## **REVISED COMMUNITY RELATIONS PLAN HUDSON RIVER REASSESSMENT RI/FS**

### **1. OVERVIEW OF THE COMMUNITY RELATIONS PLAN**

Public participation is a key element in the Superfund process. The public needs to be informed of site activities, study findings, and remediation alternatives and decisions. The United States Environmental Protection Agency (USEPA) needs to hear public opinion and to address the questions and concerns of all interested parties. The need to maintain this avenue of communication and to actively encourage public participation has inspired the community relations programs which parallel and complement the technical work at each Superfund site. Integral to those programs is the Community Relations Plan itself.

The Hudson River PCB Reassessment Remedial Investigation/ Feasibility Study project has been unusual from a community relations/public participation standpoint from the outset. The site history is such that from the beginning it was evident that the project would prove of enormous interest to citizens, government officials, environmental groups, and private interest groups in a geographic area which extends from the Fort Edward, New York, region all the way downriver to the Battery in New York City. To address public participation for a project where interest has been demonstrated to be of that magnitude, the EPA designed a Community Interaction Program (CIP) unique among Superfund community relations programs. The CIP was presented to the public at the first public meeting for the project held in Saratoga Springs, NY, on December 9, 1990. It was designed to provide maximum opportunity for the public to be heard and to ensure representation of all viewpoints in the project's decision-making process.

The Community Relations Plan (CRP) is the foundation for any community relations effort at a Superfund site. The first CRP was issued in December 1990 and reviewed at the Saratoga Springs public meeting on December 9, 1990. A key point of that CRP and a point that was emphasized in the presentation was that the Community Interaction Program designed for the Hudson River PCB Reassessment RI/FS is intended to be a dynamic and flexible program, able to respond to changes in the project and to changes in the demands of the public whose tool it is. The issuance of this updated Community Relations Plan reflects both the progress of the project into Phase 2 and EPA's commitment to being responsive to public input during the process.

The Community Relations Plan is divided into the following additional chapters:

- Chapter 2: Site Background
- Chapter 3: Area Profile
- Chapter 4: Community Relations/Public Participation Profile

- Chapter 5: Objectives and Description of the Community Interaction Program (CIP) for the Hudson River PCB Reassessment RI/FS
- Chapter 6: Community Relations/Public Participation Activities

Also included in this plan are three appendices.

In addition to the original December 1990 Community Relations Plan for the Hudson River Reassessment RI/FS, three other CRPs are on file relating to prior activities involving the 40 miles of the Hudson River from Hudson Falls, NY, south to the Federal Dam at Troy, NY.

Specifically, in July 1984, a Community Relations Plan was issued for activities leading to the 1984 Hudson River PCB Site Record of Decision (ROD). The May 1989 CRP updated the 1984 Plan and addressed community issues during the design and construction of access roads to the remnant sites. In December 1989 a final CRP was issued addressing the design and implementation of the remedy for the remnant sites (in-place containment).

Some historical and background data from these CRPs and from other documents have been incorporated into this Plan. In addition to the Reference List in Appendix D, such sources shall be noted in the text as appropriate.

## **2. SITE BACKGROUND<sup>1</sup>**

### **2.1 Site and Problem Description**

The Hudson River PCB Superfund site is defined as the Hudson River from Hudson Falls, New York, to the Battery, and includes approximately 40 miles of contaminated river bottom sediments and five discrete sediment deposits (called remnant deposits) between Hudson Falls and the Federal Dam at Troy, NY. The sediments and remnant deposits are contaminated with polychlorinated biphenyls (PCBs). PCBs are clear to pale-colored liquids or solids with a mild aromatic odor. They are virtually insoluble in water, non-combustible, and extremely persistent in the environment. PCBs tend to adhere to organic matter and to small inorganic particles such as silt. In relation to the volatility of other chemicals, PCBs are generally considered to be non-volatile. Because of their chemical and thermal stability, polychlorinated biphenyls have been used primarily as insulating fluids in electrical systems.

Studies show that PCBs have toxic effects on humans and animals. The PCBs bioaccumulate in the fatty tissues of living creatures. Animals near the top of the food chain have higher concentrations of the contaminant. In the case of the Hudson River, the health risk of primary concern is associated with accumulation of PCBs in the human body through ingestion of contaminated fish. Fishing has been banned in the upper Hudson since 1976, severely impacting the fishing industry in the entire Hudson and negatively affecting normal use of the river. Ingestion of contaminated water, breathing of and skin contact with contaminated air, and contact with contaminated sediment deposits are also considered risks.

### **2.2 Site History**

During a 30-year period ending in 1977, it is estimated that up to 1.1 million pounds of PCBs were discharged into the Hudson River from two General Electric Company (GE) capacitor manufacturing plants located in Fort Edward and Hudson Falls, New York. Discharged PCBs adhered to the sediments in the bottom of the river and accumulated in large areas behind the Fort Edward Dam. When the dam was removed in 1973 due to its deteriorating condition, PCB-contaminated sediments were released. The removal of the Fort Edward Dam and large spring floods, particularly in 1976 and 1983, moved much of the PCB-contaminated sediments downstream.

Action brought against GE by the New York State Department of Environmental Conservation (NYSDEC) in 1975 resulted in a \$7 million program for the investigation of PCBs and the development of methods to reduce or remove the

threat of PCB contamination. Subsequent sediment surveys revealed that the most extensive contamination was confined to 40 "hot spots" (areas with PCB concentrations of 50 micrograms of PCB per kilogram of sediment, or greater) located in approximately a 40-mile stretch of the river between Fort Edward and Albany, and to five exposed remnant deposits located north of the former Fort Edward Dam site.

In 1976, the NYSDEC banned all fishing on the upper Hudson River, from Albany north through Fort Edward, because PCB contamination had been detected in Hudson River fish. The ban is still in effect today. In addition, the presence of PCBs began to impact dredging activities in the Hudson River. The New York State Department of Transportation (DOT) had periodically dredged the river, which is prone to sediment buildup, in order to maintain a minimum depth to accommodate river traffic. No dredging has occurred since 1979.

For these reasons, the NYSDEC proposed a partial cleanup of the river by dredging selected PCB hot spots and containing the contaminated material in a secure upland containment facility, and in fact some highly contaminated sediments were removed from Remnant Deposit 3A in 1978 and were placed in a secure encapsulation site in Moreau, along with some sediment dredged from just below the old Fort Edward dam site. Unstable river banks of two of the sites were reinforced at that time. Three sites were revegetated to prevent public contact with the sediments and to minimize erosion and release of PCBs into the environment.

In the mid-1980s, the site history actually diverged into two projects. One was the Hudson River PCB Reclamation Demonstration Project, often called simply the "Demonstration Project." The second was the implementation of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) ROD, including the containment of the remnant deposits and a treatability study of the Town of Waterford's water treatment plant. Although these two earlier efforts are not specifically the subjects of this CRP, brief descriptions of them are necessary to the overall context of the current project, which is the Reassessment RI/FS. Often in the eyes of the public, all activities directed at the PCB problem in this part of the Hudson River are perceived as one effort. The whole picture, therefore, must be considered as the basis for any meaningful on-going communication with the public.

#### **2.2.1 The Hudson River PCB Reclamation Demonstration Project (The Demonstration Project)**

In September 1980, Congress passed an amendment to the Clean Water Act (CWA) under Title 1, Section 116 (a) and (b), entitled, "The Hudson River PCB Reclamation Demonstration Project." Under this legislation, funds up to \$20 million could be authorized by the EPA Administrator if the Administrator determined that funds were not first available under Section 116 or 311 of the CWA or from the

then-proposed Comprehensive Environmental Response, Compensation and Liability Act of 1980. The purpose of the Hudson River PCB Reclamation Demonstration Project was to provide funds for the demonstration of technologies, particularly dredging, that would clean up the contamination without causing further PCB migration and pollution. The intended demonstration would clean up about 20 hot spots involving approximately 360,000 cubic yards of sediment. Congress authorized the EPA to make grants to the NYSDEC in order to carry out the intent of the amendment. The funding authorization was due to expire on September 30, 1983, but was extended by a Consent Order signed on September 23, 1983.

In accordance with the National Environmental Policy Act (NEPA) and requirements in the CWA, Section 116, the EPA issued a Draft and Supplemental Environmental Impact Statement (EIS) in 1981, and a Final EIS in 1982. In December 1982, a Record of Decision (ROD) was signed in which the EPA Administrator determined that funds for addressing this problem were available under the newly-created CERCLA, also known as Superfund, not the CWA, and that the problem rated sufficiently high to be considered for inclusion on the National Priorities List (NPL).

Under Superfund, a Remedial Action Master Plan (RAMP) was initiated to evaluate all available information and assess feasible remedial options. Before the RAMP was completed, the Hudson River PCB Site was in fact placed on the EPA's proposed NPL, and, as a result, became eligible for CERCLA funding. The RAMP was subsequently changed to a Feasibility Study (FS) since the RAMP contained all the necessary information to meet the statutory requirements of an FS. NUS Corporation issued the final FS in April of 1984.

New York State, the Hudson River Sloop Clearwater, and other environmental groups, however, filed suit to compel the EPA to award the balance of the \$20 million stipulated under Section 116 of the CWA so the demonstration project could proceed. In May 1984, the EPA signed a settlement agreement whereby the EPA would make a grant to New York State of approximately \$18 million for dredging and disposal of PCBs if the state obtained an acceptable disposal site with all the necessary state and federal permits within three years. Although the Demonstration Project was never completed in accordance with this settlement agreement and these monies have since reverted to New York State wastewater treatment projects, NYSDEC at this time proceeded with its Project plans and its investigation of potential containment sites.

This investigation generated a high level of public and political interest. One site under consideration, Site 10 four miles south of Fort Edward, was viewed as the most desirable but was initially ruled out because of its agricultural zoning status. A site named Site G, on the Ruggi farm in the Village of Fort Edward, was finally named as the preferred site in a 1985 study released by the NYSDEC Project Sponsor Group (PSG).

In 1987, New York's Governor Mario Cuomo appointed the Industrial Hazardous Waste Disposal Facility Siting Board to award or deny appropriate site certification. During this year, public hearings and conferences in preparation for adjudicatory hearings began. In November, NYSDEC Commissioner Thomas Jorling ruled that local zoning/land use regulations were not to be considered when approving or denying applications for construction of hazardous waste disposal facilities. Commissioner Jorling directed the PSG to review sites for the project which had previously been considered but had been rejected on the basis of existing zoning restrictions. This action resulted in a 1988 ruling by the NYSDEC Administrative Law Judge that the once-rejected Site 10 was again a feasible alternative. The PSG was directed to conduct a comparative study of Site 10 and Site G.

#### **2.2.1.1 The Hudson River PCB Project Action Plan**

January of 1989 brought another key decision by Commissioner Jorling. While reaffirming NYSDEC's commitment to dredge the river, he denied permits to use Site G for the encapsulation site and directed the PSG to focus a characterization study on Site 10. Commissioner Jorling favored a larger project which would remediate as much of the PCBs in the Upper Hudson as practicable. Site 10 was to be assessed not only as an encapsulation site but as a location where PCBs in the dredged sediment could be permanently destroyed.

The result of the PSG's analysis was the Hudson River PCB Project Action Plan, issued in December 1989, at the same time the USEPA decided to reassess the No Action portion of the 1984 ROD. This plan "discusses the foundations for the scope and breadth of a comprehensive cleanup effort; evaluates potential remedial actions and alternative technologies; and presents a schedule for carrying out the rescoped Project (Hudson River PCB Action Plan, 1989)."

According to the Plan, the Project scope, in order of priority based on how effective remediation would be in restoring the recreational and economic viability of the river, includes Remnant Deposits 2, 3, 4 and 5 (on the riverbank), Thompson Island Pool, Lock 6/5 Pool, Stillwater and Mechanicville Pools, Fort Edward Technical/Lock 7, the Navigation Channel and eight sediment disposal sites. A total of approximately 3 million cubic yards containing 250,000 pounds of PCBs would be removed from these sites. The estimated cost for removal and encapsulation only is \$280 million. The Plan indicates that costs associated with decontamination technologies were uncertain but "could more than triple the total costs of the Project."

The proposed schedule published in the Plan, predicated on a 2-year state and federal approval process, anticipated the completion of studies, facility design, and Siting Board application/hearing processes between 1990 and 1993, issuance of a Notice to Proceed with site construction in May 1994, initial dredging in 1995,

and Project closure by the end of 2000. NYSDEC's Project Sponsor Group undertook the management of the entire effort, which today continues to be based upon the 1989 Project Action Plan.

Periodically, activities generated by the PSG are reported in local media and generate intense concern on the part of local citizen and government representatives. In October 1991, articles in **The Glens Falls Post Star** which indicated that the PSG was continuing with its investigation of Site 10 as a possible encapsulation site caused people involved in the EPA's Community Interaction Program to pose a number of questions pertaining to ultimate jurisdiction in a decision regarding the Hudson River and to the relevance of participation in EPA's CIP, if in fact the state could and would proceed with dredging regardless of the outcome of the Reassessment.

These questions, carried to EPA's Regional Administrator through the channels opened to the public by the CIP, generated discussion on the highest administrative levels between EPA and NYSDEC, and resulted in a letter to the public from NYSDEC Commissioner Thomas Jorling. In this letter, read and submitted at a meeting of the Hudson River PCB Oversight Committee in Poughkeepsie, NY, on January 21, 1992, Commissioner Jorling stated that DEC would not proceed with a certification of completeness prior to EPA's completion of the Reassessment RI/FS, and that the agency would be willing to reconsider its approach to remediation of the Hudson if EPA's findings in the Reassessment were viable.

## **2.2.2 Implementation of the CERCLA ROD**

### **2.2.2.1 Containment of the Remnant Deposits**

In September 1984, based on the Feasibility Study by NUS Corporation, a ROD was signed for the Hudson River PCB site, addressing four remnant deposits and the river sediments. The ROD reflected EPA's decision for in-place containment, or capping, of the four remnant deposit areas, stabilization of the associated riverbanks and revegetation of the areas. This was considered an interim remedy and can be reevaluated in the future based upon changes in circumstances and/or advances in technology for treating PCBs.

The Administrative Order of Consent, signed in September 1989, provided for GE, the potentially responsible party (PRP) with regard to the PCB contamination, to perform a Remnant Deposit Characterization and a Remedial Technology Review for the remnant deposits and a draft Remedial Design Report for the access roads to the deposits. NYSDEC, with Metcalf and Eddy (M&E), was already preparing the design for in-place containment and stabilization of the remnant deposits.

Ultimately, GE assumed responsibility for final design and implementation of both the access road construction and the in-place containment, and that project is

currently underway. Access roads have been built and capping is due to be completed in 1991. EPA, with the assistance of the US Army Corps of Engineers and TAMS Consultants, Inc., initially involved in the access road design, has overseen the implementation of the remedy. A material called Claymax (TM), made of a layer of highly absorbent clay enclosed between two layers of polypropylene, was used for the clay layer of the cap. Claymax has an extremely low permeability and thus is effective in minimizing volatilization, emission of dust particles, and water infiltration.

#### **2.2.2.2 The Waterford Water Treatment Plant Treatability Study**

Part of the 1984 ROD was the decision to perform of a treatability study to evaluate the effectiveness of the Town of Waterford's treatment plant in removing PCBs from Hudson River water. The Town of Waterford is located 40 miles south of the remnant deposits and was selected for evaluation because it is the northernmost community downstream of the site that receives its water supply directly from the Hudson River.

NYSDEC retained Metcalf and Eddy in 1986 for the study. A draft report was completed in November 1988, and the final report was issued in June 1990. A public meeting was held on that report in the same month. Findings indicated that PCB levels in the water supplied by the Waterford Water Works did in fact meet standards applied to public water supplies.

#### **2.2.3 The Reassessment RI/FS**

The 1984 ROD which mandated in-place containment of the remnant deposits and the Waterford Water Treatability Study also delivered a No Action alternative recommendation under Superfund for the river sediments. At that time it was felt that it would be more appropriate to address the sediments in connection with the Hudson River PCB Reclamation Demonstration Project. The intent was to reassess possible treatment methods in the future based on what may have been demonstrated in the Demonstration Project and/or on any further development of sediment dredging techniques.

EPA decided to undertake a reassessment of the No Action alternative based on the following events which have occurred since 1984:

- With the Superfund Amendments and Reauthorization Act of 1986 (SARA) came the indication that preferred remedies were those which "permanently and significantly reduce the volume, toxicity or mobility of the hazardous substance involved."
- Advances have been made in the techniques for treating PCB-contaminated materials and in dredging techniques.

- A 1989 EPA Headquarters document indicated EPA should view the CERCLA requirement for a periodic review of remedial actions as policy for both pre-and post-SARA RODs. Such a review should occur at least every five years after initiation of remedial action, for as long as hazardous substances, pollutants, or contaminants that may pose a threat to human health or the environment remain at the site. If it is determined during a particular review cycle that the existing remedial action no longer protects human health and the environment, further remedial actions would be considered.
- The Hudson River Reclamation Demonstration Project had not been undertaken so no information pertaining to dredging river sediments and their current status could be obtained from that source.

In December 1989, therefore, the USEPA decided to proceed with the reassessment, and in July 1990, TAMS Consultants, Inc. was assigned under the Alternative Remedial Contracting Strategy (ARCS) program to provide a Scope of Work (SOW) for the Hudson River PCB Reassessment RI/FS. The project was deemed so complex that TAMS Consultants, Inc. proposed a unique three-phased approach in that Scope of Work in order to maximize the capability for adjusting project direction if findings during the process indicated the need to do so. That proposal was approved and the Reassessment RI/FS is proceeding based on that concept.

This three-phased approach was presented to the public at the December 1990 public meeting. The phases are as follows:

Phase 1	Interim Characterization and Evaluation
Phase 2	Further Site Characterization and Analysis
Phase 3	Feasibility Study

To date, some of the unique features of the three-phased Reassessment have included the issuance of a full-blown Phase 1 Report and a Responsiveness Summary after Phase 1, and the issuance of a second Work Plan at the outset of Phase 2. Also, opportunities for the public to offer formal comment are being provided at the end of each phase, rather than once at the end of the entire RI/FS. Finally, the Community Relations Plan, generally only updated at the time of the Remedial Design phase, has been updated already to reflect changes to the CIP during Phase 1.

The Work Plan for Phase 1 was issued in January 1991. The Phase 1 Report was issued in August 1991 and the comment period extended to October 25, 1991; a Responsiveness Summary for the Phase 1 Report was issued in July 1992; and the Review Copy of the Phase 2 Work Plan was issued June 5, 1992. The comment period for that review copy, originally scheduled to end July 10, 1992, was extended to July 24 based on requests from members of the public. The final Phase 2 Work Plan will be issued in September 1992. At present the project itself

is into Phase 2 activities, the specifics of which can be researched in the appropriate documents on file at any of sixteen information repositories. These are located at intervals along the Hudson River from Fort Edward, NY, south to White Plains, with one repository on Long Island at SUNY in Stony Brook (see Appendix C).

III

### **3. AREA PROFILE**

#### **3.1 Geographic Characterization**

The Hudson River originates in the Adirondack Mountains, Essex County, NY. From its headwaters at 43°15' North latitude and 74°00' East longitude, the river flows 300 miles, through 14 counties and 7 locks and over 15 dams and 3 waterfalls, to reach New York Bay.

The Hudson River, Mohawk River, and the New York Barge Canal system comprise the nation's only navigable passage through the Appalachians and as such is an important transportation link between the Atlantic Ocean and the Great Lakes. The Hudson supports deep-draft traffic all the way to the port of Albany and barge traffic north through a series of dams and locks to Fort Edward.

The two navigable sections of the river are generally referred to as the Upper and Lower Hudson. The Upper Hudson (Figure 1) extends from the Federal Dam in Troy to Glens Falls/Hudson Falls 40 miles to the north. "Lower Hudson" refers to the 160 river miles between Troy and New York Bay.

Topographically, the Hudson River Basin features flat lowlands near the coast, rolling hills and valleys midstate, and forest wilderness in the Catskill and Adirondack Mountains. The river itself is in a plain called the Hudson - Champlain lowlands which, 10 to 15 thousand years ago, was a proglacial lake that extended from Rensselaer to Essex County (NUS. 1984).

According to the NUS 1984 Feasibility Study, bedrock in the study area is covered in depths ranging from a few inches to over 200 feet by unconsolidated glacial materials (till, outwash, and lacustrine sediments), recent alluvium of sand, clay, silt, and gravel, and canal dredging deposits primarily comprised of sands, cinders, shale, and wood fragments.

#### **3.2 Land Use, Facilities, and Lifestyle**

Land use in the historic Upper Hudson is diverse. Saratoga and Rensselaer Counties, two of the three counties in the actual study area, are two of the four counties comprising what is known as the Capital District Region (the other two are Albany and Schenectady). This Region is strategically located in the northeast and is a metropolitan area centering around the State Capital of Albany, the cities of Troy and Schenectady, and a large suburban population.

Easily reached today by air, rail, and Routes 87, 5, and 90, the area is accessible to major urban markets and boasts a well-developed transportation system, a diverse economic base, and availability of housing, education, cultural, and recreational opportunities. Rich in history, the Region played a major role in the American Revolution, the population migration westward after the Revolution, and the early transportation systems centered around the Erie Canal and several early

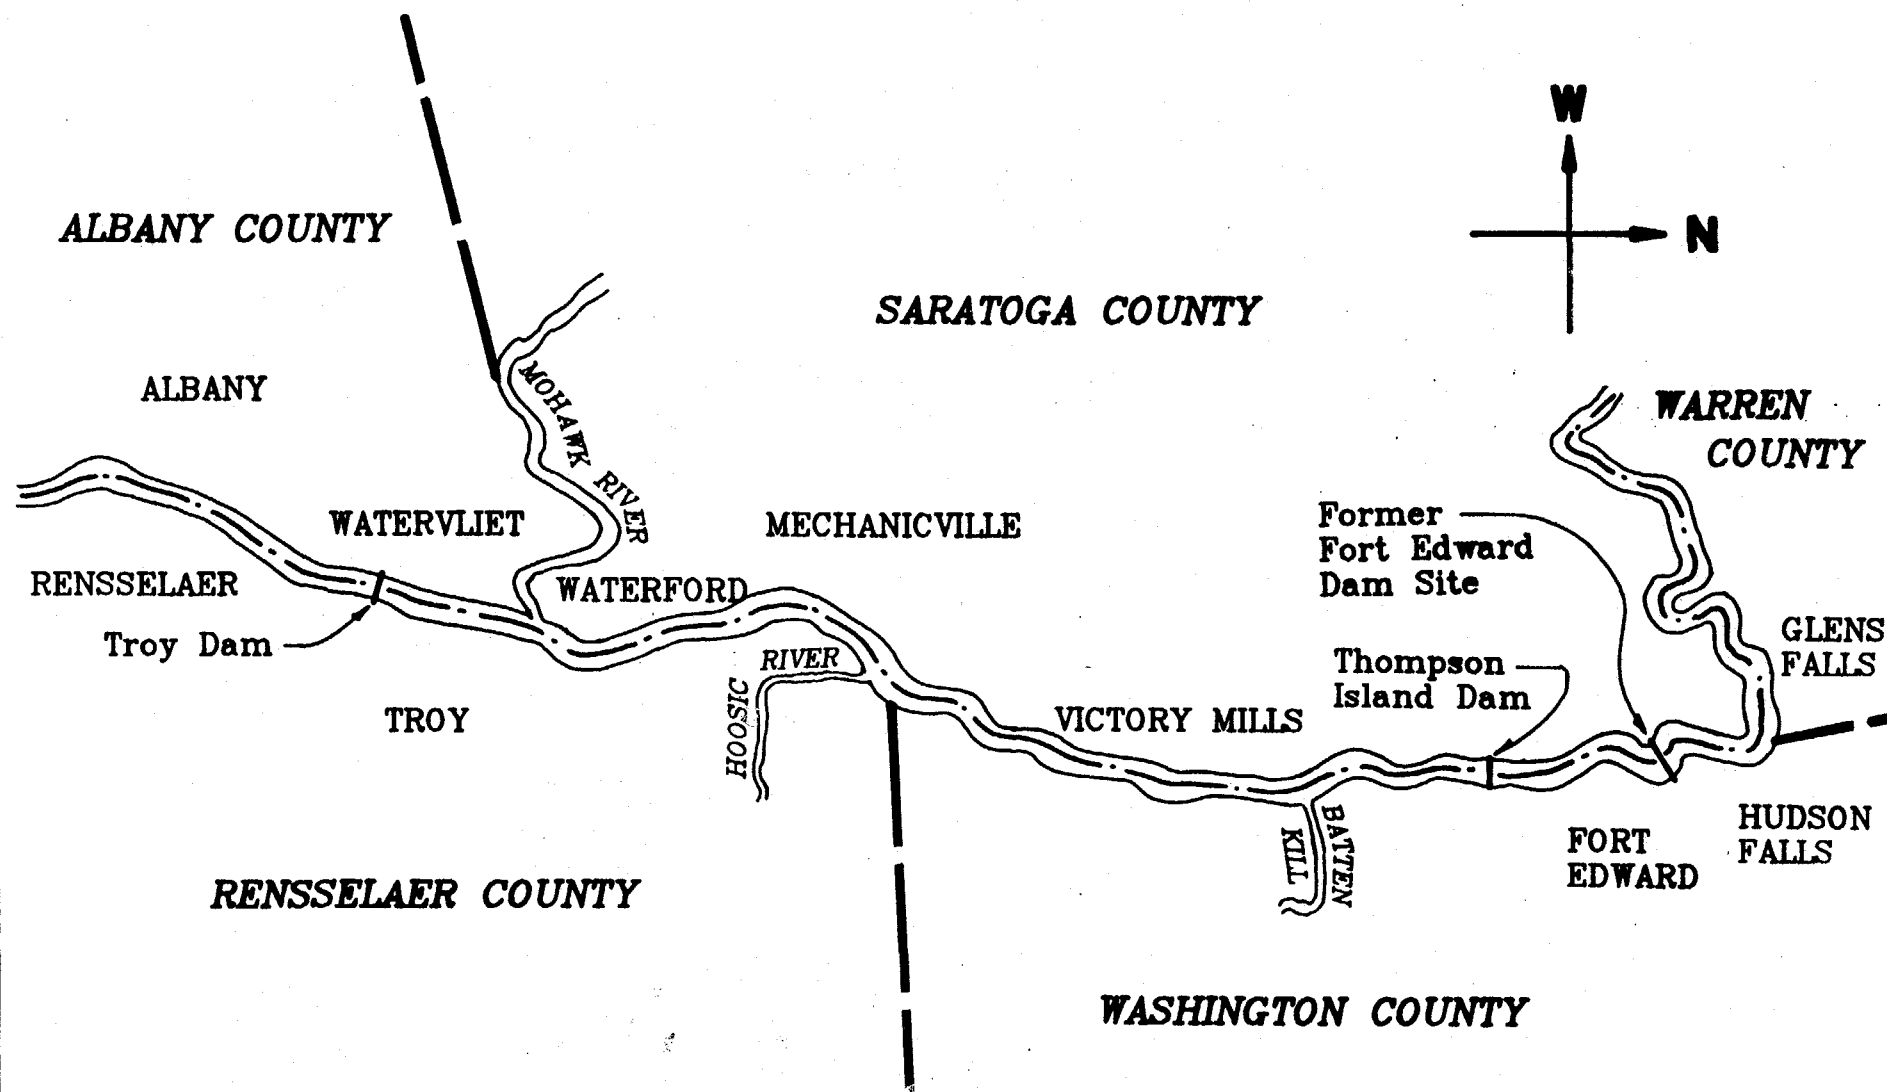

Figure 1

**THE UPPER  
HUDSON RIVER****TAMS** CONSULTANTS, Inc.

turnpikes. The Capital District as well as the entire study area supports dozens of museums of all sizes.

There are over 15 public and private colleges and universities in and near the Capital Region, supporting an expanding professional and technical labor force. Among these are Rensselaer Polytechnic Institute (RPI), a world-renowned science and technology university, the State University of New York with branches in Albany and Saratoga Springs, Skidmore College, and Siena College. Others include the Albany College of Pharmacy, Albany Law School, Albany Business College, Union College, The College of Saint Rose, The University of New York State Regents College, and Russell Sage College.

Arts and music flourish in the area also. The Saratoga Performing Arts Center is the summer home of the New York City Ballet and the Philadelphia Orchestra, and hosts The Cool Jazz Festival every July. In Troy, the Rensselaer County Council for the Arts holds classes, outreach programs for school children, and exhibits by various artists. The Troy Music Hall hosts the Albany Symphony Orchestra, and other facilities such as the Cohoes Music Hall, Tanglewood (in Massachusetts), and the Lake George Opera Festival are but a short drive from the immediate area.

In addition to outdoor recreational activities such as hiking, boating, swimming, camping, skiing, and fishing, racing fans can find the oldest thoroughbred track in the United States, the Saratoga Race Course, near the City of Saratoga Springs. Saratoga Harness, also located in Saratoga Springs, is called the fastest half-mile track in America (Bureau of Budget, Research and Planning, undated). Greyhound racing can be found at the Green Mountain Race Track in nearby Pownal, Vermont.

All these offerings make the Upper Hudson Valley a haven for tourists, who, between other activities, hunt antiques and enjoy a variety of country festivals and fairs such as the Washington County Strawberry Festival, Washington County Fair, and numerous Christmas season festivities.

The industrial base of the area ranges from basic manufacturing to high technology and research and development-oriented businesses to agriculture. The area supports petroleum refineries, granaries, and paper mills. Schenectady is a center for the electrical machinery and equipment industry, and bricks, cement, tiles and similar items are also products of the valley. Rensselaer Technology Park, a project of RPI, is designed to attract and foster a diverse range of businesses, primarily service, high tech, and heavy industry. Its 1200 acres currently has 40 business tenants, a marina, a convention center, and other associated facilities.

The Hudson River valley is well-suited for agriculture and dairy farming. Livestock and livestock products comprise 70% of the state's agricultural income, which is 1% of New York's gross income. In Rensselaer County, 89% of the land use is rural, and 20.5% of that is agricultural (the remainder is forest and brushland). In

Saratoga County, of the 82.5% rural land, 14.9% is agricultural (Capital District Regional Planning Commission, 1980).

Finally, the Hudson River is itself an integral part in the lives and lifestyles of area residents. Most of the ten hydroelectric plants on the river are located in the Upper Hudson. The river is still a major industrial transport route, although according to the 1984 NUS FS, tonnage has declined over the past quarter of a century. Water-based recreational activities such as waterfowl hunting, fur trapping, swimming, boating, and fishing abound, although various bans and advisories on fishing in the Upper Hudson have impacted that sport.

In areas not served by a public water system, domestic water supplies and water for cattle and other farm animals are obtained almost solely from wells. Several communities along the Hudson use the river for drinking water. In addition to the Town of Waterford already mentioned, these communities include the Town of Halfmoon, City of Poughkeepsie, Village of Rhinebeck, the Highland Water District, and the Port Ewen Water District. In fact, New York City can even obtain Hudson River water as a supplement for its drinking water supply during droughts. Additionally, some residents along the Hudson's banks avail themselves of that resource for drinking, watering lawns and gardens, and irrigating crops.

---

IV

## **4. COMMUNITY RELATIONS/PUBLIC PARTICIPATION PROFILE**

### **4.1 History of Community Involvement**

As stated at the end of Section 2.2, the Hudson River PCB contamination is generally viewed as one overall problem, despite the number of separate activities which have taken place. The community relations/public participation history is no different. People, organizations, and officials interested in the PCB problem in the Hudson River are interested in the whole problem and in all the projects. Therefore, the history of community involvement spans 16 years and encompasses all events pertaining to the PCB issue since 1975.

The first public concern was triggered in that year by studies revealing high levels of PCBs in Hudson River fish, a common item in local diets and a key part of the northeastern commercial fishing industry. These studies indicated a potential health risk from exposure to PCBs at those levels. Subsequent bans and advisories on commercial and sport fishing heightened concern, not only over personal health but also over the adverse affect on all parts of the economy dependent upon fishing and the recreational use of the river.

In addition to local citizen interest, media accounts of PCB problems locally and in other parts of the state drew the attention of national groups. Fishing and sporting associations and unions affected by the fishing restrictions began to want to participate in plans to clean up the river. Environmental groups began to heighten their involvement and local, state, and federal officials demonstrated an active interest.

Throughout, EPA and NYSDEC have made efforts to keep the public informed and involved by such means as public meetings and hearings and publication of fact sheets, Community Relations Plans, project-specific brochures, and other updates. Also, committees with public membership were organized. One, the Hudson River PCB Settlement Advisory Committee made up of experts in the fields of biology, health, hydrology, and geology, was formed in the mid-1970s to advise the NYSDEC Commissioner on remediation of the Hudson River. This committee, whose first task in 1975 was to oversee the \$7 million program for initial investigation of the PCB problem, is chaired by Dr. John Sanders, Professor Emeritus of Barnard College, Columbia University, and still meets periodically.

In the early 1980s, public interest escalated over the Hudson River PCB Reclamation Demonstration Project, the federally-funded dredging and encapsulation demonstration which resulted from the recommendations of a consortium of New York community and group leaders. Emotions ran high. The PCB Settlement Advisory Committee, NYSDEC, Hudson River Sloop Clearwater, and other agencies and groups supported the dredging and encapsulation; many residents and interest groups opposed it, and the opposition quickly became organized.

"Citizen Environmentalists Against Sludge Encapsulation (C.E.A.S.E.)" was formed in 1981 to fight the location of an encapsulation site in Fort Edward. C.E.A.S.E. was originally a rather informal group of Fort Edward citizens, several of whom owned land being suggested for the demonstration project containment site. Since the early 1980s, C.E.A.S.E. has grown into a large, incorporated, focused, and well-managed environmental interest group. Frequently mentioned in the media and very visible at public meetings and hearings, C.E.A.S.E. was instrumental in blocking the location of a containment site in Fort Edward and active in opposing the PCB Reclamation Demonstration Project.

In the mid to late 1980s when the Waterford Treatability Study was performed and capping was chosen as the interim remedy for the remnant deposits, the interest level moderated somewhat, though it was by no means any less a factor in the project process. The public, however, did not feel compelled to oppose either project. Concerns connected with the remnant site remediation centered as much around construction of the access roads to the deposits, associated noise and traffic, and disruption of local activity as around the capping itself. Issues pertaining to the latter were questions on the rationale for selection of the remedy, durability and effectiveness of the cap, safety precautions during construction, and post-construction monitoring.

In 1987, when the NYSDEC Project Sponsor Group reapplied for dredging and encapsulation permits, it also launched a rather vigorous public involvement program. A mailing list of over 1000 names was created and 14 document repositories from Long Island to Glens Falls were established to facilitate public access to project documents. NYSDEC also held a public forum and several availability sessions, and kept the public informed through update letters, fact sheets, and other summary documents.

The current Reassessment RI/FS has generated as much interest on the part of the public as was anticipated. Segments of the public, government, and environmental community have strongly indicated their positions and opinions on both the Reassessment itself and any remedial options that may come under consideration during Phase 3. Although the public initially indicated a strong distrust of government agencies in general, opportunities for the public voice to be heard through the Community Interaction Program during Phase 1 seem to have alleviated that feeling to some extent.

Many activities have been undertaken by EPA as part of the Community Interaction Program to ensure availability of all project information to the public, to provide opportunities to input to the process for anyone choosing to do so, and to encourage the free exchange of ideas, concerns and criticisms by the public. The current mailing list contains over 1000 names; Liaison Group and committee membership numbers nearly 200; meetings at all levels of CIP participation - and general public meetings - are held at various sites along the Hudson; and a totally uncensored newsletter, jointly produced by Liaison Group members and EPA, has been launched. Plans continue not only for the same base level of public outreach

into Phases 2 and 3, but also for some additional educational and participative activities.

## **4.2 Key Concerns and Anticipated Issues**

With each Hudson River PCB site remediation project since 1975, all sectors of the public have been vocal as to their concerns. Volumes of hearing transcripts and press clippings attest to the sustained level of interest. Some of the concerns which arose over time were project-specific (i.e., safety precautions to be taken while capping remnant deposits) and will not be addressed here. The concerns which were anticipated in connection with the Reassessment RI/FS and which have indeed been expressed during Phase 1, along with some which were unanticipated, are cited in this section.

### **4.2.1 Historic Concerns and Issues**

Historically, primary concerns have centered around contamination of Hudson River fish, health risks associated with eating the fish, the demise of the fishing industry and associated economic impacts, the state of the river itself, skepticism over the ability of any governmental agency to provide an acceptable solution in a reasonable timeframe, disputes among various interest groups over which remedy should be selected, and either opposition to or support for NYSDEC's PSG project. A number of additional issues were previously identified and remain part of the public's focus, including:

- Concern that any dredging activity will not only increase contamination of the river water but also will increase the risk of volatilization both during and after dredging;
- Concerns regarding the water quality of the Hudson River:
  1. The present and future effects of PCBs and other contaminants in water used for drinking,
  2. The effect on drinking water of mobilization of contaminated material by dredging activity,
  3. For communities which have alternate sources of water, the potential expense of long-term utilization of those sources;
- Concern over general personal health risk to area residents through contaminated soil, water, and air;
- Concern on the part of upper Hudson River area residents that if encapsulation of dredged sediments were part of a

remedial solution, seepage from an encapsulation site could contaminate area ground and well water;

- Concern on the part of dairy farmers that contamination of grass eaten by their cattle, either by volatilization or groundwater seepage, could contaminate the milk and therefore adversely affect the area dairy industry;
- Concern over general disruption of normal use of the river;
- Concern over the revenue loss to commercial fishermen in the immediate area and, as in the case of the striped bass fishing ban, to fishermen all the way into Long Island coastal waters;
- Concern over curtailment of sport fishing and associated loss of recreational opportunities and revenue;
- Concern for the general decline in the area economy;
- Concern among area residents that proposed locations of encapsulation facilities could adversely affect their property values;
- Concern that continued curtailment of dredging will both adversely affect commerce dependent upon upper Hudson River transport and also cause other transportation problems; and
- Concern over whether it is worth the expense to dredge a portion of the river's contaminated sediment while leaving much contamination behind.

Finally, various portions of the interested public quite naturally continue to differ as to their priorities and viewpoints on key issues. While most factions recognize the severity of the problem and are genuinely committed to the necessity of finding a solution, those that fear dredging and encapsulation support the status quo, hopeful that the river will clean itself or technology will come up with a solution which appears "safer." Other factions feel that dredging and removal of sediment, however disruptive in the short term, is the only way to reverse the river's contamination problem. Proponents of biodegradation want to try it; opponents are concerned about relying on an unproven technology, and fear that waiting for the technology to develop will further delay the cleanup of the river. Emotional and political interests also continue to play their parts in the publicity and hearings surrounding site activities. During Phase 1 of the current Reassessment RI/FS, all these divergent and sometimes highly emotional viewpoints have been factors in the on-going dynamics of public interaction.

Two concerns which appear to have mitigated somewhat are that all alternative remedies have not or will not be given appropriate consideration, and concern over the general "ability of government agencies to properly carry out a large-scale program." (Community Relations Plan, Hudson River PCB Remnant Sites, July 1984).

#### **4.2.2 Current Key Issues**

Several issues have come to the forefront of the public's focus since the outset of the Reassessment, among them:

- the timeliness and validity of data already collected which was analyzed in Phase 1 for its applicability to the current Reassessment;
- what additional sampling will be done to supplement the existing data, and whether the sampling planned is adequate and/or appropriate;
- whether or not PCBs are as toxic as current EPA human health assessment guidelines indicate; and
- whether there is the possibility of using congener-specific analyses of various PCBs to define human health risk more clearly.

Some of these and a number of other questions were received during the public comment period following the issuance of the Phase 1 Report and are addressed in a Responsiveness Summary, issued in July 1992 and on file in the Information Repositories. Others among these issues could continue to be questions during the remaining phases of the Reassessment.

V

## **5. OBJECTIVES AND DESCRIPTION OF THE COMMUNITY INTERACTION PROGRAM (CIP) FOR THE HUDSON RIVER PCB REASSESSMENT RI/FS**

### **5.1 Program Objectives**

The Community Interaction Program for the Hudson River PCB Reassessment RI/FS is designed to address the complexities of communication and public participation associated with a project whose geographic area covers 40 miles of river, traverses parts of four counties and involves interested parties in fourteen or more, and impacts the entire Hudson River Estuary. The issues involved directly affect the fishing and agriculture industries, the river's recreational business opportunities, the lifestyles of area residents, and the future of the river (Figure 2).

All the players in the project - the EPA, citizens and citizen groups, environmental interest groups, scientific and technical experts, GE, and federal, state, county, and local agencies and officials - need continual access to information as the Reassessment progresses; there must be a vehicle for public input as well as official output. In addition to answers to specific questions, the public must understand the Superfund process and the timeframes involved in the Reassessment RI/FS process.

Following are specific objectives of the CIP which, if met, will contribute to productive public participation in the Reassessment RI/FS project, avoidance of misunderstanding and conflict, and successful completion of the study. Discussion of how these objectives will be met are found in Section 5.2, where the structure and information flow of the CIP are described, and in Chapter 6, which details community relations/public participation activities. In all cases in the following items, "public" can be taken to mean government, private citizens and citizen groups, and environmental interest groups.

- Enter into a dialogue and exchange of information with the public on the Hudson River PCB issue;
- Provide information to the public about the Superfund process;
- Inform the public about the nature of activities which will occur at the Hudson River PCB site;
- Identify to the public who will actually be performing the Reassessment RI/FS work at the site;
- Provide the public with regular progress reports;
- Provide the public the opportunity to voice opinions, ask questions, and have input to the study process;

# UPPER HUDSON RIVER

Figure 2

**REGIONAL LOCATION**

**TAMS** CONSULTANTS, Inc.

- Provide timely and accurate responses to questions and issues raised by the public;
- Encourage continuing interest and participation by the public during the entire process; and
- Inform the public of findings of the Reassessment RI/FS and of the ultimate recommendations.

## **5.2 Program Description**

Several factors led the EPA to develop an expanded approach to community relations for the Hudson River PCB Reassessment RI/FS:

- The large geographic area involved;
- The number of individual communities of different sizes that are involved or interested;
- The number of governmental, environmental, and private interest groups that have expressed interest in the past;
- The amount of information that will have to be exchanged and the need to maintain a two-way flow of information between the public and EPA during the Reassessment;
- Awareness of the sensitivity of the issues to the general population; and
- The length of time that various projects to address PCBs in the Hudson have been on-going.

With these factors in mind, EPA developed a Community Interaction Program (CIP) designed to provide an opportunity for all interested parties to have access to the PCB Reassessment RI/FS study process, to provide fora where all public concerns, questions and issues regarding the study can be raised and addressed, and to provide a manageable process for the exchange of information between the public and the EPA project team, via the Hudson River PCB Oversight Committee (HROC).

## **5.3 Community Interaction Program (CIP)**

The Community Interaction Program is a tiered process composed of six working groups at three levels (Figure 3). The foundation is comprised of four Liaison Groups: Governmental, Environmental, Citizen, and Agricultural, the latter having been developed as a result of public requests at the December 1990 public meeting. A fundamental assumption in the development of the Community Interaction Program was that different interest groups will naturally have very

# HUDSON RIVER PCB REASSESSMENT RI/FS COMMUNITY INTERACTION PROGRAM (CIP)

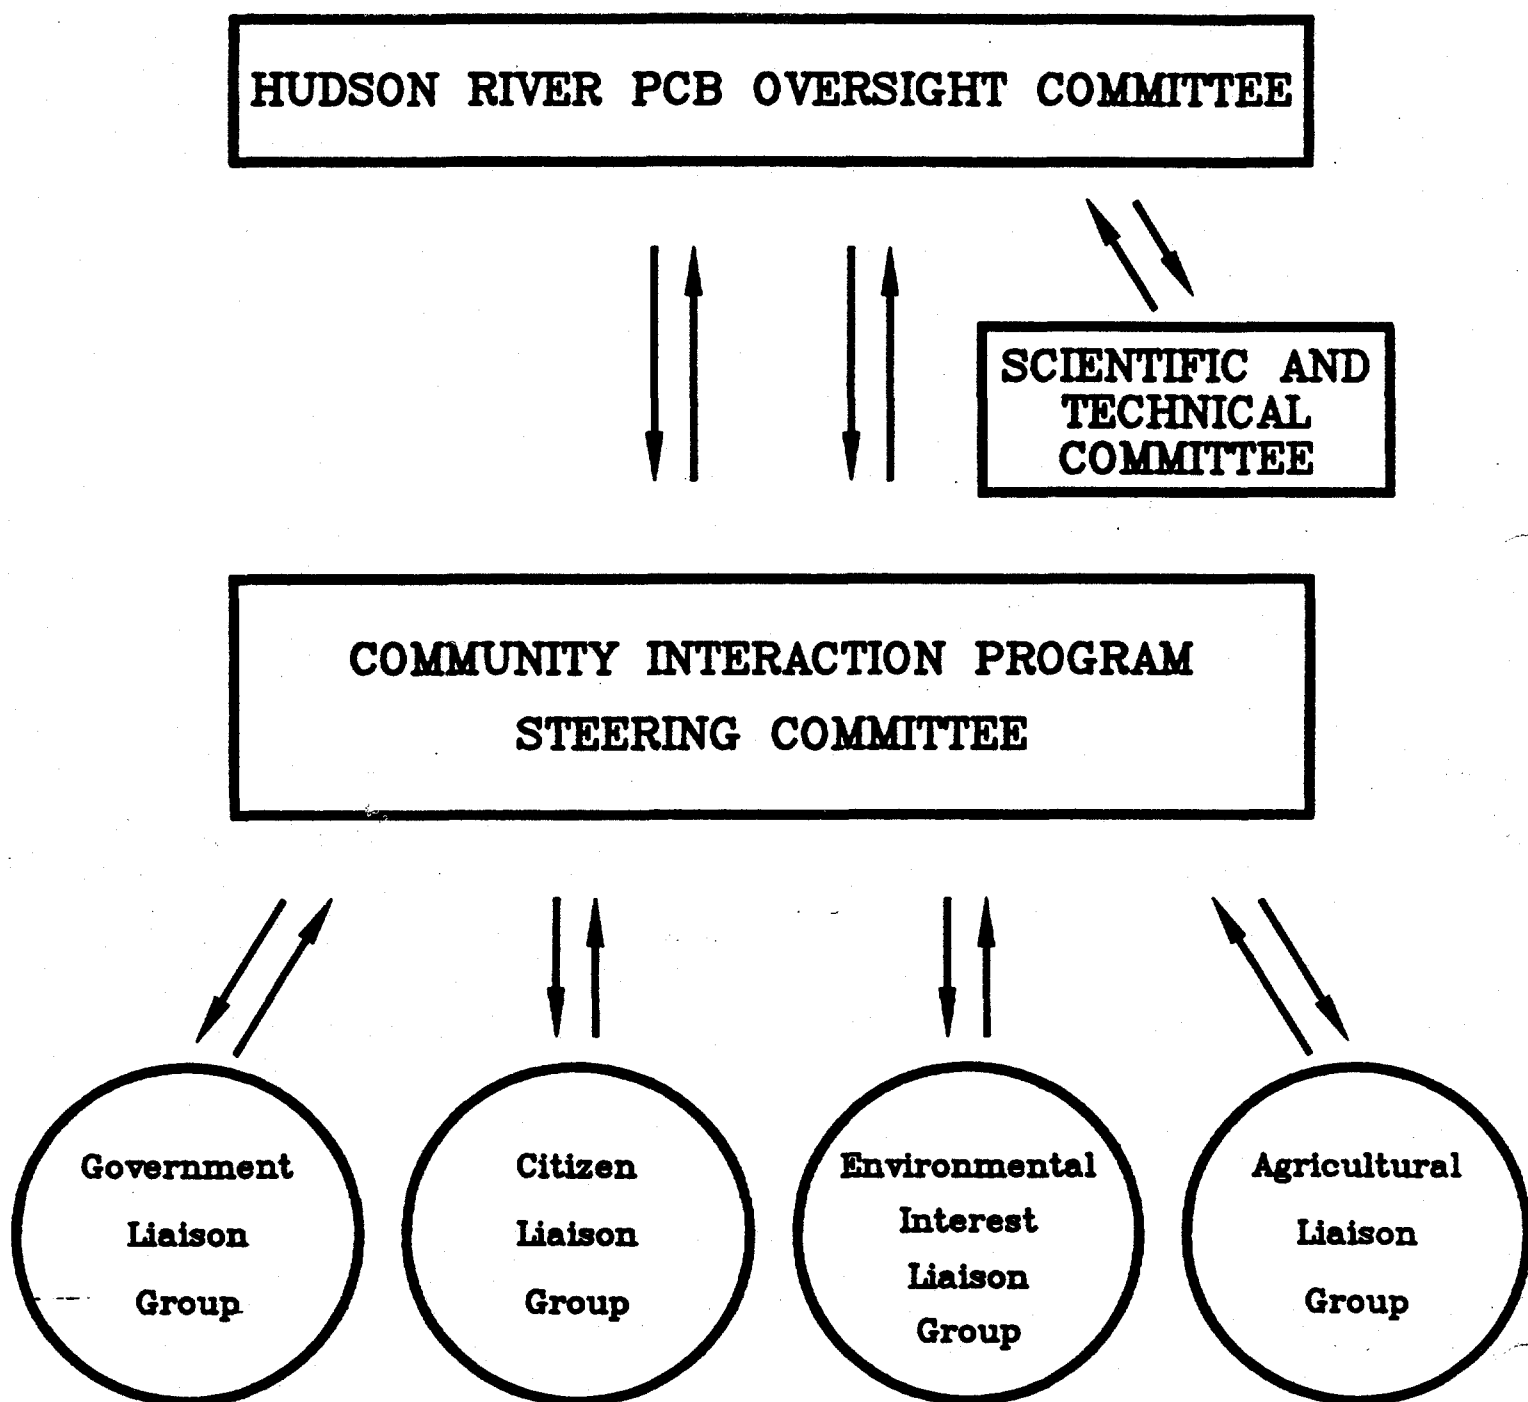

Figure 3

focused perspectives on the Reassessment, specific viewpoints to represent, and specific backgrounds and concerns to bring to the table. Rather than ignore that reality, separate Liaison Groups were formed to provide a channel for all opinions to be clearly represented and discussed.

These Liaison Groups are intended to be working groups. Liaison Group members represent to the Reassessment process others in the general public with interests in any one of those four areas. The Steering Committee, comprised of the chairpeople and co-chairpeople of the Liaison Groups and several others (see Section 5.3.2), in turn links the public to the management of the Reassessment RI/FS process by representation on the Hudson River PCB Oversight Committee.

All public concerns, issues, and questions are initially presented in the four working Liaison Groups and flow from there upward to the CIP Steering Committee. The responsibility of the Steering Committee is to manage the diverse public participation effort and to ensure that issues of import to any part of the public which are presented by the Liaison Groups are heard, and that all opinions are considered. To that end, the Steering Committee forwards such issues and opinions to the Oversight Committee.

The return flow of information from the Oversight Committee to the Steering Committee and thence to the Liaison Groups achieves the overall objective of maintaining a productive two-way flow of communication between the public and project team.

The Community Interaction Program was designed to anticipate a high level of interest from the entire public. The committee structure accommodates the participation of many people and affords everyone an opportunity to be heard, while at the same time being manageable. The program framework itself is flexible enough to handle any changes in levels of participation or project direction that may occur.

### **5.3.1 Government, Citizen, Environmental, and Agricultural Liaison Groups**

#### **Mission and Purpose**

- To provide an opportunity for any interested member of the community at large to participate in the Reassessment process;
- To provide an opportunity for all public concerns, questions, and issues regarding the Hudson River PCB Reassessment RI/FS to be raised;
- To present appropriate concerns, questions, and issues to the CIP Steering Committee for discussion and referral, as necessary, to the Hudson River PCB Oversight Committee;

- To review major project deliverables and comment on them to the Steering and Oversight Committees; and
- To enable the organized and manageable dissemination of general project information.

### Members

Membership in a Liaison Group is open to anyone interested in participating in the Reassessment process, as follows:

- Governmental Liaison Group - elected officials at municipal, county, state, and federal levels. In the case of state and federal officials, it is recognized that direct participation may not always be possible due to scheduling commitments. Therefore, paid members of the state or federal official's staff may serve as representatives. Chairpeople of the Group, however, must be elected officials.
- Citizen Liaison Group - any interested individual or representative of a community group that is neither environmental nor or agricultural in nature (including private business people, church groups, etc.).
- Agricultural Liaison Group - any interested individual who is a member of the agricultural community or a representative of a group representing an agricultural interest.
- Environmental Liaison Group - representatives of area environmental groups. Private citizens who are interested in the Reassessment because they are personally interested in the environment in general are directed to the Citizen Liaison Group.

In early 1991, letters were sent to approximately 750 people, explaining the Community Interaction Program and inviting their participation. A series of meetings was held in Saratoga Springs, NY, in February 1991 to establish the groups, to elect officers, and to distribute the first documents for review.

Current membership in the four Groups totals 176, and new participants are welcome. Anyone interested may contact:

Ann Rychlenski  
Community Relations Coordinator  
USEPA Region II  
26 Federal Plaza  
New York, NY 10278  
(212) 264-7214

### Tasks

- Liaison Group chairs and co-chairs convene periodic meetings of their Groups.
- Chairs and co-chairs shall make available to their membership all documents distributed for review, and shall provide opportunities for input from their membership, whether via meeting, telephone networking, or letters.
- Chairs and co-chairs of the Liaison Groups report on the activities of the individual groups to the Steering Committee.
- Chairs and co-chairs of the Liaison Groups present to the Steering Committee specific issues and questions arising from meetings with members of the individual groups, to be addressed at the Steering Committee level or raised to HROC.
- Liaison Group chairs and co-chairs shall ensure that input from their membership is appropriately presented at the Steering Committee, and that responses to that input are returned to the membership.
- Liaison Group chairs and co-chairs should encourage input to **River Voices**, the joint Liaison Group/EPA newsletter, from the membership of their Groups, and should use that vehicle themselves as a major channel of communication.

### Organizational Details

- Liaison Groups will be responsible for their own management and meeting schedules, but chairpeople should schedule meetings of the Groups prior to the regularly-scheduled Steering Committee and HROC meetings so that input to the Steering Committee from Group members is current.
- Depending upon the size of each Liaison Group, Chairpeople may decide to use sub-groups for individual tasks.
- To ensure that everyone involved in the Reassessment process has access to the same information, and to avoid redundant effort, individual Liaison Group reports, correspondence, and any other pertinent material should be copied to chairs and co-chairs of the other Groups.
- As members of the Steering Committee, it is the responsibility of Liaison Group chairs and co-chairs to keep the Steering Committee Chairperson informed of their Groups' activities. Liaison Group correspondence, reports, and any other pertinent documents should be copied to Ann Rychlenski.

- EPA External Programs Division will assist Liaison Group chairs and co-chairs in mailings and distribution of information to Group members.

### **5.3.2 Community Interaction Program Steering Committee**

#### **Mission and Purpose**

- To manage the public outreach and participation portion of the Reassessment RI/FS process;
- To ensure access to the study process for all interested parties;
- To ensure that all issues of any import to any part of the public are heard and considered; and
- To provide a focal point for the two-way flow of information between the Hudson River PCB Oversight Committee and the public, as represented by the Governmental, Citizen, Environmental, and Agricultural Liaison Groups.

#### **Members**

1. EPA - Community Relations Coordinator (Chair)
2. EPA - Project Manager
3. TAMS - Technical Representative
4. NYSDEC - Project Manager
5. NYSDEC - Citizen Participation Specialist
- 6.-17 Chairperson and two (2) Co-chairs from each CIP Liaison Group

Advisor/Recorder - TAMS Consultants, Inc. Community Relations Specialist

#### **Tasks**

- Members of the Steering Committee representing the EPA project team, the technical team, or the State attempt to address issues raised at the Steering Committee level. If that is not possible, Steering Committee members agree on what issues are to be raised to the Hudson River PCB Oversight Committee for resolution.
- Steering Committee members review major project documents with their constituencies. In cases where members' particular constituencies have questions or concerns about the documents, those issues are raised at the Steering Committee level.
- The Steering Committee may request speakers with expertise and information which is pertinent to the Reassessment to attend a Steering

Committee meeting and make a presentation, or to attend a joint meeting of all Liaison Groups for the same purpose.

#### Organizational Details

- Regularly scheduled Steering Committee meetings shall precede meetings of the Hudson River PCB Oversight Committee by at least one week to allow time for HROC members to review and respond to items raised at the Steering Committee meetings, in cases where an immediate response is possible. The exception to this is the scheduling of specially convened Steering Committee meetings for invited presentations or other unusual business which would not necessarily involve HROC.
- Meeting locations will vary in an attempt to address the travel required on the part of the Committee members.
- The Chairperson of the Steering Committee will issue minutes of the Committee meeting two to three weeks after the meeting date.
- The CIP Steering Committee Chairperson and one representative from each Liaison Group (the Chairperson or one of the Co-chairs as an alternate) will represent, respectively, the CIP Steering Committee and the four Liaison Groups on the Hudson River PCB Oversight Committee.

### **5.3.3 Hudson River PCB Oversight Committee (HROC)**

#### Mission and Purpose

- To ensure consideration of public viewpoint in the study process; and
- To assist in the oversight of the Hudson River PCB Reassessment RI/FS.

#### Members

- |    |  |   |  |
|----|--|---|--|
| 1. | USEPA  | - | ERRD Deputy Division<br>Director (Chair)                     |

| 12. | Citizen Liaison Group                           | - | Chairperson                          |
| 13. | Environmental Liaison Group                     | - | Chairperson                          |
| 14. | Governmental Liaison Group                      | - | Chairperson                          |
| 15. | Agricultural Liaison Group                      | - | Chairperson                          |
| 16. | TAMS  | - | Project Manager                      |
| 17. | General Electric                                | - | Manager, Hudson River Project        |
| 18. | NYSDOH  |   |                                      |

#### Tasks

- HROC will address questions and issues raised by the public via the Liaison Groups and Steering Committee that require the particular expertise of HROC members or that require resolution at a higher level of authority.
- The EPA Emergency and Remedial Response (ERRD) Division Director will make final decisions on the issues which the CIP Steering Committee raises to the HROC.
- According to the particular expertise of individual HROC members, HROC will ensure the validity and appropriateness of technical activities.
- Members will clarify policy issues pertinent to their particular jurisdictions as required.
- HROC will provide recommendations as appropriate to the Regional Administrator based upon the input of the CIP committees and the Scientific and Technical Committee.

#### Organizational Details

- The Hudson River PCB Oversight Committee meets three to four times a year. Meetings be will scheduled after Steering Committee meetings to facilitate the flow of current information from the Liaison Groups to HROC.

10.6481

- The format of the meetings will regularly include project updates, Liaison Group and Committee reports and issues, and issues raised by members in general. Exceptions to this format may include meetings where special presentations are made or input from other than the membership is entertained for a particular purpose.
- Meetings will be recorded and minutes will be issued.

#### **5.3.4 Scientific and Technical Committee (STC)**

##### **Mission and Purpose**

- To assist in the Reassessment by providing technical input to the study process;
- To evaluate scientific data collected on the project; and
- To provide technical dialogue on a variety of pertinent project topics.

##### **Members**

Members are researchers and scientists familiar with the site, PCBs, modeling, toxicology, and other relevant disciplines. Appendix B contains a complete list of current members.

##### **Tasks**

The STC will review and provide comments on documents provided by EPA and identify additional sources of information and on-going research relevant to the Reassessment.

STC members will offer and encourage technical discourse which will be of benefit to the project.

Committee members may be called upon to make presentations in their particular areas of expertise to EPA, HROC, or other groups participating in the Community Interaction Program.

The STC will identify issues or topics of a technical nature that should be raised to HROC.

The STC facilitator will guide the STC meetings, ensure that avenues of discussion and investigation are productive and pertinent to the Reassessment, and represent the STC on HROC.

Minutes of STC meetings will be prepared, submitted to EPA, and placed in the Information Repositories.

### Organizational Details

The STC meets periodically as the project warrants.

EPA will prepare the meeting agenda based on the needs of the project.

Participation in the discussion during STC meetings will be limited to STC members, special presenters, and EPA and its representatives.

EPA will assist the facilitator as necessary in carrying out his/her functions.

---

VI

VI

## **6. COMMUNITY RELATIONS/PUBLIC PARTICIPATION ACTIVITIES**

Although all activities discussed in this chapter contribute to the achievement of the objectives of the Community Interaction Program as described in Section 5.1, certain activities are specifically suggested under the guidelines set forth in "Community Relations in Superfund: A Handbook," published by the USEPA Office of Emergency and Remedial Response. These activities shall be addressed in Section 6.1. Section 6.2 will deal with additional activities that are related to the CIP structure and function and which are specific to the Hudson River PCB Reassessment RI/FS project. The final section will address additional, optional activities that either have already been undertaken as part of the public outreach effort or could be considered during Phases 2 and 3.

### **6.1 Basic Community Relations Activities**

#### **Establish and maintain information repositories.**

Sixteen information repositories have been established to provide the public with access to documents pertaining to the Reassessment RI/FS. Appendix B contains a complete list of these repositories. The Administrative Record for the Reassessment can be found at the Crandall Library repository in Glens Falls, NY, the Adriance Memorial Library in Poughkeepsie, NY, and at USEPA Region II, New York, NY.

#### **Identify the EPA contact.**

Ms. Ann Rychlenski, EPA Region II Community Relations Coordinator, continues to be the designated community relations contact for the Reassessment RI/FS. Ms. Rychlenski chairs the Steering Committee, sits on the Hudson River PCB Oversight Committee, and is responsible for the overall management of the Community Interaction Program.

#### **Conduct public meetings.**

To date three public meetings have been held to provide information about the Reassessment and particularly about Phase 1. Those meetings were held in Saratoga Springs, Poughkeepsie, and Ft. Edward, NY. Several meetings will be scheduled during each subsequent Phase at varying locations along the Hudson.

#### **Establish and maintain mailing lists.**

The initial concept of two basic mailing lists, "direct involvement" or "information," based respectively on geographic proximity to or distance from the 40 miles of up-river contamination between Ft. Edward and Albany, NY, sprang from the assumption that interest would be highest closest to the origin of the problem. It was felt that although anyone regardless of location would certainly be welcome to join a Liaison Group and take an active role in the CIP, desire to participate on

the part of communities and groups at a distance would not be widespread enough to justify mailing everything to everyone.

This approach was abandoned almost immediately. It quickly became apparent that maintenance of separate mailing lists would be enormously difficult. Also, several members of the public took issue with the two-list approach as being unnecessarily arbitrary. The mailing list is currently being maintained as one data base, with sub-sets for actual members of Liaison Groups and Committees. The list currently contains over 1000 names.

Appendix A contains the entire mailing list.

**Prepare updates and technical summaries.**

EPA issued the initial fact sheet for the Reassessment RI/FS in February 1991 at the contact of Phase 1. A second fact sheet will be published during the early part of Phase 2.

**Provide press releases to local media.**

EPA has issued a number of press releases to the media during Phase 1. In addition, many general information mailings are routinely sent to the press and to radio stations. The media list has expanded since the beginning of the reassessment and can be found in Appendix A, Section 3.

**Obtain permission from property owners to do any off-site sampling or testing on private property.**

Although sampling on private property has not yet been necessary, property owners should be contacted at least two weeks in advance to obtain permission for any such sampling that is required. The request should be in writing, either mailed or hand delivered, and should contain information explaining the sampling to be done, the identity of those expected to be on the property doing the testing, and the name of the EPA contact in case questions arise. EPA community relations staff may, at the discretion of the EPA Project Manager, be asked to assist with these contacts.

**Hold a public comment period (required activity).**

A minimum thirty-day public comment period is required in the Superfund process at the time the proposed plan is presented to the public, which is at the end of the RI/FS in a typical project. In the case of the Hudson River PCB Reassessment RI/FS, a formal comment period is being provided for the benefit of the public at the end of each phase of the reassessment.

**Prepare a Responsiveness Summary (also required).**

The Responsiveness Summary documents all comments received during the public comment period and is included in the Record of Decision (ROD). In the case of the Hudson River PCB Reassessment RI/FS, three Responsiveness Summaries will be prepared, one for each of the three public comment periods described in the prior paragraph.

**Revise the Community Relations Plan (also required).**

Once a ROD is signed at the end of an RI/FS in a typical Superfund remediation project, the Community Relations Plan (CRP) must be updated to reflect the proposed plan, the community's opinions at the outset of the remedial design and remedial action phases of the project, and the proposed community relations activities recommended for these phases. In the case of the Hudson River PCB Reassessment RI/FS, the CRP must be as dynamic and flexible as the Community Interaction Program itself. Therefore, the CRP for the reassessment has been updated for Phase 2 of the project. It will be updated again in the future either at the outset of Phase 3 if necessary or after the ROD is signed, prior to the actual remedial design.

**6.2 CIP-Specific Community Relations/Public Participation Activities**

**Establish the CIP Liaison Groups.**

Four Liaison Groups - Governmental, Citizen, Environmental and Agricultural - were established in February 1991 instead of the initially proposed three. Officers were elected at that time, also. Appendix A, Sections 1 through 4, contain the membership lists for these Groups.

**Continue to assist the Liaison Groups as necessary.**

EPA assists the chairs and co-chairs in their mailings and in any other operational task where larger resources are required.

**Explain the structure and function of the overall CIP to the public.**

EPA continues to publicize its approach to community relations and public participation at meetings, in mailings, and through the newsletter, **River Voices**.

**Chair the CIP Steering Committee.**

Ann Rychlenski, EPA Community Relations Coordinator, continues to chair the Steering Committee and to represent that Committee as a whole on the Hudson River PCB Oversight Committee. Members of the Steering Committee are listed in Appendix A, Section 5.

**Ensure continuous communication among Liaison Groups and between the CIP Steering Committee and the Groups.**

Both inter-Liaison Group communication and vertical communication have been less effective than anticipated. Ms. Rychlenski is working to improve the sharing of information laterally among Liaison Groups and also to improve the vertical exchange of information, namely the timeliness of responses to issues raised by the Liaison Groups, the timely distribution of minutes and other media, and the regular receipt by her office of material from the Liaison Groups.

**Coordinate the continual changes in Liaison Group membership.**

As the community relations contact and coordinator for the reassessment and as manager of the Community Interaction Program, Ms. Rychlenski actively solicits participation in the CIP by members of the public, mails invitation letters, tabulates responses, advises the chairpeople of changes, and updates the mailing lists. She also tracks the results of elections and coordinates changes in the Governmental Liaison Group based on those results.

**6.3 Optional Community Relations/Public Participation Activities**

During Phase 1, EPA added two features to its Community Interaction Program:

- A newsletter, **River Voices**, jointly produced by EPA and the members of the Liaison Groups, was first published in September 1991. The second issue, February 1992, was recently published. This newsletter is a unique communication opportunity for Liaison Group members, as it is uncensored and designed specifically for the expression of opinion and the raising of questions of interest to Group members.
- A public availability session held in Saratoga Springs, NY, in September 1991 had a call-in number for use by those who could not attend in person.

During the remaining phases, other optional activities which could be utilized include:

- Public opinion polls/surveys
- Appearances on public television, radio, and/or call-in programs
- Educational seminars/workshops for adults
- Educational programs for area schools

- Displays for libraries, municipal halls, etc.
- Use of regularly scheduled Hudson River events as opportunities for educating the public about the Hudson River PCB Reassessment RI/FS.

**INTENTIONALLY LEFT BLANK**
