Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
U	Indicates the analyte was analyzed for but not detected.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits

Narrative

CASE NARRATIVE

Client: Cornerstone Environmental Group, LLC

Project: FORD Ringwood Mines E203361

Report Number: 460-163415-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 8/28/2018 3:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 9 coolers at receipt time were 0.3º C, 0.3º C, 0.5º C, 0.6º C, 0.7º C, 0.8º C, 0.8º C, 0.9º C and 1.1º C.

Receipt Exceptions

The following sample was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): PMB-02A-082718 (460-163415-34). The client was notified that the sample would be analyzed for the same tests as the other samples received in this delivery group.

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): SR3-Seep-02-082718 (460-163415-18). Sample ID on COC is SR3-Seep-01-082718 but SR3-Seep-02-082718 on the container labels. The client was notified that the sample ID is logged in as per the container labels.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

The continuing calibration verification (CCV) analyzed in batch 460-548531 was outside the method criteria for the following analytes: Bromoform (biased low); Bromomethane and Chloroethane (biased high). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The CCV analyzed in batch 460-548838 was outside the method criteria for the following analytes: Bromomethane, Chloroethane and Methylcyclohexane (biased high) and Bromoform (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The CCV analyzed in batch 460-549013 was outside the method criteria for the following analytes: Bromoform and Toluene-d8 (Surr). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) for analytical batch 460-548531 recovered outside control limits (low) for the following analyte: Bromoform. This analyte was not detected in the associated samples; therefore, the data have been reported.

The LCS for analytical batch 460-548838 recovered outside control limits (low) for the following analyte: Bromoform. This analyte was not detected in the associated samples; therefore, the data have been reported.

Acetone was detected in method blank MB 460-548531/8 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. 2-Butanone (MEK) was detected in method blank MB 460-548531/8 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Bromoform failed the recovery criteria low for the matrix spike (MS) and matrix spike duplicate (MSD) of sample PMB-01A-082718 (460-163415-3) in batch 460-548531.

Narrative

CASE NARRATIVE

Client: Cornerstone Environmental Group, LLC

Project: FORD Ringwood Mines E203361

Report Number: 460-163526-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 8/29/2018 2:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.9º C, 1.0º C and 1.2º C.

Receipt Exceptions

One container for the following sample was received empty: RW12 (130-140)-082918 (460-163526-8)/container "E" for Chloride/Sulfate. The laboratory can utilize one of the 250 ml glass jars provided for this sample analysis; there is sufficient volume to run all required tests for this sample.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Narrative

CASE NARRATIVE

Client: Cornerstone Environmental Group, LLC

Project: FORD Ringwood Mines E203361

Report Number: 460-163634-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 8/30/2018 3:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.6º C and 2.8º C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples RW8(163-173)-082918 (460-163634-1), RW8(204-214)-082918 (460-163634-2), RW9A(85-95)-082918 (460-163634-3), RW9(206-216)-082918 (460-163634-4) and TB-05-083018 (460-163634-5) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260C DKQP. The samples were analyzed on 09/02/2018 and 09/03/2018.

The continuing calibration verification (CCV) analyzed in batch 460-549256 was outside the method criteria for the following analytes: Chloroethane, Dichlorodifluoromethane, Trichlorofluoromethane and Bromomethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The CCV analyzed in batch 460-549424 was outside the method criteria for the following analytes: 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and 2-Methyl-2-propanol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes are considered estimated.

The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 460-549256 recovered outside control limits (low) for Bromomethane.

Refer to the QC report for details.

No other difficulties were encountered during the volatiles analysis.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS) DKQP

Samples RW8(163-173)-082918 (460-163634-1), RW8(204-214)-082918 (460-163634-2), RW9A(85-95)-082918 (460-163634-3) and RW9(206-216)-082918 (460-163634-4) were analyzed for Semivolatile organic compounds (GC/MS) DKQP in accordance with EPA SW-846 Method 8270D DKQP. The samples were prepared on 08/31/2018 and analyzed on 09/02/2018.

The CCV analyzed in batch 460-549280 was outside the method criteria for the following analytes: Benzo[g,h,i]perylene and Di-n-octyl phthalate. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) for preparation batch 460-549018 and analytical batch 460-549280 recovered outside control limits for the following analyte: Atrazine. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The LCS associated with preparation batch 460-549018 and analytical batch 460-549280 was outside DKQP recovery criteria (low) but within laboratory generated limits for the following analytes: 2,2'-oxybis[1-chloropropane]. The data has been reported.

2,4,6-Tribromophenol (Surr) failed the surrogate recovery criteria high for RW8(163-173)-082918 (460-163634-1), RW8(204-214)-082918 (460-163634-2), RW9A(85-95)-082918 (460-163634-3), RW9(206-216)-082918 (460-163634-4), MB 460-549018/1-A, LCS 460-549018/2-A, LCS 460-549018/4-A, 460-163445-J-1-A MS, and 460-163445-H-1-A MSD.

Several analytes failed the recovery criteria low for the MSD of sample 460-163445-1 in batch 460-549280. Atrazine exceeded the RPD limit.

Several analytes failed the recovery criteria low for the MS of sample 460-163445-1 in batch 460-549280. Di-n-octyl phthalate failed the recovery criteria high.

The samples were prepared on 08/31/2018 and analyzed on 09/02/2018.

The CCV analyzed in batch 460-549294 was outside the method criteria for the following analytes: Benzo[a]anthracene and Dibenz(a,h)anthracene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The CCV associated with batch 460-549294 recovered above the upper control limit for Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene failed the recovery criteria high for LCS 460-549018/6-A and LCSD 460-549018/7-A.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

*	ISTD response or retention time outside acceptable limits
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

HPLC/IC

Qualifier	Qualifier Description

Narrative

CASE NARRATIVE

Client: Cornerstone Environmental Group, LLC

Project: FORD Ringwood Mines E203361

Report Number: 460-163741-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 8/31/2018 7:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 7 coolers at receipt time were 2.0º C, 2.1º C, 2.1º C, 2.3º C, 2.4º C, 2.4º C and 3.0º C.

Receipt Exceptions

One voa vial for the following sample was broken on receipt: RW-14S(135-155)-083118 (460-163741-3); there is sufficient volume to run the requested VOC analyses.

Only 3 bottles per sample were provided for the following samples for the SVOC, SVOC SIM, 1,4 Dioxane, and PCB analysis: RW-11D(262-267)-083118 (460-163741-2), RW-13(100-120)-083018 (460-163741-10) and RW-3DS(155-160)-083018 (460-163741-11). There is sufficient volume to extract the samples once for each analysis.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

The samples were analyzed on 09/04/2018 and 09/05/2018.

The continuing calibration verification (CCV) analyzed in batch 460-549619 was outside the method criteria for the following analytes: 1,1,2-Trichloro-1,2,2-trifluoroethane and Dichlorodifluoromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits due to poor performance. The LCS associated with batch 460-549338 had Atrazine and Caprolactam outside control limits (low recovery); re-extraction/re-analysis was not performed and results have been reported and qualified (LCS 460-549338/3-A).

The LCS for preparation batch 460-549397 and analytical batch 460-549470 recovered outside control limits for the following analyte: Atrazine. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The LCS and lab control sample duplicate (LCSD) for preparation batch 460-549397 and analytical batch 460-549718 recovered outside control limits for the following analyte: 2,4-Dinitrophenol. Narrative

CASE NARRATIVE

Client: Cornerstone Environmental Group, LLC

Project: FORD Ringwood Mines E203361

Report Number: 460-164119-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 9/6/2018 3:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.7º C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples CMS-50-090518 (460-164119-1), RW-6-090518 (460-164119-2), CMS-100-090518 (460-164119-3), CMS-160-090518 (460-164119-4), OB-20B-090518 (460-164119-5), RW-6A-090518 (460-164119-6), CMS-27S-090518 (460-164119-7), SC-01-090518 (460-164119-8) and TB-01-09052018 (460-164119-9) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260C DKQP. The samples were analyzed on 09/14/2018.

The continuing calibration verification (CCV) analyzed in batch 460-552087 was outside the method criteria for the following analyte: Bromomethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

The CCV analyzed in batch 460-552301 was outside the method criteria for the following analytes: Bromomethane. Bromomethane minimum response factor (RF) was below required limit. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Refer to the QC report for details.

No other difficulties were encountered during the volatiles analysis.

All other quality control parameters were within the acceptance limits.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 163149-1
Sample date: 2018-08-21 2018-08-22
Report received by CADENA: 2018-08-31
Initial Data Verification completed by CADENA: 2018-08-31

The following minor QC exceptions or missing information were noted:

MBK - METHOD BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the method blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
TOTAL METALS QC batch 548003 - ANTIMONY - UB flags - samples -001 through -013, -016, -017, -018.

FBK - FIELD BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the FIELD blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
DISSOLVED METALS - SODIUM - B flags - samples -002, -003, -006, -007, -008, -009, -010, -011, -012, -013, -017, -018.
DISSOLVED ALUMINUM - Qualifications not required.

FBK - FIELD BLANKS had detections ABOVE the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 10X the FIELD blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC - METHYLENE CHLORIDE - UB flags - samples -017, -018.

LCS - LCS recoveries were outliers biased LOW for these analytes (or one LCS and the associated LCS/LCSD RPD). The listed client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: .
GCMS SVOC QC batch 547376 - 2-METHYLPHENOL, CAPROLACTAM - UJ flags - samples -013, -014, -016, -017, -018.
GCMS SVOC QC batch 547339 - 2-METHYLPHENOL - UJ flags - samples -001 through -012.

TIC - Tentatively Identified Compounds (TIC's) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC and GCMS SVOC.

MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample from this submittal for the test and QC batch noted so qualification was not required based on these sample-specific QC outliers:
GCMS SVOC QC batch 547376

GCMS VOC-SIM, GCMS SVOC-SIM analytical batch CCV STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

LCS or LCSD recoveries but not both or LCS/LCSD RPD only were outliers so client sample results were not qualified based on these QC outliers alone:
GCMS VOC QC batch 547593 - METHYL ACETATE
GCMS SVOC-SIM QC batch 547339 - DIBENZO(AH)ANTHRACENE, PENTACHLOROPHENOL

LCS recoveries were outliers biased HIGH for these tests and analytes (or one LCS and the associated LCS/LCSD RPD). All associated client sample results were non-detect for these analytes so were not affected by the high bias and qualification was not required:
GCMS VOC QC batch 547498 - METHYL ACETATE.
GCMS SVOC-SIM QC batch 547376 - HEXACHLOROBENZENE.

SURROGATE recoveries were outside of laboratory control limits biased low but greater than 10% for only 1 of 3 acid fraction specific surrogate so qualification of client sample results noted below were not required based on this QC outlier alone:
GCMS SVOC - samples -001, -005, -006, -007, -008, -009, -010, -011.
SURROGATE recoveries were biased high for only 1 of 3 acid fraction surrogates so qualification was not required for the following:
GCMS SVOC - samples -013, -014, -017, QC batch 547376 LCS and METHOD BLANK.

MS or MSD recoveries but not both or RPD only were outliers for the following analytes so results for the client sample spiked were not qualified based on these QC outliers alone:
GCMS VOC sample -002 - METHYL ACETATE.
GCMS SVOC sample -002 - CAPROLACTAM (note 2-METHYLPHENOL MS/MSD recoveries were both biased low but this result is already qualified based on low LCS recoveries noted above).
CHLORIDE sample -006.

MS/MSD spike concentrations were less than 4X the original sample concentration for the following analytes in the client sample noted so MS/MSD percent recoveries are not considered to be statistically reliable and were not used to qualify client sample results:
DISSOLVED METALS sample -002 - CALCIUM, MAGNESIUM, MANGANESE, SODIUM.
TOTAL METALS sample -002 - CALCIUM.
CHLORIDE -sample -002.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

16 Water sample(s) and 1 field blank were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Laboratory submittal: 163188-1
Sample date: 2018-08-22
Report received by CADENA: 2018-08-31
Initial Data Verification completed by CADENA: 2018-08-31

The following minor QC exceptions or missing information were noted:

TBK - TRIP BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the TRIP blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC - CARBON DISULFIDE - UB flags - samples -002, -003, -004, -005, -009, -012, -018.

FBK - FIELD BLANKS had detections ABOVE the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 10X the FIELD blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC - METHYLENE CHLORIDE - B flags - samples -005, -013.

LCS - LCS recoveries were outliers biased LOW for these analytes (or one LCS and the associated LCS/LCSD RPD). The listed client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: .
GCMS SVOC QC batch 547375 - 2-METHYLPHENOL, CAPROLACTAM - UJ flags - samples -002, -003, -004, -005, -006, -007, -011, -012, -015, -016, -018.

TIC - Tentatively Identified Compounds (TIC's) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC and GCMS SVOC.

MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample from this submittal for the test and QC batch noted so qualification was not required based on these sample-specific QC outliers:
GCMS VOC QC batches 547649, 548123
GCMS SVOC QC batch 5481149.

GCMS VOC-SIM, GCMS SVOC, GCMS SVOC-SIM analytical batch CCV STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

LCS or LCSD recoveries but not both or LCS/LCSD RPD only were outliers so client sample results were not qualified based on these QC outliers alone:
GCMS SVOC QC batch 547375 - BENZALDEHYDE
Note: ATRAZINE LCS recovery was biased high and RPD was an outlier but all associated results were non-detect so were not affected by the high bias.

LCS recoveries were outliers biased HIGH for these tests and analytes (or one LCS and the associated LCS/LCSD RPD). All associated client sample results were non-detect for these analytes so were not affected by the high bias and qualification was not required:
GCMS SVOC-SIM QC batch 548149 - DIBENZO(AH)ANTHRACENE.

SURROGATE recoveries were outside of laboratory control limits biased low but greater than 10% for only 1 of 3 acid fraction specific surrogate so qualification of client sample results noted below were not required based on this QC outlier alone:
GCMS SVOC - sample -014 and QC batch 548149 LCS.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

16 Water sample(s) and 1 Field Blank were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 163302-1
Sample date: 2018-08-23 2018-08-24
Report received by CADENA: 2018-09-14
Initial Data Verification completed by CADENA: 2018-09-17

The following minor QC exceptions or missing information were noted:

TBK - TRIP BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC - METHYLENE CHLORIDE - UB flag - sample -013.

FBK - FIELD BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
METALS - B flags - sample -014, -004 TOTAL AND DISSOLVED BARIUM.
METALS - UB flags - samples -012 and -013 TOTAL AND DISSOLVED BARIUM.
1,4-DIOXANE - B flags - samples -001, -002, -005 through -014, -016 through -019, -022.

TIC - Tentatively Identified Compounds (TIC's) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC
GCMS SVOC.

LCS - LCS recoveries were outliers biased LOW for these analytes (or one LCS and the associated LCS/LCSD RPD). The listed client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: .
GCMS SVOC QC batch 547574 - HEXACHLOROBUTADIENE - UJ flags - samples -001 through -010.
GCMS SVOC QC batch 547599 - 2-METHYLPHENOL and CAPROLACTAM - UJ flags - samples -011, -012, -013, -014, -016, -017, -018, -019, -020, -022, -023.
GCMS SVOC QC batch 547757 - ATRAZINE - sample qualifications not required.

MSD - MS and MSD recovery outliers or one recovery and the MS/MSD RPD were outliers with the recovery biased LOW for these analytes. Results for the client sample spiked only should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect for these analytes:
GCMS SVOC sample -021 - UJ flags - 2-METHYLPHENOL, 3-NITROANILINE. J flag - 1,4-DIOXANE.
GCMS SVOC sample -005 - UJ flags - 2-METHYLPHENOL, HEXACHLOROBUTADIENE.
METALS sample -005 - UJ flag - DISSOLVED ANTIMONY. J flag - DISSOLVED BARIUM.

MBK - METHOD BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the method blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
TOTAL METALS - QC batch 548512 - LEAD - UB flags - samples -001, -002, -006, -007. B flags - samples -008.

GCMS VOC, GCMS VOC-SIM, GCMS SVOC, GCMS SVOC-SIM CCV/INTERNAL STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

SURROGATE recoveries were outside of laboratory control limits biased HIGH for only 1 fraction specific surrogate so qualification of client sample results noted below were not requried based on this QC outlier alone:
GCMS SVOC ACID FRACTION surrogates 1 of 3 biased high - samples -001, -005, -005MS, -005MSD, QC batch 547574/547599/548149 LCS.

MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample from this submittal for the test and QC batch noted so qualification was not required based on these sample-specific QC outliers:
GCMS SVOC QC batch 547625.
PCB QC batch 548017.
METHOD 6020 TOTAL METALS QC batches 550221, 5485122.

LCS recoveries were outliers biased HIGH for these tests and analytes (or one LCS and the associated LCS/LCSD RPD). All associated client sample results were non-detect for these analytes so were not affected by the high bias and qualification was not required:
GCMS SVOC-SIM - QC batch 547574 - BENZO(A)ANTHRACENE, BENZO(A)PYRENE, BIS-2-CHLOROETHYLETHER, DIBENZO(AH)ANTHRACENE, HEXACHLOROBENZENE, INDENO(123CD)PYRENE.
GCMS SVOC-SIM - QC batch 547599 - DIBENZO(AH)ANTHRACENE, HEXACHLOROBENZENE, INDENO(123CD)PYRENE.
GCMS SVOC-SIM - QC batch 548149 - DIBENZO(AH)ANTHRACENE.
TOTAL CYANIDE - QC batch 548650.

MS/MSD spike concentrations were less than 4X the original sample concentration for the following analytes in the client sample noted so MS/MSD percent recoveries are not considered to be statistically reliable and were not used to qualify client sample results:
METHOD 8270-SIM ISOTOPIC DILUTION - sample -021 - 1,4-DIOXANE.
DISSOLVED METALS - sample -005 - SODIUM, MAGNESIUM, CALCIUM, MANGANESE.
DISSOLVED METALS - sample -021 - SODIUM, POTASSIUM, BARIUM, MANGANESE, MAGNESIUM, CALCIUM, IRON.
TOTAL METALS - sample -021 - BARIUM, MANGANESE, SODIUM, MAGNESIUM, CALCIUM, IRON.
TOTAL METALS - sample -005 - SODIUM, MAGNESIUM, CALCIUM, IRON.
ANIONS - samples -005 and -021 - CHLORIDE.

MS or MSD recoveries but not both or RPD only were outliers for the following analytes so results for the client sample spiked were not qualified based on these QC outliers alone:
DISSOLVED METALS - sample -021 - SELENIUM.
TOTAL CYANIDE - sample -005.

MS and MSD recovery outliers or one recovery and the MS/MSD RPD were outliers with the recovery biased HIGH for these analytes. Client sample results spiked as noted below were non-detect so qualification was not required based on these high bias QC outliers:
TOTAL CYANIDE - sample -011.

TBK - TRIP BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC - METHYLENE CHLORIDE - UB flag - sample -013.

SAMPLE RECEIPT NARRATIVE - Laboratory submittal case narrative indicated that GCMS VOC analysis was not performed on client samples -001, -003, -004, -005, -007, -008, -009, -022 and MS/MSD for sample -005 due to headspace in sample vials. Samples were re-samples and analyzed in SDG 164119.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

20 Water sample(s), 2 field duplicates and 1 field blank were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 163415-1
Sample date: 2018-08-27
Report received by CADENA: 2018-09-14
Initial Data Verification completed by CADENA: 2018-09-17

The following minor QC exceptions or missing information were noted:

MBK - METHOD BLANKS had detections ABOVE the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 10X the method blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC QC batch 548531 - ACETONE - B flags - samples -002 through -009 and -011 through -015.

MBK - METHOD BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the method blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC QC batch 548531 - MEK - UB flags - samples -002, -003.

TBK - TRIP BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the method blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
GCMS VOC - METHYLENE CHLORIDE - UB flags - samples -013, -021.

LCS - LCS recoveries were outliers biased LOW for these analytes (or one LCS and the associated LCS/LCSD RPD). The listed client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: .
GCMS VOC QC batch 548531 and 548838 - BROMOFORM - UJ flags - samples -001 through -009 and -011 through -015 and -019 through -030, -032, -033.

MSD - MS and MSD recovery outliers or one recovery and the MS/MSD RPD were outliers with the recovery biased LOW for these analytes. Results for the client sample spiked only should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect for these analytes:
GCMS VOC sample -003 - UJ flag - BROMOFORM.
TOTAL CYANIDE sample -027 - UJ flag.

TIC - Tentatively Identified Compounds (TIC"s) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC

GCMS VOC CCV STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

MS/MSD spike concentrations were less than 4X the original sample concentration for the following analytes in the client sample noted so MS/MSD percent recoveries are not considered to be statistically reliable and were not used to qualify client sample results:
DISSOLVED METALS sample -026 - SODIUM, CALCIUM.
DISSOVLED METALS sample -003 - MANGANESE, SODIUM, MAGNESIUM, POTASSIUM, CALCIUM.
TOTAL METALS sample -003 - MANGANESE, SODIUM, CALCIUM.
ANIONS sample -026 - SULFATE, CHLORIDE.
ANIONS sample -032 - SULFATE, CHLORIDE.

MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample from this submittal for the test and QC batch noted so qualification was not required based on these sample-specific QC outliers:
TOTAL METALS QC batches 549767, 550229.

Sample result for test and analyte noted below were NOT QUALIFIED based on low level concentration criteria (sample result less than 5X the lab RL so absolute difference between replicate values must be less than 2X RL for soil and less than 1X RL for water), even though laboratory report indicated duplicate RPD was an outlier based on high level criteria (laboratory RPD control limit):
TOTAL METALS sample -003 - COPPER.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

31 Water sample(s) and 2 field duplicate samples were analyzed for GCMS VOC, GCMS SVOC, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 163526-1
Sample date: 2018-08-28 2018-08-29
Report received by CADENA: 2018-09-13
Initial Data Verification completed by CADENA: 2018-09-14

The following minor QC exceptions or missing information were noted:

TIC - Tentatively Identified Compounds (TIC's) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC, GCMS SVOC.

LCS - LCS recoveries were outliers biased LOW for these analytes (or one LCS and the associated LCS/LCSD RPD). The listed client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: .
GCMS SVOC QC batch 548982 - 2-METHYLPHENOL, HEXACHLOROBUTADIENE, CAPROLACTAM - UJ flags - samples -001, -002, -003, -004, -005, -006, -007.
GCMS SVOC QC batch 548983 - 2,2-oxybis(1-chloropropane), 2-CHLOROPHENOL, 2-METHYLPHENOL - UJ flags - sample -008.

LCS or LCSD recoveries but not both or LCS/LCSD RPD only were outliers so client sample results were not qualified based on these QC outliers alone:
GCMS VOC QC batch 549428 - TRICHLOROFLUOROMETHANE.
GCMS SVOC QC batch 548982 - 2-CHLOROPHENOL, 4-NITROPHENOL, PHENOL.
GCMS SVOC-SIM QC batch 548982 and 548983 - PENTACHLOROPHENOL, HEXACHLOROBENZENE.

GCMS SVOC, GCMS SVOC-SIM analytical CCV STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample from this submittal for the test and QC batch noted so qualification was not required based on these sample-specific QC outliers:
GCMS SVOC QC batch 548983
TOTAL METALS QC batch 550229, 549767
TOTAL CYANIDE QC batch 550322.

LCS recoveries were outliers biased HIGH for these tests and analytes (or one LCS and the associated LCS/LCSD RPD). All associated client sample results were non-detect for these analytes so were not affected by the high bias and qualification was not required:
GCMS SVOC-SIM QC batch 548986 - DIBENZO(AH)ANTHRACENE.

MS/MSD spike concentrations were less than 4X the original sample concentration for the following analytes in the client sample noted so MS/MSD percent recoveries are not considered to be statistically reliable and were not used to qualify client sample results:
DISSOLVED METALS - sample -001 - MANGANESE, SODIUM, CALCIUM.
ANIONS - sample -004 - CHLORIDE, SULFATE.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

8 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 163634-1
Sample date: 2018-08-29
Report received by CADENA: 2018-09-14
Initial Data Verification completed by CADENA: 2018-09-14

The following minor QC exceptions or missing information were noted:

LCS - LCS recoveries were outliers biased LOW for these analytes (or one LCS and the associated LCS/LCSD RPD). The listed client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: .
GCMS VOC QC batch 549256 - BROMOMETHANE - UJ flag - sample -001.
GCMS SVOC QC batch 549018 - 2,2-oxybis(1-chloropropane) - UJ flags - sample -001, -002, -003, -004.

TIC - Tentatively Identified Compounds (TIC's) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC
GCMS SVOC

MSD - MS and MSD recovery outliers or one recovery and the MS/MSD RPD were outliers with the recovery biased HIGH for these analytes. Results for the client sample spiked only should be considered to be estimated and qualified with a J flag if detected for these analytes (non-detect results are not affected by this high bias):
ANIONS -sample -001 - CHLORIDE - J flag.

GCMS VOC, GCMS SVOC, GCMS SVOC-SIM, VOC-SIM Analytical batch CCV STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

LCS recoveries were outliers biased HIGH for these tests and analytes (or one LCS and the associated LCS/LCSD RPD). All associated client sample results were non-detect for these analytes so were not affected by the high bias and qualification was not required:
GCMS SVOC QC batch 549018 - ATRAZINE
GCMS SVOC-SIM QC batch 549018 - DIBENZO(AH)ANTHRACENE, INDENO(123CD)PYRENE.

SURROGATE recoveries were outside of laboratory control limits biased HIGH for only 1 fraction specific surrogate so qualification of client sample results noted below were not requried based on this QC outlier alone:
GCMS SVOC ACID FRACTION 1 out of 3 surrogates biased high - samples -001, -002, -003, -004, LCS and MBLK QC batch 549018.

MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample from this submittal for the test and QC batch noted so qualification was not required based on these sample-specific QC outliers:
GCMS SVOC QC batch 549018
DISSOLVED METALS QC batch 551569 - MS RECOVERY and DUPLICATE RPD
TOTAL METALS QC batch 550921.

METHOD BLANKS had detections BELOW the Reporting Limit (RL) as noted below. Client sample results were either non-detect for these analytes or had concentrations greater than 5X the method blank levels so qualification of client sample results was not required:
GCMS VOC-SIM QC batch 550312 - 1,2,3-TRICHLOROPROPANE.

MS/MSD spike concentrations were less than 4X the original sample concentration for the following analytes in the client sample noted so MS/MSD percent recoveries are not considered to be statistically reliable and were not used to qualify client sample results:
ANIONS sample -001 - SULFATE.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

4 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 163741-1
Sample date: 2018-08-31 2018-08-30
Report received by CADENA: 2018-09-18
Initial Data Verification completed by CADENA: 2018-09-18

The following significant QC anomalies were identified during verification of the analytical report:

LCS - LCS results recovered less than 10% or did not recover for these analytes . Client sample non-detect results are considered to be unusable and have been qualified with R flags. Detected analyte results are considered to be estimated and qualified with J flags:
GCMS SVOC QC batch 549338 - CAPROLACTAM - R flags - samples -001, -002, -003, -005, -006.

The following minor QC exceptions or missing information were noted:

TIC - Tentatively Identified Compounds (TIC's) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC
GCMS SVOC

LCS - LCS recoveries were outliers biased LOW for these analytes (or one LCS and the associated LCS/LCSD RPD). The listed client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: .
GCMS SVOC QC batch 549338 - ATRAZINE - UJ flags - samples -001, -002, -003, -005, -006.
GCMS SVOC QC batch 549397 - HEXACHLOROBUTADIENE - UJ flags - samples -007 through -016 and -018.
GCMS SVOC QC batch 549791 - 2,2-OXYBIS(1-CHLOROPROPANE) and 2-METHYLPHENOL - UJ flags - sample -004.

MSD - MS and MSD recovery outliers or one recovery and the MS/MSD RPD were outliers with the recovery biased LOW for these analytes. Results for the client sample spiked only should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect for these analytes:
GCMS SVOC sample -003 - UJ flag - 2-METHYLPHENOL.
METALS sample -003 - UJ flag - SELENIUM.

MBK - METHOD BLANKS had detections BELOW the Reporting Limit (RL) for these analytes. The listed client sample results had concentrations LESS than 5X the method blank levels so client sample results reported below the RL are considered non-detect at the RL and qualified with UB flags and results greater than the RL are non-detect at the sample concentration reported and qualified with B flags :
TOTAL METALS QC batch 550528 - TOTAL LEAD - UB flags - samples -001, -002, -004, -009, -010, -015, -016, -018.

GCMS VOC, GCMS VOC-SIM, GCMS SVOC, GCMS SVOC-SIM CCV STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

LCS or LCSD recoveries but not both or LCS/LCSD RPD only were outliers so client sample results were not qualified based on these QC outliers alone:
GCMS SVOC QC batch 549338 - DINOCTYLPHTHALATE.
GCMS SVOC QC batch 549397 - ATRAZINE
GCMS SVOC QC batch 549791 - 3,3-DICHLOROBENZIDINE
GCMS SVOC-SIM QC batch 549338 - DIBENZO(AH)ANTHRACENE
GCMS SVOC-SIM QC batch 549397 - BIS2CHLOROETHYLETHER, HEXACHLOROBENZENE

LCS recoveries were outliers biased HIGH for these tests and analytes (or one LCS and the associated LCS/LCSD RPD). All associated client sample results were non-detect for these analytes so were not affected by the high bias and qualification was not required:
GCMS SVOC QC batch 549397 - 2,4-DINITROPHENOL.
GCMS SVOC-SIM QC batch 549338 - HEXACHLOROBENZENE, INDENO(123CD)PYRENE, PENTACHLOROPHENOL.

SURROGATE recoveries were outside of laboratory control limits biased low but greater than 10% for only 1 of 3 acid fraction surrogate so qualification of client sample results noted below were not required based on this QC outlier alone:
GCMS SVOC - samples -001, -002, -003, -003MS, -003MSD, -005, -006, -008, -010, -011, LCS for QC batches 549338 and 549397, METHOD BLANK for QC batch 249338.

MS or MSD recoveries but not both or RPD only were outliers for the following analytes so results for the client sample spiked were not qualified based on these QC outliers alone:
GCMS SVOC sample -003 - ATRAZINE
PCB sample -003 - aroclor 1016 and 1260 - RPD only

MS and MSD recovery outliers or one recovery and the MS/MSD RPD were outliers with the recovery biased HIGH for these analytes. Client sample results spiked as noted below were non-detect so qualification was not required based on these high bias QC outliers:
GCMS SVOC sample -003 - DINOCTYLPHTHALATE.

MS/MSD spike concentrations were less than 4X the original sample concentration for the following analytes in the client sample noted so MS/MSD percent recoveries are not considered to be statistically reliable and were not used to qualify client sample results:
DISSOLVED AND TOTAL METALS sample -003 - SODIUM, MAGNESIUM, CALCIUM.
ANIONS sample -003 and -010 - CHLORIDE and SULFATE.

Sample result for test and analyte noted below were NOT QUALIFIED based on low level concentration criteria (sample result less than 5X the lab RL so absolute difference between replicate values must be less than 2X RL for soil and less than 1X RL for water), even though laboratory report indicated duplicate RPD was an outlier based on high level criteria (laboratory RPD control limit):
TOTAL METALS sample -003 - ARSENIC.

Tentatively Identified Compound (TIC) QC batch blank had detections for these analytes. Qualification of client sample TIC detections was not required based on the TIC blanks noted below:
GCMS SVOC QC batch 549338 - EICOSANE Retention Time 14.80 tentative concentration 6.73J ug/l.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

15 Water sample(s), 1 field duplicate, 1 field blank were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Laboratory: TestAmerica - Edison
Laboratory submittal: 164119-1
Sample date: 2018-09-05
Report received by CADENA: 2018-09-17
Initial Data Verification completed by CADENA: 2018-09-18

The following minor QC exceptions or missing information were noted:

TIC - Tentatively Identified Compounds (TIC's) detections reported for samples noted should all be considered to be estimated and qualified with NJ flags.
GCMS VOC

GCMS VOC CCV STANDARD response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

8 Water sample(s) and 1 trip blank were analyzed for GCMS VOC and GCMS SVOC parameter(s).

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.
