1 MR. RODRIGUEZ: Hi, good afternoon, 2 everyone. Welcome to the meeting to talk 3 about Lead Zone 1. My name is Charles Rodriguez. I'm the community involvement 4 coordinator with the U.S. Environmental 5 Protection Agency. So thank you, everybody, 6 for being here today. 7 If you can move to the next slide. 8 Thank 9 you. So today we'll be talking about the 10 upcoming cleanup at Zone 1, modified Zone 1, 11 12 which includes the former West Calumet Housing Complex, so there will be a couple of 13 presentations. The first one will be from 14 15 EPA, and the second one will be from IDA, the 16 developer. And after both presentations, we 17 will have a Q and A. So presentation. Then 18 a presentation. And then the question and answer period. 19 20 If you have any questions, please hold 21 them until the Q and A session. And when 22 that session starts, just raise your hand and 23 we'll bring a microphone to you. We have our court reporter here that's 24 25 going to be transcribing this meeting. The

meeting will be available at the USS Lead
website from EPA. The website address is
right here. And the website address is also
available on the fact sheet at the front
desk, and we will have a slide at the end
with our URL website.

I'm going to turn it over to Thomas
Alcamo, who is the project manager for U.S.
EPA Region 5.

MR. ALCAMO: Let's see if I can get this technology to work. Hello, everybody. How ya doing?

So we're here tonight to talk about the Zone 1 cleanup. It should be starting later this summer. Just to give you an overview of Zone 1 -- let's see if I can get this laser pointer to work. There's Zone 1 right there. There's Zone 2, Zone 3. Zones 2 and 3 have been cleaned up already.

Zone 1 is where the former West Calumet
Housing Complex was. We split that site into
three different zones. We call it operable
units, so you can think of it as a phase of
the project. We also have a second phase of
this project called Operable Unit 2 or

Phase 2, which is a groundwater investigation for the entire area. This is the former USS Lead Site and here's the DuPont site.

The OU2 or groundwater investigation is ongoing, and that -- once those results are available for that, there be will be a public meeting associated with that. And if you have any questions on the groundwater, the actual RPM is here, Kevin McCarthy. Raise your hand, Kevin. So we can get some questions answered if you have questions on the groundwater.

So again, here's Zone 1. It includes the former West Calumet Housing Complex. It includes Goodman Park, and it includes this utility corridor. It's a little over 50 acres.

So just to give you guys a little
background on the timeline, if some of you
are not aware. Back in 2016 the City of East
Chicago closed the housing complex due to
lead contamination. Funding was received
from both Housing Urban Development and the
State of Indiana in 2018 to essentially
demolish the housing complex. And that

occurred in 2018 and was completed in the fall of '18.

Due to the closure of the housing complex, EPA was required and -- subsequent demolition, EPA was required to re-evaluate the remedy. We had an initial remedy in 2012, but because this was demolished, we had to look at the site remedy.

So in the meantime, we started hearing or getting information from the City of East Chicago that they were in discussions with developers for the redevelopment of Zone 1.

And that redevelopment will be associated with commercial redevelopment. And that's one thing I wanted to just mention to you in regard to land use. EPA really -- the owner of the actual property determines the land use. EPA does not determine the land use.

We basically do a cleanup based upon what that land use is.

So again, going over some timeline, we ended up doing a new remedy decision. We call that a record of decision, and we did that in March of '20. And basically, it was a residential cleanup, but we also had a

contingency in there. Because we were getting all these signals from the City that they were looking to redevelop this Zone 1 property as light industrial, really, light commercial, we essentially put a contingency in our decision document. And if two things happen, we would then implement that contingency which would then put it as a commercial remedy.

Number one is the City would have to change the zoning of Zone 1 to commercial.

And number two is a developer would have to buy the property. Okay.

And so back in May of 2020 the City and the City Council approved the change in zoning. And then, basically in August of '22 HUD basically transferred the property and allowed the developer, Industrial Development -- Industrial Development Advantage to buy the property. So in any case the property was transferred to -- I'm just going to use IDA as a shortcut.

So what happened is IDA bought the property, and the zoning changed. Therefore, we were going to implement this commercial

remedy, which is different than a residential remedy. Okay.

So in a commercial remedy we look at 800 parts per million of lead, 26 parts per million arsenic, and that's excavated at the top one foot. Okay. In this case there was also an agreement -- and I'll talk to you in a little more detail about it -- something called a Prospective Purchaser Agreement, which is really an agreement between EPA and the developer to do the cleanup but also then subsequently build a logistics center warehouse over the Zone 1 property.

And basically, we -- I think we came out here in May of last year and did a public meeting and took public comments for the Prospective Purchaser Agreement, also for our -- something we call the Explanation of Significant Differences, which just finalizes the remedy. And we took public comments on that, answered those public comments. And then IDA basically purchased the property or finally purchased it in September of '22, and then we signed our Explanation of Significant Differences in September of '22. So that

really started the actual design work for the site.

So again, just to kind of reiterate, the Prospective Purchaser Agreement is a legal agreement between EPA and IDA, the developer. What it calls for is IDA is going to actually be doing the cleanup. All right. And subsequent to that, there's going to be a logistics center built on that or a warehouse built over the property. Okay.

As part of that agreement, they're required to meet all EPA requirements for the cleanup. In addition to that, we ended up doing another agreement at the same time. So that's why there's a little bit of a delay getting going on this project because we had a large amount of negotiation to do. And we did something called Administrative Settlement Agreement and Order of Consent, and that's another fancy name for a legal agreement. That's between us, EPA, and the responsible parties.

One of the main things associated with that is, in that, the responsible parties have to provide us a bond for 13-and-a-half

million dollars. So for example, if IDA ends up going bankrupt and does not finish the cleanup, we will get that money to finish the cleanup. And we do that in a large number of our settlements to make sure that we basically can get the cleanup done. And again, the responsible parties are doing that, not the developer.

We also are getting paid our oversight costs. One of the things that is going to be happening, we'll talk a little bit more about that, is EPA is going to be on this site full time during the cleanup, just like we did in the demolition. So we're going to get compensated for our costs associated with that. So we know how important it is that we need to get this cleanup done appropriately and get it done right. And so, again, EPA will be on site full time during the actual cleanup activities.

IDA has hired an engineering firm called Verdantas. And maybe, Dave, if you want to kind of raise your hand. Dave is their project manager who I work closely with. And basically, they've been hired to do the

design, to do -- obtain the cleanup construction contractor and, also, basically do construction oversight for IDA. So Verdantas will be on there looking at the work that's being done to make sure it's being done appropriately, but also EPA will be on there overseeing all that work.

So back in March of 2020 we decided to go out and do some additional sampling in Zone 1 to really look and see what's on the top foot of that site. So we did a pretty detailed sampling event. You can see -- oops, sorry. You can see these grid areas. They're about an acre in size. We broke the site up into a number of these grids and basically sampled that in a specific way and looked at the statistics.

And I don't want to get too technical here, but what we tried to do is look at how the soil samples and how they were different or variable. Okay. And what we do with that is we do statistics on that. And so we basically took sampling that -- we had three sample points very close to each other.

Looked at how different they were and then

did statistics on it. And we use that to be 95 percent confident we would meet the 800 parts per million cleanup number and the 26 parts per million cleanup number. So what we determined based on this variability is that we're going to be excavating at 787 parts per million lead. So we're lowering it. And 19 parts per million arsenic, to make sure we're 95 percent confident that we're going to meet these cleanup numbers. So we did the sophisticated sampling in 2020.

One of the things they also did on this project is they did additional sampling on these grids to look at the disposal of these soils. And if -- there's a specific test that is done that evaluates the leaching of the soil, if it went into the landfill. And they did that on all the grids and essentially came up with, in the next slide, that we're going to have to actually stabilize some of this soil material before it can get put into a landfill. And we'll talk a little bit more about that.

So this kind of gives you a general idea

1 of what we discovered and what we're going to 2 be doing with the excavation in a kind of a 3 picture. The green here, these are grids that are 4 less than 787 and 19 arsenic, and they don't 5 need to be excavated. 6 The light brown ones basically just have 7 to be excavated. That soil does not need to 8 be stabilized. 9 The red are grids that have to be 10 stabilized. Okay. And we have to stabilize 11 12 this material before it can be sent off to a landfill. We call it a non-hazardous 13 landfill. 14 15 And we have a couple of grids where we 16 have to stabilize but not excavate. 17 So then this was -- based on our detailed 18 sampling event, this is what we're -basically what we're going to be doing on the 19 20 site. So what is stabilization? You kind of 21 22 can almost think of it as taking the soil and 23 mixing it with concrete. This isn't concrete, but that's an easy way to think 24 about it. This is done, we call it, in situ 25

or in place. You can see this piece of equipment here is like a massive rototiller. And they put the stabilizing agent in there and they rototill that into the soil to make sure that when this goes to a landfill, it won't leech.

And so this will happen. We don't know the means and methods yet, but it will be done in place. But this is just an example of the type of equipment we use to basically till -- as I said, it's kind of a big garden tiller -- till the stabilizing agent into the soil. And, again, we have to do that, because if we don't do that, this material has to go to a hazardous waste landfill.

And we're taking the material -- the non-hazardous material is all going to Republic Newton County Landfill in Brook, Indiana. The landfill is also going to require, I think, every 1600 cubic yards of material to resample to make sure that it can be disposed of there. So there are these whole procedures in place just to make sure that we can take this material from Zone 1 to this landfill.

[
1	PUBLIC MEMBER: Tom?
2	MR. ALCAMO: Yes.
3	PUBLIC MEMBER: You're talking about
4	(inaudible) into the soil?
5	MR. ALCAMO: Correct.
6	PUBLIC MEMBER: And taking it out?
7	MR. ALCAMO: Yes. Then it gets dug out.
8	Now, sometimes you can do this, they call it,
9	ex situ or out of place. What they do is
10	they dig it out and put it in this big mixer
11	and add the stabilizing agent in this mixer
12	and then take it off site. In this case we
13	think it's better to do in place because
14	there's less chance for dust generation.
15	So cleanup. Let's talk a little bit
16	about numbers. So we're looking at Zone 1
17	and a little over 100,000 tons of
18	contaminated soil is going to be taken off
19	the site and disposed of in that Newton
20	County landfill. About 40,000 cubic yards of
21	that is going to need to be stabilized versus
22	a total of 71,000 cubic yards. I just
23	converted it to tons to make it easy.
24	One of the phases, we're going to be
25	excavating that one foot. Then they're going

to need to put a visible barrier down. That will be an orange barrier. And then they will bring in residential standard soil and put that over and replace the stuff we removed with this residential standard soil.

24

25

And so there's a whole series of sampling procedures. They've not been identified quite yet. They're off-site fill, but there are sampling procedures that have to be met for this to insure that they bring appropriate soil and we're not bringing contaminated soil back onto the site.

Couple things. We know how important it is to make sure that we don't spread material from the site, so there's going to be a truck washing station. This was one that was used during the demolition. There's also going to be a street sweeper and also will be -- being very careful in terms of all the traffic will be going out on 151st Street. So our truck route is going to essentially be going 151st Street to Railroad to Chicago Avenue. we're trying to avoid as much as possible any type of residential area. And the gate only on 151st Street is going to be used. So

again, they'll be turning right out of the site.

Also what we're going to be doing on site is air monitoring. We're going to have four air monitors on site. We're going to do both for dust and we'll be sending off samples to the laboratory. These air monitors, there's going to be one upwind, one downwind and then two near the excavation. And what they do is there's a device in there that measures dust in realtime, and we set that at a conservative level, and that alarms if the dust gets greater than a number.

We set this at a very conservative number of 68 parts per million. I don't want to go into that with you, but in any case, there's a number that's been set that's very conservative. So when that alarm goes off, we know that they need to add additional engineering controls, like additional wetting, additional dust suppressants or whatever they have to do to make sure this isn't getting spread to the neighborhood.

But in addition, there's samples that are going to be going off to the laboratory for

arsenic and lead sampling, and we've got action levels set up for that to be able to evaluate that over time to make sure that we're not influencing -- or affecting not only workers but also the nearby community.

Again, EPA will be there full time.

Rachel, could you stand up. This is Rachel

Huel (phonetic), and Rachel is with a company

called Tetra Tech. Her team will be on the

site full time. She was actually involved in

the demolition, during the demolition phase,

but she'll be actually on site being EPA's

eyes and ears and making sure that dust is

controlled, that they excavate it properly

and document all the cleanup. So again, full

time during all cleanup activity.

So again, as Charles mentioned, there's a lot of plans. I think there's 13 or 14 plans on the EPA website. You don't need to copy. You can just search USS Lead EPA website and go to the section called technical documents. And there's a bunch of technical documents there that we've essentially approved that will give much, much more detail in terms of the cleanup. You can see all of them.

There's a couple more we have to get approved yet, mainly associated with laboratory analysis, but we're getting very near on those.

Right now the schedule is looking to begin sometime in July of this year. The thing is is there's still a lot -- a lot of things have to come together before we meet that schedule. They need to get a construction firm. There's a number of evaluations for fill material. All those kind of things still need to be done before they can actually begin work.

We expect this work -- if it starts in July, we expect this work to go through the year. And by the end of sometime in December we expect to be done. And then they're going to essentially have to do erosion control after that. Usually -- it may get extended into next year seeding, to make sure that there's -- basically, dust isn't blowing off, things like that. So there's some things we may have to do if this gets completed outside of, you know, the growing season.

But after that is done, then the actual

logistics center warehouse starts. Okay.

What we've been told, and Steve can talk -Steve Radel from IDA is here to talk a little
bit about his project. Essentially, they're
going to be bringing in -- in addition to our
one foot of soil that meets residential
standards, they're going to be bringing in
fill material that's going to raise the
elevation even four feet higher, so the
building will be put on top of that. So the
good thing with that is they will not need to
dig into any contaminated material during the
construction of the building. Okay.

And so, again, I don't know if you remember, a couple of years ago we did something called a five-year review. Every five years EPA needs to re-evaluate these sites. So this isn't a walk-away for EPA. We'll be back every five years looking at the site to make sure that this remedy that's been implemented not only in Zone 1 but in Zones 2 and 3 remains protected. I think that's it. So Steve.

MR. RADEL: Hi, everybody. It's great to be back. I've been back a lot this year.

I'm excited to get moving with this project.

It's been a while to get to where we are

today. That's for sure. I guess I'll pick

up where Tom left off.

23

24

25

Well, I'm Steve Radel with Industrial

Development Advantage. I guess I'm waiting

for somebody to click, and I'm the guy that's

doing it. Right.

So a quick overview of our company. our focus has always been is repositioning and redeveloping impacted properties, properties that are contaminated. My partner and I have a skill set in doing that for 25 years, and we brought that to IDA when we started the company and built our team around it. A lot of our team are folks that we've worked with in other capacities, other businesses before IDA. But you know, we love finding properties that have issues, figuring Sometimes you've got to think out solutions. outside the box, be creative and then repositioning them for development. that's our skill set.

We also get involved in projects where we take over the cleanup and closure of those

projects. Sometimes those can be redeveloped. Sometimes they cannot. So just to kind of give you a background of who we are.

You know the story, or some of you do or -- you know, we got involved in this process with the City years ago and through an RFP process with other entities. We were fortunately selected to be the developer, and then -- you know, then we had that slog of a couple years working with the PRPs to hammer out a deal to take the site over. So as Tom mentioned, we were able to acquire the site last September. And so September 2022 is when we finally owned the property.

And once that day -- you know, once we closed on the property, our focus was first and foremost getting the remediation kicked off. And that's where Dave and his team, we worked closely with them for many months before that. But once, you know, we owned the property -- in fact, we did a number of things in advance of closure because we anticipated closing and we wanted to get a leg up on a lot of the reports that we have

to do. As Tom mentioned, there's a lot of reports he went through. There's a lot of work plans associated with everything that we do out here that have to be approved. So 2022, September through the end of last year and into this year, that's been our sole focus.

What we've also done -- I'm getting ahead of myself, I guess. What we also did around January of this year is we hired a design engineer, a civil engineering company, to start working on our development designs because we want to be able to go to development once we get through remediation at the end of this year.

To do that, we have to have a well thought out, understood, you know, engineered understanding of the site, utilities, anything and everything associated with putting a building up. You know, that's storm water, water, sewer, gas, electric. So there's a lot of detail that goes hand in hand with that. Our team is going to be working closely with the City through the summer and into the fall to get City

approvals and necessary buy-ins on our utility plans and all of our site development plans. So that work is ongoing right now.

18

19

20

21

22

23

24

25

The focus of our development is, at the end of the day, a logistics hub. And we're targeting -- I'm looking backwards and I can't see it anyways. We're targeting about an 850,000 square foot logistics center on this site. As Tom mentioned, we're raising the grade of the site to minimize any future utility excavations and the contaminated material from the prior slag operations. We've been able to balance that pretty good. There might be a little bit that has to be, you know, managed. But we really try to get as much of the utilities out of that contaminated material as possible. And I think our engineers have come up with a design to do that. So that's our focus from a design standpoint.

From a building standpoint, that design will culminate in about an 850,000 square foot logistics campus. Depending on the ultimate end user, we think that will generate 400 to 900 full-time jobs. And you

know, there's a variety of those jobs, what they will be. It's really -- the end user drives everything, but it's anything from forklift operators to truck drivers to computer engineers to logistics engineers, managers, etc. So pretty exciting the whole gamut of employment opportunities and we're excited to be pushing that forward.

1

2

3

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Plus, you know, these projects always bring a catalyst to the area, too, so that's where the multiplier effect comes in. So our design is based on a -- you know, this is a conceptual design. Better renderings will follow. You can see this 850,000 -- we'll put the biggest building that would fit on this site and allow for adequate parking and movement of trucks around the campus. So -and what you're looking at ultimately is, you know, a concrete and asphalt covering the old, you know, waste that was placed here from the prior days but in the form of a productive building that's a job generator.

This is a peek inside what some of these warehouses look like. They're never that quiet. They're always active on the inside,

moving packages around. That's a typical rendering of an outside of one of these facilities. End user drives a lot of these things, and obviously everything is going to be built in conformance with City codes and City requirements.

You know, one of the things we really want to do and it's real important with any development in our view, especially these kind of campuses, is making sure we're networked with the local community training centers. And to us, this is one of the main focal points of our development. You know, it's one thing to reposition the site and get it ready and go vertical. It's another thing to have a workforce in the area that can work there, and that's a big focus of ours.

We're going to be working closely with
the City and regional resources to make sure
that, you know, there's opportunities for
people here. And it benefits us and it
benefits the community. It makes the
community stronger. It makes our development
stronger. It's a no-brainer to us. And
that's one of the exciting things about this

development to our team. We keep an alliance -- you know, in touch with the ministry alliance and others, and we're going to continue.

Now, we're not in the -- you know, we were in the paddling water stage until
September of 2022. Now we're swimming. And so as we're swimming, we're going to continue to network and outreach with as many institutions and networks in the region to -- you know, to build our network, to get the training aspects moving and any other networking that makes sense from a regional standpoint.

I could talk forever here, but I guess that's the end of my presentation. I guess we can get into questions now, Tom.

MR. RODRIGUEZ: So we're going to now move into our questions and answers. That was a lot of information, so I imagine there's some questions out there. If you have a question, you can raise your hand. We'll bring you a microphone. Cisco and Kaley here will bring you a microphone. Tom and Steve will be hear to answer questions.

1 So any questions, raise your hand. 2 COUNCILMAN HILL: First of all, mine is I'm the councilman of this 3 not a question. district -- re-elected councilman of this 4 district, and I've been working with these 5 guys for the last three years, and I'd like 6 to thank the president, Monica, for helping 7 me to get the zoning changed so that we have 8 industrial and taken away from residential. 9 And I'm excited. 10 Like I say, it's three years I've been 11 12 waiting on this to happen, you know. wish the best for this community. However, I 13 got some information from one of my 14 15 However, she wasn't able to be residents. 16 Some of the things that she asked --17 is Charles here? 18 MR. RODRIGUEZ: I'm here. COUNCILMAN HILL: All right. 19 You got 20 some information from a Ms. Marissa Lopez; 21 correct? 22 MR. RODRIGUEZ: Yes, she emailed me a 23 couple of questions, so we'll be responding 24 to those. 25 COUNCILMAN HILL: Okay.

1	MR. ALCAMO: I can address that if you
2	want me to.
3	COUNCILMAN HILL: Oh, no, I heard some of
4	it already. One thing I did hear is how they
5	going when you fence it around, you're
6	going to have that protective area around
7	that fence so some of the stuff won't leak
8	into my community.
9	MR. ALCAMO: Exactly. I think that's
10	obviously a top priority for us, just like we
11	did the demolition, trying to control the
12	dust.
13	COUNCILMAN HILL: Correct.
14	MR. ALCAMO: If this is done
15	appropriately, there's going to be no issues.
16	And we're going to make sure it's done
17	appropriately.
18	COUNCILMAN HILL: And I live here in the
19	community and I'm always watching so
20	MR. ALCAMO: Oh, we'd love you to come to
21	the site.
22	COUNCILMAN HILL: Oh, I will.
23	MR. ALCAMO: Okay.
24	COUNCILMAN HILL: I'm just glad we're now
25	moving forward with this, and it's going to

1	make our district a whole lot better than it
2	has been in the past. And under my
3	leadership, that's what I want. Just like
4	Monica is doing a great job in her area, she
5	has one of those over there as well, and
6	we're going to move forward and work together
7	for the next four years and doing what we
8	need to do. She supports me, and I'm going
9	to support her. So thank you for that, and
10	I'm looking forward to the first truck to
11	come up out of there. Thank you.
12	MR. RODRIGUEZ: Thank you, Councilman,
13	for your kind words.
14	COUNCILMAN HILL: I have to leave because
15	we have a council meeting.
16	MR. RODRIGUEZ: Thank you for attending
17	and thank you for your comment.
18	Next question.
19	UNKNOWN SPEAKER: We have a question over
20	here.
21	MR. RODRIGUEZ: Okay.
22	PUBLIC MEMBER: I'm Steve Saguro
23	(phonetic). I work for the City of East
24	Chicago. This truck washing station, what
25	happens to the water that runs off into the

1 water table? 2 MR. ALCAMO: Well, it will be controlled. The water will be controlled. And so it 3 hasn't been defined. I mean, there's many 4 different kinds, and we haven't seen exactly 5 what it is. But we certainly have a storm 6 water pollution prevention plan that was 7 reviewed by the City to make sure that the 8 9 runoff doesn't go outside or into the sewers. 10 And that's been approved; correct? Dave, that's been approved? 11 12 MR. DAVE: Yes. MR. ALCAMO: Yeah, it's been approved. 13 MR. RODRIGUEZ: Thank you for your 14 15 Next question. question. 16 PUBLIC MEMBER: What I've seen on Kennedy 17 Avenue with this project on DuPont and 18 talking about the dust out in the roadway on Kennedy Avenue, it's not very ideal what we 19 20 see out there right now. I don't know if 21 they have a wash station or not, but it --22 are you going to duplicate that, or are you 23 going to improve on what they're doing on Kennedy Avenue right now? 24 25 MR. ALCAMO: Well, we're going to have a

1 street sweeper. Okay. I mean, we basically 2 are going to have -- as I said, EPA is going to have full-time oversight. We know the 3 problems that truck traffic can have, and 4 we're going to keep it down, the dust down. 5 I can't talk what's going on on Kennedy, 6 but certainly we're going to have a street 7 sweeper, a truck washing station, and we're 8 9 going to have inspections every day insuring that those trucks, not only that, leaving the 10 sight aren't carrying the stuff out either. 11 12 So you know, that's kind of what we tried to do with the demolition. 13 PUBLIC MEMBER: I see that you're going 14 15 out on 151st? 16 MR. ALCAMO: Correct. 17 PUBLIC MEMBER: And what is the preferred 18 route of the trucks actually going out of the 19 City? Do you have one yet? MR. ALCAMO: Yeah, I think -- you want 20 21 to --22 MR. RADEL: Yeah. Thanks for the 23 question. We're going to go right on -trucks will go right on 151st Avenue out of 24 the site, right on Railroad and right on 25

1	Chicago out.
2	PUBLIC MEMBER: So it will be Chicago
3	Avenue to the exit?
4	MR. RADEL: Yes.
5	PUBLIC MEMBER: It's going to be pretty
6	obvious to the residents if the monitoring
7	and the dust suppressing is not being done
8	properly.
9	MR. RADEL: It will be obvious to us.
10	We'll be the first one to notice it and
11	rectify it if there's an issue. So dust
12	control and street cleaning and sweeping and
13	really keeping the, you know, dust on site,
14	that's our number one focus and priority
15	so
16	PUBLIC MEMBER: Yeah, because we're
17	already seeing some not a good approach,
18	you know, on Kennedy Avenue. I mean
19	MR. RADEL: I don't know what they're
20	doing there but
21	PUBLIC MEMBER: I understand.
22	MR. RADEL: What we're going to do, as
23	Tom mentioned, you know, is truck wash, dust
24	control and, as necessary, street sweep. It
25	will be on call and up and ready to go. And

1 I will be working with my team and impressing 2 that upon them. And Tom will be impressing 3 that upon me. So I think we have the checks in place to make sure that what I'm telling 4 you is carried out, and certainly that's our 5 focus. 6 MR. ALCAMO: I think one of the things 7 with the truck route is we certainly want to 8 9 avoid residential and want to stay away from all the truck traffic on Kennedy too. 10 11 that's why we have this route to basically 12 alleviate some of the -- obviously a lot of truck traffic that's going to happen here. 13 PUBLIC MEMBER: From our experience on 14 15 Kennedy Avenue, I'm pretty sure you'll be 16 monitored pretty closely. 17 MR. ALCAMO: Yep. That's okay. That's 18 okay. PUBLIC MEMBER: So I have some questions 19 20 on the development and job training. 21 will come later probably. Thank you. MR. RODRIGUEZ: Thank you for your 22 23 question. And we've got a question in the back. 24 25 PUBLIC MEMBER: Okay. I'd like to ask

[
1	IDA, I think were you aware that you
2	could've had better cleanup if you would have
3	stuck with residential and then had it
4	cleaned out and then went commercial? Was
5	that even possible?
6	MR. RADEL: That's
7	PUBLIC MEMBER: You could have had more
8	stuff moved out. It would have went deeper
9	and then you could've had it redeveloped
10	rezoned to commercial. I think that would
11	have worked. I'm not sure, but I think that
12	would have. Yes or no?
13	MR. RADEL: I'm not sure. That's
14	after we got involved when it was, you
15	know, the remedial
16	PUBLIC MEMBER: Well, were you aware of
17	that, that you could have got a better
18	cleanup out of that spot if you would have
19	kept residential and rezoned later?
20	MR. RADEL: I was aware of all the
21	different
22	PUBLIC MEMBER: Okay. I could be wrong,
23	but I think that's how it works.
24	MR. RADEL: Okay.
25	PUBLIC MEMBER: And Mr. Alcamo, can I

1	have a few minutes of your time?
2	MR. ALCAMO: Sure. Please.
3	PUBLIC MEMBER: All right. I don't know
4	if you went over this or not, but I would
5	like to ask some questions about the air
6	monitor because I couldn't hear real good
7	back here.
8	MR. ALCAMO: Okay. Go ahead.
9	PUBLIC MEMBER: Could you repeat.
10	MR. ALCAMO: Okay. There's going to be
11	four air monitors
12	PUBLIC MEMBER: I'll ask the questions
13	and I don't have to bother you anymore.
14	MR. ALCAMO: Okay.
15	PUBLIC MEMBER: You're going to air
16	monitor for arsenic and lead; right?
17	MR. ALCAMO: Yes.
18	PUBLIC MEMBER: Okay. And is it going to
19	be 24 hours a day, 7 days a week there?
20	MR. ALCAMO: No. It won't be monitored
21	24. It will be operating during the actual
22	excavation activities. And then the site
23	will be then the site will be shut down
24	for the night, and then air monitoring starts
25	the next morning. So there will be dust

1 suppressants and things like that added at 2 night to ensure that excavations aren't blowing material and stuff like that. 3 PUBLIC MEMBER: Okay. Now, how high 4 above the ground will these monitors -- you 5 know, how high up in the air? 6 MR. ALCAMO: (Indicating). 7 PUBLIC MEMBER: I can't see that. 8 MR. ALCAMO: Well, I'm going to back up. 9 PUBLIC MEMBER: Okay. 10 Sure. 11 MR. ALCAMO: Right there. There's a 12 picture of the air monitor. Can you see it? PUBLIC MEMBER: Yeah, I can see it. 13 MR. ALCAMO: That's -- there's going to 14 15 be four of those. There's going to be one 16 upwind. We want to see what's coming from 17 off site. There will be one downwind and 18 then two by the excavations. Okay. And if there's additional activities that are 19 20 happening in multiple locations on the site, 21 then there's going to be additional air 22 monitors placed. 23 So right now we're assuming that there's 24 just going to be one excavation. 25 something goes where they're doing something else. Maybe they're stabilizing soils over here and excavating over there, we will bring in additional air monitors.

And those air monitors are realtime, and they have an alarm on them. And we set that alarm to a very low level for dust, total dust. And if we get greater than that number the monitor reads, then an alarm goes off, and we know -- not from a health standpoint it isn't causing an unacceptable risk. What it's doing is telling us we need to basically improve the dust control. And there are many things, engineering controls we can implement to do that.

And maybe it's going to be too windy of a day that they can't excavate that day. So there's a number of things that we normally do in these type of cleanups, similar to what we did with the air monitoring in the cleanup of Zones 2 and 3 at the homes.

PUBLIC MEMBER: You have fencing around the property already; right?

MR. ALCAMO: Yes, there's fencing. The fencing is enclosed with one gate onto 151st Street.

1 PUBLIC MEMBER: Now, that fencing, would 2 you need any kind of additional signs put up 3 as soon as you start excavating on there like you did at DuPont? 4 MR. ALCAMO: We can do that. We haven't 5 talked about that. But if that's necessary, 6 we'll do it. Certainly I think we need to 7 put some signs out on 151st Street about 8 truck traffic. I think that probably is a 9 good idea. I've done that at other sites, 10 and so we can put signs up. We just haven't 11 12 got that far into the -- the construction firm hasn't been hired yet, but it's 13 something that we can do. 14 15 PUBLIC MEMBER: Just one more. 16 MR. ALCAMO: Sure. 17 PUBLIC MEMBER: Okay. Now, as far as 18 security around the fence, how are you going to secure it 24/7 so nobody goes in there? 19 20 MR. ALCAMO: There's a locked gate. 21 There's only one entrance with a locked gate. 22 And if we need to have -- if we start seeing 23 trespassing or something like that, I think we're going to go to IDA and say we're going 24 25 to need to have some nighttime security. But

1	right now that's not planned.
2	PUBLIC MEMBER: I think at DuPont they
3	got video cameras in the fence. I think so.
4	MR. ALCAMO: Yeah, that's a good idea.
5	We might do that.
6	PUBLIC MEMBER: Yeah, it's very
7	important. You don't want no kids going in
8	there.
9	MR. ALCAMO: Exactly. Particularly when
10	we're excavating. Although these aren't deep
11	excavations, it certainly brings inquisitive
12	kids to see what's going on.
13	PUBLIC MEMBER: Yeah, because I'd go
14	there myself if I was a kid.
15	MR. RODRIGUEZ: Thank you for your
16	question. Next question. Please raise your
17	hand.
18	Okay. We got a couple questions.
19	Gentleman, first, and then in the back.
20	Thank you.
21	MR. DAVIS: My name is Thomas Davis, and
22	I don't live in the area, but I have
23	relatives that do. Now, during the oversight
24	and during the monitoring and all of that and
25	I know they like to cook outside when it's

warm now and -- but if it's windy, will it be
good to suggest to them to don't do any
outside activities?

MR. ALCAMO: No. They can cook all they want. We're looking for dust. Okay.

Initially, the stuff -- you know, when you're cooking, that's a different type of odor and different. It's not really a dust that's ever going to affect us. Okay. So there is no limitations for barbecuing. Hopefully, they barbecue all summer.

MR. DAVIS: Okay. One more question.

The area from McCook over to Kennedy Avenue

for the resident, at any given day, is it

down to the level that everything is okay in

those areas now?

MR. ALCAMO: Yeah, there's no issues now.

I mean, I think when we start excavating,
that's when we really have to start
monitoring because obviously we're picking up
the soil with backhoes and putting it in
trucks. So that's where we basically are
concerned. But otherwise, there's no issues
right now. The site is -- there's grass on
it or basically gravel over the site. So

1 it's really controlled right now. But once 2 we get going into this excavation, there's 3 going to be open areas that we have to monitor. 4 MR. DAVIS: Okay. That's what I need to 5 know. Okay. Thank you. 6 MR. RODRIGUEZ: Okay. Sir. 7 PUBLIC MEMBER: Yes. The question I want 8 I'm a lifetime resident of 9 to ask is this. this area. As a matter of fact, I live on 10 11 the front end of McCook. And from my 12 backyard, I can see the former entrance to the former West Calumet Complex. 13 Now, this is my question. 14 There's a 15 field separation between my house and West 16 Calumet. Now, this dust that we're talking 17 about, is it possible that somebody could 18 leak up -- now, I know you have dust monitoring devices which will monitor the 19 level how high the dust is. But is there any 20 21 guarantee that none of it will leak out into 22 the neighboring residence? 23 MR. ALCAMO: Well, I think from the 24 standpoint of the dust, what we've done is set extremely low alarm levels that are safe 25

levels and very low numbers. Okay. And that machine reads it -- takes in the air and it reads it and it tells us, oh, that's higher than our alarm level. Therefore, it's going to be an alarm that's done that's going to tell the construction firm, okay, we got a problem. We need to basically -- we need to basically improve our dust control.

But we'll also be taking samples and sending them off to the laboratory, but we can't do that like realtime, like these dust monitors, but in a few days later we get the results, and then we can start looking at those results over time and look at risk levels and things like that to make sure that you on McCook are safe.

PUBLIC MEMBER: Well, there's another question that concerns me. What about a shift in wind?

MR. ALCAMO: Well, there's a meteorological station there. Okay. So it's going to measure wind direction. So we're going to have one -- like if this is the excavation where I'm at, there's going to be one upwind. Okay. So we get the background

of what's coming from elsewhere so we know.

And then there's going to be one downwind and then two on the other sides of the excavation. Okay.

So we think we have it covered. Now, obviously, if we have to modify that, we will. And as I said previously, if there's two things happening on the site, like on one side of the site they're doing something that may be creating dust versus another side, then we're going to have to bring more monitors on. And that's all part of the plan we have to make sure we've got this covered.

Do not forget, though, that I have full-time oversight on this project. There's going to be an EPA representative every day on that project, okay, that will insure -- they're going to be looking at the street.

Okay. They're going to be looking at the air monitor. They're going to be there. Rachel was there during the actual demolition of the housing complex. There will be other staff members there, too, from her team but --

So that, we think, helps in terms of making sure that we're not influencing and

1 putting any negative risk on not only the 2 workers because the workers are going to be They'll be wearing certain air 3 monitoring devices to look at health and 4 safety standards, but also the community. 5 We don't -- the last thing we want, we don't 6 want to spread dust on the roads, and we do 7 not want to basically influence the 8 surrounding community and put them at risk. 9 We can do this cleanup safely, you know, if 10 the right dust control is used, and we plan 11 12 to do that. PUBLIC MEMBER: Thank you very much. 13 That's all I have for now. 14 15 MR. ALCAMO: Thank you. Yep. 16 MR. ISRAEL: Good afternoon. All right. 17 So my name is (inaudible) Israel, and I have 18 deep roots with East Chicago, especially Calumet. I got my first haircut here. My 19 wife attended this very school. 20 I met my 21 wife two blocks away from here. Most of my 22 family is from East Chicago. Most were 23 Calumet residents. My mother was a city clerk. My uncle was a teacher. My family is 24 25 genuinely part of this community.

currently work as a lead field scientist on
the former DuPont property cleanup in East
Chicago working as an environmental
technician for Impact Environmental. I never
thought that I would be able to make a
difference in my community.

I am putting on public record that I am not -- that I was not aware, nor was my employer, of this remediation project having been nearly finalized in scope until last week. How is this possible? My employer Impact Environmental has always volunteered to help where they can to clean the USS Lead Site by participating in efforts to reduce the cumulative impacts of the two remediation projects through agency coordination. How can it be that your efforts failed to notify me and my employer?

My immediate concern as a community
member and as an environmental professional
is that the environmental impacts of this
next phase of the USS Lead remediation has
not considered the cumulative impacts of two
remediation projects occurring simultaneously
in the community absent coordination.

Cumulative impact analysis is required under the public participation, particularly within environmental justice communities.

President Biden's executive order on environmental justice specifically demands promotion of the latest science data and research on cumulative impacts and a deepening of the government's role and commitment to environmental justice. Where is this cumulative impact analysis here?

Further, there are concerns regarding the quantity and quality of backfill materials to be used at the USS Lead Site. Terms such as "clean fill," quote, unquote, and "industrial fill," quote, unquote, are inconsistent with the residential quality soil that was previously understood for use at the project. I will be submitting, along with my employer, further comments in writing to the parties in the coming weeks.

I expect that all of these considerations will be heard as legally required under Public Comment Policy in addition to the environmental justice that was provided by the President.

1 MR. RODRIGUEZ: Well, thank you for your 2 statement. And so we're ready for our next 3 question and/or statement. Please raise your hand, and we'll bring you a microphone. 4 5 have one more question from the back. MR. JOE: I want to ask something from 6 Mr. Rodriguez. After this is done, will I 7 have a time period we could comment on these 8 9 comments? Is that possible? Because I think 10 last time I asked you you said you couldn't do it for me. Could you do it this time or 11 no? 12 MR. RODRIGUEZ: Yeah, Joe, so --13 PUBLIC MEMBER: Because you're putting 14 15 out a lot of information, and you can't take it in sitting here, in my opinion. 16 17 MR. RODRIGUEZ: Yeah, so this is not a --18 there's no public comment period. There's no formal public comment period like other parts 19 20 of the cleanup. You can always submit 21 questions at any time. I know you would like 22 to wait until you have the transcript of this 23 meeting so --PUBLIC MEMBER: 24 Yeah. 25 MR. RODRIGUEZ: Yeah, absolutely, when

ſ	
1	you have it, you can submit any questions,
2	any concerns, and we'll respond to them.
3	MR. JOE: And one more thing and I'll let
4	you go.
5	MR. ALCAMO: Before you
6	MR. RODRIGUEZ: Yes.
7	MR. ALCAMO: We'll get you a copy of the
8	transcript when it's done.
9	MR. JOE: Yeah, I wanted to be able to
10	comment on it. That's all.
11	MR. ALCAMO: Yeah, and we'll respond to
12	your yeah, yeah.
13	MR. JOE: One more thing I want to ask
14	and that will be it. I talked to Mr. Alcamo
15	earlier about that timeline site on the NWI
16	Times. There's a lot of information there
17	about what happened before you got to this
18	point of the cleanup, and I know I can't read
19	it all. I think you need a meeting to go
20	through it. And these people have a right to
21	know exactly what happened before we got to
22	this point in the cleanup.
23	The information is on the internet.
24	All you have to do is read it, and you guys
25	could tell us this is right, this is wrong.

1	I think they need to know how we got to
2	this point. There's a lot of it's by a
3	reporter. There's a lot of information on
4	there. You're not I can sit here for
5	hours and I wouldn't be able to go through
6	it. We ain't got that kind of time, but if
7	you had another meeting and you tell people
8	to read it and they could comment on it, I
9	think that's a good idea, my opinion.
10	MR. ALCAMO: Okay. I think you gave me
11	that information, Joe, and I'll certainly
12	take a look at that article back from 2016.
13	I know you mentioned
14	MR. JOE: There's a lot on there.
15	MR. ALCAMO: Yeah, I'll take a look at
16	it, and you can submit it. I need to look
17	at it.
18	MR. JOE: Yeah, right, right. I
19	understand.
20	MR. RODRIGUEZ: Thank you.
21	Okay. Any other questions? Please raise
22	your hand. Okay. If there are no oh, one
23	question, the gentleman in the middle.
24	PUBLIC MEMBER: Okay. My question is
25	this: Like, you know, as I expressed before,

1	I live on McCook now. You're going to have
2	fences and things like that that's going to
3	block off that construction site; right?
4	MR. ALCAMO: Yeah, we can talk you're
5	talking about like a fabric over the fence?
6	PUBLIC MEMBER: Uh-huh, yep.
7	MR. ALCAMO: We can talk about that. We
8	already talked about that with the but if
9	you think that would be a good idea, we
10	certainly can bring it up with IDA.
11	PUBLIC MEMBER: Yeah, and also
12	MR. ALCAMO: Do you think that's a good
13	idea? I mean, would you like that?
14	PUBLIC MEMBER: I think so. I think it
15	would be a good idea.
16	MR. ALCAMO: Okay.
17	PUBLIC MEMBER: And I have a follow-up
18	question. When all this is set up, would it
19	obstruct or impede any of the traffic flow
20	going into the residential area? I think you
21	plan to use 151st. So there's going to be a
22	lot of traffic going this way and that way
23	and so forth.
24	MR. ALCAMO: As Steve mentioned, there's
25	one gate we'll be using off 151st Street.

Trucks will go out, make a right, go to Railroad and then go to Chicago Avenue.

PUBLIC MEMBER: But nothing has to be rerouted?

MR. ALCAMO: No. Well, something like if there's a huge accident or something, we'll have to figure that out. But that's the main truck route. Now, they could go an alternate route to Indianapolis, down to Michigan, down to 12, down 94. So that's another route that is possible. But in any case, our preferred route is going -- at least I've been told, is Chicago Avenue.

PUBLIC MEMBER: Okay. That clears it up. Thank you.

MR. ALCAMO: We really want to try to avoid the residential area. We certainly got a lot of trucks in the residential area during the cleanup. And I mean, that's one of the things that I think Steve is really taking seriously regarding the truck traffic and making sure that we minimize -- because there's going to be a lot of trucks, and minimizing that to the residents as much as possible.

1	MD DODDICHEZ Oltov Any other
	MR. RODRIGUEZ: Okay. Any other
2	questions? Okay. I see no hands up. If
3	there are no further questions or comments or
4	concerns, I think we can
5	Oh, Joe, one more.
6	MR. JOE: (Inaudible).
7	MR. RODRIGUEZ: We'll bring you a
8	microphone so the court reporter can hear the
9	question. It will just take a couple
10	seconds.
11	MR. JOE: I want to know if the removal
12	of the ground the soil will have any
13	effect on the groundwater study.
14	MR. ALCAMO: We think that removing
15	100,000 tons of contaminated soil from that
16	50-acre site, along with building a building
17	over pretty much that entire site will
18	prevent infiltration into the Zone 1
19	groundwater and make an improvement.
20	MR. JOE: But don't you guys have to keep
21	the groundwater cleaned out, too, right?
22	MR. ALCAMO: Right. That's Kevin
23	is Kevin McCarthy is the project manager
24	for the groundwater portion. He's
25	investigating that and if there's areas on

1 the site that are greater than the drinking 2 water standards. It's not just the USS Lead It's -- let me back up here. 3 MR. JOE: What I'm trying to drive at is 4 I got a chart here from the EPA --5 MR. ALCAMO: Right. So we're basically 6 investigating all this groundwater here right 7 Okay. That's what Kevin is, and that's 8 9 the second phase of the cleanup. 10 MR. JOE: So this chart here, it says that -- for the EPA, it says that exactly it 11 12 goes pretty deep, that contamination, into the soil, and you're taking about a foot off. 13 MR. ALCAMO: A foot. There will be some 14 contamination that remains on the site under 15 16 a foot. 17 MR. JOE: Would it be better for the 18 groundwater to remove more of that soil or does it matter? 19 20 MR. ALCAMO: That's to be -- I can't 21 answer that. I think the mission is going to 22 be removing 100,000 tons from this, and then 23 there's going to be a building over this entire piece of property that's going to 24 prevent water from infiltrating into the 25

1	property.
2	MR. JOE: But I'm saying you'll be
3	leaving
4	MR. ALCAMO: Based on the risk eval, we
5	don't think we need to dig any additional.
6	MR. JOE: Right. It's okay. It's not
7	going to affect the groundwater, how much
8	soil you take out?
9	MR. ALCAMO: Oh, I think it's going to.
10	I think when we remove that, I think it's
11	going to make it better.
12	MR. JOE: Better; right?
13	MR. ALCAMO: Yeah.
14	MR. JOE: So you're better off putting a
15	hard surface on the top and leaving what's
16	underneath has more to do with keeping the
17	groundwater clean than going deeper into the
18	soil?
19	MR. ALCAMO: Yes, we think it's going to
20	prevent infiltration. Correct.
21	MR. JOE: Okay. Is Mr. McCarthy going to
22	talk later?
23	MR. ALCAMO: No. I mean, if you want to
24	ask him any questions now, I mean
25	MR. JOE: Yeah, I'll talk to him

1 personally. 2 MR. ALCAMO: Yeah. 3 MR. RODRIGUEZ: Okay. Thank you for your question. If there are no more questions, 4 then I guess we can adjourn this meeting. 5 Thank you, everyone, for attending. 6 contact information is on the last slide if 7 you have any questions or concerns. 8 You can 9 always email Tom and/or myself. 10 MR. ALCAMO: An easy way is you just 11 search Google USS Lead Superfund Site. 12 site will come up. Okay. The USS Lead Site will come up. And if you want to look at the 13 technical documents, there's a technical and 14 15 legal documents. You just hit that link, and there's a bunch of them in there. Okay. 16 17 MR. RODRIGUEZ: And tomorrow we'll upload 18 a copy of the presentation, and we should have the transcript of the meeting probably 19 20 in a couple weeks, roughly. It will be added to the document collection that we have on 21 22 the website. 23 Thank you, everyone, and good night. 24 (MEETING WAS CONCLUDED AT 5:58 PM.) 25

1 2 PUBLIC MEETING 3 HOSTED BY EPA EAST CHICAGO, INDIANA 4 5 REPORTER'S CERTIFICATE 6 7 I, KRISTEN K. STOKES, CSR, Notary Public in 8 and for the County of Lake, State of Indiana, do hereby certify that I reported in machine shorthand 9 10 the foregoing proceedings had in the above-entitled 11 matter, at the time and place herein set forth; and 12 I do further certify that the foregoing transcript, 13 consisting of 57 (fifty-seven) typewritten pages, is 14 a true and correct transcript of my said 15 stenographic notes. 16 Signed this 23rd day of May, 2023. 17 18 19 KRISTEN K. STOKES 20 CSR# 084-003723 21 My Commission Expires: 8/27/23 Notary Public: Lake County, Indiana 22 23 24 25
