**RE: REMEDIAL INVESTIGATION / FOCUSED FEASIBILITY STUDY - OPERABLE UNIT 1
LIGHTMAN DRUM COMPANY SUPERFUND SITE, WINSLOW TOWNSHIP, NEW JERSEY**

Dear Ms. Gelblat:

On behalf of the Lightman Yard PRP Group (Group), Golder Associates Inc. (Golder) is pleased to submit this revised Remedial Investigation / Focused Feasibility Study (RI/FFS) for Operable Unit 1 (OU-1) of the Lightman Drum Company Superfund Site (Site). This revised RI/FFS is being submitted in response to USEPA comments received on October 19, 2018 related to the RI/FFS for OU-1 submitted on June 11, 2018.

The text and figures of the RI/FFS have been updated to address USEPA's comments, several of which are clarified further below:

- Comment 5: The piezometers and groundwater elevations on Figure 2 were inadvertently carried over from an older figure and have been removed. The piezometers have also been removed from other figures where they appeared.
- Comment 6: Notes have been added to Figures 5 and 6 to indicate the wells that were installed in 2012.
- Comment 7: The concentration measure at GW-6 has been moved closer to the well for clarity on Figure 6.
- Comments 8-10: Figures 7 and 8 have been modified to illustrate contours and data from the 3rd and 4th quarters of 2017 and the titles changed accordingly. The concentrations of PCE are below 1 ug/l at MW-3 for this time period, so a 1 ug/l contour is not necessary.

Please contact the undersigned if you have any questions.

Very truly yours,

Golder Associates Inc.
