RE: Decision Unit Sampling Soil Data Package for USS lead Operable Unit 1; Zone 1, East Chicago, Indiana; IDA001.0011

Dear Mr. Alcamo:

Enclosed is the Decision Unit soil sampling data package for the U.S. Smelter and Lead Refinery, Inc. (USS. Lead) Superfund Site Operable Unit 1 (OU1) Zone 1 located in East Chicago, Indiana (Site). Sampling was performed by Hull & Associates, LLC (Hull) on behalf of Industrial Development Advantage LLC (IDA) in November 2020 in accordance with the approved 2020 Work Plan for Decision Unit Soil Sampling.

Sampling was based on a Geospatial Sample/Incremental Composite Sampling (ICS) Design with the Site divided into 55 Decision Units as shown on Figure 1. Within each decision unit, sub-sample locations were arrayed in a "five on a die" pattern for compositing five (5) 0.0 to 1.0-foot depth interval sub-samples into a single sample within each decision unit for laboratory analysis of total arsenic and total lead. As the maintenance building and parking lot in the east-central portion of the Site will remain post-development and soil beneath the hardscape materials will not be excavated, the sampling pattern was modified such that sub-samples were collected from existing green space areas in affected decision units per the approved work plan. Triplicate sub-samples were collected within nine (9) of the decision units for statistical evaluation for determining a confidence level. Each composited decision unit sample was also analyzed for toxicity characteristic leaching procedure (TCLP) extraction for arsenic and lead to assist with determining the need for on-Site treatment (e.g., stabilization) prior to off-Site disposal, as applicable. Additional waste characterization sampling was performed at select sample locations (E2-3, C5-3, and B8-3) to provide waste disposal facilities with data to support/evaluate off-Site disposal options.

Any aggregate material for road subbases or in former building areas, large roots or anthropogenic materials (plastic, metals, etc.) was discarded from the sample. Only material below the aggregate was submitted to the laboratory in accordance with the Work Plan. Samples were sent to ALS Environmental USA in Holland, Michigan under chain-of-custody for processing and analyses. Hull utilized the services of ECT.CON Inc for third-party data validation. Third-party data validation was completed on all analyses with the exception of ALS Work Order 20111764 associated with samples that were collected and analyzed to provide additional waste characterization data to disposal facilities.

The decision unit soil sampling data package includes the following information:

- Site Plan showing Layout of Decision Units;
- Tabulated arsenic and lead soils data and TCLP laboratory data;
- Electronic (pdf) copy of ALS Work Order 20111251 Level IV Data Report;

Case Narrative

Samples for the above noted Work Order were received on 11/13/2020. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting. A copy of the laboratory's scope of accreditation is available upon request.

Case Narrative

Samples for the above noted Work Order were received on 11/13/2020. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting. A copy of the laboratory's scope of accreditation is available upon request.

With the following exceptions, all sample analyses achieved analytical criteria.

Metals:
Samples were homogenized and sieved using a No. 10 sieve (2.00mm) prior to analyses.

Batch 168040, Method SW6010D, Sample 20111251-35AMS: The MS recovery was outside of the control limit; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte: Pb

Batch 168042, Method SW6010D, Sample 20111251-43AMS: The MS recovery was outside of the control limit; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte: Pb

Batch 168037, Method SW6010D, Sample 20111251-42AMSD: The MSD recovery was outside of the control limit; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte: Pb

Batch 168040, Method SW6010D, Sample 20111251-35AMSD: The MSD recovery was outside of the control limit; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte: Pb

Batch 168042, Method SW6010D, Sample 20111251-43AMSD: The MSD recovery was outside of the control limit; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte: As, Pb

Wet Chemistry:

No other deviations or anomalies were noted.

Case Narrative

Samples for the above noted Work Order were received on 11/17/2020. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting. A copy of the laboratory's scope of accreditation is available upon request.

With the following exceptions, all sample analyses achieved analytical criteria.

Metals:
Samples were homogenized and sieved using a No. 10 sieve (2.00mm) prior to analyses.

Batch 168176, Method SW6010D, Sample 20111574-33AMS: The MS recovery was outside of the control limit; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte: As, Pb

Batch 168177, Method SW6010D, Sample 20111574-59AMS: The MS recovery was outside of the control limit; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte: Pb
