QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: 3-root.sub
Target Version: 4.14
Processing Host: PITPC-732

Concentration Formula: Amt * DF * Uf * Vt/(Vi * Ws)*1 * CpndVariable

Name	Value	Description
DF	1.000	Dilution Factor
Uf	1.000	ng unit correction factor
Vt	500.000	Volume of final extract (uL)(1000 low, 2
Vi	2.000	Volume injected (uL)
Ws	30.000	Weight of sample extracted (g)
Cpnd Variable		Local Compound Variable

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

8D
PESTICIDE ANALYTICAL SEQUENCE

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: 40325 SDG No.: C0K030562

GC Column: MR-2 ID: 0.53 (mm) Init. Calib. Date(s): 11/15/10 11/15/10

Instrument ID: GC10

THE ANALYTICAL SEQUENCE OF PERFORMANCE EVALUATION MIXTURES, BLANKS, SAMPLES, AND STANDARDS IS GIVEN BELOW:

MEAN SURROGATE RT FROM INITIAL CALIBRATION
TCX: 3.36 DCB: 14.69

	EPA SAMPLE NO.	LAB SAMPLE ID	DATE ANALYZED	TIME ANALYZED	TCX RT #	DCB RT #

NOTE(S):

Calculations are performed before rounding to avoid round-off errors in calculated results.

Results and reporting limits have been adjusted for dry weight.

NC The recovery and/or RPD were not calculated.

N Spiked analyte recovery is outside stated control limits.

1 INTRODUCTION

This appendix contains the chemical data usability summaries for samples collected in May 2008, October 2010 from Koppers Pond and the Outlet Channels, and the October 2010 samples collected from the Reference Pond. AMEC Earth & Environmental (AMEC) validated the samples collected in 2008, while Integral Consulting (Integral) performed the data validation of the 2010 samples.

A data usability assessment is used to evaluate whether analytical data points are scientifically valid and defensible, and of a sufficient level of precision, accuracy, representativeness, completeness, comparability and sensitivity to support the project goals. Overall, our review of the results indicates the data are generally usable and of good quality to support the project goals and data quality objectives as outlined in the Koppers Pond *Quality Assurance Project Plan* (April 2008).

The analytical data validation reports for the 2010 sample collections are provided in electronic format as part of this appendix. The analytical data reports for the 2010 are provided in electronic format in Appendix K. The analytical data reports for the 2008 samples are provided in Appendix G of the *Site Characterization Study Report*. The key usability results are provided below by media.

2 DATA USABILITY SUMMARY FOR 2008 SAMPLE COLLECTIONS

Samples collected in 2008 included surface water, sediments and fish from Koppers Pond. These samples were validated by AMEC chemists. The data validation reports are provided in Attachment J-1 on the report CD.

2.1 SURFACE WATER AND SEDIMENT SAMPLES

None of the surface water or sediment were rejected. Therefore, 100% of the data should be considered valid which meets the 90% project data quality objective. The types of qualifications applied to the dataset included non-detected data and estimated data.

Non-detected Qualified Data

A number of detected metal, VOC, SVOC, pesticide, and conventional chemistry results were qualified as non-detected because of contamination in the associated laboratory and/or trip blanks or interferences.

Estimated Data

Portions of the VOC, SVOC, pesticide, PCB, metals, AVS/SEM, TOC, and conventional chemistry data were qualified as estimated due to calibration issues, matrix interferences, low and high matrix spike recoveries, field duplicate imprecision, low and high surrogate recoveries, low and high internal standard recoveries, serial dilution results, high percent moisture results, exceeded holding times, and concentrations between the MDLs and RLs.

2.2 FISH SAMPLES

AMEC's review indicates the data for the fish tissue samples were generally usable and of good quality. Approximately 2% of the results were rejected; therefore, 98% of the data should be considered valid, which meets the 90% project data quality objective. Although review of the initial results of fish tissue percent lipid analyses showed no technical validation issues, it was apparent that the reported values were anomalously low based on AMEC's experience in fish tissue evaluations. To confirm these unanticipated lipid results, samples were forwarded to the TestAmerica laboratory in Burlington, Vermont, for comparative analysis of both lipid content and PCBs. The data received from the TestAmerica Burlington re-analyses showed lipid contents that were in-line with expectations and higher PCB concentrations than were reported from the analyses in the TestAmerica Pittsburgh laboratory.

AMEC investigated the fish tissue handling, preparation, extraction, and analytical methods employed by both TestAmerica laboratories and determined the only identified difference between the two laboratories was the use of a Tekmar Tissumizer® during sample preparation at the TestAmerica Burlington laboratory. AMEC, as well as, TestAmerica laboratory staff feel that the tool effectively breaks down the tissue to the cellular level, allowing for a greater extraction efficiency of both the lipids and PCBs compared to other tissue processing methods.

Although both the TestAmerica Pittsburgh and the TestAmerica Burlington data were developed in accordance with USEPA and NYSDEC methods, the TestAmerica Burlington data in fish were considered more representative of the lipid content of these samples and more useful in assessing the dose of PCBs for project purposes.

The types of qualifications applied to the dataset included rejected data, non-detect data and estimated data.

Rejected Data

A single non-detected 4,4'-DDT result was rejected because of a very low matrix spike recovery. In addition, the chromium and/or vanadium results in a number of samples were rejected because of associated blank results above the CRQL.

Non-detected Qualified Data

A number of detected metal and pesticide results were U qualified as non-detected because of contamination in the associated laboratory blanks or interferences. Results that were U qualified as non-detected were not further qualified due to other associated QC outliers.

Estimated Data

Portions of the PCB, pesticide and metals data were qualified as estimated due to high and low surrogate recoveries, high and low matrix spike recoveries, serial dilution imprecision, and concentrations between the MDLs and RLs.

3 DATA USABILITY SUMMARY FOR 2010 SAMPLE COLLECTIONS

Samples collected in 2010 included sediments, fish and vegetation from Koppers Pond and the reference pond. These samples were validated by Integral chemists. The three SDGs were compiled into a single Data Validation Report, which is provided in Attachment J-2 on the report CD.

A total of 1,841 data points were reported. A total of 1,374 results (74.6 percent) were estimated (J/UJ), and five of these results were also qualified as not detected (U). One hundred seventy one results were labeled do-not-report to indicate a more appropriate result exists. No data were rejected and completeness was 100 percent. A summary of all qualified results is presented in Table 3-2 in Attachment J2. Some results were qualified for multiple reasons so the sum of the qualifiers is greater than the number of qualified results.

The data meets the criteria set forth in the referenced quality assurance documents, with the exceptions noted above. Data that has been labeled do-not-report should not be used for any purpose. All other results are acceptable for their intended use as qualified.

3.1 SEDIMENT AND MUDFLAT SAMPLES

Two sediment composite samples from the Reference Pond (one unsieved and one sieved at 0.5 mm size), five samples collected for sediment toxicity testing from Koppers Pond, and three mudflat soil samples from the Outlet/Mudflat area were analyzed for TCL SVOCs, Aroclor PCBs, TOC and TAL metals. The sediment toxicity bioassay report results did not undergo third party data validation.

Rejected Data

None of the analytical results for the sediment samples were rejected.

Non-detected Qualified Data

None of the detected metal or Aroclor PCB results were U qualified as non-detected because of contamination in the associated laboratory blanks or interferences.

Estimated Data

Portions of the SVOCs, PCB, and metals data were qualified as estimated due to elevated moisture contents in the sediment samples. Antimony and cyanide were qualified as estimated results in the three Outlets/Mudflat Area samples due to matrix spike recoveries outside of the

control limits. The cyanide data were qualified as estimates in the sediment toxicity samples due to exceeding the holding time.

3.2 FISH SAMPLES

Five gamefish samples collected from the Reference Pond and a single composite of forage fish from West Outlet were collected in October 2010. These were analyzed for Aroclor PCBs, total lipids, and TAL metals by the TA-Burlington laboratory. These results were reported in a single laboratory report (SDG 200-2079-1).

The Aroclor PCB analyses were originally reported at detection limit greater than specified in the Koppers Pond QAPP. Therefore, the Aroclor PCB fractions of these samples were re-analyzed at a lower detection limit.

Rejected Data

None of the analytical results for the fish samples were rejected. However, some of the Aroclor PCB results were labeled as "do-not-report" since they were originally analyzed at an inappropriate detection limit.

Non-detected Qualified Data

None of the detected metal or Aroclor PCB results were U qualified as non-detected because of contamination in the associated laboratory blanks or interferences.

Estimated Data

Portions of the PCB, and metals data were qualified as estimated due to exceeding holding times (re-analyzed Aroclor PCB samples), matrix spike recoveries (zinc only), and serial dilution imprecision (lead only).

3.3 VEGETATION SAMPLES

Seven samples of aquatic and terrestrial vegetation were collected in 2010 from Koppers Pond and the Reference Pond. These were analyzed for Aroclor PCBs and metals by the TA-Burlington laboratory. These results were reported in a single laboratory report (SDG 200-2079-1). The Aroclor PCB analyses were originally reported at detection limit greater than specified in the Koppers Pond QAPP. Therefore, the Aroclor PCB fractions of these samples were re-analyzed at a lower detection limit.

Rejected Data

None of the analytical results for the vegetation samples were rejected. However, some of the Aroclor PCB results were labeled as "do-not-report" since they were originally analyzed at an inappropriate detection limit.

Non-detected Qualified Data

None of the detected metal or Aroclor PCB results were U qualified as non-detected because of contamination in the associated laboratory blanks or interferences.

Estimated Data

Portions of the PCB, and metals data were qualified as estimated due to exceeding holding times (re-analyzed Aroclor PCB samples), high and low surrogate recoveries, high and low matrix spike recoveries, and serial dilution imprecision.

4 DATA ASSESSMENT SYNOPSIS

Based on the Data Validation performed on the 2008 and 2010 samples collected for this project, the percent completeness for useable data ranged from 98 to 100%, which meets the 90% project data quality objective. The project QA program identified issues with the PCB analyses for the 2008 and 2010 samples, and appropriate mitigative control measures were taken to provide data for the project. Some of the chemical results were qualified as estimates, but can still be used as reported to support the risk assessments and risk management.

1.0 INTRODUCTION

This data quality review and validation report covers 22 fish tissue samples from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 16, 2008 and submitted to Test America (TA) in South Burlington, Vermont on August 27, 2008. The samples were assigned sample delivery group (SDG) 8E170109. The following analyses were performed on these samples:

- Percent Lipids by laboratory specified method; and
- Polychlorinated biphenyls (PCBs) as Aroclors by United States Environmental Protection Agency (EPA) SW-846 Method 8082.

A list of these samples by field sample identification (ID) and TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response (OSWER), National Functional Guidelines for Organic Data Review (October 1999), including Region II modifications, if any, and associated method quality control (QC) requirements. These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) QC requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP (AMEC, 2008). The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Matrix spike/matrix spike duplicate (MS/MSD) samples;
- Laboratory control samples (LCSs);

- Detection limits;
- Sample dilutions;
- Instrument performance;
- Surrogate recoveries; and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The majority of data are generally usable and of good quality.

PCB results from several samples were qualified as estimated due to low surrogate recoveries.

One hundred percent of the data should be considered usable, which meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.3 of this Data Validation Report contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

TA received all samples in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation.

4.3 Polychlorinated Biphenyls as Aroclors by USEPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report are considered usable with the qualifications described in Sections 4.3.1 through 4.3.7.

4.3.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 14 days from thawing of fish tissue to extraction and 40 days from extraction to analysis.

4.3.2 Initial Calibration

The method-specified percent relative standard deviation (%RSD) and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.3.3 Continuing Calibration

The method-specified percent difference (%D) and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.3.4 Blanks

No target analytes were detected in the laboratory blanks associated with the PCB sample analysis.

4.3.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis outside the laboratory-specified acceptance limits are described in the following table.

Sample Identification	Surrogate	Recovery	Effects on Data Usability
CC08-04	Tetrachloro-m-xylene (TCMX)	56%/55%	This sample was analyzed at a 10-fold dilution; therefore, data usability could not be fully evaluated. Qualification of data is not required.
	Decachlorobiphenyl (DCB)	57%/52%	
LB08-02	DCB	58%/60%	AMEC J qualified the detected PCB results and UJ qualified the nondetected PCB results from these samples because of possible low bias.
LB08-05	DCB	64%	
BC08-02	DCB	58%/64%	
LB08-04	DCB	63%/64%	
WS08-04	DCB	53%/54%	
WS08-02	DCB	61%/62%	

4.3.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.3.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

5.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included estimated data (J or UJ).

Estimated Data. Portions of the PCB data were qualified as estimated due to low surrogate recoveries.

Data Completeness Assessment. A total of 154 data records were evaluated during the data validation and review of the sample results. Of the total data records, 42 records (27%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected results (UJ) or the concentration of detected target analytes (J).

One hundred percent of the data should be considered valid, which meets the 90% project data quality objective.

TABLE 2
Data Validation Qualifiers
Koppers Pond
SDG 8E170109

Reason Code:

LS - Low surrogate recovery

Validation Codes:

J - The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required acceptance limits.

UJ - The UJ qualifier indicates the RL is estimated. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required acceptance limits.

1.0 INTRODUCTION

This data quality review and validation report covers eight fish tissue samples from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 16, 2008 and submitted to Test America (TA) in South Burlington, Vermont on August 7, 2008. The samples were assigned sample delivery group (SDG) 8H050180. The following analyses were performed on these samples:

- Percent Lipids by laboratory specified method; and
- Polychlorinated biphenyls (PCBs) as Aroclors by United States Environmental Protection Agency (EPA) SW-846 Method 8082.

A list of these samples by field sample identification (ID) and TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response (OSWER) National Functional Guidelines for Organic Data Review (October 1999), including Region II modifications, if any, and associated method quality control (QC) requirements. These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) QC requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP (AMEC, 2008). The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Matrix spike/matrix spike duplicate (MS/MSD) samples;
- Laboratory control samples (LCSs);

- Detection limits;
- Sample dilutions;
- Instrument performance;
- Surrogate recoveries; and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The majority of data are generally usable and of good quality.

PCB results from one sample were qualified as estimated due to a low surrogate recovery.

One hundred percent of the data should be considered usable, which meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.3 of this Data Validation Report contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

TA received all samples in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation.

4.3 Polychlorinated Biphenyls as Aroclors by USEPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.3.1 through 4.3.6.

4.3.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 14 days from thawing of fish tissue to extraction and 40 days from extraction to analysis.

4.3.2 Initial Calibration

The method-specified percent relative standard deviation (%RSD) and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.3.3 Continuing Calibration

The method-specified percent difference (%D) and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.3.4 Blanks

No target analytes were detected in the laboratory blanks associated with the PCB sample analysis.

4.3.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis outside the laboratory-specified acceptance limits are described in the table below.

Sample Identification	Surrogate	Recovery	Effects on Data Usability
CC08-03A	Tetrachloro-m-xylene (TCMX)	56%	This sample was analyzed at a five-fold dilution; therefore, data usability could not be fully evaluated. Qualification of data is not required.
	Decachlorobiphenyl (DCB)	61%	
FF08-03	DCB	60%	AMEC J qualified the detected PCB results and UJ qualified the nondetected PCB results from this sample because of possible low bias.

4.3.6 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

5.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included estimated data (J or UJ).

Estimated Data. Portions of the PCB data were qualified as estimated due to a low surrogate recovery.

Data Completeness Assessment. A total of 56 data records were evaluated during the data validation and review of the sample results. Seven records (13%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected results (UJ) or the concentration of detected target analytes (J).

One hundred percent of the data should be considered valid which meets the 90% project data quality objective.

1.0 INTRODUCTION

This data quality review and validation report covers 10 surface water samples from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 12, 2008 and submitted to Test America (TA) in Pittsburgh, Pennsylvania on May 14, 2008. The samples were assigned sample delivery group (SDG) C8E140218. The following analyses were performed on these samples:

- Total and Dissolved Target Analyte List (TAL) metals by Environmental Protection Agency (EPA) SW-846 Methods 6020/7470A;
- Total cyanide by EPA SW-846 Method 9012A;
- Ammonia Nitrogen by EPA Method 350.1;
- Total hardness as $CaCO_3$ by Standard Methods (SM) 2340-C;
- Nitrite by EPA Method 9056A;
- Total suspended solids (TSS) by SM 2540D;
- Fluoride by SM 4500-F C;
- Semivolatile organic compounds (SVOCs) by EPA SW-846 Method 8270C;
- Volatile organic compounds (VOCs) by EPA SW-846 Method 8260B;
- Pesticides by EPA SW-846 Method 8081A;
- Polychlorinated biphenyls (PCBs) as Aroclors by EPA SW-846 Method 8082.

A list of these samples by field sample identification (ID), TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response (OSWER) National Functional Guidelines for Inorganic Data Review (October 2004), National Functional Guidelines for Organic Data Review (October 1999) including Region II modifications, if any, and associated method quality control requirements .

These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) quality control (QC) requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP, dated April 2008. The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Inductively coupled plasma (ICP) check sample;
- Matrix spike / matrix spike duplicate samples (MS/MSD);
- Laboratory duplicate samples;
- Field Duplicates;
- Laboratory control samples (LCS);
- ICP serial dilution;
- Detection limits;
- Sample dilutions;
- Gas chromatography/mass spectrometry (GC/MS) tuning;
- Instrument performance;
- Surrogate recoveries;
- Internal standards (IS); and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The data are generally usable and of good quality.

A number of detected metal and SVOC results were U qualified as nondetected because of contamination in the associated laboratory blanks.

No data were rejected and 100% of the data should be considered valid which meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.8 of this Data Validation Report contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

All samples were received at TA in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation, except as described below.

The Case Narrative states that samples were received on May 19, 2008. According to the COC and Cooler Receipt form the samples were received on May 14, 2008. AMEC confirmed with the laboratory that the samples were received on May 14, 2008. Data usability is not affected by the reporting error.

4.3 Volatile Organic Compounds by EPA SW-846 Method 8260B

VOC results generated by TA for samples covered in this report are considered usable with the limitations described in Sections 4.3.1 through 4.3.9.

4.3.1 Holding Times

All aqueous samples were analyzed within the QAPP-specified maximum holding time of 10 days for analysis of preserved samples.

4.3.2 Initial Calibration

The method-specified minimum relative response factor (RRF) and percent relative standard deviation (%RSD) criteria were met for the initial calibrations associated with VOC analysis of the samples covered in this report.

4.3.3 Continuing Calibration

The Region II-specified minimum RRF and percent deviation or percent drift (%D) criteria were met for the continuing calibration verifications (CCVs) associated with VOC analysis of the samples covered in this report.

4.3.4 Blanks

VOCs were not detected in the laboratory blanks associated with the VOC sample analysis.

4.3.5 Surrogate Recoveries

All surrogate recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.6 Laboratory Control Sample Recoveries

All LCS recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.7 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.8 Internal Standard Recoveries

IS recoveries were all within the method-specified 50% to 200% acceptance limits for the VOC sample analysis covered in this report.

4.3.9 Data Reporting

The laboratory J qualified detected results with concentrations between the reporting limit (RL) and method detection limit (MDL). AMEC concurs that these results are quantitative estimates and J qualified these results.

4.4 Semivolatile Organic Compounds by EPA SW-846 Method 8270C

SVOC results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.4.1 through 4.4.9.

4.4.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction and 40 days for analysis.

4.4.2 Initial Calibration

The Region II-specified minimum RRF and %RSD criteria not met for the initial calibrations associated with the SVOC sample analysis are described below.

The benzaldehyde %RSD of 38.7% was greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 2, 2008 on instrument 71. AMEC J qualified the detected benzaldehyde results and UJ qualified the nondetected benzaldehyde results from the following samples because of possible bias in the analytical results: SW08-13, SW08-10, SW08-08, SW08-05, SW08-04, SW08-02, SW08-17, SW08-16, SW08-15, and SW08-14.

4.4.3 Continuing Calibration

The Region II-specified minimum RRF and %D criteria were met for the continuing calibrations associated with the SVOC sample analysis, except as described below.

- The benzaldehyde (41.2%, bias high), hexachlorocyclopentadiene (25.6%, bias low), indeno(1,2,3-cd)pyrene (26.3, bias low), dibenz(a,h)anthracene (30.8%, bias low), and the benzo(g,h,i)perylene (27.6%, bias low) %Ds in the CCV analyzed on May 19, 2008 on instrument 71 were outside the Region II-specified ±20% acceptance limit. Specific limitations include the following:
  - AMEC J qualified the detected benzaldehyde results from the following samples because of possible high bias in the analytical results: SW08-04 and SW08-15.
  - AMEC UJ qualified the nondetected hexachlorocyclopentadiene, indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene, and benzo(g,h,i)perylene results from the following samples because of possible bias in the analytical results: SW08-13, SW08-10, SW08-08, SW08-05, SW08-04, SW08-02, SW08-17, SW08-16, SW08-15, and SW08-14.

4.4.4 Laboratory Blank

Qualification to samples as a result of SVOCs detected in the associated laboratory blank is described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Blank Results
Method Blank KM8V51AA	Bis(2-ethylhexyl)phthalate	0.94 micrograms per liter (µg/L)	SW08-13 SW08-10 SW08-08 SW08-05 SW08-04 SW08-02 SW08-17 SW08-16 SW08-15 SW08-14
	Butylbenzylphthalate	0.17 µg/L	
	Caprolactam	0.95 µg/L	

4.4.5 Surrogate Recoveries

Surrogate recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.6 Laboratory Control Sample Recoveries

LCS recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.7 MS/MSD Recovery

MS/MSD recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.8 Internal Standard Recoveries

IS recoveries were within the method-specified 50% to 200% acceptance limits for the SVOC sample analysis.

4.4.9 Data Reporting

The laboratory J qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified (unless U qualified due to blank contamination) these results.

4.5 Pesticides by EPA SW-846 Method 8081A

Pesticide results generated by TA for the samples covered in this report may be considered usable and without qualification.

4.5.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction and 40 days for analysis.

4.5.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the pesticide sample analysis.

4.5.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the pesticide sample analysis.

4.5.4 Laboratory Blank

No target analytes were detected in the laboratory blank associated with the pesticide analysis.

4.5.5 Surrogate Recoveries

Surrogate recoveries associated with the pesticide sample analysis were within laboratory-specified acceptance limits.

4.5.6 Matrix Spike/Matrix Spike Duplicate Accuracy and Precision

MS/MSD recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.6 PCBs as Aroclors by EPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report may be considered usable and without qualification.

4.6.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction and 40 days for PCB analysis.

4.6.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.6.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.6.4 Laboratory Blank

No target analytes were detected in the laboratory blank associated with the PCB sample analysis.

4.6.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis were within the laboratory-specified acceptance limits.

4.6.6 Matrix Spike/Matrix Spike Duplicate Accuracy and Precision

MS/MSD recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.7 Target Analyte List Metals by EPA SW-846 Methods 6020/7470A

Samples covered in this report underwent total and dissolved metals analysis by EPA SW-846 Methods 6020/7470A at TA. The results are usable with the limitations and exceptions described in Sections 4.7.1 through 4.7.9.

4.7.1 Holding Times

All samples were analyzed for metals within the QAPP-specified technical holding time of 180 days and for mercury within the QAPP-specified technical holding time of 26 days.

4.7.2 Initial Calibration

The initial calibrations associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.3 Initial and Continuing Calibration Verification

All initial calibration verifications (ICVs) and CCVs associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.4 Contract-required Quantitation Limit Check Standard

All contract-required quantitation limit (CRQL) check standards (CRIs) associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.5 Blanks

Initial and Continuing Calibration Blanks

Target analytes detected at concentrations greater than the MDL in calibration blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results	
			Total	Dissolved
CCB1 5/29/08 ICPMS	Magnesium	3.63 µg/L	Not applicable	None
	Potassium	6.37 µg/L	Not applicable	None
CCB4 5/29/08 ICPMS	Magnesium	6.10 µg/L	None	Not applicable
	Thallium	0.02 µg/L	SW08-05 SW08-04 SW08-02	Not applicable

Preparation Blanks

Target analytes detected at concentrations greater than the MDL in preparation blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected analytes	Analyte concentration	Sample Results U Qualified as Nondetected because of Associated Preparation Blank Results	
			Total	Dissolved
C8E290000-250	Chromium	0.28 µg/L	None	Not Applicable
	Thallium	0.073 µg/L	SW08-13 SW08-10 SW08-08 SW08-05 SW08-04 SW08-02	Not Applicable
C8E290000-	Chromium	0.15 µg/L	Not Applicable	None

Blank ID	Detected analytes	Analyte concentration	Sample Results U Qualified as Nondetected because of Associated Preparation Blank Results	
			Total	Dissolved
245	Iron	23.6 µg/L	Not Applicable	SW08-13 SW08-10 SW08-08 SW08-05 SW08-04 SW08-02 SW08-17 SW08-16 SW08-14 SW08-15
	Potassium	7.4 µg/L	Not Applicable	None

4.7.6 Inductively Coupled Plasma Interference Check Sample

All interference check samples (ICSs) exhibited recoveries within the 80% to 120% method-specified acceptance limits.

4.7.7 Laboratory Control Sample Recovery

Recoveries were within the method-specified acceptance limits in all LCS samples associated with the metals sample analysis.

4.7.8 ICP Serial Dilution

Serial dilution analysis was performed on sample SW08-14. Analytes not meeting the method-specified criteria of less than 10 percent difference for analytes with concentrations greater than 50-times the MDL are described below:

The percent difference between the total chromium (17.9%), total zinc (10.5%), and dissolved lead (18.8%) serial dilution results in sample SW08-14 were greater than the method-specified limit. AMEC J qualified the detected total chromium, total zinc, and dissolved lead results from the following samples because of possible bias in the analytical results due to potential matrix interference: SW08-13, SW08-10, SW08-08, SW08-05, SW08-04, SW08-02, SW08-17, SW08-16, SW08-15, and SW08-14.

4.7.9 Data Reporting

The laboratory B qualified detected results with concentrations between the CRQL and MDL. AMEC concurs that these results are quantitative estimates and J qualified (unless U qualified due to blank contamination) these results.

4.8 Conventional Chemistry Parameters

Conventional chemistry results generated by TA for the samples covered in this report may be considered usable with the limitations described below.

- The laboratory B qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified these results.
- TA performed nitrite analysis on sample SW08-10 approximately 4 hours past the 48 hour holding time. According to the QAPP (Table B2-3), the holding time for nitrite analysis is 48 hours from sample collection. AMEC UJ qualified the nondetected nitrite result from sample SW08-10 because of possible low bias in the analytical result due to the holding time exceedance.

5.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included nondetected data (U) and estimated data (J or UJ).

Nondetected Qualified Data. A number of detected metal and SVOC results were U qualified as nondetected because of contamination in the associated laboratory blanks. Results that were U qualified as nondetected were not further qualified due to other associated QC outliers.

Estimated Data. Portions of the VOC, SVOC, metals, and conventional chemistry data were qualified as estimated due to calibration issues, an exceeded holding time, serial dilution results, and concentrations between the MDLs and RLs.

Data Completeness Assessment. A total of 1,930 data records were evaluated during the data validation and review of the sample results. Of the total data records, 233 records (12%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected concentration limits (UJ) or the concentration of detected target analytes (J). Of the total data records, 46 (2.4%) were qualified as nondetected as a result of a detection of a target analyte in

the associated blanks. The pesticide, PCB, total hardness, TSS, fluoride, and total cyanide data did not require qualification.

No data were rejected; therefore, 100% of the data should be considered valid which meets the 90% project data quality objective.

TABLE 2
Data Validation Qualifiers
Koppers Pond
SDG C8E140218

Reason Codes

BC - High initial calibration percent relative standard deviations
CB - Contaminated Blank
DL - Value was between method detection limit and reporting limit
HC - High continuing calibration verification result
HT - Holding time exceedance
LC - Low continuing calibration verification result
MB - Method blank contamination
MI - High differences between serial dilution results

Validation Codes:

U -The U qualifier indicates that an analyte is considered nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in blanks.

J - The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required acceptance limits.

UJ - The UJ qualifier indicates the RL is estimated. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required acceptance limits.

1.0 INTRODUCTION

This data quality review and validation report covers 17 sediment samples and a trip blank from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 12 and13, 2008 and submitted to Test America (TA) in Pittsburgh, Pennsylvania on May 14, 2008. The samples were assigned sample delivery group (SDG) C8E140236. The following analyses were performed on these samples:

- Total Target Analyte List (TAL) metals by United States Environmental Protection Agency (EPA) SW-846 Methods 6020/7471A;
- Total cyanide by EPA SW-846 Method 9012A;
- Total organic carbon (TOC) by EPA Lloyd Kahn;
- Acid-volatile sulfide by EPA SW-846 Method 9034;
- Simultaneously Extractable Metals (SEM) by SW-846 Method 6010B;
- Semivolatile organic compounds (SVOCs) by EPA SW-846 Method 8270C;
- Volatile organic compounds (VOCs) by EPA SW-846 Method 8260B;
- Pesticides by EPA SW-846 Method 8081A;
- Polychlorinated biphenyls (PCBs) as Aroclors by EPA SW-846 Method 8082.

A list of these samples by field sample identification (ID), TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response (OSWER) National Functional Guidelines for Inorganic Data Review (October 2004), National Functional Guidelines for Organic Data Review (October 1999), including Region II modifications, if any, and associated method quality control (QC) requirements. These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data

quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) QC requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP (AMEC, 2008). The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Inductively coupled plasma (ICP) check sample;
- Matrix spike/matrix spike duplicate samples (MS/MSD);
- Laboratory duplicate samples:
- Laboratory control samples (LCSs);
- ICP serial dilution;
- Detection limits;
- Sample dilutions;
- Gas chromatography/mass spectrometry (GC/MS) tuning;
- Instrument performance;
- Surrogate recoveries;
- Internal standards (IS); and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting

forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The data are generally usable and of good quality.

A number of detected metal and VOC results were U qualified as nondetected because of contamination in the associated laboratory and/or trip blanks.

A number of detected pesticide results were U qualified as nondetected because of probable matrix interference from Aroclors and polynuclear aromatic hydrocarbons (PAHs) as demonstrated by the very high percent differences between dual column results. If greater certainty regarding possible presence of low concentrations of pesticides is required to achieve project DQOs, AMEC recommends consideration of either high resolution mass spectrometry (HRMS) or tandem mass spectrometry (MS/MS) as the determinative technique for future pesticide analyses.

It appears the Aroclor 1248 and/or Aroclor 1260 may be in samples SD08-13 (0-6), SD08-13 (6-18), SD08-13 (18-27.5), SD08-11 (6-9), SD08 (0-6), SD08-10 (6-18), and SD08-10 (18-23). Because the laboratory did not provide results from a secondary dissimilar column, AMEC could not confirm the presence of Aroclor 1248 or Aroclor 1260 in the samples. In addition, the unusually short analytical run time made it difficult to match patterns. The data user should use the PCB results from these samples with caution

No data were rejected, and 100% of the data should be considered valid. This meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.9 contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

TA received all samples in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation.

4.3 Volatile Organic Compounds by EPA SW-846 Method 8260B

VOC results generated by TA for samples covered in this report are considered usable with the limitations described in Sections 4.3.1 through 4.3.9.

4.3.1 Holding Times

All aqueous samples were analyzed within the QAPP-specified maximum holding time of 10 days for preserved samples. All soil samples were analyzed within the QAPP-specified 10 day holding time for unpreserved samples.

4.3.2 Initial Calibration

The method-specified minimum relative response factor (RRF) and percent relative standard deviation (%RSD) criteria were met for the initial calibrations associated with VOC analysis of the samples covered in this report.

4.3.3 Continuing Calibration

The Region II-specified minimum RRF and percent deviation or percent drift (%D) criteria were met for the continuing calibrations associated with VOC analysis of the samples covered in this report, except as described below:

- The acetone %D of 38.4% (bias high) was greater than the 20% Region II-specified acceptance limit in the continuing calibration verification (CCV) analyzed on May 15, 2008 at 05:11 on instrument HP3. AMEC J qualified the detected acetone results from the following samples because of possible high bias in the analytical results: SD08-14, SD08-15, and SD08-13 (0-6).
- The acetone %D of 35.7% (bias high) was greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 16, 2008 at 05:41 on instrument HP3. AMEC J qualified the detected acetone results from the following samples because of possible high bias in the analytical results: SD08-10 (0-6), SD08-10 (18-23), and SD08-9 (0-6).

- The chloroethane %D of 28.1% (bias high) was greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 21, 2008 at 19:03 on instrument HP5. This analyte was not detected in the associated samples; therefore, data usability is not adversely affected by the potential high bias.
- The chloroethane %D of 51.1% (bias high) was greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 21, 2008 at 05:02 on instrument HP3. This analyte was not detected in the associated samples; therefore, data usability is not adversely affected by the potential high bias.
- The trichlorotrifluoromethane (26.6%, bias low) and 1,2-dibromo-3-chloropropane (23.4%, bias low) %Ds were greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 22, 2008 at 06:54 on instrument HP3. AMEC UJ qualified the nondetected trichlorotrifluoromethane and 1,2-dibromo-3-chloropropane results from samples SD08-11 (0-6) and SD08-11 (6-9) because of possible low bias.

4.3.4 Blanks

Qualification to samples as a result of VOCs detected in the associated laboratory blank and trip blanks is described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Blank Results
Method Blank KNCHF1AA	Methylene Chloride	0.94 µg/kg	SD08-13 (6-18) SD08-10 (0-6) SD08-10 (18-23) SD08-9 (0-6)
Trip Blank TB-3	Methylene Chloride	0.36 µg/L	SD08-14 SD08-15 SD08-13 (0-6) SD08-13 (6-18) SD08-13 (18-27.5) SD08-10 (0-6) SD08-10 (6-18) SD08-10 (18-23) SD08-9 (0-6)

4.3.5 Surrogate Recoveries

All surrogate recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.6 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.7 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.8 Internal Standard Recoveries

IS recoveries were all within the method-specified 50% to 200% acceptance limits for the VOC sample analysis covered in this report.

4.3.9 Data Reporting

The laboratory J qualified detected results with concentrations between the method detection limit (MDL) and reporting limit (RL). AMEC concurs that these results are quantitative estimates and J qualified these results unless the results were previously U qualified because of blank contamination.

4.4 Semivolatile Organic Compounds by EPA SW-846 Method 8270C

SVOC results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.4.1 through 4.4.9.

4.4.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for analysis.

4.4.2 Initial Calibration

The Region II-specified minimum RRF and %RSD criteria not met for the initial calibrations associated with the SVOC sample analysis are described below.

The benzaldehyde (28.3%); 2,4-dinitrophenol (21.9%); 3,3'-dichlorobenzidine (29.9%); and di-n-octylphthalate (19.3%) %RSDs were greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 5, 2008 on instrument 732. AMEC J qualified the detected results and UJ qualified the nondetected results

for these analytes from the following samples because of possible bias in the analytical results: SD08-17, SD08-16, SD08-14, SD08-15, SD08-13 (0-6), SD08-13 (6-18), SD08-13 (18-27.5), SD08-12 (0-6), SD08-12 (6-12), SD08-11 (0-6), SD08-11 (6-9), SD08-10 (0-6), SD08-10 (6-18), SD08-10 (18-23), SD08-9 (0-6), and SD08-9 (6-10).

4.4.3 Continuing Calibration

The Region II-specified minimum RRF and %D criteria were met for the continuing calibrations associated with the SVOC sample analysis, except as described below.

The 4-chloroaniline (26.4%, bias low) and hexachlorocyclopentadiene (33.1%, bias low) %Ds in the CCV analyzed on May 20, 2008 on instrument 732 were outside the Region II-specified ±20% acceptance limit. AMEC UJ qualified the nondetected 4-chloroaniline and hexachlorocyclopentadiene results from the following samples because of possible low bias in the analytical results: SD08-17, SD08-16, SD08-14, SD08-15, SD08-13 (0-6), SD08-13 (6-18), SD08-13 (18-27.5), SD08-12 (0-6), SD08-12 (6-12), SD08-11 (0-6), SD08-11 (6-9), SD08-10 (0-6), SD08-10 (6-18), SD08-10 (18-23), SD08-9 (0-6), and SD08-9 (6-10).

4.4.4 Laboratory Blank

SVOCs were not detected in the laboratory blank associated with the samples.

4.4.5 Surrogate Recoveries

Surrogate recoveries outside the laboratory-specified limits for the SVOC sample analysis are described below.

The acid extractable surrogate compound 2,4,6-tribromophenol recovery of 117% in sample SD08-10 (6-18) was greater than the laboratory-specified acceptance limit. AMEC J qualified the detected 4-methylphenol result from sample SD08 (6-18) because of possible high bias.

4.4.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD analysis was performed on sample SD08-17. The hexachloroethane recovery of 39% in the MS was less than the laboratory-specified limits. AMEC UJ qualified the nondetected hexachloroethane result from sample SD08-17 because of possible low bias due to potential matrix interference.

4.4.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.8 Internal Standard Recoveries

IS recoveries were within the method-specified 50% to 200% acceptance limits for the SVOC sample analysis.

4.4.9 Data Reporting

The laboratory J qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified these results.

4.5 Pesticides by USEPA SW-846 Method 8081A

Pesticide results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.5.1 through 4.5.8.

4.5.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 14 days for solid extraction, and 40 days for analysis.

4.5.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the pesticide sample analysis.

4.5.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the pesticide sample analysis.

4.5.4 Blanks

No target analytes were detected in the laboratory blanks associated with the pesticide analysis.

4.5.5 Surrogate Recoveries

Surrogate recoveries associated with the pesticide sample analysis outside laboratory-specified acceptance limits are described below.

Surrogates were not recovered in the analysis of sample SD08-13 (0-6). This sample was analyzed at a 10-fold dilution; therefore, data usability could not be fully evaluated.

The decachlorobiphenyl recovery of 149% in sample SD08-10 (18-23) was greater than the laboratory-specified 18% to 145% acceptance limits. AMEC J qualified (unless U qualified due to matrix interference) the detected pesticide results from sample SD08-10 (18-23) because of possible high bias in the analytical results.

4.5.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.8 Data Reporting and Analytical Procedures

There was greater than 25% difference between the pesticide concentrations from the primary and secondary analytical columns for the samples listed in the following table. Analysis of pesticides using conventional GC/ECD techniques can result in an extremely high rate of false positive detections, as referenced in literature including a memo titled *EPA Region 10 Clarification of SW-846 Method 8081 and Supplemental Guidance for Data Review* (EPA, 2006). In AMEC's professional judgment, based on the very large percent differences between primary and secondary column results, the reported insecticide results are likely false positives that result from interferences from the PAHs and PCBs detected in these samples. In addition, Region II validation guidelines (SOP HW-44) allow "U" qualification based on the presence of interferences and large differences between dual-column results.

AMEC U qualified the detected pesticide concentrations as listed in the table below based on professional judgment of the chemists performing the review. If greater certainty regarding possible presence of low concentrations of pesticides is required to

achieve project DQOs, AMEC recommends consideration of either HRMS or MS/MS as the determinative technique for future pesticide analyses.

Sample ID	Analyte	%D	Qualification
SD08-17	gamma-BHC (Lindane)	223	U

SD08-9 (6-10)	gamma-BHC (Lindane)	254	U
	Dieldrin	285	U
	Endrin Aldehyde	98.5	U

The laboratory J qualified detected results with concentrations between the MDL and RL. AMEC concurs that these results are quantitative estimates and J qualified these results unless they were U qualified due to interferences.

4.6 Polychlorinated Biphenyls as Aroclors by USEPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.6.1 through 4.6.8.

4.6.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 14 days for solid extraction and 40 days for PCB analysis.

4.6.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.6.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.6.4 Blanks

No target analytes were detected in the laboratory blanks associated with the PCB sample analysis.

4.6.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis outside the laboratory-specified acceptance limits are described below.

Surrogate tetrachloro-m-xylene recovery of 130% was greater than the 31% to 127% laboratory-specified acceptance limits in the analysis of sample SD08-13 (0-6). AMEC J qualified the detected Aroclor 1254 result from sample SD08-13 (0-6) because of possible high bias in the analytical result.

4.6.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.8 Data Reporting

The laboratory identified Aroclor 1254 in the samples. AMEC concurs with the Aroclor 1254 identification; however, upon review of the chromatograms it appears that Aroclor 1260 and/or Aroclor 1248 may also be in the following samples: SD08-13 (0-6), SD08-13 (6-18), SD08-13 (18-27.5), SD08-11 (6-9), SD08 (0-6), SD08-10 (6-18), and SD08-10 (18-23). Due to the degree of weathering of the Aroclor mixtures in the samples, and to a lesser extent because the laboratory did not provide results from a second dissimilar column, AMEC could not definitively confirm the presence of Aroclor 1248 or Aroclor 1260 in the samples. In addition, the unusually short analytical run time, while appropriate for quantitative analysis of PCBs, does not allow for adequate chromatographic resolution to fully evaluate Aroclor identification using pattern matching techniques. The data user should therefore interpret the qualitative PCB results for these samples with caution.

4.7 Target Analyte List Metals by EPA SW-846 Methods 6020/7471A

Samples covered in this report underwent total metals analysis by EPA SW-846 Methods 6020/7471A at TA. The results are usable with the limitations and exceptions described in Sections 4.7.1 through 4.7.10.

4.7.1 Holding Times

All samples were analyzed for metals within the QAPP-specified technical holding time of 180 days and for mercury within the QAPP-specified technical holding time of 26 days.

4.7.2 Initial Calibration

The initial calibrations associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.3 Initial and Continuing Calibration Verification

All initial calibration verifications (ICVs) and CCVs associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.4 Contract-required Quantitation Limit Check Standard

All contract-required quantitation limit (CRQL) check standards (CRIs) associated with the analysis of these samples outside the method-specified acceptance criteria are described below.

Chromium and iron recoveries were outside method-specified acceptance limits at 52.0% and 138%, respectively, in the CRI analyzed June 1, 2008 at 14:59. The chromium and iron concentrations in the associated samples were greater than two times the CRQL; therefore, data usability is not adversely affected by the CRI recoveries.

4.7.5 Blanks

Initial and Continuing Calibration Blanks

Target analytes detected at concentrations greater than the MDL in calibration blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results
ICB 6/01/08 ICPMS	Antimony	0.09 µg/L	None
	Cadmium	0.10 µg/L	None
	Calcium	-31.87 µg/L	None
	Chromium	5.34 µg/L	None
	Potassium	-1.28 µg/L	None
	Copper	-0.89 µg/L	None
	Iron	3.27 µg/L	None
	Magnesium	1.96 µg/L	None
	Manganese	0.07 µg/L	None
	Nickel	-0.07 µg/L	None
	Potassium	6.08 µg/L	None
	Zinc	-0.77 µg/L	None
CCB6 6/01/08 ICPMS	Antimony	0.11 µg/L	None
	Calcium	-29.85 µg/L	None
	Chromium	-1.22 µg/L	None
	Copper	-0.89 µg/L	None
	Iron	6.73 µg/L	None
	Lead	0.07 µg/L	None
	Magnesium	19.4 µg/L	None
	Manganese	-0.10 µg/L	None
	Potassium	9.13 µg/L	None

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results
	Silver	0.05 µg/L	None
	Sodium	13.16 µg/L	None
	Thallium	0.07 µg/L	None
	Zinc	-0.81 µg/L	None
CCB7 6/01/08 ICPMS	Antimony	0.11 µg/L	None
	Calcium	-21.95 µg/L	None
	Chromium	-1.14 µg/L	None
	Copper	-0.82 µg/L	None
	Iron	9.23 µg/L	None
	Lead	0.16 µg/L	None
	Magnesium	16.94 µg/L	None
	Manganese	0.22 µg/L	None
	Nickel	-0.07 µg/L	None
	Silver	0.04 µg/L	None
	Thallium	0.06 µg/L	SD08-15 SD08-12 (0-6)
	Zinc	-0.55 µg/L	None
CCB8 6/01/08 ICPMS	Aluminum	4.48 µg/L	None
	Antimony	0.10 µg/L	None
	Calcium	-26.85 µg/L	None
	Chromium	-1.13 µg/L	None
	Cobalt	0.03 µg/L	None
	Copper	-0.85 µg/L	None
	Iron	16.19 µg/L	None
	Lead	0.10 µg/L	None
	Magnesium	21.69 µg/L	None
	Manganese	0.32 µg/L	None
	Potassium	8.56 µg/L	None
	Silver	0.05 µg/L	None
	Sodium	9.42 µg/L	None
	Thallium	0.06 µg/L	SD08-15 SD08-12 (0-6)
	Zinc	-0.59 µg/L	None
CCB13 6/01/08 ICPMS	Iron	3.97 µg/L	None

Preparation Blanks

Target analytes detected at concentrations greater than the MDL in preparation blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Preparation Blank Results
C8E300000-125	Chromium	0.0086 milligrams per kilogram (mg/kg)	None
	Lead	0.0034 mg/kg	None
	Vanadium	0.012 mg/kg	None

4.7.6 Inductively Coupled Plasma Interference Check Sample

All interference check samples (ICSs) exhibited recoveries within the 80% to 120% method-specified acceptance limits.

4.7.7 Laboratory Control Sample Recovery

Recoveries were within the method-specified acceptance limits in all LCS samples associated with the metals sample analysis.

4.7.8 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries outside the laboratory-specified limits for the metals sample analysis are described below.

MS/MSD analysis was performed on sample SD08-17. Manganese (40% MSD), selenium (70% MSD), and antimony (65%/63%) recoveries were less than the laboratory specified limits. In addition, aluminum, calcium, cadmium, chromium, copper, iron, lead, and zinc were not recovered in the MS/MSD analysis. Specific limitations include the following:

- AMEC J qualified the detected manganese, selenium, and antimony results from the following samples because of possible low bias due to potential matrix interference: SD08-17, SD08-16, SD08-14, SD08-15, SD08-13 (0-6), SD08-13 (6-18), SD08-13 (18-27.5), SD08-12 (0-6), SD08-12 (6-12), SD08-11 (0-6), SD08-11 (6-9), SD08-10 (0-6), SD08-10 (6-18), SD08-10 (18-23), SD08-9 (0-6), and SD08-9 (6-10).
- The aluminum, calcium, cadmium, chromium, copper, iron, lead, and zinc concentrations in the sample were greater than four times the associated spike concentrations; therefore, data usability could not be fully evaluated due to the high sample concentrations for these analytes. Data usability is not adversely affected.

4.7.9 Serial Dilution Results

The arsenic percent difference of 17.3% was outside the method-specified 10% acceptance limit in the serial dilution analysis of sample SD08-17. AMEC J qualified the detected arsenic results from the following samples because of possible bias due to potential matrix interference: SD08-17, SD08-16, SD08-14, SD08-15, SD08-13 (0-6), SD08-13 (6-18), SD08-13 (18-27.5), SD08-12 (0-6), SD08-12 (6-12), SD08-11 (0-6), SD08-11 (6-9), SD08-10 (0-6), SD08-10 (6-18), SD08-10 (18-23), SD08-9 (0-6), and SD08-9 (6-10).

4.7.10 Data Reporting and Analytical Procedures

The laboratory B qualified detected results with concentrations between the MDL and CRQL. AMEC concurs that these results are quantitative estimates and J qualified these results unless they were U qualified due to blank contamination.

4.8 Total Cyanide, Total Organic Carbon, Acid-Volatile Sulfide, and Simultaneously Extracted Metals

Total cyanide, TOC, acid-volatile sulfide, and SEM results generated by TA for the samples covered in this report may be considered usable with the limitations described below.

- The laboratory B qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified these results.
- Chromium (0.00084 micromoles per gram [µmol/gm]), copper (0.0012 µmoles/gm), and zinc (0.0058 µmoles/gm) were detected in the simultaneously extracted metals (SEM) method blank C8E220000-123. Concentrations for the SEM in the associated sample were greater than five times the method blank concentration; therefore, data usability is not adversely affected by the method blank concentrations.
- Nickel (63%/65%) and silver (12%/0%) recoveries were low in the SEM MS/MSD analysis of sample SD08-10 (0-6). In addition, cadmium, chromium, copper, and lead were not recovered in the MS/MSD. Specific limitations include the following:
    - AMEC J qualified the detected SEM nickel and silver results from sample SD08-10 (0-6) because of possible low bias due to potential matrix interference.

  - The cadmium, chromium, copper, and lead SEM concentrations were greater than four times the associated spike concentration; therefore, data usability could not be fully evaluated due to the high parent sample concentrations. Data usability is not adversely affected.

- Cyanide recoveries were less than the laboratory-specified 75% to 125% acceptance limits in the MS analyses of samples SD08-13 (6-18) (74%) and SD08-13 (18-27.5) (74%) and the MSD analysis of sample SD08-17 (69%). AMEC J qualified the detected cyanide result from sample SD08-13 (18-27.5) and UJ qualified the nondetected cyanide results from samples SD08-13 (6-18) and SD08-17 because of possible low bias in the analytical results due to potential matrix interference.
- The TOC recovery of 155% was greater than the laboratory-specified 75% to 125% acceptance limits in the MSD analysis of sample SD08-17. AMEC J qualified the detected TOC result from sample SD08-17 because of possible high bias due to potential matrix interference.

4.9 Percent Moisture

The percent moisture for samples SD08-15 (83%), SD08-13 (0-6) (73%), and SD08-12 (0-6) (73%) were ≥ 70% but < 90%. AMEC J qualified (unless U qualified due to blank contamination or interferences) all detected results and UJ qualified all nondetected results from these samples per Region II criteria.

5.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included nondetected data (U) and estimated data (J or UJ).

Nondetected Qualified Data. A number of detected metal, VOC, and pesticide results were U qualified as nondetected because of contamination in the associated laboratory and/or trip blanks or interferences. Results that were U qualified as nondetected were not further qualified due to other associated QC outliers.

Estimated Data. Portions of the VOC, SVOC, pesticide, PCB, metals, and conventional chemistry data were qualified as estimated due to calibration issues, high surrogate recoveries, high and low matrix spike recoveries, serial dilution imprecision, high percent moistures, and concentrations between the MDLs and RLs.

Data Completeness Assessment. A total of 2,730 data records were evaluated during the data validation and review of the sample results. Of the total data records, 746 records (27%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected concentration limits (UJ) or the concentration of detected target analytes (J). Of the total data records, 96 (3.5%) were qualified as nondetected as a result of a detection of a target analyte in the associated blanks or interferences.

No data were rejected; therefore, 100% of the data should be considered valid which meets the 90% project data quality objective.

LIMITATIONS

This report was prepared exclusively for Koppers Pond PRP Group by AMEC Earth & Environmental, Inc. (AMEC). The quality of information, conclusions, and estimates contained herein is consistent with the level of effort involved in AMEC services and based on: i) information available at the time of preparation, ii) data supplied by outside sources, and iii) the assumptions, conditions, and qualifications set forth in this report. This Data Validation Report is intended to be used by Koppers Pond PRP Group for the Remedial Investigation/Feasibility Study, Koppers Pond, Kentucky Avenue Wellfield Superfund Site, Operable Unit 4, Horseheads, New York only, subject to the terms and conditions of its contract with AMEC. Any other use of, or reliance on, this report by any third party is at that party's sole risk.

TABLE 2
Data Validation Qualifiers
Koppers Pond
SDG C8E140236

Reason Codes

BC - High initial calibration percent relative standard deviation
CB - Contaminated blank
DL - Value was between method detection limit and reporting limit
HC - High continuing calibration verification result
HM - High matrix spike recovery
HS - High surrogate recovery
LC - Low continuing calibration verification result
LM - Low matrix spike recovery
MB - Method blank contamination
MI - High serial dilution percent difference
PM - High percent moisture
SE - Large differences between the primary and secondary column results.
TB - Trip blank contamination

Validation Codes:

U -The U qualifier indicates that an analyte is considered nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in blanks.

J - The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required acceptance limits.

UJ - The UJ qualifier indicates the RL is estimated. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required acceptance limits.

DATA QUALITY REVIEW AND VALIDATION REPORT

1.0 INTRODUCTION

This data quality review and validation report covers 29 sediment samples, one trip blank, and one equipment blank from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 13 and 14, 2008 and submitted to Test America (TA) in Pittsburgh, Pennsylvania on May 15, 2008. The samples were assigned sample delivery group (SDG) C8E150368. The following analyses were performed on these samples:

- Target Analyte List (TAL) metals by Environmental Protection Agency (EPA) SW-846 Methods 6020/7470A/7471A;
- Total cyanide by EPA SW-846 Method 9012A;
- Total hardness as $CaCO_3$ by Standard Methods (SM) 2340-C;
- Acid Volatile Sulfide by EPA SW-846 Method 9034;
- Simultaneously Extractable Metals by SW-846 Method 6010B;
- Semivolatile organic compounds (SVOCs) by EPA SW-846 Method 8270C;
- Volatile organic compounds (VOCs) by EPA SW-846 Method 8260B;
- Pesticides by EPA SW-846 Method 8081A;
- Polychlorinated biphenyls (PCBs) as Aroclors by EPA SW-846 Method 8082;
- Total organic carbon (TOC) by SM 5310B or EPA Lloyd Kahn.

A list of these samples by field sample identification (ID) and TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response (OSWER) National Functional Guidelines for Inorganic Data Review (October 2004), National Functional Guidelines for Organic Data Review (October 1999), including Region II modifications, if any, and associated method quality control requirements.

These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) quality control (QC) requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP, dated April 2008. The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in the QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Inductively coupled plasma (ICP) check sample;
- Matrix spike/matrix spike duplicate samples (MS/MSD);
- Laboratory duplicate samples:
- Field Duplicates;
- Laboratory control samples (LCS);
- ICP serial dilution;
- Detection limits;
- Sample dilutions;
- Gas chromatography/mass spectrometry (GC/MS) tuning;
- Instrument performance;
- Surrogate recoveries;
- Internal standards (IS); and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of the QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The data are generally usable and of good quality.

A number of detected metal, VOC, SVOC, and cyanide results were U qualified as nondetected because of contamination in the associated laboratory, equipment, and/or trip blanks.

A number of detected pesticide results were U qualified as nondetected because of probable matrix interference from polynuclear aromatic hydrocarbons (PAHs) and/or Aroclors as demonstrated by the very high percent differences between dual column results. If greater certainty regarding possible presence of low concentrations of pesticides is required to achieve project data quality objectives (DQOs), AMEC recommends consideration of either high resolution mass spectrometry (HRMS) or tandem mass spectrometry (MS/MS) as the determinative technique for future pesticide analyses.

No data were rejected and 100% of the data should be considered valid, which meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.9 of this Data Validation Report contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2. Field duplicate results are presented in Table 3.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

All samples were received at TA in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation.

4.3 Volatile Organic Compounds by EPA SW-846 Method 8260B

VOC results generated by TA for samples covered in this report are considered usable with the limitations described in Sections 4.3.1 through 4.3.9.

4.3.1 Holding Times

Samples SD08-2(6-18), SD08-2(18-30), SD-DUP2, SD08-1(18-30), SD08-1(30-35), TB-1, and SED08-EB were analyzed one day beyond the QAPP-specified 10 day holding time for preserved aqueous samples and soils. Specific limitations include the following:

- Samples TB-1 and SED08-EB were analyzed within the Region II guidelines 14 day holding time for preserved samples; therefore, data usability is not adversely affected.
- AMEC J qualified (unless U qualified due to blank contamination) the detected results and UJ qualified the nondetected results from the following samples because of possible low bias due to the exceeded holding times: SD08-2(6-18), SD08-2(18-30), SD-DUP2, SD08-1(18-30), and SD08-1(30-35).

4.3.2 Initial Calibration

The method-specified minimum relative response factor (RRF) and percent relative standard deviation (%RSD) criteria were met for the initial calibrations associated with the VOC sample analysis.

4.3.3 Continuing Calibration

The Region II-specified minimum RRF and percent deviation or percent drift (%D) criteria were met for the continuing calibrations associated with the VOC sample analysis, except as described below:

- The chloroethane %D of 51.1% (bias high) was greater than the 20% Region II-specified acceptance limit in the continuing calibration verification (CCV) analyzed on May 21, 2008 at 05:02 on instrument HP3. Chloroethane was not detected in the associated samples; therefore, data usability is not adversely affected by the potential high bias.
- The trichlorofluoromethane (26.6%, bias low) and 1,2-dibromo-3-chloropropane (23.4%, bias low) %Ds were greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 22, 2008 at 06:54 on instrument HP3. AMEC UJ qualified the nondetected trichlorofluoromethane and 1,2-dibromo-3-chloropropane results from the following samples because of possible low bias: SD08-5(0-6), SD08-5(6-13), SD-DUP1, SD08-7(0-6), SD08-7(18-22), SD08-6(0-6), SD08-6(6-9), SD08-4(0-6), SD08-4(6-18), SD08-4(18-20), SD08-3(0-6), SD08-3(6-18), SD08-30(0-6), and SD08-2(0-6).
- Trichlorofluoromethane (31.4%, bias low), 2-butanone (27.4%, bias low), 4-methyl-2-pentanone (24.1%, bias low), bromoform (23.9%, bias low), and 1,2-dibromo-3-chloropropane (38.6%, bias low) %Ds were greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 23, 2008 at 07:34 on instrument HP3. AMEC UJ qualified the nondetected results for these analytes from the following samples because of possible low bias: SD08-3(18-25), SD08-3(25-29), SD08-2(30-38), SD08-40(0-6), SD08-1(0-6), and SD08-1(16-18).
- The trichlorofluoromethane %D of 36.8%, bias high, was greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 25, 2008 at 08:54 on instrument HP6. This analyte was not detected in the associated samples; therefore, data usability is not adversely affected by the potential high bias.
- Dichlorodifluoromethane (21.2%, bias low), trichlorofluoromethane (32.5%, bias low), 4-methyl-2-pentanone (24.9%, bias low), 2-hexanone (29.5%, bias low), and 1,2-dibromo-3-chloropropane (31.2%, bias low) %Ds were greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 25, 2008 at 09:24 on instrument HP3. AMEC UJ qualified the nondetected results for these analytes from the following samples because of possible low bias: SD08-2(6-18), SD08-2(18-30), SD-DUP2, SD08-1(18-30), and SD08-1(30-35).

4.3.4 Blanks

VOCs were not detected in the laboratory blanks or equipment blank associated with the VOC sample analysis.

Acetone [3.2 micrograms per liter (µg/L)] and methylene chloride (0.34 µg/L) were detected in the trip blank TB-1. Specific limitations include the following:

- AMEC U qualified the detected acetone results from the following samples because the sample concentrations were less than 10 times the associated trip blank concentration, indicating possible contamination: SD08-8 (6-18), SD08-8 (18-20), SD08-7 (6-18), SD08-7 (18-22), SD08-6 (6-9), SD08-4 (6-18), SD08-4 (18-20), SD08-3 (18-25), SD08-3 (25-29), SD08-2 (6-18), SD08-2 (30-38), and SD08-1 (16-18).
- AMEC U qualified the detected methylene chloride results from the following samples because the sample concentrations were less than 10 times the associated trip blank concentration, indicating possible contamination: SD08-8 (0-6), SD08-8 (6-18), SD08-7 (0-6), SD08-7 (18-22), SD08-4 (0-6), SD08-3 (18-25), SD08-3 (25-29), SD08-2 (18-30), SD08-2 (30-38), SD08-40 (0-6), SD08-1 (0-6), SD08-1 (16-18), SD08-1 (18-30), and SD08-1 (30-35).

4.3.5 Surrogate Recoveries

All surrogate recoveries were within the laboratory-specified limits for VOC sample analysis.

4.3.6 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for VOC sample analysis.

4.3.7 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for VOC sample analysis.

4.3.8 Internal Standard Recoveries

IS recoveries were all within the method-specified 50% to 200% acceptance limits for the VOC sample analysis.

4.3.9 Data Reporting and Analytical Procedures

The laboratory J qualified detected results with concentrations between method detection limit (MDL) and the reporting limit (RL). AMEC concurs that these results are quantitative estimates and J qualified these results unless the results were previously U qualified because of blank contamination.

4.4 Semivolatile Organic Compounds by EPA SW-846 Method 8270C

SVOC results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.4.1 through 4.4.9.

4.4.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for analysis.

4.4.2 Initial Calibration

The Region II-specified minimum RRF and %RSD criteria not met for the initial calibrations associated with the SVOC sample analysis are described below.

The benzaldehyde %RSD of 38.7% was greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 2, 2008 on instrument 71. AMEC J qualified the detected benzaldehyde results and UJ qualified the nondetected benzaldehyde results from all samples because of possible bias in the analytical results.

4.4.3 Continuing Calibration

The Region II-specified minimum RRF and %D criteria were met for the continuing calibrations associated with the SVOC sample analysis, except as described below.

- The benzaldehyde (43.7%, bias high) and, hexachlorocyclopentadiene (20.9%, bias low) %Ds were outside the Region II-specified ±20% acceptance limit in the CCV analyzed on May 22, 2008 on instrument 71. Specific limitations include the following:
    - AMEC UJ qualified the nondetected hexachlorocyclopentadiene result from sample SED08-EB because of possible low bias.

  - Benzaldehyde was not detected in the associated sample; therefore, data usability is not adversely affected by the potential high bias.

- The benzaldehyde (43.8%, bias high), 4-nitrophenol (24.4%, bias low), diethylphthalate (20.7%, bias low), and atrazine (21.3%, bias low) %Ds were outside the Region II-specified ±20% acceptance limit in the CCV analyzed on May 23, 2008 on instrument 71. Specific limitations include the following:
  - AMEC J qualified the detected 4-nitrophenol, diethylphthalate, and atrazine results and UJ qualified the nondetected results for these analytes from the following samples because of possible low bias: SD08-6 (0-6), SD08-8 (6-18), SD08-8 (18-20), SD08-5 (0-6), SD08-5 (6-13), SD-DUP1, SD08-7 (6-18), SD08-7 (18-22), SD08-6 (0-6), SD08-6 (6-9), and SD08-3 (0-6).
  - AMEC J qualified the detected benzaldehyde results from samples SD08-7 (18-22) and SD08-6 (6-9) because of possible high bias.
- The benzaldehyde (39.1%, bias high), hexachlorocyclopentadiene (30.5%, bias low), and atrazine (25.1%, bias low) %Ds were outside the Region II-specified ±20% acceptance limit in the CCV analyzed on May 28, 2008 on instrument 71. Specific limitations include the following:
  - AMEC UJ qualified the nondetected hexachlorocyclopentadiene and atrazine results from the following samples because of possible low bias: SD08-7 (0-6), SD08-4 (0-6), SD08-4 (6-18), SD08-4 (18-20), SD08-3 (6-18), SD08-3 (18-25), and SD08-3 (25-29)
  - Benzaldehyde was not detected in the associated samples; therefore, data usability is not adversely affected by the potential high bias.
- The benzaldehyde (41.2%, bias high) and hexachlorocyclopentadiene (36.5%, bias low) %Ds were outside the Region II-specified ±20% acceptance limit in the CCV analyzed on May 29, 2008 on instrument 71. Specific limitations include the following:
  - AMEC UJ qualified the nondetected hexachlorocyclopentadiene results from the following samples because of possible low bias: SD08-30 (0-6), SD08-2 (0-6), SD08-2 (6-18), SD08-2 (18-30), SD08-2 (30-38), SD-DUP2, SD08-40 (0-6), SD08-1 (0-6), SD08-1 (16-18), SD08-1 (18-30), and SD08-1 (30-35).
  - AMEC J qualified the detected benzaldehyde result from sample SD08-2 (30-38) because of possible high bias.

4.4.4 Laboratory and Field Blanks

Qualification of results from SVOCs detected in the laboratory and/or field blanks are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Blank Results
Method Blank C8E210000-011	Di-n-butylphthalate	8.1 µg/kg	SD08-2 (30-38)
SED08-EB	Dibenzofuran	0.15 µg/L	SD08-8 (0-6) SD08-7 (6-18) SD08-6 (6-9) SD08-3 (0-6) SD08-4 (0-6) SD08-4 (6-18) SD08-4 (18-20) SD08-3 (6-18) SD08-3 (18-25) SD08-2 (0-6) SD08-2 (6-18) SD08-2 (30-38) SD08-40 (0-6) SD08-1 (0-6) SD08-1 (16-18) SD08-1 (18-30)

4.4.5 Surrogate Recoveries

Surrogate recoveries not within the laboratory-specified limits for the SVOC sample analysis are described below.

The majority of samples were analyzed at 5 to 10-fold dilutions. Surrogate recoveries in these samples were either low or not recovered. Data usability could not be fully evaluated due to the sample dilutions. Qualification of data was not required due to surrogate recoveries.

4.4.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries not within the laboratory-specified limits for the SVOC sample analysis are described below.

- Analytes were not recovered in the MS/MSD analysis of sample SD08-7 (6-18) because the laboratory analyzed these samples at 10-fold dilutions. Data usability could not be fully evaluated because of the diluted results.

- The laboratory performed MS/MSD analysis on sample SD08-40 (0-6). The phenol (39%) and naphthalene (39%) recoveries were less than the laboratory-specified acceptance limits. In addition, the RPD of 21% between the 4-bromophenyl phenyl ether results was greater than the 20% acceptance limit. Specific limitations include the following:
    - AMEC UJ qualified the nondetected phenol and naphthalene results from sample SD08-40 (0-6) because of possible low bias due to potential matrix interference.
    - 4-Bromophenyl phenyl was not detected in the associated sample; therefore, data usability is not adversely affected by the potential imprecision.

4.4.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.8 Internal Standard Recoveries

IS recoveries outside the method-specified 50% to 200% acceptance limits for the SVOC sample analysis are described below.

The acenapthene-d_{10} recovery was low (<50%) in the analysis of sample SD08-1 (0-6). AMEC J qualified (unless U qualified due to blank contamination) the detected dibenzofuran and fluorene results and UJ qualified the nondetected hexachlorocyclopentadiene; 2,4,6-trichlorophenol; 2,4,5-trichlorphenol; 1,1'-biphenyl; 2-chloronaphthalene; 2-nitroaniline; dimethylphthalate; 2,6-dinitrotoluene; acenaphthylene; 3-nitroaniline; acenaphthene; 2,4-dinitrophenol; 2-nitrophenol; 2,4-dinitrotoluene; diethylphthalate; 4-chlorophenyl phenyl ether; and 4-nitroaniline results from this sample because of possible low bias.

4.4.9 Analytical Procedures and Reporting

The laboratory J qualified detected results with concentrations between the MDL and RL. AMEC concurs that these results are quantitative estimates and J qualified these results unless they were U qualified due to blank contamination.

4.5 Pesticides by EPA SW-846 Method 8081A

Pesticide results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.5.1 through 4.5.8.

4.5.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for analysis.

4.5.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the pesticide sample analysis.

4.5.3 Continuing Calibration

The method-specified %D and retention time criteria not met for the continuing calibrations associated with the pesticide sample analysis are described below.

The 4,4'-DDD %Ds were greater than the 20% method-specified acceptance limit on both the primary (20.6%, bias high) and secondary (21.8%, bias high) columns in the CCV analyzed on June 2, 2008 at 22:54. 4,4'-DDD was not detected in the associated samples; therefore, data usability is not adversely affected by the potential high bias.

4.5.4 Blanks

No target analytes were detected in the laboratory blanks associated with the pesticide analysis.

4.5.5 Surrogate Recoveries

Surrogate recoveries associated with the pesticide sample analysis outside laboratory-specified acceptance limits are described below.

Surrogates were not recovered in the majority of samples. The laboratory analyzed these samples at 20-fold to 50-fold dilutions due to matrix interferences; therefore, data usability could not be fully evaluated. Qualification of data was not required.

4.5.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries not within the laboratory-specified limits for the pesticide sample analysis are described below.

The laboratory performed MS/MSD analyses on samples SD08-7 (6-18) and SD08-40 (0-6). The MS/MSDs were analyzed at 50-fold and 10-fold dilutions, respectively;

therefore, data usability could not be fully evaluated. Qualification of data was not required.

4.5.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.8 Data Reporting and Analytical Procedures

The laboratory analyzed the majority of samples at 5-fold to 50-fold dilutions. According to the Case Narrative, these samples were diluted due to matrix interference.

There was greater than 25% difference between the pesticide concentrations from the primary and secondary analytical columns for the samples listed in the following table. Analysis of pesticides using conventional gas chromatography/electron capture detector (GC/ECD) techniques can result in an extremely high rate of false positive detections, as referenced in literature including a memo titled *EPA Region 10 Clarification of SW-846 Method 8081 and Supplemental Guidance for Data Review* (EPA, 2006). In AMEC's professional judgment, based on the very large percent differences between primary and secondary column results, the reported insecticide results are likely false positives that result from interferences from the PCBs and/or PAHs detected in these samples. In addition, Region II validation guidelines (SOP HW-44) allow "U" qualification based on the presence of interferences and large differences between dual-column results.

AMEC U qualified the detected pesticide concentrations as listed in the table below based on professional judgment of the chemists performing the review. If greater certainty regarding possible presence of low concentrations of pesticides is required to achieve project DQOs, AMEC recommends consideration of either HRMS or MS/MS as the determinative technique for future pesticide analyses.

Sample ID	Analyte	%D	Qualification
SD08-8 (6-18)	Endrin Ketone	758	U
	alpha-Chlordane	1000	U
	gamma-Chlordane	125	U
SD-DUP1	gamma-Chlordane	537	U
SD08-7 (6-18)	alpha-Chlordane	26.5	U
	gamma-Chlordane	142	U
SD08-7 (18-22)	gamma-BHC (Lindane)	1000	U
	Dieldrin	29.9	U
	alpha-Chlordane	1000	U

Sample ID	Analyte	%D	Qualification
SD08-6 (0-6)	Endrin Ketone	387	U
SD08-6 (6-9)	Endosulfan II	85	U

	4,4'-DDD	184	U
	Methoxychlor	33.8	U
	Endrin Ketone	206	U
SD08-2 (0-6)	gamma-Chlordane	293	U
SD08-2 (6-18)	Endosulfan sulfate	110	U
	Endrin ketone	132	U
	gamma-Chlordane	160	U
SD08-2 (18-30)	gamma-BHC (Lindane)	28.2	U
	Heptachlor	71.4	U
	Dieldrin	286	U
	Endrin ketone	85.5	U
	gamma-Chlordane	222	U
SD08-2 (30-38)	delta-BHC	834	U
	gamma-BHC (Lindane)	141	U
	Dieldrin	625	U
	Endrin ketone	172	U
	gamma-Chlordane	105	U
SD-DUP2	Dieldrin	647	U
	Endrin Ketone	178	U
	gamma-Chlordane	209	U
SD08-1 (0-6)	gamma-Chlordane	274	U
SD08-1 (16-18)	Endrin ketone	176	U
	gamma-Chlordane	219	U

Sample ID	Analyte	%D	Qualification
SD08-1 (18-30)	Endosulfan sulfate	147	U
	Endrin ketone	152	U
	alpha-Chlordane	35.7	U
	gamma-Chlordane	95.5	U
SD08-1 (30-35)	gamma-Chlordane	108	U

The laboratory J qualified detected results with concentrations between the MDL and RL. AMEC concurs that these results are quantitative estimates and J qualified these results unless they were U qualified due to interferences.

4.6 Polychlorinated Biphenyls as Aroclors by EPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.6.1 through 4.6.7.

4.6.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for PCB analysis.

4.6.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.6.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.6.4 Blanks

No target analytes were detected in the laboratory or equipment blanks associated with the PCB sample analysis.

4.6.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis outside the laboratory-specified acceptance limits are described below.

- Decachlorobiphenyl recoveries were greater than the laboratory-specified acceptance limits in samples SD08-3 (6-18) (151%), SD08-3 (18-25) (147%), and SD08-1 (18-30) (152%). These samples were analyzed at 5-fold dilutions; therefore, data usability could not be fully evaluated. Qualification of data was not required.
- Tetrachloro-m-xylene recoveries were greater than the laboratory-specified limits in samples SD08-5 (0-6) (129%), SD08-5 (6-13) (128%), SD-DUP1 (131%), and SD08-4 (18-20 (133%). AMEC J qualified the detected Aroclor 1254 results from these samples because of possible high bias.

4.6.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.7 Target Analyte List Metals by EPA SW-846 Methods 6020/7470A/7471A

Samples covered in this report underwent total metals analysis by EPA SW-846 Methods 6020/7470A/7471A at TA. The results are usable with the limitations and exceptions described in Sections 4.7.1 through 4.7.10.

4.7.1 Holding Times

All samples were analyzed for metals within the QAPP-specified technical holding time of 180 days and for mercury within the QAPP-specified technical holding time of 26 days.

4.7.2 Initial Calibration

The initial calibrations associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.3 Initial and Continuing Calibration Verification

All initial calibration verifications (ICVs) and CCVs associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.4 Contract-required Quantitation Limit Check Standard

All contract-required quantitation limit (CRQL) check standards (CRIs) associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.5 Blanks

Initial and Continuing Calibration Blanks

Target analytes detected at concentrations greater than the MDL in calibration blanks associated with U qualified results are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results
ICB 6/03/08 ICPMS	Antimony	0.08 µg/L	SD08-7 (18-22) SD08-6 (6-9)
CCB2 6/03/08 ICPMS	Antimony	0.16 µg/L	SD08-7 (18-22) SD08-6 (6-9)
CCB3 6/03/08 ICPMS	Antimony	0.17 µg/L	SD08-7 (18-22) SD08-6 (6-9)

Preparation Blanks

Target analytes detected at concentrations greater than the MDL in preparation blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Preparation Blank Results
C8E300000-132	Chromium	0.032 milligrams per kilogram (mg/kg)	None
	Iron	0.77 mg/kg	None
	Sodium	0.84 mg/kg	None
	Lead	0.0036 mg/kg	None
	Antimony	0.011 mg/kg	SD08-7 (18-22) SD08-6 (6-9)
	Zinc	0.044 mg/kg	None

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Preparation Blank Results
C8E300000-135	Chromium	0.043mg/kg	None
	Copper	0.011 mg/kg	None
	Lead	0.021 mg/kg	None
	Vanadium	0.016 mg/kg	None
	Zinc	0.19 mg/kg	None
C8F020000-136	Chromium	0.88 mg/kg	None
	Copper	0.014 mg/kg	None
	Iron	1.7 mg/kg	None
	Lead	0.033 mg/kg	None
	Antimony	0.0082 mg/kg	None
	Vanadium	0.073 mg/kg	None
	Zinc	0.22 mg/kg	None

Equipment Blank

Target analytes detected at concentrations greater than the MDL in the equipment blank associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Equipment Blank Results
SED08-EB	Arsenic	0.35 µg/L	None
	Chromium	3.3 µg/L	None
	Sodium	11.5 µg/L	None
	Lead	0.035 µg/L	None
	Selenium	0.31 µg/L	None
	Antimony	0.086 µg/L	SD08-7 (18-22) SD08-6 (6-9)
	Vanadium	0.82 µg/L	None
	Zinc	2.1 µg/L	None

4.7.6 Inductively Coupled Plasma Interference Check Sample

All interference check samples (ICSs) exhibited recoveries within the 80% to 120% method-specified acceptance limits.

4.7.7 Laboratory Control Sample Recovery

Recoveries were within the method-specified acceptance limits in all LCS samples associated with the metals sample analysis.

4.7.8 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries outside the laboratory-specified limits for the metals sample analysis are described below.

- MS/MSD analysis was performed on sample SD08-7 (6-18). Calcium (33%/41%), copper (36%/34%), nickel (71%/67%), selenium (70%, MSD), and antimony (44%/49%) recoveries were less than the laboratory-specified limits. In addition, aluminum, cadmium, iron, lead, and zinc were not recovered. Specific limitations include the following:
    - AMEC J qualified (unless U qualified due to blank contamination) the detected calcium, copper, nickel, selenium, and antimony results from the following samples because of possible low bias due to potential matrix interference: SD08-7 (0-6), SD08-7 (6-18), and SD08-7 (18-22).
    - The aluminum, cadmium, iron, lead, and zinc concentrations in the unspiked sample were greater than four times the spike concentration added; therefore, data usability could not be fully evaluated. Qualification of data was not required.
- MS/MSD analysis was performed on sample SD08-2(6-18). The antimony recoveries of 63% in the MS/MSD were less than the laboratory-specified limits. In addition, silver, aluminum, calcium, cadmium, chromium, copper, iron, nickel, lead, and zinc were not recovered. Specific limitations include the following:
    - AMEC J qualified the detected antimony results from the following samples because of possible low bias due to potential matrix interference: SD08-2(0-6), SD08-2(6-18), SD08-2(18-30), SD08-2(30-38), and SD-DUP2.
    - The silver, aluminum, calcium, cadmium, chromium, copper, iron, nickel, lead, and zinc concentrations in the unspiked sample were greater than four times the spike concentration added; therefore, data usability could not be fully evaluated. Qualification of data was not required.
- MS/MSD analysis was performed on sample SD08-5(6-13). Calcium (71%/68%), cadmium (74%/73%), and antimony (53%/54%) recoveries were less than the laboratory-specified limits. In addition, aluminum, chromium, iron, lead, and zinc were not recovered. Specific limitations include the following:
    - AMEC J qualified the detected calcium, cadmium, and antimony results from the following samples because of possible low bias due to potential matrix interference: SD08-5(0-6), SD08-5(6-13), and SD-DUP1.

- The aluminum, chromium, iron, lead, and zinc concentrations in the unspiked sample were greater than four times the spike concentration added; therefore, data usability could not be fully evaluated. Qualification of data was not required.

- MS/MSD analysis was performed on sample SD08-40(0-6). The mercury recovery of 130% was greater than the laboratory-specified limits in the MS. AMEC J qualified the detected mercury result from sample SD08-40 (0-6) because of possible high bias due to potential matrix interference.

4.7.9 Serial Dilution Results

- Serial dilution analysis was performed on sample SD08-2 (6-18). The antimony (18.6%) and beryllium (19.7%) percent differences were greater than the method-specified 10% acceptance limit. AMEC J qualified the detected antimony and beryllium results from the following samples because of possible bias due to potential matrix interference: SD08-2(0-6), SD08-2(6-18), SD08-2(18-30), SD08-2(30-38), and SD-DUP2.

- Serial dilution analysis was performed on sample SD08-7 (6-18). The arsenic (16.7%) and zinc (17.6%) percent differences were greater than the method-specified 10% acceptance limit. AMEC J qualified the detected arsenic and zinc results from the following samples because of possible bias due to potential matrix interference: SD08-7 (0-6), SD08-7 (6-18), and SD08-7 (18-22).

- Serial dilution analysis was performed on sample SD08-5 (6-13). The arsenic (22.8%), copper (10.8%), and zinc (22.6%) percent differences were greater than the method-specified 10% acceptance limit. AMEC J qualified the detected arsenic, copper, and zinc results from the following samples because of possible bias due to potential matrix interference: SD08-5(0-6), SD08-5(6-13), and SD-DUP1.

4.7.10 Data Reporting and Analytical Procedures

The laboratory B qualified detected results with concentrations between the MDL and CRQL. AMEC concurs that these results are quantitative estimates and J qualified (unless U qualified due to blank contamination) these results.

4.8 Percent Moisture

The percent moisture for samples SD08-8 (0-6) (75%), SD08-7 (0-6) (74%), SD08-4 (0-6) (72%), SD08-3 (0-6) (74%), SD08-1 (0-6) (73%) were ≥ 70% but < 90%.

AMEC J qualified (unless U qualified due to blank contamination or interferences) all detected results and UJ qualified all nondetected results from these samples per Region II criteria.

4.9 Total Cyanide, Total Organic Carbon, Acid-Volatile Sulfide, Simultaneously Extracted Metals, and Total Hardness as $CaCO_3$

Total cyanide, TOC, acid-volatile sulfide, SEM, and total hardness as $CaCO_3$ results generated by TA for the samples covered in this report may be considered usable with the limitations described below.

- The laboratory B qualified detected results with concentrations between the MDL and RL. AMEC concurs that these results are quantitative estimates and J qualified these results.
- The laboratory performed SEM MS/MSD analysis on sample SD08-4 (0-6). The nickel (63%/65%) and silver (12%, MS) recoveries were less than the laboratory-specified limits. In addition, cadmium, chromium, copper, lead, and zinc were not recovered in the MS/MSD and silver was not recovered in the MSD. Specific limitations include the following:
    - AMEC J qualified the detected nickel and silver results from sample SD08-4 (0-6) because of possible low bias due to potential matrix interference.
    - The cadmium, chromium, copper, lead, and zinc concentrations in the unspiked sample were greater than four times the spike concentration added; therefore, data usability could not be fully evaluated. Qualification of data was not required.
- Chromium (0.00084 µmoles/gm), copper (0.0012 µmoles/gm), and zinc (0.0058 µmoles/gm) were detected in method blank C8E220000-123. Chromium, copper, and zinc concentrations were greater than the RL in the associated samples; therefore, data usability is not adversely affected.
- TOC was detected in equipment blank SED08-EB at a concentration of 0.27 milligrams per liter (mg/L). TOC concentrations were greater than the RL; therefore, data usability is not adversely affected by the equipment blank results.
- The laboratory performed TOC MS/MSD analysis on sample SD08-7(6-18). The MSD recovery of 43% was less than the laboratory-specified 75% to 125% acceptance limits. AMEC J qualified the detected TOC results from sample SD08-7(6-18), SD08-7(0-6), and SD08-7(18-22) because of possible low bias due to potential matrix interference.

- Cyanide was detected in method blanks BLK-C8E210000176B (0.10 mg/kg), BLK-C8E210000177B (0.12 mg/kg), and BLK-C8E210000327B (0.16 mg/kg). AMEC U qualified the detected cyanide results from the following samples because the sample concentrations were less than the RL: SD08-8(0-6), SD08-8(6-18), SD08-8(18-20), SD08-5(0-6), SD08-5(6-13), SD08-7(0-6), SD08-7(6-18), SD08-7(18-22), SD08-6(0-6), SD08-6(6-9), SD08-4(0-6), SD08-4(6-18), SD08-4(18-20), SD08-3(0-6), SD08-3(6-18), SD08-3(18-25), SD08-3(25-29), SD08-30(0-6), SD08-2(6-18), SD08-2(18-30), SD08-2(30-38), SD-DUP2, SD08-40(0-6), SD08-1(0-6), SD08-1(16-18), SD08-1(18-30), and SD08-1(30-35).
- The laboratory performed cyanide MS/MSD analysis on sample SD08-7(6-18). The MSD recovery of 63% was less than the laboratory-specified 75% to 125% acceptance limits. The detected cyanide result from this sample was previously U qualified due to blank contamination; further qualification is not required.

5.0 FIELD DUPLICATE RESULTS

Samples SD08-5(0-6) and SD08-2(6-18) were collected as field duplicates and submitted to TA. The samples were labeled blindly, so that the laboratory was not aware which samples were submitted in duplicate. Detected results and RPDs for the field duplicates are summarized in Table 3. Qualifiers added during validation, because of precision values exceeding QAPP-specified acceptance limits of less than 20% RPD for sample concentrations more than five times their CRQL or RL, are described in Table 3.

6.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included nondetected data (U) and estimated data (J or UJ).

Nondetected Qualified Data. A number of detected metal, VOC, SVOC, pesticide, and cyanide results were U qualified as nondetected because of contamination in the associated laboratory and/or trip blanks or interferences. Results that were U qualified as nondetected were not further qualified due to other associated QC outliers.

Estimated Data. Portions of the VOC, SVOC, pesticide, PCB, metals, AVS/SEM, TOC, and cyanide data were qualified as estimated due to calibration issues, high surrogate recoveries, low and high matrix spike recoveries, a low internal standard recovery, exceeded holding times, high percent moisture results, serial dilution and field duplicate imprecision, and concentrations between the MDLs and RLs.

Data Completeness Assessment. A total of 5,108 data records were evaluated during the data validation and review of the sample results. Of the total data records, 1,421 records (28%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected concentration limits (UJ) or the concentration of detected target analytes (J). Of the total data records, 137 (2.7%) were qualified as nondetected as a result of a detection of a target analyte in the associated blanks or interferences. The total hardness data did not require qualification.

No data were rejected; therefore, 100% of the data should be considered valid, which meets the 90% project data quality objective.

LIMITATIONS

This report was prepared exclusively for Koppers Pond PRP Group by AMEC Earth & Environmental, Inc. (AMEC). The quality of information, conclusions, and estimates contained herein is consistent with the level of effort involved in AMEC services and based on: i) information available at the time of preparation, ii) data supplied by outside sources, and iii) the assumptions, conditions, and qualifications set forth in this report. This Data Validation Report is intended to be used by Koppers Pond PRP Group for the Remedial Investigation/Feasibility Study, Koppers Pond, Kentucky Avenue Wellfield Superfund Site, Operable Unit 4, Horseheads, New York only, subject to the terms and conditions of its contract with AMEC. Any other use of, or reliance on, this report by any third party is at that party's sole risk.

TABLE 2
Data Validation Qualifiers
Koppers Pond
SDG C8E150368

Reason Codes

BC - High initial calibration percent relative standard deviation
CB - Contaminated blank
DL - Value was between method detection limit and reporting limit
EB - Equiment blank contamination
FD - Field duplicate imprecision
HC - High continuing calibration verification result
HM - High matrix spike recovery
HS- High surrogate recovery
HT - Holding time exceedance
LC - Low continuing calibration verification result
LI - Low internal standard recovery
LM - Low matrix spike recovery
MB - Method blank contamination
MI - Serial dilution imprecision
PM - High percent moisture
SE - Large differences between the primary and secondary column results
TB - Trip blank contamination

Validation Codes:

U -The U qualifier indicates that an analyte is considered nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in blanks.

J - The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required acceptance limits.

UJ - The UJ qualifier indicates the RL is estimated. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required acceptance limits.

1.0 INTRODUCTION

This data quality review and validation report covers one sediment sample and 26 fish tissue samples from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 15 and 16, 2008 and submitted to Test America (TA) in Pittsburgh, Pennsylvania on May 16, 2008. The samples were assigned sample delivery group (SDG) C8E170109. The following analyses were performed on these samples:

- Target Analyte List (TAL) metals by Environmental Protection Agency (EPA) SW-846 Methods 6020/7471A;
- Total cyanide by EPA SW-846 Method 9012A;
- Total Organic Carbon (TOC) by EPA Lloyd Kahn;
- Percent Lipids by laboratory specified method;
- Semivolatile organic compounds (SVOCs) by EPA SW-846 Method 8270C;
- Volatile organic compounds (VOCs) by EPA SW-846 Method 8260B;
- Pesticides by EPA SW-846 Method 8081A;
- Polychlorinated biphenyls (PCBs) as Aroclors by EPA SW-846 Method 8082.

A list of these samples by field sample identification (ID) and TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response (OSWER) National Functional Guidelines for Inorganic Data Review (October 2004), National Functional Guidelines for Organic Data Review (October 1999), including Region II modifications, if any, and associated method quality control (QC) requirements. These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) QC requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP (AMEC 2008). The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Inductively coupled plasma (ICP) check sample;
- Matrix spike/matrix spike duplicate (MS/MSD) samples;
- Laboratory duplicate samples:
- Laboratory control samples (LCSs);
- ICP serial dilution;
- Detection limits;
- Sample dilutions;
- Gas chromatography/mass spectrometry (GC/MS) tuning;
- Instrument performance;
- Surrogate recoveries;
- Internal standards (IS); and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The majority of data are generally usable and of good quality.

The nondetected 4,4'-DDT result from sample CC08-04 was rejected because of a very low matrix spike recovery. In addition, the chromium and/or vanadium results in a number of samples were rejected because of associated blank results above the CRQL.

A number of detected metal and VOC results were U qualified as nondetected because of contamination in the associated laboratory blanks.

A number of detected pesticide results were U qualified as nondetected because of probable matrix interference from polynuclear aromatic hydrocarbons (PAHs) and/or Aroclors as demonstrated by the very high percent differences between dual column results. If greater certainty regarding possible presence of low concentrations of pesticides is required to achieve project DQOs, AMEC recommends consideration of either high resolution mass spectrometry (HRMS) or tandem mass spectrometry (MS/MS) as the determinative technique for future pesticide analyses.

Ninety eight percent of the data should be considered valid which meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.8 of this Data Validation Report contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

TA received all samples in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation.

4.3 Volatile Organic Compounds by EPA SW-846 Method 8260B

VOC results generated by TA for samples covered in this report are considered usable with the limitations described in Sections 4.3.1 through 4.3.9.

4.3.1 Holding Times

All soil samples were analyzed within the QAPP-specified 10 day holding time for unpreserved samples.

4.3.2 Initial Calibration

The method-specified minimum relative response factor (RRF) and percent relative standard deviation (%RSD) criteria not met for the initial calibrations associated with VOC analysis of the samples covered in this report are described below.

The acetone %RSD of 34.5% in the initial calibration analyzed on May 25, 2008 on instrument HP5 was greater than the method-specified 15% limit. AMEC J qualified the detected acetone result from sample SD08-41 (0-6) because of possible bias in the analytical results.

4.3.3 Continuing Calibration

The Region II-specified minimum RRF and percent deviation or percent drift (%D) criteria were met for the continuing calibrations associated with VOC analysis of the samples covered in this report, except as described below:

The acetone (34.5%, bias low) and 2-butanone (22.9%, bias low) %Ds were greater than the 20% Region II-specified acceptance limit in the continuing calibration verification (CCV) analyzed on May 25, 2008 at 14:21 on instrument HP4. AMEC J qualified the detected acetone result and UJ qualified the nondetected 2-butanone result from sample SD08-41 (0-6) because of possible low bias.

4.3.4 Blanks

Methylene chloride was detected in method blank C8E250000-027 at a concentration of 0.75 microgram per kilogram (µg/kg). AMEC U qualified the detected methylene chloride result from sample SD08-41 (0-6) because the sample concentration was less than 10 times the associated method blank concentration.

4.3.5 Surrogate Recoveries

All surrogate recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.6 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.7 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.8 Internal Standard Recoveries

IS recoveries were all within the method-specified 50% to 200% acceptance limits for the VOC sample analysis covered in this report.

4.3.9 Data Reporting

The laboratory J qualified detected results with concentrations between the method detection limit (MDL) and reporting limit (RL). AMEC concurs that these results are quantitative estimates and J qualified these results.

4.4 Semivolatile Organic Compounds by EPA SW-846 Method 8270C

SVOC results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.4.1 through 4.4.9.

4.4.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 14 days for solid extraction and 40 days for analysis.

4.4.2 Initial Calibration

The Region II-specified minimum RRF and %RSD criteria not met for the initial calibrations associated with the SVOC sample analysis are described below.

The benzaldehyde %RSD of 38.7% was greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 2, 2008 on instrument 71. AMEC UJ qualified the nondetected benzaldehyde result from sample SD08-41 (0-6) because of possible bias in the analytical results.

4.4.3 Continuing Calibration

The Region II-specified minimum RRF and %D criteria were met for the continuing calibrations associated with the SVOC sample analysis, except as described below.

The benzaldehyde (30.6%, bias high), hexachlorocyclopentadiene (45.4%, bias low), butylbenzylphthalate (22.6%, bias high), and 3,3'-dichlorobenzidine (25.1%, bias high) %Ds in the CCV analyzed on May 30, 2008 on instrument 71 were outside the Region II-specified ±20% acceptance limit. Specific limitations include the following:

- AMEC UJ qualified the nondetected hexachlorocyclopentadiene result from sample SD08-41 (0-6) because of possible low bias.
- Benzaldehyde, butylbenzylphthalate, and 3,3'-dichlorobenzidine were not detected in the associated sample; therefore, data usability is not adversely affected by the potential high bias.

4.4.4 Laboratory Blank

SVOCs detected in the laboratory blank associated with the samples are described below.

Diethylphthalate was detected in method blank C8E220000-011 at a concentration of 6.0 µg/kg. Diethylphthalate was not detected in the associated sample; therefore, data usability is not adversely affected by the method blank results.

4.4.5 Surrogate Recoveries

All surrogate recoveries not within the laboratory-specified limits for SVOC analysis of the samples covered in this report are described below.

Surrogates were not recovered in the 15-fold dilution analysis of sample SD08-41 (0-6). Data usability could not be fully evaluated due to the sample dilution. Data qualification was not required.

4.4.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries not within the laboratory-specified limits for SVOC analysis of the samples covered in this report are described below.

The laboratory analyzed the MS/MSD sample SD08-41 (0-6) at a 15-fold dilution. Analytes were not recovered and data usability could not be fully evaluated due to the dilution. Data qualification was not required.

4.4.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.8 Internal Standard Recoveries

IS recoveries were within the method-specified 50% to 200% acceptance limits for the SVOC sample analysis.

4.4.9 Data Reporting

The laboratory J qualified detected results with concentrations between the MDL and RL. AMEC concurs that these results are quantitative estimates and J qualified these results.

4.5 Pesticides by EPA SW-846 Method 8081A

Pesticide results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.5.1 through 4.5.8.

4.5.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 14 days for solid extraction, 14 days to extract from thawing of fish tissue and 40 days for analysis.

4.5.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the pesticide sample analysis.

4.5.3 Continuing Calibration

The method-specified %D and retention time criteria not met for the continuing calibrations associated with the pesticide sample analysis are described below.

The 4,4'-DDT %D of 21.4%, bias low, exceeded the ±20% method-specified acceptance limit in the calibration check standard analyzed on May 29, 2008 at 22:51. AMEC UJ qualified the nondetected 4,4'-DDT result from sample SD08-41 (0-6) because of possible low bias.

4.5.4 Blanks

No target analytes were detected in the laboratory blanks associated with the pesticide analysis.

4.5.5 Surrogate Recoveries

Surrogate recoveries associated with the pesticide sample analysis outside laboratory-specified acceptance limits are described below.

Surrogates were not recovered in the analysis of sample SD08-41 (0-6). This sample was analyzed at a 7.5-fold dilution; therefore, data usability could not be fully evaluated because of the dilution. Data qualification was not required.

Decachlorobiphenyl (DCB) recoveries greater than the laboratory-specified 18% to 145% acceptance limits are described in the following table. AMEC J qualified (unless U qualified due to matrix interference) the detected pesticide results from these samples because of possible high bias.

Sample Identification	DCB Recovery
WS08-01	180%
WS08-04	167%
WS08-02	148%
WS08-03	165%
BC08-04	156%
FF08-02	162%
FF08-05	147%
FF08-04	149%
FF08-06	152%
CC08-04	152%
LB08-06	165%
FF08-01	170%

Sample Identification	DCB Recovery
FF08-03	148%

4.5.6 Matrix Spike/Matrix Spike Duplicate Accuracy and Precision

MS/MSD recoveries not within the laboratory-specified limits for pesticide analysis of the samples covered in this report are described below.

- The laboratory analyzed MS/MSD sample SD08-41 (0-6) at a 7.5-fold dilution. Analytes were not recovered and data usability could not be fully evaluated due to the dilution. Data qualification was not required.
- The laboratory performed MS/MSD analysis on sample CC08-03. The 4,4'-DDT recovery of 182% in the MSD was greater than the laboratory-specified limits. 4,4'-DDT was not detected in sample CC08-03; therefore, data usability is not adversely affected by the potential high bias.
- The laboratory performed MS/MSD analysis on sample CC08-04. The endrin recovery of 144% in the MS was greater than the laboratory-specified limits. In addition, 4,4'-DDT was not recovered in the MS/MSD, and dieldrin was not recovered in the MSD. Specific limitations include the following:
    - AMEC R qualified and rejected the nondetected 4,4'-DDT result from sample CC08-04 because the absence or presence of the analyte could not be confirmed due to the very low (<10%) recoveries.
    - AMEC J qualified (unless U qualified due to interferences) the detected dieldrin result from sample CC08-04 because of possible low bias.
    - Endrin was not detected in the associated sample; therefore, data usability is not adversely affected by the potential high bias.

4.5.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.8 Data Reporting and Analytical Procedures

There was greater than 25% difference between the pesticide concentrations from the primary and secondary analytical columns for the samples listed in the following table. Analysis of pesticides using conventional gas chromatography/electron capture

detector (GC/ECD) techniques can result in an extremely high rate of false positive detections, as referenced in literature including a memo titled *EPA Region 10 Clarification of SW-846 Method 8081 and Supplemental Guidance for Data Review* (EPA, 2006). In AMEC's professional judgment, based on the very large percent differences between primary and secondary column results, the reported insecticide results are likely false positives that result from interferences from the PAHs and/or PCBs detected in these samples. In addition, Region II validation guidelines (SOP HW-44) allow "U" qualification based on the presence of interferences and large differences between dual-column results.

AMEC U qualified the detected pesticide concentrations as listed in the table below based on professional judgment of the chemists performing the review. If greater certainty regarding possible presence of low concentrations of pesticides is required to achieve project DQOs, AMEC recommends consideration of either HRMS or MS/MS as the determinative technique for future pesticide analyses.

Sample ID	Analyte	%D	Qualification
SD08-41 (0-6)	delta-BHC	999	U

Additionally, the laboratory J qualified detected results with concentrations between the MDL and RL. AMEC concurs that these results are quantitative estimates and J qualified these results unless they were U qualified due to interferences.

4.6 Polychlorinated Biphenyls as Aroclors by USEPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report are considered usable without limitations.

4.6.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 14 days for solid extraction, 14 days to extract from thawing of fish tissue, and 40 days for analysis.

4.6.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.6.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.6.4 Blanks

No target analytes were detected in the laboratory blanks associated with the PCB sample analysis.

4.6.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis were within the laboratory-specified acceptance limits.

4.6.6 Matrix Spike/Matrix Spike Duplicate Accuracy and Precision

MS/MSD recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.7 Target Analyte List Metals by EPA SW-846 Methods 6020/7471A

Samples covered in this report underwent total metals analysis by EPA SW-846 Methods 6020/7471A at TA. The results are usable with the limitations and exceptions described in Sections 4.7.1 through 4.7.10.

4.7.1 Holding Times

All samples were analyzed for metals within the QAPP-specified technical holding time of 180 days and for mercury within the QAPP-specified technical holding time of 26 days.

4.7.2 Initial Calibration

The initial calibrations associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.3 Initial and Continuing Calibration Verification

All initial calibration verifications (ICVs) and CCVs associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.4 Contract-required Quantitation Limit Check Standard

All contract-required quantitation limit (CRQL) check standards (CRIs) associated with the analysis of these samples were within the method-specified acceptance criteria.

4.7.5 Blanks

Initial and Continuing Calibration Blanks

Target analytes detected at concentrations greater than the MDL in calibration blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results
ICB 6/16/08 ICPMS	Calcium	9.47 µg/L	None

4.7.6 Inductively Coupled Plasma Interference Check Sample

All interference check samples (ICSs) exhibited recoveries within the 80% to 120% method-specified acceptance limits.

4.7.7 Laboratory Control Sample Recovery

Recoveries were within the method-specified acceptance limits in all LCS samples associated with the metals sample analysis.

4.7.8 Matrix Spike/Matrix Spike Duplicate Accuracy and Precision

MS/MSD recoveries outside the laboratory-specified limits for the metals sample analysis are described below.

- MS/MSD analysis was performed on sample SD08-41 (0-6). Magnesium (255% MS) and selenium (71% MS) recoveries were outside than the laboratory-specified limits. In addition, aluminum, calcium, manganese, iron, and lead were not recovered in the MS/MSD analysis. Specific limitations include the following:
    - AMEC J qualified the detected magnesium result from sample SD08-41 (0-6) because of possible high bias due to potential matrix interference.
    - AMEC J qualified the detected selenium and lead results from sample SD08-41 (0-6) because of possible low bias due to potential matrix interference.
    - The aluminum, calcium, manganese, and iron concentrations in the sample were greater than four times the associated spike concentrations; therefore, data usability could not be fully evaluated due to the high sample concentrations for these analytes. Data usability is not adversely affected.
- MS/MSD analysis was performed on sample CC08-03. The potassium recovery of 71% in the MS less than the laboratory-specified limits. AMEC J qualified the detected potassium results from the following samples because of possible low bias due to potential matrix interference: CC08-03, LB08-01, LB08-02, LB08-05, BC08-02, BC08-01, CC08-02, CC08-05, LB08-03, LB08-04, WS08-05, WS08-01, WS08-04, WS08-02, WS08-03, BC08-04, BC08-03, FF08-02, FF08-05, and FF08-04.
- MS/MSD analysis was performed on sample FF08-06. Aluminum (176% MSD), calcium (232%/439%), iron (190% MSD), sodium (74% MS), and lead (192% MSD) recoveries were outside the laboratory-specified limits. In addition, the aluminum (42%), calcium (34%), iron (48%), and lead (50%) %RPDs were greater than the laboratory-specified 20% acceptance limit. Specific limitations include the following:
    - AMEC J qualified (unless U qualified due to blank contamination) the detected aluminum, calcium, iron, and lead results from the following samples because

of possible high bias due to potential matrix interference: FF08-06, CC08-04, CC08-01, LB08-06, FF08-01, and FF08-03.

- AMEC J qualified the detected sodium results from the following samples because of possible low bias due to potential matrix interference: FF08-06, CC08-04, CC08-01, LB08-06, FF08-01, and FF08-03.

4.7.9 Serial Dilution Results

The silver percent difference of 14.8% was outside the method-specified 10% acceptance limit in the serial dilution analysis of sample SD08-41 (0-6). AMEC J qualified the detected silver result from this sample because of possible bias due to potential matrix interference.

The chromium (39.7% and 47.2%) and zinc (13.3% and 13.8%) percent differences were outside the method-specified 10% acceptance limit in the serial dilution analyses of samples CC08-03 and FF08-06, respectively. AMEC J qualified (unless R qualified due to method blank contamination) the detected chromium and zinc results from all fish tissue samples because of possible bias due to potential matrix interference.

4.7.10 Data Reporting and Analytical Procedures

The laboratory B qualified detected results with concentrations between the MDL and CRQL. AMEC concurs that these results are quantitative estimates and J qualified these results unless they were U qualified due to blank contamination.

4.8 Cyanide, Total Organic Carbon, and Lipid Content

Cyanide, TOC, and lipid content results generated by TA for the samples covered in this report may be considered usable with the limitations described below.

Cyanide was detected in method blank C8E210000327B. The cyanide result in the associated sample was greater than the RL and five times greater than the method blank concentration; therefore, data usability is not adversely affected by the method blank results.

The laboratory B qualified detected results with concentrations between the MDL and CRQL. AMEC concurs that these results are quantitative estimates and J qualified these results.

5.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included rejected (R), nondetected data (U), and estimated data (J or UJ).

Rejected Data. The nondetected 4,4'-DDT result from sample CC08-04 was rejected because of a very low matrix spike recovery. In addition, the chromium and/or vanadium results in a number of samples were rejected because of associated blank results above the CRQL.

Nondetected Qualified Data. A number of detected metal, VOC, and pesticide results were U qualified as nondetected because of contamination in the associated laboratory blanks or interferences. Results that were U qualified as nondetected were not further qualified due to other associated QC outliers.

Estimated Data. Portions of the VOC, SVOC, pesticide, metals, and percent lipids data were qualified as estimated due to calibration issues, a high surrogate recovery, high and low matrix spike recoveries, serial dilution imprecision, and concentrations between the MDLs and RLs.

Data Completeness Assessment. A total of 1,519 data records were evaluated during the data validation and review of the sample results. Of the total data records, 204 records (13%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected concentration limits (UJ) or the concentration of detected target analytes (J). Of the total data records, 308 (20%) were qualified as nondetected as a result of a detection of a target analyte in the associated blanks or interferences. Of the total data records, 29 (1.9%) were rejected due to a very low MS recovery or method blank results. The PCB, cyanide, and TOC did not require qualification.

Ninety eight percent of the data should be considered valid which meets the 90% project data quality objective.

DQR = Data quality review as described by Section 10.2.1 of the Quailty Assurance Project Plan,
Quality Assurance Project Plan, Koppers Pond, Kentucky Avenue Wellfield Site, Operable Unit 4, April 2008
ID = identification
MS/MSD = matrix spike/matrix spike duplicate
PCBs = polychlorinated biphenyls
SDG = sample delivery group
SVOCs = semivolatile organic compounds
TOC = total organic carbon
VOCs = volatile organic compounds

TABLE 2
Data Validation Qualifiers
Koppers Pond
SDG C8E170109

Reason Codes

BC - High initial calibration percent relative standard deviations
CB - Contaminated Blank
DL - Value was between method detection limit and reporting limit
HC - High continuing calibration verification result
HM - High matrix spike recovery
HS - High surrogate recovery
LC - Low continuing calibration verification result
LM - Low matrix spike recovery
MB - Method blank contamination
MI - High serial dilution percent difference
SE - Large differences between the primary and secondary column results.

Validation Codes:

R - The R qualifier indicates that a result has been rejected due to serious QC problems. It is not possible to definitively determine whether the analyte is present or absent in the sample.

U -The U qualifier indicates that an analyte is considered nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in blanks.

J - The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required acceptance limits.

UJ - The UJ qualifier indicates the RL is estimated. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required acceptance limits.

1.0 INTRODUCTION

This data quality review and validation report covers 5 surface water samples, including one field duplicate and one trip blank, and 2 sediment samples from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 6, 2008 and submitted to Test America (TA) in Pittsburgh, Pennsylvania on May 7, 2008. The samples were assigned sample delivery group (SDG) C8E070123. The following analyses were performed on these samples:

- Total and Dissolved Target Analyte List (TAL) metals by Environmental Protection Agency (EPA) SW-846 Methods 6020/7470A/7471A;
- Total cyanide by EPA SW-846 Method 9012A;
- Ammonia Nitrogen by EPA Method 350.1
- Total hardness as $CaCO_3$ by Standard Methods (SM) 2340-C;
- Nitrite by EPA Method 9056A;
- Total suspended solids (TSS) by SM 2540D;
- Fluoride by SM 4500-F C;
- Semivolatile organic compounds (SVOCs) by EPA SW-846 Method 8270C;
- Volatile organic compounds (VOCs) by EPA SW-846 Method 8260B;
- Pesticides by EPA SW-846 Method 8081A;
- Polychlorinated biphenyls (PCBs) as Aroclors by EPA SW-846 Method 8082;
- Total organic carbon (TOC) by Lloyd Kahn Method.

A list of these samples by field sample identification (ID), TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response

(OSWER) National Functional Guidelines for Inorganic Data Review (October 2004), National Functional Guidelines for Organic Data Review (October 1999), including Region II modifications, if any, and associated method quality control requirements. These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) quality control (QC) requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP, dated April 2008. The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Inductively coupled plasma (ICP) check sample;
- Matrix spike/matrix spike duplicate samples (MS/MSD);
- Laboratory duplicate samples:
- Field Duplicates;
- Laboratory control samples (LCS);
- ICP serial dilution;
- Detection limits;
- Sample dilutions;
- Gas chromatography/mass spectrometry (GC/MS) tuning;
- Instrument performance;
- Surrogate recoveries;
- Internal standards (IS); and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The data are generally usable and of good quality.

A number of detected metal, VOC, SVOC, pesticide, and conventional chemistry results were U qualified as nondetected because of contamination in the associated laboratory and/or trip blanks.

A number of detected pesticide results were U qualified as nondetected because of probable matrix interference from Aroclors and PAHs as demonstrated by the very high percent differences between dual column results.

No data were rejected and 100% of the data should be considered valid which meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.8 of this Data Validation Report contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

All samples were received at TA in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation.

4.3 Volatile Organic Compounds by EPA SW-846 Method 8260B

VOC results generated by TA for samples covered in this report are considered usable with the limitations described in Sections 4.3.1 through 4.3.9.

4.3.1 Holding Times

All aqueous samples were analyzed within the QAPP-specified maximum holding time of 10 days for analysis of preserved samples. All soil samples were analyzed within the QAPP-specified 10 day holding time for unpreserved samples.

4.3.2 Initial Calibration

The method-specified minimum relative response factor (RRF) and percent relative standard deviation (%RSD) criteria were met for the initial calibrations associated with VOC analysis of the samples covered in this report.

4.3.3 Continuing Calibration

The Region II-specified minimum RRF and percent deviation or percent drift (%D) criteria were met for the continuing calibrations associated with VOC analysis of the samples covered in this report, except as described below:

- The carbon disulfide (24.4% bias low), carbon tetrachloride (20.5% bias low), cis-1,3-dichloropropene (22.2% bias low), trans-1,3-dichloropropene (24.4% bias low), bromoform (28.8% bias low), and 1,2-dibromo-3-chloropropane (26.8 bias low) %Ds were greater than the 20% Region II-specified acceptance limit in the continuing calibration verification (CCV) analyzed on May 16, 2008 at 08:48 on instrument HP6. AMEC UJ qualified the nondetected carbon disulfide, carbon tetrachloride, cis-1,3-dichloropropene, trans-1,3-dichloropropene, bromoform, and 1,2-dibromo-3-chloropropane results from the following samples because of possible low bias in the analytical results: SW08-21, SW08-22, SW08-23, SW08-DUP1 and TB-1.

- The trichlorotrifluoromethane (21.4%, bias high) and acetone (40.3%, bias high) %Ds were greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 8, 2008 at 21:28 on instrument HP3. Trichlorotrifluoromethane and acetone were not detected in the associated samples; therefore, data usability is not affected by the potential high bias.

4.3.4 Blanks

VOCs were not detected in the laboratory blank or trip blanks associated with the VOC sample analysis except as described below.

Methylene chloride was detected in the laboratory blank at a concentration of 2.3 micrograms per kilogram (µg/kg). AMEC U qualified the detected methylene chloride results from samples SD08-20 and SD08-21 because the sample concentrations were less than 10 times the associated laboratory blank concentration, indicating possible contamination.

4.3.5 Surrogate Recoveries

All surrogate recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.6 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.7 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.8 Internal Standard Recoveries

IS recoveries were all within the method-specified 50% to 200% acceptance limits for the VOC sample analysis covered in this report.

4.3.9 Data Reporting and Analytical Procedures

The laboratory J qualified detected results with concentrations between the reporting limit (RL) and method detection limit (MDL). AMEC concurs that these results are

quantitative estimates and J qualified these results unless the results were previously U qualified because of blank contamination.

4.4 Semivolatile Organic Compounds by EPA SW-846 Method 8270C

SVOC results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.4.1 through 4.4.9.

4.4.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for analysis.

4.4.2 Initial Calibration

The Region II-specified minimum RRF and %RSD criteria not met for the initial calibrations associated with the SVOC sample analysis are described below.

- The benzaldehyde %RSD of 38.7% was greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 2, 2008 on instrument 71. AMEC UJ qualified the nondetected benzaldehyde results from the following samples because of possible bias in the analytical results: SW08-21, SW08-22, SW08-23 and SW08-DUP1.
- The benzaldehyde (28.8%); 2,4-dinitrophenol (30.1%); and 4,6-dinitro-2-methylphenol (20.8%) %RSDs were greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 14, 2008 on instrument 722. AMEC J qualified the detected results and UJ qualified the nondetected results for these analytes from the following samples because of possible bias in the analytical results: SD08-20 and SD08-21.

4.4.3 Continuing Calibration

The Region II-specified minimum RRF and %D criteria were met for the continuing calibrations associated with the SVOC sample analysis, except as described below.

The benzaldehyde %D of 34.8% (bias high) in the CCV analyzed on May 12, 2008 on instrument 71 was outside the Region II-specified ±20% acceptance limit. Benzaldehyde was not detected in the associated samples; therefore, data usability is not affected by the potential high bias.

4.4.4 Laboratory Blanks

Qualifications results from SVOCs detected in the laboratory blanks are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Blank Results
Method Blank KMWXP1AA	Bis(2-ethylhexyl)phthalate	0.23 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1
	Butyl benzyl phthalate	0.23 µg/L	SW08-21 SW08-22 SW08-23
	Dibenzofuran	0.17 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1
	Naphthalene	0.066 µg/L	None
	Phenanthrene	0.15 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1

4.4.5 Surrogate Recoveries

Surrogate recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the SVOC sample analysis except as described below.

MS/MSD analysis was performed on sample SD08-21. The acenaphthene, 4-chloro-3-methylphenol, pyrene and naphthalene all had a 0% recovery in the MS and MSD. AMEC J qualified the detected acenaphthene result from sample SD08-21 and UJ qualified the nondetected 4-chloro-3-methylphenol because of possible low bias due to potential matrix interference.

Pyrene and naphthalene concentrations in the sample were greater than four times the associated spike concentrations; therefore, data usability could not be fully evaluated

due to the high sample concentrations for these analytes. Data usability is not adversely affected.

4.4.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.8 Internal Standard Recoveries

IS recoveries outside the method-specified 50% to 200% acceptance limits for the SVOC sample analysis are described below.

The perylene-d_{12} recovery was high (>200%) in the analysis of the MS and MSD of sample SD08-21; however the recovery was within method-specified limits for the sample itself, so no qualifications were necessary.

4.4.9 Analytical Procedures and Reporting

The laboratory J qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified (unless U qualified due to blank contamination) these results.

4.5 Pesticides by USEPA SW-846 Method 8081A

Pesticide results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.5.1 through 4.5.8.

4.5.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for analysis.

4.5.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the pesticide sample analysis.

4.5.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the pesticide sample analysis.

4.5.4 Blanks

No target analytes were detected in the laboratory blanks associated with the pesticide analysis.

4.5.5 Surrogate Recoveries

Surrogate recoveries associated with the pesticide sample analysis were within laboratory-specified acceptance limits.

4.5.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.8 Data Reporting and Analytical Procedures

There was greater than 25% difference between the pesticide concentrations from the primary and secondary analytical columns for the samples listed in the following table. Analysis of pesticides using conventional GC/ECD techniques can result in an extremely high rate of false positive detections, as referenced in literature including a memo titled *EPA Region 10 Clarification of SW-846 Method 8081 and Supplemental Guidance for Data Review*, dated May 3, 2006. In AMEC's professional judgment, based on the very large percent differences between primary and secondary column results, the reported insecticide results are likely false positives that result from interferences from the PAHs and PCBs detected in these samples. In addition, Region II validation guidelines (SOP HW-44) allow "U" qualification based on the presence of interferences and large differences between dual-column results. AMEC U qualified the detected pesticide concentrations as listed in the table below based on professional judgment of the chemists performing the review. If greater certainty regarding possible presence of low concentrations of pesticides is required to achieve project DQOs, AMEC recommends consideration of either high resolution mass spectrometry (HRMS) or tandem mass spectrometry (MS/MS) as the determinative technique for future pesticide analyses.

Sample ID	Analyte	%D	Qualification
SD08-20	gamma-BHC (Lindane)	59.1	U
	Heptachlor Epoxide	462.5	U
	delta-BHC	32.9	U
	4,4'-DDD	49.5	U
	Endrin Ketone	432.1	U
	Endosulfan sulfate	280.0	U
	gamma-Chlordane	279.0	U
SD08-21	delta-BHC	96.4	U
	gamma-BHC (Lindane)	73.4	U
	Heptachlor	56.8	U
	Methoxychlor	795.0	U
	gamma-Chlordane	83.3	U

4.6 Polychlorinated Biphenyls as Aroclors by USEPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report may be considered usable and without qualification.

4.6.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for PCB analysis.

4.6.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.6.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.6.4 Blanks

No target analytes were detected in the laboratory blanks associated with the PCB sample analysis.

4.6.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis were within the laboratory-specified acceptance limits.

4.6.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.7 Target Analyte List Metals by EPA SW-846 Methods 6020/7470A/7471A

Samples covered in this report underwent total and dissolved metals analysis by EPA SW-846 Methods 6020/7470A/7471A at TA. The results are usable with the limitations and exceptions described in Sections 4.7.1 through 4.7.10.

4.7.1 Holding Times

All samples were analyzed for metals within the QAPP-specified technical holding time of 180 days and for mercury within the QAPP-specified technical holding time of 26 days.

4.7.2 Initial Calibration

The initial calibrations associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.3 Initial and Continuing Calibration Verification

All initial calibration verifications (ICVs) and CCVs associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.4 Contract-required Quantitation Limit Check Standard

All contract-required quantitation limit (CRQL) check standards (CRIs) associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.5 Blanks

Initial and Continuing Calibration Blanks

Target analytes detected at concentrations greater than the MDL in calibration blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results	
			Total	Dissolved
ICB 5/25/08 ICPMS	Antimony	0.11 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1	SW08-21 SW08-22 SW08-23 SW08-DUP1
	Magnesium	4.70 µg/L	None	None
CCB1 5/25/08 ICPMS	Antimony	0.20 µg/L	Not applicable	SW08-21 SW08-22 SW08-23 SW08-DUP1
	Magnesium	5.34 µg/L	Not applicable	None
	Potassium	10.81 µg/L	Not applicable	None
	Thallium	0.02 µg/L	Not applicable	SW08-21 SW08-23 SW08-DUP1
CCB2 5/25/08 ICPMS	Antimony	0.22 µg/L	SW08-21	SW08-21 SW08-22 SW08-23 SW08-DUP1
	Magnesium	4.17 µg/L	Not applicable	None
	Thallium	0.02 µg/L	SW08-21	SW08-21 SW08-23 SW08-DUP1
CCB3 5/25/08 ICPMS	Antimony	0.24 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1	Not applicable
	Magnesium	7.86 µg/L	None	None
	Thallium	0.03 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1	Not applicable
CCB4 5/25/08 ICPMS	Antimony	0.24 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1	Not applicable
	Calcium	12.11 µg/L	None	Not applicable
	Cobalt	0.02 µg/L	SW08-23 SW08-DUP1	Not applicable
	Magnesium	12.07 µg/L	None	Not applicable

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results	
			Total	Dissolved
	Potassium	7.32 µg/L	None	Not applicable
	Thallium	0.03 µg/L	SW08-21 SW08-22 SW08-23 SW08-DUP1	Not applicable
	Vanadium	0.10 µg/L	SW08-21 SW08-DUP1	Not applicable

Preparation Blanks

Target analytes detected at concentrations greater than the MDL in preparation blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Preparation Blank Results	
			Total	Dissolved
C8E220000-283	Chromium	0.012 milligrams per kilogram (mg/kg)	None	Not Applicable
	Iron	0.68 mg/kg	None	Not Applicable
	Antimony	0.016 mg/kg	None	Not Applicable
	Vanadium	0.011 mg/kg	None	Not Applicable
	Zinc	0.016 mg/kg	None	Not Applicable
C8E220000-377	Chromium	0.32 µg/L	None	Not Applicable
	Sodium	7.5 µg/L	None	Not Applicable
C8E220000-381	Chromium	0.25 µg/L	Not Applicable	None
	Iron	17.2 µg/L	Not Applicable	SW08-21 SW08-23
	Potassium	8.4 µg/L	Not Applicable	None
	Sodium	9.5 µg/L	Not Applicable	None
	Thallium	0.048 µg/L	Not Applicable	SW08-21 SW08-22 SW08-23 SW08-DUP1
	Antimony	0.36 µg/L	Not Applicable	SW08-21 SW08-22 SW08-23 SW08-DUP1

4.7.6 Inductively Coupled Plasma Interference Check Sample

All interference check samples (ICSs) exhibited recoveries within the 80% to 120% method-specified acceptance limits.

4.7.7 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the method-specified limits for the metals sample analysis unless described below.

MS/MSD analysis was performed on sample SD08-20. Silver (71% MSD), beryllium (67% MSD), cadmium (72% MSD), cobalt (69% MSD), copper (73% MSD), selenium (71%/65%), thallium (67% MSD) and antimony (69% MS) recoveries were less than the method-specified limits. Arsenic (138% MS) and calcium (698% MS) recovered above the method-specified limits. In addition, aluminum, iron, manganese, lead, and zinc were not recovered in the MS/MSD analysis.

- AMEC J qualified the detected silver, beryllium, cadmium, cobalt, copper, selenium, thallium, and antimony, in samples SD08-20 and SD08-21, due to low bias caused by potential matrix interference.

- AMEC J qualified the detected arsenic and calcium, in samples SD08-20 and SD08-21, due the high bias caused by potential matrix interference.

- The aluminum, iron, manganese, lead, and zinc concentrations in the sample were greater than four times the associated spike concentrations; therefore, data usability could not be fully evaluated due to the high sample concentrations for these analytes. Data usability is not adversely affected.

4.7.8 Laboratory Control Sample Recovery

Recoveries were within the method-specified acceptance limits in all LCS samples associated with the metals and cyanide sample analysis.

4.7.9 Serial Dilution Results

Serial dilution analysis was performed on sample SW08-21 and SD08-20. Analytes not meeting the method-specified criteria of less than 10 percent difference for analytes with concentrations greater than 50-times the MDL are described below:

The percent difference between the dissolved potassium (10.4%) and total potassium (12.9%) serial dilution results in sample SW08-21 were greater than the method-specified limit. AMEC J qualified the detected dissolved and total potassium results from the following samples because of possible bias in the analytical results due to potential matrix interference: SW08-21, SW08-22, SW08-23, and SW08-DUP1.

The sodium percent difference of 12.8% was outside the method-specified 10% acceptance limit in the serial dilution analysis of sample SD08-20. AMEC J qualified the detected sodium results from sample SD08-20 and SD08-21 because of possible bias due to potential matrix interference.

4.7.10 Data Reporting and Analytical Procedures

The laboratory B qualified detected results with concentrations between the CRQL and MDL. AMEC concurs that these results are quantitative estimates and J qualified (unless U qualified due to blank contamination) these results.

4.8 Conventional Chemistry Parameters

Conventional chemistry results generated by TA for the samples covered in this report may be considered usable with the limitations described below.

- The laboratory J qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified these results.
- Ammonia nitrogen was detected in method blank BLK-C8E090000150B at a concentration of 0.048 milligrams per liter (mg/L). AMEC U qualified the detected ammonia nitrogen results from samples SW08-21, SW08-22, SW08-23 and SW08-DUP1 because the sample concentrations were less than five times the associated method blank concentration.

5.0 FIELD DUPLICATE RESULTS

Sample SW08-22 was collected as a field duplicate and submitted to TA. The samples were labeled blindly, so that the laboratory was not aware which sample was submitted in duplicate. Detected results and RPDs for the field duplicate are summarized in Table 3. No qualifiers were added during validation, because of precision values exceeding QAPP-specified acceptance limits of less than 20% RPD for sample concentrations more than five times their CRQL or RL.

6.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included nondetected data (U) and estimated data (J or UJ).

Nondetected Qualified Data. A number of detected metal, VOC, SVOC, pesticide, and conventional chemistry results were U qualified as nondetected because of contamination in the associated laboratory and/or trip blanks or interferences. Results that were U qualified as nondetected were not further qualified due to other associated QC outliers.

Estimated Data. Portions of the VOC, SVOC, and metals data were qualified as estimated due to calibration issues, matrix interferences, exceeded matrix spike recoveries, field duplicate imprecision, and concentrations between the MDLs and RLs.

Data Completeness Assessment. A total of 1,156 data records were evaluated during the data validation and review of the sample results. Of the total data records, 154 records (13%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected concentration limits (UJ) or the concentration of detected target analytes (J). Of the total data records, 55 (4.8%) were qualified as nondetected as a result of a detection of a target analyte in the associated blanks or interferences. The total hardness, TSS, fluoride, nitrite, cyanide, PCBs and TOC data did not require qualification.

No data were rejected; therefore, 100% of the data should be considered valid which meets the 90% project data quality objective.

LIMITATIONS

This report was prepared exclusively for Koppers Pond PRP Group by AMEC Earth & Environmental, Inc. (AMEC). The quality of information, conclusions, and estimates contained herein is consistent with the level of effort involved in AMEC services and based on: i) information available at the time of preparation, ii) data supplied by outside sources, and iii) the assumptions, conditions, and qualifications set forth in this report. This Data Validation Report is intended to be used by Koppers Pond PRP Group for the Remedial Investigation/Feasibility Study, Koppers Pond, Kentucky Avenue Wellfield Superfund Site, Operable Unit 4, Horseheads, New York only, subject to the terms and conditions of its contract with AMEC. Any other use of, or reliance on, this report by any third party is at that party's sole risk.

TABLE 2
Data Validation Qualifiers
Koppers Pond
SDG C8E070123

Reason Codes

BC - High initial calibration percent relative standard deviations
CB - Contaminated Blank
DL - Value was between method detection limit and reporting limit
HM - High matrix spike recovery
LC - Low continuing calibration verification result
LM - Low matrix spike recovery
MB - Method blank contamination
MI - High differences between serial dilution results
SE - Large differences between the primary and secondary column results.

Validation Codes:

U -The U qualifier indicates that an analyte is considered nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in blanks.

J - The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required acceptance limits.

UJ - The UJ qualifier indicates the RL is estimated. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required acceptance limits.

1.0 INTRODUCTION

This data quality review and validation report covers 7 surface water samples, including one trip blank, and 4 sediment samples from the Koppers Pond site located in Horseheads, New York. The samples were collected on May 7, 2008 and submitted to Test America (TA) in Pittsburgh, Pennsylvania on May 8, 2008. The samples were assigned sample delivery group (SDG) C8E080374. The following analyses were performed on these samples:

- Total and Dissolved Target Analyte List (TAL) metals by Environmental Protection Agency (EPA) SW-846 Methods 6020/7470A/7471A;
- Total cyanide by EPA SW-846 Method 9012A;
- Ammonia Nitrogen by EPA Method 350.1
- Total hardness as $CaCO_3$ by Standard Methods (SM) 2340-C;
- Nitrite by EPA Method 9056A;
- Total suspended solids (TSS) by SM 2540D;
- Fluoride by SM 4500-F C;
- Semivolatile organic compounds (SVOCs) by EPA SW-846 Method 8270C;
- Volatile organic compounds (VOCs) by EPA SW-846 Method 8260B;
- Pesticides by EPA SW-846 Method 8081A;
- Polychlorinated biphenyls (PCBs) as Aroclors by EPA SW-846 Method 8082;
- Total organic carbon (TOC) by Lloyd Kahn Method.

A list of these samples by field sample identification (ID), TA sample ID is presented in Table 1.

2.0 DATA QUALITY REVIEW AND DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) performed this data quality review and validation with reference to the EPA Office of Solid Waste and Emergency Response

(OSWER) National Functional Guidelines for Inorganic Data Review (October 2004), National Functional Guidelines for Organic Data Review (October 1999), including Region II modifications, if any, and associated method quality control requirements. These EPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data quality review and validation where they differ from method and Quality Assurance Project Plan (QAPP) quality control (QC) requirements.

AMEC's data validation methodology complied with the validation procedures specified in the Koppers Pond QAPP, dated April 2008. The laboratory's raw analytical data packages were reviewed to assess the criteria outlined in QAPP:

- Data completeness;
- Holding times;
- Calibration;
- Blanks;
- Inductively coupled plasma (ICP) check sample;
- Matrix spike/matrix spike duplicate samples (MS/MSD);
- Laboratory duplicate samples:
- Field Duplicates;
- Laboratory control samples (LCS);
- ICP serial dilution;
- Detection limits;
- Sample dilutions;
- Gas chromatography/mass spectrometry (GC/MS) tuning;
- Instrument performance;
- Surrogate recoveries;
- Internal standards (IS); and
- Compound identification.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

In accordance with the specifications of QAPP, the data validation process comprised 20% full validation of the raw analytical data and 80% data quality review for all methods, based on information provided by the laboratory as summary reporting forms. Data that underwent data quality review and data validation are indicated on Table 1.

3.0 EXECUTIVE SUMMARY

The data are generally usable and of good quality.

A number of detected metal, VOC, pesticide, and conventional chemistry results were U qualified as nondetected because of contamination in the associated laboratory and/or trip blanks.

A number of detected pesticide results were U qualified as nondetected because of probable matrix interference from Aroclors and PAHs as demonstrated by the very high percent differences between dual column results.

No data were rejected and 100% of the data should be considered valid which meets the 90% data quality objective.

4.0 SPECIFIC DATA VALIDATION FINDINGS FOR EACH ANALYTICAL METHOD

Sections 4.1 to 4.8 of this Data Validation Report contain narrative descriptions of data validation findings and data quality limitations. Definitions of data qualifiers added during validation and summaries of specific qualifiers added to each affected sample as a result of the data validation findings are presented in Table 2.

4.1 Data Deliverables

The submitted data packages contained all documentation elements required for full validation.

4.2 Chain of Custody and Sample Receipt Condition Documentation

All samples were received at TA in good condition and at less than the EPA-recommended temperature of 6 degrees Celsius (°C). There were no anomalies associated with sample receipt condition or chain of custody (COC) documentation.

4.3 Volatile Organic Compounds by EPA SW-846 Method 8260B

VOC results generated by TA for samples covered in this report are considered usable with the limitations described in Sections 4.3.1 through 4.3.9.

4.3.1 Holding Times

All aqueous samples were analyzed within the QAPP-specified maximum holding time of 10 days for analysis of preserved samples. All soil samples were analyzed within the QAPP-specified 10 day holding time for unpreserved samples.

4.3.2 Initial Calibration

The method-specified minimum relative response factor (RRF) and percent relative standard deviation (%RSD) criteria were met for the initial calibrations associated with VOC analysis of the samples covered in this report.

4.3.3 Continuing Calibration

The Region II-specified minimum RRF and percent deviation or percent drift (%D) criteria were met for the continuing calibrations associated with VOC analysis of the samples covered in this report, except as described below:

- The acetone %D of 30.8% (bias high) was greater than the 20% Region II-specified acceptance limit in the continuing calibration verification (CCV) analyzed on May 12, 2008 at 04:53 on instrument HP3. AMEC J qualified the detected acetone results from the following samples because of possible high bias in the analytical results: SD08-29 and SD08-24.
- The bromomethane (34.5%, bias low), trichlorotrifluoromethane (31.0%, bias low), dichlorodifluoromethane (22.8%, bias high), and acetone (25.4%, bias high) %Ds were greater than the 20% Region II-specified acceptance limit in the CCV analyzed on May 16, 2008 at 10:10 on instrument HP5. Specific limitations include the following:

- AMEC J qualified the detected acetone results from the following samples because of possible high bias in the analytical results: SW08-25, SW08-26, and SW08-27.
- AMEC UJ qualified the nondetected bromomethane and trichlorofluoromethane results from the following samples because of possible low bias in the analytical results: TB-2, SW08-24, SW08-25, SW08-26, SW08-27, SW08-28, and SW08-29
- Dichlorodifluoromethane was not detected in the associated samples; therefore, data usability is not adversely affected by the potential high bias.

4.3.4 Blanks

VOCs were not detected in the laboratory blanks associated with the VOC sample analysis.

Methylene chloride was detected in the trip blank TB-2 at a concentration of 0.2 micrograms per liter (µg/L). AMEC U qualified the detected methylene chloride results from samples SD08-29, SD08-28, SD08-24, and SD08-27 because the sample concentrations were less than 10 times the associated trip blank concentration, indicating possible contamination.

4.3.5 Surrogate Recoveries

All surrogate recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.6 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.7 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for VOC analysis of the samples covered in this report.

4.3.8 Internal Standard Recoveries

IS recoveries were all within the method-specified 50% to 200% acceptance limits for the VOC sample analysis covered in this report.

4.3.9 Data Reporting and Analytical Procedures

The laboratory J qualified detected results with concentrations between the reporting limit (RL) and method detection limit (MDL). AMEC concurs that these results are quantitative estimates and J qualified these results unless the results were previously U qualified because of blank contamination.

4.4 Semivolatile Organic Compounds by EPA SW-846 Method 8270C

SVOC results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.4.1 through 4.4.9.

4.4.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for analysis.

4.4.2 Initial Calibration

The Region II-specified minimum RRF and %RSD criteria not met for the initial calibrations associated with the SVOC sample analysis are described below.

- The benzaldehyde %RSD of 38.7% was greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 2, 2008 on instrument 71. AMEC J qualified the detected benzaldehyde results and UJ qualified the nondetected benzaldehyde results from the following samples because of possible bias in the analytical results: SW08-24, SW08-25, SW08-26, SW08-27, SW08-28, and SW08-29.
- The benzaldehyde (28.3%); 2,4-dinitrophenol (21.9%); 3,3'-dichlorobenzidine (29.9%); di-n-octylphthalate (19.3%) %RSDs were greater than the Region II-specified 15% RSD acceptance limit in the initial calibration analyzed on May 5, 2008 on instrument 732. AMEC J qualified the detected results and UJ qualified the nondetected results for these analytes from the following samples because of possible bias in the analytical results: SD08-24, SD08-27, SD08-28, and SD08-29.

4.4.3 Continuing Calibration

The Region II-specified minimum RRF and %D criteria were met for the continuing calibrations associated with the SVOC sample analysis, except as described below.

- The benzaldehyde %D of 29.5% (bias high) in the CCV analyzed on May 15, 2008 on instrument 732 was outside the Region II-specified ±20% acceptance limit. AMEC J qualified the detected benzaldehyde results from the following samples because of possible high bias in the analytical results: SD08-24, SD08-28, and SD08-29.
- The benzaldehyde %D of 34.8% (bias high) in the CCV analyzed on May 12, 2008 on instrument 71 was outside the Region II-specified ±20% acceptance limit. AMEC J qualified the detected benzaldehyde results from the following samples because of possible high bias in the analytical results: SW08-27 and SW08-29.

4.4.4 Laboratory Blanks

Qualifications results from SVOCs detected in the laboratory blanks are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Blank Results
Method Blank KMWXP1AA	Bis(2-ethylhexyl)phthalate	0.23 µg/L	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28 SW08-29
	Butylbenzylphthalate	0.23 µg/L	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28 SW08-29
	Dibenzofuran	0.17 µg/L	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28 SW08-29
	Naphthalene	0.066 µg/L	None
	Phenanthrene	0.15 µg/L	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28 SW08-29

4.4.5 Surrogate Recoveries

Surrogate recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.6 Matrix Spike/Matrix Spike Duplicate Recovery

MS/MSD recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the SVOC sample analysis.

4.4.8 Internal Standard Recoveries

IS recoveries outside the method-specified 50% to 200% acceptance limits for the SVOC sample analysis are described below.

The perylene-d_{12} recovery was high (>200%) in the analysis of sample SD08-24. AMEC J qualified the detected di-n-octylphthalate result from this sample because of possible high bias.

4.4.9 Analytical Procedures and Reporting

The laboratory J qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified (unless U qualified due to blank contamination) these results.

The laboratory reanalyzed sample SD08-24 at a 50-fold dilution because several target analyte concentrations in the original analysis exceeded the instrument calibration range. AMEC reported the results for these analytes from the diluted analysis.

Benzo(b)fluoranthene and benzo(k)fluoranthene were not resolved in the diluted analysis of sample SD08-24. The laboratory reported the benzo(k)fluoranthene as nondetected in the diluted analysis. In AMEC's professional opinion, the benzo(b)fluoranthene concentration reported by the laboratory in the data package and electronic data deliverable (EDD) is the sum of benzo(b)fluoranthene and benzo(k)fluoranthene.

4.5 Pesticides by USEPA SW-846 Method 8081A

Pesticide results generated by TA for the samples covered in this report are considered usable with the limitations described in Sections 4.5.1 through 4.5.8.

4.5.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for analysis.

4.5.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the pesticide sample analysis.

4.5.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the pesticide sample analysis.

4.5.4 Blanks

No target analytes were detected in the laboratory blanks associated with the pesticide analysis.

4.5.5 Surrogate Recoveries

Surrogate recoveries associated with the pesticide sample analysis outside laboratory-specified acceptance limits are described below.

Tetrachloro-m-xylene (TCMX) recovery of 24% in sample SD08-29 was less than the laboratory-specified 31% to 131% acceptance limits. AMEC J qualified the detected pesticide results and UJ qualified the nondetected pesticide results from sample SD08-29 because of possible low bias in the analytical results.

4.5.6 Matrix Spike/Matrix Spike Duplicate Accuracy and Precision

MS/MSD recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the pesticide sample analysis.

4.5.8 Data Reporting and Analytical Procedures

There was greater than 25% difference between the pesticide concentrations from the primary and secondary analytical columns for the samples listed in the following table. Analysis of pesticides using conventional GC/ECD techniques can result in an extremely high rate of false positive detections, as referenced in literature including a memo titled *EPA Region 10 Clarification of SW-846 Method 8081 and Supplemental Guidance for Data Review*, dated May 3, 2006. In AMEC's professional judgment, based on the very large percent differences between primary and secondary column results, the reported insecticide results are likely false positives that result from interferences from the PAHs and PCBs detected in these samples. In addition, Region II validation guidelines (SOP HW-44) allow "U" qualification based on the presence of interferences and large differences between dual-column results. AMEC U qualified the detected pesticide concentrations as listed in the table below based on professional judgment of the chemists performing the review. If greater certainty regarding possible presence of low concentrations of pesticides is required to achieve project DQOs, AMEC recommends consideration of either high resolution mass spectrometry (HRMS) or tandem mass spectrometry (MS/MS) as the determinative technique for future pesticide analyses.

Sample ID	Analyte	%D	Qualification
SD08-29	delta-BHC	114	U
	Aldrin	141	U
	4,4'-DDD	186	U
	Endrin Ketone	218	U
	gamma-Chlordane	185	U
SD08-28	Aldrin	333	U
	Heptachlor Epoxide	153	U
	Endrin Ketone	136	U
	alpha-Chlordane	105	U
	gamma-Chlordane	72.8	U
SD08-24	gamma-BHC (Lindane)	57.0	U
	Heptachlor	54.1	U
	Endrin	91.0	U
	4,4'-DDD	66.9	U
	alpha-Chlordane	419	U
	gamma-Chlordane	1000	U
SD08-27	delta-BHC	784	U
	gamma-BHC (Lindane)	87.9	U

4.6 Polychlorinated Biphenyls as Aroclors by USEPA SW-846 Method 8082

PCB results generated by TA for the samples covered in this report may be considered usable and without qualification.

4.6.1 Holding Times

All samples were extracted and analyzed within the QAPP-specified maximum holding time of 7 days for aqueous extraction, 14 days for solid extraction, and 40 days for PCB analysis.

4.6.2 Initial Calibration

The method-specified %RSD and retention time criteria were met for the initial calibrations associated with the PCB sample analysis.

4.6.3 Continuing Calibration

The method-specified %D and retention time criteria were met for the continuing calibrations associated with the PCB sample analysis.

4.6.4 Blanks

No target analytes were detected in the laboratory blanks associated with the PCB sample analysis.

4.6.5 Surrogate Recoveries

Surrogate recoveries associated with the PCB sample analysis were within the laboratory-specified acceptance limits.

4.6.6 Matrix Spike/Matrix Spike Duplicate Accuracy and Precision

MS/MSD recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.7 Laboratory Control Sample Recovery

LCS recoveries were within the laboratory-specified limits for the PCB sample analysis.

4.6.8 Data Reporting

The laboratory J qualified detected Aroclor-1260 result from sample SD08-27 with a concentration between the RL and MDL. AMEC concurs that this result is a quantitative estimate and J qualified the result.

4.7 Target Analyte List Metals by EPA SW-846 Methods 6020/7470A/7471A

Samples covered in this report underwent total and dissolved metals analysis by EPA SW-846 Methods 6020/7470A/7471A at TA. The results are usable with the limitations and exceptions described in Sections 4.7.1 through 4.7.8.

4.7.1 Holding Times

All samples were analyzed for metals within the QAPP-specified technical holding time of 180 days and for mercury within the QAPP-specified technical holding time of 26 days.

4.7.2 Initial Calibration

The initial calibrations associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.3 Initial and Continuing Calibration Verification

All initial calibration verifications (ICVs) and CCVs associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.4 Contract-required Quantitation Limit Check Standard

All contract-required quantitation limit (CRQL) check standards (CRIs) associated with the analysis of these samples met the method-specified acceptance criteria.

4.7.5 Blanks

Initial and Continuing Calibration Blanks

Target analytes detected at concentrations greater than the MDL in calibration blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results	
			Total	Dissolved
ICB 5/25/08 ICPMS	Antimony	0.11 µg/L	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28 SW08-29	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28 SW08-29
	Magnesium	4.70 µg/L	None	None
CCB1 5/25/08 ICPMS	Antimony	0.20 µg/L	Not applicable	SW08-24

	Potassium	7.32 µg/L	None	Not applicable
	Thallium	0.03 µg/L	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28	Not applicable

Blank ID	Detected Analytes	Analyte Concentration	Sample Results U Qualified as Nondetected because of Associated Calibration Blank Results	
			Total	Dissolved
	Vanadium	0.10 µg/L	SW08-25 SW08-26 SW08-27 SW08-28	Not applicable

Preparation Blanks

Target analytes detected at concentrations greater than the MDL in preparation blanks associated with the metals sample analysis are described in the following table.

Blank ID	Detected analytes	Analyte concentration	Sample Results U Qualified as Nondetected because of Associated Preparation Blank Results	
			Total	Dissolved
C8E220000-024	Chromium	0.012 milligrams per kilogram (mg/kg)	None	Not Applicable
	Iron	0.68 mg/kg	None	Not Applicable
	Antimony	0.016 mg/kg	None	Not Applicable
	Vanadium	0.011 mg/kg	None	Not Applicable
	Zinc	0.016 mg/kg	None	Not Applicable
C8E220000-377	Chromium	0.32 µg/L	None	Not Applicable
	Sodium	7.5 µg/L	None	Not Applicable
C8E220000-381	Chromium	0.25 µg/L	Not Applicable	None
	Iron	17.2 µg/L	Not Applicable	None
	Potassium	8.4 µg/L	Not Applicable	None
	Sodium	9.5 µg/L	Not Applicable	None
	Thallium	0.048 µg/L	Not Applicable	SW08-25 SW08-26
	Antimony	0.36 µg/L	Not Applicable	SW08-24 SW08-25 SW08-26 SW08-27 SW08-28 SW08-29

4.7.6 Inductively Coupled Plasma Interference Check Sample

All interference check samples (ICSs) exhibited recoveries within the 80% to 120% method-specified acceptance limits.

4.7.7 Laboratory Control Sample Recovery

Recoveries were within the method-specified acceptance limits in all LCS samples associated with the metals and cyanide sample analysis.

4.7.8 Data Reporting and Analytical Procedures

The laboratory B qualified detected results with concentrations between the CRQL and MDL. AMEC concurs that these results are quantitative estimates and J qualified (unless U qualified due to blank contamination) these results.

4.8 Conventional Chemistry Parameters

Conventional chemistry results generated by TA for the samples covered in this report may be considered usable with the limitations described below.

- The laboratory J qualified detected results with concentrations between the RL and MDL. AMEC concurs that these results are quantitative estimates and J qualified these results.
- Cyanide was detected in method blank BLK-C8E150000443B at a concentration of 0.15 mg/kg. AMEC U qualified the detected cyanide results from samples SD08-29, SD08-24, and SD08-27 because the sample concentrations were less than five times the associated method blank concentration.
- Ammonia Nitrogen was detected in method blank BLK-C8E090000150B at a concentration of 0.048 milligrams per liter (mg/L). AMEC U qualified the detected ammonia nitrogen results from samples SW08-24 and SW08-28 because the sample concentrations were less than five times the associated method blank concentration.
- TA performed nitrite analysis on samples SW08-24, SW08-25, SW08-26, SW08-27, SW08-28, and SW08-29 2 to 8 hours past the 48-hour holding time. According to the QAPP (Table B2-3), the holding time for nitrite analysis is 48 hours from sample collection. AMEC UJ qualified the nondetected nitrite results from these samples because of possible low bias in the analytical results due to the holding time exceedance.

5.0 SUMMARY AND CONCLUSIONS

AMEC's review indicates the data from this event are generally usable and of good quality. The types of qualifications applied to the dataset included nondetected data (U) and estimated data (J or UJ).

Nondetected Qualified Data. A number of detected metal, VOC, pesticide, and conventional chemistry results were U qualified as nondetected because of contamination in the associated laboratory and/or trip blanks or interferences. Results that were U qualified as nondetected were not further qualified due to other associated QC outliers.

Estimated Data. Portions of the VOC, SVOC, pesticide, PCB, metals, and conventional chemistry data were qualified as estimated due to calibration issues, a low surrogate recovery, a high internal standard recovery, exceeded holding times, and concentrations between the MDLs and RLs.

Data Completeness Assessment. A total of 1,870 data records were evaluated during the data validation and review of the sample results. Of the total data records, 201 records (11%) were qualified as estimated concentrations. Estimated concentrations may be associated with either the nondetected concentration limits (UJ) or the concentration of detected target analytes (J). Of the total data records, 75 (4.0%) were qualified as nondetected as a result of a detection of a target analyte in the associated blanks or interferences. The total hardness, TSS, fluoride, and TOC data did not require qualification.

No data were rejected; therefore, 100% of the data should be considered valid which meets the 90% project data quality objective.

TABLE 2
Data Validation Qualifiers
Koppers Pond
SDG C8E080374

Reason Codes

BC - High initial calibration percent relative standard deviations
CB - Contaminated Blank
DL - Value was between method detection limit and reporting limit
HC - High continuing calibration verification result
HI - High Internal standard recovery
HT - Holding time exceedance
LC - Low continuing calibration verification result
LS - Low surrogate recovery
MB - Method blank contamination
SE - Large differences between the primary and secondary column results.
TB - Trip blank contamination

Validation Codes:

U -The U qualifier indicates that an analyte is considered nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in blanks.

J - The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required acceptance limits.

UJ - The UJ qualifier indicates the RL is estimated. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required acceptance limits.

1 INTRODUCTION

This report presents the findings of the data validation of sediment and tissue samples and associated field quality control (QC) samples analyzed for conventional parameters, metals, semivolatile organic compounds (SVOCs), and polychlorinated biphenyl (PCB) Aroclors by TestAmerica. Sediments samples were analyzed at the Pittsburgh, PA laboratory and tissue samples were analyzed at the Burlington, VT laboratory. The sample delivery groups (SDG) reviewed are summarized in Table 1-1. The parameters and analytical methods are listed in Table 1-2. The samples received a Level IV (Stage 3/4) validation, which included a review of all laboratory summary forms of quality control and instrument performance data and recalculation of ten percent of the results. The data validation was based upon criteria described in the EPA's functional guidelines for inorganic and organic data review (USEPA 2004, 2008a), applicable EPA Region 2 Data Validation Guidelines (USEPA 2006a, 2006b, 2008b), and the referenced analytical methods.

The QA/QC parameters reviewed are listed in Table 1-3. All electronic data deliverables (EDD) were compared to the hardcopy data packages and 100 percent of the field sample results and 10 percent of the laboratory quality control sample results were verified. Qualifiers resulting from the validation process were entered into the project database. A reason code explaining the reason for qualification was also entered into the database. The definitions of the data qualifiers used are provided in Table 1-4 and a description of the reason codes used are provided in Table 1-5. For example, if a data point was estimated due to an inductively coupled plasma (ICP) serial dilution percent difference result the qualifier "J" and the reason code "ICPSD " would be entered into the database, indicated as J–ICPSD in the discussion of findings in Section 2.

2 FINDINGS

2.1 PARAMETERS REVIEWED

The quality assurance and quality control (QA/QC) parameters reviewed for each analytical parameter are discussed below and are listed in Table 1-3.

2.2 SAMPLE RECEIPT AND HOLDING TIMES

Samples were received in good condition and with complete chain of custody (COC) forms. Some samples were received at temperatures below the lower temperature control limit of 2 °C, at 0.1 °C, this temperature was determined to have no impact on the data and no qualifiers were assigned.

SDG C0J210496: All sediment samples had percent moisture content greater than 50 percent.

All SVOC, PCB Aroclor, and metals data were qualified as estimated (J/UJ–%Moi).

SDG C0K030562: All samples were received and processed outside of the holding time criteria for SVOCs, PCB Aroclors, total cyanide, and TOC analyses. All data were qualified as estimated (J/UJ–HT). In addition, all samples had percent moisture content greater than 50 percent. All SVOC, PCB Aroclor, and metals data were qualified as estimated (J/UJ–%Moi).

SDG 200-2079-1: All samples, except FF10-7, were reanalyzed outside of the holding time criteria for PCB Aroclors. All data for the re-analyses were qualified as estimated (J/UJ–HT).

2.3 BLANKS

Laboratory preparation blanks were performed with all analyses, except total solids. Continuing calibration blanks (CCB) were performed with all metals analyses. Target analytes were detected in several laboratory preparation blanks or CCBs at concentrations greater than the method detection limit (MDL), all blank concentrations were less than the method reporting limit (MRL). When an analyte was detected in a blank and in an associated sample, the result for the analyte was qualified as not detected if the sample result was less than the MRL. If the sample result was greater than the MRL, then no qualifier was assigned.

2.3.1 Cyanide

SDG C0K030562: Cyanide was detected in the method blank, but all sample results were non-detect for cyanide. No qualifiers were applied to the data. An equipment blank (EB10-20

reported in SDG C0J210496) was associated with these samples. No cyanide was detected in this blank.

2.3.2 Metals

SDG C0J210496: Selected analytes were detected in the method blank, initial calibration blank, and continuing calibration blanks. However, all analytical samples had analyte concentrations above the MRL. No qualifiers were applied to the data.

SDG C0K030562: Selected analytes were detected in the method blank, initial calibration blank, and continuing calibration blanks. Samples 20100836 RSD10-01 and 20100876 RSD10-01SV had concentrations of thallium and selenium between the MDL and the MRL; results were reported to the MRL and qualified as undetected (U–LB). Several metals were detected in the equipment blank associated with these samples (EB10-20, reported in SDG C0J210496), however all sample results were much higher than the blank results or were qualified as not detected based on laboratory blank contamination and no further qualification was necessary.

SDG 2009-2079-1: Two equipment blanks were submitted with this SDG, EQBLKPT and EQBLKFT. No metals were detected in either blank.

2.3.3 SVOCs

SDG C0K030562: Selected analytes were detected in the equipment blank (EB10-20, reported in SDG C0J210496). The concentrations of these analytes in associated field samples were and greater than the MRL. No qualifiers were applied to the data.

2.3.4 PCB Aroclors

SDG C0K030562: An equipment blank (EB10-20 reported in SDG C0J210496) was associated with these samples. No Aroclors were detected in this blank.

SDG 2009-2079-1: Two equipment blanks were submitted with this SDG, EQBLKPT and EQBLKFT. No Aroclors were detected in either blank.

2.4 SURROGATE COMPOUNDS

Surrogates were added to all samples analyzed for SVOCs and PCB Aroclors by methods 8270C and 8082, respectively. The surrogate compound recoveries for all samples were within the laboratory control limits, with the exceptions noted below.

2.4.1 SVOCs

SDG C0K030562: Because concentrations of target compounds detected and/or matrix, samples 20100836 SD10-01, 20100838 SD10-DUP, 20100841 SD10-03, and 20100842 SD10-04 were analyzed at 20 times dilutions, which caused the surrogates to be diluted. No qualifiers were assigned to the data on this basis.

2.4.2 PCB Aroclors

SDG C0K030562: Because concentrations of PCBs detected and/or matrix, the samples were analyzed at 10 times dilutions, which caused the surrogates to be diluted. An examination of the raw data indicated that the surrogates would have met QC limits without dilution; no qualifiers were applied to the data.

SDG 200-2079-1: The surrogate recovery of decachlorobiphenyl was below the control limit of 45 percent (at 44 percent) in the re-analysis of sample RFF10-03. Results in this sample were estimated (J/UJ–Surr).

2.5 MATRIX SPIKES/MATRIX SPIKE DUPLICATES

Matrix spikes/matrix spike duplicate (MS/MSD) analyses were performed for all cyanide, total organic carbon (TOC), metals, SVOC, and PCB Aroclor analytical batches. Percent recoveries and relative percent differences (RPDs) were generally within the laboratory control limits, with the exceptions noted below.

2.5.1 TOC

SDG C0K030562: The percent recoveries in the Batch QC MS/MSD were outside of the control limits of 75–125 percent, at 64 percent and 225 percent. All results were estimated (J/UJ–MS/MSD).

2.5.2 Cyanide

SDG C0J210496: Percent recoveries of cyanide were below the lower control limit of 75 percent in the MS/MSD performed on sample SD-18 (MS at 73 percent and MSD at 73 percent). All results were estimated (J/UJ–MS/MSD).

SDG C0K030562: The percent recovery in the Batch QC MS for cyanide was outside of the lower control limit of 75 percent, at 50 percent. The MS/MSD performed on sample 2010836 RSD10-01 met control limits. No qualifiers were applied to the data.

2.5.3 Metals

SDG C0J210496: The percent recovery of antimony was below the lower control limit of 70 percent in the MS performed on sample C0J140521-001 at 52 percent. Results for antimony were estimated (J/UJ–MS/MSD).

SDG C0K030562: Percent recovery of antimony was below the lower control limit of 70 percent in the MS performed on Batch QC sample C0K120411-001 at 51 percent. Results for antimony were estimated (J/UJ–MS/MSD).

SDG 200-2079-1: Percent recoveries of aluminum (220 percent), iron (248 percent), manganese (154 percent), sodium (136 percent), and zinc (189 percent) were above the upper control limit of 120 percent in the MS performed on sample RVG10-02. The EPA Region II validation criteria for sediments calls for the rejection of all results and non-detects when percent recoveries are greater than 200 percent. However, EPA Region II has not established criteria for tissues and because a greater natural variability is expected in a tissue matrix the results for aluminum and iron were estimated (J–MS/MSD) based on the validators best professional judgment. Results for manganese, sodium, and zinc were also estimated (J–MS/MSD). The percent recovery of potassium was below the lower control limit of 80 percent in this same MS, at -205 percent, however the concentration of potassium in the parent sample was greater than four times the amount spiked and the control limits do not apply.

The percent recoveries of calcium (–142 percent) and zinc (205 percent) were outside the control limits of 80 to 120 percent in the MS performed on sample RLB10-01. The EPA Region II validation criteria for sediments call for the rejection of all results and non-detects when percent recoveries are less than 10 percent or greater than 200 percent. However because there are no criteria for tissues, and as discussed above, results and non-detects for calcium were estimated (J/UJ–MS) and results for zinc were estimated (J–MS/MSD) based on the validators best professional judgment.

2.5.4 SVOCs

SDG C0J210496: Percent recoveries of pyrene, hexachloroethane, and naphthalene were outside of the control limits. However, the MS/MSD was analyzed on a batch QC sample, and the results are not applicable to the analytical sample results. No qualifiers were applied.

SDG C0K030562: The percent recoveries of most spiked compounds were less than the lower control limits in the MS performed on Sample 20100836 RSD10-01. Because the percent recoveries for these compounds were acceptable in the MSD, no qualifiers were assigned. The RPDs for all spiked compounds were greater than the control limit in this same MS/MSD. Of the spiked compounds only pyrene and butyl benzyl phthalate were detected in the parent sample and these results were estimated (J–Pc). Non-detects are not estimated for RPD outliers.

2.5.5 PCB Aroclors

SDG C0K030562: The MS/MSD performed on sample 20100837 SD10-01 was analyzed at a 10 times dilution and percent recoveries and RPDs were not reported. Examination the raw data showed percent recoveries and RPDs were outside of the control limits for Aroclors 1016 and 1260 compounds. However, no action is taken on MS/MSD data alone and because the recoveries in the LCS met the control limits, no qualifiers were applied to the data.

2.6 LABORATORY CONTROL SAMPLES (LCS)

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the appropriate frequency of one per analytical batch for all applicable parameters. The percent recoveries of all LCS were within the laboratory control limits. The RPDs of all LCS/LCSD (where applicable) were also within the laboratory control limits.

2.7 REPLICATES

Laboratory replicates were analyzed at the appropriate frequency of one per analytical batch for conventional (percent solids) and metals analyses and all RPDs met the laboratory control limits, with the exceptions noted below.

SDG C0K030562: One set of field replicates were submitted, samples SD10-01 and SD10-Dup. The EPA has not established control limits for field replicates. For this project the target control limit for field replicates for values greater than five times the MRL is an RPD less than 50 percent. For values less then five times the MRL, the absolute difference should be less than the MRL. These control limits were met for all analytes in the field replicate pair.

SDG 200-2079-1: The RPDs for aluminum (122 percent), iron (102 percent), lead (115 percent), manganese (43 percent), and potassium (53 percent) were above the control limit of 35 percent in the laboratory duplicate of sample RVG10-02. The USEPA Region II validation criteria for sediments call for the rejection of all results and non-detects when RPDs are greater than 120 percent, however EPA Region II has not established criteria for tissues and as a greater natural variability is expected in a tissue matrix the results aluminum, and the other outlying analytes were estimated (J–Pc) based on the validators best professional judgment.

The relative percent difference for calcium (163 percent) was above the control limit of 36 percent in the duplicate on sample RLB10-01; as discussed above results for calcium were estimated (J–Pc).

2.8 INTERFERENCE CHECK SAMPLE

The inductively coupled plasma-mass spectrometry (ICP-MS) instrument interference check samples were analyzed at the start of each metals analytical sequence. All analytes were within the control limits of ±20 percent of the true value or ± two times the MRL.

2.9 SERIAL DILUTION

A serial dilution was analyzed with each metals extraction batch. The percent differences met the control limits of less than 10 percent for analytes with concentrations greater than 50 times the MDL, with the exceptions noted below.

SDG 200-2079-1: The percent difference of magnesium (21 percent) in the serial dilution performed on sample RVG10-02 and the percent differences of calcium (11 percent), magnesium (20 percent), and sodium (11 percent) in the serial dilution performed on sampleRLB10-01 were greater than the control limit. Results for these analytes were estimated (J–ICPSD) in all samples.

Percent differences of 61 percent for barium and 52 percent for zinc were reported in the serial dilution performed on sample RVG10-02, however these analytes were not detected in either the sample or serial dilution and no qualifiers were assigned.

2.10 METHOD REPORTING LIMITS AND METHODOLOGY

Non-detected results were reported to the method reporting limits (MRL). The reported MRLs are consistent with the methodologies used and the intended uses of the data.

SDG C0J210496: All sediment samples were analyzed at a dilution for SVOCs because of the concentration of target compounds detected and/or matrix interference. Both detected and non-detected analytes were reported from these dilutions; reporting limits were elevated accordingly.

SDG C0K030562: All sediment samples were analyzed at a dilution for SVOCs, PCB Aroclors, and metals because of the concentration of target compounds detected and/or matrix interference. Both detected and non-detected analytes were reported from these dilutions. Reporting limits were elevated accordingly.

SDG 200-2079-1: All tissue samples were initially extracted for PCB Aroclors using a nominal 10 g amount with a final volume of 10 mL. From the initial 10 mL extract, 5 mL was concentrated down to 2 mL to achieve lower reporting limits and both sets of data were reported. The initial analyses were labeled do-not-report (DNR–Other) to indicate they should not be used.

The percent difference between analytical columns was greater than 25 percent for Aroclors 1254 and 1260 in sample FF10-7, the results for these analytes were estimated (J–Conf).

2.11 INSTRUMENT PERFORMANCE

The gas chromatograph/mass spectrometer (GC/MS) Instrument Performance Checks ("tune") were analyzed at the start of each 12 hour analytical shift for the SVOC analyses and the method specified acceptance criteria were met.

The ICP-MS Instrument Performance Checks ("tune") were analyzed at the start of each 12 hour analytical shift for the metals and mercury analyses and the method specified acceptance criteria were met.

2.12 INITIAL CALIBRATION

Initial calibrations (ICAL) were analyzed on all instruments and met the acceptance criteria stated in the EPA's functional guidelines for inorganic and organic data review (USEPA 2004, 2008a), and the applicable EPA Region 2 data validation guidelines (USEPA 2006a, 2006b, 2008b).

2.13 CONTINUING CALIBRATION

Continuing calibrations (CCAL) were analyzed at the appropriate frequency and met the acceptance criteria stated in the EPA's functional guidelines for organic and inorganic data review (USEPA 2004, 2008a), and the applicable EPA Region 2 data validation guidelines (USEPA 2006a, 2006b, 2008b), with the exceptions noted below.

2.13.1 SVOCs

SDG C0J210496: Several CCAL standards had compounds with a percent difference (%D) greater than the control limit of 25 percent. Benzaldehyde (25.3 percent) and hexachlorocyclopentadiene (25.8 percent) both had %D greater than 25 percent, indicative of a low bias. All results and non-detects were qualified as estimated (J/UJ–Cc).

2.13.2 Metals

SDG 200-2079-1: The continuing calibration verification (CCV) for analytical batch 9011 (200-9011/10) exceeded the upper control limit of 110 percent for potassium (114 percent), magnesium (112 percent), and sodium (114 percent); results for these analytes were estimated (J–Cc).

2.14 INTERNAL STANDARDS

Internal standards were added to all samples analyzed for SVOCs by method 8270C and metals by method 6020. The areas and retention times of all internal standards were all within the method specified control limits, with the exceptions noted below.

2.14.1 Metals

SDG 200-2079-1: The internal standard associated with arsenic and selenium was greater than the upper e control limits of 125 percent, at 138 percent, in sample VG10-01. Results were qualified as estimated (UJ–IS).

2.15 RECALCULATION CHECKS

Recalculation checks were performed for 10 percent of the target analytes in all ICALs, and in 10 percent of the CCALs, samples, LCS, and MS/MSD. Results were also checked for transcription checks. No calculation or transcription errors were noted.

2.16 COMPOUND IDENTIFICATION

The compound identification was reviewed for 10 percent of the samples analyzed for SVOCs and PCB Aroclors, no discrepancies were noted.

3 OVERALL ASSESSMENT

A total of 1,841 data points were reported. A total of 1,374 results (74.6 percent) were estimated (J/UJ), and five of these results were also qualified as not detected (U), the number of data points qualified are summarized by reason in Table 3-1. One hundred seventy one results were labeled do-not-report to indicate a more appropriate result exists. No data were rejected and completeness was 100 percent. A summary of all qualified results is presented in Table 3-2. Some results were qualified for multiple reasons so the sum of the qualifiers is greater than the number of qualified results.

The data meets the criteria set forth in the referenced quality assurance documents, with the exceptions noted above. Data that has been labeled do-not-report should not be used for any purpose. All other results are acceptable for their intended use as qualified.

Mercury		EPA SW846 7471A
PCB Aroclors		EPA SW846 8082
SVOCs		EPA SW846 8270C

[a] Metals include Ag, Al, As, Ba, Be, Ca, Cd, Co, Cr, Cu, Fe, Mg, Mn, Na, K, Ni, Pb, Se, Tl, Sb, V, and Zn.

Table 1-3. QA/QC Parameters Reviewed

	Analytical Parameter					
QA/QC Parameter	Cyanide	Percent Solids	TOC	Metals & Mercury	SVOCs	PCB Aroclors
Sample Receipt & Holding Times	Q	D	Q	Q	Q	Q
Blanks	D	+	+	Q	D	D
Surrogate Compounds	NA	NA	NA	NA	D	D
MS/MSD	Q	NA	Q	Q	Q	D
LCS	+	NA	+	+	+	+
Replicates	+	+	+	Q	Q	+
Inteference Check Sample	NA	NA	NA	+	NA	NA
Serial Dilution	NA	NA	NA	Q	NA	NA
MRL & Methodology	+	+	+	D	Q	Q
Instrument Performance	NA	NA	NA	+	+	NA
Initial Calibration	+	+	NA	+	+	+
Continuing Calibration	+	+	NA	Q	Q	+
Internal Standards	NA	NA	NA	Q	+	NA
Recalculation Checks	+	+	+	+	+	+
Compound Identification	+	+	+	NA	+	+

Notes:

+ – All QA/QC criteria met
D – Data are discussed below. QA/QC criteria were not met; however no data were qualified.
LCS – laboratory control sample
MRL – method reporting limit
MS/MSD – matrix spike/matrix spike duplicate
Q – Data were qualified
QA/QC – quality assurance and quality control

Table 1-4. Definition of Data Qualifiers

Data Qualifier	Definition
J	Estimated. The analyte was detected and positively identified. The associated numerical value is an estimated value.
U	Not Detected. The analyte is considered to be not detected at the reported value.
UJ	Estimated and Not Detected. The analyte is considered to be not detected at the reported value and the associated numerical value is an estimated value.
DNR	Do not report.

Table 1-5. Definition of Data Validation Reason Codes

Reason Code	Definition
%Moi	Percent moisture
Cc	Calibration (continuing)
Conf	Compound confirmation
HT	Holding time
ICPSD	ICP serial dilution
IS	Internal standard
LB	Laboratory Blank
MS/MSD	Matrix spike recovery
Other	Other, see validation report
Pc	Precision (all replicates)
Surr	Surrogate

Table 3-1. Summary of Qualified Data Points by Reason

Data Qualification Reason	Number of Data Points Estimated	Number of Data Points Qualified Not Detected	Number of Data Points Labeled Do-Not-Report
Continuing calibration outlier	62		
Compound confirmation	2		
Holding time outlier	763		
ICP serial dilution percent difference	54		
Internal standard performance	2		
Lab blank contamination		5	
Matrix spike/matrix spike duplicate recovery	112		
Percent moisture	1042		
Replicate precision	77		
Surrogate spike/labeled compound recovery	9		
Other			171

Lake Name: Koppers Pond						Start Time: 10:25 am			Description Starting Point: East Outlet					Station	
Sampling Date: 9/16/2009						End Time: 1:40 pm			Lat: W76.82771			Long: N42.14848		Description	Comment
						Exotics/Target Plants			Native and Other Plants						
Station #	Sample #	Lat	Long	Depth (m)	Overall Plant Abundance	Northern Slender Pondweed (*Stuckenia filiformis v. alpinus*)			Coontail (*Ceratophyllum demersum*)	Duckweed (*Lemna minor*)					
5	1	W76.82979	N42.14838	0.76	S	Z			S	C				SP09-005	Pond location
6	1	W76.83016	N42.14960	0.46	S	Z			S	Z				SP09-006	Pond location
7	1	W76.83069	N42.15024	0.20	S	Z			S	Z				SP09-007	Pond location
8	1	W76.83023	N42.15142	0.30	S	Z			S	Z				SP09-008	Industrial drainageway
9	1	W76.82950	N42.14963	0.30	S	Z			S	Z				SP09-009	Pond location
10	1	W76.82832	N42.14886	0.61	S	Z			S	Z				SP09-010	Pond location
11	1	W76.82719	N42.14980	0.15	S	Z			S	Z				SP09-011	Pond location
12	1	W76.82639	N42.15006	0.46	S	Z			S	Z				SP09-012	Pond location
13	1	W76.82709	N42.14904	0.30	S	Z			S	Z				SP09-013	Pond location
Abundance Value: Z = Zero; T = Trace, S = Sparse; C = Common															
Additional Comments:			The CSLAP abundance codes were modified since a rake was not used for sample survey (see Technical Memorandum No. 1 for discussion).												
			Lat/Long values based on NAD83.												
			Station # was the GPS waypoint. The corresponding sample ID is shown under the description column.

Table I-1
Historical Sediment Analytical Data
Koppers Pond, Horseheads, New York

1. *Operable Unit 3 RI data are from Philip Environmental (March 1996).*
   1998 data are from CDM (February 1999).
2. *For sampling locations, see Figure 3.*
3. *For clarity, all detections are shown in* ***bold-face type*** *.*
4. *"NA" indicates data not available due to missing page in CDM (February 1999) report.*
5. *All results are reported on a dry-weight basis.*
6. *Inorganic data qualifiers:*
   U - not detected at indicated reporting limit.
   B - detected concentration below quantitation limit but above instrument detection limit.
   N - matrix spike/matrix spike duplicate (MS/MSD) recoveries outside control limits.
   J - constituent also detected in corresponding method blank.
   ** - the relative percent difference (RPD) of the MS/MSD recovered outside control limits.*
   E- reported concentration is estimated due to matrix interference.
   R - data rejected in validation.

Table J-1
Fish Tissue Analytical Data - July 2003 Sampling
Koppers Pond, Horseheads, New York

1. *Data from CEC (July 2003). See Table 1 of that report for inventory of fish samples, including sample numbers, species, weight, and length.*
2. *Only analytes detected in one or more samples are listed. Other analytes were not detected in any sample above reporting limits.*
3. *For clarity, all detections are shown in* ***bold-face type****.*
4. *Organic data qualifiers:*
   U - not detected at indicated detection limit.
   J - analyte detected, but concentration is an estimated value because the result is less than the quantitation limit or quality control criteria were not met.
5. *Inorganic data qualifiers:*
   U - not detected at indicated detection limit.
   B - detected concentration below quantitation limit but above instrument detection limit.

APPENDIX J

SUMMARY OF KOPPERS POND FISH SAMPLING DATA - 2003

CUMMINGS RITER

Table J-1
Fish Tissue Analytical Data - July 2003 Sampling
Koppers Pond, Horseheads, New York

Parameter	Concentration by Species and Sample Number			
	Black Crappie	Green Sunfish		
	BC-3-RS	GS-1-RS	GS-2-RS	GS-3-RS
Polychlorinated Biphenyls (ug/kg)				
Aroclor 1248	**52**	50 U	50 U	**56**
Aroclor 1254	**480**	**360**	**480**	**240**
Aroclor 1260	**110**	**94**	**130**	**110**
Total PCBs	**642**	**454**	**610**	**406**
Metals (mg/kg)				
Aluminum	17 U	20 U	**23**	**14 B**
Antimony	1.2 U	**0.37 B**	1.3 U	1.3 U
Arsenic	1.2 U	1.5 U	1.3 U	1.3 U
Barium	**3.3**	**4.0**	**1.7**	**2.0**
Beryllium	0.25 U	0.30 U	0.27 U	0.27 U
Cadmium	**0.030 B**	**0.051 B**	**0.30**	**0.12 B**
Calcium	**15,000**	**18,000**	**12,000**	**13,000**
Chromium	**0.35**	**0.42**	**0.40**	**0.58**
Cobalt	0.42 U	0.50 U	**0.11 B**	**0.14 B**
Copper	**0.56 B**	**0.56 B**	**0.78 B**	**0.82 B**
Iron	**9.2 B**	**7.3 B**	**52**	**35**
Lead	**0.34 B**	**0.63 B**	**0.91**	**0.99**
Magnesium	**450**	**490**	**400**	**400**
Manganese	**1.6**	**1.9**	**1.6**	**1.1**
Mercury	**0.012**	**0.015**	**0.052**	**0.037**
Nickel	0.83 U	0.99 U	**0.20 B**	**0.30 B**
Potassium	**2,500**	**2,400**	**2,500**	**2,400**
Selenium	**0.62 B**	**0.52 B**	**0.58 B**	**0.96 B**
Silver	0.46 U	0.44 U	0.42 U	0.43 U
Sodium	**940**	**990**	**1,100**	**1,200**

Table J-1
Fish Tissue Analytical Data - July 2003 Sampling
Koppers Pond, Horseheads, New York

1. *Data from CEC (July 2003). See Table 1 of that report for inventory of fish samples, including sample numbers, species, weight, and length.*
2. *Only analytes detected in one or more samples are listed. Other analytes were not detected in any sample above reporting limits.*
3. *For clarity, all detections are shown in* ***bold-face type****.*
4. *Organic data qualifiers:*
   U - not detected at indicated detection limit.
   J - analyte detected, but concentration is an estimated value because the result is less than the quantitation limit or quality control criteria were not met.
5. *Inorganic data qualifiers:*
   U - not detected at indicated detection limit.
   B - detected concentration below quantitation limit but above instrument detection limit.
