Subject: Hudson River mammal contaminant data

Hi Tricia

Dave Mayack informed me that you were interested in viewing some of our preliminary PCB data. Attached is a database of the most recent PCB data for mink, otter, and muskrats in the Hudson River watershed. Please keep in mind that the database is still under construction. Not all data have been received from the tox. lab. It will probably be another month before I have the information I need to complete it.

I also have a .dbf file that contains GIS coordinates for mink from the 1998-9 sample. Let me know if you are interested in this file.

I included another attachment that contains a letter I sent to project participants about a month ago. This has some general summary information from the 1998-9 sample.

I hope you find these documents useful. You can reach me at (518) 899-9083 if you need to call. I will be in the field until late afternoon today.

 U.S. GEOLOGICAL SURVEY

Dear project collaborator,

The 1999 – 2000 trapping season resulted in another successful collection of animals for the Hudson River contaminant monitoring project. Thanks to all project participants, especially the trappers who were so helpful with donating carcasses. The following is a general project update. If you supplied animals last season, specific information on these animals can be found on page 3.

From November 1998 – April 2000 a total of 289 mink, 70 muskrats, and 46 otters were collected within the New York State Department of Environmental Conservation Regions 3, 4 and 5 (Table 1).

Table 1. Number of mink, muskrats, and otters collected from counties within NYS DEC Regions 3, 4 and 5, 1998 - 2000.

County	Species					
	Mink		Muskrat		Otter	
	1998 - 1999	1999 - 2000	1998 - 1999	1999 - 2000	1998 - 1999	1999 - 2000
Herkimer	0	0	0	0	6	0
Hamilton	35	4	1	0	6	0
Essex	1	0	0	0	0	1
Warren	35	23	3	0	0	7
Saratoga	16	61	24	1	2	12
Washington	17	8	0	2	1	1
Albany	0	0	0	0	1	0
Rensselaer	13	27	23	14	3	2
Columbia	12	5	3	0	1	0
Fulton	11	8	0	0	0	0
Montgomery	5	2	0	0	1	0
Schoharie	3	3	0	0	0	0
Westchester	0	0	0	0	0	2
Total	148	141	54	16	21	25

We selected 106 mink, 46 otters, and 20 muskrats from this sample (1998 – 2000) for contaminant analysis. Liver samples from these specimens are currently being analyzed for PCBs, organochlorine pesticides, and metals (mercury, lead, cadmium). Initial PCB data from 1998 – 1999 have been received (Table 2). The initial PCB data for the 1999 – 2000 specimens should be available before June 2001. A comprehensive analysis of this data may not be available until 2002 - I'll keep you updated.

Table 2. Average total Aroclor PCB levels (lipid-adjusted) in 63 mink, 21 otters, and 6 muskrats from counties within NYS DEC Regions 3, 4 and 5, 1998 - 1999.

County	Species					
	Mink		Muskrat		Otter	
	Average Total PCBs (ppm)	Range	Average Total PCBs (ppm)	Range	Average Total PCBs (ppm)	Range
Herkimer					4.97	3.69 - 7.20
Hamilton	0.97	0.69 - 1.29	ND ^a		3.41	1.51 - 6.20
Essex	1.20	0.89 - 1.451				
Warren	4.78	0.71 - 13.11	ND			
Saratoga	10.51	0.60 - 80.57	ND		101.17	1.98 - 200.37
Washington	1.94	0.29 - 3.86			8.31	
Albany					18.54	
Rensselaer	2.75	1.07 - 3.87			39.09	30.96 - 47.87
Columbia	2.47	0.12 - 7.36			11.24	
Montgomery	7.43	2.59 - 15.00			168.00	

^a Not detected

(Note: Our initial health effect criteria are: PCB levels <9 ppm = no/minimal effect, 9 - 21 ppm = potential negative health effects, 21 - 50 ppm = probable negative health effects, >50 ppm = potential reproductive failure).

For the 2000 - 2001 trapping season, we are interested in mink from the southern reach of the Hudson River watershed (south of Columbia and Greene counties) and otter from the entire watershed. If you would like to contribute carcasses to the study, or have any questions about the project, please feel free to call me at **800-341-5772**.
