Balance and Pipette Check

Daily Balance Tolerance Check Reports

for : L85486

Instrument: BALANCE 8

Model: A&D GF-6100

Serial Number: 14619637

Description: 6100 g capacity top loading balance

Known Weight	Result Weight
1.00	1.00
100.00	100.08
1000.00	1000.10

Check Date: 17-DEC-19

Analyst: SMC

Weight Set Used: WTSET 3

Tolerance: 1%

Out of Range: N

Prod		
GELI	BALANCE 8	17-DEC-19
NONE	BALANCE 8	17-DEC-19

Certificate of calibration of absolutely standardized radioactive solution

P 30621

CALIBRATION No. 0146

Description

Principal radionuclide: Lead-210
Daughter radionuclide: Bismuth-210 + Polonium-210

Product code: RBZ.24
Solution number: S1/23/133

Measurement

Reference time:	1200 GMT on 1 July 1991	
Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
which is equivalent to:	119.6	nanocuries per gram of solution
Mass of solution:	5.3634	grams
Total activity of lead-210:	23.74	kilobecquerels
which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy

Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity

The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition

2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data

Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks

The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Approved Signatory

Bismuth Carrier

Carrier ID: BI19-1 SD ~~BI 15-1~~ SD
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardiz as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Certification

This is to certify that Teledyne Brown Engineering - Environmental Services, located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

Flag Values
U = Compound/Analyte not detected (< MDC) or less than 3 sigma
\+ = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
U* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
High = Activity concentration exceeds customer reporting value
Spec = MDC exceeds customer technical specification
L = Low recovery
H = High recovery

Bolded text indicates reportable value.

No = Peak not identified in gamma spectrum
Yes = Peak identified in gamma spectrum

**** Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

Balance and Pipette Check

Daily Balance Tolerance Check Reports

for : L85481

Instrument: BALANCE 8

Model: A&D GF-6100

Serial Number: 14619637

Description: 6100 g capacity top loading balance

Known Weight	Result Weight
1.00	1.01
100.00	100.01
1000.00	1000.04

Check Date: 30-DEC-19

Analyst: KT

Weight Set Used: WTSET 3

Tolerance: 1%

Out of Range: N

Prod

CALIBRATION
No. 0146

Certificate of calibration of absolutely standardized radioactive solution

P 30621

Description

Principal radionuclide: Lead-210

Daughter radionuclide: Bismuth-210 + Polonium-210

Product code: RBZ.24

Solution number: S1/23/133

Measurement

Reference time:	1200 GMT on 1 July 1991	
Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
which is equivalent to:	119.6	nanocuries per gram of solution
Mass of solution:	5.3634	grams
Total activity of lead-210:	23.74	kilobecquerels
which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy

Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity

The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition

2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data

Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks

The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Bismuth Carrier

Carrier ID: BI19-1 SD ~~BI19-1~~ SD
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardize as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Precipitate weights	1	2	3	4

Gamma Spectroscopy

Quality Control

Quality control sample(s) analyzed as WG32735.

Duplicate Sample

All duplicate result(s) were within acceptance limits, unless otherwise noted. Duplicate(s) were analyzed for the following sample(s).

Client ID	Laboratory ID	QC Sample #
11187072-120819-BN-SJSSA05 (70-72.5 CM)	L85483-10	WG32735-1

PB-210

Quality Control

Quality control sample(s) analyzed as WG32883. Carrier(s): BI19-1.

Method Blank

All blank(s) within acceptance limits, unless otherwise noted.

Laboratory Control Sample

All laboratory control sample(s) within acceptance limits, unless otherwise noted.

Duplicate Sample

All duplicate result(s) were within acceptance limits, unless otherwise noted. Duplicate(s) were analyzed for the following sample(s).

Client ID	Laboratory ID	QC Sample #
11187072-120919-BN-SJSSA07 (22.5-25 CM)	L85485-4	WG32883-3

Matrix Spike

All matrix spike result(s) within acceptance limits, unless otherwise noted.

Matrix Spike Duplicate

Matrix spike duplicate result was within acceptance limits, unless otherwise noted.

Certification

This is to certify that Teledyne Brown Engineering - Environmental Services, located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

Certificate of calibration of absolutely standardized radioactive solution

P 30621

NAMAS
CALIBRATION
No. 0146

Description

Principal radionuclide: Lead-210
Daughter radionuclide: Bismuth-210 + Polonium-210

Product code: RBZ.24
Solution number: S1/23/133

Measurement

Reference time:	1200 GMT on 1 July 1991	
Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
which is equivalent to:	119.6	nanocuries per gram of solution
Mass of solution:	5.3634	grams
Total activity of lead-210:	23.74	kilobecquerels
which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy

Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity

The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition

2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data

Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks

The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Approved signatory

Bismuth Carrier

Carrier ID: BI19-1 SD ~~BI15-1~~ FOR
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardiz as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Special Considerations

Sample Receipt L85479-1

The sample container for 11187072-120719-SS-SJSSA01 0-2.5 cm) was broken during transit to the laboratory. The solid content portion of the sample was salvaged and used for the analyses.

Lead 210 L85479-1 through 11

The method blank for workgroup WG32943 was slightly above the MDC of 4.06E-01 pCi/total with an activity/uncertainty of 4.28E-01 +/- 2.57E-01 pCi/total. Since all other quality control results for this workgroup met the required criteria, the data is reported for consideration of acceptability. If determined that the data associated with this workgroup is unacceptable, please let us know and we will reanalyze all associated samples.

Gamma Spectroscopy

Quality Control

Quality control sample(s) analyzed as WG32680.

Duplicate Sample

All duplicate result(s) were within acceptance limits, unless otherwise noted. Duplicate(s) were analyzed for the following sample(s).

PB-210

Quality Control

Quality control sample(s) analyzed as WG32943. Carrier(s): BI19-1.

Method Blank
All blank(s) within acceptance limits, unless otherwise noted.

Blank Samples	WG32943-1	Failed

Laboratory Control Sample
All laboratory control sample(s) within acceptance limits, unless otherwise noted.

Duplicate Sample
All duplicate result(s) were within acceptance limits, unless otherwise noted. Duplicate(s) were analyzed for the following sample(s).

Client ID	Laboratory ID	QC Sample #	
11187072-120719-SS-SJSSA01 (15-17.5 CM)	L85479-3	WG32943-3	Failed

Matrix Spike
All matrix spike result(s) within acceptance limits, unless otherwise noted.

Matrix Spike Duplicate
Matrix spike duplicate result was within acceptance limits, unless otherwise noted.

Certification

This is to certify that Teledyne Brown Engineering - Environmental Services, located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

Keith Jeter
Operations Manager

CS-137	2007	-2.10E-02	8.38E-02	**1.33E-01**	pCi/g Dry		131.8	g dry	12/07/19 15:50	01/03/20	3895	Sec	U		No	

Flag Values
U = Compound/Analyte not detected (< MDC) or less than 3 sigma
\+ = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
U* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
High = Activity concentration exceeds customer reporting value
Spec = MDC exceeds customer technical specification
L = Low recovery
H = High recovery

Bolded text indicates reportable value.

No = Peak not identified in gamma spectrum
Yes = Peak identified in gamma spectrum

**** Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

Balance and Pipette Check

Daily Balance Tolerance Check Reports

for : L85479

Instrument: BALANCE 8

Model: A&D GF-6100

Serial Number: 14619637

Description: 6100 g capacity top loading balance

Known Weight	Result Weight
1.00	1.00
100.00	100.01
1000.00	1000.12

Check Date: 19-DEC-19

Analyst: KT

Weight Set Used: WTSET 3

Tolerance: 1%

Out of Range: N

Prod

Certificate of calibration of absolutely standardized radioactive solution

P 30621

NAMAS CALIBRATION No. 0146

Description

Principal radionuclide: Lead-210
Daughter radionuclide: Bismuth-210 + Polonium-210
Product code: RBZ.24
Solution number: S1/23/133

Measurement

Reference time:	1200 GMT on 1 July 1991	
Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
which is equivalent to:	119.6	nanocuries per gram of solution
Mass of solution:	5.3634	grams
Total activity of lead-210:	23.74	kilobecquerels
which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy

Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity

The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition

2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data

Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks

The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Bismuth Carrier

Carrier ID: BI19-1 SD ~~BI18-1~~ SD
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardiz as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Certification

This is to certify that Teledyne Brown Engineering - Environmental Services, located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

Flag Values
U = Compound/Analyte not detected (< MDC) or less than 3 sigma
\+ = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
U* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
High = Activity concentration exceeds customer reporting value
Spec = MDC exceeds customer technical specification
L = Low recovery
H = High recovery

Bolded text indicates reportable value.

No = Peak not identified in gamma spectrum
Yes = Peak identified in gamma spectrum

**** Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

Certificate of calibration of absolutely standardized radioactive solution

P 30621

NAMAS
CALIBRATION
No. 0146

Description

Principal radionuclide: Lead-210
Daughter radionuclide: Bismuth-210 + Polonium-210
Product code: RBZ.24
Solution number: S1/23/133

Measurement

Reference time:	1200 GMT on 1 July 1991	
Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
which is equivalent to:	119.6	nanocuries per gram of solution
Mass of solution:	5.3634	grams
Total activity of lead-210:	23.74	kilobecquerels
which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy

Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity

The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition

2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data

Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks

The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Bismuth Carrier

Carrier ID: BI19-1 SD ~~BI19-1~~
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardiz as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Certification

This is to certify that Teledyne Brown Engineering - Environmental Services, located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

Flag Values
U = Compound/Analyte not detected (< MDC) or less than 3 sigma
\+ = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
U* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
High = Activity concentration exceeds customer reporting value
Spec = MDC exceeds customer technical specification
L = Low recovery
H = High recovery

Bolded text indicates reportable value.

No = Peak not identified in gamma spectrum
Yes = Peak identified in gamma spectrum

**** Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

Response Comment

	Criteria	Yes No NA	Comment
1	Shipping container custody seals present and intact.	NA	
2	Sample container custody seals present and intact.	NA	
3	Sample containers received in good condition.	Y	
4	Chain of custody received with samples.	Y	
5	All samples listed on chain of custody received.	Y	
6	Sample container labels present and legible.	Y	
7	Information on container labels correspond with chain of custody.	Y	
8	Sample(s) properly preserved.	Y	
9	Sample(s) appropriate container(s).	Y	
For Hazardous Materials Only:			
10	Other. (Describe)	NA	
11	Paperwork shows TBE and shippers name, address and phone number.	NA	
12	Paperwork shows sample quantity information.	NA

Summary of Nuclide Activity
Sample ID : 13S100122619

Acquisition date : 26-DEC-2019 17:15:06

Total number of lines in spectrum 18
Number of unidentified lines 7
Number of lines tentatively identified by NID 11 61.11%

Nuclide Type :

Nuclide	Hlife	Decay	Uncorrected BQ/TOTAL	Decay Corr BQ/TOTAL	Decay Corr 2-Sigma Error	2-Sigma %Error	Flags

Certificate of calibration of absolutely standardized radioactive solution

P 30621

NAMAS
CALIBRATION
No. 0146

Description	Principal radionuclide:	Lead-210	Product code:	RBZ.24
	Daughter radionuclide:	Bismuth-210 + Polonium-210	Solution number:	S1/23/133

Measurement	Reference time:	1200 GMT on 1 July 1991	
	Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
	which is equivalent to:	119.6	nanocuries per gram of solution
	Mass of solution:	5.3634	grams
	Total activity of lead-210:	23.74	kilobecquerels
	which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy: Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity: The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition: 2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data: Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks: The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Bismuth Carrier

Carrier ID: BI19-1 SD ~~BI19-1~~ FOR
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardiz as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Sample Receipt

The following sample(s) were received on December 17, 2019 in good condition, unless otherwise noted.

Cross Reference Table

Client ID	Laboratory ID	Station ID(if applicable)
11187072-120919-BN-SJSSA04 (0-2.5 CM)	L85482-1	
11187072-120919-BN-SJSSA04 (7.5-10 CM)	L85482-2	
11187072-120919-BN-SJSSA04 (15-17.5 CM)	L85482-3	
11187072-120919-BN-SJSSA04 (22.5-25 CM)	L85482-4	
11187072-120919-BN-SJSSA04 (30-32.5 CM)	L85482-5	
11187072-120919-BN-SJSSA04 (37.5-40 CM)	L85482-6	
11187072-120919-BN-SJSSA04 (45-47.5 CM)	L85482-7	
11187072-120919-BN-SJSSA04 (52.5-55 CM)	L85482-8	
11187072-120919-BN-SJSSA04 (60-62.5 CM)	L85482-9	
11187072-120919-BN-SJSSA04 (70-72.5 CM)	L85482-10	
11187072-120919-BN-SJSSA04 (80-82.5 CM)	L85482-11	

Sample Analysis

Instrument(s) used for all analyses were in calibration.
Standard solution(s) used in analyses were National Institute of Standards and Technology (NIST) traceable.

Special Considerations

The following samples arrived at the laboratory with the container lids that were broken which resulted in the liquid portion of the samples leaking into the shipment container.

L85482-7 11187072-120919-BN-SJSSA04 (45-47.5 CM)
L85482-10 11187072-120919-BN-SJSSA04 (70-72.5 CM)
L85482-11 11187072-120919-BN-SJSSA04 (80-82.5 CM)

Gamma Spectroscopy

Quality Control

Quality control sample(s) analyzed as WG32733.

Duplicate Sample

All duplicate result(s) were within acceptance limits, unless otherwise noted. Duplicate(s) were analyzed for the following sample(s).

Client ID	Laboratory ID	QC Sample #
11187072-120619-SS-SJSSA03 (80-82.5 CM)	L85481-11	WG32733-1

PB-210

Quality Control

Quality control sample(s) analyzed as WG32932. Carrier(s): BI19-1.

Method Blank

All blank(s) within acceptance limits, unless otherwise noted.

Laboratory Control Sample

All laboratory control sample(s) within acceptance limits, unless otherwise noted.

Duplicate Sample

All duplicate result(s) were within acceptance limits, unless otherwise noted. Duplicate(s) were analyzed for the following sample(s).

Client ID	Laboratory ID	QC Sample #
11187072-120819-BN-SJSSA05 (30-32.5 CM)	L85483-5	WG32932-3

Matrix Spike

All matrix spike result(s) within acceptance limits, unless otherwise noted.

Matrix Spike Duplicate

Matrix spike duplicate result was within acceptance limits, unless otherwise noted.

Certification

This is to certify that Teledyne Brown Engineering - Environmental Services, located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

Keith Jeter
Operations Manager

+	Positive Result
U	Compound/analyte was analyzed, peak not identified and/or not detected above MDC
*	< 5 times the MDC are not evaluated
**	Nuclide not detected
***	Spiking level < 5 times activity
P	Pass
F	Fail
NE	Not evaluated

Certificate of calibration of absolutely standardized radioactive solution

P 30621

NAMAS CALIBRATION No. 0146

Description

Principal radionuclide: Lead-210
Daughter radionuclide: Bismuth-210 + Polonium-210

Product code: RBZ.24
Solution number: S1/23/133

Measurement

Reference time:	1200 GMT on 1 July 1991	
Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
which is equivalent to:	119.6	nanocuries per gram of solution
Mass of solution:	5.3634	grams
Total activity of lead-210:	23.74	kilobecquerels
which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy

Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity

The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition

2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data

Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks

The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Bismuth Carrier

Carrier ID: BI19-1 BI19-1
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardize as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Case Narrative - L85485
GH001-3EJACINTO-19

01/31/2020 11:33

Certification

This is to certify that Teledyne Brown Engineering - Environmental Services, located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

Keith Jeter
Operations Manager

Flag Values
U = Compound/Analyte not detected (< MDC) or less than 3 sigma
\+ = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
U* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
High = Activity concentration exceeds customer reporting value
Spec = MDC exceeds customer technical specification
L = Low recovery
H = High recovery

Bolded text indicates reportable value.

No = Peak not identified in gamma spectrum
Yes = Peak identified in gamma spectrum

**** Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

Certificate of calibration of absolutely standardized radioactive solution

P 30621

CALIBRATION No. 0146

Description

Principal radionuclide: Lead-210
Daughter radionuclide: Bismuth-210 + Polonium-210
Product code: RBZ.24
Solution number: S1/23/133

Measurement

Reference time:	1200 GMT on 1 July 1991	
Radioactive concentration of lead-210:	4.426	kilobecquerels per gram of solution
which is equivalent to:	119.6	nanocuries per gram of solution
Mass of solution:	5.3634	grams
Total activity of lead-210:	23.74	kilobecquerels
which is equivalent to:	642	nanocuries

Method of measurement:
Repeated 4-pi alpha counting over a period of 63 days

Accuracy

Overall uncertainty in the radioactive concentration quoted above: ± 2.4 %

Random uncertainty: ± 0.6 % Systematic uncertainty: ± 1.8 %

Overall uncertainty is defined on the reverse of the certificate.

Radionuclidic Purity

The estimated activities of any radioactive impurities are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides less than 0.02 %

Chemical Composition

2M HNO_3 containing 100 micrograms of lead and 100 micrograms of bismuth per ml.

Physical Data

Recommended half life: 22.3 ± 0.2 years

Lead-210: 100% beta particle emission.
Bismuth-210: 100% beta particle emission. Half life 5.01 ± 0.01 days.
Polonium-210: 100% alpha particle emission. Half life 138.38 ± 0.01 days.

Remarks

The ratio of the activity of bismuth-210 to the activity of lead-210 = 1.0006
At the reference time polonium-210 was in radioactive equilibrium with lead-210.
The ratio of the activity of polonium-210 to the activity of lead-210 was 1.0179
There is no guarantee that all the polonium-210 will remain in solution.
Tests made over 4 years on standardized solutions of lead-210 stored in glass ampoules have shown that loss of lead-210 from solution is negligible other than by radioactive decay.

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST traceability as defined in NCRP 58 (1985).

Bismuth Carrier

Carrier ID: BI19-1 SD ~~BI18-1~~ SD
Reagent Lot # : ~~006116~~ 07410
Reagent Manufacturer: Fisher Scientific

Bismuth Carrier preparation:
Weigh 69.6 grams bismuth nitrate - $Bi(NO_3)_3.5H_2O$ - into a 1 liter beaker.
Add 1:19 HNO_3 to the 1 liter mark. Stir with magnetic stirrer until dissolved.
Transfer to the bismuth carrier volumetric flask and standardize as bimuth phosphate per procedure TBE-2015.

NOTES:
Used 5 beakers containing 15 milliliters of 5N HNO3.
Added one milliliter of carrier to each beaker.
proceeded with steps 9.4.9 - 9.5.7 of procedure TBE-2015.

Subject: **Analytical Results and Reduced Validation**
San Jacinto River Waste Pits Superfund Site Investigation
Predesign Investigation Sampling Event - Pilot Study and Treatability
San Jacinto, Harris County, Texas
December 2019

1. Introduction

This document details a reduced validation of analytical results for soil samples collected in support of the San Jacinto River Waste Pits Superfund Site Investigation during December 2019. Samples were submitted to Teledyne Brown Engineering, Inc. in Knoxville, Tennessee. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Evaluation of the data was based on information obtained from the finished data sheets, chain of custody forms, blank data, duplicate data, laboratory control samples (LCS), matrix spike (MS) samples. The assessment of analytical and in-house data included checks for: data consistency (by observing comparability of duplicate analyses), adherence to accuracy and precision criteria, and transmittal errors.

The QA/QC criteria by which these data have been assessed are outlined in the analytical method referenced in Table 3 and applicable guidance from the document entitled:

i) U.S. Environmental Protection Agency. 2004. Multi-Agency Radiological Laboratory Analytical Protocols Manual (MARLAP). USEPA 402-B-04-00IA. July 2004

This item will subsequently be referred to as the "Guidelines" in this Memorandum.

2. Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were analyzed within the required holding times.

3. Chain-of-Custody Evaluation

During the sample confirmation receipt (SCR) inspection, the chain-of-custody (COC) was reviewed and compared to the SCR. The SCR confirmed that the samples were correctly logged for the requested parameters upon receipt at the laboratory. The COC was complete and accurate, the sample identification numbers and collection information was verified, and appropriate signatures documenting relinquishment were provided.

The sample container for 11187072-120719-SS-SJSSA01 (0-2.5 CM) was received broken and the contents salvaged; the sample container for 11187072-120919-BN-SJSSA04 (45-47.5 CM) was received with a broken lid and liquid contents leaked into the cooler; the project manager gave permission to proceed with analysis in both cases.

4. Initial Calibration

Initial calibration of the instruments ensures that they are capable of producing satisfactory quantitative data at the beginning of a series of analyses. The control limits for check sources and backgrounds shall be established using a minimum of 20 sequentially measured data points. For extended background count periods, a series of at least 10 single background measurements is acceptable. The background count times should be equal to or greater than sample count time unless precluded by extended low level sample count times. The calibration counting geometry used must be the same as that used with the analytical samples. Evaluate if standard sources have aged greater than the expiration date on the certificate. No samples shall be may be counted until these warning and control limits have been established.

Upon review of the data, it was determined that the instruments are capable of producing satisfactory quantitative data and the radiochemical control charts indicated no out of control conditions.

5. Continuing Calibration

To ensure that instrument calibration is acceptable throughout the sample analysis period, continuing calibration verification (CCV) standards are analyzed on a regular basis. Each reporting batch submitted should contain control charting data related to calibration verification for all detectors used in the analyses of the samples.

For this study, all analyte recoveries reported for the CCVs were within the specified limits.

6. Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

A low concentration of lead-210 was detected in the method blank indicating a potential for laboratory contamination. All associated samples containing similar concentrations of the associated compound were assumed a reflection of laboratory contamination and are qualified non-detect in Table 4.

7. Laboratory Control Sample Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

8. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision.

For this study, MS/MSD samples were prepared and analyzed by the laboratory as specified in Table 1.

The MS/MSD samples were spiked with all compounds of interest. All percent recoveries and RPD values were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision.

9. Duplicate Sample Analyses

Analytical precision is evaluated based on the analysis of laboratory duplicate samples. For this study, duplicate samples were prepared and analyzed by the laboratory as specified in Table 1.

The duplicate results were evaluated per the "Guidelines". Duplicate results less than 5 times the minimum detectable concentration (MDC) are not evaluated. All RPD values were within the laboratory control limits, demonstrating acceptable analytical precision.

10. Chemical Yield - Tracers

Tracers are used in radiochemical separations methods to provide evaluation of chemical separation. Chemical yield is evaluated through the recovery of chemical species spiked into samples; it is evaluated radiometrically with a tracer. Each sample is spiked with a tracer, and sample results are adjusted for yields greater or less than 100 percent.

For this study, all analyte tracer recoveries reported were within the specified limits.

11. Field QA/QC Samples

The field QA/QC consisted of one field duplicate sample set.

11.1 Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision one field duplicate sample was collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 100 percent for soil samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criteria is two times the RL value for soil samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

12. Analyte Reporting

The laboratory reported radiochemistry results down to the laboratory's MDC for each analyte. Non-detect results were presented as non-detect at the RL in Table 2.

All soil results were reported on a dry weight basis.

13. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.

Table 1

Subject: **Analytical Results and Validation - High Resolution**
San Jacinto River Waste Pits Superfund Site Investigation
Predesign Investigation Sampling Event – Sand Separation Area
San Jacinto, Harris County, Texas
December 2019

1. Introduction

This document details a validation of analytical results for soil boring samples collected in support of the Predesign Investigation Sampling Event – Sand Separation Area at the San Jacinto River Waste Pits Superfund Site from December 2019. Samples were submitted to Eurofins TestAmerica, Inc. at locations in Sacramento, California, and Knoxville, Tennessee. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Full Contract Laboratory Program (CLP) equivalent raw data deliverables were provided by the laboratory. The sample delivery groups covered in the report are identified in Table 1. Evaluation of the data was based on information obtained from the finished data sheets, raw data, chain of custody forms, calibration data, blank data, recovery data from surrogate spikes/laboratory control samples (LCS), matrix spikes (MS) and field Quality Assurance/Quality Control (QA/QC) samples. The assessment of analytical and in-house data included checks for: data consistency (by observing comparability of duplicate analyses), adherence to accuracy and precision criteria, and transmittal errors.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

i) "Quality Assurance Project Plan, Final Second Phase Pre-Design Investigation", San Jacinto River Waste Pits Site, Harris County, Texas, Report No 6, June 3 2019

ii) "National Functional Guidelines for High Resolution Superfund Methods Data Review", OLEM 9200.3-115, EPA 542-B-16-001, April 2016

Item ii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2. Sample Holding Time and Preservation

The sample holding time criterion for the analyses are summarized in Table 3. The sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were delivered on ice and stored by the laboratory at the required temperature (0-6°C).

3. Gas Chromatography/Mass Spectrometry (GC/MS) – Tuning and Mass Calibration (Instrument Performance Check)

Prior to dioxin/furans analyses, GC/MS instrumentation is tuned to ensure optimization over the mass range of interest. To evaluate instrument tuning, the method requires the analysis of the specific tuning compound perfluorokerosene (PFK). The resulting spectra must meet the criteria cited in the method before analysis is initiated. Analysis of the tuning compound must then be repeated every 12 hours throughout sample analysis to ensure the continued optimization of the instrument.

Tuning compounds were analyzed at the required frequency throughout the analysis period. All tuning criteria were met, indicating that proper optimization of the instrumentation was achieved.

4. Initial Calibration

To quantify dioxin/furans of interest in samples, calibration of the GC/MS over a specific concentration range must be performed. Initially, a minimum of a five-point calibration curve containing all compounds of interest is analyzed to characterize instrument response for each analyte over a specific concentration range. Linearity of the calibration curve and instrument sensitivity are evaluated against the criteria cited in the methods.

The initial calibration data were reviewed. All compounds met the method criteria for sensitivity and linearity.

5. Continuing Calibration

To ensure that instrument calibration for the analyses is acceptable throughout the sample analysis period, continuing calibration standards must be analyzed and compared to the initial calibration curve every 12 hours.

Calibration standards were analyzed at the required frequency, and all results met the method criteria for instrument sensitivity and stability.

6. Laboratory Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with the investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per analytical batch.

Several method blank results had low-level detections. Those investigative results of similar concentrations to those found in the method blanks were qualified as non-detect (U) as shown in Table 4.

7. Spiked C-13 Labeled PCDD/PCDF

In accordance with the method employed, all samples, blanks, and QC samples analyzed for Polychlorinated Dibenzodioxins/Polychlorinated Dibenzo-p-furan (PCDD/PCDF) are spiked with labeled congeners prior to extraction to be an internal standard for the quantitation of native congeners, and to serve as surrogates for the assessment of method performance in the sample matrix.

All samples submitted for PCDD/PCDF determinations were spiked with the appropriate number of labeled compounds prior to sample extraction and analysis.

Labeled congener recoveries and ion abundance ratios were assessed against method control limits. All Dioxin/Furan recoveries were within the method acceptance ranges. However, one abundance ratio was outside of the acceptable limits, and the associated sample result was qualified as estimated as shown in Table 5.

8. Cleanup Standard Recoveries

C-37 labeled cleanup standards are added to all samples, blanks, and QC samples subsequent to extraction, but prior to the cleanup procedures to assess the efficiency of the cleanup procedures.

Cleanup standards were added to all samples, blanks, and QC samples prior to cleanup. All Dioxin/Furan recoveries were within the method acceptance ranges.

9. Laboratory Control Sample Analyses

LCS and/or LCS/laboratory control sample duplicates (LCSD) are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects. The relative percent difference (RPD) of the LCS/LCSD recoveries is used to evaluate analytical precision.

For this study, LCS or LCS/LCSD were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS and/or LCS/LCSD contained all compounds of interest. All LCS recoveries and RPDs were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision.

10. **Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses**

To evaluate the effects of sample matrices on the preparation process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern

and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision.

If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed. If only the MS or MSD recovery was outside of control limits, no qualification of the data was performed based on the acceptable recovery of the companion spike and the acceptable RPD.

MS/MSD analyses was performed as specified in Table 1. The laboratory performed additional site-specific MS/MSD analyses internally.

The MS/MSD samples were spiked with all compounds of interest. All percent recoveries and RPD values were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision with the exception of those shown in Table 6.

11. Field QA/QC Samples

The field QA/QC consisted of two field duplicate sample sets.

To assess the analytical and sampling protocol precision, two field duplicate sample sets were collected and submitted “blind” to the laboratory, as specified in Table 1. The RPDs associated with this duplicate sample were assessed per the Guidelines.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision with the exception of those shown in Table 7 that showed elevated variability.

12. Analyte Reporting

The laboratory reported detected results down to the laboratory's estimated detection limit (EDL) for each analyte. Positive analyte detections less than the reporting limit (RL) but greater than the EDL were reported as estimated (J) in Table 2 unless otherwise qualified in the Memorandum. Non-detect results were presented as non-detect at the estimated detection limit (EDL) in Table 2.

All results were reported on a dry weight basis.

Diphenyl ether interferences were observed at the exact retention time and mass channel for several furans. All associated sample results were qualified as estimated as shown in Table 8.

13. Target Compound Identification/Sample Quantitation

To minimize erroneous compound identification during organic analyses, qualitative criteria including compound retention time, ion abundance ratio, and chromatography were evaluated according to the identification criteria established by the methods. An erroneous identification can be either a false-positive (reporting a target compound when it is not present in the sample) or false-negative (not reporting a compound that is present in the sample).

The samples identified in Table 1 were reviewed. Most congeners reported adhered to the specified identification criteria.

Some sample results were reported as positive hits although the ion abundance ratio was not met. The associated results were qualified as the estimated maximum possible concentration. A summary of these qualified data is presented in Table 9.

14. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.
