Analytical data in this report were reviewed to determine analytical limitations of the data based on specific quality control criteria. This review is performed on a laboratory signed data data package. The laboratory signature indicates that the laboratory has reviewed and has certified that the information provided in the data package are correct and complete.
The results of the review are an interpretation of the reported quality control information provided by the laboratory in comparison to the specified validation criteria for the project. Laboratory calculations have been verified as part of the validation. Form 1's and/or analytical results sheets are annotated with the results of the validation.

This evaluation was conducted in accordance with the requested validation guidelines, project requirement and the analytical method. Findings from this validation should be considered when using the analytical data.

The inorganic and general chemistry findings are based upon the assessment of the following, where applicable:

Sample Preservation
Holding Times
Calibration (Initial and Continuing)
Blanks (lab and field)
ICP MS Tune (if applicable)
ICP MS Internal Standards (if applicable)
ICP Spectral Interference Check sample
Laboratory Control Sample (LCS)
Duplicate Sample Analysis
Spike Sample Analysis
Graphite Furnace Atomic Absorption (GFAA) QC (if applicable)
ICP Serial Dilution
Field Duplicates (if applicable)

This report consists of the validation findings. This is followed by annotated Form 1's. The final section of the report is supporting documentation. This consists of the Chain of Custody, laboratory case narrative and the validation worksheets.

FINDINGS

Metals ICP

(1) Sample Preservation/Holding Time

All criteria were met.

(2) Initial Calibration

The 11/20/20 low level verification sample percent recovery for lead (124%) was greater than the upper control limit. For the following samples, qualify lead positive results as estimated "J".

IDA001:DU-A1	solid	IDA001:DU-D3	solid
IDA001:DU-B1	solid	IDA001:DU-E3 TE	solid
IDA001:DU-E1	solid	IDA001:DU-E3 TS	solid

IDA001:DU-B3	solid	IDA001:DU-E4	aqueous
IDA001:DU-C3	solid	IDA001:DU-A5	solid

(3) Continuing Calibration

All criteria were met.

(4) Field and Lab Blanks

All criteria were met.

(5) ICP Spectral Interference Check Sample (SIC)

All criteria were met.

(6) Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All criteria were met.

(7) Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

All criteria were met.

(8) ICP Serial Dilution

All criteria were met.

(9) Compound Quantitation

Positive results less than the reporting limit are qualified as estimated "J" due to uncertainty near the detection limit.

NOTES

Metals - ICP

A. Sample Receipt/Sample Preservation/Hold Time

There are no notes for this item.

B. Initial Calibration

There are no notes for this item.

C. Continuing Calibration

There are no notes for this item.

D. Field and Lab Blanks

There are no notes for this item.

E. ICP Spectral Interference Check Sample (SIC)

The analytical method (SW 846 6010D) requires a Spectral Interference Check (SIC) and not an ICS. The lab uses a mixed element SIC. This is run on at the beginning of an analytical run or once every 12 hours of continuing sample analysis. The SIC is to check that the instrument is free from interefence from elements typcially observed in high concentrations (arsenic and lead are not applicable via 6010D). ccording to the lab SOP, the concentration measured for any target analytes must be < 2x the MQL. Data are not qualified on this basis.

F. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

For IDA001:DU-E4, IDA001:DU-B4 TE and IDA001:DU-A5 MS/MSD, the percent recovery and relative percent difference for lead is not applicable because the original sample concentration is greater than 4x the spike amount. Data are not qualified on this basis.

For IDA001:DU-A5 MS/MSD, the percent recovery and relative percent difference for arsenic is not applicable because the original sample concentration is greater than 4x the spike amount. Data are not qualified on this basis.

For QC batch 168036 (aqueous), the MS/MSD was not a project sample in this sample delivery group. All arsenic and lead MS/MSD items were within lab control limits. No raw data was provided for this MS/MSD. Data are not qualified on this basis.

G. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

There are no notes for this item.

H. ICP Serial Dilution

There are no ICP serial dilutions for the TCLP (aqueous) samples. All aqueous matrix spike recoveries and relative percent differences were within control limits. Data are not qualified on this basis.

Case Narrative

Samples for the above noted Work Order were received on 11/13/2020. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting. A copy of the laboratory's scope of accreditation is available upon request.

With the following exceptions, all sample analyses achieved analytical criteria.

Analytical data in this report were reviewed to determine analytical limitations of the data based on specific quality control criteria. This review is performed on a laboratory signed data data package. The laboratory signature indicates that the laboratory has reviewed and has certified that the information provided in the data package are correct and complete. The results of the review are an interpretation of the reported quality control information provided by the laboratory in comparison to the specified validation criteria for the project. Laboratory calculations have been verified as part of the validation. Form 1's and/or analytical results sheets are annotated with the results of the validation.

This evaluation was conducted in accordance with the requested validation guidelines, project requirement and the analytical method. Findings from this validation should be considered when using the analytical data.

The inorganic and general chemistry findings are based upon the assessment of the following, where applicable:

Sample Preservation
Holding Times
Calibration (Initial and Continuing)
Blanks (lab and field)
ICP MS Tune (if applicable)
ICP MS Internal Standards (if applicable)
ICP Spectral Interference Check sample
Laboratory Control Sample (LCS)
Duplicate Sample Analysis
Spike Sample Analysis
Graphite Furnace Atomic Absorption (GFAA) QC (if applicable)
ICP Serial Dilution
Field Duplicates (if applicable)

This report consists of the validation findings. This is followed by annotated Form 1's. The final section of the report is supporting documentation. This consists of the Chain of Custody, laboratory case narrative and the validation worksheets.

Blank	Constituent	Conc. (ug/L)	Conc. (mg/kg)
CCB 11/26/20 00:26	lead	2.04 J	0.102 J

For the following samples that are associated with the blank(s), qualify as follows:

Sample result	Action
<RL	RL "U"

RL – Reporting Limit; BLK - Blank
Dilution and percent solids are taken into account when applying blank.

(5) ICP Spectral Interference Check Sample (SIC)

All criteria were met.

(6) Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All criteria were met.

(7) Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

All criteria were met.

(8) ICP Serial Dilution

For serial dilution IDA001:DU-E6, the percent difference for arsenic (36%) and lead (12%) was greater than the lab control limit of 10%. It is not known if all samples in the sample delivery group are sufficiently similar as the sample selected for the serial dilution. For sample IDA001:DU-E6 qualify positive results of these constituents as estimated "J" and nondetected results as estimated "UJ".

(9) Compound Quantitation

Positive results less than the reporting limit are qualified as estimated "J" due to uncertainty near the detection limit.

NOTES

Metals - ICP

A. Sample Receipt/Sample Preservation/Hold Time

There are no notes for this item.

B. Initial Calibration

There are no notes for this item.

C. Continuing Calibration

For continuing calibration (CCV) 11/29/20 23:47, the percent recovery of arsenic (113%) and lead (115%) was outside the control limit of 110%. The only sample associated with this CCV is the post digestion spike. Data are not qualified on this basis.

D. Field and Lab Blanks

There are no notes for this item.

E. ICP Spectral Interference Check Sample (SIC)

The analytical method (SW 846 6010D) requires a Spectral Interference Check (SIC) and not an ICS. The lab uses a mixed element SIC. This is run on at the beginning of an analytical run or once every 12 hours of continuing sample analysis. The SIC is to check that the instrument is free from interefence from elements typcially observed in high concentrations (arsenic and lead are not applicable via 6010D). ccording to the lab SOP, the concentration measured for any target analytes must be < 2x the MQL. Data are not qualified on this basis.

F. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

For IDA001:DU-C8 and IDA001:DU-E6 MS/MSD, the percent recovery and relative percent difference for lead is not applicable because the original sample concentration is greater than 4x the spike amount. Data are not qualified on this basis.

G. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

There are no notes for this item.

H. ICP Serial Dilution

There are no ICP serial dilutions for the TCLP (aqueous) samples. All aqueous matrix spike recoveries and relative percent differences were within control limits. Data are not qualified on this basis.

This accounts for the elevated reporting limits. Data are not qualified on this basis.

J. Field Duplicates

No field duplicates were associated with this sample delivery group.

K. Sample Preparation

Samples were homogenized and sieved using a No. 10 sieve (2 mm).

For sample IDA001:DU-C6, the relative percent difference (RPD) for the percent moisture duplicate (40.2%) was greater than the control limit of 10%. The information for the sample duplicate on the QC summary form did not match the raw data. The RPD based on the raw data was 38%. Data are not qualified on this basis.

All criteria were met.

(2) Preliminary Evaluation

All criteria were met.

(3) Extraction Requirements

All criteria were met.

(4) Physical Requirements

For sample IDA001:DU-C6, the TCLP raw data has a temperature range of 22.94 C to 21.92C. This is incorrect. According to the raw data for the other TCLP samples, the temperature range for thermometer 170724851 is 23.46C to 22.85C. Data were not qualified on this typographical error.

Case Narrative

Samples for the above noted Work Order were received on 11/17/2020. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting. A copy of the laboratory's scope of accreditation is available upon request.

With the following exceptions, all sample analyses achieved analytical criteria.

Metals:
Samples were homogenized and sieved using a No. 10 sieve (2.00mm) prior to analyses.

Analytical data in this report were reviewed to determine analytical limitations of the data based on specific quality control criteria. This review is performed on a laboratory signed data data package. The laboratory signature indicates that the laboratory has reviewed and has certified that the information provided in the data package are correct and complete. The results of the review are an interpretation of the reported quality control information provided by the laboratory in comparison to the specified validation criteria for the project. Laboratory calculations have been verified as part of the validation. Form 1's and/or analytical results sheets are annotated with the results of the validation.

This evaluation was conducted in accordance with the requested validation guidelines, project requirement and the analytical method. Findings from this validation should be considered when using the analytical data.

The inorganic and general chemistry findings are based upon the assessment of the following, where applicable:

Sample Preservation
Holding Times
Calibration (Initial and Continuing)
Blanks (lab and field)
ICP MS Tune (if applicable)
ICP MS Internal Standards (if applicable)
ICP Spectral Interference Check sample
Laboratory Control Sample (LCS)
Duplicate Sample Analysis
Spike Sample Analysis
Graphite Furnace Atomic Absorption (GFAA) QC (if applicable)
ICP Serial Dilution
Field Duplicates (if applicable)

This report consists of the validation findings. This is followed by annotated Form 1's. The final section of the report is supporting documentation. This consists of the Chain of Custody, laboratory case narrative and the validation worksheets.

NOTES

Metals - ICP

A. Sample Receipt/Sample Preservation/Hold Time

There are no notes for this item.

B. Initial Calibration

For the 12/2/20 14:22 low level verification sample, the arsenic percent recovery (126%) was greater than the control limit of 120%. This LLICV was applicable to only the MS/MSD performed on a sample that was not in project sample in this sample delivery group. Data are not qualified on this basis.

C. Continuing Calibration

There are no notes for this item.

D. Field and Lab Blanks

There are no notes for this item.

E. ICP Spectral Interference Check Sample (SIC)

The analytical method (SW 846 6010D) requires a Spectral Interference Check (SIC) and not an ICS. The lab uses a mixed element SIC. This is run on at the beginning of an analytical run or once every 12 hours of continuing sample analysis. The SIC is to check that the instrument is free from interefence from elements typcially observed in high concentrations (arsenic and lead are not applicable via 6010D). ccording to the lab SOP, the concentration measured for any target analytes must be < 2x the MQL. Data are not qualified on this basis.

F. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

For QC batch 168178 (solid), the MS/MSD was not a project sample in this sample delivery group. The arsenic MS was not within lab control limits. The arsenic MSD percent recovery and relative percent difference was within lab control limits. All leadMS/MSD items were within lab control limits. No raw data was provided for this MS/MSD. Data are not qualified on this basis.

G. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

There are no notes for this item.

H. ICP Serial Dilution

The solid ICP serial dilution was not performed on a project sample in this sample delivery group. No raw data was provided for the ICP serial dilution. The percent differences did not meet lab control limits. Since this is not a project sample in this sample delivery group, data are not qualified on this basis.

There are no ICP serial dilutions for the TCLP (aqueous) samples. All aqueous matrix spike recoveries and relative percent differences were within control limits. Data are not qualified on this basis.

I. Compound Quantitation

The following sample(s) were analyzed at the listed dilution for the noted parameter(s).

Sample ID	Parameter(s)	Dilution Factor	Matrix
IDA001:DU-F0	arsenic and lead	10	solid
IDA001:DU-F1	arsenic and lead	10	solid

IDA001:DU-F3	arsenic and lead	10	solid
IDA001:DU-F4	arsenic and lead	10	solid
IDA001:DU-F5	arsenic and lead	10	solid
IDA001:DU-F7	arsenic and lead	10	solid
IDA001:DU-F7 TE	arsenic and lead	10	solid
IDA001:DU-F7 TS	arsenic and lead	10	solid
IDA001:DU-F6	arsenic and lead	10	solid
IDA001:DU-F8	arsenic	10	solid
	lead	100	solid
IDA001:DU-F9	arsenic	10	solid
	lead	100	solid

This accounts for the elevated reporting limits. Data are not qualified on this basis.

J. Field Duplicates

No field duplicates were associated with this sample delivery group.

K. Sample Preparation

Samples were homogenized and sieved using a No. 10 sieve (2 mm).

Case Narrative

Samples for the above noted Work Order were received on 11/19/2020. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting. A copy of the laboratory's scope of accreditation is available upon request.

With the following exceptions, all sample analyses achieved analytical criteria.

Hi Terrie,

1. The result presented on the data sheets are dilution corrected for the dilution factor. So the true raw value for sample 20111754-01A would be 0.59899 ppm, which is well within the LDR of 5 ppm. The uncorrected raw value is uploaded to our LIMS, where it is multiplied by the dilution factor and corrected for the preparation factor from the sample digestion. Same applies to the remaining samples identified.

3. Please see attached CCV 11-30-20 @ 23:52

4. In accordance with method 1311, the matrix spikes must be spiked prior to pH adjustment of the sample to <2. The acid is then added at time of sample digestion, after the spikes were added.

5. The MDL and PQL are adjusted for the preparation factor where 2.5 ml of sample is prepared to a final volume of 27.5 mL, as opposed to the base preparation volume of 25 mL. Therefore all the MDL/PQL are 10x higher.

6. Sample -21A 12/1/20 @ 3:09 PM

    a. 0.104472 * 100 = 10.4472 mg/L * 0.05L = 0.52236 mg / 0.000725 Kg = 720 mg/Kg

    b. 720 mg/Kg is corrected for 18% moisture, so 720 / 0.82 = 880 mg/Kg-dry

Subject: Re: [EXTERNAL] - Re: 20111754 IDA001

Hello Everyone

Thank you very much for getting back to me timely. I have finished my review of the metals portion of the data package. I have additional questions. I have followup questions on the responses that you gave me below.

FOLLOWUP QUESTIONS

ALS answer:

1. . We do not provide LDR summary forms. LDRs are processed with each run and presented in the raw data. A specifications sheet is attached for aid in evaluation.

Question - the LDR sheet shows that the LDR for both arsenic and lead is 5 mg/L. That corresponds with the LDR2 raw data. My question is for the following samples, the raw data result for lead was greater than 5 ppm

Samples 01A, 03A, 05A, 06A, 07A, 09A, 11A, 15A, 17A, 21A, 23A (all at a 10x dilution) and 21A, 23A 9at a 100x dilution).

I would assume that all of these results were outside the linear range of the calibration for lead. Please explain how you can use these results with an LDR of 5 ppm.

ALS Answer:

1. 2 Raw data for TCLP begins on page 443 of the data package.

Question - i have attached a copy of page 443 of my report (pdf). It is not raw data. I have attached a spreadsheet that shows the information I need to validate the TCLP data. Please provide this information.

NEW QUESTIONS AFTER REVIEW OF METAL DATA

1. The raw data for CCV 11/30/20 23:52 is missing. Please provide the raw data.

2 The prep batch sheet does not have the pH listed for sample 22A. Please provide pH.

3. The detection limit form has the following info (Pb MDL = 0.0013 andMRL = 0.005; As MDL = 0.0016 and MRL = 0.005). The analytical result sheet for a dilution of 1 (aqueous sample) has the following info (Pb MDL = 0.013 and MRL = 0.05; As MDL = 0.016 and MRL = 0.05). I also see in the calculations that a factor of 10 is used. Please explain.

4. Please check 21A for lead (12/1/20 3:09 pm). Did the lab use 100 as the DF when calculating the final result. I cannot replicate the 880 using a DF of 100.

Those are my questions on the metals portion. I will review the % solids and the TCLP when i get the info. Just checking - you have not QC info for sample homogenization. I never get any for particle size.

FYI - i will state in my report the following is a deficiency in the data package. There is no summary for the sample specific Internal standards.

Finally, please provide only the info that is requested and DO NOT reissue the data package. I have completed my review of this data package. IF you were to reissue the data package, i would have to charge the client 2x for this data package.

thanks so much for all of your help

The ICSA is processed as described in 6010D. The SOP needs an update as the "ICSA" is actually the "SIC".
"0" is non-detect <MDL.

Good Morning

I am starting my review of the data package 20111754. I am just starting so I may have more detailed questions later but I have some general ones now.

The following is information that I did not see in the data package. If it is present, please let me know where to find it. If not, it is info that I will need.

1. LDR summary form
2. LLOQ summary form
3. IS summary form
4. raw data for TCLP

Also, is your ISCA really the SIC to check the IEC. I looked at your SOP in the QAPP. It states that you use <1/2 MQL for non-spiked analytes (i.e., As, and Pb). Do I use the MDL for your MQL?

On your summary forms does a "0" mean non detect?

This is it for now. I am just going through quickly and printing info out to review. I will follow up with additional questions. I think once we get it ironed out on this first package the others will not have many questions.

thanks for all your help
