Upcoming Cleanup
EPA has begun construction for the source area cleanup project. The work includes excavating TCE-contaminated soil above cleanup levels down to bedrock at approximately 30 to 35 feet below ground surface. The TCE source area is located at the southern end of the landfill, with dimensions of approximately 100 feet by 50 feet. Excavated contaminated soils and debris will be disposed of at an approved offsite disposal facility. Excavated areas will be backfilled with clean fill. The project is expected to last 5-6 months.

What to Expect
The community should expect to see dump trucks, excavators, and other heavy equipment needed to prepare the site for excavation, remove contaminated soil and import clean soil on the site. EPA will take measures to minimize nuisances like noise, dust, and light pollution.

Work Schedule:
The construction team's regular workdays will be from 7:00am to 4:00pm Monday through Friday.

Cleanup Steps and Estimated Timeline

| Mobilization and Site Prep | → | Excavation and Off-Site Disposal | → | Restoration and Demobilization |

Approximate Timeline: 5-6 months
Typical Work Hours: Monday through Friday, 7:00 a.m. to 4:00 p.m.

Increased truck traffic along Persimmon Lane is anticipated. EPA will minimize traffic impacts by:

- Adding signage and spotters

- Working with Loudoun County Public Schools to minimize disruptions during school bus hours

- Notifying community of any changes to traffic patterns
