Laboratory Review Checklist: HRMS Initial Calibration

Method: 1613/8290	Process Date: 01/25/18
Instrument Name: E-HRMS-07	Calibration File Name: P5-1801241613I
Processor Name: Gisela Cruz	Reviewer Name: Loan Leung
Supervisor: Kristin Neir	

Description	Yes	No	NA	NR	ER#
Analytical Sequence					
Does the analytical sequence summary accurately reflect the instrument run log, including ICV?	√				
Was a Mass Resolution Check performed at the beginning and end of the 12-hour sequence?	√				
Were all calibration standards and the ICV analyzed within the same 12-hour sequence?	√				
Were all calibration standards analyzed only once?	√				
Was the ICV analyzed after the ICAL, before analyzing samples?	√				
	√				
Mass Resolution Check					
Are beginning and ending resolution checks provided and legible?	√				
Were all target masses >10,000 resolving power at the beginning of the sequence?	√				
Were all target masses >10,000 resolving power at the end of the sequence?	√				
For PCB analysis, were masses at the low and high end of each function mass range >8,000?			√		
Where automatic printout of the mass resolution were not >10,000, was the resolution inspected by a trained analyst, including manual calculation of the resolution, if warranted?			√		
Window Define/209					
Is the window defining mix summary present, and accompanied by SICPs/Chromatograms for the WDM?	√				
Was the WDM/Column Performance/209 solution analyzed prior to the analysis of the calibration standards?	√				
Was 2,3,7,8-TCDD peak valley <25% to any other TCDD?	√				
Were all first and last eluters adequately resolved in each function?	√				
If first and last eluters were not resolved, was corrective action performed and documented, followed by a reanalysis of the WDM?			√		
Was the retention time of PCB 209 >55 min?			√		
Were the following congeners uniquely resolved (valley height <40% of the shortest peak)? PCB-34 and PCB-23 PCB-187 and PCB-182			√		
Did PCB 156/157 co-elute within 2 seconds at peak maximum?			√		
Calibration Standards					
Were there at least 5 calibration standards analyzed?	√				
If not all calibration standards were used, were the omitted standards either the lowest or highest calibration standard?			√

Description	Yes	No	NA	NR	ER#
Are all sample response summaries, S/N height summaries, and SICPs included (and legible) for the entire sequence?	√				
Did each calibration point meet method criteria for Ion Abundance Ratio for all analytes and labeled standards?	√				
Did each calibration point meet method criteria for signal-to-noise ratios (S/N)?	√				
Were area counts for the highest calibration standard below levels of saturation?	√				
Were manual integrations technically justified to correct for poor software integration?		√			
Response Factors					
Is the ICAL Response Factor Summary present, including RR/RF values for each native/labeled analyte at each level of calibration?	√				
Were all calibration standards used in determining response factors?	√				
Were relative response factors (RR) for each native analyte calculated at each calibration point?	√				
Did the RSD for RRFs for each native analyte meet method criteria?	√				
Were response factors (RF) for each native analyte not having a corresponding labeled compound calculated at each calibration point?	√				
Were RFs for each labeled compound calculated for each calibration point?	√				
Did the RSD for RF for each labeled compound meet method criteria?	√				
Initial Calibration Verification					
Is the calibration verification present, including form 4A/B reflecting results for the ICV (Conc. or %D)	√				
Did all analytes meet method criteria for the ICV.	√

Project: San Jacinto
Sample Matrix: Wipe, Soil

Service Request: K1811120
Date Received: 11/13/2018 - 11/14/2018

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt:

Six soil and two wipe samples were received for analysis at ALS Environmental between 11/13/2018 - 11/14/2018. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

Semivolatiles by GC/MS:

Method 8270D, TCLP Semivolatile Organic Compounds by GC/MS 12/08/2018: The spike recovery of 2,4,6-Trichlorophenol, TCLP for Laboratory Control Sample (LCS) KQ1817224-01 was slightly outside the lower control criterion (63, 64-108). The analyte in question was not detected in the associated field samples. The error associated with reduced recovery indicated a potential low bias. Additional analysis of the associated field samples was not performed because insufficient sample holding time remained for testing. Recovery in the associated matrix spikes was acceptable, which indicated the analytical batch was in control. The data was flagged to indicate the problem.

Semivoa GC:

Method 8015C, Diesel and Residual Range Organics 11/20/18: The detection limit was elevated for Diesel Range Organics in sample SL0065. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. The extract was highly colored, which indicated the need to perform a dilution prior to injection into the instrument. The result was flagged to indicate the matrix interference.

Method 8015C, Diesel and Residual Range Organics 12/06/18: The recovery of Diesel and Residual Range Organics in Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) KWG1806092-1/2 was outside the control limits listed in the results summary. The limits are default values temporarily in use until sufficient data points are generated to calculate statistical control limits. Based on the method and historic data, the recoveries observed were in the range expected for this procedure. The field samples analyzed in this sequence did not contain the analyte in question. Since the apparent problem indicated a potential high bias, the data quality was not affected. No further corrective action was required.

Method 8015C, Diesel and Residual Range Organics 12/06/18: Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Method 8015C, Diesel and Residual Range Organics 12/06/18: The detection limit was elevated for Diesel and Residual Range Organics in samples. The samples were diluted in order to prevent damage to the instrument. Previous attempt to run extracts caused injector error. The results were flagged to indicate the matrix interference.

Method 8015C, Diesel and Residual Range Organics 12/06/18: The upper control criterion was exceeded for Diesel Range Organics and Residual Range Organics in Continuing Calibration Verifications (CCV) KWG1806357-3/4. The field samples analyzed in this sequence did not contain the analytes in question. Since the apparent problem indicated a potential high bias, the data quality was not affected. No further corrective action was required.

Method 8081B, Organochlorine Pesticides: The recoveries of Methoxychlor and Toxaphene in Laboratory Control Sample

Approved by _____ Date 01/21/2019

KWG1806145-5; Methoxychlor in Matrix Spikes (MS/DMS) KWG1806145-1/2; and Tetrachloro-m-xylene in all samples and Decachlorobiphenyl in Laboratory Control Sample KWG1806145-5 were outside the control limits listed in the results summary (70-130). The limits are default values temporarily in use until sufficient data points are generated to calculate statistical control limits. Based on the method and historic data, the recoveries observed were in the range expected for this procedure. No further corrective action was taken.

Method 8081B, Organochlorine Pesticides: The analysis of samples SL0064, SL0065, and SL0022 was initially performed past the recommended holding time. Analyst misprioritized holding dates of these samples based on the collection date of the initial sample SL0084 which was performed within holding time. The data was flagged to indicate the holding time violation.

Method 8082A, :Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Metals:

Method 6010C, 12/05/2018: The matrix spike recovery of Silver for sample SL0022 was outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicated the analytical batch was in control. The matrix spike outlier suggested a potential low bias in this matrix. No further corrective action was appropriate.

General Chemistry:

Method 9034 Modified, 11/15/2018:Samples SL0084, SL0064, SL0065, SL0022, FW0001 and FB0001 were received past holding time. The analysis was performed as soon as possible after receipt by the laboratory. The data was flagged to indicate the holding time violation.

Subcontracted Analytical Parameters:

Asbestos
The analysis for Asbestos was performed at LabCor, Seattle, Washington. The data for this analysis is included in the corresponding section of this report.

Cyanide Reactivity
This analysis was performed at ALS Environmental in Holland, MI. The data for this analysis is included in the corresponding section of this report.

Volatiles by GC/MS:

Method 8260C, 11/27/2018:The upper control criterion was exceeded for Dibromofluoromethane in samples SL0064, SL0065 and SL0022. No target analytes were detected in the sample. The error associated with an elevated recovery equated to a high bias. The quality of the sample data was not significantly affected. No further corrective action was appropriate.

Method 8260C, 11/27/2018:The spike recovery of 2-Butanone for Laboratory Control Sample (LCS) KWG1806350-1 was outside the lower control criterion. The analyte in question was not detected in the associated field samples. The error associated with reduced recovery indicated a potential low bias. Additional analysis of the associated field sample was not performed because insufficient sample hold time remained for testing. The data was flagged to indicate the problem.

Report Number: 188387R01
Report Date: 12/5/2018

Enclosed please find results for samples submitted to our laboratory. A list of samples and analyses follows:

Lab/Cor Sample #	Client Sample # and Description	Analysis	Analysis Notes	Date Received:
188387 - S1	K1811120-001 - SL0084	CARB 435 - PLM		11/16/2018
188387 - S2	K1811120-002 - SL0064	CARB 435 - PLM		11/16/2018

188387 - S4	K1811120-004 - SL0022	CARB 435 - PLM		11/16/2018

CARB 435 - PLM - The submitted samples were analyzed using the CARB 435 method "Determination of Asbestos Content of Serpentine Aggregate" April 2017. The samples were weighed and dried overnight in an oven in order to remove moisture from the soil. After drying, the samples were weighed again and then manually crushed. The sample size was then reduced through the use of a riffle splitter in order to achieve approximately a one pint sub-sample for grinding. The remaining material was archived. The sub-sample was analyzed with a stereomicroscope in order to determine the presence of asbestos. After the stereomicroscope examination, the sub-sample was ground with a Bico plate grinder to a particle size of between 75µm and 250µm.

The ground soil was then analyzed with a stereomicroscope to further determine homogeneity and check for any potential asbestos fibers. A sub-portion of the ground sample was then pulled for a 400 field of view point-count. Any observed asbestos fibers were confirmed through morphological and optical characteristics as outlined by the CARB 435 method and the EPA 600/R-93/116 method.

Disclaimer The results reported relate only to the samples tested or analyzed; the laboratory is not responsible for data collected by personnel who are not affiliated with the laboratory. Results reported in both structures/cm3 and structures/mm2 are dependent on the sample volume and area. These parameters are measured and recorded by non-laboratory personnel and are not covered by the laboratory's accreditation. Interpretation of these results is the sole responsibility of the client.

If further clarification of these results is needed, please call us. Thank you for allowing the staff at Lab/Cor Portland, Inc. the opportunity to provide you with the analytical services.

Sincerely,

This laboratory participates in the National Voluntary Laboratory Accreditation Program (NVLAP). Testing method is per 40 CFR 763 Subpart E, Appendix E, PLM. This report and the data contained therein cannot be used to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government.

- "NAD" is No Asbestos Detected.
- Asbestos consists of the following minerals: chrysotile, amosite, crocidolite, tremolite, actinolite, anthophyllite.
- Material binders, such as those found in vinyl floor tiles, may prevent the detection of small diameter asbestos fibers. A gravimetric preparation and point-count is recommended for such samples.
- Quantitative analysis by PLM point count or TEM may be recommended for samples testing at < or = to 1% asbestos.
- The following estimate of error for this method by visual estimation of asbestos percent are as follows:
1% asbestos: 0-3% error, 5% asbestos: 1-9% error, 10% asbestos: 5-15% error, 20% asbestos: 10-30% error.
- This report pertains only to the samples listed on the report. Report considered valid only when signed by analyst.
