Complete Waste Management

Profile Number □□□□□□□□□□□□
Customer Number □□□□□□

WASTE PROFILE

SECTION A – GENERAL INFORMATION

1. Generator:USEPA Region III,
   Address:1650 Arch Street
   City/State:Philadelphia, PA Zip:19103
   County:Philadelphia SIC:
   Municipality:City of Philadelphia TEL: 215-814-3402
   Tech Contact:Stepan Nevshehirlian Fax:

2. Billing Broker:Tetra Tech Inc.
   Address: 661 Anderson Drive, Building 7
   City/State:Pittsburgh, PA Zip15220
   Billing Contact:[redacted] TEL:4[redacted]
   FAX:

SECTION B – WASTE DESCRIPTION

1. Waste Name:IDW Waste Drilling Residuals RWC 801

2. Physical Appearance: ☐Liquid ☒Solids ☐Sludge (pumpable)

   Color:brown/black Odor:none ☒None ☐Slight ☐Strong

3. Number of solid or liquid phases of separation: solid
   Describe each phase and estimate volume (%) of each: 100%

4. Annual volume of waste to be shipped to MEI: 6 IDW (soil) drums

5. Shipment term: ☐On going ☐Temporary ☒One time disposal

6. Waste to be shipped in: ☐Bulk ☒Drums (55 gallon)

7. Anticipated date of first waste shipment 4/30/2020 and volume: 6 IDW (soil) drums

8. Shipment Frequency:Event

SECTION C – CHEMICAL ANALYSIS

1. Waste sample type: ☐ Grab ☒ Composite ☐ Other_____

   Provide a detailed description of the sampling method and a diagram of the sample collection area.
   samples were collected from the drums onsite as a composite for testing (lab# 30357305)

   Diagram of sample collection area:

2. List the results of the analysis of the waste below: Please attach laboratory report

3. Check below if results are in PPM or PPB and note if results are by TCLP vs. Totals.

4. Please analyze for the following parameters indicated by (✔), or contact MEI to perform analysis for you.

PARAMETER	METHOD PREFERENCE	TEST RESULT ☐ PPM ☐ PPB	RANGE (TYPICAL)	PARAMETER	METHOD PREFERENCE	TEST RESULT ☐PPM ☐PPB Check if by TCLP ☐	RANGE (TYPICAL)
☐pH	150.1/9040			☐Arsenic	6010/7060		
☐Oil and Grease	413.1/9070			☐Barium	6010/7080		
☐ PCB	608/8080			☐Cadmium	6010/7130		
☐ TVS	160.4			☐Chromium	6010/7190		
☐ TSS	160.2			☐Lead	6010/7420		
☐ Total Solids	160.3			☐ Mercury	7470		
☐ Flash Point	1010			☐ Selenium	6010/7740		
☐ TCLP	1311	//////////	//////////	☐ Silver	6010/7760		
☐ COD	410.1/410.2			☐RCRA Volatile Organics	8260		
☐ Cyanide	9010			☐RCRA Semi-Vol Organics	8270		
☐ Sulfide	9030			☐			
☐ Spec. Gravity	D1298-99			☐			
☐ BOD 05	SM5210B			☐			

5. Is the waste a hazardous waste as defined in 40 CFR 261? ☐ Yes ☒ No
   IF THE WASTE IS HAZARDOUS IT CANNOT BE DISPOSED AT MEI

6. Is the waste subject to any specific Federal pre-treatment standards? ☐ Yes ☒ No
   If yes, identify industrial category and subpart. Attach copy of PSES/PSNS if available.

   _____

SECTION D – PROCESS DESCRIPTION AND SCHEMATIC

1. Give a detailed description of the manufacturing or waste generating process and a description (if applicable) of waste treatment and stabilization including treatment/stabilization monitoring:

Shaffer Equipment Site in Minden, WV

2. Please attach any MSDS sheets if available.

3. Draw a schematic of the manufacturing or waste generating process here or attach:

4. Additional comments or information:

SECTION E – CERTIFICATION OF GENERATOR

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents and that based upon my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete.

PRINT

COMPANY Tetra Tech Inc

AUTHORIZED REPRESENTATIVE [redacted]

TITLE Project Manager

SIGNATURE [redacted] DATE 4 / 17 / 2020

Generator/Broker Special Waste Processing Warranty Statement

Please initial statement 1, 2 & 3. Consultants, Brokers or other parties may initial and sign on behalf of the generator only if a notarized letter of authorization from the generator permits such party to sign documents on their behalf and legally binds the generator in submission with the Waste Profile (WP).

1. I hereby warrant that the waste described in the attached waste processing application (WP) is not a listed hazardous waste pertinent to 40 CFR 261 and 25 PA Code 261. Furthermore, the described waste is not a mixture of a listed hazardous waste or residue derived from the treatment of a listed hazardous waste (or if it is a residue of a listed hazardous waste, it has been stabilized and meets the requirements of this waste profile) nor is the described waste an excluded hazardous waste unless it meets the conditions of the Waste Analysis and Classification Plan.
2. I hereby specifically warrant that (in lieu of analytical testing and therefore based upon my knowledge of the waste stream and manufacturing process described in the attached waste processing application, WP) the parameters specified in the application and those parameters listed below are not equal to or greater than the allowable levels indicated on the approved Residual Waste Permit for the receiving facility.
3. I hereby certify that (in lieu of analytical testing and therefore based upon my knowledge of the waste stream and manufacturing process described in the attached waste processing application, WP) any parameter of the waste (listed in MEI's Table R-4 of the Residual Waste Permit Waste Analysis Plan) does not exceed the Table R-4 limit for that parameter unless it meets the conditions of the Waste Analysis and Classification Plan.

Acceptable Facility Limits (AFL) for Residual Waste (Except Waste Oil)

RE: Project: Tetra Tech Mindon
Pace Project No.: 30357305

Dear [redacted]:

Enclosed are the analytical results for sample(s) received by the laboratory on April 02, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Long Island
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

[redacted]

ANALYTICAL RESULTS

Project: Tetra Tech Mindon
Pace Project No.: 30357305

Sample: MEI ID 11979 **Lab ID: 30357305001** Collected: 04/02/20 10:26 Received: 04/02/20 16:30 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: Tetra Tech Mindon
Pace Project No.: 30357305

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

[redacted]d at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS[redacted]rix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

[redacted]The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased

[redacted]etween the sample and sample duplicate exceeded laboratory control limits.

[redacted]ample was received or analysis requested beyond the recognized method holding time.

[redacted]

APPENDIX E

REPRESENTATIVE BACKGROUND CONCENTRATIONS

TECHNICAL MEMORANDUM

DERIVATION OF REPRESENTATIVE BACKGROUND CONCENTRATIONS
SHAFFER EQUIPMENT ARBUCKLE CREEK AREA SITE
MINDEN, WEST VIRGINIA

1.0 INTRODUCTION

This appendix presents the evaluation performed to calculate representative background concentrations for the background soil samples collected at the Shaffer Equipment/Arbuckle Creek Area site located in Minden, West Virginia. Ten surface soil samples each were collected from 0 to 0.5 foot and 0.5 to 2 feet below ground surface (bgs), with one field duplicate sample collected from each interval. Seven subsurface soil samples and one field duplicate sample were collected from 2 to 4 feet bgs. It is noted that refusal was encountered at sample locations SB03, SB04, and SB05. Therefore, subsurface soil samples were not collected at these locations. The background samples were analyzed for Target Compound List (TCL) semivolatile organic compounds (SVOCs), TCL SVOCs by Select Ion Monitoring (SIM), TCL Pesticides, TCL polychlorinated biphenyls (PCBs) (aka Aroclors) and PCB congeners, TCL dioxins/furans, and Target Analyte List (TAL) Inorganics. The evaluation consisted of three steps: identification of outliers in the combined soil data sets, comparison of surface soil and subsurface soil datasets to determine if they are statistically significantly different, and calculation of representative background concentrations. The evaluation was prepared following current guidance using U.S. Environmental Protection Agency (USEPA) ProUCL software, a statistical software package that provides varied statistical methods and graphical tools to address environmental sampling and statistical issues.

1.1 DATA MANAGEMENT

A brief discussion of how qualified data and data associated with field duplicates were handled prior to calculating the representative concentrations is presented in this section.

Data with “J” and “Z” qualifiers (indicators that the datum is an estimated value) were treated as positively detected concentrations. In accordance with USEPA guidance, the full detection limit (limit of detection [LOD]), was used to represent non-detected or “U” qualified values (USEPA, 2015). If a chemical was not detected in an environmental medium (i.e., all results were non-detects), a meaningful representative background concentration could not be calculated. In this case, no representative concentration was developed for the chemical.

Field duplicate sample results were counted as one sample in the calculation of representative background concentrations. If both results for a compound in the pair were positively detected, the arithmetic average of the two results was used to represent the sample pair. If the chemical was not detected in either sample, one-half the arithmetic average of the non-detected results was used to

represent the sample pair. In general, if a chemical was not detected in one sample of the pair but was detected in the other sample of the pair, the arithmetic average of one-half the detection limit (LOD) for the non-detected result and the positive result was used to represent the sample pair. However, if the numerical value of the detection limit (LOD for the non-detected result) was greater than the positive detection, then the positive result only was used to represent the concentration in the sample pair.

1.2 OUTLIER ANALYSIS

As a first step in the evaluation, analytical results reported for the background samples were evaluated to determine if any outliers were present in the soil dataset. The outlier analysis was conducted on the combined data sets of surface and subsurface soil.

USEPA's ProUCL software Version 5.1.002 was used to identify potential outliers. This tool uses the Dixon Test for datasets with less than 25 samples and the Rosner Test for datasets with more than 25 samples. If the highest positive detection was determined to be an outlier, that datum was removed and then the given dataset was re-tested for the presence of additional potential outliers. This iterative evaluation of the dataset continued until test results indicated that no potential outliers were present in a dataset. Dixon and Rosner tests were conducted by ProUCL at a 5 percent level of significance; results of the outlier tests are presented in Table 1. ProUCL outputs for the outlier tests are included in Attachment 1.

The null hypothesis for the outlier analysis is that the suspected outlier is still part of the data set. If the test statistic is greater than the critical value at a level of significance of 0.05, then the null hypothesis is rejected. The conclusion is that there is less than a 5 percent probability that identifying the value as an outlier is erroneous.

Q-Q plots were also created with ProUCL and visually inspected for the presence of potential outliers. These plots were prepared to further confirm the results of the outlier tests. Also, because ProUCL software will not perform outlier tests when there are less than three detected concentrations in a dataset, the Q-Q plots were used to identify potential outliers in these cases. Q-Q plots are presented in Attachment 1.

For datasets with both detect and non-detected results, ProUCL can run the outlier tests for either the dataset containing the detected values only or for the dataset containing both detect and non-detect values. In this evaluation, the outlier tests were run for detected values only. Professional judgment was then used to decide if a particular data point was, in fact, an outlier based on both the Q-Q plot and the results of the outlier tests.

Analytical results identified as potential "statistical outliers" based on the Dixon or Rosner tests and/or the Q-Q plots were then further evaluated. A "statistical outlier" is a datum that appears to be inconsistent

with all or most of the other values in a dataset based on some assumed or apparent pattern of these points. The various outlier tests found in the statistical literature are all devoted to identifying "statistical outliers." However, these initial tests and plots should be used as a screening tool. Statistical outliers should not be automatically discarded, but rather further evaluated to determine whether such values should be considered true outliers for a dataset being evaluated.

1.3 COMPARISON OF SURFACE SOIL AND SUBSURFACE SOIL DATA SETS

After outliers were identified and removed from the datasets, the surface soil and subsurface soil datasets for a chemical were compared to determine if the datasets were comparable. If the surface soil and subsurface soil datasets for a chemical were comparable, the datasets for a chemical would be combined into one dataset. If the surface soil and subsurface datasets were not comparable, the datasets would not be combined.

The two-sample hypothesis approach is used when the surface soil parameters (e.g., mean/median, shape, distribution) are being compared with the subsurface soil parameters (e.g., mean/median, shape, distribution). The two-sample Wilcoxon-Mann-Whitney (WMW) test, and Tarone-Ware (TW) test were used to determine if the surface soil data were statistically different from the subsurface soil data. The WMW test and TW test are nonparametric tests and do not require the distribution of the evaluated datasets to be known. The WMW test requires all nondetect values to have the same detection limits whereas the TW test can be used for datasets with multiple detection limits. A five percent significance level ($\rho = 0.05$) was used for all hypothesis tests. The following null and alternative hypotheses were used for each hypothesis test:

H_o: Surface Soil Concentration = Subsurface Soil Concentration

H_A: Surface Soil Concentration ≠ Subsurface Soil Concentration

These tests start with an initial assumption (null hypothesis) that surface soil and subsurface soil concentrations have the same distribution. Statistical tests were performed that attempt to refute the null hypothesis and determine cases where surface soil and subsurface soil concentrations have different distributions. For each statistical test, the chance of making an incorrect decision that surface soil and subsurface soil concentrations were not equal (i.e., false positive result) was set equal to a probability level (alpha) of 0.05. This is interpreted as a 5 percent chance of a test outcome wrongly concluding that surface soil dataset is significantly different than the subsurface soil data set when in fact both data sets belong to a common underlying population. The results of these statistical tests are summarized in Table 2. ProUCL outputs for the statistical hypothesis tests are presented in Attachment 2.

It is always desirable to supplement the test statistics and test conclusions with graphical displays. Q-Q plots are useful for visually comparing two data sets in a single graph. If the surface soil and subsurface

soil data set distributions were identical, the plotted values would lie on a straight line with similar concentration ranges and slopes. Deviations from this line show the differences between the two distributions. If the surface soil and subsurface soil data set distributions are similar, then the scattering of the two data sets will be mixed. If there is grouping of the two data sets, then data sets are most likely different. The Q-Q plots are presented in Attachment 2.

1.4 CALCULATION OF REPRESENTATIVE BACKGROUND CONCENTRATIONS

Background concentrations were determined following USEPA *Guidance for Comparing Background and Chemical Concentrations in Soil for CERCLA Sites* (USEPA, 2002) and the methodologies presented in the ProUCL guidance (USEPA, 2015). The distribution of the dataset for each chemical (normal, gamma, lognormal, or non-parametric) was identified first using several tests (Shapiro-Wilk W-test, Lilliefors test, etc.). The representative concentration was selected from those calculated by ProUCL software based on the data distribution. The 95 percent upper tolerance level (UTL) was selected as the background concentration.

If the results of the dataset comparison for a chemical indicated the concentrations of a chemical in surface soil and subsurface soil were from the same distributions, an UTL was calculated for the combined surface soil and subsurface soil dataset. If the results of the data comparison for a chemical indicated the concentrations of a chemical in surface and subsurface soil were not from the same distribution, then separate UTLs were calculated for surface soil and subsurface soil.

ProUCL is unable to accurately determine a data distribution or calculate meaningful and reliable statistics for datasets with less than four detected values. Therefore, a background concentration was not calculated for datasets that contained less than four detected values.

The estimated background concentrations are presented in Table 3. The ProUCL outputs for the estimated background concentrations are included in Attachment 3 of this appendix.

Notes:
Null Hypothesis H_o, for all parameters: Surface soil mean is equal to subsurface soil mean (Two Sided Test).
A five percent significance level (p = 0.05) was used for all hypothesis tests.
mg/kg = milligrams per kilogram.
ND = Not detected.
ng/kg = nanograms per kilogram
ug/kg = micrograms per kilogram.

Data Qualifiers:
J = The result is an estimated quantity.
J+ = The result is an estimated quantity, but the results may be biased high.
Z = The isomer was identified with an ion ratio outside the 15% theoretical ion abundance ration; the associated numerical value is reported as the Estimated Maximum Possible Concentration (EMPC) and is considered estimated.

Table 3
Estimated Background Concentrations in Soil
Shaffer Equipment/Arbuckle Creek Area Site
Minden, West Virginia

Chemical	Frequency of Detection	Range of Concentrations	Location of Maximum Detected Concentration	Distribution of Data	Background Concentration	Comments
Volatiles (ug/kg)						
2-Butanone	3/27	4.2 - 5.8 J	SB301-20191125-0006	Undefined	NC	Only three detected concentrations.
Acetone	4/27	4.4 J - 72	SB309-20191125-0624	Normal	45	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
m,p-Xylene	2/26	0.91 J - 4 J	SB309-20191125-0624	Undefined	NC	Only two detected concentrations.
Methylcyclohexane	2/27	7.2 J - 11 J+	SB309-20191125-0624	Undefined	NC	Only two detected concentrations.
Methylene chloride	4/26	2.9 J - 3.7 J	SB305-20191125-0624	Normal	4.1	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
o-xylene	1/26	1.9 J	SB309-20191125-0624	Undefined	NC	Only one detected concentration.
Toluene	3/27	1.1 J - 5.7 J	SB309-20191125-0624	Undefined	NC	Only three detected concentrations
Semivolatiles (ug/kg)						
2-Methylnaphthalene	3/27	52 J - 130 J	SB309-20191125-0624	Undefined	NC	Only three detected concentrations
Acenaphthylene	2/27	56 J - 66 J	SB309-20191125-0624	Undefined	NC	Only two detected concentrations.
Acetophenone	1/27	62J	SB304-20191125-0624	Undefined	NC	Only one detected concentration.
Anthracene	2/27	41 J - 69 J	SB304-20191125-0624	Undefined	NC	Only two detected concentrations.
Benzaldehyde	4/27	42 J - 52 J	SB309-20191125-0006	Normal	55.61	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
Benzo(a)anthracene	9/27	43 J - 390	SB304-20191125-0006	Gamma	300	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Benzo(a)pyrene	10/27	44 J - 410	SB304-20191125-0006	Gamma	299	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Benzo(b)fluoranthene	10/26	51 J - 410	SB309-20191125-0624	Lognormal	340	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma and normal Rs.
Benzo(g,h,i)perylene	8/27	41 J - 300	SB304-20191125-0006	Lognormal	292	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma and normal Rs.
Benzo(k)fluoranthene	4/27	53 J - 170	SB304-20191125-0006	Normal	146.5	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
Bis(2-ethylhexyl)phthalate	1/26	210 J	SB305-20191125-0006	Undefined	NC	Only one detected concentration.
Butylbenzylphthalate	1/27	65 J	SB300-20191125-0006	Undefined	NC	Only one detected concentration.
Chrysene	10/26	53 J - 290	SB309-20191125-0624	Lognormal	245	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma and normal Rs.
Dibenzo(a,h)anthracene	2/27	52 J - 72 J	SB304-20191125-0006	Undefined	NC	Only two detected concentrations.
Dibenzofuran	1/27	42 J	SB309-20191125-0624	Undefined	NC	Only one detected concentration.
Dimethylphthalate	27/27	83 J - 380	SB300-20191125-2448	Lognormal	408	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R.
Fluoranthene	11/26	58 J - 500	SB307-20191125-0006	Gamma	535	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Indeno(1,2,3-cd)pyrene	6/27	55 J - 250	SB304-20191125-0006	Gamma	220	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Naphthalene	2/27	98 J - 120 J	SB309-20191125-0624	Undefined	NC	Only two detected concentrations.
Phenanthrene	9/27	46 J - 320	SB304-20191125-0006	Gamma	284	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Phenol	25/27	41 J - 210 J	SB305-20191125-0006	Normal	233	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
Pyrene	11/26	57 J - 430	SB307-20191125-0006	Gamma	445	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Semivolatile-SIM (ug/kg)						
2-Methylnaphthalene	15/23	0.83 J - 18	SB308-20191125-0624	Gamma	18	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Acenaphthene	9/27	1.6 J - 8.5	SB304-20191125-0006	Gamma	6.4	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.

Table 3
Estimated Background Concentrations in Soil
Shaffer Equipment/Arbuckle Creek Area Site
Minden, West Virginia

Chemical	Frequency of Detection	Range of Concentrations	Location of Maximum Detected Concentration	Distribution of Data	Background Concentration	Comments
Acenaphthylene	19/24	0.88 J - 19	SB308-20191125-0624	Undefined	19	Nonparametric UTL
Anthracene	19/27	0.82 J - 57	SB304-20191125-0006	Gamma	46	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Benzo(a)anthracene - surface soil	17/17	0.76 J - 140	SB308-20191125-0624	Gamma	221	Data set follows gamma and lognormal distribution. GOF lognormal R > gamma R. Gamma UTL represent more reasonable estimate than lognormal UTLs.
Benzo(a)anthracene - subsurface soil	4/7	0.79 J - 40.5	SB309-20191125-2448-D	Gamma	87	Data set follows gamma and lognormal distribution. GOF lognormal R > gamma R. Gamma UTL represent more reasonable estimate than lognormal UTLs.
Benzo(a)pyrene - surface soil	18/18	1.2 J - 200	SB307-20191125-0006	Gamma	271	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Benzo(a)pyrene - subsurface soil	3/7	4 - 39.5	SB309-20191125-2448-D	Undefined	NC	Only three detected concentrations.
Benzo(b)fluoranthene - surface soil	18/18	1.9 J - 260	SB307-20191125-0006	Gamma	387	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Benzo(b)fluoranthene - subsurface soil	4/7	1.5 - 68	SB309-20191125-2448-D	Gamma	139	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Benzo(g,h,i)perylene - surface soil	19/19	1.2 J - 140	SB307-20191125-0006	Gamma	223	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Benzo(g,h,i)perylene - subsurface soil	4/7	0.81 - 21.4	SB309-20191125-2448-D	Gamma	40	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Benzo(k)fluoranthene	19/24	1.6 J - 56	SB308-20191125-0006	Gamma	69	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Chrysene - surface soil	18/18	1.1 J - 210	SB307-20191125-0006	Gamma	327	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Chrysene - subsurface soil	4/7	1.7 J - 51.5	SB309-20191125-2448-D	Gamma	111	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal R, = lognormal R. Gamma UTL represent more reasonable estimate than lognormal UTL.
Dibenzo(a,h)anthracene	18/26	0.93 J - 42	SB309-20191125-0624	Gamma	42	Data set follows gamma distribution.
Fluoranthene - surface soil	19/19	0.76 J - 460 J	SB307-20191125-0006	Gamma	667	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Fluoranthene - subsurface soil	4/7	1.4 - 35.5	SB309-20191125-2448-D	Gamma	83	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Fluorene - surface soil	13/20	0.82 J - 18	SB304-20191125-0006	Gamma	20	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Fluorene - subsurface soil	2/7	0.83 J - 1.3 J	SB309-20191125-2448	Undefined	NC	Only two detected concentrations.
Indeno(1,2,3-cd)pyrene	20/24	1.1 J - 68	SB308-20191125-0624	Undefined	68	Nonparametric UTL
Naphthalene	15/23	0.75 J - 13	SB308-20191125-0624	Lognormal	19	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R.
Pentachlorophenol	1/27	0.91	SB306-20191125-0006-D	Undefined	NC	Only one detected concentration
Phenanthrene - surface soil	20/20	0.98 J - 290	SB304-20191125-0006	Gamma	450	Data set follows lognormal and gamma distribution. GOF lognormal R = gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Phenanthrene - subsurface soil	4/7	1.7 - 16	SB309-20191125-2448-D	Gamma	35	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Pyrene - surface soil	19/19	0.84 J - 460 J	SB307-20191125-0006	Gamma	677	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Pyrene - subsurface soil	4/7	1.5 - 40.5	SB309-20191125-2448-D	Gamma	96	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.

Table 3
Estimated Background Concentrations in Soil
Shaffer Equipment/Arbuckle Creek Area Site
Minden, West Virginia

Chemical	Frequency of Detection	Range of Concentrations	Location of Maximum Detected Concentration	Distribution of Data	Background Concentration	Comments
Dioxin/Furan (ng/kg)						
1,2,3,4,6,7,8-HpCDD	13/13	1.9 J - 43	SB308-20191125-0624	Gamma	85	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
1,2,3,4,6,7,8-HpCDF - surface soil	9/10	2.4 J - 25	SB308-20191125-0006	Normal	35	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.

1,2,3,4,7,8-HxCDF	4/14	2.3 J - 5.5	SB308-20191125-0006	Gamma	5.1	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
1,2,3,6,7,8-HxCDD	3/12	1.8 J - 2.2 J	SB302-20191125-0006	Undefined	NC	Only three detected concentrations.
1,2,3,6,7,8-HxCDF	4/14	2.3 J - 3.5 J	SB308-20191125-0006	Gamma	3.5	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
1,2,3,7,8,9-HxCDD	2/14	2.6 J - 6.5	SB308-20191125-0006	Undefined	NC	Only two detected concentrations.
1,2,3,7,8-PeCDD	1/10	4.7 J	SB308-20191125-0006	Undefined	NC	Only one detected concentration.
1,2,3,7,8-PeCDF	4/14	1.6 J - 3.5 J	SB308-20191125-0006	Gamma	3.24	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
2,3,4,6,7,8-HxCDF	6/14	1 J - 3.9	SB302-20191125-0006	Normal	4.4	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
2,3,4,7,8-PeCDF	7/14	0.98 J - 6.9	SB305-20191125-0006	Gamma	8	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
2,3,7,8-TCDD	5/14	0.29 Z - 0.71J	SB308-20191125-0006	Gamma	0.73	Data set follows lognormal and gamma distribution. GOF lognormal R = gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
2,3,7,8-TCDF - surface soil	10/10	0.56 J - 4.6	SB308-20191125-0006	Gamma	10	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
2,3,7,8-TCDF - subsurface soil	2/4	0.54 J - 1.1	SB308-20191125-2448	Undefined	NC	Only two detected concentrations.
OCDD	13/13	63 - 750	SB308-20191125-0006	Normal	1017	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
OCDF	8/14	2.2 J - 36	SB308-20191125-0006	Normal	38	Data set follows normal, lognormal, and gamma distribution. GOF normal R = gamma R > lognormal R. Normal UTL represents more reasonable estimate than gamma UTL.
Total HpCDD	14/14	3.4J - 170 J	SB308-20191125-0006	Gamma	256	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Total HpCDF - surface soil	9/10	2.4 J - 45 J	SB308-20191125-0006	Normal	65	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
Total HpCDF - subsurface soil	1/4	3.8 J	SB308-20191125-2448	Undefined	NC	Only one detected concentration.
Total HxCDD - surface soil	8/9	2.9 J - 45 J	SB308-20191125-0624	Gamma	96	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Total HxCDD - subsurface soil	1/4	1.7 J	SB302-20191125-2448	Undefined	NC	Only one detected concentration.
Total HxCDF - surface soil	9/10	1 J - 54 J	SB305-20191125-0006	Gamma	133	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma, normal Rs. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total HxCDF - subsurface soil	1/4	3.2 J	SB308-20191125-2448	Undefined	NC	Only one detected concentration.
Total PeCDD	6/12	2.3 J - 1 2 J	SB302-20191125-0006	Normal	14.4	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.

Table 3
Estimated Background Concentrations in Soil
Shaffer Equipment/Arbuckle Creek Area Site
Minden, West Virginia

Chemical	Frequency of Detection	Range of Concentrations	Location of Maximum Detected Concentration	Distribution of Data	Background Concentration	Comments
Total PeCDF - surface soil	9/10	1.1 J - 89 J	SB305-20191125-0006	Gamma	257	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Total PeCDF - subsurface soil	1/4	6 J	SB308-20191125-2448	Undefined	NC	Only one detected concentration.
Total TCDD - surface soil	8/8	0.9 J - 17 J	SB305-20191125-0006	Normal	27.6	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma, normal Rs. Normal UTL represents more reasonable estimate than lognormal UTL.
Total TCDD - subsurface soil	2/4	0.515 - 1.6 J	SB308-20191125-2448	Undefined	NC	Only two detected concentrations.
Total TCDF - surface soil	10/10	2 J - 70 J	SB308-20191125-0006	Normal	115	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma, normal Rs. Normal UTL represents more reasonable estimate than lognormal UTL.
Total TCDF - subsurface soil	2/4	2.4 - 13 J	SB308-20191125-2448	Undefined	NC	Only two detected concentrations.
Pesticides (ug/kg)						
4,4'-DDD	16/27	0.39 J - 5	SB309-20191125-0624	Gamma	5.3	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
4,4'-DDE	7/27	0.185 - 3.9 J	SB301-20191125-0006	Gamma	5	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma, normal Rs. Gamma UTL represents more reasonable estimate than lognormal UTL.
4,4'-DDT	5/26	0.24 J - 2.7 J	SB301-20191125-0006	Gamma	4.3	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
Endosulfan II	1/27	1.2 J	SB309-20191125-0624	Undefined	NC	Only one detected concentration.
Endosulfan Sulfate	2/26	1.1 J - 1.3 J	SB300-20191125-0006	Undefined	NC	Only two detected concentrations.
Endrin	5/24	0.25 J - 0.56 J	SB308-20191125-0624	Gamma	0.7	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
gamma-BHC (Lindane)	16/27	0.21 J - 3.9	SB309-20191125-0624	Gamma	3.6	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > normal and lognormal Rs.
PCB Aroclors (ug/kg)						
Aroclor-1260	2/27	11 J - 20 J	SB308-20191125-0006	Undefined	NC	Only two detected concentrations
PCB Congeners (ng/kg)						
Total DiCB	20/20	2.8 J - 335 J	SB306-20191125-0006-D	Gamma	468	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma, normal Rs. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total HpCB	24/24	28 J - 3500 J	SB308-20191125-2448	Gamma	5074	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total HxCB	23/23	36 J - 6400 J	SB305-20191125-0006	Gamma	7472	Data set follows lognormal and gamma distribution. GOF gamma R > lognormal R.
Total MoCB - surface soil	19/19	1.4 J - 210 J	SB308-20191125-0006	Gamma	320	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total MoCB - subsurface soil	5/5	0.49 J - 11 J	SB307-20191125-2448	Normal	27	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
Total NoCB - surface soil	19/19	30 J - 4200 J	SB305-20191125-0006	Gamma	4477	Data set follows lognormal and gamma distribution. GOF lognormal R = gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total NoCB - subsurface soil	7/7	2.2 J - 420 J	SB308-20191125-2448	Gamma	1988	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.

Table 3
Estimated Background Concentrations in Soil
Shaffer Equipment/Arbuckle Creek Area Site
Minden, West Virginia

Chemical	Frequency of Detection	Range of Concentrations	Location of Maximum Detected Concentration	Distribution of Data	Background Concentration	Comments
Total OcCB	23/23	7.6 J - 1000 J	SB308-20191125-2448	Gamma	1567	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
TOTAL PCBs	25/25	100 J - 32000 J	SB300-20191125-0006	Gamma	37042	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total PeCB	23/23	13 J - 2800 J	SB300-20191125-0006	Gamma	3270	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total TeCB	21/21	3.1 - 430 J	SB306-20191125-0006-D	Gamma	470	Data set follows lognormal and gamma distribution. GOF lognormal R = gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total TrCB - surface soil	17/17	1.9 - 350 J	SB306-20191125-0006-D	Gamma	643	Data set follows lognormal and gamma distribution. GOF lognormal R = gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Total TrCB - subsurface soil	7/7	0.33 J - 75 J	SB307-20191125-2448	Gamma	289	Data set follows lognormal and gamma distribution. GOF lognormal R = gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Inorganics (mg/kg)						
Aluminum	27/27	1770 J - 13700 J	SB301-20191125-0624-D	Normal	14587	Data set follows normal, lognormal, and gamma distribution. GOF normal R > gamma and lognormal Rs.
Antimony	4/27	1.3 - 2.4 J	SB309-20191125-0624	Lognormal	1.7	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma and normal Rs.
Arsenic - surface soil	20/20	3.3 - 21	SB308-20191125-0006	Gamma	25	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R = gamma R > normal R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Arsenic - subsurface soil	7/7	3.9 - 8.6	SB309-20191125-2448-D	Gamma	13	Data set follows normal, lognormal, and gamma distribution. GOF normal R = gamma R > lognormal R. Gamma UTL represents more reasonable estimate than normal UTL.
Barium	27/27	27.2 - 183	SB308-20191125-0006	Lognormal	228	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R.
Beryllium	27/27	0.25 J - 1.3	SB308-20191125-0006	Lognormal	1.7	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma R.
Cadmium	19/27	0.08 J - 1.1	SB302-20191125-0006	Lognormal	1.3	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R.
Calcium - surface soil	17/17	231 J - 1900	SB308-20191125-0624	Gamma	2908	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > lognormal and normal Rs.
Calcium - subsurface soil	6/6	161 J - 718	SB307-20191125-2448	Gamma	1601	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > lognormal and normal Rs.
Chromium	26/26	4.8 - 23.9	SB303-20191125-0624	Gamma	27	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R = gamma R > normal R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Cobalt	27/27	3.1 - 20.8	SB303-20191125-0006	Gamma	24	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.

Table 3
Estimated Background Concentrations in Soil
Shaffer Equipment/Arbuckle Creek Area Site
Minden, West Virginia

Chemical	Frequency of Detection	Range of Concentrations	Location of Maximum Detected Concentration	Distribution of Data	Background Concentration	Comments
Copper	26/26	3.5 - 93.4 J	SB309-20191125-0624	Gamma	104	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Cyanide	1/27	0.86 J	SB307-20191125-0006	Undefined	NC	Only one detected concentration
Iron	26/26	6500 - 38900	SB302-20191125-2448	Gamma	39865	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > lognormal and normal Rs.
Lead - surface soil	18/18	13.6 - 194	SB308-20191125-0006	Gamma	315	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > gamma and normal Rs. Gamma UTL represents more reasonable estimate than lognormal UTL.
Lead - subsurface soil	7/7	8.5 - 70.45	SB309-20191125-2448-D	Gamma	190	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R = gamma R > normal R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Magnesium	27/27	237 J - 2290	SB309-20191125-0624	Lognormal	3018	Data set follows lognormal distribution.
Manganese	26/26	123 - 1030	SB302-20191125-2448	Lognormal	1282	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R.
Mercury	14/27	0.02 J - 0.19	SB308-20191125-0624	Lognormal	0.22	Data set follows lognormal distribution.
Nickel	27/27	3.8 - 25.7	SB303-20191125-0006	Gamma	30	Data set follows lognormal and gamma distribution. GOF lognormal R > gamma R. Gamma UTL represents more reasonable estimate than lognormal UTL.
Potassium	23/27	467 - 1750	SB308-20191125-0006	Normal	1935	Data set follows normal, lognormal, and gamma distribution. GOF normal R > lognormal and gamma Rs.
Selenium - surface soil	20/20	0.31 J - 1.5 J	SB308-20191125-0006	Gamma	1.8	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > lognormal and normal Rs.
Selenium - subsurface soil	7/7	0.3 J - 0.78 J	SB308-20191125-2448	Normal	1.1	Data set follows normal, lognormal, and gamma distribution. GOF normal R > lognormal and gamma Rs.
Silver	11/27	0.056 J - 0.26 J	SB308-20191125-0006	Lognormal	0.32	Data set follows normal, lognormal, and gamma distribution. GOF lognormal R > normal and gamma Rs.
Thallium	11/26	0.034 J- 0.091 J	SB306-20191125-0624	Normal	0.11	Data set follows normal, lognormal, and gamma distribution. GOF normal R > lognormal and gamma Rs.
Vanadium	27/27	2.3 J - 28.85	SB301-20191125-0624-D	Normal	29	Data set follows normal, lognormal, and gamma distribution. GOF normal R > lognormal and gamma Rs.
Zinc - surface soil	19/19	19.5 - 180	SB308-20191125-0624	Gamma	241	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > lognormal and normal Rs.
Zinc - subsurface soil	7/7	19.3 - 67.15	SB309-20191125-2448-D	Gamma	140	Data set follows normal, lognormal, and gamma distribution. GOF gamma R > lognormal and normal Rs.

Notes:
1 - Background concentration is the 95 UTL. If data comparison indicated surface soil and subsurface soil concentrations were the same the presented concentrations is for both surface soil and subsurface soil.
If the data comparison indicated concentrations in surface and subsurface soil were different a UTL is presented separately for surface and subsurface soil.
GOF = Goodness-of-fit
mg/kg = milligrams per kilogram.
NC = Not calculated, not enough data pointes to compute meaningful or reliable statistics and estimates.
ng/kg = nanograms per kilogram
R = correlation.
ug/kg = micrograms per kilogram.
UTL = upper tolerance limit.

Data Qualifiers:
J = The result is an estimated quantity.
J+ = The result is an estimated quantity, but the results may be biased high.
Z = The isomer was identified with an ion ratio outside the 15% theoretical ion abundance ration; the associated numerical value is reported as the Estimated Maximum Possible Concentration (EMPC) and is

Dixon's Outlier Test for 2-Butanone

Total N = 27
Number NDs = 24
Number Detects = 3
10% critical value: 0.886
5% critical value: 0.941
1% critical value: 0.988
Note: NDs excluded from Outlier Test

1. Data Value 5.8 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.313

For 10% significance level, 5.8 is not an outlier.
For 5% significance level, 5.8 is not an outlier.
For 1% significance level, 5.8 is not an outlier.

2. Data Value 4.2 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.688

For 10% significance level, 4.2 is not an outlier.
For 5% significance level, 4.2 is not an outlier.
For 1% significance level, 4.2 is not an outlier.

Dixon's Outlier Test for Acetone

Total N = 27
Number NDs = 23
Number Detects = 4
10% critical value: 0.679
5% critical value: 0.765
1% critical value: 0.889
Note: NDs excluded from Outlier Test

1. Data Value 72 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.237

For 10% significance level, 72 is not an outlier.
For 5% significance level, 72 is not an outlier.
For 1% significance level, 72 is not an outlier.

2. Data Value 4.4 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.231

For 10% significance level, 4.4 is not an outlier.
For 5% significance level, 4.4 is not an outlier.
For 1% significance level, 4.4 is not an outlier.

No Outlier Test for m,p-Xylene

No Outlier Test for Methylcyclohexane

Dixon's Outlier Test for Methylene chloride

Total N = 27
Number NDs = 22
Number Detects = 5
10% critical value: 0.557
5% critical value: 0.642
1% critical value: 0.78
Note: NDs excluded from Outlier Test

1. Data Value 8.2 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.849

For 10% significance level, 8.2 is an outlier.
For 5% significance level, 8.2 is an outlier.
For 1% significance level, 8.2 is an outlier.

2. Data Value 2.9 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.019

For 10% significance level, 2.9 is not an outlier.
For 5% significance level, 2.9 is not an outlier.
For 1% significance level, 2.9 is not an outlier.

No Outlier Test for o-xylene

Dixon's Outlier Test for Toluene

Total N = 27
Number NDs = 24
Number Detects = 3
10% critical value: 0.886
5% critical value: 0.941
1% critical value: 0.988
Note: NDs excluded from Outlier Test

1. Data Value 5.7 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.826

For 10% significance level, 5.7 is not an outlier.
For 5% significance level, 5.7 is not an outlier.
For 1% significance level, 5.7 is not an outlier.

2. Data Value 1.1 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.174

For 10% significance level, 1.1 is not an outlier.
For 5% significance level, 1.1 is not an outlier.
For 1% significance level, 1.1 is not an outlier.

Dixon's Outlier Test for 2-Methylnaphthalene

Total N = 27
Number NDs = 24
Number Detects = 3
10% critical value: 0.886
5% critical value: 0.941
1% critical value: 0.988
Note: NDs excluded from Outlier Test

1. Data Value 130 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.128

For 10% significance level, 130 is not an outlier.
For 5% significance level, 130 is not an outlier.
For 1% significance level, 130 is not an outlier.

2. Data Value 52 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.872

For 10% significance level, 52 is not an outlier.
For 5% significance level, 52 is not an outlier.
For 1% significance level, 52 is not an outlier.

No Outlier Test for Acenaphthylene

No Outlier Test for Acetophenone

No Outlier Test for Anthracene

Dixon's Outlier Test for Benzaldehyde

Total N = 27

Number NDs = 23

Number Detects = 4

10% critical value: 0.679

5% critical value: 0.765

1% critical value: 0.889

Note: NDs excluded from Outlier Test

1. Data Value 52 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.300

For 10% significance level, 52 is not an outlier.

For 5% significance level, 52 is not an outlier.

For 1% significance level, 52 is not an outlier.

2. Data Value 42 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.400

For 10% significance level, 42 is not an outlier.

For 5% significance level, 42 is not an outlier.

For 1% significance level, 42 is not an outlier.

Dixon's Outlier Test for Benzo(a)anthracene

Total N = 27

Number NDs = 18

Number Detects = 9

10% critical value: 0.441

5% critical value: 0.512

1% critical value: 0.635

Note: NDs excluded from Outlier Test

1. Data Value 390 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.419

For 10% significance level, 390 is not an outlier.

For 5% significance level, 390 is not an outlier.

For 1% significance level, 390 is not an outlier.

2. Data Value 43 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.063

For 10% significance level, 43 is not an outlier.

For 5% significance level, 43 is not an outlier.

For 1% significance level, 43 is not an outlier.

Dixon's Outlier Test for Benzo(a)pyrene

Total N = 27
Number NDs = 17
Number Detects = 10
10% critical value: 0.409
5% critical value: 0.477
1% critical value: 0.597
Note: NDs excluded from Outlier Test

1. Data Value 410 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.420

For 10% significance level, 410 is an outlier.
For 5% significance level, 410 is not an outlier.
For 1% significance level, 410 is not an outlier.

2. Data Value 44 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.042

For 10% significance level, 44 is not an outlier.
For 5% significance level, 44 is not an outlier.
For 1% significance level, 44 is not an outlier.

Dixon's Outlier Test for Benzo(b)fluoranthene

Total N = 27
Number NDs = 16
Number Detects = 11
10% critical value: 0.517
5% critical value: 0.576
1% critical value: 0.679
Note: NDs excluded from Outlier Test

1. Data Value 560 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.630

For 10% significance level, 560 is an outlier.
For 5% significance level, 560 is an outlier.
For 1% significance level, 560 is not an outlier.

2. Data Value 51 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.092

For 10% significance level, 51 is not an outlier.
For 5% significance level, 51 is not an outlier.
For 1% significance level, 51 is not an outlier.

Dixon's Outlier Test for Benzo(g,h,i)perylene

Total N = 27
Number NDs = 19
Number Detects = 8
10% critical value: 0.479
5% critical value: 0.554
1% critical value: 0.683
Note: NDs excluded from Outlier Test

1. Data Value 300 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.528

For 10% significance level, 300 is an outlier.
For 5% significance level, 300 is not an outlier.
For 1% significance level, 300 is not an outlier.

2. Data Value 41 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.101

For 10% significance level, 41 is not an outlier.
For 5% significance level, 41 is not an outlier.
For 1% significance level, 41 is not an outlier.

Dixon's Outlier Test for Benzo(k)fluoranthene

Total N = 27
Number NDs = 23
Number Detects = 4
10% critical value: 0.679
5% critical value: 0.765
1% critical value: 0.889
Note: NDs excluded from Outlier Test

1. Data Value 170 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.427

For 10% significance level, 170 is not an outlier.
For 5% significance level, 170 is not an outlier.
For 1% significance level, 170 is not an outlier.

2. Data Value 53 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.316

For 10% significance level, 53 is not an outlier.
For 5% significance level, 53 is not an outlier.

For 1% significance level, 53 is not an outlier.

Dixon's Outlier Test for Bis(2-ethylhexyl)phthalate

Total N = 27
Number NDs = 24
Number Detects = 3
10% critical value: 0.886
5% critical value: 0.941
1% critical value: 0.988
Note: NDs excluded from Outlier Test

1. Data Value 210 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.000

For 10% significance level, 210 is not an outlier.
For 5% significance level, 210 is not an outlier.
For 1% significance level, 210 is not an outlier.

2. Data Value 110 is a Potential Outlier (Lower Tail)?

Test Statistic: 1.000

For 10% significance level, 110 is an outlier.
For 5% significance level, 110 is an outlier.
For 1% significance level, 110 is an outlier.

No Outlier Test for Butylbenzylphthalate

Dixon's Outlier Test for Chrysene

Total N = 27
Number NDs = 16
Number Detects = 11
10% critical value: 0.517
5% critical value: 0.576
1% critical value: 0.679
Note: NDs excluded from Outlier Test

1. Data Value 400 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.608

For 10% significance level, 400 is an outlier.
For 5% significance level, 400 is an outlier.
For 1% significance level, 400 is not an outlier.

2. Data Value 53 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.097

For 10% significance level, 53 is not an outlier.
For 5% significance level, 53 is not an outlier.
For 1% significance level, 53 is not an outlier.

No Outlier Test for Dibenzo(a,h)anthracene

No Outlier Test for Dibenzofuran

Rosner's Outlier Test for 1 Outliers in Dimethylphthalate

Total N	**27**
Number NDs	**0**
Number Detects	**27**
Mean of Detects	**181**
SD of Detects	**75.22**
Number of data	**27**
Number of suspected outliers	**1**

NDs not included in the following:

#	Mean	sd	Potential outlier	Obs. Number	Test value	Critical value (5%)	Critical value (1%)

Dixon's Outlier Test for SIM-Pyrene

Total N = 26
Number NDs = 3
Number Detects = 23
10% critical value: 0.374
5% critical value: 0.421
1% critical value: 0.505
Note: NDs excluded from Outlier Test

1. Data Value 460 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.397

For 10% significance level, 460 is an outlier.
For 5% significance level, 460 is not an outlier.
For 1% significance level, 460 is not an outlier.

2. Data Value 0.84 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.020

For 10% significance level, 0.84 is not an outlier.
For 5% significance level, 0.84 is not an outlier.
For 1% significance level, 0.84 is not an outlier.

Dixon's Outlier Test for 1,2,3,4,6,7,8-HpCDD

Total N = 13
Number NDs = 0
Number Detects = 13
10% critical value: 0.467
5% critical value: 0.521
1% critical value: 0.615
Note: NDs excluded from Outlier Test

1. Data Value 43 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.248

For 10% significance level, 43 is not an outlier.
For 5% significance level, 43 is not an outlier.
For 1% significance level, 43 is not an outlier.

2. Data Value 1.9 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.024

For 10% significance level, 1.9 is not an outlier.
For 5% significance level, 1.9 is not an outlier.
For 1% significance level, 1.9 is not an outlier.

Dixon's Outlier Test for 1,2,3,6,7,8-HxCDD

Total N = 13
Number NDs = 9
Number Detects = 4
10% critical value: 0.679
5% critical value: 0.765
1% critical value: 0.889
Note: NDs excluded from Outlier Test

1. Data Value 4 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.818

For 10% significance level, 4 is an outlier.
For 5% significance level, 4 is an outlier.
For 1% significance level, 4 is not an outlier.

2. Data Value 1.8 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.045

For 10% significance level, 1.8 is not an outlier.
For 5% significance level, 1.8 is not an outlier.
For 1% significance level, 1.8 is not an outlier.

Dixon's Outlier Test for OCDD

Total N = 13
Number NDs = 0
Number Detects = 13
10% critical value: 0.467
5% critical value: 0.521
1% critical value: 0.615
Note: NDs excluded from Outlier Test

1. Data Value 750 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.179

For 10% significance level, 750 is not an outlier.
For 5% significance level, 750 is not an outlier.
For 1% significance level, 750 is not an outlier.

2. Data Value 63 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.027

For 10% significance level, 63 is not an outlier.
For 5% significance level, 63 is not an outlier.

For 1% significance level, 63 is not an outlier.

Dixon's Outlier Test for Total HxCDD

Total N = 13
Number NDs = 4
Number Detects = 9
10% critical value: 0.441
5% critical value: 0.512
1% critical value: 0.635
Note: NDs excluded from Outlier Test

1. Data Value 45 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.404

For 10% significance level, 45 is not an outlier.
For 5% significance level, 45 is not an outlier.
For 1% significance level, 45 is not an outlier.

2. Data Value 1.7 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.046

For 10% significance level, 1.7 is not an outlier.
For 5% significance level, 1.7 is not an outlier.
For 1% significance level, 1.7 is not an outlier.

Dixon's Outlier Test for Total PeCDD

Total N = 13
Number NDs = 6
Number Detects = 7
10% critical value: 0.434
5% critical value: 0.507
1% critical value: 0.637
Note: NDs excluded from Outlier Test

1. Data Value 38 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.728

For 10% significance level, 38 is an outlier.
For 5% significance level, 38 is an outlier.
For 1% significance level, 38 is an outlier.

2. Data Value 2.3 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.003

For 10% significance level, 2.3 is not an outlier.

For 5% significance level, 2.3 is not an outlier.

For 1% significance level, 2.3 is not an outlier.

Dixon's Outlier Test for Total TCDD

Total N = 13

Number NDs = 2

Number Detects = 11

10% critical value: 0.517

5% critical value: 0.576

1% critical value: 0.679

Note: NDs excluded from Outlier Test

1. Data Value 37 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.637

For 10% significance level, 37 is an outlier.

For 5% significance level, 37 is an outlier.

For 1% significance level, 37 is not an outlier.

2. Data Value 0.515 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.028

For 10% significance level, 0.515 is not an outlier.

For 5% significance level, 0.515 is not an outlier.

For 1% significance level, 0.515 is not an outlier.

Dixon's Outlier Test for 4,4'-DDT

Total N = 26

Number NDs = 21

Number Detects = 5

10% critical value: 0.557

5% critical value: 0.642

1% critical value: 0.78

Note: NDs excluded from Outlier Test

1. Data Value 2.7 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.447

For 10% significance level, 2.7 is not an outlier.

For 5% significance level, 2.7 is not an outlier.

For 1% significance level, 2.7 is not an outlier.

2. Data Value 0.24 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.041

For 10% significance level, 0.24 is not an outlier.
For 5% significance level, 0.24 is not an outlier.
For 1% significance level, 0.24 is not an outlier.

Dixon's Outlier Test for Total DiCB

Total N = 21
Number NDs = 0
Number Detects = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524
Note: NDs excluded from Outlier Test

1. Data Value 590 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.512

For 10% significance level, 590 is an outlier.
For 5% significance level, 590 is an outlier.
For 1% significance level, 590 is not an outlier.

2. Data Value 2.8 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.003

For 10% significance level, 2.8 is not an outlier.
For 5% significance level, 2.8 is not an outlier.
For 1% significance level, 2.8 is not an outlier.

Rosner's Outlier Test for 1 Outliers in Total HpCB

Total N	**26**
Number NDs	**0**
Number Detects	**26**
Mean of Detects	**1582**
SD of Detects	**2352**
Number of data	**26**
Number of suspected outliers	**1**
NDs not included in the following:	

#	Mean	sd	Potential outlier	Obs. Number	Test value	Critical value (5%)	Critical value (1%)
1	1582	2307	11000	1	4.083	2.84	3.16

For 5% Significance Level, there is 1 Potential Outlier
Therefore, Observation 11000 is a Potential Statistical Outlier

For 1% Significance Level, there is 1 Potential Outlier

Rosner's Outlier Test for 1 Outliers in Total HxCB

Total N	**26**
Number NDs	**0**
Number Detects	**26**
Mean of Detects	**2558**
SD of Detects	**3605**
Number of data	**26**

Test Statistic: 0.010

For 10% significance level, 3.1 is not an outlier.

For 5% significance level, 3.1 is not an outlier.

For 1% significance level, 3.1 is not an outlier.

Dixon's Outlier Test for Calcium

Total N = 23

Number NDs = 0

Number Detects = 23

10% critical value: 0.374

5% critical value: 0.421

1% critical value: 0.505

Note: NDs excluded from Outlier Test

1. Data Value 1900 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.180

For 10% significance level, 1900 is not an outlier.

For 5% significance level, 1900 is not an outlier.

For 1% significance level, 1900 is not an outlier.

2. Data Value 161 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.049

For 10% significance level, 161 is not an outlier.

For 5% significance level, 161 is not an outlier.

For 1% significance level, 161 is not an outlier.

MLE Sd (bias corrected)	54.85	95% Percentile of Chisquare (2kstar)	3.754

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	7.066
Maximum	72	Median	0.01

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	26	95% UTL with95% Coverage	12
Approx, f used to compute achieved CC	1.368	Approximate Actual Confidence Coefficient achieved by UTL	0.736
Approximate Sample Size needed to achieve specified CC	59	95% UPL	10.64
95% USL	12	95% KM Chebyshev UPL	4.87

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

SD in Original Scale	56.4	SD in Log Scale	0.525
95% UTL95% Coverage	524.5	95% UPL (t)	398.5
90% Percentile (z)	313.8	95% Percentile (z)	379.7
99% Percentile (z)	543.1	95% USL	660.1

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	480
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	468
95% USL	480	95% KM Chebyshev UPL	63.67

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	410
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	350
95% USL	410	95% KM Chebyshev UPL	455.1

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	300
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	272
95% USL	300	95% KM Chebyshev UPL	359.5

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

MLE Sd (bias corrected)	84.04	95% Percentile of Chisquare (2kstar)	8.359

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	41.98	Mean	108
Maximum	189	Median	104.5

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	13.57	Mean	120.7

90% Percentile (z)	218	95% Percentile (z)	262
99% Percentile (z)	370.2	95% USL	443.1

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	26	95% UTL with95% Coverage	430
Approx, f used to compute achieved CC	1.368	Approximate Actual Confidence Coefficient achieved by UTL	0.736
Approximate Sample Size needed to achieve specified CC	59	95% UPL	398.5
95% USL	430	95% KM Chebyshev UPL	545.2

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	8.5
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	7.3
95% USL	8.5	95% KM Chebyshev UPL	9.517

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	6.891

	90% Chebyshev UPL	213		95% Percentile	132
	95% Chebyshev UPL	290		99% Percentile	186.4
	95% USL	200			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.

Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.

The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	7	95% UTL with95% Coverage	21.4
Approx, f used to compute achieved CC	0.368	Approximate Actual Confidence Coefficient achieved by UTL	0.302
Approximate Sample Size needed to achieve specified CC	59	95% UPL	21.4
95% USL	21.4	95% KM Chebyshev UPL	36.52

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution (0.05)

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	24	95% UTL with95% Coverage	56
Approx, f used to compute achieved CC	1.263	Approximate Actual Confidence Coefficient achieved by UTL	0.708
Approximate Sample Size needed to achieve specified CC	59	95% UPL	55.75
95% USL	56	95% KM Chebyshev UPL	89.26

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	10.2

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	7.511

95% UTL95% Coverage	59.88	95% UPL (t)	31.26
90% Percentile (z)	17.88	95% Percentile (z)	27.82
99% Percentile (z)	63.74	95% USL	98.11

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	26	95% UTL with95% Coverage	42
Approx, f used to compute achieved CC	1.368	Approximate Actual Confidence Coefficient achieved by UTL	0.736
Approximate Sample Size needed to achieve specified CC	59	95% UPL	37.8
95% USL	42	95% KM Chebyshev UPL	54.47

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Upper Limits for Background Threshold Values

Order of Statistic, r		19	95% UTL with	95% Coverage	460
Approx, f used to compute achieved CC		1	Approximate Actual Confidence Coefficient achieved by UTL		0.623
			Approximate Sample Size needed to achieve specified CC		59
95% Percentile Bootstrap UTL with	95% Coverage	460	95% BCA Bootstrap UTL with	95% Coverage	460
	95% UPL	460		90% Percentile	282
	90% Chebyshev UPL	515.4		95% Percentile	343
	95% Chebyshev UPL	701.7		99% Percentile	436.6
	95% USL	460			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.

Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.

The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	7	95% UTL with95% Coverage	16
Approx, f used to compute achieved CC	0.368	Approximate Actual Confidence Coefficient achieved by UTL	0.302
Approximate Sample Size needed to achieve specified CC	59	95% UPL	16
95% USL	16	95% KM Chebyshev UPL	28.61

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	7	95% UTL with95% Coverage	40.5
Approx, f used to compute achieved CC	0.368	Approximate Actual Confidence Coefficient achieved by UTL	0.302
Approximate Sample Size needed to achieve specified CC	59	95% UPL	40.5
95% USL	40.5	95% KM Chebyshev UPL	71.38

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	4.8
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	4.68
95% USL	4.8	95% KM Chebyshev UPL	6.749

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	26	95% UTL with95% Coverage	4.8
Approx, f used to compute achieved CC	1.368	Approximate Actual Confidence Coefficient achieved by UTL	0.736
Approximate Sample Size needed to achieve specified CC	59	95% UPL	4.625
95% USL	4.8	95% KM Chebyshev UPL	5.202

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.172

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution (0.05)

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	4	95% UTL with95% Coverage	1.1
Approx, f used to compute achieved CC	0.211	Approximate Actual Confidence Coefficient achieved by UTL	0.185
Approximate Sample Size needed to achieve specified CC	59	95% UPL	1.1
95% USL	1.1	95% KM Chebyshev UPL	2.272

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.

Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers

and consists of observations collected from clean unimpacted locations.

The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

MLE Sd (bias corrected)	1.395	95% Percentile of Chisquare (2kstar)	12.47

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.806
Maximum	3.5	Median	0.106

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	14	95% UTL with95% Coverage	6.9
Approx, f used to compute achieved CC	0.737	Approximate Actual Confidence Coefficient achieved by UTL	0.512
Approximate Sample Size needed to achieve specified CC	59	95% UPL	6.9
95% USL	6.9	95% KM Chebyshev UPL	10.05

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	10.89

	95% Chebyshev UPL	1461		99% Percentile	748.8
	95% USL	750			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

MLE Sd (bias corrected)	15.88	95% Percentile of Chisquare (2kstar)	5.76

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	8.804

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.0879	Mean	18.99

90% Percentile (z)	59.27	95% Percentile (z)	97.55
99% Percentile (z)	248.4	95% USL	202.1

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	10	95% UTL with95% Coverage	45
Approx, f used to compute achieved CC	0.526	Approximate Actual Confidence Coefficient achieved by UTL	0.401
Approximate Sample Size needed to achieve specified CC	59	95% UPL	45
95% USL	45	95% KM Chebyshev UPL	90.8

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

	95% Chebyshev UPL	8978		99% Percentile	5960
	95% USL	6400			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	15.01

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!

It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Total HxCDF (sb) was not processed!

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	18.31
Maximum	54	Median	11

90% Percentile (z)	64.86	95% Percentile (z)	116.7
99% Percentile (z)	351.3	95% USL	275.5

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	10	95% UTL with95% Coverage	54
Approx, f used to compute achieved CC	0.526	Approximate Actual Confidence Coefficient achieved by UTL	0.401
Approximate Sample Size needed to achieve specified CC	59	95% UPL	54
95% USL	54	95% KM Chebyshev UPL	99.48

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data appear Approximate Gamma Distribution at 5% Significance Level

Nonparametric Upper Limits for Background Threshold Values

Order of Statistic, r		7	95% UTL with	95% Coverage	420
Approx, f used to compute achieved CC		0.368	Approximate Actual Confidence Coefficient achieved by UTL		0.302
			Approximate Sample Size needed to achieve specified CC		59
95% Percentile Bootstrap UTL with	95% Coverage	420	95% BCA Bootstrap UTL with	95% Coverage	420
	95% UPL	420		90% Percentile	408
	90% Chebyshev UPL	749		95% Percentile	414
	95% Chebyshev UPL	1031		99% Percentile	418.8
	95% USL	420			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

	95% UPL	2720		90% Percentile	2060
	90% Chebyshev UPL	3076		95% Percentile	2390
	95% Chebyshev UPL	4197		99% Percentile	2712
	95% USL	2800			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

MLE Sd (bias corrected)	5.673	95% Percentile of Chisquare (2kstar)	7.668

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	10	95% UTL with95% Coverage	89
Approx, f used to compute achieved CC	0.526	Approximate Actual Confidence Coefficient achieved by UTL	0.401
Approximate Sample Size needed to achieve specified CC	59	95% UPL	89
95% USL	89	95% KM Chebyshev UPL	150.7

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution (0.05)

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	4	95% UTL with95% Coverage	13
Approx, f used to compute achieved CC	0.211	Approximate Actual Confidence Coefficient achieved by UTL	0.185
Approximate Sample Size needed to achieve specified CC	59	95% UPL	13
95% USL	13	95% KM Chebyshev UPL	29.76

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.

Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers

and consists of observations collected from clean unimpacted locations.

The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.368

	95% USL	9.911		99% Percentile (z)	11.02

Nonparametric Distribution Free Background Statistics

Data appear Normal at 5% Significance Level

Nonparametric Upper Limits for Background Threshold Values

Order of Statistic, r		7	95% UTL with	95% Coverage	8.6
Approx, f used to compute achieved CC		0.368	Approximate Actual Confidence Coefficient achieved by UTL		0.302
			Approximate Sample Size needed to achieve specified CC		59
95% Percentile Bootstrap UTL with	95% Coverage	8.6	95% BCA Bootstrap UTL with	95% Coverage	8.6
	95% UPL	8.6		90% Percentile	7.46
	90% Chebyshev UPL	11.12		95% Percentile	8.03
	95% Chebyshev UPL	13.43		99% Percentile	8.486
	95% USL	8.6			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

MLE Mean (bias corrected)	0.361		
MLE Sd (bias corrected)	0.301	95% Percentile of Chisquare (2kstar)	7.617

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.08	Mean	0.318
Maximum	1.1	Median	0.209
SD	0.273	CV	0.858
k hat (MLE)	1.891	k star (bias corrected MLE)	1.705

99% Percentile (z)	1.312	95% USL	1.695

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	1.1
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	1.032
95% USL	1.1	95% KM Chebyshev UPL	1.524

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

	95% Chebyshev UPL	34.88		99% Percentile	23.63
	95% USL	23.9			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Upper Limits for Background Threshold Values

	Order of Statistic, r	7	95% UTL with	95% Coverage	70.45
	Approx, f used to compute achieved CC	0.368	Approximate Actual Confidence Coefficient achieved by UTL		0.302
			Approximate Sample Size needed to achieve specified CC		59
95% Percentile Bootstrap UTL with	95% Coverage	70.45	95% BCA Bootstrap UTL with	95% Coverage	70.45
	95% UPL	70.45		90% Percentile	62.02
	90% Chebyshev UPL	108.8		95% Percentile	66.24
	95% Chebyshev UPL	143.8		99% Percentile	69.61
	95% USL	70.45			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	0.19
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	0.19
95% USL	0.19	95% KM Chebyshev UPL	0.279

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	27	95% UTL with95% Coverage	1750
Approx, f used to compute achieved CC	1.421	Approximate Actual Confidence Coefficient achieved by UTL	0.75
Approximate Sample Size needed to achieve specified CC	59	95% UPL	1750
95% USL	1750	95% KM Chebyshev UPL	2832

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.056	Mean	0.12
Maximum	0.26	Median	0.115

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.034	Mean	0.067

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

APPENDIX F

WIPE SCREENING LEVELS

TECHNICAL MEMORANDUM

DERIVATION OF A RESIDENTIAL WIPE SAMPLE SCREENING LEVEL FOR EXPOSURE TO DUST ON SURFACES CONTAINING PCBS

Introduction

Contaminated surfaces, such as walls and floors in a residence or industrial facility, pose a potential risk to those exposed to these surfaces. However, no standardized approach currently exists for evaluating wipe sample data from contaminated surfaces and evaluating potential risk to human health. This technical memorandum presents a quantitative approach, using standard risk assessment methodology outlined in U.S. Environmental Protection Agency (USEPA) Risk Assessment Guidance for Superfund (USEPA, 1989; USEPA, 2004; USEPA, 2009), to develop a wipe sample screening level for polychlorinated biphenyls (PCBs) that may be present in dust located in a residence.

Method

Risk associated with exposure to PCB-contaminated dust is primarily limited to dermal exposure and incidental ingestion of the dust as a result of hand-to-mouth interaction. While PCBs may have limited volatility, one's exposure to PCBs via inhalation as a result of volatilizing from surface dust is negligible relative to the combined exposure of dermal contact and incidental ingestion. Additionally, exposure to surface dust resulting from dispersion from surfaces and resuspending is also negligible relative to combined exposure of dermal contact and incidental ingestion.

Dermal exposure to the dust results in a chronic daily intake (CDI_{derm}) as defined by the following equation:

$$\mathbf{CDI_{derm} = (C_s * TC * ET * EF * ED * ABS_{derm} * FT) / (BW * AT * UCF)}$$

where:

C_s = Concentration of PCB on tested surface ($\mu g/cm^2$)

TC = Transfer coefficient from surface to skin (cm^2/hr)

ET = Exposure time (hr/day)

EF = Exposure frequency (days/year)

ED = Exposure duration (years)

ABS_{derm} = Dermal absorption factor for PCBs (unitless)

FT = Fraction transferred from surface to skin (unitless)

BW = Body weight (kg)

AT = Averaging time for exposure (days)

UCF = Unit conversion factor (1000 µg/mg)

Incidental ingestion (CDI_{ing}) of dust on one's hands is defined by the following equation:

$$\mathbf{CDI_{ing} = (C_s * SA_{ihand} * FQ_{ihand} * SE * ET * EF * ED * GIABS) / (BW * AT * UCF)}$$

where:

SA_{ihand}= Skin surface area exposed to surface dust and susceptible to ingestion (cm^2)

FQ_{ihand} = Frequency of hand-to-mouth events (hr^{-1})

SE = Saliva extraction factor (unitless)

GIABS = Fractional gastrointestinal absorption (unitless)

The CDI for dermal exposure and ingestion are expressed in units of milligrams PCB per kilogram body weight per day (mg/kg-day).

For the carcinogenic properties of PCBs, AT is defined as a lifetime equal to 70 years (25,550 days). For the noncarcinogenic properties of PCBs, AT is defined as the Exposure Duration (ED x 365 days/year).

The incremental lifetime cancer risk (CR), the incremental probability of an individual developing cancer over a lifetime as a result of exposure to PCBs in surface dust, is defined by the equation:

$$\mathbf{CR = CDI * CSF}$$

where:

CDI = cumulative chronic daily intake of dermal and ingestion pathways (mg/kg-day)

CSF = cancer slope factor [$(mg/kg\text{-}day)^{-1}$]

The likelihood of experiencing a noncarcinogenic effect to PCBs is defined as a ratio between the intake of the PCBs and the threshold dose that is likely to be considered safe, known as the hazard quotient. It is defined by the equation:

$$\mathbf{HQ = CDI / RfD}$$

where:

RfD = reference dose (mg/kg-day)

The CDI for PCBs will differ based on whether it is being evaluated for its carcinogenic or noncarcinogenic toxicity properties because the time over which exposure is averaged (AT) differs.

To determine a screening level for surface concentrations and wipe sample concentrations of PCBs in dust requires algebraic substitution and rearrangements of the above equations to solve for C_s. For the carcinogenic properties of PCBs,

$$\mathbf{CR = C_s * CSF * (EXP_{ch,derm} + EXP_{ad,derm} + EXP_{ch,ing} + EXP_{ad,ing})}$$

where CDI is equal to the product of C_s and the remaining exposure parameters used to derive the CDI. The remaining exposure parameters are constants for this exposure scenario and are defined as:

$EXP_{ch,derm}$ = Exposure constant for dermal exposure to PCBs by child resident

$EXP_{ad,derm}$ = Exposure constant for dermal exposure to PCBs by adult resident

$EXP_{ch,ing}$ = Exposure constant for incidental ingestion of PCBs by child resident

$EXP_{ad,ing}$ = Exposure constant for incidental ingestion of PCBs by adult resident

The units for these intermediate terms are (cm^2-mg PCB / kg body weight-day-µg PCB).

Rearranging the equation to solve for C_s results in the derivation of a screening level for PCBs on a surface for a target risk level (TR):

$$\mathbf{C_s = TR / [\ CSF * (EXP_{ch,derm} + EXP_{ad,derm} + EXP_{ch,ing} + EXP_{ad,ing})\ ]}$$

The EXP terms are derived using a carcinogenic AT of 70 years (25,550 days).

For the noncarcinogenic properties of PCBs,

$$\mathbf{HQ = C_s * (EXP_{ch,derm} + EXP_{ch,ing}) / RfD}$$

Only the exposures for children are evaluated, thus resulting in a more conservative estimate of the screening level. Rearranging the equation to solve for C_s results in the derivation of a screening level for PCBs on a surface for a target hazard quotient (HQ):

$$\mathbf{Cs = HQ * RfD / (EXP_{ch,derm} + EXP_{ch,ing})}$$

The EXP terms are derived using a noncarcinogenic AT equal to the ED of 6 years.

Inhalation Exposure

Risk associated with potential exposure to dust resuspended from surfaces is based on an exposure concentration of the contaminants in air instead of an intake, as calculated for ingestion and dermal

exposures. While inhalation of dust resuspended from surfaces is likely, its contribution to total risk is relatively insignificant relative to ingestion and dermal exposures.

The incremental cancer risk associated with inhalation exposure is defined by the equation (USEPA, 2009):

$$\mathbf{CR_{inh} = EC * IUR}$$

where:

EC = exposure concentration of contaminant in air ($\mu g/m^3$)

IUR = inhalation unit risk [$(\mu g/m^3)^{-1}$]

The hazard quotient associated with inhalation exposure is defined by the equation:

$$\mathbf{HQ_{inh} = EC / RfC}$$

where:

RfC = reference concentration (mg/m^3)

No air concentrations of PCBs in dust have been collected, but an estimate of the air concentration can be derived using a resuspension factor. The EC is defined by the following equation:

$$\mathbf{EC = C_s * K * ET * EF * ED / AT}$$

where:

K = resuspension factor (m^{-1})

The resuspension factor is a ratio between the surface concentration ($\mu g/m^2$) and the air concentration ($\mu g/m^3$), reported in units of m^{-1}. May (2002) describes studies conducted in which concentrations of contaminants in air and on surfaces were measured during various activities. For a construction worker, May (2002) estimated a K of 10^{-4} m^{-1}; for an industrial worker, May (2002) estimated a K of 5 $x10^{-8}$ m^{-1}. The EC is an exposure concentration consistent with exposures for ingestion and dermal pathways and varies for carcinogenic and noncarcinogenic risks based on the averaging time.

As with the ingestion and dermal pathways, the screening level surface concentration for the inhalation pathway ($C_{s,inh}$)is derived similarly.

Noting that EC = C_s * EXP_{inh},

$$\mathbf{C_{s,inh} = TR / [IUR * (EXP_{inh,ch} + EXP_{inh,ad}) * 10{,}000\ cm^2/m^2\ (carcinogens)}$$

$$\mathbf{C_{s,inh} = THQ * RfC / EXP_{inh,ch} * 10{,}000\ cm^2/m^2\ (noncarcinogens)}$$

The screening level for all exposure pathways ($C_{s,all}$) is defined as:

$$\mathbf{C_{s,all} = 1 / (1/C_s + 1/C_{s,inh})}$$

Exposure Parameters

For residential exposure, values for body weights of a child and adult, averaging times, exposure frequency, and exposure duration are equal to the default exposure assumptions used in the derivation of USEPA's Regional Screening Levels (USEPA, 2020). Exposure time to surfaces (direct exposure to dust) is assumed to be 2 hours per day. The Office of Pesticide Programs utilizes an exposure time of 2 hours/day to estimate dermal exposure to pesticides on a hard surface (see *Standard Operating Procedures for Residential Pesticide Exposure Assessment*) for a residential child (USEPA, 2012).

For skin surface area, professional judgment was used to determine which body parts would be exposed to the contaminated surfaces. For dermal contact by the child, it was assumed that the hands, arms, and feet were available for contact with surfaces. For dermal contact by the adult, it was assumed that the hands were available for contact with surfaces. A Transfer Coefficient (TC) was assumed to be 50 percent of the surface areas of these body parts available for contact (Kuusisto, et al., 2006). This results in a TC of 800 cm^2/hr for the child and 500 cm^2/hr for the adult. The fraction transferred from the surface to skin (FT_{skin}) is 50 percent (USEPA, 1987).

For incidental ingestion by the child, to account for hand-to-mouth contact, it was assumed that 100 percent of the surface area of the child's hands was available for contact. For incidental ingestion by the adult, it was assumed that 5 percent of the surface area of the adult's hands, the approximate surface area of three fingers, was available for contact (Kuusisto et al., 2006). The frequency of hand-to-mouth events (FQ_{ihand}) is assumed to be 9.5 events/hr for the child and 0.2 events/hr for the adult (Greene et al., 2004). A salivary extraction factor is also assumed to be 50 percent (Greene et al., 2004).

The following table identifies the fraction of the total average body surface area for the adult and child that each body part comprises.

Fraction of Total Body Surface Area[a]		
Body Part	**Adult[b]**	**Child[c]**
Arms	0.14	0.139
Hands	0.05	0.05
3 Fingers of Hands	0.0025	NA
Feet	0.067	0.064

[a] USEPA, 2011. Exposure Factors Handbook (Chapter 7).
[b]Average of the mean surface areas for men and women.
[c]Mean surface areas of weighted average for first 6 years of life.

Exposed surface areas for the adult and child for dermal contact and incidental ingestion are summarized in the following table.

Exposed Surface Area		
Receptor	**Adult**	**Child**
Total Body Surface Area (cm^2)	19,652	6,365
(SA_{ihand}) (cm^2)	49	318
TC (cm^2/hr)	500	800

The dermal absorption fraction for PCBs (ABS_{derm}) is 0.14 (USEPA, 2004). Fractional gastrointestinal absorption of PCBs (GIABS) is defined as 100 percent. These are the only chemical-specific parameters used in this analysis.

The exposure parameters are summarized in the following table:

Exposure Parameter		Units	Child Resident	Adult Resident
Body Weight	BW	kg	15	80
Averaging Time (carcinogen)	AT_c	days	25,550	25,550
Averaging Time (noncarcinogen)	AT_{nc}	days	2,190	Not Applicable
Exposure Frequency	EF	days/year	350	350
Exposure Duration	ED	years	6	20
Exposure Time	ET	hr/day	2	2
Transfer Coefficient	TC	cm^2/hr	800	500
Skin Surface Area (ingestion)	SA_{ihand}	cm^2	318	49
Frequency of hand-to-mouth events	FQ_{ihand}	hr^{-1}	9.5	0.2
Fraction transferred surface to skin	FT	unitless	0.5	0.5
Dermal Absorption	ABS_{derm}	unitless	0.14	0.14
Fraction Gastrointestinal Absorption	GIABS	unitless	1	1

Toxicity Assessment

A toxicity factor is a numerical expression of a substance's dose-response relationship. For carcinogens, this toxicity factor is the Cancer Slope Factor (CSF). In accordance with USEPA's risk assessment guidance, the evaluation of potential risk to a carcinogen is based on the presumption that cancer is a nonthreshold response. Based on the evaluation that a chemical is a known or probable human carcinogen, a value that defines the relationship between dose and the incidence of cancer is derived. The cancer slope factor is a plausible upper bound estimate of the probability of a carcinogenic response per unit intake of a chemical over a lifetime (USEPA, 1989).

For noncarcinogens, the toxicity factor is the Reference Dose (RfD). In accordance with USEPA's risk assessment guidance, the RfD is an evaluation of a daily exposure level for the human population, including sensitive subpopulations, that is unlikely to pose an appreciable risk of deleterious effects during a lifetime (USEPA, 1989).

After PCBs are released into the environment, PCB mixtures change through transformation, partitioning, and bioaccumulation. The PCBs to which people are exposed are typically different than the original PCB source because of changes in congener and impurity composition. While evaluation for Aroclor mixtures indicates a presence of PCBs, their weathering and transformation over time render the Aroclor data uncertain regarding what compounds receptors are likely to be exposed.

The range of potency for commercial mixtures is used to represent the potency of environmental mixtures. Environmental processes alter mixture composition, thereby altering the toxicity of those original mixtures. Congener information is important in refining the cancer and noncancer risks.

When evaluating potential cancer risk associated with exposure to PCBs, the exposure route, congeners identified, total PCB concentrations, and chlorine composition determine which CSF is applicable. For potential residential exposure to dust, the PCBs are classified as "high risk," which corresponds to the CSF of 2 $(mg/kg\text{-}day)^{-1}$. This CSF is appropriate for food consumption, soil or sediment ingestion, and dust or aerosol inhalation.

A limited number of congeners are classified as dioxin-like carcinogens (DLC). These include the following congeners (USEPA, 2010):

Congener	Toxicity Equivalence Factor
77	0.0001
81	0.0003
105	0.00003
114	0.00003
118	0.00003
123	0.00003
126	0.1
156	0.00003
157	0.00003
167	0.00003
169	0.03
189	0.0003

Multiplication of the toxicity equivalency factor (TEF) by the congener concentration results in an equivalent concentration to the dioxin 2,37,8-tetrachlorodibenzodioxin (2,3,7,8-TCDD).

- The oral CSF for 2,3,7,8-TCDD [1.3×10^5 $(mg/kg\text{-}day)^{-1}$] is applicable to the dioxin toxicity equivalent (TEQ) concentration.
- The IUR for 2,3,7,8-TCDD is [38 $(\mu g/m^3)^{-1}$] is also applicable to the dioxin TEQ concentration.

Dioxin-like PCB congeners also have noncarcinogenic toxicity properties. The corresponding toxicity values are presented in the following table:

Congener	RfD (mg/kg-day)	RfC (mg/m^3)
77	7×10^{-6}	4 x 10-4
81	2.3×10^{-6}	1.3×10^{-4}
105	2.3×10^{-5}	1.3×10^{-3}
114	2.3×10^{-5}	1.3×10^{-3}
118	2.3×10^{-5}	1.3×10^{-3}
123	2.3×10^{-5}	1.3×10^{-3}
126	7×10^{-9}	4×10^{-7}

Congener	RfD (mg/kg-day)	RfC (mg/m^3)
156	2.3×10^{-5}	1.3×10^{-3}
157	2.3×10^{-5}	1.3×10^{-3}
167	2.3×10^{-5}	1.3×10^{-3}
169	2.3×10^{-8}	1.3×10^{-6}
189	2.3×10^{-5}	1.3×10^{-3}

Screening Level

Incorporation of the exposure parameters and toxicity factor into the equations and solving for $C_{s,\ all}$ results in the surface screening levels for a target carcinogenic risk level of 1×10^{-6}, a one-in-one million probability of developing cancer as a result of exposure to surface dust, and a hazard quotient of 1. Wipe samples are collected to determine surface concentrations. Wipe samples are typically collected over a 100 cm^2 area. Therefore, the screening level for the mass of PCBs on a wipe sample, C_{wipe}, is equal to 100 times the screening level, $C_{s,all.}$ Attachment 1 provides the backup calculation for derivation of the screening levels.

Risks are directly proportional to concentration. The USEPA's target risk range is 10^{-4} to 10^{-6}. Therefore, for achieving higher risk levels, wipe sample screening levels increase by an order-of-magnitude for each risk level.

PCB	Carcinogen C_{wipe} 10^{-6} Risk Level ng/100 cm^2	Noncarcinogen C_{wipe} HQ = 1 ng/100 cm^2
High Risk PCBs	5.5	NA
Dioxin Like Congeners (TEQ)	8.4×10^{-5}	NA
77	NA	79
81	NA	26
105	NA	260
114	NA	260
118	NA	260
123	NA	260
126	NA	0.08
156	NA	260
157	NA	260
167	NA	260
169	NA	0.26
189	NA	260

EXP_{inh} = (K * ET * EF * ED) / (ATnc * UCF)

Expoure Constant Child	EXP_{ch}	0.00889	
Expoure Constant Adult	EXP_{ad}	NA	

EXP_{ch} = $EXP_{derm,ch}$ + $EXP_{ing,ch}$ cm2 / [kg bw - d - ug/mg]

EXP_{ad} = $EXP_{derm,ad}$ + $EXP_{ing,ad}$ cm2 / [kg bw - d - ug/mg]

Reference Dose	RfD	(mg/kg-day)	2.30E-08
Reference Concentration	RfC	mg/m^3	1.30E-06
Hazard Quotient	HQ	unitless	1.00E+00

Surface Concentration of Dust (ing/derm)	C_s	ug/cm^2	2.59E-06

C_s = [THQ * RfD] / (EXP_{ch})

Surface Concentration of Dust (inh)	$C_{s,inh}$	ug/cm^2	1.63E-02

$C_{s,inh}$ = THQ * RfC / ($EXP_{inh,ch)}$ * 10,000 cm^2/m^2)

Surface Concentration of Dust (all)	Cs,all	ug/cm^2	2.59E-06

Cs,all = 1 / (1/C_s + 1/$C_{s,inh}$)

			Ing/Derm	Inh	All
Wipe Sample Concentration	C_{wipe}	$ug/100\ cm^2$	2.59E-04	1.63E+00	2.59E-04
		$ng/100\ cm^2$	2.59E-01	1.63E+03	2.59E-01

C_{wipe} = 100 * C_s

GLOSSARY OF DATA QUALIFIER CODES

Validation Qualifiers: In order of descending precedence, these qualifiers may apply to a result.

R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
B	The result is presumed a blank contaminant. This qualifier is used only for drinking water samples.
Z	The isomer was identified with an ion ratio outside the 15% theoretical ion abundance ratio; the associated numerical value is reported as the Estimated Maximum Possible Concentration (EMPC) and is considered estimated.
