyls

1.1 Analytical Data Package Documentation

The table below is the evaluation of the data package completeness.

Table 2. Evaluation of Data Package Completeness

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X

10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) USEPA Method 8082A. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023); and
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if

it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	0	0	0	5	0	0	5

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Aroclor Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 8082A

Method	Matrix	Holding Time	Preservation
USEPA Method 8082A	Solid	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

2.3 System Performance

System performance and column resolution were acceptable.

2.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

2.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. Multiple-point calibrations were performed for Aroclor 1016 and 1260 only. Single-point calibrations were performed for the remaining Aroclors. The initial calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

2.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (15%).

All compounds associated with the calibrations were within the specified control limits.

2.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with labeled compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Analysis requires isotope dilution compounds exhibit recoveries within the laboratory-established acceptance limits.

All Aroclors associated with the labeled compound analysis exhibited recoveries within the control limits.

2.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis performed on sample CRACKED CORN BAG 1, exhibited acceptable recoveries and RPDs.

2.7 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the reporting limit (RL). A control limit of 30% for water matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of one time the RL is applied for water matrices.

The laboratory duplicate analysis was not performed on a sample from this SDG.

2.8 Laboratory Control Sample / Laboratory Control Sample Duplicate Analysis

The ongoing precision result laboratory control sample / laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the accuracy of the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery and RPD within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits.

2.9 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the EML, a control limit of two times the RL is applied for water matrices.

A field duplicate sample was not collected for samples from this SDG.

2.10 Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (%RPD) of detected sample results must be less than 40%.

The dual column analysis exhibited an acceptable %RPD between columns.

2.11 System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.12 Data Validation Checklist for PCB Congeners

Table 5. Data Validation Checklist for Polychlorinated Biphenyls

Notes:
%RSD = Relative standard deviation
RPD = Relative percent difference
%D = Percent Deviation
%R = Percent recovery

3 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 6. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

1 Summary

This attachment summarizes the data validation review of Sample Delivery Group (SDG) C1489 performed on behalf of the General Electric Company (GE) for waterfowl sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) USEPA Method 1668C. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);
- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.

- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	0	0	0	12	0	0	12

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
USEPA Method 1668C	Tissue	One year (frozen) from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 5. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Blank	Sample Result	Qualification
MAL-WPA-F-05 MAL-WPA-F-06 WOD-WPA-F-08 WOD-WPA-M-10 WOD-WPA-F-15	PCB-11	Method blank (C1489_21993)	Detected sample results >RL and <BAL	"U" at detected sample concentration
MAL-WPA-M-01	PCB-3 PCB-11			
MAL-WPA-M-07	PCB-1 PCB-3 PCB-11			
WOD-BBA-F-01 WOD-WPA-M-13	PCB-1 PCB-11			

Sample ID	Compounds	Blank	Sample Result	Qualification
WOD-BBA-M-02	PCB-3 PCB-11 PCB-64			
WOD-BBA-M-03	PCB-1 PCB-11 PCB-21/33			
WOD-BBA-F-09	PCB-1 PCB-3 PCB-11 PCB-21/33			

Note:
RL = Reporting limit

The Total PCBs as Congeners result is calculated post validation within the database; therefore, the total PCB results have not been adjusted on the attached laboratory forms.

2.3 System Performance

System performance and column resolution were acceptable.

2.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

2.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

2.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

All compounds associated with the calibrations were within the specified control limits.

2.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with labeled compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Analysis requires isotope dilution compounds exhibit recoveries within the laboratory-established acceptance limits.

All PCB congeners associated with the labeled compound analysis exhibited recoveries within the control limits with the exception noted below.

Table 6. Surrogate Recoveries Outside Control Limits

Sample ID	Surrogate	Recovery
MAL-WPA-M-01 WOD-WPA-F-08	ES PCB-170	> UL
	ES PCB-180	> UL
MAL-WPA-F-05 MAL-WPA-M-07 WOD-WPA-M-10 WOD-WPA-M-13 WOD-WPA-F-15 WOD-BBA-M-03	ES PCB-180	> UL

Notes:
UL = Upper control limit

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the associated sample results are qualified as documented in the table below.

Table 7. Surrogate Recovery Evaluation Criteria

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Surrogates diluted below the calibration curve due to the high concentration of a target compounds	Non-detect	UJ[1]
	Detect	J[1]

2.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

An MS/MSD analysis was not performed on a sample within this SDG.

2.7 Laboratory Duplicate Analysis

The laboratory duplicate RPD criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the EML. A control limit of 30% for water matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the EML, a control limit of one time the EML is applied for water matrices.

A laboratory duplicate analysis was not performed on a sample within this SDG.

2.8 Ongoing Precision Result (OPR) / Laboratory Control Sample

The ongoing precision result (OPR) / laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the OPR/LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the OPR/LCS analysis exhibited recoveries within the control limits.

2.9 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the EML, a control limit of two times the EML is applied for water matrices.

Field duplicate samples were not collected from this SDG.

2.10 Compound Identification

PCB congeners by 1668C are identified by using the compound’s ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest.” This value should be considered an elevated detection limit based on potential compound identification and quantitation interference. If the EMPC value is above the reporting limit, the qualifier JNX has been added to the sample results to indicate the elevated detection limit as EMPC. If the EMPC value is below the reporting limit, the compound is reported as non-detect at the reporting limit and no qualification is added.

Note: Samples MAL-WPA-M-01 (001) and MAL-WPA-F-05 (002) show saturated analytes for one or more Hepta- and Hexa-CB compounds. Affected analytes and homolog totals are "S" qualified to indicate the saturation and that reported results are minimum estimates of the actual concentrations. The “S” qualifier will be removed for final reporting and these and the other compounds in the original analysis outside calibration range were flagged with an “EJ” qualifier.

The laboratory qualified co-eluting congeners as “C”. The “C” qualifier will be removed from the database for reporting purposes.

2.11 System Performance and Overall Assessment

Overall system performance was acceptable. Other than those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.12 Data Validation Checklist for PCB Congeners

Table 8. Data Validation Checklist for Polychlorinated Biphenyls

PCB Congeners; EPA1668C	Reported		Performance Acceptable		Not Required

Notes:
%RSD = Relative standard deviation
RPD = Relative percent difference
%D = Percent Deviation
%R = Percent recovery

3 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 9. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Preservation Type: **Sample Seals:** No

Notes/Comments:

Samples received intact. Samples from C1033 & C1034.

Any un-extracted sample will be stored for 90 days from reporting date. Additional storage fees may apply for any samples stored longer than 90 days.

Notes:
ND - Analyte was not detected. The number in parentheses is the associated reporting limit.
J = Indicates the compound was positively identified; however, the associated numerical value is an estimated concentration only.

Baseline Monitoring Program: Data Summary Report for 2024
Housatonic River - Rest of River

Notes

mg/kg = milligram per kilogram

EJ = The compound was quantitated above the calibration range. The associated numerical value is an estimated concentration only.

EJNX = The compound was quantitated above the calibration range. The associated numerical value is an estimated maximum possible concentration (EMPC).

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.

JNX = The associated numerical value is an estimated maximum possible concentration (EMPC).

U = The compound was not detected above the reported sample quantitation limit.

1 Summary

This attachment summarizes the data validation review of Sample Delivery Group (SDG) C1067 performed on behalf of the General Electric Company (GE) for benthic invertebrate sampling activities conducted as part of the Baseline Monitoring at the GE-Pittsfield/Housatonic River Site. The review was conducted at Tier I and Tier II levels and included review of data package completeness. Field documentation was not included in this review. Included with this assessment are the chain-of-custody forms (Appendix A) and the validation annotated sample analysis data sheets (Appendix B). Analyses were performed on the samples listed in Table 1.

Table 1. Summary of Samples Subjected to Tier I and Tier II Data Validation

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis
						PCB
C1067	5B-T-1	C1067_001	Tissue	10/07/2024		X

11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Note:
QA = Quality Assurance

1.2 Data Validation Procedures

Analyses were performed according to United States Environmental Protection Agency (EPA) USEPA Method 1668C. Data were reviewed in accordance with the following documents:

- Field Sampling Plan/Quality Assurance Project Plan – GE-Pittsfield/Housatonic River Site (FSP/QAPP), General Electric Company, Pittsfield, Massachusetts, prepared by Arcadis (Revised December 21, 2023);
- EPA Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) (EPA Region I Guidelines);
- EPA National Functional Guidelines for High Resolution Superfund Methods Data Review OLEM 9240.1-65EPA, 542-R-20-007 (November 2020); and
- Second Revised Baseline Monitoring Plan, Housatonic River – Rest of River, General Electric Company, Pittsfield, Massachusetts, prepared by Anchor QEA (January 2023).

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

UB Compound considered non-detect at the listed value due to associated blank contamination.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected.

Two facts should be noted by all data users. First, the “R” flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

Section 7.5 of the revised FSP/QAPP states that all analytical data will be validated to a Tier I level following the procedures presented in the EPA Region I Guidelines. The Tier I review consisted of a completeness evidence audit, as outlined in the EPA Region I CSF Completeness Evidence Audit Program (EPA Region I, July 31, 1991), to ensure that laboratory data and documentation were present. In the event that data packages were determined to be incomplete, the missing information was requested from the laboratory. Upon completion of the Tier I review, the data packages complied with the EPA Region I Tier I data completeness requirements.

The analytical results described above were also subjected to a Tier II data review. The Tier II data review consisted of a review of data package summary forms for identification of quality assurance (QA)/QC deviations and qualification of the data according to the EPA Region I Guidelines. Additionally, field duplicates were examined for relative percent difference (RPD) compliance with the criteria specified in the FSP/QAPP. A tabulated summary of the number of sample analyses subject to Tier I and Tier II data review is presented in the following table.

Table 3. Summary of Sample Analyses Subjected to Tier I and Tier II Data Validation

Parameter	Tier I Only			Tier I &Tier II			Total
	Samples	Duplicates	Blanks	Samples	Duplicates	Blanks	
PCBs	0	0	0	8	0	0	0

When qualification of the sample data was required, the sample results associated with a QA/QC parameter deviation were qualified in accordance with the procedures outlined in EPA Region I Guidelines. When the data validation process identified several quality control deficiencies, the cumulative effect of the various deficiencies was employed in assigning the final data qualifier. The annotated sample analysis data sheets attached to this validation report (Appendix B) reflect any added data qualifiers.

2 Polychlorinated Biphenyl Congener Analyses

2.1 Holding Times

The specified holding times for the following methods are presented in the following table.

Table 4. Holding Time for USEPA Method 1668C

Method	Matrix	Holding Time	Preservation
USEPA Method 1668C	Tissue	One year from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria with the exceptions noted below.

Table 5. Holding Time Exceptions

Sample ID	Holding Time	Criteria
5B-T-1 5A-T-1 5C-T-1 7D-T-1 7H-T-1 11-T-1 11-T-2 11-T-3	102 days from extraction to analysis	40 days from extraction to analysis

Sample results associated with sample locations analyzed by analytical method EPA 1668C were qualified, as specified in the table below. All other holding times were met.

Table 6. Holding Time Evaluation Criteria

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

2.2 Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Table 7. Summary of Blank Contamination Qualifications

Sample ID	Compounds	Blank	Sample Result	Qualification
11-T-1_20241010	PCB-11	Method blank (C1067_21675)	Detected sample results >RL and <BAL	"U" at detected sample concentration

Note:
RL = Reporting limit

The Total PCBs as Congeners result is calculated post validation within the database; therefore, the total PCB results have not been adjusted on the attached laboratory forms.

2.3 System Performance

System performance and column resolution were acceptable.

2.4 Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

2.4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

2.4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

All compounds associated with the calibrations were within the specified control limits.

2.5 Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with labeled compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Analysis requires isotope dilution compounds exhibit recoveries within the laboratory-established acceptance limits.

All PCB congeners associated with the labeled compound analysis exhibited recoveries within the control limits with the exceptions noted below.

Table 8. Surrogate Recoveries Outside Control Limits

Sample ID	Surrogate	Recovery
5B-T-1	ES PCB-180	> UL
5C-T-1	ES PCB-170	> UL
	ES PCB-209	> UL
7H-T-1	ES PCB-170	> UL
	ES PCB-180	> UL
	ES PCB-209	> UL
11-T-1	ES PCB-180	> UL
11-T-2	ES PCB-170	> UL
	ES PCB-180	> UL
11-T-3	ES PCB-170	> UL
	ES PCB-180	> UL
	ES PCB-188	> UL

Note:
UL = Upper control limit

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results are qualified as documented in the table below.

Table 9. Surrogate Recovery Evaluation Criteria

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Surrogates diluted below the calibration curve due to the high concentration of a target compounds	Non-detect	UJ[1]
	Detect	J[1]

2.6 Matrix Spike/Matrix Spike Duplicate Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The RPD between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis was performed on sample 7H-T-1. The MS/MSD analysis exhibited acceptable recovery and RPDs with the exception noted below.

Table 10. MS/MSD Recoveries Outside Control Limits

Sample ID	Compound
7H-T-1	PCB-126

The criteria used to evaluate the RPD between the MS/MSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Table 11. MS/MSD Evaluation Criteria

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

2.7 Laboratory Duplicate Analysis

The laboratory duplicate RPD criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the EML. A control limit of 30% for water matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the EML, a control limit of one time the EML is applied for water matrices.

The laboratory duplicate analysis was performed on sample 7H-T-1. The laboratory duplicate analysis exhibited acceptable RPD values with the exception noted below.

Table 12. Summary of Laboratory Duplicate Analysis

Sample ID	Compounds
7H-T-1	Tetra-CB
	Octa-CB
	PCB-209 DeCB

The criteria used to evaluate laboratory duplicate RPD are presented in the following table. In the case of a laboratory duplicate RPD deviation, the sample results are qualified.

Table 13. Laboratory Duplicate Evaluation Criteria

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

2.8 Ongoing Precision Result (OPR) / Laboratory Control Sample

The ongoing precision result (OPR) / laboratory control sample (LCS) analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The compounds associated with the OPR/LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the OPR/LCS analysis exhibited recoveries within the control limits.

2.9 Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In an instance when the parent and/or duplicate sample concentrations are less than or equal to five times the EML, a control limit of two times the EML is applied for water matrices.

Field duplicate samples were not collected from this SDG.

2.10 Compound Identification

PCB congeners by 1668C are identified by using the compound’s ion abundance ratios, signal-to-noise values, and relative retention times.

An EMPC or "estimated maximum possible concentration" designation is given to compounds which have signals eluting within the established retention time window which would, if positively identified, be above the detection limit. The signals do not, however, meet the ion abundance ratio criteria and cannot be identified as the compound of interest. The EMPC value is the estimated concentration of the interferant quantitated "as the compound of interest.” This value should be considered an elevated detection limit based on potential compound identification and quantitation interference. If the EMPC value is above the reporting limit, the qualifier JNX has been added to the sample results to indicate the elevated detection limit as EMPC. If the EMPC value is below the reporting limit, the compound is reported as non-detect at the reporting limit and no qualification is added.

Note: Several compounds in the original analysis of the samples were outside calibration range and flagged with an “EJ” qualifier.

2.11 System Performance and Overall Assessment

Overall system performance was acceptable. Other than those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

2.12 Data Validation Checklist for PCB Congeners

Table 14. Data Validation Checklist for Polychlorinated Biphenyls

PCB Congeners; EPA1668C	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
HIGH RESOLUTION GAS CHROMATOGRAPHY/HIGH RESOLUTION MASS SPECTROMETRY (HRGC/HRMS)					
Tier I Validation					
Holding times		X	X		
Reporting limits (units)		X		X	
Blanks

Labeled Standard Recovery %R		X	X		
Cleanup Compound %R		X		X	
Dual Column (RPD)		X		X	
Dilution Factor		X		X	
Moisture Content	X				X

Notes:
%RSD = Relative standard deviation
RPD = Relative percent difference
%D = Percent Deviation
%R = Percent recovery

3 Overall Data Usability

This section summarizes the analytical data in terms of its completeness and usability. Data completeness is defined as the percentage of sample results that have been determined to be usable during the data validation process. The percent usability calculation included analyses evaluated under both the Tier I/II data validation reviews. The percent usability calculation also includes quality control samples (i.e., field/equipment blanks, trip blanks, and field duplicates) to aid in the evaluation of data usability. Data usability is summarized in the following table.

Table 15. Overall Summary of Data Usability

Parameter	Percent Usability	Rejected Data
PCBs	100%	0

The data package completeness, as determined from the Tier I data review, was used in combination with the data quality deviations identified during the Tier II data review to determine overall data quality. As specified in the FSP/QAPP, the overall precision, accuracy, representativeness, comparability, and completeness (PARCC) parameters determined from the Tier I and Tier II data reviews were used as indicators of overall data quality. These parameters were assessed through an evaluation of the results of the field and laboratory QA/QC sample analyses (discussed in this report) to provide a measure of compliance of the analytical data with the Data Quality Objectives specified in the FSP/QAPP.

Contact & Company Name: Adam Ayers/Arcadis

Telephone: 518 312 0940

Address:

Fax:

City State Zip

E-mail Address: Thomas.Ayers@arcadis.com

Project Name/Location (City, State): GE Housatonic River (CT, MA)

Project #:

Sampler's Printed Name: Matt Frachetton

Sampler's Signature:

Preservative	0°C						
Filtered (✓)	—						
# of Containers	1/Sample						
Container Information	7						

Keys

Preservation Key:
A. H_2SO_4
B. HCL
C. HNO_3
D. NaOH
E. None
F. Other: _____
G. Other: _____
H. Other: _____

Container Information Key:
1. 40 ml Vial
2. 1 L Amber
3. 250 ml Plastic
4. 500 ml Plastic
5. Encore
6. 2 oz. Glass
7. 4 oz. Glass
8. 8 oz. Glass
9. Other: _____
10. Other: _____

Matrix Key:
SO - Soil SE - Sediment NL - NAPL/Oil
W - Water SL - Sludge SW - Sample Wipe
T - Tissue A - Air Other: _____

PARAMETER ANALYSIS & METHOD

Table L-1
Benthic Invertebrate Individual Congener PCB Results

Baseline Monitoring Program: Data Summary Report for 2024
Housatonic River - Rest of River

Notes

mg/kg = milligram per kilogram

EJ = The compound was quantitated above the calibration range. The associated numerical value is an estimated concentration only.

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.

JNX = The associated numerical value is an estimated maximum possible concentration (EMPC).

UBJ = The compound is considered non-detect at the listed value due to associated blank contamination. The associated numerical value is an estimated concentration only.

UJ = The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
