LICENSE TO COLLECT OR POSSESS: SCIENTIFIC - LICENSE CONDITIONS

1. Collection from the Wild: Authorized Species, Specific The licensee is authorized to collect and possess the following species: 20 Black crappie (Promoxis nigromaculatus), 20 Bluegill sunfish (Lepomis macrochirus), 20 Pumpkinseed (Lepomis gibbosus), 20 White sucker (Catostomus commersonii), 20 Common carp (Cyprinus carpio), 20 Largemouth bass (Micropterus salmoides), 40 Crayfish(Family) Family: Astacidae

2. Scientific Collection - Authorized Activities The licensee is authorized to possess the collected species for the following activity(ies): Residue analyses to support the Human health and Ecological Risk Assessments for Koppers Pond

3. Scientific Collection - Location The licensee is authorized to collect species from the following locations only:
Koppers Pond and two reference ponds authorized by DEC located in the Horseheads area.

4. Scientific Collection - Authorized Fish Collection Equipment The licensee shall only collect fish using
Electroshocking, hand collection and sweep nets.

5. Scientific Collection - Biosafety Protocol The licensee shall conform with all guidelines contained in the NYS DEC Bureau of Fisheries Sampling, Survey, Boat and Equipment Protocol, attached to this license as Appendix I. Any questions regarding the protocols may be directed to the Regional Fisheries Manager at:

Regional Fisheries Manager
NYSDEC REGION 8 HEADQUARTERS

6. Scientific Collection - LCP - No Endangered or Threatened Species No endangered/threatened species may be collected or possessed pursuant to this license.

7. Scientific Collection - Federal and Local Licensing Requirements The licensee shall determine if a corresponding Federal or local Permit is required to exercise the authority granted in this license. If a corresponding Federal or local Permit is required, the licensee shall obtain a valid Federal or local Permit before conducting any activity pursuant to this license.

8. Collection from the Wild - Authority to Designate Agents The licensee is authorized to designate agents to assist the licensee with the activities authorized pursuant to this license provided that:

a. the licensee submits a written request to the NYSDEC Special Licenses Unit at the address listed on the front of this license containing the:
i) name
ii) address
iii) age
iv) phone number of the person he or she is nominating as a designated agent, and;

b. the licensee receives an amended license from the Special Licenses Unit listing the designated agent(s) he or she has nominated before that person can conduct activities authorized by this license.

9. Scientific Collection - Reporting Requirement - Prior to Expiration The licensee shall file a written annual report prior to the expiration date of this license. Such annual report shall contain: a) name of the licensee, b) license number, c) common name of the listed animals collected, d) location(s) of collection, e) date(s) of collection, f) biological data collected and g) final disposition of collected animals. The licensee shall send this report to the NYSDEC Special Licenses Unit 625 Broadway, Albany, NY 12233-4752.

10. Scientific Collection - Reporting Requirement - Macroinvertebrate The licensee shall record and report all macroinvertebrate collections using forms provided by the Department.

11. Scientific Collection – Additional Reporting Requirement The licensee shall file duplicate reports with the following Regional Wildlife Manager or Fisheries Manager.

Appendix I. NYS DEC Bureau of Fisheries Sampling, Survey, Boat and Equipment Protocol

Sampling and Survey work should be conducted with clean, dry and/or completely disinfected equipment.

For all survey work in streams and rivers where the status of ANS is unknown, sampling should start at the upper most reach, and then work downstream. This will help ensure that non motile ANS will not be transported on boots and gear to uninfected upstream reaches. In streams where the infestation is systemwide, survey order is less important. If the stream or river is already known to be infested with ANS but the extent of infestation is not clear, particular care should be taken to replace or completely disinfect boots and gear before consecutive surveys are conducted.

In general, lakes and ponds which are connected by channels or streams with or without barriers, should be surveyed starting at the uppermost location in the system. Dry or disinfected gear should always be used for lake or pond surveys.

When traveling from a lake or pond to another water body, or from a stream/river site to one that is not downstream in the same system, the following procedures must be followed for boats, trailers and all other gear that comes in contact with the water. *(Note: additional REQUIRED procedures are listed in this protocol for use when moving from whirling disease or zebra mussel positive waters to waters not known to have these organisms.)*

- **Upon launching boat:**
  - **Trailers with carpeted bunks** should be disinfected after the boat is launched and the trailer removed from the water - use a spray bottle with Lysol solution or full-strength vinegar for carpeted trailer bunks.
  - Keep the disinfectant bottle in the truck so the driver can treat the trailer bunks after deploying the boat.

- **Prior to leaving launch site:**
  - Inspect and remove visible aquatic plants, animals and mud from the boat, trailer and equipment at the sampling location.
  - Drain all water from the live well, bilge, etc.
  - Do not transfer any aquatic animals, plants or water from one water body to another.

- Do not store dissolved oxygen probes or other water chemistry gear in lake water - bring distilled or chlorinated tap water for this purpose (follow manufacturers directions).

- **Upon returning to equipment storage area OR before launching in any other water body that is not immediately downstream of prior location (whichever comes first):**

  - Nets, anchors, lines, boots and waders can be dried for 5 days . *When felt soled waders are used special care needs to be taken to ensure that they are totally dry or they must be disinfected as outlined below*) **OR**
  - **All** equipment can be disinfected using one of the following techniques (*Note: for boats this includes surface, motor, bilge, pumps and live wells. All equipment must subsequently be rinsed with clean water. Disinfection must take place away from water bodies*):
    - **In zebra mussel/whirling disease waters - use 10% bleach solution***
    - In all other waters - 1% Virkon Aquatic** is acceptable **OR**
    - Boats, trailers and **all** other equipment can be disinfected using a high temperature pressure washer (steam power washer)- *(Note: this technique is approved for zebra mussel/whirling disease waters;* see Appendix 1 for boat disinfection guidelines).
    -

* **Chlorine bleach**: When handling 10% chlorine bleach solution, be sure to wear protective gear (masks, gloves, goggles, etc.) and use in a well ventilated area (follow precautions on Material Safety Data Sheets (MSDS)). Remove all visible debris from equipment and gear. Spray equipment and gear with the solution so that it is saturated or immerse gear in solution. If equipment or gear is porous (i.e., felt bottomed or neoprene waders) let soak in solution for 10 minutes. Rinse equipment and gear with tap water or with water from the next water body you will be sampling. Dispose of waste chlorine bleach solution away from bodies of water and drinking water sources (follow protocol in MSDS).

** **Virkon Aquatic:** Wear a dust mask and rubber gloves when handling the powder. Mix a 1% (1:100) solution. Remove all visible debris from equipment and gear. Spray equipment and gear with the solution so that it is saturated or immerse gear in solution. If equipment or gear is porous (i.e., felt bottomed or neoprene waders) let soak in solution for 10 minutes. Rinse equipment and gear with tap water or with water from the next water body you will be sampling. Dispose of waste Virkon solution away from bodies of water and drinking water sources (follow protocol in MSDS).

NYSDEC Bureau of Fisheries
Biosecurity Protocol

Boat hulls, anchors, and trailers:

- Always drain the bilges of the boat by removing the drain plug. Bilge pumps are not capable of removing all water from those areas. Wet wells, live wells, and any other compartments that could hold water from an infested field collection site should be drained of water at the field site, and if possible, flushed with hot water, steam or disinfectant solution and allowed to dry before the next use. If appropriate, the field site water may be drained back into the original body of water, as long as conditions and the decontaminant used are such that this would not cause chemical or biological contamination. Otherwise, such water containing disinfectant solutions must be drained into a suitable container for treatment prior to final disposal. Field crews may elect to not drain the bilge area until they return to the storage lot if they are not going to any other bodies of water until decontamination is completed.
- If the bilge water is drained and collected, it must be disinfected and then disposed of by suitable means to avoid causing environmental damage or contamination.
- After draining contained water, all compartments that held water should be washed with a high temperature pressure washer or disinfectant solution and left open to completely dry prior to use in the next site.
- All boats, anchors, trailers used in field sampling will be cleaned using a high temperature pressure washer working from fore to aft and gunnels to keel in a thorough manner.
- While using the high temperature pressure washer, particular attention should be paid to the cooling water intakes on the lower unit of the motor.
- Particular attention should be paid to the carpeted trailer bunks since they can hold water for extended periods of time. These areas should have already been treated with a disinfectant solution when the boat was unloaded into the lake but should be washed with a high temperature pressure washer anyway.
- Lower the motor to drain all water from the lower unit. Replace the motor into the "transom saver" when this is accomplished.

APPENDIX E
QUALITATIVE ASSESSMENT OF BIOTA AND FISH HABITAT

The current environmental setting and habitats of Koppers Pond was summarized in the *Preliminary Conceptual Site Model* (Koppers Pond RI/FS Group, 2007b). This section summarizes results from the May 2008 sampling event and compares these results to the June 2003 field observations. Attachment E-1 contains representative site photographs from the fish collections.

E.1 Summary of Fish Collections

Table E-1 summarizes the fish that were collected during the May 2008 and provides some key morphometric parameters (e.g., body weight, total length). The gamefish that were collected included black crappie, carp, largemouth bass, and white sucker. None of these fish exhibited any external lesions or physical anomalies. The individual fish were analyzed for chemical parameters and lipid content.

The forage fish that were collected included bluegill sunfish and pumpkinseeds. Three of the bluegill samples were evaluated as individual samples, and one was evaluated as a composite of four fish to achieve sufficient samples mass for chemical analysis. Similarly, there was one composite of pumpkinseed (consisting of four fish) and one individual sample evaluated for chemical analyses. None of these fish exhibited any external lesions or physical anomalies.

One gizzard shad that was collected had some fin erosion and a lip tumor. It was released back to the pond with the agreement of the three agencies as a non-target species and an isolated case of deformity.

E.2 May 2008 Biota and Fish Habitat Assessment

The fish collection effort was not intended as a population survey, and the field team discontinued shocking when the target species and numbers were collected. Several other fish were noted in addition to those retained for chemical analyses. These included yellow perch, largemouth bass, black crappie, four pumpkinseeds and seven bluegills. These were all released. Numerous largemouth bass were observed in the pond, but the collection team did not net them after the target number of specimens had been captured.

In addition to the fish collections, the team made note of the other biota observed in, on or near the pond. The air temperature was 7-10°C, with a light rain falling throughout the sampling period. Because of the inclement weather, there was little visible wildlife activity.

- *Avian Species*: Among the birds observed at the pond were: red-winged blackbirds, robins, yellow warblers, sparrows, swallows, Canada geese and mallards.

- *Reptiles and Amphibians*: One Eastern painted turtle was netted by the fish shocking team. While few turtles were observed during the fish collection, numerous turtles, including snapping turtles, were observed on preceding sunny days. No frogs or tadpoles

were observed during the fish shocking, but many had been observed on preceding sunny days.

- *Aquatic Insects*: Water striders were observed on the pond surface. The inclement weather likely reduced activities of any flying insects (e.g., dragonflies).

These observations, albeit limited, were consistent with what one would expect to see in warmwater pond areas in this portion of NY State.

E.3 Comparison of 2003 and 2008 Assessments of Biota and Fish Habitat

The worksheets from EPA's *Rapid Bioassessment Protocol* (RBP: Barbour et al., 1999) were used to collect information about the potential habitats and other ecologically-relevant features of Koppers Pond and the immediate area during the June 2003 sampling event (CEC, 2003). There was little apparent change in the vegetative cover adjoining the pond between the June 2003 and May 2008 sampling events, although a detailed assessment of these adjoining areas was not performed in 2008.

The pond conditions were similar between the June 2003 and May 2008 sampling events, with the exception of the pond water levels. During the May 2008 sampling event it was observed that water levels were approximately 2-ft lower than present during the prior sampling events. This was not attributable to a drought, since rainfall has been close to normal in the Horseheads area. The decline is likely due to removal of beaver dams near the pond outlets. The reduction in water levels has resulted in exposure of littoral areas that were formerly under water along portions of the pond perimeter. Additional soil/sediment samples were collected from some of these littoral areas during the May 2008 field sampling event.

NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

The codes utilized for program types are described below:

HW Hazardous Waste certification
WW Non-potable Water and/or Wastewater certification
X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 21, 2010. The cooler was received within the proper temperature range.

Note: The initial weight extracted for the sediment samples was determined based on using 50% for the percent moisture of each sample.

Sample SD10-19 was received broken.. The sample aliquot was transferred to a new jar and analyzed.

Sample EB10-20 was received with very limited volume. This sample was weighed out for analysis as a solid sample would be in order to have enough sample volume for all requested analyses.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected and/or matrix, several samples were analyzed at a dilution.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

Several continuing calibration standards had compounds with a %D >25%; but were within the expected performance range for these compounds.

PCB's:
There were no problems associated with the analysis.

Metals:
The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

CASE NARRATIVE

Client: TestAmerica Laboratories, Inc.

Project: Koppers Pond (Horseheads, NY)

Report Number: 200-2079-1 (Revision 2)

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/20/2010 and 10/21/2010; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.5 ^{o}C and 5.0 ^{o}C. Due to an oversight in documentation, the Internal COCs were not created for the metals fraction.

The tissue samples were prepared/homogenized and maintained in frozen storage. All results have been reported on a wet weight basis.

PCBs as Arcolors

The samples in this sample set were analyzed for PCB in accordance with EPA SW-846 method 8082. The samples were prepared on 10/28/2010 and analyzed on 11/05/2010, 11/06/2010, 11/10/2010, 12/15/2010, and 12/16/2010.

The samples were extracted on 10/28/2010 for PCBs using a nominal 10 gram sample amount, and the extracts were brought to a final volume of 10mL. Those extracts were analyzed, and the results were reported. Based on a consideration of the project objectives, the laboratory did pursue an additional analysis of the sample extracts to achieve a lower reporting limit. From the initial 10.0 mL extract, a 5.0 mL volume was concentrated to 2.0 mL, and analyzed. Sample FF10-07 was not re-analyzed, as PCBs were identified in the analysis of that sample. Additionally, the extracts for the matrix spike matrix spike duplicate, and replicate analysis of sample RVG10-02 were not reanalyzed. The extracts of each of the laboratory quality controls associated with the analytical work were included with the reanalysis of the sample extracts.

Data for both the initial and more concentrated analysis of the samples are presented in the data package. An “RE” suffix has been appended to both the laboratory identifier and the sample identifier to distinguish the more concentrated analyses.

The form summaries associated with the follow-up analyses make reference to an extraction date of 11/30/2010, this is a reflection of the additional extract preparations. All extractions were performed on 10/28/2010.

It should be noted that the more concentrated analysis of the sample extracts occurred on 12/15/2010 and 12/16/2010, and that the 40-day analytical holding time established by the method was exceeded. Additionally, the majority of the surrogate recoveries in those analyses were derived from responses that exceeded the range of calibrated instrument response, as were the recoveries in the MS/MSD and LCS analyses. Those values are qualified with an "E" qualifier.

No difficulties were encountered during the 8082 analyses.

All quality control parameters were within the acceptance limits. All quality control parameters were within the acceptance limits.

TOTAL METALS (ICPMS)

The samples in this sample set were analyzed for total metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 10/27/2010 and analyzed on 10/29/2010, 10/30/2010 and 11/03/2010.

Calcium, Cobalt, Manganese and Potassium failed the recovery criteria low for the MS of sample RLB10-01MS in batch 200-9011. Zinc failed the recovery criteria high. Refer to the QC report for details.

Calcium and Potassium failed the recovery criteria low for the MS of sample RVG10-02MS in batch 200-9011. Several analytes failed the recovery criteria high. The associated laboratory control sample (LCS) recovery met acceptance criteria. Refer to the QC report for details.

Arsenic, Calcium, Iron, Manganese and Zinc exceeded the RPD limit for the duplicate of sample RLB10-01DU. Several analytes exceeded the RPD limit for the duplicate of sample RVG10-02DU. Refer to the QC report for details.

The continuing calibration verification (CCV) for analytical batch 9011 exceeded control criteria for K, Mg, and Na. The data have been qualified and reported.

The post digestion spike % recovery for Ca and K was outside of control limits. Refer to the QC report for details.

The serial dilution performed for the several samples were outside control limits for Ca, Mg, Ba, Pb, and Na. Refer to the QC report for details.

Internal standard responses were outside of acceptance limits for the following sample:
VG10-01 (200-2081-4) for As and Se. The sample showed evidence of matrix interference.

Samples RVG10-01[10X], VG10-01[10X] and VG10-14[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

The samples in this sample set were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 10/28/2010 and analyzed on 10/29/2010.

No difficulties were encountered during the mercury analyses.

All quality control parameters were within the acceptance limits.

PERCENT LIPIDS

The samples in this sample set were analyzed were analyzed for percent lipids in accordance with Percent Lipids Determination. The samples were prepared on 10/28/2010 and analyzed on 10/29/2010.

No difficulties were encountered during the % lipids analyses.

All quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: TestAmerica Laboratories, Inc. Job Number: 200-2079-1

Lab Section	Qualifier	Description
GC Semi VOA		
	U	Indicates the analyte was analyzed for but not detected.
	E	Result exceeded calibration range.
	X	Surrogate is outside control limits
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals		
	U	Indicates the analyte was analyzed for but not detected.
	^	Instrument related QC exceeds the control limits
	4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
	F	MS/MSD Recovery or RPD exceeds the control limits
	W	PS: Post-digestion spike was outside control limits
	V	Serial Dilution exceeds the control limits
General Chemistry		
	U	Indicates the analyte was analyzed for but not detected.
