

DRAFT FINAL (REVISION 1)

VOLUME 3

HEALTH AND SAFETY PLAN

SITE WIDE GROUNDWATER (OPERABLE UNIT 03)

WEST LAKE LANDFILL SITE

BRIDGETON, MISSOURI

April 22, 2020

Project #: 63N-001-002

SUBMITTED BY: Trihydro Corporation

1252 Commerce Drive, Laramie, WY 82070

ENGINEERING SOLUTIONS. ADVANCING BUSINESS.

memorandum

То:	West Lake OU-3 Project-Team Members
From:	Ms. Allison Riffel, P.E.
Date:	April 22, 2020
Re:	Health and Safety Plan (HASP) Orientation

The purpose of this memorandum is to provide Trihydro employees and Trihydro subcontractors with a Health and Safety Plan (HASP) orientation, including a summary of the project, its common hazards, minimum personal protective equipment (PPE) required, and other relevant safety concerns, plus policies and practices unique to the site. Since project history affects information presented to project team members, this orientation is an evergreen document and should be updated as the project progresses. Incidents and hazards identified will be documented during daily tailgate safety meetings, recorded on Job Safety Analyses (JSAs) and memorialized in the HASP. This memorandum must be read in conjunction with the site-specific HASP, which contains detailed site hazard and response information.

INTRODUCTION

The West Lake Landfill (the site) was added to the Superfund National Priorities List (NPL) in 1990 and currently consists of three Operable Units (OUs) including former industrial and municipal waste cells and groundwater. Operable Unit 1 (OU-1) is comprised of areas that have been identified as containing radiological impacted material (RIM), and includes Area 1, Area 2, the Buffer Zone, and Lot 2A2 (USEPA ID#MOD079900932). Operable Unit 2 (OU-2) is the remainder of the site including the closed construction and demolition (C&D) Landfill, Inactive Sanitary Landfill, and the Bridgeton Landfill. Operable Unit 3 (OU-3), which is the focus of the Remedial Investigation/Feasibility Study (RI/FS) for which this HASP has been prepared, includes groundwater at or surrounding the site that may have been impacted by contaminants at the site. The OU-3 RI/FS is underway and anticipated to extend through 2023.

Access to OU-1 areas is restricted to trained personnel under the OU-1 Radiation Safety Plan. Trihydro will defer to and adhere to the existing health and safety policies/procedures regarding working within the OU-1 Exclusion Zone.

PROJECT/SITE HISTORY

For ease of discussion, the site is divided into five areas:

- Area 1
- Area 2
- Closed Demolition Landfill

- Inactive Sanitary Landfill
- The Bridgeton Landfill (North and South Quarries)

OU-1 is comprised of Area 1, Area 2, the Buffer Zone, and Lot 2A2. The Bridgeton Landfill, the Closed Demolition Landfill, and the Inactive Sanitary Landfill are all part of OU-2.

The West Lake Landfill site contains multiple areas of differing past operations. The landfill property was used agriculturally until a limestone quarrying and crushing operation began in 1939. The quarrying operation continued at various locations at the site until 1988 and resulted in shallow excavation areas and two quarry pits, the North Quarry Pit and the South Quarry Pit. The South Quarry Pit was excavated to a maximum depth of 240 feet below ground surface (ft bgs) (Herst & Associates 2005).

The site contains several areas where solid wastes have been disposed. The date on which landfilling activities started at the West Lake Landfill is not known with certainty and has been variously cited as beginning in or around the early 1950s, or as starting in 1952 or possibly 1962 (Herst & Associates 2005). The landfill was not officially permitted for use as a sanitary landfill until 1952. USEPA has reported that "from 1941 through 1953 it appeared that limestone extraction was the prime activity at the facility; however, as time passed the focus of the activity appeared to shift to waste disposal" (USEPA 1989). USEPA has reported that historical aerial photography from 1953 indicates use of a landfill had commenced. Mine spoils from quarrying operations were deposited on adjacent land immediately to the west of the quarry. Portions of the quarried areas and adjacent areas were subsequently used for landfilling municipal refuse, industrial solid wastes, and C&D debris. USEPA has reported that liquid wastes and sludges were also disposed of at the landfill. These operations, which predated state and federal laws and regulations governing such operations, occurred in areas that subsequently have been identified as Area 1, Area 2, the Closed Demolition Landfill, and the Inactive Sanitary Landfill.

This project HASP has been developed specifically for the OU-3 RI/FS field scope of work. When Trihydro personnel and subcontractors enter OU-1 (for well surveying, inventory, and groundwater gauging/sampling), personnel will follow the March 30, 2020 OU-1 Radiation Safety Plan (RSP) prepared by Ameriphysics and the September 2019 OU-1 Emergency Response Plan. Note, the RSP for OU-1 is currently being updated, and this HASP for OU-3 will accordingly be updated with the latest version of the RSP once that document is finalized.

WORK SCOPE

The OU-3 RI/FS is designed to document the nature and extent of releases of any hazardous substance from the site in groundwater and to determine the potential risk posed by such releases to human health and the environment. The objectives of the RI/FS are to refine the current understanding of the hydrogeologic system at and around the site, evaluate background water quality near the site, determine

the extent of groundwater impacts occurring at and near the site, provide predictive tools/models to evaluate potential future impacts, and, based on the information collected, identify potential groundwater remedies that may be implemented at the site.

The OU-3 RI field investigation may include, but is not limited to, the following tasks: well inspection and surveying, surficial and subsurface geologic investigations and sampling, monitoring well/soil boring drilling and installation, fluid level gauging, aquifer pump and slug testing, groundwater sampling, leachate sampling, indoor air testing, surveying/global positioning system (GPS), vapor intrusion investigations, ecological assessments, and routine site visits.

Updates to this HASP will be completed to add new tasks as necessary during implementation of the RI and subsequent FS activities.

MINIMUM/ANTICIPATED PERSONAL PROTECTIVE EQUIPMENT (PPE)

The minimum PPE for this project is listed below. Refer to the HASP and task-specific Job Safety Analysis (JSA) forms for additional anticipated PPE as entering OU-1 requires additional safety measures and PPE.

- Safety-toed boots
- Safety glasses
- Hard hat
- Work gloves
- Chemical resistant gloves (as needed)
- 4-Gas meter (as needed)
- H₂S monitor (as needed)
- Photo-ionization detector (PID) (as needed)
- Hearing protection (as needed)
- High-visibility vest

The requirements for working within the OU-1 area are outlined in the attached OU-1 Radiation Safety Plan and OU-1 Emergency Response Plan.

TRAINING/DRUG SCREENING REQUIREMENTS

- Occupational Safety and Health Administration Hazardous Waste Operations and Emergency Response (OSHA HAZWOPER) 40-Hour Training
- Radiation Awareness Training (see OU-1 RSP)
- Radiation Worker Training (Designated Radiation Workers see OU-1 RSP)
- Bridgeton Landfill On-site Orientation

The drug consortium (a third-party administrator that manages Trihydro's drug and alcohol testing) applies to project team members who must be enrolled and screened before site entry. In accordance with the Trihydro Drug and Alcohol Policy described in the HASP Reference Manual, at no time while on duty may employees use or be under the influence of alcohol, narcotics, intoxicants, or similar mind-altering substances, including prescription medications. Employees found under the influence of or having consumed such substances are to be immediately removed from the jobsite. Trihydro reserves the right to test for substance abuse. As part of implementing Trihydro's program to deter alcohol, drug, and substance abuse, each employee may be requested to submit to urine, blood, or other medical tests at any time, with or without notice. Employees are further subject to "for cause" drug, alcohol, or substances testing. "Cause" is determined if the company has reason to believe that the covered worker has used alcohol or illegal drugs or has misused prescription medication or over-the-counter drugs. Key reasons for testing may include the following: accidents, injuries, near misses, excessive absences, tardiness, altercations, lengthy absences, possession of drugs, or thefts. This policy applies to Trihydro employees and subcontractors.

Drug Testing Facilities

Concentra Medical Center	83 Progress Pkwy	Maryland Heights, MO	(314) 434-8174
Mercy Urgent Care - St. Peters	637 Dunn Road Suite 101	Hazelwood, MO	(314) 817-2000

MOBILE PHONE AND ELECTRONIC DEVICES SAFETY

Mobile phone(s) are defined as cellular and other mobile telephones and other similar electronic communication devices which facilitate both simplex (push-to-talk) and duplex (multi-directional simultaneous conversations), including GPS devices, when those devices are being used for voice communication, text messaging, electronic mail, and other operations requiring active manipulation of the device, including operation of the devices in hands free or hand held modes. For the purposes of this standard, two-way radios that are only capable of simplex communication (push-to-talk) are excluded from the definition of mobile phones.

The following are specifically prohibited:

- Use of mobile phones by drivers while operating a company vehicle on public roadways.
- Use of mobile phones by drivers while operating a personal vehicle on company business.
- Use of mobile phones by drivers while operating a motor vehicle on company business, unless allowable areas and circumstances are designated by applicable work site rules and instructions (such as areas restricted from public access inside an operating facility or controlled area).

PRE-ENTRY BRIEFING ACKNOWLEDGEMENT

⊽ Trihydro

I certify that I have read and understand the contents of this Health and Safety Plan (HASP) for West Lake Landfill OU-3, and reviewed appropriate Job Safety Analysis (JSA) forms, site safety documents, and Trihydro safety policies, procedures, plans, and documents for hazards that may be encountered on this project. Check the reason block if this is for initial entry, because of a change in the HASP, or to recognized hazards as outlined in Section 7 of this HASP.

1.0 EMERGENCY RESPONSE PLAN

If working within OU-1, Trihydro Corporation (Trihydro) personnel will follow the OU-1 Radiation Safety Plan and OU-1 Emergency Response Plan (Appendix D) in addition to the requirements below.

Because of the near proximity of medical assistance (approximately 3-4 minute response), this site does not assign site personnel to provide first aid.

The following Trihydro personnel are trained in CPR and first aid:

Allison Riffel	Kelly Birkenhauer		
Michael Sweetenham	Charles VanHeuvelen		
Drew Caschette	John Alten		

Emergency response will be carried out immediately whenever there is a personal injury, fire, or explosion. Field team members that sight or suspect a fire, explosion, or other potential risk to employee or environmental health will notify the Trihydro Project Manager (PM) immediately. A first-aid kit and fire extinguisher will be maintained on site.

Trihydro employees will be familiar with emergency procedures at the job site. Site emergency procedures will be reviewed with team members during the morning kick-off safety meeting. Site workers will be instructed to immediately stop work when a hazard is discovered.

A primary line of communication with emergency services will be established before work commencement. A secondary form is highly encouraged. Forms of communication include, but are not limited to, land line telephone, cellular telephone with verified acceptable signal strength, two-way radios, etc.

The following information is provided in the event of an emergency.

💎 Trihydro

1.3 EMERGENCY MEDICAL CARE

The primary concern during emergencies is the medical treatment of injured or exposed personnel. It is crucial that employees understand the contents of the Emergency Response Plan of the OU-3 Health and Safety Plan (HASP) to include the location of emergency contact numbers, the route to the nearest hospital, and the process of using WorkCareTM, Trihydro's contracted medical intervention provider.

- PMs need to print the emergency contact list, page 1-3, and post in a central location on site (if available).
- *PMs need to print the hospital routes, page 1-8 through1-10, and post in a central location on site (if available).*
- Team members need to have their WorkCareTM contact cards available.
- When present, the PM, or other Trihydro representative, needs to accompany the injured employee to the hospital.
- WorkCare[™] needs to be contacted by a project-team member to provide the treating facility with the injured employee's medical records and to coordinate medical treatment.

A map showing the location of the nearest (primary) hospital is shown on Figure 1-1, page 1-10.

1.4 NON-EMERGENCY MEDICAL CARE

The health and welfare of the project-team members is a primary concern, so it is important for employees to understand the procedures for contacting WorkCareTM for medical situations of a non-emergency nature. To provide the best care of staff, employees will contact WorkCareTM to provide information for the nearest Occupational Health Clinic, or use the services provided by the hospital listed in this HASP.

- Team members need to have their WorkCare[™] contact cards available.
- When present, the site PM, or other Trihydro representative, needs to accompany the employee to the clinic.
- The employee will contact WorkCare[™] to provide the treating facility with the employee's medical records and to coordinate medical treatment.

1.5 INCIDENT AND ACCIDENT REPORTING

Trihydro employees will report both verbally and in writing to Trihydro's PM and Corporate Health and Safety (H&S) Office any incidents or near misses resulting in personal or public injury, environmental impact, or property damage to the site, materials, or equipment, including motor vehicles owned by Trihydro or its subcontractors. Regarding accident, incidents, or near misses, verbal reports will be made as soon as possible after the situation is under control, followed by written reports to the OU-3 Project Coordinator through the Trihydro PM or Director. A copy of the

"Near Miss Report" form can be found as **Appendix A**. A near miss is an event that, given a change in time or position of personnel or equipment, could have resulted in an incident.

Examples of incidents and near misses which will be reported are as follows:

- Environment (e.g., spills, releases, odor complaints, permit exceedances, process upsets)
- Injury/illness (e.g., injuries, illnesses, first aids, OSHA-recordables, lost workday cases, fatalities, non-injuries document only, non-occupational)
- Property damage/loss (e.g., fires, explosions, loss of well control, business interruptions, abnormal operations, production loss/reduction)
- Quality (e.g., customer complaints, contaminations, off specification materials)
- Security (e.g., vandal damages, burglaries, break and enters, robberies, thefts, public disturbances, trespasses)
- Vehicle (e.g., vehicle accidents, cars/pickups/trucks, drill rigs)

Incident and accident reporting are important for the following reasons:

- Collects information that Trihydro can use to calculate statistics and other information for tracking accident trends
- Helps identify training needs; problems with work procedures; and needs for personal protective, safety, and emergency equipment
- Collects information necessary for completing investigation and insurance reports and complying with regulatory requirements
- Identifies weaknesses in company and site safety programs so they can be updated.

Reports of incidents or accidents will be prepared immediately after the event occurs. This is necessary to verify that important evidence is not lost or disturbed, and details are not forgotten by those involved. The "Accident/Incident Investigation Report" form can be found as **Appendix B**.

Additional incident reporting requirements are highlighted in the OU-1 ERP. This document can be found in **Appendix D**.

1.6 INCIDENT REPORTING FLOWCHART

*The Trihydro PM is to notify the client representatives.

It is crucial that the project team has control of the situation and care for the injured before reporting the incident. Once under control, the notification process is to be initiated.

The goal is for the notification process to be completed within 1 hour.

Notification is to be "person-to-person;" email notification and voicemail is unacceptable. If necessary, contact the next position in the notification tree.

Incidents include: injuries, illnesses, motor vehicle crashes, environmental impacts, Notice of Violation (NOV), security incidents, property damage, OSHA response, or other incidents that could potentially impact Trihydro's reputation.

Version: April 21, 2020

1.7 INCIDENT RESPONSE

1.7.1 VEHICLE ACCIDENT

- The individual discovering the accident is to provide or coordinate immediate care for personnel, safety, and vehicle security.
- The individual discovering the accident is to initiate or coordinate the notification process:
 - Notify police/ambulance (911)
 - Notify the Trihydro H&S Office using the Safety Response Line (307) 755-4888
 - Notify the PM
 - Notify the employee's supervisor
 - Notify the client as directed by the PM
 - Notify the rental car agency as directed by the PM (if applicable)
- If medical treatment is required, notify WorkCareTM (888) 449-7787
- Complete drug and alcohol testing as soon as possible (within 3 hours); coordinate with H&S Team
- Complete and file reports within 12 hours

1.7.2 INCIDENT

- Stop work and provide immediate care for personnel, safety, and site security
- The individual discovering the accident is to initiate or coordinate the notification process:
 - Notify police/ambulance (9311), if applicable
 - Notify the Trihydro H&S Office using the Safety Response Line (307) 755-4888
 - Notify the PM
 - Notify the employee's supervisor
 - Notify the client as directed by the PM
 - Notify site managers as directed by the PM
- If medical treatment is required, notify WorkCareTM (888) 449-7787
- Complete and file reports within 12 hours

- Before returning to work, the employee will:
 - Notify the PM and supervisor
 - Assess and analyze the conditions for safety
 - Take applicable corrective actions to prevent recurrence

1.8 HOSPITAL ROUTES

Primary route from the project site to the hospital can be found on Figures 1-1 through 1-3.

FIGURE 1-1. PRIMARY HOSPITAL ROUTE

Directions to Hospital	SUMMARY				
Hospital Name: SSM De Paul Health Center	Driving distance: 2.24miles				
Address: 12303 De Paul Drive					
Telephone Number: (314) 344-6000	mp duration. O minutes				
Instruction	<u>For</u>				
Depart 13570 St Charles Rock Rd, Bridgeton, MO, 63044, USA					
Go southeast on St Charles Rock Rd Saint Charles Rock	1.40 mi				
Rd toward Taussig Rd					
Make sharp right on Mareschall Ln	.12 mi				
Bear left on Depaul Ln De Paul Ln	.21 mi				
Turn left at Depaul Dr to stay on Depaul Ln De Paul Ln	.14 mi				
Bear right on Depaul Dr De Paul Dr	.37 mi				
Arrive Finish at 12303 Depaul Dr, Bridgeton, MO, 63044, USA on

2.0 INTRODUCTION

2.1 REFERENCES

The 29 Code of Federal Regulations (CFR) 1910 General Industry standards, 1910.120, Hazardous Waste Operations and Emergency Response (HAZWOPER), will dictate the primary information contained within this HASP. Section 1910.120(b)(1)(ii)(C) states that "a site-specific safety and health plan which need not repeat the employer's standard operating procedures required in paragraph (b)(1)(ii)(F)" and will contain the elements listed under 1910.120(b)(4)(ii).

2.2 APPLICATION

This OU-3 HASP applies to the site specified and those tasks and operations identified in Section 2.0.

2.3 PURPOSE

The purpose of this OU-3 HASP is to provide Trihydro employees with emergency response information, high-level hazard analyses, and a summary of safe work requirements. Subcontractors may wish to use Trihydro's plan as a guideline. However, subcontractors will have their own HASP developed by their respective companies. The primary responsibility for employee safety lies with each company for its own employees.

2.4 REQUIRED DOCUMENTATION

Project work will comply with applicable sections of the Occupational Safety and Health Administration (OSHA), state, Trihydro, and client standards, policies, procedures, and plans. In the event of multiple applicable standards, the more stringent standards will apply. This HASP and supportive documentation will be kept on site in accordance with 29 CFR 1910.120(b)(4)(i).

Trihydro employees and subcontractors that are covered by contractual agreements with Trihydro performing tasks outlined in this HASP need to have a thorough understanding of supportive documentation. The following documents will accompany this HASP as supportive documentation:

- Job Safety Analysis (JSA) oriented to the site tasks and operations outlined in this HASP. See Appendix C.
- The OU-1 Radiation Safety Plan and OU-1 Emergency Response Plan have been prepared and will be followed while working within OU-1. See **Appendix D**.
- Safety Data Sheets (SDSs) / Material Safety Data Sheets (MSDS). See Appendix E.

7 Trihydro

2.4.1 JOB SAFETY ANALYSIS (JSA)

JSA forms are living documents to assist in hazard awareness and in task preparation. Employees are expected to review JSA forms before work commencement, have the JSA at the task site, and revise the JSA when discrepancies are noted. The following JSA forms are included in **Appendix C**:

\bowtie	Air Knife Borehole Clearance		Forklift O	Operations		Soil Sub-Sampling	
	Air/Knife/Vacuum Extraction		Fueling Vehicles		\boxtimes	SUMMA Canister Sampling	
\boxtimes	Aquifer Test/Pumping Test		Geoprobe	Geopunch Sampling		Surface Water Sampling	
	Asphalt Placement Observation	\boxtimes	GPS Surv	eying		Tank Demolition	
	Boating	\boxtimes	Groundwa	ater Gauging		Vacuum Trailer Operations	
	Confined Space Entry	\boxtimes	Groundwater Sampling		\boxtimes	Vehicle Operation	
	Contaminated Soil Cleanup	\boxtimes	Hand Auger Soil Sampling			Voltage and Ground Test	
\boxtimes	Contractor Oversight		Heavy Equipment Operations			Weed Control	
	Data Logger Deployment		Hydraulic Direct Push			Well	
\boxtimes	Retrieval	\square	Sampler	npler		Abandonment	
\boxtimes	Drilling Oversight	\boxtimes	Managem	ent of IDW		Well Bailing	
	Dump Truck Loading	\boxtimes	Leachate	eachate Sampling		Well Development	
	Dump Truck Operations	\boxtimes	Site Visit	Visit		Well Replacement	
\boxtimes	Ecological Survey	\boxtimes	Other:	Sub-slab Vapor Probe Installation			
	Flume Sampling	\square	Other:	Soil Vapor Sampling			

2.4.2 MATERIAL SAFETY DATA SHEETS (MSDSs) / SAFETY DATA SHEETS (SDSs) The following SDSs / MSDSs are included in Appendix E:

\boxtimes	Acetone	\boxtimes	Ethyl Benzene	\boxtimes	Methan	e	\square	Radium (Radon)
	Acrylonitrile		Fly/Coal Ash		Methan	e, Compressed		Simple Green
	Anhydrous Ammonia		Fuel Oil		Methan	ol		S-K 105 Solvent
	Aniline	\boxtimes	Gasoline		Methyl	Methacrylate		Sodium Hydroxide
	Aromatic 150		Grease	\square	Methyle	ene Chloride		Sodium Phosphate
\boxtimes	Asbestos	\boxtimes	Hexane		Methyl	Isobutyl Ketone		Monobasic
\square	Benzene		Hexanone		Motor (Dil		Surflan
	BTEX Calibration Gas		Hydraulic Oil/Fluid		MTBE			Survey Marker Paint
	Celtone		Hydrochloric Acid	\boxtimes	Nitric A	Acid		Tetrahydrofurane
\square	Chloroform		Hydrofluoric Acid		Nitroge	n, Compressed	\boxtimes	Toluene
	Coal		Hydrogen		Nitroge	n, Liquid	\boxtimes	Trichloroethane
	Coal Fly Ash		Hydrogen, Compressed		Oxygen	, Compressed		Triethylamine
	Coke		Hydrogen Chloride		Perchlo	ric Acid		Vinyl Acetate
	Crude Oil		Isobutane		Phthalic	e Anhydride	\boxtimes	Vinyl Chloride
\square	Dichloroethane	\boxtimes	Isobutylene		Propane	2	\boxtimes	Xylene
\boxtimes	Diesel Fuel	\boxtimes	Isopropyl Alcohol	\boxtimes	Other:	1,1-Dichloroetha	ine	
	Dimethyl Sulfide		Kerosene	\square	Other:	Non Flammable	Gas	Mixture
	DIPE		Lead	\boxtimes	Other:	Tetrachloroether	ie	
	Ethanol		Lead Acid (Battery)	\boxtimes	Other:	1,1,2-Trichloroet	thane	2
\boxtimes	Other: Trans 1,2-DCE	\boxtimes	Other: Cis 1,2-DCE	\boxtimes	Other:	1,2-Dichloroetha	ine	
\boxtimes	Other: Carbon tetrachloride	\bowtie	Other: Methyl ethyl ketone	\boxtimes	Other:	1,1,1-Trichloroet	thane	2
\square	Other: Isopropyl Alcohol	\boxtimes	Other: Chromium	\boxtimes	Other:	Trichloroethylen	e	

2.5 TRAINING REQUIREMENTS

Trihydro employees and subcontractors that are covered by contractual agreements with Trihydro performing tasks outlined in this HASP need to meet the training requirements outlined in OSHA 29 CFR 1910.120(e)(3). Trihydro employees and subcontractors should have certification in the 40-hour HAZWOPER course and, if staff will be performing supervisory duties, the 8-hour supervisor's course.

Employees entering OU-1 will be required to have Radiation Awareness Training as required by the OU-1 RSP. Employees who are designated as Radiation Workers will be required to have Radiation Worker Training as required by the OU-1 RSP. There is the potential to encounter asbestos during drilling activities. Employees conducting intrusive activities will undergo 2-hour asbestos awareness training.

2.6 PHYSICAL QUALIFICATIONS

2.6.1 PERSONAL QUALIFICATIONS

Trihydro employees will be physically, medically, and emotionally qualified to perform the duties to which they are assigned. Some factors to be considered in making work assignments are activity knowledge, strength, endurance, agility, coordination, and visual and hearing acuity. Trihydro employees and subcontractors will be able to read and understand English.

At no time while on duty may employees use or be under the influence of alcohol, narcotics, intoxicants, or similar mind-altering substances. Employees found under the influence or consumption of substances will be immediately removed from the jobsite. Trihydro reserves the right to test for substance abuse. As part of implementing the Trihydro's program to deter alcohol, drug, and substance abuse, each employee may be requested to submit to a urine, blood, or other medical test at any time, with or without notice. All employees are further subject to "for cause" drug, alcohol, or substances testing. "Cause" is determined if the Trihydro PM has reason to believe that a covered worker has used illegal drugs or has misused alcohol, prescription medication, or over-the-counter drugs. Such reason may be, but is not limited to, the following: accidents, injuries, near misses, excessive absences, tardiness, altercations, lengthy absences, possession of drugs, or thefts. This policy applies to, but is not limited to, Trihydro employees and subcontractors.

Operators of equipment or vehicles will be able to read and understand the signs, signals, and operating instructions in use. Where permits are required to operate specified equipment, the employee will have the permit on hand.

2.6.2 MEDICAL SURVEILLANCE REQUIREMENTS

In accordance with 29 CFR 1910.120(f), Trihydro employees and subcontractors that are covered by contractual agreements with Trihydro performing tasks outlined in this HASP will meet the following medical surveillance requirements with medical examinations and consultations:

- Before assignment.
- Project field-team members at least once every 12 months.
- At termination of employment or reassignment.
- As soon as possible upon notification by an employee that the employee has developed signs or symptoms indicating possible overexposure to hazardous substances or health hazards, or that the employee has been injured or exposed above the permissible exposure limits or published exposure levels in an emergency situation.

2.6.3 EXPOSURE ASSESSMENT PLAN

As a component of Trihydro's H&S Management System, the H&S Team coordinates annual exposure sampling events for hazardous environments per the corporate Exposure Assessment Plan. The results are compiled, analyzed, recorded, and reported to management and employees per the plan.

2.7 PRE-ENTRY BRIEFING

In accordance with 29 CFR 1910.120(b)(4)(iii), Trihydro employees and subcontractors that are covered by contractual agreements with Trihydro performing tasks outlined in this HASP will receive a pre-entry briefing:

- Before initiating site activities
- Before work activities if there are changes to this HASP
- Before work activities if there are changes to the recognized hazards (i.e., seasonal changes, new hazardous substance exposure, etc.)

Trihydro employees and subcontractors will complete the *Pre-Entry Briefing Acknowledgement Form* portion of this HASP after each pre-entry briefing.

2.8 DAILY SAFETY BRIEFINGS

The site PM, or assigned project supervisor, will conduct a daily site safety briefing covering the scope of work (general type of work), tasks for the shift, PPE, associated chemicals and their hazard controls, site and task associated

🔊 Trihydro

hazards, permits needed, special equipment/techniques, communications, hospital information, and any special topics. The "Daily Tailgate Safety Meeting" form will be used to document the meeting; see **Appendix F**.

Subcontractors will be included in the daily safety briefings to provide effective coordination between Trihydro and contracted employees.

2.9 EFFECTIVENESS OF THE SITE HEALTH AND SAFETY PLAN (HASP)

In accordance with 29 CFR 1910.120 (4)(iv), inspections should be conducted by the Project Site Health and Safety Officer (PSHSO) as necessary to determine the effectiveness of the site HASP. Deficiencies in the effectiveness of the site HASP will be corrected by Trihydro.

The "Health and Safety Plan Effectiveness Audit Form," found on the H&S Forms Web page, will be used to annotate and report deficiencies to the Corporate H&S Team.

3.0 SITE TASKS AND OPERATIONS

The following activities are anticipated to be performed at this site:

- Vehicle Operation
- Borehole Clearance
- Monitoring Well/Soil Boring Drilling (Sonic Rig and CPT Technology Rig)
- Soil/Bedrock Sampling
- Well Construction
- Well Inventory and Repair
- Well Development
- Well Abandonment
- Ecological Field Survey
- Fluid Level Gauging
- Slug Testing and Aquifer Pump Testing
- Groundwater Sampling
- Leachate Sampling
- Installation and Monitoring of Staff Gauges
- Vapor Sampling
- Surveying/GPS
- Routine Site Visits

3.1 SITE MAP

A site map (**Figure 3-1**) is provided for project-team member orientation. The site map will indicate site entrances, gates, command centers and parking areas. Project-team members and subcontractors need to be familiar with the site map.

3.2 SITE ACCESS

Workers and authorized visitors/guests must access the site by signing in at the landfill office after completion of the site's safety orientation program. Authorized visitors/guests must be accompanied to a work site. Prior to entering OU-1, Trihydro and its subcontractors will coordinate with the Radiation Safety Officer for access and radiation safety coverage. See the OU-1 RSP for detailed procedures with accessing the OU-1 areas.

3.3 SITE SECURITY

For client-controlled sites, Trihydro employees and subcontractors will follow the client's security policies and procedures. At any time that a Trihydro employee or subcontractor observes a breach in site security measures or suspicious activities that contradict security protocol, the notification process specified in this HASP will be initiated, followed by reporting the situation to the Trihydro site PM.

4.0 PERSONNEL RESPONSIBILITIES

4.1 PROJECT TEAM RESPONSIBILITIES

Project personnel who have responsibility for the oversight of this project are:

<u>Position</u>	<u>Name</u>
Project Director:	Gary Risse
Project Manager (PM):	Allison Riffel
Project Site Manager:	Michael Sweetenham
Project Site Health and Safety Officer* (PSHSO):	To be identified based on field personnel onsite each day
Trihydro Team Members:	Charles VanHeuvelen
	Kelly Birkenhauer
	John Alten

*The PSHSO(s) will be a member who is present at the project site.

The project team responsibilities are listed below. It is the responsibility of the PM to verify that the field team has access to this HASP and supportive documentation and reads the safety procedures. It is the individual's responsibility to bring to the attention of the PM, or Corporate H&S Manager, portions of this HASP and related training that he/she does not fully understand.

Site employees and subcontractors will conduct safety meetings at appropriate intervals to verify that personnel are fully informed of potential hazards. Attendance at safety meetings is to be documented, and attendance sheets signed by personnel in attendance. The attendance sheets will be retained by Trihydro and made available to the appropriate client representative on request. Trihydro's "Daily Tailgate Safety Meeting" form can be found as **Appendix F**.

🔊 Trihydro

4.1.1 PROJECT MEMBERS

Trihydro is a strong advocate for Behavior-Based Safety (BBS) where the "one team" approach to safety is highly supported. Project members, to include subcontractors, are expected to perform Work-Site Self-Assessments (WSSA), conduct task observations, exercise the right of Stop Work Authority and to refuse unsafe work, review JSA forms, and report any unsafe conditions; all to promote the highest level of safety.

4.1.2 TRIHYDRO PROJECT DIRECTOR

The responsibilities of the project director with respect to safety are as follows:

- Verify that Trihydro field team personnel have read and understand this HASP
- Make available to the field team personnel the data known to him/her on this project site

4.1.3 TRIHYDRO PROJECT MANAGER (PM)

The responsibilities of the PM with respect to safety are as follows:

- Verify acceptable cellular reception at site before work commencement.
- *Verify route from site to hospital by driving the published route.*
- Coordinate initial site safety training for project team personnel as described in this document.
- Verify that field team personnel have read and understand this HASP.
- Verify that Trihydro field team personnel have the required materials needed before the start date to meet the requirements of this specific site HASP.
- Make available to the field team personnel and the appropriate client representative H&S information relevant to this project.

4.1.4 TRIHYDRO FIELD PROJECT MANAGER

The responsibilities of the Field PM with respect to safety are as follows:

- Verify acceptable cellular reception at site before work commencement.
- Verify there are no route obstructions (i.e., construction) from the site to the hospital.
- Conduct the daily safety briefing.

- Coordinate efforts and communicate site tasks with other site contractors.
- Establish communications between other site contractors via phone or radio to enhance coordination in the event of an emergency.

4.1.5 TRIHYDRO PROJECT SITE HEALTH AND SAFETY OFFICER (PSHSO)

The responsibilities of the Trihydro PSHSO with respect to safety are as follows:

- Verify that work performed by Trihydro is conducted in accordance with safe practices outlined in this OU-3 HASP.
- Communicate to workers their expected tasks/duties.
- Note weather conditions.
- Identify and schedule training.
- Calibrate air and personal monitoring equipment.
- Identify and remove hazards where possible.
- Make PPE available.
- Monitor activities for the proper use of PPE specified in this OU-3 HASP, such as respirators with appropriate filters and/or canisters, protective coveralls, gloves, safety boots, protective eyewear, ear plugs, and hard hats.
- Monitor PPE usage, storage, maintenance, and replace when necessary.
- Verify that safety equipment to be used by field team personnel is maintained in usable condition.
- Use only safe work practices.
- Initiate emergency phone calls when an emergency or accident requires medical attention.
- Correct unsafe conditions and behaviors immediately.
- Conduct additional health and safety meetings deemed necessary.
- Report problems to the PM.

4.1.6 TRIHYDRO FIELD TEAM MEMBERS

The responsibilities of the Trihydro field team members with respect to safety are as follows:

- Become thoroughly familiar with this HASP and its supportive documentation.
- Actively participate in this OU-3 HASP.

- Follow safety standards and safe work practices set by Trihydro, the client, and regulatory agencies.
- Refuse to perform work when unsafe conditions exist.
- Report potential hazards to the PSHSO.
- Immediately report potential hazards, accidents, incidents, injuries, and illnesses to the PSHSO.
- Inform PM of contact lens use.
- Inform the PM if allergic to insect stings/bites or other biological hazards.
- Inform the Trihydro Health Insurance Portability and Accountability Act (HIPAA) Officer of the Risk Management Office if on medication that can impair their physical and/or cognitive abilities to perform their duties.
- Use PPE when needed.
- Inspect PPE and safety equipment before use.
- Have required equipment operating permits on person.
- Be familiar with the location, type, and operation of site and facility emergency equipment and procedures.

4.1.7 SUBCONTRACTOR TEAM MEMBERS

The responsibilities of the subcontractor-team members with respect to safety are as follows:

- Perform work safely.
- Read and understand subcontractor HASPs.
- Adhere to applicable HASP protocol.
- Provide applicable health and safety monitoring.
- Report unsafe acts to Trihydro's PSHSO.
- Properly inspect and maintain heavy equipment and other machines in compliance with applicable sections of the federal and State Occupational H&S Codes.
- Supply and maintain PPE specified in this HASP, such as respirators with appropriate filters and/or canisters, protective coveralls, gloves, safety boots, protective eyewear, ear plugs, and hard hats.
- Enforce corrective action in cooperation with the client and Trihydro's PSHSO.
- Inform Trihydro's PSHSO of the presence of potential health or safety hazards.

- Be aware and alert for signs and symptoms of potential exposure to site contaminants and climatic or acoustic stress.
- Inspect PPE and safety equipment before use.
- Inform PM of contact lens use.
- Inform the PM if allergic to insect stings/bites or other biological hazards.
- Inform their company HIPAA Officer if on medication that can impair their physical and/or cognitive abilities to perform their duties.
- Have required equipment operating permits on person.
- Be familiar with the location, type, and operation of site and facility emergency equipment and procedures.

5.0 PERSONAL PROTECTIVE EQUIPMENT (PPE)

Personnel will understand and follow the Trihydro PPE Program. Tables 5-1 and 5-2 provide more guidelines on PPE selection.

The following is a list of PPE anticipated to be used on this site based on the listed tasks, operations, and provided JSA forms:

Eye and Face Protection		Hand Protection	Respiratory Protection*		
\boxtimes	Safety Glasses	Industrial Work Gloves	Half-Face Respirator (based on PID readings this may be ⊠ required)		
	Face Shield	Chemical-Resistant Gloves	Full-Face Respirator		
	Chemical Goggles	Laceration-Resistant Gloves	Chemical Cartridge		
Bod	y Protection	Fall Protection	Particulate Filter		
	Fire-Retardant Clothing	Barriers/Guard Rails	Cartridge/Filter Combo		
\square	Tyvek Coveralls	Body Harness w/Lanyards	Ammonia Cartridge		
	Chemical-Resistant Coveralls	Anchorage Devices	H ₂ S Escape Cartridge		
	Chemical-Resistant Apron	Foot Protection	Asbestos Filter (P100/HEPA)		
\square	High-Visibility Safety Vest	Leather Boots	Hearing Protection		
	Cooling Vest	Safety-Toed Boots	⊠ Ear Plugs		
	Lightning-Strike Indicator	Chemical-Resistant Boots	Ear Muffs		
Water Safety		Head Protection	Biological Protection		
\boxtimes	Personal Flotation Device	⊠ Hard Hat	First-Aid Kit		
\square	Waders	Hard-Hat Liner	Blood-borne Pathogen Spill Kit		
\boxtimes	<i>Other:</i> Face Masks		Insect Repellent		
	Other:		Snake Gaiters		

*Assigned Protection Factors (APF) for determining Maximum Use Concentrations (MUC) and for appropriate respirator selection can be found in the **Table 5-3** titled "Respirator Assigned Protection Factor (APF)."

6.0 AIR (AREA) AND PERSONAL MONITORING, AND ENVIRONMENTAL SAMPLING

The following is a list of monitoring/sampling devices expected to be used on this site for the listed tasks and operations:

Air (Area) Monitoring 🗌 N/A		Personal Monitoring 🗌 N/A		Environmental Sampling 🗌 N/A		
\square	Photo-Ionization Detector	\boxtimes	H ₂ S Monitor	\boxtimes	DO/ORP Meter	
	Combustible Gas Indicator		Ammonia Monitor	\boxtimes	pH Meter	
\square	Multi-Gas Detector	\square	Multi-Gas Detector	\square	Turbidity Meter	
	Flame Ionization Detector		Colorimetric Tube	\boxtimes	Conductivity Meter	
			Other:			
	Colorimetric Tube			\square	Temperature Gauge	
	Other:		(Specify)	\boxtimes	Photoionization Detector (PID)	
			Other:		Flame-Ionization Detector (FID)	
	(Specify)				Other:	
			(Specify)			
					(Specify)	

6.1 AIR (AREA) MONITORING

To protect employees from hazardous atmospheric conditions, air sampling and monitoring utilizing the appropriate monitoring device, whether single or multiple gas detectors, will be conducted in the work zone if a potential or actual hazardous atmospheric condition is suspected. An assessment of the work zone includes, but is not limited to, the configuration of the surrounding area that could hold hazardous gases, any nearby processes that produce toxic vapors, wind direction, and the possibility of oxygen depletion or enrichment. A hazardous atmosphere is defined as 1) oxygen percentage less than 19.5% and over 23.5%; 2) Lower Explosive Limits (LEL) of 20% or more (10% for confined space and trenching); and 3) exceeding the Permissible Exposure Levels (PEL) of toxic substances.

The preferred air monitoring device will be of an active design using a pump that introduces the air sample to the gas detecting apparatus. The order of air sampling is: 1) oxygen percentage; 2) LELs; and 3) toxic substances. Air sampling will be conducted in a "tiered" manner where the sampling is conducted at intervals allowing adequate time

for the device to make an accurate reading. For example, when vertically sampling a confined space, pause every 2-3 feet long enough for the device to read the atmosphere correctly.

The manufacturer's manual for the specific device will be kept on site for reference.

6.1.1 AIR MONITORING ACTION LEVELS

When using a photoionization detector (PID) or flame ionization detector (FID) for air monitoring, refer to **Tables 6-1** and 6-2, for PID and FID Organic Vapor Action Levels and Responses.

6.1.2 FREQUENCY

The frequency of air sampling/monitoring is:

- Upon area entry by the sampler and before team entry.
- Continuously (minimum every 15 minutes) if the oxygen level is below 20% or above 23%, LEL is above 15% (5% for confined space and trenching), and/or half of the PEL of toxic substances.
- Periodically, such as every 2 hours, if deemed safe, but with a potential hazard.

6.1.3 CALIBRATION, BUMP TESTING, AND MAINTENANCE

Each instrument will be bump tested at the beginning of each day with the manufacturer's recommended calibration gas. Calibration will be performed at a minimum quarterly or sooner if exposed to large doses of contaminants. Trihydro equipment will be calibrated and maintained by the Trihydro H&S Team unless otherwise dictated by the team. Rental equipment will be calibrated and maintained by the rental company.

6.1.4 DEVICE TYPES

There are various methods for sampling and monitoring atmospheric conditions where the operator will be trained in their use and the appropriate equipment will be utilized so that the device is capable of detecting the specific site hazard.

6.1.4.1 PHOTO-IONIZATION DETECTOR (PID)

A type of Organic Vapor Meter (OVM) known as a PID will be used during this project if hydrocarbon-impacted materials are encountered. The PID used for this project will be equipped with a 10.0 eV lamp or greater. Monitoring

will be conducted using one PID per work zone. Areas downwind of the work zone will also be monitored, if necessary, to verify organic vapor emissions do not impact off-site areas.

6.1.4.2 MULTI-GAS DETECTOR

A multiple gas detector can be taken into the field to provide site monitoring (one instrument per work zone) to sample and monitor the work zone area. The multi-gas detector will be set up to monitor oxygen levels, LEL, and hydrogen sulfide.

Trihydro personnel working within the landfill area will utilize a BW Gas Alert Microclip or similar meter. Off-site work areas may also require utilization of the multi-gas meter. This decision will be based on preliminary field readings. The multi-gas meter will be equipped with the following pre-set alarm levels as noted in the manual (**Appendix J**):

Gas	TWA	STEL	Low	High
O ₂	N/A	N/A	19.5% vol.	23.5% vol.
LEL	EL N/A N/A		10% LEL	20% LEL
со	35 ppm	50 ppm	35 ppm	200 ppm
H ₂ S	10 ppm	15 ppm	10 ppm	15 ppm

A self-test will be performed daily, which includes a sensor test, power test, and auto-zero and oxygen calibration, upon startup of meter. The meter will be calibrated every 6 months or if necessary as part of troubleshooting.

6.2 PERSONAL MONITORING

The methods for monitoring the atmospheric conditions in a worker's breathing zone are very similar to area sampling and monitoring. Again, the operator will be trained in their use and the appropriate equipment will be utilized so that the device is capable of detecting the specific site hazard. Personal monitoring devices will be worn in the breathing zone of the employee.

The manufacturer's manual for the specific device will be kept on site for reference.

6.2.1 FREQUENCY

Personal exposure monitoring will be conducted on a continuous basis (minimum every 15 minutes) if there is a potential exposure risk.

🖻 Trihydro

6.2.2 CALIBRATION, BUMP TESTING, AND MAINTENANCE

Non-disposable instruments will be bump tested at the beginning of each day with the manufacturer's recommended calibration gas. Calibration will be performed at a minimum quarterly, or sooner if exposed to large doses of contaminants. Trihydro equipment will be calibrated and maintained by the Corporate H&S Team unless otherwise dictated by the team. Rental equipment will be calibrated and maintained by the rental company, or by Trihydro employees if calibration equipment is available.

Employees are to perform a daily function test on disposable personal monitors before commencing work on site.

Calibration results are to be recorded on an "Air Monitoring Equipment Calibration Tracking Form."

Bump testing and function test results are to be recorded on a "Personal Detector Bump Check Record."

6.2.3 DEVICE TYPES

The same devices used for air monitoring can be used for personal monitoring. However, typically, personal monitors are smaller in size and are usually passive devices (not pump driven). The devices can be single gas detectors or multiple.

6.2.3.1 HYDROGEN SULFIDE (H₂S) DETECTOR

Project members are to wear a hydrogen sulfide (H_2S) detector when on site. The low-level alarm is to be set at 10 ppm and the high-level at 15 ppm. The action levels are listed in **Table 6-3**.

The manufacturer's manual for the specific device is located Appendix J.

6.2.3.2 MULTI-GAS DETECTOR

A multiple gas detector can be taken into the field to provide personal monitoring (one instrument per person or group) to sample and monitor the work atmosphere. The multi-gas detector will be set up to monitor, at a minimum, oxygen (O₂) levels, LEL, and chemical PELs. The multi-gas detector will monitor for potential hazardous atmospheres of:

- <19.5% O₂
- >20% LEL (>10% for permit-confined space operations)
- >PEL

- H₂S (low alarm set at 10 ppm, high alarm 15 ppm)
- CO (alarm set at 35 ppm)

The manufacturer's manual for the specific device is located Appendix J.

6.3 ENVIRONMENTAL SAMPLING

Multiple hazards should be considered when preparing for environmental sampling activities. Hazards may include but are not limited to calibration solutions, calibration gases, sample locations, sampling environment, sample media, and sampling activities. Before completing environmental sampling activities, the appropriate JSA form should be completed by the sampling team and reviewed by the PM. JSA forms would cover, but not be limited to, sampling activities, equipment calibration, and sampling equipment maintenance. Environmental sampling and the development of JSA forms may be completed for a variety of media and should be completed in general accordance with site specific Sampling and Analysis Plans (SAP), Quality Assurance Project Plan (QAPP), and / or the USEPA Groundwater RCRA groundwater monitoring guidelines.

6.3.1 TECHNIQUES

Environmental sampling techniques should be completed in general accordance with site specific SAPs, QAPPs, and or the USEPA Groundwater Sampling Technical Guidance Document (TGD).

6.3.2 INSTRUMENTATION

The manufacturer's manual for the specific devices used will be kept on site for reference. Caution will be used whenever using chemicals or compressed gases for calibration of monitoring equipment. Use recommended PPE based upon potential hazards as defined in the job specific JSA. For the OU-3 RI/FS work, a flow-through meter will be used to collect DO, ORP, pH, conductivity, temperature, and turbidity data.

6.3.2.1 DO/ORP METER

A combination Dissolved Oxygen (DO) and Oxidation Reduction Potential (ORP) meter will be used at the site during groundwater sampling. The DO meter uses an optical device in which dissolved oxygen affects the magnitude of the luminescence of chemical dyes within the DO sensor. The DO probe emits a light resulting in luminesce, which is at the maximum value when DO readings are low. The luminescence decreases as higher DO is present. It records the DO concentration in milligrams per liter or percentage saturation. ORP meters measure the very small voltages generated when the measuring probe is placed in water in the presence of an oxidizing agent. The electrode is made of

🔊 Trihydro

platinum or gold, which reversibly loses its electrons to the oxidizer. A voltage is generated which is compared to a silver electrode in a silver salt solution, similar to a pH probe. The more oxidizer available, the greater the comparative voltage generated between the two probes.

6.3.2.2 PH METER

A pH meter is a high impedance voltmeter for the measurement of electrode potential. A pH meter will be used at the site during groundwater and leachate sampling.

6.3.2.3 TURBIDITY METER

A turbidity meter will be used at the site during groundwater sampling. Turbidity refers to the concentration of undissolved, suspended particles present in a liquid and is a measure of the clarity of a sample. Turbidity measurement is achieved by analyzing the amount of light refracted from suspended particles such as clay, silt, and organic material.

6.3.2.4 CONDUCTIVITY METER

A conductivity meter will be used at the site during groundwater sampling. Conductivity is the ability of a material to conduct electric current and is measured by placing two plates (enclosed in the meter end) in the sample, a potential is applied across the plates, and the current that passes through the solution is measured.

6.3.2.5 TEMPERATURE METER

A temperature meter will be used at the site during groundwater sampling. Temperature refers to the kinetic energy of molecules making up substance, vibrating and bouncing against each other. Temperature meters measure temperature by reading the current across the sensor after a current is applied across the sensor. The meter then converts the current reading into temperature.

6.3.3 CALIBRATION AND MAINTENANCE

Each instrument will be tested at the beginning of each day in accordance with the manufacturer's recommendations. Calibration will be documented and performed in accordance with the manufacturer's recommendations, or sooner if warranted. Trihydro equipment will be calibrated and maintained by field personnel on a daily basis. Rental equipment will be calibrated and maintained at a minimum according to manufacturer's recommendations. Field equipment will be calibrated to the extent practicable before use each sampling day.

7.0 SITE CONTROL PLAN

DI I I I

Project-team members and subcontractor employees need to review the site map, Figure 3-1, to become familiar with the site layout, work zones, and emergency plan components such as evacuation routes and assembly points.

Entry into a hazardous environment requires the "buddy system" of two personnel where each employee is observed by the other to provide rapid assistance in the event of an emergency. If there are no actual or potential exposures to hazards that would incapacitate the individual, then refer to the Lone Worker Safety Procedures.

The following are recognized hazards at the site throughout the project period; personnel will be familiar with the associated health and safety policy, procedure, or plan corresponding to each hazard.

	Physical Hazards	\boxtimes	Chemical Hazards	\boxtimes	Powered Industrial Trucks
	Machine Guarding	\square	Asbestos Hazards		Confined Space Entry
	High Pressurized/Temperature		Natural Disaster		Biological Hazards
	Process		Earthquake	\square	Blood-borne Pathogens
	Lock Out / Tag Out	\boxtimes	Tornado	\square	Hantavirus
\square	Housekeeping		Climate Hazards	\square	Histoplasmosis
\boxtimes	Ground Level Slips, Trips, and	\square	Heat Stress	\square	Psittacosis
	Falls	\boxtimes	Cold Stress	\boxtimes	Chiggers
			Ergonomic Hazards		
	Falls from Heights	\square	Acoustical Hazards	\square	Stinging Insects
\boxtimes	Knife Safety	\square	Radiation Hazards		Fire Ants
	Ladder Use	\square	Dust Hazards	\square	Lyme Disease (Ticks)
		\square	Silica Hazards	\square	COVID-19
	Electrical Hazards	\square	Excavation Hazards	\square	West Nile Virus
\boxtimes	Overhead-Power Lines	\square	Drilling Activities		Snakes
\boxtimes	Inclement Weather/Lightning		Traffic Hazards	\square	Spiders
\boxtimes	Utilities Clearance	\boxtimes	Driving Safety		Scorpions
\boxtimes	Water Hazards	\boxtimes	Vehicular Safety	\boxtimes	Poison Oak/Ivy/Sumac
	Fire/Explosion Hazards	\boxtimes	Contaminated Soil Truck		Rabies
	Hot Works		Removal/Hauling Operations		Alligators

7.1 HAZARD CONTROL HIERARCHY – ORDER OF PRECEDENCE

Site hazards and hazards resulting from investigation and remediation activities may be controlled using one or more of the control measures listed below. The order of precedence is as follows:

- *Engineering Controls:* A major component of the design phase is to select safety features to eliminate a hazard and render it fail-safe or provide redundancy using backup components. Examples of engineering controls include, but are not limited to: mechanical ventilation; sound-proofing; machine guarding; etc.
- *Administrative Controls:* Hazards that cannot be totally eliminated by engineering controls can be controlled through administrative controls. Examples of administrative controls include, but not limited to: warning signs; personnel change out; specialized training; established procedures; etc.
- **Personal Protective Equipment (PPE):** To protect workers from injury, the last method in the order of precedence is the use of PPE. Employees need to understand that the use of PPE does not remove the risk. PPE such as hard hats, gloves, eye protection, life jackets (when working near surface water bodies as part of OU-3 staff gauge installation and monitoring), and other protective equipment can be bulky, cumbersome, and heavy where often it is discarded or not used, rendering this method ineffective without proper controls.

7.2 SAFE WORK PRACTICES

The following section presents procedures on how to address the hazards expected to be encountered during site activities for this project. During times when site operations are under the observation of a Trihydro representative, Trihydro will notify contractor personnel on site and a client representative if an unsafe condition is observed.

7.2.1 STOP WORK AUTHORITY/RIGHT-TO-REFUSE UNSAFE WORK PROGRAM

Employees not only have the right to refuse unsafe work, they also have the right to stop unsafe practices of others. The stop work authority program gives any employee working onsite the ability to stop all work related to a specific activity being performed in a manner in which there is an imminent danger to personnel, property, or the environment. All employees and contractors are responsible for participating in the stop work authority program.

The stop work order is binding until either the employee who stopped the work or the site PM rescinds the order. The site PM is the only individual who can overrule the employee who initially stopped the work.

NOTE: The requirements and responsibilities identified in the stop work authority program may cross company boundaries. For example, a Trihydro employee may identify a subcontractor performing an unsafe act or creating an

unsafe condition and stop the work, or vice versa. Any unsafe act or condition identified must be investigated and corrected by either the employee who stopped the work or the site PM.

Any employee who identifies an unsafe act or condition that warrants a stop work order shall immediately conduct the following:

- Notify affected employees (includes workers in the general area)
- Take the appropriate actions necessary to protect workers, the public, the environment, and the property
- Notify immediate supervisor
- Notify site PM if different from immediate supervisor

Affected employees will immediately comply with the stop work order until either the employee who stopped the work or the site PM rescinds the order.

Every stop work order will be investigated and corrected as soon as possible. Individuals involved in the investigation will be determined by the site PM. The results of the investigation shall be communicated to all affected employees, including the employee who initially stopped the work and the site PM.

No employee will receive any kind of reprisal, retribution, or discipline for exercising a stop work authority.

7.2.2 WORK AREA EVALUATION FOR CONFINED SPACES

The project team will evaluate their work areas for confined spaces using the "Work Area Evaluation for Confined Spaces," **Appendix G.** Workers who enter confined spaces must be trained prior to entry. The form is used to determine if there are non-regulated spaces, confined spaces, or permit-required confined spaces in the work area. The project team will use completed forms to communicate the type and location of the spaces to team members. Completed forms will be kept in the project folder.

The project team will re-evaluate their work areas if the space configuration or hazards change.

7.2.3 HAND-INJURY PREVENTION

Employees are expected to assess their tasks for physical, chemical, and thermal hand hazards and implement engineering, administrative controls, and/or PPE.

🔊 Trihydro

7.2.3.1 ENGINEERING CONTROLS

Engineering controls prevent the physical placement of the employee's hand in harm's way. An example is machine guarding to protect from hazards such as those created by point of operation (area on a machine where work is actually performed), ingoing nip points, rotating parts, flying chips, and sparks.

7.2.3.2 ADMINISTRATIVE CONTROLS

Administrative controls are designed to make an individual aware of the hazard and, therefore, limit their exposure. Administrative controls may include training, labeling, signs, and safe work practices and procedures.

7.2.3.3 PERSONAL PROTECTIVE EQUIPMENT (PPE)

Gloves can protect against chemical exposure, lacerations, and thermal hazards. However, employees need to understand that one type of glove does not protect against all hazards. Employees need to match the right glove material with each application or task. This includes assessing the job for chemical exposures, pinch points, laceration hazards, thermal risks, abrasion exposure, and puncture risks, and then selecting the appropriate glove based on material, thickness, length, and other traits. The site may have strict guidelines for proper glove selection, so check with the PM for more details.

 Table 7-1 provides employees with more glove selection guidance.

Warning: Loose fitting clothing, including loose fitting gloves and unbuttoned sleeve cuffs, must not be worn around rotating or moving equipment such as, but not limited to, power transmission shafts, pulleys, feed rolls, drill presses, power augers, and rotating stock!

7.3 WORK ZONE ACCESS

Currently the Exclusion Zone at the site is controlled by Feezor Engineering and Ameriphysics, LLC for OU-1 related activities and routine groundwater and air monitoring. Trihydro will defer to and adhere to the existing health and safety policies/procedures regarding working within the OU-1 Exclusion Zone.

The work zone for OU-3 work is defined as the 30-foot radius surrounding field personnel. Barricades and other entryrestricting equipment will be used at the discretion of the PM or PSHSO to prevent the work zone entry of unauthorized personnel. Only authorized personnel will be permitted to enter the work zone. Authorized personnel will include those who have duties requiring their presence in the work zone. The Trihydro PM has the right to require unauthorized personnel to exit the work zone.

Pedestrian and vehicle traffic control plans will be developed and documented as an addendum to the HASP when the potential exists for pedestrian and/or vehicular traffic to pass through or nearby the work zones. The control plans will provide: pedestrian/vehicle diversions around or away from the work zones; clear guidance through the diversion; and prevent pedestrian/vehicle/work zone interaction that would result in incidents. Requirements for submitting traffic control plans with controlling authorities need to be completed in accordance with their guidelines.

7.3.1 HAZWOPER EXCLUSION ZONE ACCESS

During OU-3 intrusive operations, it may be necessary to set up work zones to control chemical exposures and prevent the public from entering the work zone. The site currently has these areas designated by fencing and signage at OU-1 Areas 1 and 2. Trihydro will adhere to their protocol and procedures when working within the Exclusion Zone.

The Exclusion Zone (or hot zone) is the area with actual or potential contamination and the highest potential for exposure to hazardous substances. Therefore, the Exclusion Zone requires the highest level of PPE determined for the area. If workers are entering the Exclusion Zone under suspected or actual immediately dangerous to life and health conditions, there must be one standby rescuer in the same level of protection for each entrant. Standby rescuers are staged in the Support Zone (or are cold zone ready) to enter the Exclusion Zone at a moment's notice.

Exclusions zones will vary based on the tasks performed on a daily basis. If multiple exclusions zones are established, wind direction and topographical layout need to be considered to prevent exposing workers in other work zones.

Work zones must be well-marked and the boundaries visible. Work zone boundaries are established after evaluating the potential for hazardous substances to migrate through air, soil, or water.

Smoking, eating, drinking, and applying makeup or lotions within the Exclusion or Contamination Reduction Zones is prohibited.

Workers are to enter the Exclusion Zone through the CRZ (or warm zone) via the Access Control Points (ACP). Workers are to exit the Exclusion Zone through the CRZ personnel decontamination stations while equipment is decontaminated at the equipment decontamination stations.

7.3.1.1 BUDDY SYSTEM AND COMMUNICATIONS

Workers in the Exclusion Zone are to use the "buddy system" to facilitate a quicker response in the event of an emergency. Exclusion Zone entrants need to work in groups so as to have effective communication with one another and have visual contact to monitor others for signs and symptoms of exposure and other emergencies. Key responsibilities of buddies are to:

- Provide partners with assistance.
- Observe partners for signs of chemical or heat exposure.
- Periodically checking partners' PPE.
- Notify the PM or other site employees if emergency assistance is needed.

The PM needs to establish effective communication with the Exclusion Zone entrants before entry. Various systems can be used to include:

- Radio: including FM and CB (intrinsically safe for explosive atmospheres).
- Noisemakers: such as bells, air horns, megaphones, sirens, whistles.
- Visual signals: such as flags, hand signals, lights, signal boards, body movements.

7.3.2 WORK PERMITS

Work permits may or may not be required on project sites; however, the client reserves the right to regulate specific areas by the use of work permits such as general work permits, hot work permits, high hazard permits, and confined space permits. If the client has specific permit requirements, or if hot works or permit-required confined space operations are anticipated, review the Trihydro and client specific procedures before initiating the tasks.

7.3.3 LONE WORKER SAFETY PROCEDURES

The Trihydro Project Manager will strive to avoid lone worker situations. In the instance that a worker is unaccompanied, Lone Worker Safety Procedures will be established by the PM to provide an effective means of communication between a single field team member and the project management group. The primary consideration is the type of activities that will be performed that could result in exposure to an incapacitating situation. *If there are no expected or potential exposures to hazards that would incapacitate the individual, then Lone Worker Safety Procedures are acceptable.*

The following criteria need to be met before performing tasks at the project site under the Lone Worker Safety Procedures:

- Perform a Work Site Self-Assessment to determine if the task has high risk that would require the buddy system.
- Verify that cellular phone use in the work area does not pose an additional hazard or is not against the client's policy.
- The lone worker needs to possess a cellular phone that is turned on, kept on person, and charged. If working in a noisy environment, set the phone to vibrate.
- Cellular phone reception needs to be verified to be at a sufficient level. If cellular coverage is not sufficient, a booster needs to be issued to the individual.
- Supervisors away from the office will carry a cellular phone, turned on, kept on person, and charged.
- The lone worker needs to carry identification (ID) on their person and in vehicles (company ID badge, driver's license, etc.).
- If the client policies require, company vehicles need to have the company name and office phone number displayed.

The following communication protocol needs to be implemented:

- Field personnel would advise their supervisors of their work schedule.
- The lone worker needs to contact supervision at the start of the day, mid-day, and a final status report call at the end of the day. The client will be notified in accordance with their policies.
- The communication with additional contacts, such as family and friends, is encouraged.

⊽ Trihydro

• If a lone worker misses a scheduled communication, they need to be contacted to verify their status within 15 minutes of the scheduled check-in time. If the lone worker does not answer after three call attempts, a person will be sent to the work site to check on their status.

7.4 PHYSICAL HAZARDS

PPE is designed to protect field team personnel from some physical hazards expected at the work site. However, the field team personnel will be aware of potential physical hazards and remain alert during field work. The following procedures will be implemented to minimize the potential for injury from physical hazards.

7.4.1 HOUSEKEEPING

The first requirement for safe field operation is that the field team understands and fulfills the responsibility for maintenance and "housekeeping" during site environmental activities.

7.4.1.1 GENERAL HOUSEKEEPING

- Suitable storage locations will be provided for tools, materials, and supplies so that tools, materials, and supplies can be conveniently and safely handled without hitting or falling on a member of the crew or a visitor, or creating a trip hazard.
- Work areas, platforms, walkways, scaffolding, and other access ways will be kept free of material, debris, obstructions, and substances such as ice, grease, or oil that could cause a surface to become slick or otherwise hazardous.
- Gasoline will not be stored in portable containers other than a non-sparking, red container with flame arrester in the fill spout and having the word "gasoline" easily visible on the container.
- Equipment will be stored and secured outside the work zone until use is required.
- Ice will be removed or treated with sand within the work zone and along pathways.

7.4.2 GROUND LEVEL SLIPS, TRIPS, AND FALLS

To prevent slips, trips, and falls, take extra precaution if any of the following situations are encountered:

- Loose, irregular surfaces, such as gravel, shifting floor tiles, and uneven sidewalks can make it difficult to maintain footing.
- Oil, grease, and other liquids can make walking surfaces extremely slick.

- Obstructed aisles or walkways present tripping hazards or require frequent changes of direction, which can throw a worker off balance.
- Insufficient light can make it difficult to see obstacles and notice changes in the walking surface.
- Shoes with slick soles provide insufficient traction.
- Carrying items can both obstruct vision and impair your balance.
- Inattention and distraction interfere with awareness of these hazards and increase risk of injury.
- For snow covered terrain, follow already established safe trails.

7.4.3 KNIFE SAFETY

Only self-retracting utility (safety) knives are to be used by Trihydro employees and subcontractors. Self-retracting (safety) knifes add an important safety feature to the design. Like standard utility knives they can adjust quickly to different cutting depths and will let the blade retract completely into the handle when not in use. The difference is that the spring-loaded blades are pushed out of the knife body with finger pressure and then retract automatically when the pressure is released. This added safety feature will help keep our employees safer on the job site.

Here are some safety tips that apply when using utility knives:

- Once the blade is engaged into the material, release the finger pressure to allow blade retraction once material is cut.
- Use a sharp blade.
- Keep your free hand away from the line of cut.
- When making cuts on a surface below you, stand or kneel to one side of the line of the cut.
- Pull the knife toward you when making a cut on a flat surface. Because pulling motions are stronger and more positive than pushing motions, your knife is less likely to slip.
- When using a straight edge to guide a cut, either clamp it down or keep your free hand well away from the cutting path of the knife. Be sure the straight edge is thick enough to prevent the knife from "riding up" over the edge.
- With thicker materials, make several passes, cutting a little deeper into the material with each pass.
- Many tasks require a knife edge, but not a sharp point. For these tasks, add protection against puncture wounds by using a rounded-tip blade.

- Use "imbedded" blades when possible such as for strapping, shrink wrap, and twine.
- Use scissor-type cutters (pipe cutter) when possible, such as with piping, hosing, and tubing.

7.5 ELECTRICAL HAZARDS

The potential exists for field team personnel to encounter electrical hazards, particularly during site activities. The following procedures will be implemented to minimize the potential for injury from electrical hazards.

7.5.1 ELECTRICAL-QUALIFIED PERSONS

Only qualified persons are authorized to construct, repair, maintain, and operate electrical equipment and installations where the individual would be within three feet of live (energized), exposed components. This does not include removal of an electrical source to machinery/equipment for the purpose of controlling hazardous energy sources (LOTO) under 29 CFR 1910.147.

A qualified person is one who has the skills and knowledge related to the construction and operation of electrical equipment and installations. The qualified person will have undergone safety training to recognize and avoid hazards per the National Fire Protection Association (NFPA) Standard 70E.

7.5.2 GROUND FAULT CIRCUIT INTERRUPTERS (GFCI)

Power tools and extension cords used in construction activities or in damp environments will be outfitted with a GFCI adapter or plugged into a GFCI outlet. The GFCI adapter is to be installed at the outlet before the extension cord or power tool.

If the use of a GFCI can pose a greater threat to employees, such as when using magnetic-mounted power tools, employees are to coordinate with the H&S Team before tool or equipment use. Employees are to inspect and test the GFCI before use.

7.6 CHEMICAL HAZARDS

Governmental regulations require that Trihydro has one easy reference for important information regarding hazardous substances in the workplace. This information is contained on labels and in safety data sheets (SDSs) or material safety data sheets (MSDSs) for each substance in the workplace. OSHA has updated the requirements for SDSs (formerly known as MSDSs) effective on June 1, 2015. Also, OSHA has updated the requirements for labeling of hazardous chemicals under its Hazard Communication Standard (HSC). As of June 1, 2015, all labels are required to have pictograms [consisting of a symbol on a white background framed within a red boarder and represents a distinct hazard(s)], a signal word, hazard and precautionary statements, the product identifier, and supplier identification.

If a potentially hazardous material is encountered that the employee is not familiar with, the employee will review the SDS/MSDS for that material. Specifically, the employee must read labels and the SDS/MSDS carefully, follow warnings and instructions, understand the signs of exposure and first aid response, use the correct protective clothing and equipment when directed, learn emergency procedures, and practice safe work habits. Employees will direct questions about a hazardous material to the PSHSO.

Site-chemical hazards and their associated exposure limits that employees may encounter are listed in **Table 7-4**. Two particular on-site hazards are:

- Hydrocarbon liquids and gases, which may adversely affect human health through injection, skin contact, and inhalation.
- Acidic and caustic solids or liquids, which may adversely affect human health through skin contact and inhalation.

If there are questions regarding chemicals located at the client's site, contact the PM. The following procedures will be implemented to minimize potential harm from chemicals:

- The Trihydro PM will refer to the National Institute for Occupational Safety and Health (NIOSH) Pocket Guide to Chemical Hazards for the proper response to hazardous organic chemicals if field team personnel complain of irritation, giddiness, headache, or nausea.
- Copies of SDSs can be found in Appendix E.
- If organic vapors are encountered, organic vapor measurement should be taken every 15 minutes in the breathing zone within the site. Employees need to refer to **Tables 6-1 and 6-2** "PID and FID Organic Vapor Action Levels and Responses."
- Trihydro's PSHSO will instruct field team members to stop work and leave the work zone if there are indications of the exposure to acidic or alkaline substances (eye, nose, throat, or skin irritation; holes in clothes).

🔊 Trihydro

- Trihydro's PSHSO will instruct the field team members complaining of these symptoms to immediately flush the area of the body exhibiting the symptoms with cool or cold water.
- Trihydro's PSHSO will determine the pH of the apparent offending substance.
- If the pH is less than 1 or greater than 12 standard units, the field team personnel will be required to wear Tyvek coveralls, chemical resistant gloves, chemical resistant boots, splash goggles, and half-mask respirators with acid and particulate cartridges.
- Trihydro's PSHSO will instruct the field team personnel to minimize contact with the acidic or caustic substance.
- Chemicals will be stored with compatible chemicals in an area with secondary containment that will not allow a spill to enter into the environment.
- Chemicals not in their original container will be kept in a container compatible with the chemical and labeled with an Hazardous Materials Identification System (MIS) label.

7.6.1 SITE CHEMICALS OF CONCERN

Based on historical environmental sampling data for the site, chemicals of concern at the site include the individual compounds present in petroleum hydrocarbons, including volatile and semi-volatile organic compounds and heavy metals in soil and groundwater. The primary chemicals that were detected at concentrations above cleanup standards include those listed in **Table 7-4**. This table is used as a reference; defer to the NIOSH Pocket Guide to Chemical Hazards and/or the SDS / MSDS provided in **Appendix E**.

7.6.2 HAZARDOUS WASTE

Hazardous waste (if generated during OU-3 activities) will be collected in containers compatible with the waste, stored in an area with secondary containment that will not allow a spill to enter into the environment, stored with compatible wastes, and labeled indicating the waste nomenclature and collection start date.

7.7 ASBESTOS HAZARDS

There is a potential for asbestos exposure at this site; therefore, employees need to be aware of potential asbestos hazards. Once asbestos fibers are trapped in the body, the fibers can cause serious health hazards. The most common way for asbestos fibers to enter the body is through inhalation. If asbestos is unearthed or disturbed during site activity employees will immediately stop work and evacuate the area and notify the appropriate client personnel.

If soils that may have been mixed with asbestos are encountered, they will be kept adequately wet (sufficiently mixed or penetrated with water to completely prevent the release of particulate material into the ambient air), and workers will work upwind of activities.

Additional requirements under the OSHA's asbestos standards include training, exposure assessment, hazard communication (Signage), PPE, special work practices, medical surveillance, and recordkeeping.

OSHA's Asbestos Standard is an exposure-based standard, and as such, the regulations are not limited to only activities involving asbestos containing materials (ACM) that have greater than 1% asbestos, but materials with trace to 1% asbestos may also be subject to the OSHA standard if workplace air concentrations exceed the OSHA permissible exposure limit (PEL):

- The permissible exposure limit (PEL) is 0.1 f/cc of air, on an 8-hour time weighted average (TWA). TWA means exposure concentration averaged over an 8-hour period.
- An excursion limit (EL) of 1.0 f/cc, over a 30-minute TWA. This number is also known as a Short-Term Exposure Limit, or STEL.

7.8 NATURAL DISASTERS

7.8.1 TORNADOS

If the work area is are under a tornado WARNING, seek shelter immediately! The location of the nearest shelter will vary depending on whether a worker is on-site or off-site.

7.8.1.1 IF INDOORS

- Go to a pre-designated shelter area such as a safe room, basement, storm cellar, or the lowest building level. There are several on-site tornado shelters as shown on **Figure 3-1**. For workers that are off-site, identify a nearby publicly accessible building.
- If there is no basement, go to the center of an interior room on the lowest level (closet, interior hallway) away from corners, windows, doors, and outside walls.
- Put as many walls as possible between you and the outside.
- Get under a sturdy table and use your arms to protect your head and neck. Do not open windows.

7.8.1.2 IF IN A VEHICLE, TRAILER, OR MOBILE HOME

• Get out immediately and go to the lowest floor of a sturdy, nearby building or a storm shelter. Mobile homes, even if tied down, offer little protection from tornadoes.

7.8.1.3 IF OUTDOORS WITH NO SHELTER

- Lie flat in a nearby ditch or depression and cover your head with your hands. Be aware of the potential for flooding.
- Do not get under an overpass or bridge; it is safer to lie in a low, flat location.
- Never try to outrun a tornado in urban or congested areas in a car or truck. Instead, leave the vehicle immediately for safe shelter.
- Watch out for flying debris. Flying debris from tornadoes causes most fatalities and injuries.

7.9 CLIMATE HAZARDS

During day-to-day field work, on-site personnel will be alert for the signs and symptoms of climatic stress. Field team members will be observed for the following signs and symptoms of climatic stress:

- Change in body temperature
- Profuse sweating (or absence of sweating when sweating is expected)
- Skin color change

- Shivering
- Disorientation or slurring of speech
- Vision problems
- Muscle cramps or spasms

7.9.1 HEAT STRESS

Heat stress is the increased heart rate, body temperature, respiration, and perspiration that results when the body works to reduce unwanted heat.

7.9.1.1 HEAT STROKE

Heat stroke is the most serious level of heat stress and can be lethal. During heat stroke, moisture from sweat is not available to stimulate evaporative cooling. Some symptoms of heat stroke include:

- Extremely high body temperature
- Red, hot, dry skin (sweating is absent)

⊽ Trihydro

- Strong, rapid pulse
- Convulsions or collapse
- Delirium, disorientation, or unconsciousness

The most important emergency measures to take in the event of heat stroke are:

- . Call for emergency help.
- Cool the victim rapidly; get the victim to a shaded area until emergency help is available.
- If the victim is conscious, administer liquids, but never give alcoholic beverages or stimulants such as coffee or tea. .
- If emergency help is not available, seek medical attention during or immediately following the cooling process. .

7.9.1.2 **HEAT EXHAUSTION**

Heat exhaustion is not as severe as heat stroke but can lead to heat stroke if not treated properly. Some symptoms of heat exhaustion include:

- Body temperature is normal or slightly deviant from Weak pulse • • normal
- Profuse sweating .
- Pale, clammy skin

- Fatigue, dizziness or giddiness, fainting
- Muscle cramps
- Nausea or vomiting

The most important emergency measures to take in the event of heat exhaustion to prevent heat stroke are:

- Cool the victim in shade or indoors
- Have the victim lie down with feet slightly elevated
- Loosen clothing
- If conscious, administer an electrolyte solution, such as Gatorade, every 15 minutes unless vomiting occurs
- If symptoms persist or recur, seek medical attention

⊽ Trihydro

7.9.1.3 PREVENTION OF HEAT STRESS

The work schedule should be paced based on weather conditions. There should be adequate rest periods when electrolyte solutions are available, as it may be necessary to replace body fluids and electrolytes as often as every 15 minutes. Air thermometers and oral medical thermometers should be available.

Clothing should be light and reflective and a sunscreen with at least a sun protection factor (SPF) of 15 should cover areas of the body that are exposed to direct sunlight. In the case of perspiration, the sunscreen should be re-applied as necessary. It should be remembered that a thin layer of clouds is not a form of protection against sunburn, as ultraviolet rays penetrate thin cloud layers.

The effects of heat and humidity are shown in Table 7-7.

7.9.2 COLD STRESS

Cold stress is when the body's core temperature drops below 96.8°F (36°C). Cold stress occurs when the body is unable to compensate for excessive heat loss. Cold stress includes frostbite and hypothermia. Symptoms include pain in the extremities, mental confusion, tripping, and falling. This can occur in temperatures below 50°F, especially in people performing physical labor. Wind chill factor also needs to be taken into consideration (see the **Table 7-8**).

The most important emergency measures to take in the event of cold stress are:

- Individuals suffering from cold stress should move to a heated area.
- The outer layer of clothing should be removed, and the remainder of clothing loosened.
- Wet clothing should be replaced with dry clothing.
- The individual should be instructed to rest until the symptoms are no longer recognizable.
- If the symptoms appear critical, persist, or get worse, immediate medical attention will be sought.

7.9.2.1 FROSTBITE

Frostbite occurs when body parts freeze. Hands, feet, ears, nose, lips, cheeks, and chin are the most vulnerable to frostbite. There are three stages of frostbite: 1) shallow skin, 2) intermediate skin and underlying tissues, and 3) deep frostbite to the bone. The symptoms include:

- The skin changing from red to pale or waxy
- Tingling, stinging, and cold sensations

- Gradual numbness
- Deep frostbite has a cold, solid feel with pale color

First aid for frostbite includes:

- Move the person to a warm area. Put affected body parts in warm water (105 110 degrees F) until skin becomes flushed. No hotter or additional damage will result.
- After warming, the injured area should be wrapped in sterile gauze, keeping affected fingers and toes separated.
- If it cannot be guarantee that the tissue will stay warm, do not warm the tissue until it can be kept warm.
- If normal sensations haven't returned within 30 minutes, seek medical attention.
- **DO NOT RUB OR MASSAGE!** (Have the person move or exercise the affected areas as soon as possible).

7.9.2.2 HYPOTHERMIA

Hypothermia occurs when heat loss causes the body temperature to lower. Rapid warming is urgently needed to prevent death. The symptoms include:

- Severe shivering (shivering decreases as body temperature lowers)
- Disorientation
- An uncaring attitude
- Slower breathing
- Slow speech
- Forgetfulness
- Loss of manual dexterity
- Pupil dilation at 86°F body temperature
- Eventual unconsciousness and death at body temperatures of 80°F and lower

First aid for hypothermia includes:

- Rest in a warm, sheltered area
- If hypothermia advances beyond shivering, get immediate medical help

- Remove wet clothing and apply heat to the body
- Drink warm water and eat warm food if conscious

7.9.2.3 PREVENTION OF COLD STRESS

To prevent cold stress, wear layers of clothing to keep warm and dry and protect the head, hands, and feet from cold. The work rate should not be so high as to cause heavy sweating that will result in wet clothing. Cooling power of the wind is shown in **Table 7-8**.

7.10 ERGONOMIC HAZARDS

The interaction of personnel with their working environment at this site may present potential hazards, such as incorrect lifting of heavy loads, equipment vibrations, improper twisting, or improper body positioning. The aforementioned conditions are potential factors during site activities. Personnel should position themselves properly, lift with the legs when lifting equipment or heavy objects, and rely on the buddy system for assistance in lifting loads that are awkward or too heavy for one person. Back strain, the most common ergonomic hazard in the field, may be avoided if site workers ask for assistance when needed. It is expected that employees will seek assistance when lifting loads exceeding 50 pounds.

7.10.1 LIFTING PROCEDURES

Back injuries can happen as quickly as one wrong move. Lifting and carrying objects can be safer by taking the following steps:

- Plan the route before lifting the load and remove obstacles.
- When lifting items from below arm level, bend your knees, not your back, to lower your body to the object.
- Bring the load as close as possible to the body before lifting.
- Grip firmly with your hands (not just fingers) and keep your arms and elbows tucked in for more strength.
- Lift by letting your legs push you up, not your back.
- Check that you can see where you are going and move slowly enough to avoid bumping into other objects.
- Do not twist your body while carrying heavy objects; twisting is a major cause of injury. If you need to change directions, move your feet in that direction first.
- Lifting is safest when you keep your back straight and your stomach muscles tight. Staying in good physical condition and getting proper exercise are also important.

Loads should be broken down to movable weights, routes planned, and legs used to do the work. Help should be obtained, or a handcart or other device used if an object is too heavy.

7.11 ACOUSTICAL HAZARDS

When working around site equipment, the potential exists for team members to be exposed to noise levels above the OSHA exposure limit of 85 decibels on an 8-hour TWA. Trihydro and OSHA require the use of hearing protection when working in areas where the exposure limit is equal to or greater than 85 decibels on an 8-hour TWA. To provide adequate hearing protection, Trihydro team members should wear hearing protection while working around mechanical equipment on site. Field team personnel will not use headphones during work.

7.12 RADIATION HAZARDS

Site workers should refer to Trihydro's Ionizing Radiation Program and the OU-1 Radiation Safety Plan included in **Appendix D** to this OU-3 HASP that presents the specific radiological requirements that will be met while potentially contacting materials that may contain elevated levels of radioactive materials during this project, in addition to identifying site-specific hazard controls and procedures designed to protect employees, the public, and the environment from hazards associated with this project.

Workers working in or frequenting any portion of a radiation area shall be informed of the occurrence of radioactive materials, shall be instructed in the safety problems associated with exposure, precautions, and devised to minimize exposure including but not limited to time, distance, shielding, and keeping exposure limits as low as possible.

Areas 1 and 2 are operated under one radiation safety plan that is managed by OU-1. OU-3 will adhere to the OU-1 HASP and RSP when working within OU-1. The OU-1 RSP includes radiation hazards, PPE, and warning signs.

7.13 DUST HAZARDS

The generation of dust and fugitive emissions will be prevented when possible and controlled when necessary. Work practices may be adjusted in a manner to minimize dust generation. Personnel will avoid working in dust by positioning themselves upwind of intrusive activities. Dust will be controlled by suppression with water where it poses a risk to workers or community. Throughout site activities, dust areas should be watered, as needed, to minimize dust.

7.14 SILICA HAZARDS

Crystalline silica is a common mineral found in many naturally-occurring and man-made materials used at project sites (e.g., sand, concrete, brick, block, stone, and mortar). Amorphous silica, (e.g., silica gel) is not crystalline silica. Respirable crystalline silica is generated by high-energy operations like cutting, sawing, grinding, drilling, and crushing stone, rock, concrete, brick, block and mortar, or during abrasive sand blasting.

Breathing crystalline silica particles can causes diseases, including silicosis, an incurable lung disease that leads to disability and death. Respirable crystalline silica also causes lung cancer, chronic obstructive pulmonary disease (COPD), and kidney disease.

Silicosis typically occurs after 15 to 20 years of occupational exposure to respirable crystalline silica. The Occupational Safety and Health Administration (OSHA) Respirable Crystalline Silica standard for general industry and construction requires employers to limit worker exposures to respirable crystalline silica and take other precautionary steps to protect workers.

OSHA lists an occupational exposure limit (OEL) for respirable crystalline silica (including quartz) at 0.025 milligrams per cubic meter (mg/m3). This is a concentration to which workers could be exposed for 8 hours a day, 5 days a week, without adverse health effects. However, as a suspected carcinogen, crystalline silica is also an "As Low As Reasonably Achievable" (ALARA) substance, and exposures must be reduced to ALARA levels below the OEL. The OSHA Respirable Crystalline Silica Standards apply to all occupational exposures to Respirable Crystalline Silica work, except where employee exposure will remain below 25 micrograms of Respirable Crystalline Silica per cubic meter of air (25 µg/m3) as an 8-hour time-weighted average (TWA).

Trihydro uses various methods to assist with assessing possible and actual silica exposures. These methods include, but may not necessarily be limited to:

- Reviewing data/reports available in the public domain (i.e., information available through regulatory agencies and industry associations).
- Regularly consulting with safety resources/client safety managers from companies that perform similar work.
- Implementing a respirable silica exposure monitoring program. This program will check that (over time) Trihydro
 has quantifiable silica exposure data available that is representative of regularly occurring, as well as reasonably
 foreseeable work activities. Exposure monitoring will generally be conducted "in-house," although assistance (i.e.,
 monitoring and/or interpretation of results) may be obtained through outside consultants.

When possible and applicable, Trihydro will conduct activities with potential silica exposure to be consistent with OSHA's Construction Standard Table 1, which is included in Trihydro's Crystalline Silica Exposure Control Policy, Program & Procedure. Project managers will check exposure levels for each employee under their supervision who is engaged in a task identified on OSHA's Construction Standard Table 1.

During project activities, teams will have fully and properly implemented the engineering controls, work practices, and respiratory protection specified for the task in Table 1 (unless Trihydro has assessed and limited employee exposure to Respirable Crystalline Silica in accordance with the Alternative Exposure Control Methods Section of this program). Engineering Control Methods including elimination wet methods, operator isolation, and personal protective equipment (PPE) will help project-team members stay safe.

7.14.1 WET METHODS

Wet-spray methods can greatly reduce silica exposure levels of team members and the general public who work near operations that may produce silica dust. Wet methods should use the following guidance:

- Locate nozzles upstream of dust generation points.
- Position nozzles to thoroughly wet the material.
- Check that the volume and size of droplets is adequate to sufficiently wet the material (optimal droplet size is between 10 and 150 μm).
- Ensure nozzles provide complete water coverage but are not so far that the water is carried away by wind.

7.14.2 OPERATOR ISOLATION

Operator isolation includes using either an enclosed booth or a remote-control station. Operators using machines with enclosed cabs can limit their silica exposure by staying inside the cab during operations. The enclosed cab must:

- Be well-sealed and well-ventilated using positive pressure.
- Have door jambs, window grooves, power-line entries and other joints that work properly and are tightly sealed.

7.14.3 RESPIRATORY PROTECTION

An air purifying respirator fitted with HEPA cartridges is the most common PPE provided and used by Trihydro to minimize exposure to silica dust. Depending on the effectiveness of other engineering control measures, either a "full-face piece" or "half-face piece" respirator will be used by personnel (most situations will require a half-face respirator).

When working indoors or in other areas with poor ventilation, a full-face respirator may be required. Both respirators are "seal dependent," and thus the users must be "fit tested" and clean shaven where the respirator seals to the face.

7.15 DRILLING ACTIVITIES

Before any subsurface activities, Trihydro employees involved will complete Trihydro's Subsurface Utility Location and Excavation best practices training.

Potential hazards that may be encountered by workers performing drilling activities associated with OU-3 include encountering municipal solid landfill wastes, wastes that may contain asbestos containing materials (ACM), and radiologically-impacted material near/within Area 1. Based on Trihydro's planned scope of work, these hazards should not be encountered. However, should the unexpected occur, all work will cease, workers will exit the area, and Trihydro will defer and adhere to the existing health and safety policies/procedures for OU-1 (Appendix D) (See Section 6.1.4.3).

When performing hollow stem auger, flight auger, air rotary, casing hammer, mud rotary, sonic, cone penetrometer test drilling, or direct push drilling operations, the following applies:

7.15.1 GENERAL SAFETY AND EMERGENCY RESPONSE

- Before work is begun, including rig set-up, a tailgate safety meeting, review of site specific health and safety plan, and job hazard review must be conducted at the site.
- The job hazard analysis must be specific to the rig to be utilized.
- A first-aid kit must be available in an easily accessible area away from the drilling operation. Its location must be reviewed during the tailgate safety meeting.
- Work cannot be performed if lightning strikes are observed in the area.

7.15.2 PERSONAL PROTECTIVE EQUIPMENT (PPE)

- Minimum required PPE for drilling jobs includes hard hat, safety shoes with steel toes, safety glasses or goggles, gloves and hearing protection.
- Appropriate PPE must be worn to prevent irritation or contamination of the skin when handling potentially contaminated articles and spoils.

- Hearing protection must be worn in the Exclusion Zone or when working within 20 feet of the operating rig.
- Secure loose clothing, hair wraps, strings on jackets and hoods, and shoelaces. Jewelry is not allowed to be worn. Eliminate protruding tools from tool belts.

7.15.3 EQUIPMENT SAFETY

- The drilling contractor will complete a checklist daily to verify equipment is in safe and operable condition. The checklist must be available on site for review.
- Rig controls and levers, including emergency shut-off, should be legibly labeled. Wherever possible, pinch points will be identified and labeled.
- Adequate cribbing must be in place under the leveling jacks and outriggers to prevent tip-over or sinking into unstable soil.
- Secure the rig when it is in position; set brakes and/or locks, chock wheels or tracks as conditions require.
- The Exclusion Zone must be marked with a continuous barrier where the potential for site visitation by the public or other pedestrians exists.
- The Exclusion Zone(s) should be large enough to safely accommodate workers and drilling equipment.
- Check for adequate overhead clearance before raising the mast. Work in proximity to overhead power lines must address risk of contact with lines.
- Travel with the mast of the drill rig in the raised or partially raised position is unauthorized.
- The drilling rig must be equipped with an operable emergency shut-off or "kill" switch. Persons working within the Exclusion Zone must know the location and operation of the emergency shut-off switch. The functionality of emergency shut-off switches must be tested at the start of each work day.
- Whip checks or anti-whip devices must be in place on pressurized hose lines.
- Augers, drill rods, or down-hole equipment must be cleaned when the drill rig is in neutral, the engine is idle, and the machinery has stopped rotating.
- Repair to rigs must be done by a person trained and qualified to perform the repair.
- Do not perform maintenance or refueling while the equipment is operating.
- Work must cease if cables or cable clamps become damaged or frayed.
- No body part is allowed within 12 inches of a turning auger.
- Broken or substandard equipment must not be brought to the site. Equipment that becomes broken must be tagged as such and must not be used.
- Equipment must not be used if guards are not in place.
- Work areas must be kept in a clean and orderly condition. Tools and equipment must be stored properly when not in use.
- A worker must not attempt to move a load unassisted if the weight and bulk exceeds the capability of the worker. Loads greater than 50 pounds must not be repeatedly moved by a single person.
- Vertical storage of drill rods and augers is not allowed unless the rig is specifically designed to accommodate this practice.
- Drilling rods and augers may not be removed in multiple sections. Drilling rods and augers must be broken down at each joint as they are removed from the hole. Manual tools must not be used in combination with powered rotation.

7.15.4 DRILL-SITE CLEARANCE

To protect buried utilities and exposing employees to the hazards associated with utility strikes, a summary of Trihydro's drill-site clearance procedure is listed below. Trihydro's *Excavation, Drilling and Utility Locating Checklist* will be used prior to drilling and/or geoprobing activities. Before any subsurface activities, Trihydro employees involved will complete Trihydro's Subsurface Utility Location and Excavation best practices training. Procedures may vary based on the Clients expectations, PM's assessment of the area, tasks, and geological makeup.

- The drilling contractor will contact the appropriate "Call Before You Dig" one-call notification center at least 2 business days before excavation and/or drilling work is scheduled to begin.
- Contractor will verify that "Call Before You Dig" locators mark their facilities in the designated drill site area or provide notification that they do not have facilities near the proposed drill area.
- Locations of known utility lines will be clearly marked (using electronic locating methods) at each proposed drill site.
- Trihydro will conduct a thorough review of available subsurface utility-location maps for each proposed drill site.
- If drilling activities are within the "tolerance zone" and/or areas outside the "tolerance zone" when required by the client, each location will be potholed to a depth below the utility zone using minimally intrusive potholing methods such as hand auger, air or hydro vacuum techniques. Each of the proposed drill sites will be potholed to a minimum diameter no less than that of the proposed borehole to be drilled.

- If environmental soil-quality samples are required within the "utility window," air vacuum to the desired sample depth and use a hand auger to retrieve the sample.
- Visually confirm that no buried utilities or other subsurface obstructions are present in each pothole to the maximum depth of the "utility window."
- If no buried utilities or other obstructions are encountered, the proposed drill site is "cleared" for drilling.
- Before raising the mast on the drilling rig at each location, look for overhead lines. A 20-feet minimum clearance shall be maintained from overhead power lines, or per the client's requirements, whichever is greater. If the appropriate clearance cannot be maintained, the power lines shall be de-energized. If impracticable, or infeasible, contact the Corporate H&S Team for guidance.
- During drilling activities, proceed slowly for the first 5 feet.
- Stop drilling activities if resistance is encountered.
- A copy of the Trihydro Standard Operation Procedure Excavation Site Clearance can be obtained on the Trihydro Internal Webpage.

7.15.5 HOUSEKEEPING DURING DRILLING OPERATIONS

- Do not store or transport tools, materials, or supplies within or on the mast (derrick) of the drill rig.
- Pipe, drill rods, casing, augers, and similar drilling tools will be stacked on racks or sills in an orderly fashion to
 prevent spreading, rolling, or sliding.
- Penetration, or other driving hammers, will be placed at a safe location on the ground or secured to prevent movement when not in use.
- Controls, control linkages, warning and operation lights, and lenses should be stored free of oil, grease, and/or ice.
- Keep support vehicles, unnecessary equipment, and unnecessary personnel outside of the work zone.

7.16 TRAFFIC HAZARDS

7.16.1 DRIVING SAFETY

Driving safety is required to protect the field team personnel from work-related injuries and accidents. Compliance with site, local, state, and federal traffic laws is required. Workers should drive defensively by continually watching for hazardous conditions, understanding how to defend against them, and taking action in time to avoid problems. Keep eyes and attention on the road and others and adjust speed and driving to changing weather and traffic conditions.

- Trihydro employees who, as a part of their duties, operate vehicles on public roads will hold a valid, properly classed driver's license and possess an acceptable driving record.
- Only vehicles designed for off-road operations will be allowed to leave improved roads and then only within the
 manufacturer's guidelines and the vehicle's capabilities and limitations. When operating off-road, the use of a
 spotter will be used. If a spotter is not available, then a ground recon of the intended route will be conducted by
 the driver before driving the area.
- Vehicles will be parked to allow the driver to pull forward to preventing the need for backing. If the vehicle needs to be backed, the driver will use a spotter or, in the absence of a spotter, perform a ground recon for obstacles before entering the vehicle and backing.
- Trihydro employees who, as a part of their duties drive corporate, rental vehicles, or personal vehicles for Trihydro business, will be 3-D Driving (defensive driving) certified before driving on corporate business. Refresher training is required every two years.
- Employees are expected to complete a Journey Assessment Form found on the Trihydro H&S Web site before departure when traveling outside of their local area.
- Employees operating a vehicle, personal, rental, or fleet, on company business will not use a cell phone, Blackberry, or other electronic device while operating the vehicle.
- Site workers are required to wear seat belts when operating or riding in vehicles.
- It is a violation of Trihydro's safety policy for employees to operate a vehicle with illegal drugs in his/her system or while impaired by alcohol, prescription drugs, or over-the-counter medications.
- Vehicles and other mobile equipment will operate within posted speed limits, and only in areas necessary to perform work, and will observe roadblocks and caution signs.
- Vehicles may be left running only for the purposes of operating auxiliary equipment or lights or for diesel engine warming, and then only when the driver can verify the vehicle is secure with the transmission in park or neutral, wheels chocked, and the parking brake set.
- Vehicles parked on sloped surfaces will have the transmission in park, or placed in first gear for manual transmissions, wheels chocked, and the parking brake set.
- When parking heavy equipment, such as front loaders and other excavation equipment, the driver will lower the buckets, blades, or other hydraulically driven attachments to the ground, place the vehicle in park, and set the parking brakes.
- Vehicle operators will not drive over unprotected hoses or exposed piping.

- Employees will enter and exit through the gates or pathway provided and designated for this use.
- Keys to unattended vehicles and equipment will be left in the ignition so the vehicles and equipment can be moved as necessary (on unsecured sites, this is at the discretion of the PM). Where applicable, vehicles and/or equipment are described as unattended anytime the driver is not at the controls of the vehicle.
- Upon notification of a release of flammable vapors, fire, or other immediate dangers, the operator will immediately shut down sources of ignition under his/her control. No attempt to start or move vehicles in the area will be made until conditions are safe for re-entry.

7.16.2 VEHICULAR SAFETY

The protection of project-team members from vehicular hazards is crucial. The following actions should take place to provide a high level of protection from injuries caused by contact with vehicles and heavy equipment.

- Activities conducted in or near roadways will be barricaded and guarded.
 - Backed up trucks and work vehicles can provide an effective barrier for worker protection in the work zone. Trucks should be positioned between the working area and the flow of traffic. Be sure to allow enough space between the vehicle and the closest workers to prevent the vehicle from being pushed into workers if it is hit.
- Traffic control devices will be installed before work begins in accordance with the U.S. Department of Transportation (USDOT) Manual on Uniform Traffic Control Devices (MUTCD), Chapter 6F, Temporary Traffic Control Zone Devices (http://mutcd.fhwa.dot.gov/htm/2003r1r2/part6/part6f1.htm).

Figure 6F-2. Methods of Mounting Signs Other Than on Posts

- The MUTCD defines traffic control devices as signs, signals, markings, and other devices used to regulate, warn, or guide road users, placed on, over, or adjacent to a street, highway, pedestrian facility, or bikeway.
- Traffic control devices used on street and highway construction, maintenance, utility, or incident management operations will conform to the MUTCD.

- Work site warning signs will be placed far enough from the work zone so that drivers will have time to read the messages and react before they reach the work area (see **Table 7-9**). On urban streets, the effective placement of the first warning sign should range from 4 to 8 times the speed limit with the high end of the range being used when speeds are relatively high. When a single advance warning sign is used (in cases such as low-speed residential streets), the advance warning area can be as short as 100 feet. When two or more advance warning signs are used on higher-speed streets, such as major arterials, the advance warning area should extend a greater distance. The distance from the work zone to the first sign is listed in column A. The distance from the first sign to the second is listed in column B. The distance from the second sign to the third is listed in column C (the third sign is the first one in a three-sign series encountered by a driver approaching a TTC zone).
- Signs mounted on barricades, or other portable supports, will be no less than one foot above the traveled way (See MUTCD Figure 6F-2).
- Traffic cones can be used to guide and direct traffic around or through the work areas during daylight hours.
 The devices will be installed before the work begins. At least one advance warning sign will be used to explain the cones. Flags inserted in the top of the cones increase their visibility.
- Backed up and stationery vehicles and trucks can also serve as warning devices when equipped with flashing high intensity emergency lights (a revolving light or strobe light above the cab).
- During sampling activities, one person should function as a flagger to divert traffic while another collects the samples.
- Flaggers and work crew will wear high visibility vests.
- Site heavy equipment will have backup warning devices.

7.17 BIOLOGICAL HAZARDS

7.17.1 BLOOD-BORNE PATHOGENS

Workers may be at risk of developing various types of illnesses, such as the human immunodeficiency (HIV) and hepatitis B (HBV) and C (HCV) viruses, due to their exposure to blood-borne pathogens and other potentially infectious materials in the workplace.

Universal precautions, engineering, and work practice controls will be used to eliminate or minimize employee exposure. Universal precaution is the practice of treating bodily fluids as contaminated. Where occupational exposure remains after institution of these controls, PPE will also be used.

Trihydro will provide hand-washing facilities accessible to employees where feasible. When provision of handwashing facilities is not feasible, Trihydro will provide an appropriate hand cleanser in conjunction with clean cloth/paper towels or antiseptic towelettes. When antiseptic cleansers or towelettes are used, hands will be washed with soap and running water as soon as feasible. Employees will wash their hands and other skin with soap and water, or flush mucous membranes with water immediately or as soon as feasible following contact of such body areas with blood or other potentially infectious materials.

Project sites will have on hand a blood-borne pathogen clean up kit and personnel should be trained before its use.

If field team members are exposed to body fluids, they will report the incident immediately to Trihydro's PM, who will fill out Trihydro's "Exposure Incident Report" found in **Appendix I.**

7.17.2 HANTAVIRUS

Hantavirus pulmonary syndrome (HPS) is a rare but serious, and often deadly, lung infection. Hantaviruses are found in rodents in different parts of the world where the Sin Nombre virus is carried by the deer mouse, the cotton rat, and perhaps other rodents common throughout North America. The Sin Nombre virus is passed to humans by saliva, urine, and droppings of infected rodents.

The best way to prevent HPS is to:

- Avoid contact with rodents and avoid inhaling dust that might be contaminated with rodent saliva, urine, or droppings.
- Use safety precautions when cleaning indoor or outdoor areas that might be contaminated with rodent saliva, urine, or droppings. Do not stir up and breathe dust. Before cleaning, wet down potentially contaminated areas with a disinfectant (such as bleach or alcohol). While cleaning, wear rubber gloves and disinfect them after use. Dust masks that cover the nose and mouth can also help.
- When participating in outside activities, stay clear of rodents and their burrows and nests. Open up and air out outbuildings before entering or cleaning. Remove garbage and trash before leaving.

7.17.3 HISTOPLASMOSIS

Although histoplasmosis is usually associated with bird and bat droppings, it actually is caused by a fungus. Histoplasmosis infects a person through inhalation of dust from decayed droppings or contaminated soil. Anyplace

where bird or bat droppings have collected is a likely source of the "Histo" fungus. Prevention is the best solution for exposure.

- Avoid creating dust that will put the fungus in the air where it can be inhaled.
- Try not to disturb soil rich in bird droppings.
- When work requires the removal of contaminated soils, do so with wet sweeping and vacuuming with a high efficiency particulate air (HEPA) filter.
- Soil should be placed in heavy-duty plastic bags or other secure containers for disposal.

7.17.4 PSITTACOSIS

Psittacosis is an infectious disease in humans that has mild, non-specific, flu-like symptoms. Psittacosis refers to infections or diseases caused by Chlamydia psittaci, one of several microorganisms in the genus Chlamydia. This disease can be transmitted from infected birds, either wild or domestic birds or poultry, to humans. Sick birds show signs of:

- Sleepiness
 Weight loss
 Diarrhea
- Shivering

Breathing difficulties

Humans can become infected with Chlamydia psittaci by breathing in the organism when the urine, respiratory secretion, or dried feces of infected birds is aerosolized (i.e., dispersed in the air as very fine droplets or dust particles). Other sources of exposure include mouth-to-beak contact, a bite from an infected bird, and handling the plumage and tissues of infected birds.

7.17.5 CHIGGERS

Chiggers are most often found in low, damp areas where vegetation is heavy, although some species prefer dry areas. Chiggers seem to be most abundant in areas covered with shrubs and small trees where rodents are numerous. Chiggers occur in pockets or islands because a female will lay all her eggs in one spot. Chiggers may be a problem when working in grassy areas at project locations. The application of DEET can help prevent bites from these insects.

If a chigger bite is experienced, the bite should be washed with soap and water and then a commercial preparation of medication for chigger bites should be applied. The clothes that were worn when the bite(s) occurred should be placed in a plastic bag for temporary storage until they can be laundered.

7.17.6 STINGING INSECTS

Stinging insects are limited to the order Hymenoptera, which includes wasps, bees, and ants where only females can sting. Social hymenopterans, including yellow jackets, bumble bees, honey bees, and fire ants have individuals in the colony whose task it is to defend the nest. If the nest is disturbed, these individuals will defend it vigorously. In addition, foraging members of the colony will also sting if they are disturbed or injured as they go about their activities. Some, such as the yellow jacket, are much more liable to attack than others.

7.17.6.1 SINGLE STINGS

The body responds to the venom of stings with redness and swelling at the sting site. The area is quite likely to itch. Oral and topical antihistamines should help prevent or reduce the itching and swelling. Try not to rub or scratch the sting site, because microbes from the surface of the skin could be introduced into the wound and result in an infection.

If the stinger remains in the skin, remove it as quickly as possible, because venom continues to enter the skin from the stinger for 45 to 60 seconds following a sting. If removed within 15 seconds of the sting, the severity of the sting is reduced. After the stinger is removed, wash the wound and treat it with an over-the-counter product or simply a cold compress to alleviate the pain. Aerosol or cream antihistamine preparations that contain a skin coolant can also help. If the sting is followed by severe symptoms, or if it occurs on the neck or mouth, seek medical attention immediately because swelling in these areas of the body can cause suffocation.

7.17.6.2 MULTIPLE STINGS

Occasionally, a person becomes involved in a situation where he or she is stung many times before being able to flee. Humans can be killed if stung enough times in a single incident. Honeybees' toxic dose is estimated to be 8.6 stings per pound of body weight.

7.17.6.3 RENAL INSUFFICIENCY

A potentially life-threatening result of multiple stings may occur days after the incident where the kidneys become clogged and the patient is in danger of dying from kidney failure. It is important for persons who have received many stings at one time to discuss this secondary effect with their doctors. Patients should be monitored for a week or two following an incident involving multiple wasp or bee stings.

7.17.6.4 ANAPHYLAXIS

A small percentage of the population is allergic to wasp or bee stings. Allergic reactions to bee and wasp stings can develop anywhere on the body and may include non-life-threatening reactions such as hives, swelling, nausea, vomiting, abdominal cramps, and headaches. Life-threatening reactions such as shock, dizziness, unconsciousness, difficulty in breathing, and laryngeal blockage resulting from swelling in the throat require immediate medical care. Symptoms can begin immediately following the sting or up to 30 minutes later and may last for hours.

Anaphylaxis, if treated in time, usually can be reversed by the effects of epinephrine (adrenaline) injected into the body. Individuals who are aware that they are allergic to stings should notify the PM and carry epinephrine in either a normal syringe (sting kit) or in an auto-injector (Epi-Pen[®]) whenever they think they may encounter stinging insects.

7.17.7 LYME DISEASE (TICKS)

Tick-borne pathogens present a significant field hazard and in some areas account for many serious field incidents. These procedures should be applied during field activities – even in areas that are predominantly paved but with bordering vegetation.

7.17.7.1 HAZARD CONTROL

The methods for controlling exposure to ticks include, in order of most preferred to least:

- Avoiding tick habitats and ceasing operations in heavily infested areas.
- Reducing tick abundance through habitat disruption or application of acaricide.
- Personal protection through use of repellants and protective clothing.
- Frequent tick inspections and proper hygiene.

7.17.7.2 FIRST AID AND MEDICAL TREATMENT

Tick bites should be treated with first aid. Clean and wash hands and disinfect the bite site after removing embedded tick by use of tweezers. Consult a healthcare professional if infection or symptoms and effects of tick-borne illnesses develop ("target" or "bull's eye rash").

7.17.7.3 TICK IDENTIFICATION

There are four varieties of hard-bodied ticks that have been associated with tick-borne pathogens. These tick varieties include: Deer (Black-Legged) Tick; Lone Star Tick; Dog Tick; and Rocky Mountain Wood Tick.

The following ticks can be considered a hazard at the project site:

7.17.8 WEST NILE VIRUS

The West Nile virus (WNV) is a virus transmitted by mosquitoes to other animals normally through a mosquito bite. The most likely route of WNV infection to humans is through the bite of an infected mosquito. It is recommended that workers use standard infection control precautions when working with humans or animals suspected or known to be infected with WNV. Also follow standard infection control procedures when handling sick or dead animals.

Most human WNV infections cause either no symptoms or a mild, flu-like illness. The most severely affected patients may develop an inflammation of the brain called encephalitis. These severe cases are very rare in humans. Persons over age 50 are at higher risk of severe illness following infection.

7.17.9 COVID-19 HAZARD

COVID-19, a form of coronavirus, is a respiratory illness that can spread from person to person. Caused by exposure to the SARS-CoV-2 virus, symptoms can appear **2-14 days after exposure** based on information from the Center for Disease Control (CDC). These symptoms may include fever, dry cough, and shortness of breath. Trihydro personnel and subcontractors will be required to notify team members of any COVID-19 symptoms prior to initiating field work daily.

To prevent the virus from spreading, Trihydro follows the CDC, NIOSH, U.S. and State Department of Health, and client recommendations regarding personal hygiene and precautions. The following measures can help protect employees on and off the job:

- Practice proper housekeeping and sterilization measures.
- Frequently wash hands with soap and water; if soap and water are not available, use alcohol-based hand sanitizer with at least 60% alcohol.
- Avoid touching eyes, nose, or mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Stay home when sick and report flu-like symptoms to supervisor immediately.
- Adhere to the social distancing requirement of 10 people or less (CDC). If a larger work group is required, use "bubbling" or compartmentalization (e.g., assign smaller groups different tasks in different areas in the building or project site) to reduce potential of workforce exposures.
- Maintain a distance of at least 6 ft or whatever distance meets current CDC recommendations.
- Don a cloth face mask that meets current CDC guidance (https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html).

If an employee develops **early warning signs** or suspects they may have contracted COVID-19, the employee will seek **medical attention immediately**. Emergency warning signs include trouble breathing, persistent chest pain or pressure, headache, fever, confusion, or bluish lips or face. This list is not all inclusive; please consult WorkCareTM for other severe or early warning symptoms. Trihydro employees and subcontractors that contract COVID-19 will not return to work until they meet current CDC recommendations for returning to work.

Additional information on COVID-19 and Trihydro's Pandemic Prevention Plan can be found in Appendix K and on Trihydro's COVID-19 News & Response Plan SharePoint Website. Employees will also follow all applicable site-specific policies from Bridgeton Landfill, LLC. If a task cannot be safely performed under the restrictions and safety requirements for COVID-19, Stop Work Authority will be used to allow the project team to identify alternatives and communicate path forward with site personnel.

7.17.10 SPIDERS

Only a few spiders are dangerous to humans with the two problematic spiders in the United States being the Brown Recluse and Black Widow spiders. Bites from spiders may feel like a pinprick and may not even be noticed, but within

hours, swelling at the site and breathing problems may occur. Emergency help should be sought immediately. A cloth dampened with cold water or filled with ice may be applied to the bite while awaiting help.

7.17.10.1 BROWN RECLUSE (LOXOSCELES RECLUSA)

The Brown Recluse spider is usually between ¼" and ¾" but may grow larger. It is brown and sometimes an almost deep yellow color and usually has markings on the dorsal side of its cephalothorax, with a black line coming from it that looks like a violin with the neck of the violin pointing to the rear of the spider, resulting in the nickname "fiddleback spider" or "violin spider". Coloring varies from light tan to brown and the violin marking may not be visible.

Most bites are minor with no necrosis (tissue damage). However, a small number of bites produce severe dermonecrotic lesions (skin tissue damage), and, sometimes, severe systemic symptoms, including organ damage. Rarely, the bite may also produce a systemic condition with occasional fatalities. A minority of brown recluse spider bites form a necrotizing ulcer that destroys soft tissue and may take months to heal, leaving deep scars.

First aid involves the application of an ice pack to control inflammation, the application of aloe vera to soothe and help control the pain, and prompt medical care.

7.17.10.2 BLACK WIDOW (LATRODECTUS SPP)

Adult female black widow spiders are gloss black with an hourglass shaped marking on the underside of its abdomen which is red, and male black widow spiders' hourglass color is yellow to white to various shades of orange and red. A large female black widow spider can grow to about 1.5 inches, counting leg span. Male black widow spiders are half the size of the female or smaller (third picture from left). They have longer legs and a smaller abdomen in relation to their body size. They are also usually dark brown with varying colors of stripes/dots, with no hourglass mark. Adult males can be distinguished from juvenile females by their more slender body, longer legs, and large pedipalps (second pair of appendages) typical of most other male spiders.

Male Black Widow

Black Widow Nest

Although their venom is extremely potent (15 times more potent than that of the rattlesnake), these spiders are not especially large. When the venom is diffused throughout the body of a healthy, mature human, it usually does not amount to a fatal dose, though it can produce the very unpleasant symptoms of latrodectism (abdominal muscle pain and spasms). Deaths in healthy adults from Latrodectus bites are relatively rare.

7.17.11 POISON OAK/IVY/SUMAC

Reaction to poisonous shrubs is an allergic response and ranges from no reaction to a severe "rhus" dermatitis. Rhus is the class of poisonous plants which also includes poison ivy and poison sumac, mango, and other urushiol containing plants.

Shrubs are usually 12" to 30" high, or a tree-climbing vine, with triple leaflets and short, smooth hair underneath. Early berries are fuzzy and white; later, dun-colored. Plants are red and dark green in spring and summer with yellowing leaves anytime, especially in dry areas. Leaves may achieve bright reds in fall, but the plant loses its (yellowed, then brown) leaves in winter, leaving toxic stems. All parts of the plant remain toxic throughout the seasons.

Primary contamination results from contact with bruised or broken plant parts that release "toxicodendrol," an oily resin containing the toxic chemical "urushiol."

Poison Ivy

Poison Sumac

Poison Oak

The best way to prevent exposure is to recognize the plants and avoid working in areas where poisonous shrubs are present. If you will work in areas with poisonous shrubs, contact your PSHSO to determine the best procedures to prevent contamination.

7.17.11.1 FIRST AID

If there is exposure, use the following first aid procedures or others you may find to alleviate the pain and itch.

- Keep your hands away from your eyes, mouth, and face
- Do not scratch or rub the rash
- Apply one of these to the skin rash:
 - Calamine (not Caladryl) lotion
 - Zinc oxide ointment
 - Paste made with baking soda mix 3 teaspoons of baking soda with 1 teaspoon of water
- Take an over-the-counter antihistamine such as Benadryl, as stated on the label

If self-care/first aid measures do not bring relief, or for extreme cases of exposure, contact your doctor.

8.0 CONFINED SPACE ENTRY PROCEDURES

Confined spaces ("non-permit confined space") are defined as meeting *all of the following*:

- Is large enough and so configured that an employee can bodily enter and perform assigned work.
- Has limited or restricted means for entry or exit.
- Is not designed for continuous employee occupancy.

A Permit Required Confined Space ("permit space") is defined as a confined space that has one or more of the following characteristics:

- Contains or has a potential to contain a hazardous atmosphere that is defined as:
 - Having flammable gas, vapor, or mist in excess of 10 percent of its lower flammable limit (LFL).
 - An airborne combustible dust at a concentration that meets or exceeds its LFL.
 - An atmospheric oxygen concentration below 19.5 percent or above 23.5 percent.
 - An atmospheric concentration of substances for which could result in employee exposure in excess of its dose or permissible exposure limit.
 - Other atmospheric condition that is immediately dangerous to life or health.
- Contains a material that has the potential for engulfing an entrant.
- Has an internal configuration such that an entrant could be trapped or asphyxiated by inwardly converging walls or by a floor which slopes downward and tapers to a smaller cross-section.
- Contains other recognized serious safety or health hazard.

Any project work requiring confined space activities performed by Trihydro or a Trihydro subcontractor will get preapproval from the project Business Unit Leader and Trihydro Health & Safety Manager. Confined spaces are initially considered "permit required" until an evaluation is conducted using the Trihydro "Work-Area Evaluation for Confined Spaces (**Appendix G**)." No individual is allowed to enter a confined space, serve as an attendant outside of a confined space, or other confined space duties without proper training. Workers planning on entering or overseeing confined space activities must first determine if the activity being conducted falls under the OSHA General Industry or Construction industry regulations and determine what regulatory requirements apply. Construction activities 20 CFR 1926 includes new construction, repair to existing facility, and replacement of an existing structure or any of its components. (Maintenance is generally not considered construction). Monitoring and taking samples would

🔊 Trihydro

generally fall under the general industry standard 20 CFR 1910.146. Training requirements can be found in the Occupational Safety and Health Administrative CFR 1910.146(g) for OSHA General Industry and Occupational Safety and Health Administrative CFR 1926.1207 for Construction.

8.1 CONFINED SPACE OPERATIONS

Confined space operations require:

- Initial evaluation to determine if the space is a permit-required confined space.
- Barricades to prevent unauthorized entry and to eliminate fall hazards.
- Objects will be kept away from the opening edge to prevent falling object hazards.

8.2 PERMIT-REQUIRED CONFINED SPACE OPERATIONS

In addition, permit-required confined space operations require:

- Coordination with the client administrative and emergency response personnel.
- Identify and evaluate hazards.
- Develop and implement the means, procedures, and practices necessary for safe permit space entry operations.
- Verify appropriate training for those conducting permit-required confined space operations.
- Complete line-breaking, blanking, or lockout/tag out.
- Complete a permit and maintain required documentation at the permit space to include authorized entrant logs. The client's permit has precedence over the Trihydro permit.
- Perform atmospheric testing.
- Purging, inerting, flushing, or ventilating the permit space as necessary to eliminate or control atmospheric hazards.
- Provide the attendant with air monitoring equipment.
- Provide pedestrian, vehicle, or other barriers as necessary to protect entrants from external hazards.
- Verify conditions in the permit space are acceptable for entry throughout the duration of an authorized entry.
- Verify rescue services are available and current on annual training. If rescue services respond to another site, the permit-required confined space operations will cease until rescue services has been re-established.
- Establish adequate communications with rescue services and entrants.

💎 Trihydro

- Provide emergency rescue equipment if not provided by rescue services.
- Provide appropriate PPE.
- Provide adequate illumination.
- Provide equipment for safe entry and egress.

Upon completion of permit-required confined space operations, staff will be accounted for, permit space entrances will be properly closed, the client and rescue services notified, and the permit and associated documentation completed and kept on file for one year.

9.0 DECONTAMINATION PROCEDURES

An evaluation was conducted to determine the potential for hazardous substance contamination during Trihydro tasks at this site. That evaluation indicates that *there is a potential* of contamination of a sufficient quantity to require decontamination planning, equipment, and procedures.

In compliance with 29 CFR 1910.120(b)(4)(ii)(G) and 1910.120(k), the decontamination chapter of the HASP describes how personnel and equipment are decontaminated when they leave the Exclusion Zone. This chapter also describes how residual waste from decontamination processes is disposed. Decontamination procedures are designed to achieve an orderly, controlled removal or neutralization of contaminants that may accumulate on personnel or equipment. These procedures minimize worker contact with contaminants and protect against the transfer of contaminants outside designated work zones. They also extend the useful life of PPE by reducing the amount of time that contaminants contact and permeate PPE surfaces. The decontamination procedures described below are designed to meet the requirements of 1910.120(k) and include project-specific information about:

- The location and type of project decontamination facilities.
- General and specific decontamination procedures for personnel and PPE.
- General and specific decontamination procedures for equipment.
- Disposal of residual waste from decontamination.
- The monitoring procedures used to evaluate the effectiveness of decontamination.

The PSHSO is responsible for the oversight and implementation of project decontamination procedures and is responsible for validating their effectiveness.

9.1 EFFECTIVENESS OF DECONTAMINATION

The PSHSO is responsible for monitoring the effectiveness of decontamination procedures either through swipe testing, lab analysis, or both.

9.2 DECONTAMINATION FACILITIES

Decontamination is conducted in the contamination reduction zone (CRZ). The CRZ acts as a buffer between the Exclusion Zone and the Support Zone. The location and design of decontamination stations minimize the spread of contamination beyond these stations. Separate facilities are used for personnel and for equipment. A decontamination

location will be established in a geographical area that will minimize the exposure of uncontaminated employees or equipment to contaminated employees or equipment. It is recommended to establish a primary and secondary decontamination area based on terrain, site facilities, and environmental factors such as wind. The location of these designated facilities is marked on the site map, **Figure 3-1** in the Figures Section.

In general, items entering the Exclusion Zone on the site will either be decontaminated or properly discarded upon exit from the Exclusion Zone. Personnel will enter and exit the Exclusion Zone through the decontamination area. Before demobilization, contaminated equipment will be decontaminated and inspected by the Trihydro PM, or designate, before it is moved into the Support Zone. Materials that are generated by decontaminated procedures will be stored in a designated area in the Exclusion Zone until disposal arrangements are made.

9.3 PERSONNEL DECONTAMINATION

The Trihydro PSHSO will monitor decontamination procedures to determine their effectiveness, will verify the appropriate use of PPE, and staff have been sufficiently trained in decontamination procedures.

Based on the nature of the hazards and/or duration of work, showers, and change rooms consistent with the requirements of 29 CFR 1910.141 *are provided for workers*.

The following are general decontamination procedures established and implemented during this project outside of OU-1 (see **Appendix D** for decontamination procedures for within OU-1):

- Decontamination is required for workers exiting a contaminated area. Personnel may re-enter the Support Zone
 only after undergoing the decontamination procedures described in the next section.
- Used protective clothing is decontaminated, cleaned, laundered, maintained, and/or replaced as needed to verify its effectiveness.
- PPE that requires maintenance or parts replacement is decontaminated before repairs or service.
- PPE is decontaminated or prepared for disposal on the premises. Personnel who handle contaminated equipment have been trained in the proper means to do so to avoid hazardous exposure.
- Workers are required and trained to immediately exit the work zone, perform applicable decontamination
 procedures, shower, and change into uncontaminated clothing if their permeable clothing is splashed or becomes
 wetted with a hazardous substance.
- Procedures for decontamination waste disposal meet applicable local, state, and federal regulations.

9.3.1 STEPS FOR DECONTAMINATION

Station 1 Equipment Drop

Deposit equipment used on-site on plastic drop cloths. These items will be decontaminated or discarded as waste before removal from the Exclusion Zone.

Station 2 Outer Boot and Outer Glove Wash and Rinse

Scrub outer boots (if utilized) and outer gloves with decontamination solution or detergent water. Rinse off using water.

Station 3 Outer Boot and Glove Removal

Remove outer boots (or boot covers) and gloves. If disposable, deposit in a container with plastic liner. If nondisposable, place in a clean dry place.

Station 4 Respiratory Protection Removal

Remove hard hat and respirator face-piece and deposit on a clean surface. Air purifying cartridges will be discarded daily, if appropriate. Wash and rinse respirator at least daily. Wipe off and store respiratory gear in a clean dry location.

Station 5 Inner Glove Removal

Remove inner gloves. Deposit in container for disposal.

Station 6 Protective Clothing Removal

Protective cotton coveralls will be placed in a marked container for cleaning as needed. Tyvek or poly-coated coveralls will be deposited in a container with a plastic liner that is properly marked.

Station 7 Field Wash

- Thoroughly wash hands, forearms and face with biodegradable soap and water.
- Eating, drinking or practices that increase the probability of hand to mouth transfer and/or ingestion of materials is
 prohibited in areas where the possibility of contamination exists and is permitted only in the designated break area.
 Personnel will not wear or bring dirty/contaminated clothing into the clean support area.

🔊 Trihydro

9.4 EQUIPMENT DECONTAMINATION

Tools, equipment, and machinery from the Exclusion Zone or CRZ are decontaminated in the CRZ before removal to the Support Zone. Equipment decontamination procedures are designed to minimize the potential for hazardous skin or inhalation exposure, cross-contamination, and chemical incompatibilities.

The following are general equipment decontamination procedures established and implemented during this project.

9.4.1 GENERAL EQUIPMENT DECONTAMINATION PROCEDURES

- Equipment in the Exclusion Zone that can be used again, that is still operable, and that will not pose an increased exposure hazard during re-use will be left in Exclusion Zone until it is no longer needed. This eliminates unnecessary decontamination and reduces the potential for physical transfer of contaminants outside the Exclusion Zone.
- Decontamination is required for equipment exiting a contaminated area. Equipment may re-enter the Support Zone only after undergoing equipment decontamination procedures.
- Equipment that is transported regularly between the contaminated and clean areas of the facility (e.g., monitoring equipment) will be carefully decontaminated each time it is removed from the Exclusion Zone and the effectiveness of decontamination is monitored to reduce the likelihood that contamination will be spread outside designated work zones.
- Equipment that cannot be successfully decontaminated will be disposed of as hazardous waste.

9.5 DISPOSITION OF DECONTAMINATION WASTES

Equipment used for decontamination will be decontaminated or disposed of with the established waste streams. Established waste streams are those specified in the work plan. Discarded clothing (PPE) will be disposed of along with the waste streams.

9.6 EMERGENCY DECONTAMINATION

Site personnel who are contaminated and need medical treatment will be decontaminated before being transported to a medical facility if decontamination does not delay life-saving treatment or aggravate the injury.

When emergency decontamination is performed, contaminated protective clothing and equipment is washed, rinsed, and/or cut off. If an emergency victim is grossly contaminated with extremely toxic or corrosive material, the victim will be wrapped in blankets, plastic, or rubber to reduce potential exposure to other personnel.

Offsite medical treatment personnel will be alerted to the chemicals and hazards to which a victim has been potentially exposed. This will be done by sending relevant SDSs / MSDSs and other applicable hazard data with the victim or by having the victim accompanied by personnel who are familiar with the incident and the hazards.

10.0 SPILL CONTAINMENT PROGRAM

10.1 RESULTS OF EVALUATION FOR POTENTIAL SPILLS

An evaluation was conducted to determine there is a potential for hazardous substance spills of Trihydro hazardous materials at this site. That evaluation indicates that there is a potential for a hazardous substance spill of a sufficient quantity to require containment planning, equipment, and procedures. For that reason, a spill containment program is implemented at this site. Employee training on how to respond and take protective measures during incidental releases of hazardous substances are provided consistent with the Hazard Communication Standard, 29 CFR 1910.1200.

10.2 TRIHYDRO HAZARDOUS MATERIALS SPILL PLAN

In the event Trihydro personnel introduce hazardous materials onto the project site, or obtain responsibility of a hazardous materials inventory through the project, in accordance with OSHA 29 CFR 1910.120(j)(1)(viii), Handling Drums and Containers, a spill control kit, capable of handling the entire anticipated amount of hazardous materials, will be available on-site for use in the event of the uncontrolled release of materials considered potentially hazardous to site personnel, the community, or the environment. The spill control kit is considered a temporary provision to be used by site personnel to control the spread of contamination. The spill kit should be used by personnel only if they are properly protected from exposure to the spill constituents and trained on the use of the kit.

During project planning, the nearby populace exposure needs to be taken into consideration. Depending on the daily influences, such as wind direction and speed, community activities such as parades or school activities, the daily tasks need to be evaluated for possible community exposure in the event of a spill. These issues, with corrective actions, will be discussed in the daily safety briefing before work commencement.

TABLES

Protection Level	Equipment	Protection Provided	Should Be Used When	Limiting Criteria
<i>A</i> *	 <i>RECOMMENDED:</i> Pressure demand, full facepiece SCBA or pressure demand supplied air respirator with escape SCBA Fully encapsulating chemical- resistant suit Inner chemical-resistant gloves Chemical resistant safety boots/shoes Two-way radio communications <i>OPTIONAL:</i> Cooling unit Coveralls Long cotton underwear Hard hat Disposable gloves and boot covers 	The highest available level of respiratory, skin, and eye protection.	The chemical substance has been identified and requires the highest level of protection for skin, eyes, and the respiratory system based on either: 1. Measured (or potential for) high concentration of atmospheric vapors, gases, or particles Or 2. Site operations and work functions involving a high po- tential for splash, immersion, or exposure to unexpected vapors, gases, or particulates of materi- als that are harmful to skin or capable of being absorbed through the intact skin. Substances with a high degree of hazard to the skin are known or suspected to be present, and skin contact is possible. Operations must be conducted in confined, poorly ventilated areas until the absence of conditions requiring Level A protection is determined.	Fully encapsulating suit material must be compatible with the substances involved.

TABLE 5-1. CRITERIA FOR SELECTION OF PERSONAL PROTECTION LEVEL

*Level A and B Protection Levels require prior approval by Trihydro's President before conducting Level A and B work activities.

TABLE 5-1. CRITERIA FOR SELECTION OF PERSONAL PROTECTION LEVEL (co	nt.)
--	------

Protection Level	Equipment Protection Provi		Should Be Used When	Limiting Criteria	
B*	 <i>RECOMMENDED:</i> Pressure demand, full facepiece SCBA or pressure demand supplied air respirator with escape SCBA Chemical-resistant clothing (overalls and long-sleeved jacket; hooded, one- or two- piece chemical splash suit; disposable chemical resistant one piece suit) Inner and outer chemical resistant gloves Chemical resistant safety- boots/shoes Hard hat Two-way radio communication <i>OPTIONAL:</i> Coveralls Disposable boot covers Face shield Long cotton underwear 	The same level of respiratory protection but less skin protection than Level A. It is the minimum level recommended for initial site entries until the hazards have been further identified.	 The type and atmospheric concentration of substances have been identified and require a high level of respiratory protection, but less skin protection. This involves atmospheres: 1. With IDLH concentrations of specific substances that do not represent a severe skin hazard Or 2. Do not meet the criteria for use of air-purifying respirators Atmosphere contains less than 19.5 percent oxygen. Presence of incompletely identified vapors or gases is indicated by direct-reading organic vapor detection instrument, but vapors and gases are not suspected of containing high levels of chemicals harmful to skin or capable of being absorbed through the intact skin. 	Use only when the vapor or gases present are not suspected of containing high concentrations of chemicals that are harmful to skin or capable of being absorbed through the intact skin. Use only when it is highly unlikely that the work being done will generate either high concentrations of vapors, gases, or particulates, or splashes of material that will affect exposed skin.	

*Level A and B Protection Levels require prior approval by Trihydro's President before conducting Level A and B work activities.

Protection Level	Equipment	Protection Provided	Should Be Used When	Limiting Criteria
С	 <i>RECOMMENDED:</i> Full facepiece, air purifying, canister-equipped respirator Chemical-resistant clothing (overalls and long-sleeved jacket; hooded, one- or two-piece chemical splash suit; disposable chemical resistant one piece suit) Inner and outer chemical resistant gloves Chemical resistant safety boots/shoes Hard hat Two-way radio communication OPTIONAL: Coveralls Disposable boot covers Face shield Escape mask Long cotton underwear 	The same level of skin protection as Level B, but a lower level of respiratory protection.	The atmospheric contaminants, liquid splashes, or other direct contact will not adversely affect any exposed skin. The types of air contaminants have been identified, concentrations measured, and a canister is available that can remove the contaminant. All criteria for the use of air-purifying respirators are met.	Atmospheric concentration of chemicals must not exceed IDLH levels The atmosphere must contain at least 19.5 percent oxygen

TABLE 5-1. CRITERIA FOR SELECTION OF PERSONAL PROTECTION LEVEL (cont.)

Protection Level	Equipment	Protection Provided	Should Be Used When	Limiting Criteria
D	D RECOMMENDED: No respiratory protection. • Coveralls Minimal skin protection. • Safety boot/shoes Minimal skin protection. • Safety glasses or chemical splash goggles Hard hat • OPTIONAL: OPTIONAL: • Gloves Escape mask • Face shield Face shield	No respiratory protection. Minimal skin protection.	The atmosphere contains no known hazard. Work functions preclude splashes, immersion, or the potential for unexpected inhalation or contact with hazardous levels of any chemicals.	This level should not be used in the Exclusive Zone. The atmosphere must contain at least 19.5 percent oxygen.

Negative Pressure (Demand)		10	50			
Continuous Flow		50	50	25 ⁴		
Pressure Demand		1,000	2,000			
• Pressure Demand with auxiliary pressure-demand			10,000			
SCBA (Escape Tank)						
SCBA						
Negative Pressure (Demand)			50			
Pressure Demand			10,000			

TABLE 5-3. RESPIRATOR ASSIGNED PROTECTION FACTOR (APF)

¹ May use respirators assigned for higher concentrations in lower concentrations or when required use is independent of concentration.

²These APFs are only effective when employer has a continuing, effective respirator program per 1910.134.

³ This APF category includes filtering face pieces and elastomeric face pieces.

⁴ With appropriate gas/vapor cartridge and N-100, R-110, or P-100 filters.

⁵These APFs do not apply to escape-only respirators.

Negative Pressure Respirator: A tight-fitting respirator in which the air pressure inside the face piece is negative during inhalation with respect to the ambient air pressure outside the respirator.

Demand Respirator: A respirator in which the pressure inside the face piece in relation to the immediate environment is positive during exhalation and negative during inhalation.

Pressure Demand Respirator: A respirator in which the pressure inside the face piece in relation to the immediate environment is positive during both inhalation and exhalation.

Continuous Flow: A respirator that maintains air flow at all times, rather than only on demand. However, it may not maintain positive pressure within the mask at all times. Negative pressure conditions may occur during inhalation involving strenuous activity.

Purpose

This table lists air monitoring action levels to be used in the field during direct measurement of total organic vapors (TOV) in the breathing zone using a photo ionization detector (PID) to determine Permissible Exposure Limits (PEL), and describes the responses required when action levels are exceeded. PID action levels for Trihydro projects fall under two categories: petroleum hydrocarbon sites, or chlorinated hydrocarbon sites. Separate action level tables are available for each of these site categories. The table for petroleum hydrocarbon sites lists action levels based on benzene exposure limits, and the table for chlorinated hydrocarbon sites lists action levels based on vinyl chloride exposure limits.

For reference, the occupational exposure limits used in establishing action levels in the tables below include Occupational Safety and Health Administration (OSHA) Permissible Exposure Limits (PEL), OSHA Short Term Exposure Limits (STEL) or ceiling limits, and National Institute of Occupational Safety and Health (NIOSH) Immediate Danger to Life and Health (IDLH) concentrations. In addition, OSHA's 1910.1017, vinyl chloride standard, was referenced for the chlorinated hydrocarbon graph and table. Correction factors used to calculate action levels were taken from <u>RAE Systems Technical Note TN-106</u>, rev 13d, wh.01-05.

If both tables apply to a particular site, the lower of the two exposure limits will be used.

Notes for tables:

- 1. PID = Photo ionization detector
- 2. Benzene to be measured using colorimetric detector tubes or benzene-specific direct reading instrument (such as UltraRAE), vinyl chloride to be measured using colorimetric detector tubes
- 3. APR = Air purifying respirator
- 4. P-100/OV = Particulate rated filter P-100/organic vapor combination respirator cartridges

		3. Conduct periodic vinyl chloride-specific monitoring ⁽²⁾
		a. Vinyl chloride below 1 ppm – doff APR
		b. Vinyl chloride >1 to 10 ppm – maintain half- or full-face APR with P-100/OV cartridges
		c. Vinyl chloride >10 to 25 ppm – don a powered air-purifying respirator (APAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.
		 Vinyl chloride >25 ppm – stop work and evacuate area; notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring
>5 to 12.5	5 min sustained	 Don a powered air-purifying respirator (PAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.
		2. Conduct PID monitoring
		3. Conduct periodic vinyl chloride-specific monitoring ⁽²⁾
		a. Vinyl chloride below 1 ppm – doff APR
		b. Vinyl chloride >1 to 10 ppm – maintain half- or full-face APR with P-100/OV cartridges
		c. Vinyl chloride >10 to 25 ppm – maintain a powered air-purifying respirator (PAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.
		 Vinyl chloride >25 ppm – stop work and evacuate area; notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring
>12.5	1 minute sustained	1. Stop work and evacuate area
		2. Notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring

💎 Trihydro

Purpose

This table lists air monitoring action levels to be used in the field during direct measurement of total organic vapors (TOV) in the breathing zone using a flame ionization detector (FID) to determine Permissible Exposure Limits (PEL), and describes the responses required when action levels are exceeded. FID action levels for Trihydro projects fall under two categories: petroleum hydrocarbon sites, or chlorinated hydrocarbon sites. Separate action level tables are available for each of these site categories. The table for petroleum hydrocarbon sites lists action levels based on benzene exposure limits, and the table for chlorinated hydrocarbon sites lists action levels based on vinyl chloride exposure limits.

For reference, the occupational exposure limits used in establishing action levels in the tables below include Occupational Safety and Health Administration (OSHA) Permissible Exposure Limits (PEL), OSHA Short Term Exposure Limits (STEL) or ceiling limits, and National Institute of Occupational Safety and Health (NIOSH) Immediate Danger to Life and Health (IDLH) concentrations. In addition, OSHA's 1910.1017, vinyl chloride standard, was referenced for the chlorinated hydrocarbon graph and table. FID response factors used to calculate action levels were taken from Thermo Environmental Instruments Inc., TVA Response Factors, P/N 50039, 8-23-00.

If both tables apply to a particular site, the lower of the two exposure limits will be used.

Notes for the tables:

- 1. FID = Flame ionization detector
- 2. Benzene to be measured using colorimetric detector tubes or benzene-specific direct reading instrument (such as UltraRAE), vinyl chloride to be measured using colorimetric detector tubes
- 3. APR = Air purifying respirator
- 4. P-100/OV = Particulate rated filter P-100/organic vapor combination respirator cartridges
Summary Graph, FID Action Levels, Petroleum Hydrocarbon Sites (Thermo Electron TVA-1000B FID calibrated with 100 ppm methane)

Based on benzene PEL of 1 ppm, STEL of 5 ppm, IDLH of 500 ppm, and correction factor of 0.35.

FID Action Levels and Responses: Petroleum Hydrocarbon Sites

Reference: Benzene STEL of 5 ppm, IDLH of 500 ppm, and correction factor of 0.35

FID ⁽¹⁾ Reading							
(ppm)	Duration of Reading	Action(s)					
0 to 15	5 minutes sustained	onduct periodic FID monitoring					
>15 to 30	5 minutes sustained	Conduct FID monitoring					
		2. Conduct periodic benzene-specific monitoring ⁽²⁾					
		a. Benzene detected >1 to 10 ppm – don $\frac{1}{2}$ face APR ⁽³⁾ with P-100/OV cartridges ⁽⁴⁾					
>30 to 145	5 minutes sustained	1. Don ½ face APR with P-100/OV cartridges					
		2. Conduct FID monitoring					
		3. Conduct periodic benzene-specific monitoring ⁽²⁾					
		a. Benzene below 1 ppm – doff APR					
		b. Benzene >1 to 10 ppm – maintain ½ face APR with P-100/OV cartridges					
		c. Benzene >10 to 50 ppm – don full face APR with P-100/OV cartridges					
		 Benzene >50 ppm – stop work and evacuate area; notify Trihydro H&S Team to discuss engineering controls and/or additional monitoring 					
		 Trihydro H&S Department to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring 					
>145	1 minute sustained	1. Stop work and evacuate area					
		2. Notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring					

Summary Graph, FID Action Levels, Chlorinated Hydrocarbon (Thermo Electron TVA-1000B FID calibrated with 100 ppm methane)

Based on vinyl chloride Ceiling of 5 ppm and FID correction factor of 1.3.

FID Action Levels and Responses: Chlorinated Hydrocarbon Sites

Thermo Electron TVA-1000B FID calibrated with 100 ppm methane span gas

Reference: Vinyl chloride Ceiling of 5 ppm, and correction factor of 1.3.

PID ⁽¹⁾ Reading		$\Lambda_{ation}(z)$
(ppm)		Action(s)
1 to 2.5	5 min sustained	3. Conduct continuous PID monitoring
		4. Conduct vinyl chloride-specific monitoring ⁽²⁾ – every 15 minutes
		5. Don half- or full-face APR ⁽³⁾ with P-100/OV cartridges ⁽⁴⁾ if vinyl chloride detected at >1 to 10 ppm
2.6 to 5	5 min sustained	4. Don half- or full-face APR with P-100/OV cartridges
		5. Conduct continuous PID monitoring
		6. Conduct vinyl chloride-specific monitoring ⁽²⁾ – every 15 minutes
		a. Vinyl chloride below 1 ppm – doff APR
		b. Vinyl chloride >1 to 10 ppm – maintain half- or full-face APR with P-100/OV cartridges
		c. Vinyl chloride >10 to 25 ppm – don a powered air-purifying respirator (APAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.
		 Vinyl chloride >25 ppm – stop work and evacuate area; notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring
6 to 12.5	5 min sustained	4. Don a powered air-purifying respirator (PAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.
		5. Conduct continuous PID monitoring
		6. Conduct vinyl chloride-specific monitoring ⁽²⁾ – every 15 minutes
		a. Vinyl chloride >10 to 25 ppm – maintain a powered air-purifying respirator (PAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.
		 b. Vinyl chloride >25 ppm – stop work and evacuate area; notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring
>12.5	1 minute sustained	3. Stop work and evacuate area
		4. Notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring
FID ⁽¹⁾ Reading		
(ppm)	Duration of Reading	Action(s)
0 to 0.75	5 minutes sustained	Conduct FID monitoring

>0.75 to 4	5 min sustained	Conduct FID monitoring				
		2. Conduct vinyl chloride-specific monitoring ⁽²⁾				
		a. Vinyl chloride detected >1 to 10 ppm – don half- or full-face APR ⁽³⁾ with P-100/OV cartridges ⁽⁴⁾				
>4 to 7	5 min sustained	1. Don half- or full-face APR with P-100/OV cartridges				
		2. Conduct FID monitoring				
		3. Conduct periodic vinyl chloride-specific monitoring ⁽²				
		a. Vinyl chloride below 1 ppm – doff APR				
		b. Vinyl chloride >1 to 10 ppm – maintain half- or full-face APR with P-100/OV cartridges				
		c. Vinyl chloride >10 to 25 ppm – don a powered air-purifying respirator (APAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.				
		 Vinyl chloride >25 ppm – stop work and evacuate area; notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring 				
>7 to 19	5 min sustained	 Don a powered air-purifying respirator (PAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours. 				
		2. Conduct FID monitoring				
		3. Conduct periodic vinyl chloride-specific monitoring ⁽²⁾				
		a. Vinyl chloride >10 to 25 ppm – maintain a powered air-purifying respirator (PAPR) having a hood, helmet, or full- or half-face piece, or a gas mask with a front-or back-mounted canister with a service life of at least four hours.				
		 b. Vinyl chloride >25 ppm – stop work and evacuate area; notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring 				
>19	1 minute sustained	1. Stop work and evacuate area				
		2. Notify Trihydro H&S Team to discuss engineering controls, atmosphere-supplied respirators, and/or additional monitoring				

TABLE 6-3. HYDROGEN SULFIDE ACTION LEVELS

Hydrogen Sulfide Detector Reading	Action
10 ppm	Investigate the source and attempt to eliminate
15 ppm	Evacuate the area, determine the source, attempt to eliminate
20 ppm	Do not enter

Protection	Glove Material	Applications
Lacerations	Dyneema [®] , Kevlar [®] , fiber- metal blends, metal mesh, SuperFabric [®] , steel core, and Vectran	Cut-resistance: designed to protect hands from direct or indirect contact with sharp edges such as glass, metal, ceramics, and other materials. Many cut resistant gloves are manufactured to provide protection from a <i>SLASH</i> from sharp items like knives/blades. However, they may provide very little, if any, puncture-resistance from a pointed item like a needle, unless specifically designed for puncture resistance.
Needle Stick	HEX ARMOR®, DAMASCUS V-Force™ X4	Puncture protection. Ideal for correctional facility pat- downs/searches, customs officers, federal/state/city/municipal/university employees, luggage searches, hospital laundry and sharps handling.
Vibrations	DECADE [®] Gelfom™, AirGlove™	Provides padding at the palm, fingers and thumb to help neutralize the force of heavy impacts, reducing the chance of injury.
Extreme high temperatures	Best [®] CharGuard [™] , ZETEX [®] , Kevlar [®] , Nomex [®] , Crusader Flex [®] , thermal knit, Terry Cloth, heavy weight cotton	For intermittent handling of hot objects. Ideal for hot castings for intermittent heat, lab sampling with hot glassware or moldings, plastic molding manufacturing, plant maintenance controls. Temperature protection ranges vary.
Extreme low temperatures	Best® Snow Man™, thermal knit, Terry Cloth, heavy weight cotton	For intermittent handling of hot objects.
Awareness	High visibility	Protective gloves made of a high visibility color help enhance hand position awareness; the color of the gloves is rotated on a quarterly basis. This prevents complacency for a particular color and can improve attentiveness.
Chemical	Butyl	A synthetic rubber material that offers the highest permeation resistance to gas and water vapors. Especially suited for use with esters and ketones.
	Neoprene	A synthetic rubber material that provides excellent tensile strength and heat resistance. Neoprene is compatible with some acids and caustics. It has moderate abrasion resistance.
	Nitrile	A synthetic rubber material that offers chemical and abrasion resistance—a very good general-duty glove. Nitrile also provides protection from oils, greases, petroleum products and some acids and caustics.
	PVC (Polyvinyl chloride)	A synthetic thermoplastic polymer that provides excellent resistance to most acids, fats, and petroleum hydrocarbons. Good abrasion resistance.
	PVA (Polyvinyl alcohol)	A water-soluble synthetic material that is highly impermeable to gases. Excellent chemical resistance to aromatic and chlorinated solvents. This glove cannot be used in water or water-based solutions.

TABLE 7-1. PROTECTIVE GLOVE GUIDE

Protection	Glove Material	Applications
	Viton®	A fluoroelastomer material that provides exceptional chemical resistance to chlorinated and aromatic solvents. Viton is very flexible, but has minimal resistance to cuts and abrasions.
	SilverShield [®] /4H	A lightweight, flexible laminated material that resists permeation from a wide range of toxic and hazardous chemicals. It offers the highest level of overall chemical resistance, but has virtually no cut resistance.

TABLE 7-1. PROTECTIVE GLOVE GUIDE (cont.)

Cord Length (ft.)	Gauge	Max Amps

Vinyl acetate	10 ppm	15 ppm					
Isopropyl alcohol	400 ppm	500 ppm	800 ppm	2000 ppm			
Chromium	1 mg/m3			250 mg/m3			

TABLE 7-4. EXPOSURE LIMITS FOR SITE POTENTIAL CHEMICALS OF CONCERN

[†] Considered to be a potential occupational carcinogen. ¹Time Weighted Average (TWA) concentrations for OSHA PELs must not be exceeded during any 8-hour work shift of a 40-hour workweek.

²A Short Term Exposure Limit (STEL) is measured over a 15-minute period unless noted otherwise.
 ³OSHA ceiling concentrations must not be exceeded during any part of the workday.

⁴Immediately Dangerous to Life and Health (IDLH) conditions are those that pose an immediate threat to life or health, or conditions that pose an immediate threat of severe exposure to contaminants, such as radioactive materials, which are likely to have adverse cumulative or delayed effects on health. * NIOSH (based on 60 minute exposure).

TABLE 7-5. HEAT INDEX CHART

Heat index (HI) is sometimes referred to as the "apparent temperature." The HI, given in degrees F, is a measure of how hot it feels when relative humidity (RH) is added to the actual air temperature.

	HEAT INDEX °F												
	RELATIVE HUMIDITY (%)												
Temp.	40	45	50	55	60	65	70	75	80	85	90	95	100
110	136												
108	130	137											
106	124	130	137										
104	119	124	131	137									
102	114	119	124	130	137								
100	109	114	118	124	129	136							
98	105	109	113	117	123	128	134						
96	101	104	108	112	116	121	126	132					
94	97	100	103	106	110	114	119	124	129	135			
92	94	96	99	101	105	108	112	116	121	126	131		
90	91	93	95	97	100	103	106	109	113	117	122	127	132
88	88	89	91	93	95	98	100	103	106	110	113	117	121
86	85	87	88	89	91	93	95	97	100	102	105	108	112
84	83	84	85	86	88	89	90	92	94	96	98	100	103
82	81	82	83	84	84	85	86	88	89	90	91	93	95
80	80	80	81	81	82	82	83	84	84	85	86	86	87

Category Heat Index		Possible heat disorders for people in high risk groups				
Extreme Danger	130°F or higher	Heat stroke or sunstroke likely.				
Danger	105 - 129°F	Sunstroke, muscle cramps, and/or heat exhaustion likely. Heatstroke possible with prolonged exposure and/or physical activity.				
Extreme Caution	90 - 105°F	Sunstroke, muscle cramps, and/or heat exhaustion possible with prolonged exposure and/or physical activity.				
Caution	80 - 90°F	Fatigue possible with prolonged exposure and/or physical activity.

	Job Steps	Potential Hazard(s)	Critical Action(s)
1.	Mobilization/Demobilization	A. Motion – Traffic HazardsB. Motion – Backing	 A. Drive defensively and at or below the posted speed limits. B. Always attempt to park so that the first move is forward. When not feasible or practical, use spotters to help guide the vehicle. Walk around the vehicle and confirm paths are clear before driving from a parked position (GOAL). C. Set parking brake. Chock wheels if parked on an incline.
2.	Pre-task, coordination, and safety meeting	A. Operation hazards B. Site-specific hazards C. Traffic hazards	 A. Review SOP and make contact with task leader to determine equipment and safety needs. B. Discuss site-specific hazards. Have workers sign the tailgate meeting form. Review previous activities, hazards encountered, and current hospital route(s). C. Conduct vehicle inspections and document. Know destination and route prior to driving. Be aware of potential obstructions or hazards in the road, or those hidden by vegetation off-road. If driving off road, walk path before driving to look for hazards. Observe safe vehicle speeds and traffic routes.
3.	Open well	 A. Struck-by traffic B. Slips/Trips/Falls C. Biological hazards (spiders, stinging insects, poisonous snakes, scorpions, etc.) D. Pinch hazards E. Temperature stress F. Muscle/ back strain G. Lacerations 	 A. Park vehicle on an angle between well and same-lane of traffic as protection and about 10 – 20' from well, based on traffic speed. Set traffic cone ~50 behind vehicle to alert traffic. Wear a high visibility vest or jacket. B. Survey ground and walking path for trip and slip hazards. C. Survey area for snakes, scorpions, and other hazards while approaching well. Maintain the area around wells clear of vegetation by a 2' radius to prevent harborage of biological hazards. Thoroughly inspect well casing for insects and signs of insect activity. Use an insecticide if insects are present (follow manufacturer's directions). Wear work gloves to protect against stings/bites. Wear snake gaiters in areas with poisonous snakes. D. Avoid pinch points such as hinges, lids, or caps. Wear work gloves. E. Dress in layers for cold weather or loose-fitting light clothing for hot weather, but within constraints of HASP. Drink plenty of water or other hydrating liquids (i.e., not sodas).

Job Steps		Potential Hazard(s)	Critical Action(s)		
			F. Use correct body positioning when you bend over to open lid. Use correct tool to unlock/ loosen lid		
4.	Setup Airline and Discharge Hose, Lower Submersible Pump	A. Muscle strain/ Sprain B. Slip/ trips/ falls	A. Use proper body positioning when pulling hose		
		C. Hand injury	B. Watch where you walk/ place your feet		
			C. Avoid Uneven surfaces		
			D. Use proper gloves for hand		
			protection.		
5.	Gauge well	A. Chemical exposure B. Hand lacerations	 A. Wear nitrile gloves and safety glasses. Avoid direct skin contact with fluids. Lower and remove fluid level gauge slowly to avoid splashing fluids. B. Keep hands clear of sharp edges of tape or wear work gloves. 		
6.	Conduct Pump Test	 A. Chemical exposure to skin and face/eyes. B. Pressurized lines could become disconnected. C. Hand lacerations D. Slips/trips/falls E. Electrical 	 A. Wear nitrile gloves and goggles. B. Tie down and/or monitor pressurized lines for signs of weakness. Shut off pump if necessary to address worn lines. C. Wear work gloves when handling sharp edges. D. Keep work site area clear. Establish exclusion zone around equipment to minimize public from entering work site. E. Use GFCI outlets. Avoid contact of electrical equipment with water. 		
7.	Decontaminate tubing, probe and tape	A. Chemical exposure B. Hand lacerations	A. Wear nitrile gloves and safety glasses. Avoid direct skin contact with fluids.B. Keep hands clear of sharp edges of tape or wear work gloves.		
8.	Close and lock well	A. Pinch hazards	A. Avoid pinch points such as hinges, lids, or caps. Wear work gloves.		
9.	Leaving site and/or returning to office	 A. Slip/trip/fall hazards B. Loss of phone contact/location with site supervisor C. Site emergencies D. Exiting site E. Vehicle Hazards 	 A. Watch steps for ice/snow and/or other ground hazards B. Return to the check-in location and regain contact. If returning back to office, inform task lead of departure and arrival at destination. C. Exercise extreme caution when entering public roadways. Avoid backing onto a public roadway 		

Job Steps	Potential Hazard(s)	Critical Action(s)
		Check that gates or barricades are in proper order before exiting jobsite.
		D. Be aware of potential obstructions or hazards in the road, or those hidden by vegetation when travelling to the next site or back to the office.

Prior to work, I have read and understand the PPE, safety tools/equipment/instruments, and associated permits needed for this task. I also understand the job steps, potential hazards, and critical actions identified for employee task and hazard awareness. I agree to have this JSA on site and identify daily variances and understand I can make pen and ink changes to meet those variances. JSAs used at the task site that contain pen-and-ink changes ("dirtying up") are to be kept in the project folder for record.

Job Steps	Hazard(s)	Potential Hazard(s)	Critical Action(s)	Responsible Person
Prior to arriving at the Site, Project Manager will review and sign the HASP. Subcontractors will sign HASP during daily tailgate health and safety meeting.		A. Administrative function - no hazards anticipated. Action is to ensure health and safety compliance	A. Preventative Measures: Employees must have required training: Supervisor Training (Supervisors) OSHA 40-Hour HAZWOPER, Drug screening (as required).	
Walking around the site		A. 1) Slips, Trips, and Falls 2) Temperature stress 3) Biological hazards 4) Vehicle Traffic 5) Heavy / Equipment Hazards 6) Flying Debris/Objects	 A. 1A) Watch footing and where you are walking. 1B) Stay alert to holes, debris, and tools. 1C) Be alert. Be aware of location of structures, and operating equipment. 1D) Take extra caution in rainy or muddy conditions; keep boots dry or use rubber boots. 2A) Dress appropriately, but within constraints of HASP. 2B) Drink plenty of water or other hydrating liquids (i.e. not sodas). 3A) Look before you reach or step - watch for small animals, rodents, snakes, insects and spiders. 3B) Try to avoid and do not antagonize. 3C) Use insect repellant and mosquito nets as appropriate. 4A) Watch for and be aware of vehicular traffic related to contractors. 5A) Do not drive in the path of operating equipment. 5B) Make yourself visible. 5C) Yield to heavy/construction equipment until eye contact is made with operator and you are given the signal to proceed. 5D) Stay out of immediate area near heavy equipment. If you need to approach a piece of equipment, do not enter from the blind spots; stay a safe distance away until eye contact is made with the operator. 6A) Be aware of potential falling/flying objects. 6B) Use hard-hat and safety glasses with side shields to keep airborne dust particles and flying debris out of eyes. 6C) Take caution when removing glasses so particles don't fall from glasses into eyes. 	
Observe and document activity.		A. 1) Noise 2) Heat stress 3) Severe weather 4) Chemical exposure 5) Biological hazards 6) Slips, trips, and falls 7) Struck by equipment	 A. 1) Hearing protection required within 25 feet of operating heavy construction equipment. Wear ear-plugs or -muffs if noise is >85-dB. If you have to raise your voice to speak to a person that is at arm's length, noise is probably >85-dB. 2) Take breaks. Drink fluids. Know personnel limits (use buddy system). Know signs and symptoms of heat stress. Wear 	

Job Steps	Hazard(s)	Potential Hazard(s)	Critical Action(s)	Responsible Person
			correct PPE identified in morning meeting. 3) Locate nearest severe weather shelter/strong structure before beginning field work. Suspend fieldwork if lightning within 10 miles of site or tornado warning issued. 4) If contaminants are present at the surface -40 hr HAZWOPER and current refresher for workers. 8hr additional supervisor for project engineer, SSHO, and all other on- site supervisors. 5) Inspect area for hazardous plants and organism conditions. Avoid such areas if possible. Wear clothing that covers potentially affected body parts. Seal pant legs against contact with plants and to prevent access by organisms. Use insect/tick repellant whenever possible. 6) Keep path clear. Survey walking path before entering into area. Be aware of ground tripping hazards. Be aware of slick, wet ground surfaces. Utilize caution when walking down slopes. 7) Remain a safe distance away from heavy equipment. Communicate with operator before entering equipment work area and obtain permission.

	Job Steps	Potential Hazard(s)	Critical Action(s)
1.	Open well	 A. Struck-by traffic B. Slips/Trips/Falls C. Biological hazards D. Chemical hazards E. Pinch hazards F. Temperature stress 	 A. Park vehicle on an angle between well and same-lane of traffic as protection and about 10 – 20' from well, based on traffic speed. Set traffic cone ~50 behind vehicle to alert traffic. Wear a high visibility vest or jacket.
			 B. Survey ground and walking path for trip and slip hazards.
			C. Survey area for snakes and other hazards while approaching well. Maintain the area around wells clear of vegetation by a 2' radius to prevent harborage of biological hazards. Thoroughly inspect well casing for insects and signs of insect activity. Use an insecticide if insects are present (follow manufacturer's directions). Wear work gloves to protect against stings/bites.
			D. Stand upwind when opening well. Wear chemical PPE, including nitrile gloves and safety glasses.
			E. Avoid pinch points such as hinges, lids, or caps. Wear work gloves.
			F. Dress in layers for cold weather or loose-fitting light clothing for hot weather, but within constraints of HASP. Drink plenty of water or other hydrating liquids (i.e., not sodas).
2.	Gauge well	A. Follow JSA for Gauging Wells	A. Follow JSA for Gauging Wells
3.	Program data logger	A. Pinch hazards B. Hand lacerations	 A. Connect data logger to the programming device, preloaded with the appropriate software. B. Use the data from gauging the liquid level in the well and the well construction details to complete the data logger deployment form C. Set the recording frequency at the desired interval. Also, synchronize the timing of all data loggers to be deployed at any given site to facilitate subsequent data evaluation and analyses
4.	Deploy data logger	A. Pinch hazardsB. Hand lacerations	 A. Before placing data logger inside the well, securely connect the cord/line or direct read cable to the data logger and the well cap (or suitable equivalent) B. Lower the data logger into the well to the targeted depth (below the water table for water level recorder; high above the water level for a barometric recorder C. Gauge well and record data after it has stabilized (5-10 minutes)

	Job Steps	Potential Hazard(s)	Critical Action(s)
5.	Retrieve data logger and download electronic data	A. Pinch hazardsB. Hand lacerations	 A. Before retrieval, gauge well and record data. B. Slowly lift the data logger from the well to the surface and connect to the programming/downloading device. C. Download the data onto the connected communication devices D. If data monitoring is to continue, repeat deployment steps; otherwise, clean and dry the data logger for storage, and proceed to next step.
6.	Close and lock well	A.	A. Avoid pinch points such as hinges, lids, or caps. Wear work gloves.

Job Steps	Hazard(s)	Potential Hazard(s)	Critical Action(s)	Responsible Person
Mobilize to/from drilling location		A. Pedestrians B. Vehicular traffic C. Backing D. Site operations E. Overhead utilities/structures	 A. Drive within the site speed limits or slower in congested areas. Stop at crosswalks. B. Do not drive distracted. Follow local traffic laws. C. Attempt to drive forward into drilling location (first move forward). If it is necessary to back up, use a spotter. When possible only use vehicles with backup cameras. Check that the ground is stable so the rig will not get stuck. D. Check in with the client project manager for a briefing of the day's site activities. Familiarize workers with the site & current site activities. E. Use a ground guide when rig is in close proximity of overhead utilities and other facility structures. 	
Park CPT drill rig		A. Power line strike/electrocution B. Rolling rig C. Rig tip-over D. Traffic hazards	 A. Verify mast of rig when raised will clear energized power lines by a minimum of 10'. If rig must be raised closer than 10', have the utility company wrap the lines to prevent contact. Keep non-essential personnel out of work zone and keep clear of rig in the event there is contact with the power lines. B. Place rig in park. Set parking brake. Chock wheels. C. Using traffic cones and caution tape or other similar materials, establish a work zone around the rig large enough to encompass the rig mast if tipped over. D. Develop and implement a traffic control plan taking in consideration for vehicle, bicycle, and pedestrian traffic by using signs and barriers. 	
Observing drilling contractor		 A. Slips, Trips, and Falls B. Temperature/Weather stress C. Vehicular Traffic D. Drill Rig Hazards E. Flying Debris/Objects 	A. Survey area for slip/trip/fall hazards and remove if possible. Choose the safest walk path to sampling area. Practice good housekeeping practices.	

F. Noise Hazard B. Check weather forecast and	
 G. Unknown/ummarked underground or overhead uillity H. Equipment failure resulting in injury or property damage I. Chemical Exposure I. Expos	

Job Steps	Hazard(s)	Potential Hazard(s)	Critical Action(s)	Responsible Person
			 F. Wear ear-plugs or muffs if noise is >85-dB. If you have to raise your voice to speak to a person that is at arm's length, noise is probably >85- dB. G. Begin by walking the location. Check that utilities have been clearly marked and sample locations have been cleared. If unsure the location is clear or not, do not proceed. Contact the site manager for confirmation. Clear all boreholes with hand auger or hydroknife/air knife down to frost line. H. Perform a detailed rig inspection prior to operations each day and document. Verify each emergency stop is identifiable, is operational, and brief project team on their locations. Test emergency shut off switch. I. Monitor breathing zone with PID and if over trigger level in HASP, monitor breathing zone with Draeger Tubes. Wear half-face respirator with appropriate cartridge as needed. Keep soil cores covered where possible to limit exposure. Wear nitrile gloves and other appropriate PPE; stand upwind. 	
Decontaminate non- disposable equipment		A. Chemical exposure B. Slip/trip/fall hazards C. Hazardous material spills	 A. Wear chemical protective PPE. B. Maintain a clear work area free of tools, equipment, and materials. C. Establish a decon area with poly sheeting or dedicated decon pad. Collect all decon fluids and solids and containerize for waste characterization and disposal. Keep spill kit on hand during decon operations.

	Job Steps	Potential Hazard(s)	Critical Action(s)
A.	Pre-task, coordination, and safety meeting	A. Operation hazardsB. Site-specific hazards	A. Review SOP and make contact with task leader to determine equipment and safety needs.
		C. Traffic hazards	B. Discuss site-specific hazards. Have workers sign the tailgate meeting form. Review previous activities, hazards encountered, and current hospital route(s).
			C. Conduct vehicle inspections and document. Know destination and route prior to driving. Be aware of potential obstructions or hazards in the road, or those hidden by vegetation off-road. If driving off road, walk path before driving to look for hazards. Observe safe vehicle speeds and traffic routes.
В.	Arriving at Site and donning PPE	 A. Loss of phone contact/location with site supervisor B. Site hazards 	A. Using cell phone text messaging as available, inform task lead or project manager of arrival at site.
		C. Slips/Trips/Falls D. Site emergencies	B. Inspect and don appropriate PPE as indicated in the site-specific HASP.
		E. Parking	C. Keep eyes on path; be aware of slip/trip/fall hazards.
			D. When available, take note of emergency evacuation routes and muster points.
			E. Park vehicle(s) in designated or approved location. Park so first move will be forward when departing.
C.	Walking around the site and within project enclosures	A. Slips, Trips, and FallsB. Severe WeatherC. Temperature stress	A. Watch footing and where you are walking. Be alert and exercise additional care when passing through fences and/or climbing into enclosures. Take extra caution in rainy, snowy, icy, or muddy conditions.
			B. Locate nearest severe weather shelter/strong structure before beginning field work. Suspend fieldwork if lightning within 10 miles of site or tornado warning issued.
			C. Dress appropriately, but within constraints of HASP. Drink plenty of water or other hydrating liquids (i.e., not sodas).
D.	Walking around the site or along survey transects (cont'd)	A. Biological hazardsB. Vehicle TrafficC. Flying Debris/Objects	A. Look before you reach or step - watch for small animals, rodents, snakes, insects, and spiders. Try to avoid and do not antagonize. Use insect repellant and mosquito nets as appropriate.
			B. Wear reflective vest if traffic hazards are present and/or within hunting season.

	Job Steps	Potential Hazard(s)	Critical Action(s)
E.	Leaving site and/or returning to	A. Slip/trip/fall hazards	A. Watch steps for ice/snow and/or other ground bazards
	B. Loss of phone contact/location with site supervisor	B. Return to the check-in location and	
		C. Site emergencies	regain contact. If returning back to
		D. Exiting site	and arrival at destination.
	E. Vehicle Hazards		C. Be aware of unusual site activities which may indicate an emergency condition. Contact site manager to determine if it is safe to leave site.
			D. Exercise extreme caution when entering public roadways. Avoid backing onto a public roadway. Check that gates or barricades are in proper order before exiting jobsite.
			E. Be aware of potential obstructions or hazards in the road, or those hidden by vegetation when travelling to the next site or back to the office

Job Steps	Hazard(s)	Potential Hazard(s)	Critical Action(s)	Responsible Person
Utility locates.		A. Utility strike B. Biological hazards C. Temperature stress	 A. Contact One-Call (811) and locate underground utilities at least 48 hours prior to sampling. If a given utility is not registered with One-Call systems, contact a private locates service for utilities located on private property/other suspect utilities. Before using power equipment, expose the location by hand to a point of no conflict 24" on either side of the utility. Visually locate overhead utilities and buried utilities and stay clear of these lines. Use a utility checklist to verify potential utilities have been located and marked. B. Look before you reach or step; watch for small animals, rodents, snakes, insects, and spiders. Try to avoid and do not antagonize. Use insect repellant and mosquito nets as appropriate. C. Dress in layers for cold weather or loose-fitting light clothing for hot weather, but within constraints of HASP. Drink plenty of water or other hydrating liquids (i.e., not sodas). 	
Assemble hand auger equipment		 A. Hand injury, pinch points. B. Tool hazards. C. Struck by equipment 	 A. Keep fingers, hands, and body away from pinch points. Label pinch points for awareness. Wear leather protective gloves. B. Nonessential and unauthorized personnel are to remain out of the work zone. Stay clear of moving equipment. C. Wear safety-toed boots to protect against dropped tools and equipment. 	
Sample collection		 A. Electrocution B. Struck-by: dropping heavy equipment C. Slips, trips, falls D. Caught-in: auger E. Flying debris F. Chemical exposure from the borehole G. Back injuries from lifting heavy equipment (hand auger, core barrel, etc.) H. Overhead hazards 	 A. Do not work within 10' of energized power lines. B. Maintain two-handed control of equipment until laid down on ground. Sample over a tailgate to prevent dropped parts from contacting feet. Wear safety-toed work boots. C. Keep work area clean and clear of equipment, tools, spoils, etc. Keep area clear of ice, snow, gravel, etc. that could present a slip/trip hazard. 	

Job Steps	Hazard(s)	Potential Hazard(s)	Critical Action(s)	Responsible Person
			D. Do not wear loose-fitting clothing, jewelry, or long hair. Remove strings from clothing and verify boots are tied. Do not encroach upon rotating equipment until it has stopped.	
			E. Clear area for loose rocks, gravel etc. that may become a projectile. Establish a work zone to keep nonessential and unauthorized personnel away from the hazards. Wear safety glasses with side shields.	
			F. Wear nitrile gloves when handling soil samples. If visual staining is observed, do not directly smell sample to identify odor.	
			G. Use proper lifting techniques and request help when available.	
			H. If employees must auger over 6 feet deep, watch for overhead obstructions when tipping auger from hole and while lowering into position.	
Decontamination	A	A. Chemical exposure	A. Slowly pour decontamination	
		b. Slips, trips, talls	chemical-resistant gloves. Wear chemical goggles for splash hazards.	
	* * *		B. Area around decontamination bucket could be wet. Adjust method of decontamination to prevent water spillage and use an absorbent to soak up excess moisture to prevent slippage.

Driving on landfill property	x x	大米二番		Landfill access roads are unpaved and will have heavy equipment traffic and light customer traffic. Access to leachate pump house will be off the main road over undeveloped land and down a steep/narrow unpaved ramp. Road access in front of pump house has limited space for vehicle maneuvering.	-While driving along main access roads obey posted traffic signs, give right of way to heavy traffic, and/or make eye contact or receive visual direction from equipment operators before proceeding. -When driving off-road proceed cautiously and be aware of natural and engineered stormwater ditches. -Due to limited maneuverability along ramp and pump house access drive back down the ramp, if needed. Do not use ramp if wet.	
Open pump house doors.	X	~*==~~~	x	Building has two doors which are heavy metal doors opening outward, potential hazard when windy. Building may have an accumulation of landfill gas (H2S and Methane). Potential tripping hazards when exiting vehicle and walking around pump house.	-When opening door be aware of wind and open slowly bracing the door. Once open secure the door in place. -Let the building vent with both doors open for several minutes prior to entry with 4 gas meter monitoring air quality inside. -Observe ground conditions prior to exiting vehicle and observe and prepare for existing and potential tripping hazards.	
Enter pump house	× *	ちょう	x	have an accumulation of landfill gas (H2S and Methane). Step into building through doorways is 12"-18" high. Building may be a shelter for snakes or insects.	 Josing a 4 gas meter sweep the high and low spots of the building for H2S concentration and Methane %LEL. Prior to entry visually inspect the interior of the building for potentially dangerous wildlife. -Carefully step down into building. 	
Remove 4" sampling port blind flange.	X		x	Hazardous atmosphere potential due to LFG generation throughout task (H2S and Methane). Sample port may be a point of generation of hazardous gas (H2S and Methane). Blind flange is bolted onto the sample port and will require use of hand tools to remove. Building interior is narrow front to back and maneuverability inside is limited. Building may be a shelter for snakes or insects.	 Prior to removing the sample port blind flange sample the air quality around the flange before and after removing the flange for H2S concentration and Methane %LEL. Continuously monitor gas levels near sample port throughout sampling. Keep doors open for natural venting throughout task. Do not place face directly over sample port. Wear work gloves during removal of flange to protect hands. Be aware of high step at doorway while moving around. Be continuously aware of potential presence of dangerous wildlife within building. 	
Insert Pump	X X X	**=**	x x	Hazardous atmosphere potential due to LFG generation throughout task (H2S and Methane). Sample port may be a point of generation of hazardous gas (H2S and Methane). Blind flange is bolted onto the sample port and will require use of hand tools to remove. Building interior is narrow front to back and maneuverability	 -Keep air monitoring device turned on and near the opening of the well. -Wear nitrile gloves and attach the tubing to the pump. - Lower pump down well using the tubing to push the pump. -Keep tubing and cord to pump from getting tangled up. 	

		inside is limited. Building may be a shelter for snakes or insects.	
Collect leachate sample.		Hazardous atmosphere potential due to LFG generation throughout task (H2S and Methane). Sample port may be a point of LFG generation (H2S and Methane). Sample pump will be connected to a vehicle battery for power, potential shock hazard. Leachate may be chemically hazardous if contacts skin or eyes. Building interior is narrow front to back and maneuverability inside is limited. Building may be a shelter for snakes or insects.	 Continuously monitor gas levels (H2S concentration and Methane %LEL) near sample port throughout sampling. Keep doors open for natural venting throughout task. Do not place face directly over sample port. Do not directly touch battery terminals. Wear chemically resistant (nitrile) gloves during sampling to protect hands. Wear safety glasses while sampling to protect eyes from potential splash. Be aware of high step at doorway while moving around. Be continuously aware of potential presence of dangerous wildlife within building.
Remove sample pump	×	Hazardous atmosphere potential due to LFG generation throughout task (H2S and Methane). Sample port may be a point of generation of hazardous gas (H2S and Methane). Blind flange is bolted onto the sample port and will require use of hand tools to remove. Building interior is narrow front to back and maneuverability inside is limited. Building may be a shelter for snakes or insects. Pinch points Bending and lifting Slips, trips and falls	 Continuously monitor gas levels (H2S concentration and Methane %LEL) near sample port throughout sampling. Keep doors open for natural venting throughout task. Do not place face directly over sample port. Do not directly touch battery terminals. While disconnecting pump from car battery. Do not get hands wrapped up in cordage or tubing when retrieving pump. Wear chemically resistant gloves. Bend your knees and use proper lifting technique while retrieving pump. Keep cordage and tubing away from feet while retrieving pumps to avoid and slips, trips or falls. Be aware of high step at doorway while moving around. Be continuously aware of potential presence of dangerous wildlife within building
Replace 4" sampling port blind flange.	x ** /	Hazardous atmosphere potential due to LFG generation throughout task (H2S and Methane). Sample port may be a point of generation of hazardous gas (H2S and Methane). Blind flange is bolted onto the sample port and will require use of hand tools to replace. Building interior is narrow front to back and maneuverability inside is limited. Building may be a shelter for snakes or insects.	 Continuously monitor gas levels (H2S concentration and Methane %LEL) near sample during task. Keep doors open for natural venting throughout task. Do not place face directly over sample port. Wear work gloves during replacement of flange to protect hands. Be aware of high step at doorway while moving around. Be continuously aware of potential presence of dangerous wildlife

				within building.	
Exit pump house and close doors.		x	Step out of building through doorway is 12"-18" high. Building has two doors which are heavy metal doors opening outward, potential hazard when windy.	-Carefully step up out of building. -When removing door anchors be aware of wind and remove slowly while bracing the doors. Once removed slowly close and secure the doors.	
Driving on landfill property	***1***		Landfill access roads are unpaved and will have heavy equipment traffic and light customer traffic. Access to leachate pump house will be off the main road over undeveloped land and down a steep/narrow unpaved ramp. Road access in front of pump house has limited space for vehicle maneuvering.	-While driving along main access roads obey posted traffic signs, give right of way to heavy traffic, and/or make eye contact or receive visual direction from equipment operators before proceeding. -When driving off-road proceed cautiously and be aware of natural and engineered stormwater ditches. -Drive slowly and cautiously along narrow pump house access road and up access ramp.

Job Steps	Hazard(s)	Potential Hazard(s)	Critical Action(s)	Responsible Person
Gauge groundwater fluid level with oil/water interface probe.		 A. Tight of way traffic or onsite facility traffic B. Pinch points and or friction burn from fluid level probe reel C. Chemical exposure 	 A. Wear reflective safety vest, position body appropriately, use safety cones, and/or park defensively. B. Do not allow probe to "free fall" from ground surface. Keep hands from between probe reel and protective well casing. C. Wear safety glasses with side shields. Wear chemical resistant gloves. 	
Collect groundwater samples		 A. Chemical exposure to constituents of concern or preservatives B. Cuts from broken bottles C. Pinch points from parameter meter or pump connections D. Electrical shock 	 A. Wear safety glasses with side shields. Wear resistant gloves. B. Inspect vials when unpacking for scratches and cracks; do not use if present. Grasp bottom and cap with fingers; do not over tighten sample jar lids. C. Work slowly. Select equipment with fewer pinch points where possible. D. Keep electrical connections dry and hands away from exposed metal. 	
If necessary, remove sample pump from monitoring well.		A. Muscle strain from lifting pump	A. Use proper lifting procedures. If necessary, use two people or a mechanical wench to remove pump.	
Equipment decontamination		A. Chemical exposure - Groundwater or detergent water could splash into individuals eyes during decontamination in detergent water buckets	A. Verify that the flow controller is turned off prior to moving the pump from one decontamination solution to the rinse buckets. Wear safety glasses and nitrile gloves during decontamination process

Drive sampler, shovel, or trowel into soil		A. Chemical exposure to VOCs. B. Chemical exposure to radionuclides.	 A. Monitor breathing zone with PID. If over PID trigger level in HASP, monitor breathing zone with Draeger Tubes. Wear respirator with appropriate cartridge as needed. Keep soil cores covered where possible to limit exposure. Wear nitrile gloves and other appropriate PPE; stand upwind. B. Monitor breathing zone with microR and dual phosphor scintillator field equipment. Wear respirator with appropriate cartridge as needed. Keep soil cores covered where possible to limit exposure. Wear nitrile gloves and other appropriate PPE; stand upwind. 	
Collect soil samples		A. Lacerations or cuts from jar breakage	A. Use retractable-blade knives, wear appropriate gloves, wear eye protection.	
Decontaminate non- disposable equipment		A. Chemical exposure B. Slip/trip/fall hazards C. Hazardous material spills	 A. Wear chemical protective PPE. B. Maintain a clear work area free of tools, equipment, and materials. C. Establish a decon area with poly sheeting or dedicated decon pad. Collect all decon fluids and solids and containerize for waste characterization and disposal. Keep spill kit on hand during decon operations.

Job Steps	Hazard(s)			Potential Hazard(s)	Critical Action(s)	Responsible Person	
1) Load equipment and mobilize to vapor sampling well or building is slated to occur		x	**I**	X	 Personal injuries or equipment damage associated with lifting. Personal injuries or equipment damage associated with slip, trip, and fall hazards. Harm to hands due to pinch points. 	 Use proper lifting techniques, including squatting to lift loads and not bending at waist, avoid twisting or rapid movements at waist while carrying loads. Limit loads to 50 pounds or less (knowing your own limits) and seek assistance for unwieldy or heavier loads. The large soil vapor sampling board weighs 62 lbs with both pumps attached. Remove one pump or use two people to lift. Use wheels on case when possible. Summa can boxes can weigh over 50 lbs and can be awkward to carry. Use two people to lift boxes that are over 50 lbs or are awkward. Plan route and complete walk through prior to lifting any load ensuring that walk ways and surfaces are clear of hazards, any obstructions are removed (including propping doorways when appropriate). Recheck pathway while returning from vehicle each time. Use two people to carry vapor sampling board or large Summa can boxes through doors or down steps. Wear leather work gloves while loading and unloading equipment. Maintain manageable loads and request assistance for unwieldy or heavy loads. 	
2) Inspect sample locations and unload equipment from vehicle.		x	** 1 * X	x	 Personal injuries or equipment damage associated with lifting. Personal injuries or equipment damage associated with slip, trip, and fall hazards. Harm to hands due to pinch points. 	 Use proper lifting techniques, including squatting to lift loads and not bending at waist, avoid twisting or rapid movements at waist while carrying loads. Limit loads to 50 pounds or less (knowing your own limits) and seek assistance for unwieldy or heavier loads. Plan route and complete walk through prior to lifting any load ensuring that walk ways and surfaces are clear of hazards and any obstructions are removed (including propping doorways when appropriate). Recheck pathway while returning from vehicle each time. Wear leather work gloves while loading and unloading equipment. Maintain manageable loads and request assistance for unwieldy or heavy loads. 	
3) Calibrate field instruments.		x	**1**	x	 Burns from compressed gas ignition. Exposure to hazardous gas. 	 Use proper regulators and keep away from open flames and other ignition sources. Calibrate meters in well-ventilated area. 	
4) Open monitoring well, prepare sample equipment and SUMMA canisters.		x	**I*X	×	 Personal injury to hands from pinch points (motion). Strain from lifting. 	 Wear leather gloves to avoid puncture wounds/pinch points to skin Use proper tools to open/close well vault lid (i.e., wrench, screw driver, etc.) Do not force open/close at awkward position When possible - pull tool towards body. Do not force parts together. Use the correct tools and fittings for connecting equipment. Lift heavy objects using leg strength and proper posture. Use correct gloves and tools when opening wells and handling equipment. 	
5) Prepare helium tank.			今年142		1) Blunt force injury or property damage from rapid release of pressure	1) Protect tank from tipping using appropriate carts and tie downs. Replace the valve cover when not in use. Follow JSA for compressed gas canister management.	

Job Steps	Hazard(s)			Potential Hazard(s)	Critical Action(s)	Responsible Person	
6) Conduct pneumatic testing, purging, and soil vapor sample collection activities at each location.		x	**1**	x	 Personal injury or property damage while mobilizing or using helium as a tracer. Harm to hands due to pinch points, cuts, scrapes, etc. Inhalation of harmful vapors. Back strain due to improper body positioning. 	 Use hand cart while moving helium tank, secure tank to cart using strapping or tie downs, secure tank during transport and storage. Ensure cover is threaded tightly onto valve stem when moving or storing tank. Do not move compressed gas canister with regulator in place. Use correct tools including properly sized open and adjustable wrenches while tightening fittings, do not force or over-tighten fittings. Use tubing cutters, NO FOBKs. Monitor breathing zone using photoionization detector during installation of the probes. If ambient air concentrations exceed 10 ppmv use colorimetric tube for benzene. If the benzene concentration exceeds PEL then don half-face respirator with organic vapor cartridge. Use good posture, mats, portable chairs or other methods to maintain proper body positioning. Take frequent breaks and stretch back, neck, arms, and legs. 	
7) Disassemble sample train, cap SUMMA canister, and close monitoring wells.		x	**1**	×	 Personal injury to hands from pinch points. Strain from lifting. 	 Wear leather gloves to avoid puncture wounds/pinch points to skin Use proper tools to open/close well vault lid (i.e., wrench, screw driver, etc.). Do not force open/close at awkward position When possible - pull tool towards body Do not force parts together. Use the correct tools and fittings for connecting equipment. Lift heavy objects using leg strength and proper posture. Use correct gloves and tools when opening wells and handling equipment. 	
8) Clean-up work area, load equipment, and demobilize from monitoring location.		x	**1**	x	 Personal injuries or equipment damage associated with lifting. Personal injuries or equipment damage associated with slip, trip, and fall hazards. Harm to hands due to pinch points. 	 Use proper lifting techniques, including squatting to lift loads and not bending at waist, avoid twisting or rapid movements at waist while carrying loads. Limit loads to 50 pounds or less (knowing your own limits) and seek assistance for unwieldy or heavier loads. Plan route and complete walk through prior to lifting any load ensuring that walk ways and surfaces are clear of hazards and any obstructions are removed (including propping doorways if necessary). Recheck pathway while returning from vehicle each time. Wear leather work gloves while loading and unloading equipment. Maintain manageable loads and request assistance for unwieldy or heavy loads.

ſ	Call One-Call at 811	<u>ک</u> کے ا	A. Explosion, Electrocution, injury, death, property damage.	A. Request utilities locates a minimum 2 days prior to drilling.	

Permission for site			A Inability to perform work due to	A Call client before mobilization to
access		×₩1¥X	locked gates	verify that site will be accessible on the scheduled day of drilling
Check the weather		**1**	A. Unexpected storm, lightning, rain, snow, heat and cold stress	A. Check the local weather forecast. Ensure you have wet-weather gear if needed. In warmer weathers ensure you have plenty of drinking water and access to shade.
Mobilize to drilling location	•® 🏢	**	A. Vehicular traffic, pedestrians	A. Drive within the site speed limits or slower in congested areas. Utilize 3D driving methods.
	⊥i∠ ₩	T * K	B. Backing	B. Attempt to drive forward into drilling location (first move forward). If it is necessary to back up, use a spotter. Check that the ground is stable so the rig will not get stuck.
				C. Check in with the client project manager for a briefing of the day's site activities. Familiarize workers with the site & current site activities.
			D. Overhead utilities/structures	b. Maintain a minimum of 4 between rig and energized power lines when mast is down in the transporting position. Use a ground guide when rig is in close proximity of overhead utilities and other facility structures.
Drill Rig Set-up		**	A. Spill hazard	A. Verify rig inspection has been completed. Inspect equipment for signs of wear. Check all emergency shut off switches, personal observe they work.
		X	B. Power line strike/electrocution	B. Verify mast of rig when raised will clear energized power lines by a minimum of 10'. If rig must be raised closer than 10', have the utility company wrap the lines to prevent contact. Keep non- essential personnel out of work zone and keep clear of rig in the event there is contact with the power lines. Only raise/lower

Job Steps	Hazard(s)		o Steps Hazard(s) Potential Hazard(s)		Critical Action(s)	Responsible Person
				mast when rig has been stabilized.		
			C. Rolling rig	C. Place drilling rig in park. Set parking brake. Chock wheels for drill rig, support truck and shaker table.		
			D. Rig tip-over E. Traffic hazards	 D. Verify outriggers are extended and if placed on unstable ground, place cribbage that will not splay apart under outriggers. Using traffic cones and caution tape or other similar materials, establish a work zone around the rig large enough to encompass the rig mast if tipped over. E. Develop and implement a traffic 		
				control plan taking in consideration for vehicle, bicycle, and pedestrian traffic by using signs and barriers.		
Sonic Drilling		**	A. Dropping steel samplers on feet/toes.	A. Use mechanical lifting equipment and a tag line to lift augers and other heavy/awkward materials. When not available, use a multiple-person lift. Wear safety- toed boots and leather gloves.		
		×.	B. Slip/trip/fall hazards.	B. Maintain a clear work area free of tools, equipment, materials, and spoils.		
			C. Entanglement in equipment.	C. Verify equipment is protected by machine guarding. Do not get within 12" of drill bit. Do not wear loose fitting clothing, clothing with ties such as hooded sweatshirts, jewelry, or loose gloves near rotating equipment. Long hair is to be tied back securely and braid tucked into clothing.		
			D. Back injuries from lifting heavy equipment or from shoveling soil.	 D. Use mechanical lifting equipment and a tag line to lift flights and other heavy/awkward materials. When not available, use a multiple-person lift. Use proper lifting techniques and request help when necessary. While shoveling do not overload the shovel or turn the torso. 		
			E. Struck-by overhead cables/ hooks.	 E. Keep non-essential personnel out of the work zone unless cleared by the rig operator. Communicate with co-workers when shoveling or maneuvering a swing-hook from the drill mast. 		
			F. Pinch points	F. Crew members are to keep their hands clear of pinch points. Wear high-visibility work gloves		
			G. Heat/burns from sonic drilling.	for hand placement awareness and protection. G. Use thermometer to take surface		

Job Steps	
-----------	--

Hazard(s)

			H. Noise.	temperature of casing before touching. H. Use earplugs.	
Sample Collection		**1**	 A. Carrying heavy load. B. Air blown cuttings. C. Exposure to organic vapors. 	 A. Load samples in cooler on truck to prevent lifting. Verify path is clear prior to lifting. Use team lift for heavy/awkward loads. Use proper lifting techniques. B. Staff is to stand clear of blown cuttings. Operators using compressed air for blowing cuttings are to wear face shields over safety glasses/goggles. C. Wear nitrile gloves and other appropriate PPE: stand upwind 	
Well casing assembly and installation		****	A. Pinch-points at threadsB. Struck-by swinging long pipe sections near personnel.	 A. Keep clear of pinch points. Wear work gloves at all times. Stay focused on the task at hand. B. Keep non-essential staff clear of work zone. Inform everyone at well site of upcoming activities. 	
Installing well box surface completion		**1**	 A. Sharp metal edges on well box B. Muscle strains from mixing concrete, pushing wheelbarrow, lifting shovel with concrete mixture or dumping wheelbarrow. 	 A. Wear laceration-proof gloves B. Share tasks with coworkers. Keep loads light. Use proper lifting techniques. 	
Breakdown at drilling location	**1**	**1**	A. Slip/trip/fall hazards.B. Lost loads.C. Overhead utilities/structures	 A. Maintain a clear work area free of tools, equipment, materials, and spoils. B. Check that equipment, materials, and tools are secured to the rig before moving. C. Do not drive unless the mast is lowered. 	
Clean-up/Decon	**I*	***	 A. Chemical burns B. Slip/trip/fall hazards C. Hazardous material spills D. Cross contamination of equipment, public perception 	 A. Wear chemical protective PPE. Have a neutralizing agent on hand in the event of skin contact. B. Maintain a clear work area free of tools, equipment, and materials. C. Have a neutralizing agent on hand. D. Containerize decon fluids and materials with labels on containers.

	Job Steps	Potential Hazard(s)	Critical Action(s)
1.	Operation	 A. Backing B. Unfamiliar Vehicle C. Speed D. Distance / Spacing E. Skids F. Blind Spots 	 A. Check that area is clear of obstructions by walking around vehicle before moving. Use a spotter when possible. Check mirrors prior to moving vehicle. Back slowly. Anticipate other vehicle's movements. First move should be forward where applicable.
		G. Distractions H. Equipment Failure	B. Familiarize yourself with the vehicle controls before moving. Properly adjust the mirrors and seat.
		J.Driver Attitude K. Loaded Vehicle	C. Obey posted speed limits. Reduce speed during hazardous conditions (fog, rain, etc.).
		L.Parking M. Jobsite Navigation N. Exiting Jobsite	D. Continually check mirrors. Do not tailgate. Use the 3 second rule for a car or van, 4 seconds for truck, 5 for tractor trailer; add seconds for wet or slippery roads AND over 40 mph. Regularly scan the area you will be entering in the next 10-12 seconds. Always leave yourself an out during travel. When stopping, leave adequate space between you and the vehicle ahead of you. When stopped you should be able to see the rear tires on the ground of the vehicle ahead of you.
			E. To reduce potential for skids, proceed cautiously during hazardous conditions. Reduce speed! If the vehicle begins to skid out of control, turn the wheel in the direction of the skid.
			 F. Familiarize yourself with your vehicle's blind spots. Use directional (turn signal) lights when changing lanes. Perform a "head check" to verify blind spots are clear. Avoid other driver's blind spots.
			G. The use of cell phones while driving is prohibited except during an emergency. Pull off safely to the side of the road to receive or place calls or text messages. Do not attempt to read maps or other material while driving. Do not eat or drink while driving.
			H. Inspect your vehicle daily. Perform proper maintenance. Check tire pressure, fluid levels, and emergency response equipment.
			 Never drive under the influence of drugs, medications that can impair your response time, or alcohol.
			J. Refrain from operating vehicles when abnormally tired. Keep an even temper while driving. Do not drive if you are frustrated, rushed, distracted or drowsy

Job Steps	Potential Hazard(s)	Critical Action(s)
		K. Honor the load capacity of the vehicle. Secure equipment and supplies within the body of the vehicle using proper tie downs. Periodically confirm that equipment and supplies are secured properly. Obtain proper permits for transporting hazardous materials.
		L. Park vehicle(s) in designated or approved location. Do not park near heavy equipment, heavy equipment travel ways, stockpiles, fuel tanks, or open trenches. Do not park in areas that may block fire access, contractor access, or where vehicle(s) may become blocked in.
		M. Only travel in approved areas. Do not travel behind heavy equipment. Do not travel near open trenches, fuel tanks, or excessively muddy areas. Do not travel at speeds in excess of the site speed limit, especially near work crews. Scan the site and choose travel ways that minimize hazards such as collisions, sudden drops, punctured tires, steep slopes, muddy/slippery terrain, or damage to property or grass. If driving off-trail, select a vehicle designated for such and operate within the manufactures limitations and specification. Perform a ground recon or use a spotter prior to driving the terrain. Be cautius of terrain and biological hazards when reconning the path.
		N. Exercise extreme caution when entering public roadways. Avoid backing onto a public roadway. Prevent tracking mud or dirt from jobsite onto public roadways. Verify that gates or barricades are in proper order before exiting jobsite.

APPENDIX D

SITE-SPECIFIC HEALTH AND SAFETY POLICIES, PROCEDURES, AND PLANS (BRIDGING DOCUMENT)

Bridging of Trihydro Corporation and Subcontractor Safety Requirements to West Lake Landfill Policies and Procedures

The Site-Specific Health and Safety Plan (HASP) for project site work conducted at the West Lake Landfill project located in [Keywords], includes this attachment for "bridging" the policies and procedures of the site with safe work practices of Trihydro Corporation (Trihydro) and its subcontractors.

Purpose: To verify that Trihydro and its subcontractors understand and comply with written policies and procedures of the West Lake Landfill, as applicable to the work of Trihydro and its subcontractors in the site environment. Where Trihydro, its subcontractors, and West Lake Landfill have similar safe work practices and procedures, the more restrictive and protective safe work practices are the only procedures implemented.

Implementation: The included table lists OU-1 policies and procedures in existence at the site. Many of these topics are also covered in Trihydro's site and corporate health and safety policies and plans.

The policies and procedures listed in the table are those that are applicable to the work of Trihydro and its subcontractors. The more restrictive and protective site policies and procedures and safe work practices, whether West Lake Landfill, Trihydro, or subcontractor, supersede and take precedence over similar practices discussed in Trihydro Site and Corporate Health and Safety Plans or subcontractor safety procedures. Trihydro and Trihydro subcontract personnel who perform field services at the site must read, understand, and comply with these policies and procedures. However, if Trihydro, subcontractor, or site personnel have doubts about the adequacy of the policies and procedures covering safe performance of the work, stop work immediately and contact the Trihydro Project Site Manager and Site Safety Officer. Work will not proceed until the Trihydro PM Manager or Site Safety Officer has discussed the matter with site personnel and provided the affected Trihydro and subcontractor personnel with further instructions about how to proceed.

Contractor Regulations and Safety Manual Content

The following list of safety policies and procedures make up the content of the basic safety policies and procedures and safety manuals at the site. N/A

The client may add or delete other safety policies and procedures as determined by the specific work a contractor is performing.

Site	West Lake Landfill Site
TEDE	Total Effective Dose Equivalent

1 PURPOSE

The West Lake Landfill Superfund Site (Site) currently consists of three operable units (OU). OU-1 primarily addresses two disposal areas at the West Lake Landfill, known as Areas 1 and 2, that have been identified as containing radiologically impacted material (RIM). OU-2 consists of portions of the Site that have not been identified as containing RIM. OU-3 addresses groundwater associated with the Site, including the groundwater immediately beneath Areas 1 and 2. The United States Environmental Protection Agency (USEPA) is the Site's lead regulatory agency for the remedial activities and investigations at the Site, with certain responsibilities deferred to the Missouri Department of Natural Resources (MDNR).

Areas 1 and 2 are specifically designated as radiologically controlled areas (RCAs) because of the potential for workers within their boundaries to contact or disturb RIM. Consequently, any access to, egress from, and work within these areas will be controlled according to a radiation protection program conforming to Title 10, Code of Federal Regulations (CFR), § 20.1101. On a case-by-case basis, areas outside of Areas 1 and 2, such as the Buffer Zone, Lot 2A2, and adjacent property(ies), may be designated RCAs and controlled accordingly when there is concern that work in such areas exhibits a reasonable potential to disturb RIM.

Ameriphysics, LLC (Ameriphysics) is a Nuclear Regulatory Commission (NRC) licensee, and it maintains an NRC approved and audited § 20.1101-based radiation protection program that will be used to control work within RCAs. Ameriphysics' program is described in its Radiological Control Program Manual (RCM) and implementing Radiological Control Procedures (RCPs).

The purpose of this Radiation Safety Plan (RSP) is to describe the site-specific controls that are necessary to implement the existing Ameriphysics radiation protection program at the Site. The Ameriphysics RCM and RCPs will be submitted to USEPA in their entirety under separate cover; however, they will be onsite and available for use and reference whenever work is accomplished according to this RSP.

2 SCOPE

This RSP is applicable to any activities requiring access to OU-1 Areas 1 and 2 or otherwise demonstrating a reasonable potential to disturb RIM such as near-surface disturbances of soil in the Buffer Zone and Lot 2A2 and borings near the Area 1 and 2 fence line. Specific activities requiring radiological controls include, but are not limited to:

- Work area visits and surveys;
- Work area preparations;
- Invasive subsurface activities such as sampling and drilling operations;
- Above-ground monitoring or sampling activities associated with air, stormwater, or other media;

- Maintenance/repair of the engineered cover within the Areas;
- Movement and storage of equipment that may be impacted by contact with RIM;
- Monitoring and decontamination of equipment; and
- General monitoring of radiological conditions and personnel.

This RSP is intended to be used with the most recent versions of any health and safety and other site-specific plans that describe Areas 1 and 2, work that will be conducted, and other organizational aspects. Consequently, the scope of this RSP is limited to the particular instructions that are needed to implement the Ameriphysics Radiation Protection Program at the Site.

3 RESPONSIBILITIES

All employees and visitors are responsible for working safely and acting in a manner that does not jeopardize their safety, the safety of others, or the quality of the environment. They are responsible to immediately report unsafe conditions to their supervisor or site contact whether radiological or due to general safety conditions. All persons have the right and obligation to pause work if unsafe conditions are suspected, and such stop-work authority is conveyed without fear of reprisal. Other job-specific responsibilities are described in the sections that follow.

3.1 OU-1 Site Supervisor

The OU-1 Site Supervisor is responsible for providing access and egress to any person or organization requiring access to Areas 1 and 2, including the necessary monitoring and support required by this RSP.

3.2 Radiation Protection Personnel

Ameriphysics will provide radiological oversight and support for activities conducted in Areas 1 and 2 or deemed as potentially involving RIM. Ameriphysics will be responsible for assessing radiological conditions, specifying required controls, conducting radiological training, performing radiological surveys, specifying protective clothing requirements, determining personnel exposure monitoring requirements, and monitoring persons, vehicles and equipment for contamination.

Ameriphysics will provide radiological support to the project with the following organizational elements and required monitoring equipment.

3.2.1 Radiation Safety Officer

Ameriphysics' Radiation Safety Officer (RSO) is responsible for executive-level administration of the corporate radiological control program in accordance with prevailing procedures and industry practices. Specific responsibilities include the following:

- Establishing standards and guidelines for radiological operations;
- Limiting occupational radiation exposures to levels that are as low as reasonably achievable (ALARA);
- Suspending any operation that presents a radiological or safety threat to employees, the environment, or the general public;
- Ensuring the quality of protective equipment for personnel and prescribing usage standards;
- Establishing procedures for radiological protection and monitoring; and
- Overall responsibility for the radiation protection training program.

Tim Pratt is Ameriphysics' corporate RSO. Because he is an executive-level manager, he does not need to be present in the field, and his work will be conducted from Ameriphysics' corporate office in Knoxville, TN.

3.2.2 Heath Physicist

The project will be supported by a Certified Health Physicist (CHP) that is responsible for any professional-level validation that arises over the course of the project. The project Health Physicist is Tom Hansen, Jr., PhD. Support from the Health Physicist may be accomplished offsite.

3.2.3 Radiological Control Supervisor

A Radiological Control Supervisor (RCS) reports to the RSO and oversees field implementation of the radiological control and safety program at the project level. Such implementation is described in Sections 5, 6, 7, and 8 of this RSP and the current version of Ameriphysics RCM and implementing RCPs. The RCS has the authority to, and shall, order any operations suspended when such operations present an imminent radiological or safety threat or hazard to employees, the environment, or the public.

An RCS will be onsite any time work exhibiting a potential to disturb RIM is conducted. If the designated RCS must be away from the Site, his or her responsibilities will temporarily be assigned to an appropriately experienced Health-Physics Technician so that continuity of radiological supervision is always maintained. The designated RCS is only allowed to temporarily pass his or her responsibilities onto an individual that the RSO has approved to serve in such a capacity.

Because the complexity of the work may vary vastly as the project unfolds, and work occurring in multiple areas may reflect a need for more than one RCS, a specific person is not named by this RSP as the sole RCS representing the radiation protection organization. Instead, the RSO will propose and the Health Physicist will approve any person serving the project in the role of RCS. The proposal and approval will be in writing. This requirement does not preclude the RSO or project Health Physicist from serving as an RCS.

3.2.4 Health-Physics Technicians

Health-Physics Technicians are assigned by the RCS for specific day-to-day oversight of radiological workers and radiological operations. They act as the RCS's representative(s) in specifically implementing the radiological control and safety practices as assigned.

3.3 Radiation Workers

Radiation Workers are any persons, regardless of employer, who engage in work activities in RCAs and are not classified as visitors by the RCS according to Section 6.6 of this RSP. Radiation Workers will follow the instructions from Radiation Protection Personnel but do not perform the duties assigned to Radiation Protection Personnel unless specifically authorized to do so by the RCS.

4 RADIOLOGICAL CONTAMINANTS OF CONCERN

The occurrences of RIM have been identified to consist of radionuclides in the uranium (U-238), actinium (U-235), and thorium (Th-232) decay series. Important radionuclides comprising these decay series are listed in Table 1 of the September 2018 Record of Decision Amendment. These radionuclides and corresponding properties from International Commission on Radiological Protection (ICRP) Publication 107, *Nuclear Decay Data for Dosimetric Calculations*, are demonstrated on Table 1.

		Decay Mode ²		Energy Emitted (MeV/transformation)

5 RADIATION PROTECTION REQUIREMENTS

5.1 Training Requirements

Persons must possess the Radiation Safety Training required by Ameriphysics procedure RCP 2-1, *Radiation Safety Training Procedure*, in order to access RCAs unless designated as visitors according to Section 6.6 of this RSP and escorted. The training and a certificate of completion will be provided by Ameriphysics.

Workers who receive or are likely to receive an occupational effective dose equivalent in excess of 0.1 rem in one year are provided Radiation Worker Training. The approximately 1-day course familiarizes trainees with the following concepts:

• Radiation and its effects on the body;

- Federal dose limits and administrative controls;
- ALARA and personnel monitoring programs;
- Radiological postings;
- Contamination controls; and
- Federal and state regulations.

A worker who is not likely to receive an occupational effective dose equivalent in excess of 0.1 rem in one year is provided Radiation Awareness Training. This training familiarizes workers with site hazards and provides instructions for avoiding contact with radioactive material and for keeping individual doses less than 0.1 rem.

The initial Radiation Safety Training required by this section shall consist of instructor-led training and may be provided by personnel qualified at a minimum as a Health Physics Technician. This training may be administered at any location, provided additional training is administered covering any specific procedures in effect for jobsite operations. Qualification is good for one year and is attained by completing the required coursework and passing a written examination with a score of 70 percent or better. Requalification can be attained by completing the exam in lieu of classroom training, provided a passing score is attained on the first attempt, correct responses to missed questions are reviewed with the trainee, and any new rules or revisions to the radiation safety program are explained.

Position-specific training and qualifications required for persons described in Section 3.2 are described in Section 2 of Ameriphysics' RCM.

5.2 Occupational Exposure Limits

Occupational dose limits for adults are set forth in 10 CFR § 20.1201, and the dose limit for the embryo/fetus of a declared pregnant woman is specified in 10 CFR § 20.1208. As a measure to prevent exceeding these limits, Administrative Limits equal to 80% of the prescribed limits are used. These limits are tabulated in Table 2.

	Occupational Dose	Administrative Limit
Total effective dose equivalent (TEDE)	5 rem/yr	4 rem/yr
Sum of the deep-dose equivalent and the	50 rem/yr	40 rem/yr
committed dose equivalent to any individual		
organ or tissue other than the lens of the eye		
Skin (shallow-dose equivalent)	50 rem/yr	40 rem/yr
Lens of the eye (shallow-dose equivalent)	15 rem/yr	12 rem/yr
Dose equivalent to the embryo/fetus	0.5 rem for entire	0.4 rem for entire
	pregnancy	pregnancy

Table 2. Occupational Dose Limits

An ALARA goal of 0.1 rem/yr TEDE is initially established for the Site, meaning no person is allowed to exceed this goal without the consent of the RSO. The ALARA goal should be reviewed annually to make sure it is reasonable and adjusted according with concurrence from the RSO.

5.3 Airborne Exposure Limits

<u>Airborne radioactive material</u> means radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors or gases.

<u>Airborne radioactivity area</u> means a room, enclosure, or area in which airborne radioactive materials exist in concentrations:

- 1. In excess of the derived air concentrations (DAC) specified in Appendix B to 10 CFR § 20; or
- 2. To such a degree that an individual present in the area without respiratory protective equipment could exceed, during the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI) or 12 DAC-hours.

<u>ALI</u> means the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the reference man that would result in a committed effective dose equivalent of 5 rems or a committed dose equivalent of 50 rems to any individual organ or tissue. The unit for ALI is the microcurie (μ Ci).

<u>DAC</u> means the concentration of a given radionuclide in air which, if breathed by the reference man for a working year of 2,000 hours under conditions of light work, results in an intake of one ALI. The unit for DAC is μ Ci per milliliter (μ Ci/ml).

<u>DAC-hour</u> is the product of the concentration of radioactive material in air (expressed as a fraction or multiple of the derived air concentration for each radionuclide) and the time of exposure to that radionuclide, in hours. Thus, 2,000 DAC-hours is one ALI, equivalent to a committed effective dose equivalent of 5 rems.

The most-restrictive stochastic inhalation ALIs and DACs from 10 CFR § 20, Appendix B, for site-specific radionuclides of concern from Table 1 are shown on Table 3.

Uranium Series			A	ctinium Seri	es	Thorium Series		
Nuclide	ALI (μCi)	DAC (µCi/ml)	Nuclide	ALI (μCi)	DAC (µCi/ml)	Nuclide	ALI (μCi)	DAC (µCi/ml)
U-238	1E+0	6E-10	U-235	1E+0	6E-10	Th-232	1E-3	5E-13
Th-234	2E+2	8E-8	Th-231	6E+3	3E-6	Ra-228	1E+0	5E-10
Pa-234	8E+3	3E-6	Pa-231	2E-3	6E-13	Ac-228	9E+0	4E-9
U-234	1E+0	5E-10	Ac-227	4E-4	2E-13	Th-228	1E-2	4E-12
Th-230	6E-3	3E-12	Th-227	3E-1	1E-10	Ra-224	2E+0	7E-10

Table 3. ALIs and DACs for Radionuclides of Concern

Sensitive - Preliminary draft for discussion purposes only.

Ra-226	6E-1	3E-10	Ra-223	7E-1	3E-10	Pb-212	3E+1	1E-8
Pb-214	8E+2	3E-7	Pb-211	6E+2	3E-7	Bi-212	2E+2	1E-7
Bi-214	8E+2	3E-7	Bi-211	4E-4	2E-13	TI-208	2E+2	1E-7
Pb-210	2E-1	1E-10						

Thus, the most restrictive ALI (i.e., 4E-04 μ Ci) and DAC (i.e., 2E-13 μ Ci/ml) are for the radionuclides Ac-227 and Bi-211.

Personal protective equipment (PPE), i.e., Tyvek© clothing and respiratory protection, should be used only after the RCS is convinced that the organization responsible for the work activity has made a reasonable effort to control the hazard otherwise. The use of respiratory protection equipment is not anticipated for this project. The RSO will be consulted to establish appropriate controls and protections if airborne concentrations exceeding 10% of the DAC are encountered.

5.4 Site Monitoring

5.4.1 General Area Surveys

The purpose of a general area survey is to characterize the ambient radiation environment of the entire Site and not just the immediate work area. The frequency of these surveys will be determined by the RCS, but will include, at minimum, surveys at the beginning and the end of any major work activity and when substantive changes are made to the Site. These surveys will be made with a Ludlum Model 19 or equivalent that is setup and operated according to Ameriphysics Procedure RCP 4-3, *Survey Instrument Procedure*.

5.4.2 Personnel Exposures

In accordance with 10 CFR 20.1502(a), *Conditions requiring individual monitoring of external and internal occupational dose*, external exposure dosimetry shall be worn by:

- 1. Adults likely to receive, in 1 year from sources external to the body, a dose in excess of 0.5 rem per year;
- 2. Declared pregnant women likely to receive during the entire pregnancy, from radiation sources external to the body, a deep dose equivalent in excess of 0.1 rem; and
- 3. Individuals entering a high or very high radiation area as defined by 10 CFR § 20.1003, *Definitions*.

Minors are also required to wear external exposure dosimetry if they are likely to receive, in one year from radiation sources external to the body, a deep dose equivalent in excess of 0.1 rem, a lens dose equivalent in excess of 0.15 rem, or a shallow dose equivalent to the skin or to the extremities in excess of 0.5 rem; however, the presence of minors at the Site is not anticipated. Permanent-record dosimetry shall be issued by Ameriphysics to each individual that is required by this section to wear external exposure dosimetry. When a dosimeter is issued, the individual will be briefed on its proper use and care. A dosimeter can only be worn by the person to which

it is assigned. The dosimeters will be returned to Ameriphysics at the end of the work activity or at the end of the shift, as required by the RCS. If a dosimeter is lost, the individual shall immediately leave the area and notify the RCS so an investigation can be conducted.

The RSO will report individual monitoring results to workers annually and at the request of any individual formerly wearing dosimetry provided by Ameriphysics. These reports are provided directly to the monitored individuals and not their employers unless the worker directs the RSO otherwise in writing.

5.4.3 Portable Air Sampling

Airborne particulate surveys shall be performed by Radiation Protection Personnel daily in the vicinity of any work that exhibits a potential to disturb RIM. These surveys will be performed according to Ameriphysics procedure RCP 4-4, *Airborne Radioactivity Control Procedure*. The use of personnel air samplers is not anticipated.

The system used for counting air samples shall be capable of achieving a minimum detectable concentration not greater than 10% of the applicable DAC. Because the DAC values for radionuclides present in RIM are so low, it may be necessary to obtain samples for more than one shift or day to obtain sufficient volume.

6 HEALTH PHYSICS CONTROLS

Maintaining personnel exposures ALARA is the primary goal of this RSP. This is accomplished with a combination of engineering and administrative controls.

6.1 Exposure and Contamination Control

Work in areas where RIM is handled, used, or stored shall be performed in accordance with approved procedures and work instructions to ensure that the regulatory limits in Section 4.2 are maintained. Ameriphysics procedure RCP 4-1, *Exposure and Contamination Control Procedure*, describes in detail procedures for:

- Working in an RCA;
- Proper use of a radiation work permit (RWP);
- Access control point;
- Shielding;
- Administrative controls;
- Engineering controls; and
- Postings and labels.

A few of the engineering controls that may be implemented to ensure worker doses are ALARA include:

- Wetting of soil to minimize the suspension of contaminated material;
- Use of berms and coverings as appropriate during operations; and
- Using mechanical equipment to handle contaminated material rather than by hand.

The following lists administrative controls that will be implemented to ensure worker doses are ALARA.

- Any work activities conducted in Areas 1 or 2 or involving a potential to handle RIM will be defined and delineated using job-specific RWPs;
- All nonessential personnel will be restricted from RCAs;
- No eating, drinking or smoking will be allowed in RCAs; and
- Individuals will, to the extent practical, remain up-wind of surface preparation, sampling and material handling operations.

The RCS ensures that engineering and administrative controls are sufficient to maintain worker protection. In doing so, the RCS coordinates with the OU-1 Site Supervisor and other supervisory personnel to ensure that controls are understood, effective, and not unnecessarily impeding work.

6.2 Postings

Areas where radiation or the potential for radiation exist will be posted in accordance with 10 CFR § 20.1902, *Posting requirements*. The following postings are likely or possible based on known contaminants and concentrations.

- Each radiation area will be posted with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIATION AREA." Radiation area means an area, accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.005 rem in 1 hour at 30 centimeters from the radiation source or from any surface that the radiation penetrates.
- Each airborne radioactivity area (as defined in Section 5.3) will be posted with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, AIRBORNE RADIOACTIVITY AREA" or "DANGER, AIRBORNE RADIOACTIVITY AREA."
- Unless already posted as a radiation area or airborne radioactivity area, each RCA will be posted with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL(S)" or "DANGER, RADIOACTIVE MATERIAL(S)."

6.3 Surveys, Monitoring, Action Levels, and Decontamination

Radiological surveys are performed by Radiation Protection Personnel as necessary to ensure personnel do not exceed radiation exposure limits, to meet requirements for posting radiation areas, and to control the spread of contamination. These surveys shall be performed at prescribed locations and intervals according to approved procedures. These procedures are described in detailed in Ameriphysics procedure RCP 4-2, *Surveys and Monitoring Procedure*.

Area radiation surveys are performed by Radiation Protection Personnel:

- 1. Daily, at boundaries and access control points of radiation areas;
- 2. Weekly, in occupied radiation areas, areas where radioactive material and waste is stored, and at boundaries of work sites where the public could be exposed;
- 3. Whenever operations are performed that might be expected to change existing radiation levels;
- 4. When highly radioactive equipment (i.e., radiation level at 30 cm is greater than 0.1 rem per hour) is moved; and
- 5. When performing operations that could result in personnel being exposed to small intense beams of radiation.

Surface contamination surveys are performed by Radiation Protection Personnel:

- 1. Prior to initial entry to an area where contamination is possible;
- 2. In-process to verify appropriateness of contamination controls, control processes, direct remedial efforts, and free release items or areas.

Removable contamination surveys are performed by Radiation Protection Personnel:

- 1. Daily, in active work areas where contamination is possible and at access control points;
- 2. Weekly, in areas where handling of RIM occurs and areas where RIM is stored; and
- 3. In-Process, during any of the following:
 - a. Decontamination and release of equipment;
 - b. In areas where airborne radioactivity has exceeded the concentrations specified in Ameriphysics procedure RCP 4-4, *Airborne Radioactivity Control Procedure*; and
 - c. When determining the need for anti-contamination clothing and to determine the extent of contamination in an area.

Removable contamination is evaluated by obtaining representative wipes and counting the contamination on the wipe using a Ludlum 3030E or equivalent.

All vehicles and equipment entering Areas 1 or 2 will be surveyed by a qualified Health Physics Technician for alpha and beta contamination before its initial entrance as well as when exiting the area. The survey will be conducted using a Ludlum Model 2360 coupled to a Model 43-93 (or equivalent). A removable contamination survey is also required for any vehicles or equipment leaving the Site.

Radiological surveys of any drilling or sampling equipment and cores, borehole cuttings, and other investigation-derived waste will be performed in the immediate vicinity of the work activity location (i.e., this material and equipment will be surveyed before it is moved).

Ameriphysics' surface contamination survey limits are based on Regulatory Guide 1.86, Table 1, *Acceptable Surface Contamination Limits*. These limits are commensurate with limits from Regulatory Guide 8.23, Table 3, *Acceptable Surface Contamination Levels for Uncontrolled Release of Equipment*. Of the known Site contaminants, the most restrictive limits for alpha-emitting nuclides are 100 disintegrations per minute (dpm)/100 cm² total activity and 20 dpm/100 cm² removable activity, and the most restrictive limits for beta-emitting nuclides are 1,000 dpm/100 cm² total activity and 200 dpm/100 cm² removable activity. These limits serve as the action levels at which decontamination of equipment is required. Radiation Protection Personnel will decide if decontamination can be accomplished or assisted by persons qualified as Radiation Workers. For example, it is reasonable to expect Radiation Workers to be able to clean equipment that is contaminated with materials they are already authorized to handle during their regular work. Nonetheless, Radiation Workers will not undertake decontamination on their own without authorization.

Surveys of personnel (i.e., "frisking") will be performed when exiting an RCA. The type of scan (i.e., whole body, hand and foot, etc.) will be designated on the RWP. Unlike surveys of equipment, the action level for contamination of skin or clothing is any detectable contamination. Radiation Workers will not attempt to decontaminate themselves; only Radiation Protection Personnel are allowed to decontaminate people.

Ameriphysics procedure RCP 4-9, *Decontamination Procedure*, describes general techniques for decontamination. Due to the nature of the work that is planned and the physical characteristics of the RIM, decontamination beyond basic tape-presses or cleaning with damp cloths and a mild over-the-counter detergent is not expected.

6.4 Survey Instrumentation

Radiation Protection Personnel will make an adequate number of calibrated radiation detection and measurement instruments available. Instruments shall be calibrated at least annually or after each repair. Instruments will be checked before use according to Ameriphysics procedure RCP 4-3, *Survey Instrument Procedure*.

6.5 Access Control Points

An access control point is a location on the perimeter of an RCAthrough which all entries and exits are made and where precautions are taken to prevent unnecessary exposure or the spread of radioactive contamination to adjacent uncontaminated areas.

The following items outline the basic considerations for establishing an access control point:

- 1. Determine the extent of the area to be isolated and the location where entry and exit shall be controlled;
- 2. Plan for physical boundaries to prevent inadvertent or unauthorized access. Boundaries shall be conspicuously marked and posted;
- 3. Cover the floor of the control point using paper or plastic sheet or other material provided for this purpose (optional in outdoor areas). The intent is to provide an easily removable walking surface within the control point to prevent tracking of contamination from the area. Maintain a supply of the material to replace floor covering as necessary;
- 4. Provide a "step-off pad" at the exit from the control point (optional in outdoor locations). This is to be used when removing clothing during exit from the area;
- 5. Provide easily accessible receptacles for used PPE, respirators, and equipment at the control point. A supply of plastic bags shall be available as necessary for receiving contaminated equipment and tools. Radiation tags or labels shall be available to identify contaminated items being removed from the area;
- 6. Provide radiation detection instruments for monitoring personnel and equipment. Frisking should be performed in a low radiation background and where the audible response of the frisker can be heard;
- 7. Provide means of recording stay times, as may be required, at the entrance of the areas for personnel. It may be necessary to provide a record of previous radiation exposures received by personnel entering an RCA so that maximum allowable time in the RCA can be determined;
- 8. At the entrance to the access control point, information shall be posted concerning radiation and contamination conditions, precautions for entry, precautions for exit, step-off points, clothing and waste receptacles, and personnel survey. A copy of the applicable RWP shall be posted at the access control point;
- 9. Radiological Protection Personnel shall designate, stock, staff, and otherwise maintain the control point;
- 10. Only personnel in assigned PPE should enter RCAs;
- 11. Adequately trained personnel may be permitted to assist in frisking other personnel and themselves; and
- 12. Contaminated individuals shall be processed in accordance with Ameriphysics procedure RCP 4-9, *Decontamination Procedure*.

6.6 Visitors

Management, technical, and other personnel who require occasional access to RCAs and areas where RIM is stored and who enter these for observation or similar purposes, or to perform work not involving RIM, shall have the radiological control training necessary for the radiological conditions expected to be encountered or shall be escorted by appropriately qualified personnel at all times. The RCS or designee will be required to escort all visitors, and these personnel are not allowed to receive an exposure exceeding the 10 CFR § 20.1301, *Radiation Dose Limits for Individual Members of the Public*, of 0.1 rem per year or 0.002 rem in any one hour.

7 RECORD KEEPING

Ameriphysics is required to maintain and retain records of the radiation protection program and to make certain notifications. The RSO is responsible for administering the program, and the RCS is responsible for maintaining radiation protection project records generated during the project. Records shall be maintained in accordance with Ameriphysics' Quality Assurance Manual Section 17.

Radiological records are retained according to Table 4.

Record	Retention Period			
Characterization Records	7 years			
Background Data	7 years			
Calibration Records	Permanent			
Instrument Setup Sheets	Permanent			
Daily Instrument Checks	Permanent			
Survey Logs	Permanent			
Survey Raw Data	7 years

Pathway Models	Permanent			

Table 4. Project Records Retention

8 EMERGENCY RESPONSE

The Site operates according to an Emergency Response Plan that describes the procedures that will be used in the event of an accident or emergency at OU-1. In the event of a medical emergency, fire, explosion, or other emergency event potentially involving RIM, priority shall always be given to injured personnel and personnel safety, then to combating of the fire or other emergency. Radiological controls shall be given secondary importance to these tasks.

1.0 INTRODUCTION

This Emergency Response Plan (ERP) has been prepared for Operable Unit-1 (OU-1) of the West Lake Landfill Superfund Site (the "site"). The plan describes the procedures that will be used in the event of an accident or emergency at OU-1 during the implementation of the Remedial Design (RD) / Remedial Action (RA).

This plan has been prepared in accordance with the requirements of the Remedial Design Statement of Work (SOW), Operable Unit-1, West Lake Landfill Superfund Site (EPA 2019b). Specifically, the plan is intended to fulfill the requirements of SOW Paragraph 5.7(b) ["Emergency Management Plan"]. This ERP is Deliverable 3 on the RD Schedule presented in SOW Paragraph 6.2.

This ERP may be revised as necessary – if approved by EPA – during the RD/RA process to reflect changes in site conditions, RD/RA activities, or the party(ies) conducting RA.

The ERP is organized is organized as follows:

- Introduction: This section, which describes the purpose of the plan;
- Site Description: Describes the site location, layout, and history;
- Emergency Response Roles and Responsibilities: Describes the OU-1 emergency response roles and responsibilities;
- Plan Development and Revisions: Describes pre-emergency planning efforts and the ERP revision process for OU-1;
- Emergency Assessment and Response Strategy: Describes the general emergency assessment and response strategy procedures for OU-1;
- Emergency Notifications: Describes the emergency notification procedures applicable to OU-1;
- Emergency Response Infrastructure and Equipment: Describes site infrastructure and equipment that is pertinent to OU-1 emergency response activities;
- Radiation Safety During Emergencies: Describes radiation safety practices that are applicable to OU-1 during emergencies;
- Post-Response Reporting: Describes the post-response reporting procedures for emergencies that occur in OU-1; and
- Emergency Response Training: Describes the emergency response training that is applicable to OU-1.

2.0 SITE DESCRIPTION

The West Lake Landfill Superfund Site is an approximately 200-acre inactive solid waste disposal facility, located at the physical address 13570 St. Charles Rock Road in the City of Bridgeton, St. Louis County, Missouri. The site is approximately 18 miles northwest of downtown St. Louis, Missouri, approximately one mile north of the intersection of Interstate 70 and Interstate 270, and approximately one-and-three-quarters (1.75) miles west-northwest of the St. Louis Lambert International Airport. The Missouri River is approximately one-and-a-half (1.5) miles to the west of the site. Industrial properties are located on and adjacent to the site, and commercial and residential properties are located near its perimeter. The site's location is illustrated on **Figure 1**, along with the locations of local fire district facilities and hospitals.

The general layout of the site is illustrated on **Figure 2**. The site is divided into three Operable Units. OU-1 is the subject of this ERP and includes areas with radiologically impacted materials (RIM). OU-1 is comprised of the following areas:

- Radiological Area 1 (Area 1): This approximately 17.6-acre area is located in the eastern-to-northeastern portion of the site, immediately southwest of the site's main entrance from St. Charles Rock Road. Area 1 was associated with unregulated landfill operations conducted at the site prior to the commencement of state regulations in 1974. Radionuclides are present in and on the soils and waste materials that have become interspersed within the landfill matrix. The southwestern portion of Area 1 is overlain by 40 to 45 feet of more recent, non-RIM-containing waste materials (referred to as the "muffin top" or "mound"). These materials were placed above-grade between 2002 and 2004 in the North Quarry portion of the Bridgeton Landfill (see below). Due to the disposal of these more recent waste materials, some areas contaminated with RIM occur at depths of up to 85 feet in the southwestern portion of Area 1.
- Radiological Area 2 (Area 2): This approximately 41.8-acre area is located in the northwestern portion of the site. Area 2 was also associated with unregulated landfill operations conducted at the site prior to the commencement of state regulations in 1974. Radionuclides are present in and on soils and waste materials that have become interspersed within the landfill matrix.
- **Buffer Zone:** This approximately 1.8-acre strip of property is located immediately west-southwest of Area 2. The property was acquired by the landfill operator in 2001 after it was discovered that radiologically-impacted soils had eroded from Area 2 and onto the property.
- Lot 2A2 (Crossroads Properties, LLC): This approximately 3.6-acre privately-owned commercial property is located immediately west-northwest of the Buffer Zone and immediately southwest of the northern portion of Area 2. It has been determined that radiologically-impacted soils have also eroded from Area 2 and onto the Lot 2A2 property.

A Non-Combustible Cover (NCC) was installed over portions of OU-1 Area 1 and Area 2 (as well as the Buffer Zone) in 2016, with additional installation occurring in some steeply-sloped portions of Area 2 in 2018. The NCC installation was performed pursuant to the EPA's December 9, 2015 Unilateral Administrative Order (UAO) (EPA 2015). The NCC was installed over those portions of OU-1 where RIM was present at or near the ground surface. The cover design consists of a graded 8-in.-thick limestone gravel layer overlaying a non-woven geotextile. The extent of the NCC in Area 1 and Area 2 (including the Buffer Zone) is illustrated on **Figures 3** and **4**, respectively.

OU-2 includes those areas where RIM has not been identified. It is comprised of the following areas: a Closed Demolition Landfill in the northeastern portion of the site; an Inactive Sanitary Landfill in the western portion of the site; and a Former Active Sanitary Landfill, also known as Bridgeton Landfill, in the eastern and southern portion of the site. As noted above, waste materials were placed above-grade in the North Quarry portion of

Bridgeton Landfill, over the southwestern portion of what is now OU-1 Area 1. In accordance with the July 25, 2008 Record of Decision (ROD) for OU-2 (EPA 2008), EPA has deferred oversight of the Closed Demolition Landfill and Former Active Sanitary Landfill to the Missouri Department of Natural Resources (MDNR), while EPA remains the lead regulatory agency overseeing the remedy at the Inactive Sanitary Landfill.

Sitewide groundwater is being investigated as a separate Operable Unit, OU-3. A Remedial Investigation (RI) and Feasibility Study (FS) for OU-3 will be implemented pursuant to a February 6, 2019 Administrative Settlement Agreement and Order on Consent (ASAOC) (EPA 2019a).

Also included within the boundaries of the site are several structures and facilities that are not part of the waste disposal areas, including a solid waste transfer station, a leachate pre-treatment plant, and an asphalt batch plant.

Note that the emergency response procedures described in this ERP are applicable <u>only</u> to OU-1. The remainder of the site – including OU-2 and the other structures and facilities – is addressed in the Incident Management Plan (IMP) (Bridgeton Landfill 2019).

2.1 OIL STORAGE

There are no in-use containers within the boundaries of OU-1 with oil storage capacity of 55 gallons or greater. The only container with 55 gallons or more of oil storage capacity within the boundaries of OU-1 is an underground (i.e., completely buried) former diesel tank in Area 1 that is believed to be abandoned (i.e., permanently closed). In accordance with Title 40 of the Code of Federal Regulations (CFR) 112.19(d)(2)(i) and (5), the requirements of 40 CFR Part 112 are not applicable to OU-1, and a Spill Prevention, Control, and Countermeasures (SPCC) Plan is not required for OU-1.

If oil storage (e.g., for fuel and lubricants) is needed during the performance of RD/RA activities, this ERP may be revised as necessary to incorporate the required SPCC Plan.

3.0 EMERGENCY RESPONSE ROLES AND RESPONSIBILITIES

This section describes the OU-1 emergency response roles and responsibilities.

The individuals designated for each of the following emergency response roles – as well as their contact information – are specified on **Table 1**. For ease of access, the designated individuals and their contact information are also reiterated on the emergency response strategies presented in **Appendix A**.

3.1 OU-1 PROJECT COORDINATOR

The OU-1 Project Coordinator has overall responsibility for the implementation of the OU-1 RD/RA. For the RD, this individual will interface between the Environmental Protection Agency (EPA) and the OU-1 Respondents: Cotter Corporation (N.S.L.), Bridgeton Landfill, LLC, and the Department of Energy. Because the Respondents are still negotiating the Consent Decree and participation in the RA with EPA, the ERP and designated personnel may change at the RA stage, depending on the party(ies) conducting RA. The ERP will be revised with EPA's permission at the appropriate time to reflect any such changes.

3.2 EMERGENCY RESPONSE MANAGER

The OU-1 Emergency Response Manager has overall responsibility for emergency response at OU-1. This individual will report to the Project Coordinator and ensure that the procedures described in this ERP are followed. The Emergency Response Manager is responsible for initial emergency assessment and coordination of emergency response activities for OU-1. If the Emergency Response Manager is not available, one of the Alternates listed on **Table 1** may fulfill their responsibilities.

3.3 RADIATION SAFETY OFFICER

The OU-1 Radiation Safety Officer has responsibility for OU-1 radiation protection practices. This individual will report to the Emergency Response Manager and will coordinate with first responders and assist them with the implementation of radiation safety practices as necessary and appropriate during an emergency. If the Radiation Safety Officer is not available, the Alternate listed on **Table 1** may fulfill their responsibilities.

3.4 SUPPORT CONTACTS

The Support Contacts are personnel associated with Bridgeton Landfill. The OU-1 Emergency Response Manager may coordinate with the Support Contacts as needed to procure assistance and resources when responding to emergencies.

4.0 PLAN DEVELOPMENT AND REVISIONS

This section describes pre-emergency planning efforts and the ERP revision process for OU-1.

This ERP has been developed based in part on the current IMP (Bridgeton Landfill 2019) for the larger West Lake Landfill Superfund Site. The IMP was developed pursuant to the UAO (EPA 2015), which required that the facility prepare an IMP for OU-1. The IMP that was eventually prepared incorporated the entirety of the West Lake site, including OU-1, and was based in part on a plan originally developed for the Bridgeton Landfill (CEC 2015). The IMP was developed in close consultation with local and regulatory authorities, including emergency responders. Since it was first submitted on March 21, 2016, the IMP has been revised multiple times, based on changes to site conditions and activities, and on comments provided by the local and regulatory authorities.

Within 30 days of EPA Region 7 approval of this ERP, the plan will be submitted with a request for comments to the first responders listed on **Table 1**. The OU-1 Emergency Response Manager will coordinate with these first responders to ensure that their comments on the ERP are implemented. This may include a webinar, teleconference, or in-person meeting with the first responders at the Bridgeton Landfill office (or other agreed-upon venue) to review any submitted comments and discuss their implementation. The Emergency Response Manager will coordinate with EPA Region 7 regarding any such "post-approval" revisions based on comments from first responders.

Thereafter, the Emergency Response Manager will conduct routine ERP meetings with the first responders listed on **Table 1** and EPA Region 7. These meetings will be held at the Bridgeton Landfill office (or other agreed-upon venue) on – at minimum – a quarterly basis. During these meetings, the OU-1 first responders and Support Contacts listed on **Table 1** will convene to review site conditions, activities, emergencies from the past quarter (if any), and work planned for the next quarter. Any notes generated during an ERP meeting will be compiled and distributed to the invited regulatory and local authorities within 7 days of the meeting. Based on the result of the ERP meeting, changes will be incorporated into the ERP, if needed, and the revised plan then distributed to the OU-1 first responders and EPA Region 7 personnel within 30 days of the meeting. The Emergency Response Manager will have responsibility for distributing meeting notes and any ERP revisions.

ERP first responder meetings may be needed on a more frequent basis during RD and RA activities, depending on the nature of the activities and the rate at which site conditions or activities change. The OU-1 Emergency Response Manager will review the ERP on a quarterly basis to ensure the information in the document is still current.

It is anticipated that the ERP will be revised at certain points during the RD / RA process as the RD / RA activities are defined in greater detail and the party(ies) conducting RA are confirmed. Specifically, it is anticipated that major revisions to the ERP will likely be submitted concurrently with the following deliverables specified in the SOW:

- Design Investigation Work Plan (DIWP) (SOW Deliverable #8): The ERP will be updated to reflect the
 planned design investigation field activities described in the DIWP and its supporting deliverables, in
 particular the Field Sampling Plan (FSP) (SOW Deliverable #9) and Health and Safety Plan (HASP)
 (SOW Deliverable #11). The update will include a discussion of any design investigation activities that
 could potentially affect emergency responders.
- Site Wide Monitoring Plan (SWMP) (SOW Deliverable #14): The ERP will be updated to reflect the planned site monitoring field activities described in the SWMP. The update will include a discussion of any site monitoring activities that could potentially affect emergency responders.

- Pre-Final (90%) Remedial Design (90% RD) (SOW Deliverable #21): Per SOW Paragraph 3.8(b), the ERP will be updated to reflect the planned RA activities described in the 90% RD and its supporting deliverables, in particular the Operation & Maintenance Plan (0&M Plan) (SOW Deliverable #18). The update will include a discussion of any RA activities that could potentially affect emergency responders.
- Draft Final (100%) Remedial Design (100% RD) (SOW Deliverable #22): Per SOW Paragraph 3.9, the 100% RD will include final versions of all RD deliverables, including the ERP. The ERP will be updated at this point to reflect any EPA comments on the (90% RD).

As with the initial version of this ERP (see above) within 30 days of EPA approval of a revised version of the ERP, the plan will be submitted with a request for comments to the regulatory and local authorities listed on **Table 1**.

Note that the site's current IMP will be revised to reflect the fact that emergency response for OU-1 will be addressed by this ERP once it has been approved and formally adopted. The IMP will continue to address the remainder of the site, including OU-2 and the other structures and facilities. Note that the site will hold quarterly IMP review meetings with many of same first responders listed on **Table 1**, in accordance with the requirements of the IMP. During these IMP review meetings, Bridgeton Landfill personnel will discuss site conditions, activities, and incidents from the past quarter (if any) for the non-OU-1 portions of the site. For the convenience of the first responders, the quarterly ERP review meeting may occur immediately before or after the quarterly IMP meeting at the Bridgeton Landfill office (or other agreed-upon venue).

5.0 EMERGENCY ASSESSMENT AND RESPONSE STRATEGY

This section describes the general emergency assessment and response strategy procedures for OU-1.

5.1 INITIAL NOTIFICATION

Individuals who perform work within or near the boundaries of OU-1 – including OU-1 site workers, Bridgeton Landfill personnel, contractors, and visiting regulatory and local authorities – must notify the OU-1 Emergency Response Manager if they observe a potential emergency situation. The OU-1 Emergency Response Manager is responsible for initial emergency assessment and coordination of emergency response activities for OU-1. After any on-site personnel are notified of the existence of a potential emergency, the Emergency Response Manager will be the first individual notified. As indicated on the emergency response strategies presented **Appendix A**, Bridgeton Landfill Support Contacts will also be notified as a part of each response action.

Note: The exception is that during a Level 1 emergency (see "Emergency Assessment" below) the 9-1-1 operator will often be the first individual notified, per the emergency response strategies presented in **Appendix A.** In such instances, the OU-1 Emergency Response Manager will be notified immediately after notifying 9-1-1, as indicated on the appropriate strategies.

In the event of an emergency, the OU-1 Emergency Response Manager will be notified by phone. The OU-1 Emergency Response Manager's cell phone number will be posted on a gate placard at the Area 1 and Area 2 primary entrances (see "Site Entrances" under "Emergency Response Infrastructure and Equipment" below). In addition, laminated copies of **Table 1** and the emergency response strategies presented **Appendix A** – which include the cell phone number of the Emergency Response Manager – will be posted in both the Area 1 and Area 2 trailers. The forthcoming Health and Safety Plan (HASP) (SOW Deliverable #11) will also include the OU-1 Emergency Response Manager's contact information.

During their initial site / project orientation, workers performing activities within OU-1 (including contractors) will be instructed to notify the Emergency Response Manager via phone in the event of a potential emergency. Laminated copies of **Table 1** and the emergency response strategies presented **Appendix A** – which include the cell phone number of the Emergency Response Manager -- will be provided to OU-1 workers. One complete set of laminated copies will be provided for each field vehicle operating within OU-1. These laminated sets will be stored in the Area 1 and Area 2 trailers when not in use.

Local authorities will be instructed to notify the Emergency Response Manager via phone in the event of a potential OU-1 emergency. The local authorities will be involved in the initial development and regular review of this ERP (see "Plan Development and Revisions" above) and will accordingly be provided with copies of the most up-to-date version of the plan, including the contact information for the Emergency Response Manager.

Bridgeton Landfill personnel and other site personnel (including contractors) will also be instructed to notify the Emergency Response Manager via phone in the event of a potential OU-1 emergency. Copies of **Table 1** and the emergency response strategies presented in **Appendix A** will be posted at the Bridgeton Landfill office and laminated copies will be maintained for distribution to personnel as needed. Following EPA Region 7 approval of this ERP, the *Bridgeton Landfill Health and Safety Plan* (Bridgeton Landfill 2016) will also be updated to include notification instructions and contact information for the OU-1 Emergency Response Manager.

5.2 9-1-1 / SPILL LINE CALLS

If an individual associated with OU-1 or other portions of the site (e.g. Bridgeton Landfill) makes a call to 9-1-1, the EPA spill line, or MDNR spill line, that individual will also immediately notify the OU-1 Emergency Response Manager after notifying 9-1-1. If a call to 9-1-1 or a spill line is made by an individual outside OU-1 or other portions of the site (e.g., a member of the public), the 9-1-1 / spill line operator may notify the OU-1 Emergency Response Manager. During the development of the site's current IMP, the site requested of regulatory and local authorities that the 9-1-1 / spill line operator make this notification in such situations.

5.3 EMERGENCY ASSESSMENT

An emergency is a situation that is non-routine or anomalous and which poses a potential threat to the health and safety of on-site personnel or the public. The Emergency Response Manager (or their Alternate) is responsible for making the initial determination as to whether a given situation occurring at OU-1 rises to the level of an emergency.

The OU-1 Emergency Response Manager (or their Alternate) will be on call 24 hours a day, 7 days a week throughout the RD and RA phases of the project. In the event of an emergency, the Emergency Response Manager (or their Alternate) will be available to arrive at the site within approximately six hours or less of initial notification via phone (see "Initial Notification" above). A Support Contact for Bridgeton Landfill (i.e., the Bridgeton Landfill Division Manager or their Alternate) will also be on call 24 hours a day, 7 days a week throughout the RD and RA phases of the project. In the event of an emergency, the OU-1 Emergency Response Manager with notify and coordinate with this Support Contact by phone, per the emergency response strategies presented in **Appendix A**.

If the Emergency Response Manager (or their Alternate) is on site at the time a potential emergency is first identified, they will perform this initial assessment on site, supported by any relevant observations from other individuals. If the Emergency Response Manager (or their Alternate) is not on site at the time a potential emergency is first identified, they may perform this initial assessment from off-site based on information related to them by phone from the individual who performs the initial notification (see "Initial Notification" above). Even if the initial assessment is performed from off site, the Emergency Response Manager (or their Alternate) will mobilize to the site to provide further evaluation and coordination with emergency responders.

Once a determination has been made that an emergency is occurring at OU-1, the Emergency Response Manager will make an initial assessment of the emergency and classify its **category** and **severity**.

Four categories of potential emergencies have been identified for OU-1:

- Incoming Call to 9-1-1 / EPA Spill Line / MDNR Spill Line
- Personal Injury / Man Down / Personnel Contamination
- Sudden Waste Movement / Exposed Waste
- Surface Fire (Vegetation or Landfill Fire)

If site conditions or RD/RA activities change such that new categories of potential emergencies are applicable to OU-1, this ERP may be revised as necessary to reflect those categories.

The severity of the emergency is classified as Level 0 or Level 1:

• Level O Emergency: An emergency that can be addressed entirely by on-site support personnel and equipment, if requested by the Emergency Response Manager. In some cases, notification to local and regulatory authorities may be necessary.

• Level 1 Emergency: An emergency that requires the assistance of local authorities to address. May include emergencies with potential to harm the health or safety of on-site personnel.

5.4 EMERGENCY RESPONSE STRATEGY

Once the Emergency Response Manager has determined category and severity of the emergency, the appropriate response strategy will be selected, and the listed response actions will be performed in the designated order. A response strategy for each of the potential emergency categories listed above is presented in **Appendix A**. These response strategies include actions for Level 0 emergencies and actions for Level 1 emergencies (if applicable).

If more than one strategy is applicable to an emergency situation (e.g., the Sudden Waste Movement / Exposed Waste strategy and Surface Fire strategy for exposed burning waste), the most responsive strategy will be used.

The Emergency Response Manager has responsibility for ensuring that the response actions listed on the appropriate response strategy are performed, and that they are performed in the listed order. A checklist for the emergency assessment process and the implementation of emergency response strategies is presented in **Appendix B**.

In the event of a Level 1 emergency involving a response from local authorities (such as a sudden waste movement or surface fire), those authorities will designate an Incident Commander to represent them and to coordinate all local authority response activities. The Incident Commander will designate an on-site Command Center location -- outside the boundaries OU-1 -- from which response activities will be coordinated.

6.0 EMERGENCY NOTIFICATIONS

This section describes the emergency notification procedures applicable to OU-1.

Each of the emergency response strategies presented in **Appendix A** includes notification actions to local and regulatory authorities. These notification actions must be performed in the order listed on the response strategies. For ease of access, contact information for local and regulatory authorities is presented directly on the response strategies.

The Emergency Response Manager has responsibility for ensuring that the notification actions listed on the appropriate response strategy are performed, and that they are performed in the listed order.

Local and regulatory authorities – along with their contact information – are also listed on **Table 1** for reference.

6.1 HAZARDOUS SUBSTANCE RELEASE

Pursuant to the Title 42 of the United States Code (USC) § 9603, the National Response Center must be notified in the event of the release of a reportable quantity (as defined by 42 USC § 9602) of a hazardous substance. The National Response Center hotline number is listed on **Table 1**. Pursuant to 42 USC § 11004, the community emergency coordinator must also be notified in the event of an applicable release (per §11004(a)). Contact information for the St. Louis County Office of Emergency Management (OEM) is presented on **Table 1**, as well as on the applicable emergency response strategies in **Appendix A**.

In the event of such a hazardous substance release at, on, or from OU-1, the EPA Project Coordinator will also be immediately notified orally, in accordance with the requirements of SOW Paragraph 3.10(b). Contact information for the EPA Project Coordinator is presented on **Table 1**.

6.2 WASTE MATERIAL RELEASE

In the event of a waste material release at, on, or from OU-1, the EPA Project Coordinator will be immediately notified orally, in accordance with the requirements of SOW Paragraph 3.10(a). Contact information for the EPA Project Coordinator is presented on **Table 1**.

7.0 EMERGENCY RESPONSE INFRASTRUCTURE AND EQUIPMENT

This section describes site infrastructure and equipment that is pertinent to OU-1 emergency response activities.

The larger West Lake site – with the exception of the borrow area – is enclosed by fencing, and access to the site is controlled by Bridgeton Landfill. Access to OU-1 Area 1, Area 2, and the Buffer Zone is also further controlled. These OU-1 areas are enclosed by chain-link fences that are approximately six feet in height and topped with three strands of barbed wire. There are no permanent structures inside the OU-1 fence lines; only shipping containers (CONEX boxes) used for storage of dedicated site equipment and investigative soil/waste cores. The only substantial infrastructure within OU-1 consists of gravel access roads and the NCC. A septic holding tank for the Bridgeton Landfill site office is located just inside the northern fence line of Area 1, but this tank is accessed from outside Area 1. Area 1 and Area 2 each have an office trailer located just outside the fence line, near each area's respective primary entrance. Site features for Area 1 are illustrated on **Figure 3**. Site features for Area 2 and the Buffer Zone are illustrated on **Figure 4**.

There are presently no ongoing waste disposal activities occurring within OU-1. Workers only enter OU-1 to perform routine inspection and maintenance activities (e.g., inspection of the NCC) or to perform activities that are part of the OU-1 RD/RA.

7.1 SITE ENTRANCES

The entrances to Area 1 are illustrated on **Figure 3**. The primary foot and vehicle entrance to Area 1 is a 20-ft gate on the southern side of the area's fence line. There are also three emergency exits at various locations: a 6-ft gate at the northwest corner; and two 20-ft gates on the north side, accessible from the larger West Lake site's main entrance and parking area.

The entrances to Area 2 are illustrated on **Figure 4**. The primary foot and vehicle entrance to Area 2 is a 20-ft gate on the southeastern side of the area's fence line. There are also five emergency exits at various locations: a 12.5-ft gate near the southwestern corner, accessible from Boenker Lane / Old St. Charles Rock Road; a 20-ft gate at the southwest end of the Buffer Zone, accessible from Boenker Lane / Old St. Charles Rock Road; a 3-ft gate near the northern corner; a 3-ft gate on the northern side, accessible from St. Charles Rock Road; and a 6-ft gate near the northeastern corner.

Signage on the primary entrance gates for Area 1 and Area 2 indicates that there is no entry without proper authorization. The primary entrances and emergency exits for Area 1 and Area 2 are kept closed and padlocked when not in use. These padlocks keys are maintained by the OU-1 Radiation Safety Officer.

Emergency key boxes containing a spare padlock key will be maintained near each emergency exit in OU-1 Area 1 and Area 2. These key boxes will be located approximately 10 feet from the corresponding emergency exit, such that the key is accessible to an individual inside (but not outside) the OU-1 fence line. Key boxes will be installed and maintained such that they are clearly visible and clear of vegetation. In an emergency, the key stored in the emergency key box will allow evacuating individuals to unlock and exit through the corresponding emergency exit.

In the event of an emergency inside OU-1, any workers present will proceed to the primary entrance, if possible, and exit OU-1. If egress is not possible via the primary entrance, workers will proceed to the nearest

emergency exit, unlock it, and exit OU-1. The locations of the primary and secondary entrances to the larger West Lake Landfill Superfund Site are illustrated on **Figure 5**. Once workers have been evacuated from OU-1, they can be evacuated from the larger West Lake site at these locations, if necessary.

In the event of an emergency, first responders are expressly permitted to gain access to OU-1 using appropriate measures, such as cutting of gate locks.

7.2 ROADS

The emergency access road plan for the site is illustrated on **Figure 5**. This figure illustrates the names and locations of the site's native roads (i.e., roads not constructed on waste). Per first responder comments during past IMP revisions, it is understood that responders' preference is for emergency vehicles to be restricted to native roads for structural / stability reasons. **Figure 5** also distinguishes between roads that are passable to both tractor trailers and fire trucks and those that are passable only to fire trucks, based on turning radius modeling performed during the IMP development process. Signage installed around the site indicates the road names and delineates the native roads to provide emergency responders with a visual reference in the field.

There are no native roads within the boundaries of OU-1, but native road access is available at the perimeter of each OU-1 area, as illustrated on **Figure 5**. The nearest native road access to OU-1 Area 1 is along the area's northern fence line, which runs along the West Lake Landfill Superfund Site's main entrance and parking area. The nearest native road access to OU-1 Area 2 is at the area's primary entrance on the southeastern side of the area's fence line.

It is anticipated that site infrastructure – including roads within and around OU-1 – may change significantly at various points during the RD and RA phases of the project. As described under "Plan Development and Revisions" above, the ERP will be revised as the RD / RA activities are defined in greater detail in future SOW-required deliverables. It is anticipated that revisions to the site's road network will be addressed in the revised ERPs submitted concurrently with the Design Investigation Work Plan (SOW Deliverable #8) and Pre-Final (90%) Remedial Design (SOW Deliverable #21), and potentially in other revised versions of the plan, as necessary. As a part of these revisions, the planned road infrastructure will be reevaluated regarding their suitability for use by emergency response personnel and equipment.

7.3 FIRE HYDRANTS

The locations of the site's four on-site fire hydrants – as well as off-site fire hydrants near the site – are illustrated on **Figure 5**. Signage installed around the site indicates the on-site fire hydrant locations, to provide emergency responders with a visual reference in the field.

7.4 EMERGENCY COMMUNICATION AND MEET-UP LOCATIONS

In the event of an emergency, individuals will use their personal cell phones or, if needed, personal two-way radios for internal communication within OU-1 or for communication between individuals inside and outside OU-1. As noted under "Emergency Assessment" in the "Emergency Response Strategy and Assessment" section above, a Support Contact for Bridgeton Landfill (i.e., the Bridgeton Landfill Division Manager or their Alternate) will be on call 24 hours a day, 7 days a week throughout the RD and RA phases of the project. In the event of an emergency, this Support Contact can be contacted by phone for the purposes of coordinating access to particular site areas or equipment.

During the RD phase of the project, worker access to OU-1 will be overseen by the Radiation Safety Officer. The Radiation Safety Officer will be responsible for maintaining a sign-in / sign-out log for OU-1 Area 1 and Area 2. The Radiation Safety Officer will maintain possession of this log while work is being performed inside OU-1; the log will otherwise be kept at the Radiation Safety Officer's off-site office. Prior to entry, each OU-1 site worker will record their name, affiliation, cell phone number, area (1 or 2) and the current date and time in the log. Upon exiting OU-1, each worker will again record the current date and time. In the event of an emergency, the Emergency Response Officer (or their Alternate) will coordinate with the Radiation Safety Officer and refer to the sign-in / sign-out log to determine which workers are currently present within OU-1, and, if necessary, use the listed cell phone numbers to contact individual workers.

During an emergency, evacuated OU-1 workers will meet up at designated locations according to the following priority list:

- **Primary Emergency Meet-Up Location:** If possible, evacuated workers will meet up at the trailer immediately outside the Area 1 or Area 2 primary entrance (as appropriate).
- Secondary Emergency Meet-Up Location: If the applicable OU-1 trailer is inaccessible, evacuated workers will meet up at the Bridgeton Landfill office.
- Tertiary Emergency Meet-Up Location: If the Bridgeton Landfill office is inaccessible, the evacuated workers will meet up at the Forshaw Earth City Warehouse (13200 Corporate Exchange Drive), located off-site to the immediate south of the facility.

The emergency meet-up locations are indicated on **Figure 2**. Workers performing activities within OU-1 will be instructed as to these primary, secondary, and tertiary emergency meet-up locations during their initial site / project orientation.

It is anticipated that site communication, personnel tracking, and emergency meet-up procedures will change during the RA phase of the project. As described under "Plan Development and Revisions" above, the ERP will be revised as the RA activities are defined in greater detail in future SOW-required deliverables. It is anticipated that revisions to this section will be addressed in the revised ERP submitted concurrently with the Pre-Final (90%) Remedial Design (SOW Deliverable #21) – and potentially in other revised versions of the plan, as necessary.

7.5 ON-SITE EMERGENCY RESOURCES

Table 2 lists other on-site resources which are available for OU-1 emergency response activities, including heavy equipment, vehicles, personal protective equipment (PPE), and field instruments. The table distinguishes between 1) those resources available inside OU-1, in the office trailers located just outside the OU-1 fence lines, or in the OU-1 Radiation Safety Officer's off-site office; and 2) those resources which are affiliated with the larger West Lake site (including Bridgeton Landfill) but are available for emergency response activities in OU-1 if needed.

In the event of emergency in OU-1, support personnel affiliated with the Bridgeton Landfill can commit these resources and potentially provide emergency response support at the request of the Emergency Response Manager. These support personnel are listed along with their contact information on **Table 1**.

8.0 RADIATION SAFETY DURING EMERGENCIES

This section describes radiation safety practices that are applicable to OU-1 during emergencies. The Radiation Safety Officer (or their Alternate) will coordinate with first responders and assist them with the implementation of these radiation safety practices as necessary and appropriate during an emergency.

8.1 PRIORITIES DURING EMERGENCY RESPONSE

When an emergency occurs within the boundaries of OU-1, it is recommended that the following priorities be followed in the listed order during the performance of emergency response activities:

- 1. If possible, the emergency should be addressed from outside the boundaries of OU-1.
- 2. If entry into OU-1 is necessary to respond to an emergency, vehicles and personnel should, if possible, be confined to those portions of OU-1 covered by rock, i.e., gravel access roads and the NCC. The extent of the NCC in Area 1 and Area 2 (as well as the Buffer Zone) is illustrated on **Figures 3** and **4**, respectively.
- 3. If entry into portions of OU-1 that are not covered by rock is necessary, personnel should use the applicable PPE to the extent possible. The applicable PPE constitutes a Level D ensemble (work boots with steel toe and shank; high-visibility vest or shirt; hard hat; and safety glasses) plus the following equipment:
 - Tyvek coveralls;
 - Taped rubber gloves; and
 - Taped rubber booties

Tyvek coveralls, rubber gloves, and rubber boots are available in the office trailers located just outside the fence lines for OU-1 Area 1 and Area 2. The locations of the Area 1 and Area 2 trailers are illustrated on **Figure 3** and **Figure 4**, respectively. The Area 1 and Area 2 trailers are not locked, and emergency responders may freely access the PPE stored there. In addition, the OU-1 Radiation Safety Officer should be contacted to coordinate the provision of any additional PPE that may be needed by emergency response personnel who need to enter OU-1.

During an emergency, emergency responders and their equipment will not be subject to radiation safety frisking prior to entry into OU-1. The Radiation Safety Officer will coordinate the frisking and (if necessary) decontamination of emergency personnel and equipment during egress from OU-1, unless there is a life-threatening injury or other extenuating circumstance (e.g., an imminent need to evacuate the West Lake site).

Currently, frisking and decontamination procedures are performed in accordance with the requirements of the Radiation Safety Plan (RSP) prepared for the installation of the NCC (Auxier 2016). Frisking and decontamination procedures specific to the RD / RA will be detailed in the RSP that will be included in the forthcoming HASP (SOW Deliverable # 11). These procedures will supersede those devised and implemented for NCC installation and maintenance activities.

If an individual working inside OU-1 needs to be transported to a hospital during an emergency, their PPE will be removed prior to transport (if possible) and the Radiation Safety Officer will notify the hospital.

8.1.1 Emergencies Requiring Air Monitoring

If an emergency occurs in OU-1 that involves a potential for the release of radionuclide-containing dust, monitoring data obtained from the OU-1 air monitoring program will be collected and evaluated to assess the potential for a release and any impacts that may have been associated with such a release. These monitoring results will be provided to the EPA. Full details on the OU-1 air monitoring program are presented in the Air Monitoring, Sampling, and QA/QC Plan (Auxier 2014). Note that this plan is currently being revised in accordance with the EPA's August 15, 2019 comment letter. It is anticipated that this section of the ERP will be revised following approval of that revised plan, which will also be included as an appendix to the OU-1 Site Management Plan.

8.1.2 Emergencies Requiring Water Application

The NCC that has been constructed over surface RIM in OU-1 Area 1 and Area 2 includes a non-woven geotextile overlain by 8 in. of limestone gravel. Accordingly, surface RIM is not currently exposed in such a manner that allows for the transport of this material via surface runoff.

If emergency response activities performed in OU-1 involve the application of water that could run off the surface of OU-1 (e.g., the use of water to suppress a vegetation fire), best management practices (BMPs) such as the application of straw wattles will be used to mitigate the potential transport of small quantities of non-RIM-containing surface soils from OU-1 to other areas. In the event of extreme circumstances – e.g., emergency application of an extremely high volume of water that results in significant disturbance of the NCC – the site will implement appropriate and practicable corrective action measures to contain, divert, pump, and/or store potential runoff.

9.0 POST-RESPONSE REPORTING AND ACTIONS

This section describes the post-response reporting procedures for emergencies that occur in OU-1.

As soon as reasonably possible after an emergency and associated response activities, the OU-1 Emergency Response Manager will prepare a written Post-Response Report. This report will include, at minimum:

- The name, address, and contact information for the site;
- The date, time, category, severity, and general description of the type of emergency (e.g., fire injury, etc.);
- The name and quantity of any hazardous materials released as a result of the emergency, as well as the estimated quantity and disposition of any recovered materials;
- An assessment of any actual or potential hazards to human health or the environment resulting from the emergency;
- A description of the steps taken to respond to the emergency and to ensure the health and safety of onsite personnel and the public; and
- An initial evaluation of the potential cause of the emergency and recommendations for preventing such an event in the future, if possible.

Within 15 days of a Level 1 emergency, the Emergency Response Manager will submit the Post-Response Report to EPA and, as appropriate, other regulatory and local authorities. In the case of a Level 0 emergency, the Post-Response Report may be submitted to EPA and other regulatory and local authorities at the discretion of the Emergency Response Manager, or as circumstances may otherwise dictate. In all instances, a copy of the Post-Response Report will be retained at the Bridgeton Landfill office for five years.

In the event of a hazardous substance or waste material release from OU-1, the Post-Response Report will meet the EPA reporting requirements specified in SOW Paragraph 3.10(d).

If an emergency (or the response to an emergency) results in a breach in the NCC, the cover will be repaired to its original specifications unless otherwise approved by the EPA.

10.0 EMERGENCY RESPONSE TRAINING

This section describes the emergency response training that is applicable to OU-1.

Site workers that enter OU-1 must complete 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) training (including annual 8-hour refreshers) as specified in 29 CFR 1910.120. Site workers that enter OU-1 must also undergo General Employee Radiation Training (GERT) every two years. Contractors and other temporary workers can enter OU-1 without completing HAZWOPER and GERT training if they are accompanied by a worker who has completed the training. All workers that enter OU-1 should also read this ERP and familiarize themselves with its contents prior to beginning work inside the boundaries of OU-1.

It is recommended that emergency responders who enter OU-1 should also have completed 40-hour HAZWOPER training and radiation safety training that is comparable to GERT.

It is anticipated any additional health and safety training that is required for the OU-1 RD/RA process will be further defined in the HASP (Deliverable 11 on the RD Schedule presented in SOW Paragraph 6.2).

Appendix B - Emergency Assessment and Response Action Checklist

West Lake Landfill Superfund Site OU-1 Emergency Response Plan (ERP)

EMERGENCY ASSESSMENT AND RESPONSE ACTION CHECKLIST FOR EMERGENCY RESPONSE MANAGER

1. Make initial determination as to whether situation rises to the level of an emergency.

2. Classify category and severity (Level 0 or 1) of emergency.

3. Initiate appropriate response strategy (ERP Appendix A) and follow listed response actions in order given.

4. For emergency notification actions, collect the following information and communicate it to notified parties:

- Location of emergency in OU-1: Area 1, Area 2, or Buffer Zone and general direction (e.g., eastern side of Area 1)
- OU-1 site entrance closest to emergency
- Emergency category and severity (Level 0 or 1)

5. Account for site personnel.

6. Ensure that appropriate OU-1 site entrance and emergency exits are unlocked and open.

7. Determine if a hazardous substance or waste material release is occurring / has occurred, and takes steps to contain, if needed.

8. Resume normal operation with consent of Incident Commander.

2 Hazard(s) identification

· Classification of the substance or mixture

Skin Corr. 1A H314 Causes severe skin burns and eye damage.

Eye Dam. 1 H318 Causes serious eye damage.

· Label elements

• *GHS label elements* The product is classified and labeled according to the Globally Harmonized System (GHS). • *Hazard pictograms*

- · Signal word Danger
- · Hazard-determining components of labeling:
- Nitric Acid
- · Hazard statements
- Causes severe skin burns and eye damage.
- · Precautionary statements
- Do not breathe dusts or mists.

Wash thoroughly after handling.

- Wear protective gloves/protective clothing/eye protection/face protection.
- If swallowed: Rinse mouth. Do NOT induce vomiting.
- If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower.
- IF INHALED: Remove person to fresh air and keep comfortable for breathing.

If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a poison center/doctor.

Specific treatment (see on this label).

Printing date 10/20/2017

Reviewed on 10/20/2017

Trade name: Nitric Acid 1.0 Normal NIST Traceable Solution

(Contd. of page 5)

· Hazardous decomposition products: No dangerous decomposition products known.

11 Toxicological information

· Information on toxicological effects

• Acute toxicity:

• Primary irritant effect:

• on the skin: Strong caustic effect on skin and mucous membranes.

 \cdot on the eye:

Strong caustic effect.

Strong irritant with the danger of severe eye injury.

• Sensitization: No sensitizing effects known.

· Additional toxicological information:

The product shows the following dangers according to internally approved calculation methods for preparations: Corrosive

Irritant

Swallowing will lead to a strong caustic effect on mouth and throat and to the danger of perforation of esophagus and stomach.

· Carcinogenic categories

· IARC (International Agency for Research on Cancer)

None of the ingredients is listed.

· NTP (National Toxicology Program)

None of the ingredients is listed.

· OSHA-Ca (Occupational Safety & Health Administration)

None of the ingredients is listed.

12 Ecological information

- · Behavior in environmental systems:
- · Bioaccumulative potential No further relevant information available.
- · Mobility in soil No further relevant information available.
- Additional ecological information:

· General notes:

Water hazard class 2 (Self-assessment): hazardous for water

Do not allow product to reach ground water, water course or sewage system.

Must not reach bodies of water or drainage ditch undiluted or unneutralized.

Danger to drinking water if even small quantities leak into the ground.

Rinse off of bigger amounts into drains or the aquatic environment may lead to decreased pH-values. A low pH-value harms aquatic organisms. In the dilution of the use-level the pH-value is considerably increased, so that after the use of the product the aqueous waste, emptied into drains, is only low water-dangerous.

· Results of PBT and vPvB assessment

• **PBT:** Not applicable.

• **vPvB:** Not applicable.

• Other adverse effects No further relevant information available.

[·] Toxicity

[·] Aquatic toxicity: No further relevant information available.

[·] Persistence and degradability No further relevant information available.

13 Disposal considerations

· Waste treatment methods

· Recommendation:

Must not be disposed of together with household garbage. Do not allow product to reach sewage system.

- · Uncleaned packagings:
- Recommendation: Disposal must be made according to official regulations.
- Recommended cleansing agent: Water, if necessary with cleansing agents.

Percentages are by weight

SECTION 4 : First aid measures

Description of first aid measures

After inhalation: Move exposed individual to fresh air. Loosen clothing as necessary and position individual in a comfortable position. Seek medical advice if discomfort or irritation persists.

After skin contact: Wash affected area with soap and water. Rinse thoroughly. Seek medical attention if irritation, discomfort or vomiting persists.

After eye contact: Protect unexposed eye. Rinse/flush exposed eye(s) gently using water for 15-20 minutes. Remove contact lens(es) if able to do so during rinsing. Seek medical attention if irritation persists or if concerned.

After swallowing: Rinse mouth thoroughly. Do not induce vomiting. Have exposed individual drink sips of water. Seek medical attention if irritation, discomfort or vomiting persists.

Most important symptoms and effects, both acute and delayed:

Irritation, Nausea, Headache, Shortness of breath.;

Indication of any immediate medical attention and special treatment needed:

If seeking medical attention, provide SDS document to physician.

SECTION 5 : Firefighting measures

Extinguishing media

Suitable extinguishing agents: Carbon dioxide, dry chemical, foam, halon. If in laboratory setting, follow laboratory fire suppression procedures. Use appropriate fire suppression agents for adjacent combustible materials or sources of ignition

For safety reasons unsuitable extinguishing agents:

Special hazards arising from the substance or mixture:

Combustion products may include carbon oxides or other toxic vapors.

Advice for firefighters:

Protective equipment:

Additional information (precautions): Move product containers away from fire or keep cool with water spray as a protective measure, where feasible.

SECTION 6 : Accidental release measures

Personal precautions, protective equipment and emergency procedures:

Wear protective equipment. Use respiratory protective device against the effects of fumes/dust/aerosol. Keep unprotected persons away. Ensure adequate ventilation.Keep away from ignition sources. Protect from heat.Stop the spill, if possible. Contain spilled material by diking or using inert absorbent. Transfer to a disposal or recovery container.

Environmental precautions:

Prevent from reaching drains, sewer or waterway. Collect contaminated soil for characterization per Section 13

Methods and material for containment and cleaning up:

If in a laboratory setting, follow Chemical Hygiene Plan procedures.Collect liquids using vacuum or by use of absorbents. Place into properly labeled containers for recovery or disposal. If necessary, use trained response staff/contractor.

Reference to other sections:

Effective date : 12.14.2014

Hexane (n-Hexane)

SECTION 7 : Handling and storage

Precautions for safe handling:

Prevent formation of aerosols. Follow good hygiene procedures when handling chemical materials. Do not eat, drink, smoke, or use personal products when handling chemical substances. If in a laboratory setting, follow Chemical Hygiene Plan.Use only in well ventilated areas.Avoid splashes or spray in enclosed areas.

Conditions for safe storage, including any incompatibilities:

Store in a cool location. Provide ventilation for containers. Avoid storage near extreme heat, ignition sources or open flame. Store away from foodstuffs. Store away from oxidizing agents. Store in cool, dry conditions in well sealed containers. Keep container tightly sealed.

SECTION 8 : Exposure controls/personal protection

	my line
Control Parameters:	110-54-3, n-Hexan, ACGIH (TLV-TWA) 50 ppm TWA 110-54-3, n-Hexane, NIOSH (TWA) 50 ppm TWA; 180 mg/m3 TWA 110-54-3 , n-Hexane, OSHA (PELs) 500 ppm TWA; 1800 mg/m3 TWA 110-54-3 , n-Hexane, OSHA (STEL) 1000 ppm STEL; 3600 mg/m3 STEL 110-54-3, NIOSH , 1100 ppm IDLH (10% LEL)
Appropriate Engineering controls:	Emergency eye wash fountains and safety showers should be available in the immediate vicinity of use/handling.Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapor or mists below the applicable workplace exposure limits (Occupational Exposure Limits-OELs) indicated above.
Respiratory protection:	Not required under normal conditions of use. Use suitable respiratory protective device when high concentrations are present. Use suitable respiratory protective device when aerosol or mist is formed. For spills, respiratory protection may be advisable.
Protection of skin:	The glove material has to be impermeable and resistant to the product/ the substance/ the preparation being used/handled.Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.
Eye protection:	Safety glasses with side shields or goggles.
General hygienic measures:	The usual precautionary measures are to be adhered to when handling chemicals. Keep away from food, beverages and feed sources. Immediately remove all soiled and contaminated clothing. Wash hands before breaks and at the end of work. Do not inhale gases/fumes/dust/mist/vapor/aerosols. Avoid contact with the eyes and skin.

SECTION 9 : Physical and chemical properties

Appearance (physical	Form : liquid Colour :	Explosion limit lower:	Not Determined

Hazard pictograms (GHS-US)

Signal word (GHS-US)	: Danger
Hazard statements (GHS-US)	 Highly flammable liquid and vapor May be fatal if swallowed and enters airways Harmful if inhaled May cause respiratory irritation May cause drowsiness or dizziness May cause genetic defects Suspected of causing cancer Suspected of damaging fertility or the unborn child May cause damage to organs (hearing organ (loss of hearing), kidneys) through prolonged or repeated exposure
Precautionary statements (GHS-US)	 Obtain special instructions before use. Do not handle until all safety precautions have been read and understood.
Date of issue: 08/17/2015	EN (English US)

<u>.</u>		
		 Keep away from heat, hot surfaces, open flames, sparks No smoking. Keep container tightly closed. Ground/bond container and receiving equipment. Use explosion-proof electrical, lighting, ventilating equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Do not breathe mist, spray, vapors. Use only outdoors or in a well-ventilated area. Wear eye protection, flame retardant protective clothing, impermeable protective gloves. If swallowed: Immediately call a doctor, poison center. Do NOT induce vomiting. If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. If inhaled: Remove person to fresh air and keep comfortable for breathing. If exposed or concerned: Get medical advice/attention. Get medical advice/attention if you feel unwell. In case of fire: Use carbon dioxide (CO2), dry chemical, foam, water spray to extinguish. Store in a well-ventilated place. Keep cool. Store locked up. Dispose of contents and container in accordance with all local, regional, national and international regulations.
2.3.	Hazards not otherwise classified	
Other ha	azards not contributing to the ation	: Product can accumulate electrostatic charges that may cause fire by electrical discharges.
2.4. Not app	Unknown acute toxicity (GHS-US) licable	
2.5.	Additional information	
Based c	on conditions common to industrial	: May cause mild eve irritation.

workplace use of this product

May cause mild eye irritation. May cause mild skin irritation.

Section 3: Composition/inf	formation on ingredients		
3.1. Substance			
Name	: Ethylbenzene		
CAS No	: 100-41-4		
Formula	: C8H10		
Impurities and/or Stabilizing Add	itives which Contribute to the Classification:		
Name	CAS No	%	
Benzene (Impurity)	71-43-2	<= 0.2	
Toluene (Impurity)	108-88-3	<= 0.2	

3.2. Mixture

Not applicable

Section 4: First aid measures			
4.1. Description of first aid measures			
First-aid measures general	:	Never give anything by mouth to an unconscious person. If exposed or concerned: Get mediadvice/attention.	ical
First-aid measures after inhalation	:	Remove victim to fresh air and keep at rest in a position comfortable for breathing. Call a poison center/doctor/physician if you feel unwell.	
First-aid measures after skin contact	:	Rinse skin with water/shower. Remove/Take off immediately all contaminated clothing.	
First-aid measures after eye contact	:	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if prese and easy to do. Continue rinsing.	ent
First-aid measures after ingestion	:	Rinse mouth. Do NOT induce vomiting. Immediately call a poison center or doctor/physician.	
4.2. Most important symptoms and effect	cts,	both acute and delayed	
Symptoms/injuries	:	May cause genetic defects. Suspected of damaging fertility or the unborn child. Causes damage to organs.	
Symptoms/injuries after inhalation	:	May cause drowsiness or dizziness. May cause respiratory irritation.	
Symptoms/injuries after skin contact	:	May cause mild skin irritation.	
Symptoms/injuries after eye contact	:	May cause mild eye irritation.	
Date of issue: 08/17/2015	ł	EN (English US) 2	2/9

Safety Data Sheet	
Symptoms/injuries after ingestion	: May be fatal if swallowed and enters airways.
Chronic symptoms	: May cause cancer. May cause genetic defects.
4.3. Indication of any immediate medical a	attention and special treatment needed
No additional information available	
Section 5: Firefighting measures	
5.1. Extinguishing media	
Suitable extinguishing media	: Foam. Dry powder. Carbon dioxide. Water spray. Sand.
Unsuitable extinguishing media	: Do not use a heavy water stream.
5.2. Special hazards arising from the cher	nical
Fire hazard	: Highly flammable liquid and vapor.
Explosion hazard	: May form flammable/explosive vapor-air mixture.
5.3. Advice for firefighters	
Firefighting instructions	: Use water spray or fog for cooling exposed containers. Exercise caution when fighting any chemical fire. Prevent fire-fighting water from entering environment.
Protection during firefighting	: Do not enter fire area without proper protective equipment, including respiratory protection.
Section 6: Accidental release measur	es
6.1. Personal precautions, protective equi	ipment and emergency procedures
Emergency procedures for non-emergency personnel	: Evacuate unnecessary personnel.
Emergency procedures for emergency responders	: Ventilate area.
6.2. Methods and material for containmen	it and cleaning up
For containment	: Take up liquid spill into absorbent material, e.g.: sand, earth, vermiculite. Do not allow material to contaminate ground water system.
Methods for cleaning up	: Soak up spills with inert solids, such as clay or diatomaceous earth as soon as possible. Collect spillage. Store away from other materials.

6.3. Reference to other sections

See section 8. Exposure controls/personal protection.

Sectio	n 7: Handling and storage	
7.1.	Precautions for safe handling	
Addition	al hazards when processed	: Handle empty containers with care because residual vapors are flammable.
Precauti	ons for safe handling	: Wash hands and other exposed areas with mild soap and water before eating, drinking or smoking and when leaving work. Provide good ventilation in process area to prevent formation of vapor. No bare lights. No smoking. Use only non-sparking tools. Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Eliminate all ignition sources if safe to do so. Avoid breathing vapors, mist, spray. Use only outdoors or in a well-ventilated area.
7.2.	Conditions for safe storage, including	any incompatibilities
Technica	al measures	Proper grounding procedures to avoid static electricity should be followed. Ground/bond container and receiving equipment. Use explosion-proof electrical, lighting, ventilating equipment. All efforts should be made to prevent any leaks or spills. Storage tanks should be engineered to prevent contact with water resources, as this material could contaminate the water resources. Surface spills can reach groundwater through porous soil or cracked surfaces. The storage tanks should be monitored regularly for leaks. Where spills or leaks are possible, a comprehensive response plan should be developed and implemented.
Storage	conditions	: Keep only in the original container in a cool, well ventilated place away from : flames, heat sources, Direct sunlight, sparks. Keep in fireproof place. Keep container tightly closed.
Incompa	atible materials	: Sources of ignition. Direct sunlight. Heat sources.

Section 8: Exposure controls/personal protection

8.1. Occupational Exposure Limits

The following constituents are the only constituents of the product which have a PEL, TLV, or other recommended exposure limit. At this time, the other constituents have no known exposure limits.

Ethylbenzene (100-41-4)		
USA ACGIH	ACGIH TWA (ppm)	20 ppm

Safety Data Sheet

USA OSHA	OSHA PEL (TWA) (mg/m³)	435 mg/m³
USA OSHA	OSHA PEL (TWA) (ppm)	100 ppm
Benzene (71-43-2)		
USA ACGIH	ACGIH TWA (ppm)	0.5 ppm
USA ACGIH	ACGIH STEL (ppm)	2.5 ppm
USA OSHA	OSHA PEL (TWA) (ppm)	1 ppm
USA OSHA	OSHA PEL (STEL) (ppm)	5 ppm
USA OSHA	Remark (OSHA)	(see 29 CFR 1910.1028)
Toluene (108-88-3)		
USA ACGIH	ACGIH TWA (ppm)	20 ppm
USA OSHA	OSHA PEL (TWA) (ppm)	200 ppm
USA OSHA	OSHA PEL (Ceiling) (ppm)	300 ppm
USA OSHA	Remark (OSHA)	See 29 CFR 1910.1000 TABLE Z-2.
00 E ()		· · · · · · · · · · · · · · · · · · ·

8.2. Exposure controls Appropriate engineering controls

: Ensure adequate ventilation

Personal protective equipment

•	Linsule adequate ventilation.
:	Avoid all unnecessary exposure.

Hand protection

Eye protection

: Impermeable protective gloves. Choosing the proper glove is a decision that depends not only on the type of material, but also on other quality features, which differ for each manufacturer. Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough. The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.

- : Chemical goggles or safety glasses.
- : Wear fire/flame resistant/retardant clothing.

: Do not eat, drink or smoke during use.

- : An approved organic vapor respirator/supplied air or self-contained breathing apparatus must be used when vapor concentration exceeds applicable exposure limits.
- Other information

Respiratory protection

Skin and body protection

Section 9: Physical and chemical properties

9.1. Information on basic physical and	chemical properties
Physical state	: Liquid
Appearance	: Clear, colorless, volatile liquid.
Color	: Colorless.
Odor	: Characteristic. Aromatic. Sweet.
Odor threshold	: No data available
рН	: Not applicable
Relative evaporation rate (butyl acetate=1)	: No data available
Relative evaporation rate (ether=1)	: < 94
Melting point	: -94.9 °C
Freezing point	: -94.9 °C
Boiling point	: 136 °C
Flash point	: 21 (21 - 23) °C
Auto-ignition temperature	: 432 °C
Decomposition temperature	: No data available
Flammability (solid, gas)	: No data available
Vapor pressure	: 9.3 mm Hg @ 25°C
Relative vapor density at 20 °C	: 3.7 Air =1
Relative density	: 0.9
Solubility	: Water: 0.2 g/l Organic solvent:100 %
Log Kow	: 2.2 - 2.7
Viscosity, kinematic	: 0.64 cSt @ 40°C
Viscosity, dynamic	: No data available
Explosive limits	: 1 - 7 vol %

Safety Data Sheet

Callety Bata Chicot	
9.2. Other information	
VOC content	: 100 %
Section 10: Stability and reactivity	
10.1. Reactivity	
Flammable liquid and vapor.	
10.2. Chemical stability	
Stable at ambient temperature and under normal	conditions of use.
10.3. Possibility of hazardous reactions	
Under normal conditions of storage and use, haz	ardous polymerization will not occur.
10.4. Conditions to avoid	
Direct sunlight. Extremely high or low temperatur	res. Open flame.
10.5. Incompatible materials	
Strong oxidizing agents.	
10.6. Hazardous decomposition products	
Hazardous decomposition products formed unde	r fire conditions: carbon monoxide, carbon dioxide, toxic fumes.
Section 11: Toxicological informatio	n
11.1. Information on toxicological effects	
Likely routes of exposure	: Inhalation. Ingestion. Skin and eye contact.
Acute toxicity	: Inhalation:vapor: Harmful if inhaled.
Ethylbenzene (100-41-4)	1 and 1
LD50 oral rat	3500 mg/kg
LD50 dermal rabbit	15354 mg/kg
LC50 inhalation rat	17.2 mg/l/4h
Skin corrosion/irritation	: Not classified
Serious eye damage/irritation	: Not classified
Respiratory or skin sensitization	: Not classified
Germ cell mutagenicity	: May cause genetic defects.
	Classification as a Mutagen 1B is due to the benzene content of this material.
	: Suspected of causing cancer.
Ethylbenzene (100-41-4)	-
Additional information	IARC has evaluated ethylbenzene as 2B, possibly carcinogenic to humans. In IARC's evaluation, it states that:
	"There is inadequate evidence in humans for the carcinogenicity of ethylbenzene. There is sufficient evidence in experimental animals for the carcinogenicity of ethylbenzene."
	IARC also notes that ethylbenzene typically contains, $0.1 - 0.3$ wt % benzene, similar to the benzene content of this product (≤ 0.2 wt %). Benzene is a known human carcinogen.
	Additionally, the types of cancers observed in experimental animals exposed to ethylbenzene are not the same as the types of cancers known to be caused by exposure to benzene.
	There is inadequate evidence that exposure to ethylbenzene containing low levels (≤ 0.2 wt %) of benzene causes carcinogenicity in humans, while there is sufficient evidence that exposure to ethylbenzene causes carcinogenicity in experimental animals. Therefore, ethylbenzene has been US-GHS classified as Carcinogen 2.
Ethylbenzene (100-41-4)	
IARC group	2B - Possibly carcinogenic to humans
Benzene (71-43-2)	4. Consistentia to humana
Notional Taxicale str Drammer (NTD) Obstra	I - Carcinogenic to numans
Inational Toxicology Program (NTP) Status	

OSHA Carcinogen Status Additional information In OSHA Specifically Regulated Carcinogen list Benzene is a known human carcinogen and is known to cause acute myeloid leukemia & myelodysplastic syndrome (disease that affects the bone marrow and blood) in

Safety Data Sheet

	humans who have been repeatedly exposed to benzene.	
Toluene (108-88-3)		
IARC group	3 - Not classifiable	
Reproductive toxicity	: Suspected of damaging fertility or the unborn child.	
	Based on animal studies, exposure to high levels of ethylbenzene may cause developmental effects (decreases in growth and increased skeletal variations).	
Specific target organ toxicity (single exposure)	: May cause respiratory irritation. May cause drowsiness or dizziness.	
Specific target organ toxicity (repeated exposure)	: May cause damage to organs (hearing organ (loss of hearing), kidneys) through prolonged or repeated exposure.	
Aspiration hazard	: May be fatal if swallowed and enters airways.	
Section 12: Ecological information		

12.1. Toxicity Ecology - general

: Harmful to aquatic life with long lasting effects.

12.2. Persistence and degradability

No additional information available

12.3. Bioaccumulative potential

Ethylbenzene (100-41-4)	
Log Pow	3.6
Log Kow	2.2 - 2.7

12.4. Mobility in soil

No additional information available

12.5. Other adverse effects

Other information

: Avoid release to the environment.

Section 13: Disposal considerations		
13.1. Waste treatment methods		
Waste disposal recommendations	Dispose in a safe manner in accordance with local/national regulations. Dispose of contents and container in accordance with all local, regional, national and international regulations.	
Additional information	: Handle empty containers with care because residual vapors are flammable.	
Ecology - waste materials	: Avoid release to the environment. Hazardous waste due to toxicity.	

Section 14: Transport information

US Transport (DOT) for Bulk Shipments (Non-Bulk Shipments May Differ)	
Transport document description	: UN1175, Ethylbenzene, 3, PGII
UN or NA Number	: UN1175
Proper Shipping Name	: Ethylbenzene
Primary Hazard Class	: 3 - Flammable liquid
Packing Group	: PGII
Reportable Quantities (RQ)*	: Ethylbenzene 1000 lbs (454 kg), Benzene 10 lbs (4.54 kg), Toluene 1000 lbs (454 kg)
*It is the shipper's responsibility to determine whether an RQ must be reported for each individual shipment.	
Hazard labels	
Emergency Response Guide (ERG) Number	: 130
Transport by sea (IMDG)	
Transport document description	: UN1175, ETHYLBENZENE, 3, PGII
UN Number	: UN1175
Proper Shipping Name	: Ethylbenzene
Primary Hazard Class	: 3 - Flammable liquids
Packing Group	: PGII

Safety Data Sheet

Hazard labels (IMDG)

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code	: Product Name: Ethylbenzene Pollution Category: Y Ship Type: 2
Cargo name listed in 46 CFR 30.25, Table 30.25-1	: Ethylbenzene
Cargo name listed in 46 CFR 153, Table 1	: Ethylbenzene
Air transport (IATA)	
Transport document description	: UN1175, Ethylbenzene, 3, PGII
UN Number	: UN1175
Proper Shipping Name	: Ethylbenzene
Primary Hazard Class	: 3 - Flammable Liquids
Packing Group	: PGII
Hazard labels (IATA)	

Section 15: Regulatory information

15.1. US Federal regulations

EPA TSCA Status

All components of this product are listed or excluded from listing on the United States Environmental Protection Agency Toxic Substances Control Act (TSCA) inventory.

SARA Section 313 Supplier Notification

This product contains the following toxic chemical or chemicals subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR 372:

CAS number	Chemical name	Concentration
100-41-4	Ethylbenzene	99.5 - 100%
71-43-2	Benzene	<= 0.2%

This information must be included in all Safety Data Sheets that are copied and distributed for this product. For additional information, see 40 CFR §372.45 Notification About Toxic Chemicals.

SARA Section 311/312 Hazard Classes

Fire hazard Acute health hazard Chronic health hazard

15.2. International regulations

CANADA

Safety Data Sheet

US OSHA LABEL as specified under 29 CFR §1910.1200 (f)

Ethylbenzene

Total Petrochemicals & Refining USA, Inc. PO Box 674411 Houston, TX 77267-4411 USA Tel. 713-483-5000 or 1-877-871-2709

Danger

Highly flammable liquid and vapor May be fatal if swallowed and enters airways Harmful if inhaled May cause respiratory irritation May cause drowsiness or dizziness May cause genetic defects Suspected of causing cancer Suspected of damaging fertility or the unborn child May cause damage to organs (hearing organ (loss of hearing), kidneys) through prolonged or repeated exposure
Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Keep away from heat, hot surfaces, open flames, sparks No smoking. Keep container tightly closed. Ground/bond container and receiving equipment. Use explosion-proof electrical, lighting, ventilating equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Do not breathe mist, spray, vapors. Use only outdoors or in a well-ventilated area. Wear eye protection, flame retardant protective clothing, impermeable protective gloves. If swallowed: Immediately call a doctor, poison center. Do NOT induce vomiting. If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. If inhaled: Remove person to fresh air and keep comfortable for breathing. If exposed or concerned: Get medical advice/attention. Get medical advice/attention if you feel unwell. In case of fire: Use carbon dioxide (CO2), dry chemical, foam, water spray to extinguish. Store in a well-ventilated place. Keep cool. Store locked up. Dispose of contents and container and accordance with all local, regional, national and international regulations.
Supplemental Information
Product can accumulate electrostatic charges that may cause fire by electrical discharges.

Version : 2.2 Date of issue : August 17, 2015

ALTERATION OF THIS DOCUMENT IS STRICTLY PROHIBITED.

Safety Data Sheet for Radium-226

Section 1: Identification - Radium-226 (Ra-226, ²²⁶Ra)

<u>Section 2: Hazard Identification</u> - Radium-226 can present an internal and external radiation hazard. Solid sources of radium-226 pose little external hazard, but decay products of radium-226 such as radium-222 can be a slight external hazard. Liquid or gas sources of radium-226 can be an internal and external hazard.

<u>Section 3: Composition/Information on Ingredients</u> – The half-life of radium-226 is 1622 years. Radium-226 emits alpha particles that can travel about 6.5 centimeters. It also emits low-energy gamma radiation.

<u>Section 4: First-aid Measures</u> – In the event of skin contact, wash with soap and water. Blot the skin dry; do not scrub as doing so may damage the skin. For inhalation or ingestion, cover mouth while seeking clean air. Contact medical professionals for guidance on how to remove materials from the body and to properly assess dose received.

<u>Section 5: Fire-fighting Measures</u> – A self-contained breathing apparatus used by fire fighters is sufficient for preventing inhalation; decontaminate after retreating from the source.

<u>Section 6: Accidental Release Measures</u> - Gas and liquid forms of radium-226 should only be used in HEPA filtered fume hoods. If a capsule or vial that contains radium-226 is broken, secure the room or area to prevent exposure or contamination. Contact you Safety office, Radiation Safety Officer, and the Health Physics Division at the Army Public Health Center for further guidance.

<u>Section 7: Handling and Storage</u> - Radium-226 should be stored in areas approved by a radiation safety officer and labelled appropriately. Personnel who handle it should have radiation safety training. Food or beverages should not be consumed where radium-226 is used. Store items that contain radium-226 in a dry, well-ventilated place. The AN/PDR-77 RADIAC set can detect radium-226 with a pancake probe or an alpha probe. These probes effectively indicate presence/absence, and they can detect contamination.

<u>Section 8: Exposure Controls/Personal Protection</u> - Radium-226 should be handled as little as possible. This source should be kept as far away from the body as is practical.

<u>Section 9: Physical and Chemical Properties</u> - Radium-226 can be found in such medical devices as teletherapy units and brachytherapy needles. It can also be found as paint on clock dials and on gauges in tanks and aircraft. All of these sources are solid and pose no internal hazard as long as they are not damaged. Radium-226 is the source of radon-222. Radon-222 is a radioactive inert gas that can collect in areas with limited ventilation, such as basements and mines.

<u>Section 10: Stability and Reactivity</u> – Radium is very reactive with most non-metals, including oxygen, fluorine, chlorine, and nitrogen. Chemical reactions with any isotope of radium may result in radium gas, which can be an inhalation hazard.

Army Public Health Center, Health Physics Program 5158 Blackhawk Road, Aberdeen Proving Ground, Maryland 21010-5403 410-436-3502 or DSN 584-3502 <u>http:/phc.amedd.army.mil</u> **Approved for public release, distribution unlimited.** Section 11: Toxicological Information -

High-energy short-lived daughter products: radon-222, polonium-218, astatine-218, radon-218, bismuth-214, polonium-214, thallium-214, lead-210, bismuth-210, polonium-210. Specific Activity: 1.0 Ci/g Dose, ingestion: 2.8E-7 Sv/Bq ($f_1 = 0.2$) Dose, inhalation: 3.6E-7 Sv/Bq (Type F, $f_1 = 0.3$) 3.5E-6 Sv/Bq (Type M, $f_1 = 0.1$) 9.5E-6 Sv/Bq (Type S, $f_1 = 0.01$) Gamma Constant: 3.274E-6 mSv h⁻¹ per MBq at 1 meter (Does not include progeny) For more information, see "Health Physics and Radiological Health, 4th Edition" by Thomas E. Johnson and Brian K. Birky, (Lippincott Williams & Wilkins, 2012)

Section 12: Ecological Information - None

<u>Section 13: Disposal Considerations</u> - Radioactive materials cannot be disposed of as regular trash. The US Army Joint Munitions Command manages the disposal of radioactive materials in the Army. Contact the radiation waste experts at Rock Island Arsenal Garrison for radioactive disposal from contact numbers found at <u>https://www.usagria.army.mil/about/phonebook.aspx</u>.

<u>Section 14: Transportation Information</u> - When shipping radioactive materials, consult 49 CFR (Code of Federal Regulations) 173 for instructions. Packaging and shipping radioactive materials requires Department of Transportation certified training.

<u>Section 15: Regulatory Information</u> – 10 CFR is the federal regulation for use, storage, and disposal of licensed radioactive materials under U.S. Nuclear Regulatory Commission jurisdiction.

<u>Section 16: Other Information</u> - Contact your command Safety office or the Health Physics Division at Army Public Health Center (410-436-3502) for more information on regulations or emergencies relating to use of radioactive materials in the U.S. Army.

SAFETY DATA SHEET

Creation Date 21-Sep-2009

Revision Date 25-Apr-2019

Revision Number 4

1. Identification

Product Name Vinyl acetate, stabilized

Cat No. :

CAS-No108-05-4SynonymsEthenyl ethanoate; Vinyl A monomer; Ethenyl acetateRecommended UseLaboratory chemicals.Uses advised againstFood, drug, pesticide or biocidal product use

2. Hazard(s) identification

Classification

This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

Flammable liquids	Category 2
Acute Inhalation Toxicity - Vapors	Category 4
Carcinogenicity	Category 2
Specific target organ toxicity (single exposure)	Category 3
Target Organs - Respiratory system.	

Label Elements

Signal Word Danger

Hazard Statements Highly flammable liquid and vapor Harmful if inhaled Suspected of causing cancer May cause respiratory irritation

Precautionary Statements Prevention

Obtain special instructions before use Do not handle until all safety precautions have been read and understood

Use personal protective equipment as required

Keep away from heat/sparks/open flames/hot surfaces. - No smoking

Keep container tightly closed

Ground/bond container and receiving equipment

Use explosion-proof electrical/ventilating/lighting/equipment

Use only non-sparking tools

Take precautionary measures against static discharge

Avoid breathing dust/fume/gas/mist/vapors/spray

Use only outdoors or in a well-ventilated area

Response

IF exposed or concerned: Get medical attention/advice

Call a POISON CENTER or doctor/physician if you feel unwell

Inhalation

IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing

Call a POISON CENTER or doctor/physician if you feel unwell

Skin

IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower

Wash contaminated clothing before reuse

Eyes

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing **Ingestion**

Do NOT induce vomiting

Fire

In case of fire: Use CO2, dry chemical, or foam for extinction

Storage

Store locked up

Store in a well-ventilated place. Keep cool

Disposal

Dispose of contents/container to an approved waste disposal plant

Hazards not otherwise classified (HNOC)

None identified

3. Composition/Information on Ingredients

Component	CAS-No	Weight %
Vinyl acetate	108-05-4	> 99
Hydroquinone	123-31-9	< 0.01

4. First-aid measures

Eye ContactRinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Get
medical attention.Skin ContactWash off immediately with plenty of water for at least 15 minutes. Obtain medical attention.

Inhalation	Remove from exposure, lie down. Move to fresh air. If not breathing, give artificial respiration. Obtain medical attention.	
Ingestion	Do not induce vomiting. Never give anything by mouth to an unconscious person. Obtain medical attention.	
Most important symptoms and effects Notes to Physician	Breathing difficulties. Inhalation of high vapor concentrations may cause symptoms like headache, dizziness, tiredness, nausea and vomiting Treat symptomatically	
	5. Fire-fighting measures	
Suitable Extinguishing Media	Carbon dioxide (CO 2). Dry chemical. Use water spray to cool unopened containers. Cool closed containers exposed to fire with water spray.	
Line anite la la Fratia annie laine a Mardia		

Unsuitable Extinguishing Media	No information available
Flash Point	-8 °C / 17.6 °F
Method -	No information available
Autoignition Temperature	385 °C / 725 °F
Explosion Limits	
Upper	14.0%
Lower	2.6%
Sensitivity to Mechanical Impact	t No information available
Sensitivity to Static Discharge	No information available

Specific Hazards Arising from the Chemical Flammable. Vapors may form explosive mixtures with air. Vapors may travel to source of ignition and flash back. Containers may explode when heated. Vapors may form explosive mixtures with air.

Hazardous Combustion Products

Carbon monoxide (CO) Carbon dioxide (CO₂)

Protective Equipment and Precautions for Firefighters

As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

|--|

Health 2	Flammability 3	Instability 2	Physical hazards N/A
	6. Accidental re	lease measures	
Personal Precautions	Ensure adequate ventilation ignition. Take precautional	on. Use personal protective equ ry measures against static disc	ipment. Remove all sources of harges.
Environmental Precautions	See Section 12 for additional ecological information. Do not flush into surface water or sanitary sewer system.		
Methods for Containment and C Up	lean Soak up with inert absorbe sawdust). Remove all sour equipment. Keep in suitab	ent material (e.g. sand, silica ge rces of ignition. Use spark-proc le, closed containers for dispos	કો, acid binder, universal binder, if tools and explosion-proof ક્વી.
	7 Handling	and storage	

	/. Handing and storage
Handling	Wear personal protective equipment. Ensure adequate ventilation. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Take precautionary measures against static discharges. Use only in area provided with appropriate exhaust ventilation. Use explosion-proof equipment. Use only non-sparking tools. Keep away from open flames, hot surfaces and sources of ignition. To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded.

Storage

Keep in a dry place. Keep container tightly closed. Keep away from heat and sources of ignition. Keep away from direct sunlight. Refrigerator/flammables. May form explosive peroxides on prolonged storage.

8. Exposure controls / personal protection

Exposure Guidelines

Component	ACGIH TLV	OSHA PEL	NIOSH IDLH	Mexico OEL (TWA)

		(Vacated) STEL: 20 ppm		
		(Vacated) STEL: 60 mg/m ³		
Hydroquinone	TWA: 1 mg/m ³	(Vacated) TWA: 2 mg/m ³	IDLH: 50 mg/m ³	TWA: 1 mg/m ³
		TWA: 2 mg/m ³	Ceiling: 2 mg/m ³	

<u>Legend</u>

ACGIH - American Conference of Governmental Industrial Hygienists **OSHA** - Occupational Safety and Health Administration **NIOSH IDLH:** The National Institute for Occupational Safety and Health Immediately Dangerous to Life or Health

Engineering Measures	Use explosion-proof electrical/ventilating/lighting/equipment. Ensure adequate ventilation, especially in confined areas. Ensure that eyewash stations and safety showers are close to the workstation location.
Personal Protective Equipment	
Eye/face Protection	Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.
Skin and body protection	Wear appropriate protective gloves and clothing to prevent skin exposure.
Respiratory Protection	Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.
Hygiene Measures	Handle in accordance with good industrial hygiene and safety practice.

9. Physical and chemical properties				
Physical State	Liquid			
Appearance	Clear			
Odor	sweet

12. Ecological information

Ecotoxicity

This product contains the following substance(s) which are hazardous for the environment. Contains a substance which is:. Harmful to aquatic organisms. The product contains following substances which are hazardous for the environment.

Component	Freshwater Algae	Freshwater Fish	Microtox	Water Flea
Vinyl acetate	Not listed	LC50: = 14 mg/L, 96h static (Pimephales promelas) LC50: 15.04 - 21.54 mg/L, 96h static (Lepomis macrochirus) LC50: 26.1 - 36.63 mg/L, 96h static (Poecilia reticulata)	EC50 = 2080 mg/L 5 min	EC50: = 52 mg/L, 24h (Daphnia magna)
Hydroquinone	EC50: = 0.335 mg/L, 72h (Pseudokirchneriella subcapitata) EC50: = 13.5 mg/L, 120h (Desmodesmus subspicatus)	LC50: = 0.17 mg/L, 96h (Brachydanio rerio) LC50: = 0.044 mg/L, 96h flow-through (Oncorhynchus mykiss) LC50: 0.1 - 0.18 mg/L, 96h static (Pimephales promelas) LC50: = 0.044 mg/L, 96h flow-through (Pimephales promelas)	EC50 = 0.038 mg/L 15 min EC50 = 0.0382 mg/L 30 min EC50 = 0.042 mg/L 5 min EC50 = 23.75 mg/L 60 min	EC50: = 0.29 mg/L, 48h (Daphnia magna)

Persistence and Degradability

Persistence is unlikely based on information available.

Bioaccumulation/ Accumulation

Mobility

Will likely be mobile in the environment due to its volatility.

No information available.

Component	log Pow
Vinyl acetate	0.73
Hydroquinone	0.5

13. Disposal considerations

Waste Disposal Methods

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. Chemical waste generators must also consult local, regional, and national hazardous waste regulations to ensure complete and accurate classification.

2. Hazard(s) identification

Classification

This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

Flammable liquids Serious Eve Damage/Eve Irritation	Category 2 Category 2
Specific target organ toxicity (single exposure)	Category 3
Specific target organ toxicity - (repeated exposure)	Category 2

Label Elements

Signal Word Danger

Hazard Statements

Highly flammable liquid and vapor Causes serious eye irritation May cause drowsiness or dizziness May cause damage to organs through prolonged or repeated exposure

Precautionary Statements

Prevention

Wash face, hands and any exposed skin thoroughly after handling

Do not breathe dust/fume/gas/mist/vapors/spray

Use only outdoors or in a well-ventilated area

Keep away from heat/sparks/open flames/hot surfaces. - No smoking

Keep container tightly closed

Ground/bond container and receiving equipment

Use explosion-proof electrical/ventilating/lighting/equipment

Use only non-sparking tools

Take precautionary measures against static discharge

Wear protective gloves/protective clothing/eye protection/face protection

Keep cool

Response

Get medical attention/advice if you feel unwell

Inhalation

IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing

Call a POISON CENTER or doctor/physician if you feel unwell

Skin

IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower

Eyes

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing If eye irritation persists: Get medical advice/attention

Fire

In case of fire: Use CO2, dry chemical, or foam for extinction

Storage

Store in a well-ventilated place. Keep container tightly closed

Store locked up

Disposal

Dispose of contents/container to an approved waste disposal plant

Hazards not otherwise classified (HNOC)

Repeated exposure may cause skin dryness or cracking

3. Composition/Information on Ingredients

Component	CAS-No	Weight %
Methyl ethyl ketone	78-93-3	>95

4. First-aid measures

Eye Contact	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Get medical attention.
Skin Contact	Wash off immediately with plenty of water for at least 15 minutes. Get medical attention if symptoms occur.
Inhalation	Move to fresh air. Get medical attention if symptoms occur. If not breathing, give artificial respiration.

Ingestion	Do not induce vomiting. Obtain medical attention.
Most important symptoms and effects	Breathing difficulties. Symptoms of overexposure may be headache, dizziness, tiredness, nausea and vomiting: Inhalation of high vapor concentrations may cause symptoms like headache, dizziness, tiredness, nausea and vomiting
Notes to Physician	Treat symptomatically

5. Fire-fighting measures			
Suitable Extinguishing Media	CO 2, dry chemical, dry sand, alcohol-resistant foam. Cool closed containers exposed to fire with water spray.		
Unsuitable Extinguishing Media	Water may be ineffective		
Flash Point	-7 °C / 19.4 °F		
Method -	Closed cup		
Autoignition Temperature	404 °C / 759.2 °F		
Explosion Limits			
Upper	11.4 vol %		
Lower	1.4 vol %		
Oxidizing Properties	Not oxidising		

Sensitivity to Mechanical Impact No information available Sensitivity to Static Discharge No information available

Specific Hazards Arising from the Chemical

Flammable. Risk of ignition. Vapors may form explosive mixtures with air. Vapors may travel to source of ignition and flash back. Containers may explode when heated. Thermal decomposition can lead to release of irritating gases and vapors. Keep product and empty container away from heat and sources of ignition.

Hazardous Combustion Products

Carbon monoxide (CO) Carbon dioxide (CO₂)

Protective Equipment and Precautions for Firefighters

As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

NFPA Health 2	Flammability 3	Instability 1	Physical hazards N/A
	6. Accidental re	lease measures	
Personal Precautions	Use personal protective eq measures against static dis adequate ventilation.	uipment. Remove all sources of scharges. Avoid contact with sl	of ignition. Take precautionary kin, eyes and clothing. Ensure
Environmental Precautions	Avoid release to the enviro	nment. See Section 12 for add	itional ecological information.
Methods for Containment and C	lean Remove all sources of ignit	tion. Soak up with inert absorb	ent material. Keep in suitable.

 Wethods for Containment and Clean Remove all sources of ignition. Soak up with inert absorbent material. Keep in suitable,

 Up
 closed containers for disposal. Use spark-proof tools and explosion-proof equipment.

	7. Handling and storage
Handling	Wear personal protective equipment. Ensure adequate ventilation. Use spark-proof tools and explosion-proof equipment. Avoid contact with skin, eyes and clothing. Avoid ingestion and inhalation. Keep away from open flames, hot surfaces and sources of ignition. Take precautionary measures against static discharges. Use only non-sparking tools. To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded.

Storage

Keep containers tightly closed in a dry, cool and well-ventilated place. Keep away from heat and sources of ignition. Flammables area.

8. Exposure controls / personal protection

<u>Legend</u>

ACGIH - American Conference of Governmental Industrial Hygienists OSHA - Occupational Safety and Health Administration NIOSH IDLH: The National Institute for Occupational Safety and Health Immediately Dangerous to Life or Health

Engineering Measures	Ensure adequate ventilation, especially in confined areas. Use explosion-proof electrical/ventilating/lighting/equipment. Ensure that eyewash stations and safety showers are close to the workstation location.
Personal Protective Equipment	
Eye/face Protection	Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.
Skin and body protection	Wear appropriate protective gloves and clothing to prevent skin exposure.
Respiratory Protection	Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.
Hygiene Measures	Handle in accordance with good industrial hygiene and safety practice.

9. Physical and chemical properties				
Physical State	Liquid			
Appearance	Colorless			
Odor	Characteristic - sweet			
Odor Threshold	No information available			
pH	No information available			
Melting Point/Range	-87 °C / -124.6 °F			
Boiling Point/Range	80 °C / 176 °F			
Flash Point	-7 °C / 19.4 °F			
Method -	Closed cup

Section 2: Hazard(s) Identification

2.1 Classification of Chemical per OSHA CFR 1910.1200

Acute Toxicity (Oral): Skin Irritation: Eye Irritation: Skin Sensitization: Germ Cell Mutagenicity: Reproductive Toxicity: Target Organ Toxicity– Prolonged:

Category 2 Category 2 Category 2B Category 1A Category 2 Effects on or via Lactation Category 1 (Lungs, Kidney)

2.2 Label Elements Signal Word:

Hazard Statements: Fatal if swallowed. Causes skin irritation. Causes eye irritation. May cause an allergic skin reaction. Suspected of causing genetic defects. May cause harm to breast-fed children. Causes damage to lungs and kidneys through prolonged or repeated exposure. Precautionary Statements: Prevention: Wear protective gloves, protective clothing, eye protection, and face protection. Wash thoroughly after handling. Do not eat, drink or smoke when using this product. Do not breathe dust. Contaminated clothing must not be allowed out of the workplace. Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Avoid contact during pregnancy and/or while nursing. Response: If swallowed, immediately call a poison center and/or doctor. Rinse mouth. If on skin, wash with plenty of water. If skin irritation or rash occurs, get medical advice and/or attention. Take off contaminated clothing and wash it before reuse. If in eyes, rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical advice/attention. If exposed, concerned, or feeling unwell, get medical advice and/or attention. Storage: Store locked up. Disposal: Dispose of contents in accordance with federal, state, and local regulations. 2.3 **Other Hazards** Negligible fire and explosion hazard in bulk form. Dust/air mixtures may ignite or explode.

2.4 Unknown Acute Toxicity

Does not apply to this product.

Section 3: Composition / Information on Ingredients

3.1 Chemical Name

Chemical Name: Composition:

Chromium 99.00%-99.82% Cr

7440-47-3

231-157-5

The health and physical hazards information provided in this SDS are for its major component. Chromium metal contains other elements in addition to Cr. For concentrations of other components, see the Certificates of Analysis for each lot.

3.2 Common Names/Synonyms Synonyms:

See Section 1.2 for common names and synonyms.

- **3.3 CAS Number/Unique Identifiers** CAS Number: EC Number (EINECS):
- **3.4 Impurities/Stabilizing Additives** No data available.

Section 4: First-Aid Measures

4.1 Description of First-Aid Measures Inhalation:

Skin Contact:

Eye Contact:

Format: GHS Language: English (US) If adverse effects occur, remove to uncontaminated area. Give artificial respiration if not breathing. Get immediate medical attention. Wash skin with soap and water for at least 15 minutes. Remove contaminated clothing and shoes. Cover skin burns with dry, sterile dressings after decontamination. Get medical attention, if needed. Thoroughly clean and dry contaminated clothing and shoes before reuse. Flush eyes with plenty of water for at least 15 minutes. Get immediate

	Ingestion:	medical attention. Rinse mouth and administer water for dilution if the patient can swallow, has
		a strong gag reflex, and does not drool. Get medical attention.
4.2	Most Important Symptoms/Ef	fects, Acute and Delayed
	Inhalation (Acute):	Irritation.
	Inhalation (Chronic):	Digestive disorders and lung damage.

Inhalation (Chronic):Digestive disorders and lung damage.Skin Contact (Acute):Irritation.Skin Contact (Chronic):Kidney damage.Eye Contact (Acute):Irritation.Eye Contact (Chronic):Tearing.Ingestion (Acute):Vomiting, stomach pain, and dizziness.Ingestion (Chronic):No data available.

4.3 Indication of immediate Medical Attention/Special Treatment Antidote: Dimercaprol, intramuscular

Section 5: Fire-Fighting Measures

5.1 Suitable Extinguishing Media

Dolomite, dry powder for metal fires, dry sand, graphite, soda ash, and sodium chloride. Do not get water directly on material.

5.2 Specific Hazards

Negligible fire and explosion hazard in bulk form. Dust/air mixtures may ignite or explode.

5.3 Special Protective Equipment and Precautions

Respiratory protection from chromium metal and insoluble chromium salts should include a self-contained breathing apparatus with a full face piece operated in pressure-demand or other positive pressure mode. Move container from fire area if it can be done without risk. Cool containers with water spray until well after the fire is out. Stay away from the ends of tanks. For fires in cargo or storage area: Cool containers with water from unmanned hose holder or monitor nozzles until well after fire is out. If this is impossible then take the following precautions: Keep all unauthorized people away, isolate hazard area and deny entry. Let the fire burn. Use extinguishing agents appropriate for surrounding fire. Avoid inhalation of material or combustion by-products.

Section 6: Accidental Release Measures

6.1 Personal Precautions, Protective Equipment, and Emergency Procedures

Notify Local Emergency Planning Committee and State Emergency Response Commission for release greater than or equal to RQ (U.S. SARA Section 304). If release occurs in the U.S. and is reportable under CERCLA Section 103, notify the National Response Center at (800)424-8802 (USA) or (202) 426-2675 (USA). Personal protective equipment is discussed in **Section 8.3**. Keep material out of water sources and sewers. Build dikes to contain flow as necessary. Cover solids with a plastic sheet to prevent dissolving in rain or firefighting water. If spilled in water, neutralize with agricultural lime, crushed limestone, or sodium bicarbonate. Adjust pH to neutral.

6.2 Methods and Materials for Containment and Clean Up

If chromium metal or insoluble chromium salts are spilled, the following steps should be taken:

- **1.** Remove all ignition sources where metallic chromium has been spilled.
- 2. Ventilate area of spill.
- **3.** Dampen the solid spill material with 5% ammonium hydroxide, and transfer the dampened material to a suitable container.
- **4.** Deposit material and contaminated clothing in sealed containers for reclamation or for disposal in a secured sanitary landfill.
- **5.** Wash all contaminated surfaces with 5% ammonium hydroxide followed by washing with a strong soap and water solution.
- 6. Do not re-enter the contaminated area until the Safety Officer (or other responsible person) has verified

that the area has been properly cleaned.

Liquid containing chromium metal or insoluble chromium salts should be absorbed in vermiculite, dry sand, earth, or a similar material.

Section 7: Handling and Storage

7.1 Precautions for Safe Handling

Handle in accordance with all current regulations and standards. Utilize personal protective equipment to avoid contact with skin. Personal protective equipment is discussed in **Section 8.3**.

7.2 Conditions for Safe Storage

Store in accordance with all current regulations and standards. Store in a tightly closed container. Store in a cool, dry place. Store in a well-ventilated area. Keep separated from incompatible substances. Incompatible materials are identified in **Section 10.5**.

Section 8: Exposure Controls / Personal Protection

8.1 **Exposure Limits** OSHA PEL TWA (metal): $1 \text{ mg} (\text{Cr})/\text{m}^3$ ACGIH TWA (metal): 0.5 mg (Cr)/m³ NIOSH REL TWA 10 hour(s) (metal): 0.5 mg (Cr)/m³ EC OEL TWA (IOELV) (metal): 2 mg/m^3 UK WEL TWA 8 hour(s) (metal): 0.5 mg/m³ 8.2 **Appropriate Engineering Controls** Ventilation: Provide local exhaust ventilation system. Ensure compliance with applicable exposure limits. Individual Protection Measures 8.3 Eye Protection: Wear splash resistant safety goggles. Provide an emergency eye wash fountain and guick drench shower in the immediate area. Clothing: Wear appropriate chemical resistant clothing. Gloves: Wear appropriate chemical resistant gloves. **Respirator:** The following respirators and maximum use concentrations are drawn from NIOSH and/or OSHA. 2.5 mg/m³: 1. Any guarter-mask respirator. 5 mg/m³: 1. Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except guarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100 or P100. 2. Any supplied-air respirator. 12.5 mg/m³: 1. Any supplied-air respirator operated in a continuous-flow mode. 2. Any powered, air-purifying respirator with a high-efficiency particulate filter. 25 mg/m³: 1. Any air-purifying, full-facepiece respirator equipped with an N100, R100, or P100 filter. 2. Any powered, air-purifying respirator with a tight-fitting facepiece and a high-efficiency particulate filter. 3. Any self-contained breathing apparatus with a full facepiece. Any suppliedair respirator with a full facepiece.

250 mg/m ³ :	1. Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode.
Unknown Concentrations/IDLH:	 Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode. Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
Escape:	 Any air-purifying, full-facepiece respirator equipped with an N100, R100, or P100 filter. Any appropriate escape-type, self-contained breathing apparatus.

Section 9: Physical and Chemical Properties

9.1	Appearance Physical State: Physical Description:	Solid Blue-white to steel-gray, lustrous, brittle, hard, odorless solid in pig, ingot or tub form.
9.2	Odor Odor:	Odorless
9.3	Odor Threshold Not available.	
9.4	pH Not applicable.	
9.5	Melting / Freezing Points Melting Point: Freezing Point:	3,339°F-3,411°F (1,837°C-1877°C) No data available.
9.6	Boiling Point Boiling Point:	4,842°F (2,672°C)
9.7	Flash Point No data available.	
9.8	Evaporation Rate Not applicable.	
9.9	Flammability Flammability:	0.230 oz/ft ³
9.10	Upper/Lower Explosive Limits No data available.	
9.11	Vapor Pressure Vapor Pressure:	1 mmHg @ 1,616°C
9.12	Vapor Density Not applicable.	
9.13	Relative Density Water = 1:	7.20 @ 28°C
	Format: GHS Language: English (US)	Revised: April 24, 2015 Version 2

9.14 Solubility(ies) Insoluble: Soluble:

- 9.15 Partition Coefficient No data available.
- 9.16 Auto-Ignition Temperature No data available.
- 9.17 Decomposition Temperature No data available.

9.18 Viscosity

No data available.

Section 10: Stability and Reactivity

10.1 Reactivity

Stable at normal temperatures and pressures.

10.2 Chemical Stability

Stable at normal temperatures and pressures. Not oxidized by air, even in presence of much moisture.

10.3 Possibility of Hazardous Reactions

	Alkali Carbonates:	Attacked.
	Alkalies (Caustic):	Attacked.
	Ammonium Nitrate (Fused):	Violent or explosive reaction.
	Bromine Pentafluoride:	Violent reaction and possible ignition.
	Hydrogen Peroxide:	Violent decomposition reaction.
	Lithium (Molten):	Vigorous reaction at elevated temperatures.
	Nitrogen Oxide:	Incandescent reaction.
	Oxidizers (Strong):	Fire and explosion hazard.
	Potassium Chlorate (Fused):	Vigorous incandescent reaction.
	Sulphur Dioxide:	Incandescent reaction.
10.4	Conditions to Avoid None reported.	
10.5	Incompatible Materials	Bases oxidizing materials halogens peroxides and metals
	incompationaco.	Basso, onaizing materials, halogens, peronaco, and metals.

Reacts with dilute hydrochloric acid and sulfuric acid. Safe storage of the material is discussed in Section 7.2.

10.6 Hazardous Decomposition Products

Thermal Decomposition Products:

Oxides of chromium.

Section 11: Toxicological Information

11.1 Likely Routes of Exposure

Routes of entry include inhalation, skin contact, eye contact, and ingestion.

11.2 Symptoms

See Section 4.2 for symptoms related to the physical, chemical, and toxicological characteristics.

Water, Nitric Acid, and Aqua Regia Dilute Sulfuric Acid and Hydrochloric Acid

11.3	Short and Long Term Effects	
	Inhalation (Acute): Inhalation (Chronic):	High concentrations of dusts or fumes may cause irritation. Repeated or prolonged exposure to various chromium compounds has been reported to result in ulceration and perforation of the nasal septum, irritation of the throat and lower respiratory tract, less commonly in gastrointestinal disturbances, blood changes, pulmonary sensitization, pulmonary pneurnoconiosis or fibrosis, and rarely liver effects. These effects have not been reported from exposure to the metal per se.
	Skin Contact (Acute): Skin Contact (Chronic):	Contact with dusts or powder may cause irritation. Repeated or prolonged exposure to various chromium compounds has been reported to cause various types of dermatitis, including eczema, "chrome holes", sensitization, and, in contact with damaged skin, kidney damage. These effects have not been reported from exposure to the metal per se.
	Eye Contact (Acute): Eye Contact (Chronic):	Contact with dusts or powders may cause irritation. Repeated or prolonged exposure to some chromium compounds may cause conjunctivitis and lacrimation. These effects have not been reported from exposure to the metal per se
	Ingestion (Acute):	Chromium metal is poorly absorbed by the intestinal tract. Absorption of sufficient amounts of some chromium compounds may result in dizziness, intense thirst, abdominal pain, vomiting, shock, oliguria or anuria, and uremia, which may be fatal.
	Ingestion (Chronic):	No data available.
11.4	Numerical Measures of Toxicity Lethal Dose (LD ₅₀): Tumorigenic Data:	27,500 μg/kg unreported-rat 2,160 μg/kg intravenous-rat TDLo/6 week(s) intermittent; 1,200 μg/kg implant-rat TDL o/6 week(s) intermittent; 75 mg/kg implant-rabbit TDL o
	Mutagenic Data:	DNA damage - human lung 1 µmol/L
11.5	Carcinogen Status IARC: ACGIH:	Human Inadequate Evidence, Animal Inadequate Evidence, Group 3 (metal) A4 -Not Classifiable as a Human Carcinogen (metal)

Section 12: Ecological Information

(Cyprinus carpio)

spicatum)

(Synechocystis aquatilis)

(Mytilus edulis) 100 µg/L

12.1 Ecotoxicity

Fish Toxicity:

Invertebrate Toxicity: Algal Toxicity:

Phytotoxicity:

12.2 Persistence and Degradability No data available.

12.3 Bioaccumulative Potential Bioconcentration:

12.4 Mobility in Soil No data available.

12.5 Other Adverse Effects No data available.

20-40 µg/L NR week(s) BCF (Residue) Common bay mussel, blue mussel

14,300 µg/L 96 hour(s) LC₅₀ (Mortality) Common, mirror, colored, carp

3,000-5,000 µg/L NR hour(s) (Population Growth) Blue-green algae

9,900 µg/L 32 week(s) EC50 (Biomass) Water-milfoil (Myriophyllum

2,000 µg/L 0-5 hour(s) LETH (Mortality) Copepod (*Tisbe holothuriae*)

Section 13: Disposal Considerations

Hazardous Waste Number(s): D007. Dispose of in accordance with U.S. EPA 40 CFR 262 for concentrations at or above the regulatory level (5.0 mg/L). Dispose of in accordance with all applicable regulations.

Section 16: Other Information

The information in this Safety Data Sheet meets the requirements of the United States Department of Labor OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION and regulations promulgated thereunder (29 CFR 1910.1200 et. seq.). This document is intended only as a guide to the appropriate precautionary material handling by a person trained in, or supervised by a person trained in, chemical handling. Exposure to this chemical may have serious adverse health effects. This chemical may interact with other substances. Since the potential uses are so varied, all of the potential hazards of use or interaction with other chemicals or materials cannot be identified on this Safety Data Sheet. The user should recognize that this chemical can cause injury, especially if improperly handled, precautionary measures are not followed, and personal protective equipment not worn. Read and understand all precautionary information prior to use. The Defense Logistics Agency (DLA) shall not be held liable for any damage resulting from handling or from contact with the above chemical.

SAFETY DATA SHEET

Version 6.3 Revision Date 11/21/2018 Print Date 10/04/2019

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1 Product identifiers

Product name : cis-1,2-Dichloroethylene

Product Number	:	D62004
Brand	:	Aldrich
Index-No.	:	602-026-00-3
CAS-No.	:	156-59-2

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Synthesis of substances

1.3 Details of the supplier of the safety data sheet

Company	: Sigma-Aldrich Inc. 3050 Spruce Street ST. LOUIS MO 63103 UNITED STATES
Telephone	: +1 314 771-5765
Fax	: +1 800 325-5052

1.4 Emergency telephone number

Emergency Phone # : +1-703-527-3887

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

GHS Classification in accordance with 29 CFR 1910 (OSHA HCS)

Flammable liquids (Category 2), H225 Acute toxicity, Oral (Category 4), H302 Acute toxicity, Inhalation (Category 4), H332 Skin irritation (Category 2), H315

For the full text of the H-Statements mentioned in this Section, see Section 16.

2.2 GHS Label elements, including precautionary statements

Pictogram

Danger

Signal word

.

Hazard statement(s) H225

Highly flammable liquid and vapour.

Aldrich - D62004

Page 1 of 9

H302 + H332	Harmful if swallowed or if inhaled.
H315	Causes skin irritation.
Precautionary statement(s)	
P210	Keep away from heat/sparks/open flames/hot surfaces. No
	Smoking.
P233	Keep container tightly closed.
P240	Ground/bond container and receiving equipment.
P241	Use explosion-proof electrical/ ventilating/ lighting equipment.
P242	Use only non-sparking tools.
P243	Take precautionary measures against static discharge.
P261	Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray.
P264	Wash skin thoroughly after handling.
P270	Do not eat, drink or smoke when using this product.
P271	Use only outdoors or in a well-ventilated area.
P280	Wear protective gloves/ eye protection/ face protection.
P301 + P312 + P330	IF SWALLOWED: Call a POISON CENTER/doctor if you feel
	unweil. Rinse mouth.
P303 + P361 + P353	clothing. Rinse skin with water/shower.
P304 + P340 + P312	IF INHALED: Remove person to fresh air and keep comfortable
	for breathing. Call a POISON CENTER/doctor if you feel unwell.
P332 + P313	If skin irritation occurs: Get medical advice/ attention.
P362	Take off contaminated clothing and wash before reuse.
P370 + P378	In case of fire: Use dry sand, dry chemical or alcohol-resistant
	foam to extinguish.
P403 + P235	Store in a well-ventilated place. Keep cool.
P501	Dispose of contents/ container to an approved waste disposal
	plant.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS - none

SECTION 3: Composition/information on ingredients

3.1	Substances Synonyms	:	cis-Acetylene dichlor	ide	
	Formula Molecular weight CAS-No. EC-No. Index-No.	::	C ₂ H ₂ Cl ₂ 96.94 g/mol 156-59-2 205-859-7 602-026-00-3		
	Component			Classification	Concentration
	cis-Dichloroethylene				
				Flam. Liq. 2; Acute Tox. 4; Skin Irrit. 2; H225, H302, H332, H315	<= 100 %

For the full text of the H-Statements mentioned in this Section, see Section 16.

Aldrich - D62004

Page 2 of 9

SECTION 4: First aid measures

4.1 Description of first aid measures

General advice

Consult a physician. Show this safety data sheet to the doctor in attendance. Move out of dangerous area.

If inhaled

If breathed in, move person into fresh air. If not breathing, give artificial respiration. Consult a physician.

In case of skin contact

Wash off with soap and plenty of water. Consult a physician.

In case of eye contact

Flush eyes with water as a precaution.

If swallowed

Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

- **4.2 Most important symptoms and effects, both acute and delayed** The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11
- **4.3 Indication of any immediate medical attention and special treatment needed** No data available

SECTION 5: Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media Dry powder Dry sand

Unsuitable extinguishing media Do NOT use water jet.

5.2 Special hazards arising from the substance or mixture Carbon oxides, Hydrogen chloride gas

5.3 Advice for firefighters

Wear self-contained breathing apparatus for firefighting if necessary.

5.4 Further information

Use water spray to cool unopened containers.

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures Use personal protective equipment. Avoid breathing vapours, mist or gas. Ensure adequate ventilation. Remove all sources of ignition. Evacuate personnel to safe areas. Beware of vapours accumulating to form explosive concentrations. Vapours can accumulate in low areas.

For personal protection see section 8.

Aldrich - D62004

Page 3 of 9

6.2 Environmental precautions

Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

6.3 Methods and materials for containment and cleaning up

Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13).

6.4 Reference to other sections For disposal see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling

Avoid contact with skin and eyes. Avoid inhalation of vapour or mist. Use explosion-proof equipment.Keep away from sources of ignition - No smoking.Take measures to prevent the build up of electrostatic charge. For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities

Keep container tightly closed in a dry and well-ventilated place. Containers which are opened must be carefully resealed and kept upright to prevent leakage.

Handle and store under inert gas. Air and moisture sensitive. Light sensitive. Storage class (TRGS 510): 3: Flammable liquids

7.3 Specific end use(s)

Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Components with workplace control parameters

Component	CAS-No.	Value	Control	Basis
			parameters	
cis-	156-59-2	TWA	200 ppm	USA. ACGIH Threshold Limit
Dichloroethylene				Values (TLV)
	Remarks	Central Nervous System impairment		
		Eye irritation		

8.2 Exposure controls

Appropriate engineering controls

Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

Personal protective equipment

Eye/face protection

Face shield and safety glasses Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Aldrich - D62004

Page 4 of 9

Skin protection

Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Body Protection

Complete suit protecting against chemicals, Flame retardant antistatic protective clothing., The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection

Where risk assessment shows air-purifying respirators are appropriate use a fullface respirator with multi-purpose combination (US) or type AXBEK (EN 14387) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Control of environmental exposure

Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: liquid Colour: light yellow
b)	Odour	No data available
c)	Odour Threshold	No data available
d)	рН	No data available
e)	Melting point/freezing point	Melting point/range: -80 °C (-112 °F) - lit.
f)	Initial boiling point and boiling range	60 °C 140 °F - lit.
g)	Flash point	6.0 °C (42.8 °F) - closed cup
h)	Evaporation rate	No data available
i)	Flammability (solid, gas)	No data available
j)	Upper/lower flammability or explosive limits	No data available
k)	Vapour pressure	No data available
I)	Vapour density	No data available
m)	Relative density	1.284 g/cm3 at 25 °C (77 °F)
n)	Water solubility	No data available
o)	Partition coefficient: n-octanol/water	No data available
p)	Auto-ignition	No data available

Aldrich - D62004

Page 5 of 9

temperature

- q) Decomposition No data available temperature
- r) Viscosity No data available
- s) Explosive properties No data available
- t) Oxidizing properties No data available
- 9.2 Other safety information No data available

SECTION 10: Stability and reactivity

10.1 Reactivity

No data available

10.2 Chemical stability Stable under recommended storage conditions.

- **10.3 Possibility of hazardous reactions** Vapours may form explosive mixture with air.
- **10.4 Conditions to avoid** Heat, flames and sparks.
- **10.5 Incompatible materials** Oxidizing agents

10.6 Hazardous decomposition products

Hazardous decomposition products formed under fire conditions. - Carbon oxides, Hydrogen chloride gas Other decomposition products - No data available In the event of fire: see section 5

SECTION 11: Toxicological information

11.1 Information on toxicological effects

Acute toxicity

LD50 Oral - Rat - 770 mg/kg LC50 Inhalation - Rat - 13700 ppm Remarks: Behavioral:Somnolence (general depressed activity). Liver:Fatty liver degeneration. Dermal: No data available No data available

Skin corrosion/irritation

Skin - Rabbit Result: Moderate skin irritation - 24 h

Serious eye damage/eye irritation No data available

Respiratory or skin sensitisation No data available

Aldrich - D62004

Page 6 of 9

Germ cell mutagenicity

No data available

Carcinogenicity

- IARC: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
- NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.
- OSHA: No component of this product present at levels greater than or equal to 0.1% is on OSHA's list of regulated carcinogens.

Reproductive toxicity

No data available No data available

Specific target organ toxicity - single exposure No data available

Specific target organ toxicity - repeated exposure No data available

Aspiration hazard

No data available

Additional Information

RTECS: KV9420000

narcosis, To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

SECTION 12: Ecological information

- **12.1 Toxicity** No data available
- 12.2 Persistence and degradability No data available
- **12.3 Bioaccumulative potential** No data available

12.4 Mobility in soil No data available

12.5 Results of PBT and vPvB assessment PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

12.6 Other adverse effects

An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.

Harmful to aquatic life with long lasting effects.

Aldrich - D62004

Page 7 of 9

SECTION 13: Disposal considerations

13.1 Waste treatment methods

Product

Offer surplus and non-recyclable solutions to a licensed disposal company. Burn in a chemical incinerator equipped with an afterburner and scrubber but exert extra care in igniting as this material is highly flammable. Contact a licensed professional waste disposal service to dispose of this material.

Contaminated packaging

Dispose of as unused product.

SECTION 14: Transport information

DOT (US)

UN number: 1150 Class: 3 Packing group: II Proper shipping name: 1,2-Dichloroethylene Reportable Quantity (RQ): Poison Inhalation Hazard: No

IMDG

UN number: 1150 Class: 3 Packing group: II EMS-No: F-E, S-D Proper shipping name: 1,2-DICHLOROETHYLENE

ΙΑΤΑ

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1 Product identifiers

Product name : TRANS-1,2-DICHLOROETHYLENE, 98%

Product Number	:	D62209
Brand	:	Aldrich
Index-No.	:	602-026-00-3
CAS-No.	:	156-60-5

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Synthesis of substances

1.3 Details of the supplier of the safety data sheet

Company	: Sigma-Aldrich Inc. 3050 Spruce Street ST. LOUIS MO 6310 UNITED STATES
Telephone	: +1 314 771-5765
Fax	: +1 800 325-5052

1.4 Emergency telephone number

Emergency Phone # : +1-703-527-3887

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

GHS Classification in accordance with 29 CFR 1910 (OSHA HCS)

Flammable liquids (Category 2), H225 Acute toxicity, Inhalation (Category 4), H332 Short-term (acute) aquatic hazard (Category 3), H402 Long-term (chronic) aquatic hazard (Category 3), H412

For the full text of the H-Statements mentioned in this Section, see Section 16.

2.2 GHS Label elements, including precautionary statements

Pictogram

Danger

Signal word Hazard statement(s)

Highly flammable liquid and vapour.

Aldrich - D62209

H225

Page 1 of 8

H332	Harmful if inhaled.
H412	Harmful to aquatic life with long lasting effects.
Precautionary statement(s)	
P210	Keep away from heat/sparks/open flames/hot surfaces. No smoking.
P233	Keep container tightly closed.
P240	Ground/bond container and receiving equipment.
P241	Use explosion-proof electrical/ ventilating/ lighting equipment.
P242	Use only non-sparking tools.
P243	Take precautionary measures against static discharge.
P261	Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray.
P271	Use only outdoors or in a well-ventilated area.
P273	Avoid release to the environment.
P280	Wear protective gloves/ eye protection/ face protection.
P303 + P361 + P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower.
P304 + P340 + P312	IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER/doctor if you feel unwell.
P370 + P378	In case of fire: Use dry sand, dry chemical or alcohol-resistant foam to extinguish.
P403 + P235	Store in a well-ventilated place. Keep cool.
P501	Dispose of contents/ container to an approved waste disposal plant.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS - none

SECTION 3: Composition/information on ingredients

3.1 Substances

Synonyms	: trans-1, trans-Ac	2-Dichloroethene etylene dichloride	
Formula Molecular weight CAS-No. EC-No. Index-No.	: C ₂ H ₂ Cl ₂ : 96.94 g/ : 156-60- : 205-860 : 602-026	2 'mol 5 1-2 5-00-3	
Component		Classification	Concentration
trans-Dichloroethy	lene		
		Flam. Liq. 2; Acute T Aquatic Acute 3; Aqu Chronic 3; H225, H3 H402, H412	ox. 4; >= 90 - <= Jatic 100 % 32,

For the full text of the H-Statements mentioned in this Section, see Section 16.

Page 2 of 8

SECTION 4: First aid measures

4.1 Description of first aid measures

General advice

Consult a physician. Show this safety data sheet to the doctor in attendance. Move out of dangerous area.

If inhaled

If breathed in, move person into fresh air. If not breathing, give artificial respiration. Consult a physician.

In case of skin contact

Wash off with soap and plenty of water. Consult a physician.

In case of eye contact

Flush eyes with water as a precaution.

If swallowed

Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

- **4.2 Most important symptoms and effects, both acute and delayed** The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11
- **4.3 Indication of any immediate medical attention and special treatment needed** No data available

SECTION 5: Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media Dry powder Dry sand

Unsuitable extinguishing media Do NOT use water jet.

5.2 Special hazards arising from the substance or mixture Carbon oxides, Hydrogen chloride gas

5.3 Advice for firefighters

Wear self-contained breathing apparatus for firefighting if necessary.

5.4 Further information

Use water spray to cool unopened containers.

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures Use personal protective equipment. Avoid breathing vapours, mist or gas. Ensure adequate ventilation. Remove all sources of ignition. Evacuate personnel to safe areas. Beware of vapours accumulating to form explosive concentrations. Vapours can accumulate in low areas.

For personal protection see section 8.

Aldrich - D62209

Page 3 of 8

6.2 Environmental precautions

Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

6.3 Methods and materials for containment and cleaning up

Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13).

6.4 Reference to other sections For disposal see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling

Avoid contact with skin and eyes. Avoid inhalation of vapour or mist. Use explosion-proof equipment.Keep away from sources of ignition - No smoking.Take measures to prevent the build up of electrostatic charge. For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities

Keep container tightly closed in a dry and well-ventilated place. Containers which are opened must be carefully resealed and kept upright to prevent leakage.

Light sensitive. Air and moisture sensitive. Refrigerate before opening. Storage class (TRGS 510): 3: Flammable liquids

7.3 Specific end use(s)

Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Components with workplace control parameters

Component	CAS-No.	Value	Control	Basis
			parameters	
trans-	156-60-5	TWA	200 ppm	USA. ACGIH Threshold Limit
Dichloroethylene				Values (TLV)
	Remarks	Central Nervous System impairment		
		Eye irritation		

8.2 Exposure controls

Appropriate engineering controls

Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

Personal protective equipment

Eye/face protection

Face shield and safety glasses Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Aldrich - D62209

Page 4 of 8

Skin protection

Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Body Protection

Complete suit protecting against chemicals, Flame retardant antistatic protective clothing., The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection

Where risk assessment shows air-purifying respirators are appropriate use a fullface respirator with multi-purpose combination (US) or type AXBEK (EN 14387) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Control of environmental exposure

Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: liquid, clear Colour: light yellow
b)	Odour	No data available
c)	Odour Threshold	No data available
d)	рН	No data available
e)	Melting point/freezing point	Melting point/range: -50 °C (-58 °F) - lit
f)	Initial boiling point and boiling range	48 °C 118 °F - lit.
g)	Flash point	6.0 °C (42.8 °F) - closed cup
h)	Evaporation rate	No data available
i)	Flammability (solid, gas)	No data available
j)	Upper/lower flammability or explosive limits	Upper explosion limit: 12.8 %(V) Lower explosion limit: 9.7 %(V)
k)	Vapour pressure	No data available
I)	Vapour density	No data available
m)	Relative density	1.257 g/mL at 25 °C (77 °F)
n)	Water solubility	No data available
o)	Partition coefficient: n-octanol/water	No data available
p)	Auto-ignition	No data available

Aldrich - D62209

Page 5 of 8

temperature

- q) Decomposition No data available temperature
- r) Viscosity No data available
- s) Explosive properties No data available
- t) Oxidizing properties No data available
- 9.2 Other safety information No data available

SECTION 10: Stability and reactivity

10.1 Reactivity

No data available

10.2 Chemical stability Stable under recommended storage conditions.

- **10.3 Possibility of hazardous reactions** Vapours may form explosive mixture with air.
- **10.4 Conditions to avoid** Heat, flames and sparks.
- **10.5 Incompatible materials** Oxidizing agents, Bases

10.6 Hazardous decomposition products

Hazardous decomposition products formed under fire conditions. - Carbon oxides, Hydrogen chloride gas Other decomposition products - No data available

In the event of fire: see section 5

SECTION 11: Toxicological information

11.1 Information on toxicological effects

Acute toxicity

Skin corrosion/irritation

Serious eye damage/eye irritation

Respiratory or skin sensitisation

Germ cell mutagenicity

Carcinogenicity

- IARC: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
- NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.
- OSHA: No component of this product present at levels greater than or equal to 0.1% is on OSHA's list of regulated carcinogens.

Aldrich - D62209

Page 6 of 8

Reproductive toxicity

Specific target organ toxicity - single exposure

Specific target organ toxicity - repeated exposure

Aspiration hazard

Additional Information RTECS: KV9400000

SECTION 12: Ecological information

12.1 Toxicity

- 12.2 Persistence and degradability
- 12.3 Bioaccumulative potential
- 12.4 Mobility in soil

12.5 Results of PBT and vPvB assessment

PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

12.6 Other adverse effects

An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.

Harmful to aquatic life with long lasting effects.

SECTION 13: Disposal considerations

13.1 Waste treatment methods

Product

Offer surplus and non-recyclable solutions to a licensed disposal company. Burn in a chemical incinerator equipped with an afterburner and scrubber but exert extra care in igniting as this material is highly flammable. Contact a licensed professional waste disposal service to dispose of this material.

Contaminated packaging

Dispose of as unused product.

SECTION 14: Transport information

DOT (US)

UN number: 1150 Class: 3 Packing group: II Proper shipping name: 1,2-Dichloroethylene Reportable Quantity (RQ): 1000 lbs Poison Inhalation Hazard: No

IMDG

UN number: 1150 Class: 3 Packing group: II Proper shipping name: 1,2-DICHLOROETHYLENE

EMS-No: F-E, S-D

Aldrich - D62209

Page 7 of 8

SECTION 15: Regulatory information

SARA 302 Components

No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

SARA 313 Components

This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

SARA 311/312 Hazards

Fire Hazard

Massachusetts Right To Know Components

No components are subject to the Massachusetts Right to Know Act.

Pennsylvania Right To Know Components

SAFETY DATA SHEET

Version 6.0 Revision Date 09/19/2019 Print Date 10/04/2019

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1 Product identifiers

Product name: 1,1,2-TrichloroethaneProduct Number: 466212Brand: AldrichCAS-No.: 79-00-5

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Synthesis of substances

1.3 Details of the supplier of the safety data sheet

Company	: Sigma-Aldrich Inc.
	3050 Spruce Street
	ST. LOUIS MO 63103 UNITED STATES
Telephone	: +1 314 771-5765
Fax	: +1 800 325-5052

1.4 Emergency telephone number

Emergency Phone # : +1-703-527-3887

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

GHS Classification in accordance with 29 CFR 1910 (OSHA HCS)

Acute toxicity, Oral (Category 4), H302 Acute toxicity, Inhalation (Category 3), H331 Acute toxicity, Dermal (Category 4), H312 Carcinogenicity (Category 2), H351 Short-term (acute) aquatic hazard (Category 3), H402 Long-term (chronic) aquatic hazard (Category 3), H412

For the full text of the H-Statements mentioned in this Section, see Section 16.

2.2 GHS Label elements, including precautionary statements

Pictogram

Signal word

Danger

Aldrich - 466212

Page 1 of 11

Hazard statement(s) H302 + H312 H331	Harmful if swallowed or in contact with skin. Toxic if inhaled.
H351 H412	Suspected of causing cancer. Harmful to aquatic life with long lasting effects.
Precautionary statement(s)	
P201	Obtain special instructions before use.
P202	Do not handle until all safety precautions have been read and understood.
P261	Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray.
P264	Wash skin thoroughly after handling.
P270	Do not eat, drink or smoke when using this product.
P271	Use only outdoors or in a well-ventilated area.
P273	Avoid release to the environment.
P280	Wear protective gloves/ protective clothing.
P302 + P352	IF ON SKIN: Wash with plenty of soap and water.
P304 + P340	IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.
P311	Call a POISON CENTER /doctor.
P322	Specific measures (see supplemental first aid instructions on this label).
P330	Rinse mouth.
P363	Wash contaminated clothing before reuse.
P403 + P233 P405	Store in a well-ventilated place. Keep container tightly closed. Store locked up.
P501	Dispose of contents/ container to an approved waste disposal plant.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS

Repeated exposure may cause skin dryness or cracking.

SECTION 3: Composition/information on ingredients

3.1 Substances

Formula	:	C2H3Cl3
Molecular weight	:	133.40 g/mol
CAS-No.	:	79-00-5

Component	Classification	Concentration

H336;	

For the full text of the H-Statements mentioned in this Section, see Section 16.

SECTION 4: First aid measures

4.1 Description of first aid measures

General advice

Consult a physician. Show this safety data sheet to the doctor in attendance. Move out of dangerous area.

If inhaled

If breathed in, move person into fresh air. If not breathing, give artificial respiration. Consult a physician.

In case of skin contact

Wash off with soap and plenty of water. Take victim immediately to hospital. Consult a physician.

In case of eye contact

Rinse thoroughly with plenty of water for at least 15 minutes and consult a physician.

If swallowed

Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

4.2 Most important symptoms and effects, both acute and delayed

The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

4.3 Indication of any immediate medical attention and special treatment needed No data available

SECTION 5: Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media

Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

- **5.2** Special hazards arising from the substance or mixture Carbon oxides, Hydrogen chloride gas Combustible.
- **5.3** Advice for firefighters Wear self-contained breathing apparatus for firefighting if necessary.
- **5.4 Further information** No data available

Aldrich - 466212

Page 3 of 11

SECTION 6: Accidental release measures

- **6.1 Personal precautions, protective equipment and emergency procedures** Wear respiratory protection. Avoid breathing vapours, mist or gas. Ensure adequate ventilation. Evacuate personnel to safe areas. For personal protection see section 8.
- **6.2 Environmental precautions** Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.
- **6.3 Methods and materials for containment and cleaning up** Soak up with inert absorbent material and dispose of as hazardous waste. Keep in suitable, closed containers for disposal.
- **6.4** Reference to other sections For disposal see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling Avoid contact with skin and eyes. Avoid inhalation of vapour or mist. For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities

Keep container tightly closed in a dry and well-ventilated place. Containers which are opened must be carefully resealed and kept upright to prevent leakage. Storage class (TRGS 510): 6.1D: Non-combustible, acute toxic Cat.3 / toxic hazardous materials or hazardous materials causing chronic effects

7.3 Specific end use(s)

Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Components with workplace control parameters

Component	CAS-No.	Value	Control parameters	Basis

Page 5 of 11

8.2 Exposure controls

Appropriate engineering controls

Avoid contact with skin, eyes and clothing. Wash hands before breaks and immediately after handling the product.

Personal protective equipment

Eye/face protection

Face shield and safety glasses Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin protection

Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Full contact Material: Fluorinated rubber Minimum layer thickness: 0.7 mm Break through time: 480 min Material tested:Vitoject® (KCL 890 / Aldrich Z677698, Size M)

Splash contact Material: Nitrile rubber Minimum layer thickness: 0.4 mm Break through time: 60 min Material tested:Camatril® (KCL 730 / Aldrich Z677442, Size M)

data source: KCL GmbH, D-36124 Eichenzell, phone +49 (0)6659 87300, e-mail sales@kcl.de, test method: EN374

If used in solution, or mixed with other substances, and under conditions which differ from EN 374, contact the supplier of the CE approved gloves. This recommendation is advisory only and must be evaluated by an industrial hygienist and safety officer familiar with the specific situation of anticipated use by our customers. It should not be construed as offering an approval for any specific use scenario.

Body Protection

Complete suit protecting against chemicals, The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection

Where risk assessment shows air-purifying respirators are appropriate use a fullface respirator with multi-purpose combination (US) or type ABEK (EN 14387) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Control of environmental exposure

Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

Aldrich - 466212

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: liquid Colour: colourless	
b)	Odour	No data available	
c)	Odour Threshold	No data available	
d)	pН	No data available	
e)	Melting point/freezing point	-37.0 °C (-34.6 °F)	
f)	Initial boiling point and boiling range	110 - 115 °C 230 - 239 °F - lit.	
g)	Flash point	()No data available	
h)	Evaporation rate	No data available	
i)	Flammability (solid, gas)	No data available	
j)	Upper/lower flammability or explosive limits	No data available	
k)	Vapour pressure	No data available	
I)	Vapour density	No data available	
m)	Relative density	1.435 g/cm3 at 25 °C (77 °F)	
n)	Water solubility	soluble	
o)	Partition coefficient: n-octanol/water	No data available	
p)	Auto-ignition temperature	No data available	
q)	Decomposition temperature	No data available	
r)	Viscosity	No data available	
s)	Explosive properties	No data available	
t)	Oxidizing properties	No data available	
Other safety information			

No data available

SECTION 10: Stability and reactivity

10.1 Reactivity

9.2

No data available

10.2 Chemical stability

Reacts with air to form peroxides. Stable under recommended storage conditions. Contains the following stabiliser(s):

Aldrich - 466212

Page 7 of 11

2-Propanol (<=3 %)

- **10.3 Possibility of hazardous reactions** No data available
- **10.4 Conditions to avoid**

No data available

10.5 Incompatible materials

Strong bases, Strong oxidizing agents, Reacts violently with:, Sodium/sodium oxides, Potassium, Magnesium, Aluminum

10.6 Hazardous decomposition products

Hazardous decomposition products formed under fire conditions. - Carbon oxides, Hydrogen chloride gas Other decomposition products - No data available In the event of fire: see section 5

SECTION 11: Toxicological information

11.1 Information on toxicological effects

Acute toxicity

LD50 Oral - Rat - 836.0 mg/kg Inhalation: No data available Dermal: No data available No data available

Skin corrosion/irritation

Skin - Rabbit Result: Severe skin irritation - 24 h Skin - Rabbit Result: Mild skin irritation - 24 h

Serious eye damage/eye irritation

Eyes - Rabbit Result: Mild eye irritation - 24 h

Respiratory or skin sensitisation No data available

Germ cell mutagenicity

No data available

Carcinogenicity

This product is or contains a component that has been reported to be possibly carcinogenic based on its IARC, ACGIH, NTP, or EPA classification. The National Cancer Institute (NCI) has found clear evidence for carcinogenicity.

Limited evidence of carcinogenicity in animal studies

- IARC: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
- NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.
- OSHA: No component of this product present at levels greater than or equal to 0.1% is on OSHA's list of regulated carcinogens.

Aldrich - 466212

Page 8 of 11

Reproductive toxicity

No data available No data available

Specific target organ toxicity - single exposure No data available

Specific target organ toxicity - repeated exposure No data available

Aspiration hazard No data available

Additional Information

RTECS: Not available

Central nervous system depression, prolonged or repeated exposure can cause:, narcosis, To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

Kidney - Irregularities - Based on Human Evidence

SECTION 12: Ecological information

12.1 Toxicity

Persistence and degradability				
Toxicity to daphnia and other aquatic invertebrates	EC50 - Daphnia magna (Water flea) - 43.00 mg/l - 48 h			
	LC50 - Pimephales promelas (fathead minnow) - 81.60 mg/l - 96 h			
Toxicity to fish	LC50 - Lepomis macrochirus (Bluegill) - 40.00 mg/l - 96 h			

- 12.2 Persistence and degradability No data available
- **12.3 Bioaccumulative potential** No data available

12.4 Mobility in soil No data available

12.5 Results of PBT and vPvB assessment

 $\mathsf{PBT}/\mathsf{vPvB}$ assessment not available as chemical safety assessment not required/not conducted

12.6 Other adverse effects

An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.

Harmful to aquatic life with long lasting effects.

An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.

Harmful to aquatic life with long lasting effects.

Aldrich - 466212

Chloroform CAS No 67-66-3

MATERIAL SAFETY DATA SHEET SDS/MSDS

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1	Product identifiers Product name	: Chloroform
	CAS-No.	: 67-66-3
1.2	Relevant identified use	s of the substance or mixture and uses advised against
	Identified uses	: Laboratory chemicals, Industrial & for professional use only
1.3	Details of the supplier of Company	of the safety data sheet : Central Drug House (P) Ltd 7/28 Vardaan House New Delhi-10002 INDIA
	Telephone Email	: +91 11 49404040 : <u>care@cdhfinechemical.com</u>

1.4 Emergency telephone number Emergency Phone # : +91 11 49404040 (9:00am - 6:00 pm) [Office hours]

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Classification according to Regulation (EC) No 1272/2008

Acute toxicity, Oral (Category 4), H302 Acute toxicity, Inhalation (Category 3), H331 Skin irritation (Category 2), H315 Eye irritation (Category 2), H319 Carcinogenicity (Category 2), H351 Reproductive toxicity (Category 2), H361d Specific target organ toxicity - single exposure (Category 3), Central nervous system, H336 Specific target organ toxicity - repeated exposure (Category 1), H372

For the full text of the H-Statements mentioned in this Section, see Section 16.

Classification according to EU Directives 67/548/EEC or 1999/45/EC

Xn, Xi Harmful, Irritant R20, R22, R48/20/22, R36/38, R40, R63, R67

For the full text of the R-phrases mentioned in this Section, see Section 16.

2.2 Label elements

Labelling according Regulation (EC) No 1272/2008 Pictogram

Signal word	Danger
Hazard statement(s)	
H302	Harmful if swallowed.
H315	Causes skin irritation.
H319	Causes serious eye irritation.
H331	Toxic if inhaled.
H336	May cause drowsiness or dizziness.
H351	Suspected of causing cancer.
H361d	Suspected of damaging the unborn child.
H372	Causes damage to organs through prolonged or repeated exposure.
Precautionary statement(s)	
P261	Avoid breathing vapours.
P281	Use personal protective equipment as required.
P305 + P351 + P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P311	Call a POISON CENTER or doctor/ physician.
Supplemental Hazard Statements	none
Other hazards This substance/mixture contains	s no components considered to be either persistent, bioaccumulative and

toxic (PBT), or very persistent and very bioaccumulative (vPvB) at levels of 0.1% or higher.

SECTION 3: Composition/information on ingredients

SECTION 4: First aid measures

Index-No.

Description of first aid measures 4.1

General advice

Consult a physician. Show this safety data sheet to the doctor in attendance.

602-006-00-4

lf inhaled

If breathed in, move person into fresh air. If not breathing, give artificial respiration. Consult a physician.

In case of skin contact

Wash off with soap and plenty of water. Take victim immediately to hospital. Consult a physician.

In case of eye contact

Rinse thoroughly with plenty of water for at least 15 minutes and consult a physician.

If swallowed

Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

- **4.2** Most important symptoms and effects, both acute and delayed The most important known symptoms and effects are described in the labelling (see section 2 .2) and/or in section 11
- **4.3 Indication of any immediate medical attention and special treatment needed** No data available

SECTION 5: Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

- **5.2** Special hazards arising from the substance or mixture Carbon oxides, Hydrogen chloride gas
- **5.3** Advice for firefighters Wear self-contained breathing apparatus for firefighting if necessary.

5.4 Further information No data available

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures Wear respiratory protection. Avoid breathing vapours, mist or gas. Ensure adequate ventilation. Evacuate personnel to safe areas. For personal protection see section 8.

6.2 Environmental precautions Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

- **6.3** Methods and materials for containment and cleaning up Soak up with inert absorbent material and dispose of as hazardous waste. Keep in suitable, closed containers for disposal.
- **6.4 Reference to other sections** For disposal see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling

Avoid contact with skin and eyes. Avoid inhalation of vapour or mist. For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities Store in cool place. Keep container tightly closed in a dry and well-ventilated place. Containers which are

opened must be carefully resealed and kept upright to prevent leakage. Storage class (TRGS 510): Non-combustible, acute toxic Cat.3 / toxic hazardous materials or hazardous materials causing chronic effects

7.3 Specific end use(s)

Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Components with workplace control parameters

8.2 Exposure controls

Appropriate engineering controls

Avoid contact with skin, eyes and clothing. Wash hands before breaks and immediately after handling the product.

Personal protective equipment

Eye/face protection

Face shield and safety glasses Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin protection

Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Body Protection

Complete suit protecting against chemicals, The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection

Where risk assessment shows air-purifying respirators are appropriate use a full-face respirator with multi-purpose combination (US) or type AXBEK (EN 14387) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Control of environmental exposure

Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties

Form: liquid, clear a) Appearance Colour: colourless b) Odour No data available c) Odour Threshold No data available No data available d) pH e) Melting point/freezing -62.99 °C point Initial boiling point and 61.0 °C f) boiling range g) Flash point No data available h) Evaporation rate No data available Flammability (solid, gas) No data available i) Upper/lower No data available j) flammability or explosive limits k) Vapour pressure 213,3 hPa at 20,0 °C No data available Vapour density I) m) Relative density 1,48 g/cm3

	n)	Water solubility	No data available		
	o)	Partition coefficient: n- octanol/water	log Pow: 1,97		
	p)	Auto-ignition temperature	No data available		
	q)	Decomposition temperature	No data available		
	r)	Viscosity	No data available		
	s)	Explosive properties	No data available		
	t)	Oxidizing properties	No data available		
9.2	Ot	her safety information			
		Surface tension	27,1 mN/m at 20,0 °C		
SEC		10: Stability and reactivi	ity		
10.1	Reactivity No data available				
10.2	Chemical stability Stable under recommended storage conditions.				
10.3	Possibility of hazardous reactions No data available				
10.4	Conditions to avoid No data available				
10.5	Incompatible materials Strong oxidizing agents, Strong bases, Magnesium, Sodium/sodium oxides, Lithium				
10.6	Hazardous decomposition products Other decomposition products - No data available In the event of fire: see section 5				
SECT	rion	11: Toxicological inform	nation		
11.1	Info	ormation on toxicologica	I effects		
	Acute toxicity LD50 Oral - Rat - 908 mg/kg Remarks: Behavioral:Change in motor activity (specific assay). Behavioral:Ataxia. Lungs, Thorax, Respiration:Respiratory stimulation.				
	LOEC Inhalation - Rat - male - 6 h - 500 ppm				
	LD	50 Dermal - Rabbit - > 20.0	000 mg/kg		
	Sk Ski Re	in corrosion/irritation in - Rabbit sult: Irritating to skin 24 ł	1		
	Se Eye Re	rious eye damage/eye irr es - Rabbit sult: Irritating to eyes 24	itation h		

Respiratory or skin sensitisation

Did not cause sensitisation on laboratory animals.

Germ cell mutagenicity

Laboratory experiments have shown mutagenic effects.

Carcinogenicity

Carcinogenicity - Rat - Oral Tumorigenic:Carcinogenic by RTECS criteria. Leukaemia The National Cancer Institute (NCI) has found clear evidence for carcinogenicity. Limited evidence of a carcinogenic effect.

IARC: 2B - Group 2B: Possibly carcinogenic to humans (Chloroform)

Reproductive toxicity

Suspected of damaging the unborn child. Suspected human reproductive toxicant

Specific target organ toxicity - single exposure

May cause drowsiness or dizziness.

Specific target organ toxicity - repeated exposure

The substance or mixture is classified as specific target organ toxicant, repeated exposure, category 1. - Liver, Kidney

Aspiration hazard

No data available

Additional Information

RTECS: Not available

Vomiting, Gastrointestinal disturbance, Exposure to and/or consumption of alcohol may increase toxic effects., To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

SECTION 12: Ecological information

12.1 Toxicity

Toxicity to fish	LC50 - Leuciscus idus (Golden orfe) - 162 mg/l - 48 h		
	LC100 - Leuciscus idus (Golden orfe) - 220 mg/l - 48 h		
	LC50 - other fish - 97 mg/l - 96 h		
	LC50 - Danio rerio (zebra fish) - 121 mg/l - 96 h		
	NOEC - Oryzias latipes - 122 mg/l - 10 d		
	NOEC - Oncorhynchus mykiss (rainbow trout) - 24 mg/l - 96 h		
Toxicity to daphnia and other aquatic invertebrates	EC50 - Daphnia magna (Water flea) - 79,00 mg/l - 24 h		
	Immobilization EC50 - Daphnia magna (Water flea) - 51,6 mg/l - 48 h		
	NOEC - Daphnia magna (Water flea) - 120 mg/l - 11 d		
Toxicity to algae	EC50 - No information available 500,00 mg/l - 24 h		
Persistence and degradability No data available			
Bioaccumulative potent Bioaccumulation	t ial Lepomis macrochirus (Bluegill) - 14 d - 0,11 mg/l		

Bioconcentration factor (BCF): 6

12.4 Mobility in soil

12.2

12.3

No data available

12.5 Results of PBT and vPvB assessment

This substance/mixture contains no components considered to be either persistent, bioaccumulative and toxic (PBT), or very persistent and very bioaccumulative (vPvB) at levels of 0.1% or higher.

12.6 Other adverse effects

Harmful to aquatic life.

SECTION 13: Disposal considerations

13.1 Waste treatment methods Product Offer surplus and non-recyclable solutions to a licensed disposal company. **Contaminated packaging** Dispose of as unused product. **SECTION 14: Transport information** 14.1 UN number IMDG: 1888 IATA: 1888 ADR/RID: 1888 14.2 UN proper shipping name ADR/RID: CHLOROFORM IMDG: **CHLOROFORM** IATA: Chloroform 14.3 Transport hazard class(es) ADR/RID: 6.1 IMDG: 6.1 IATA: 6.1 14.4 Packaging group ADR/RID: III IMDG: III IATA: III 14.5 Environmental hazards ADR/RID: no IMDG Marine pollutant: no IATA: no 14.6 Special precautions for user

No data available

SECTION 15: Regulatory information

This safety datasheet complies with the requirements of Regulation (EC) No. 1907/2006.

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

No data available

15.2 Chemical Safety Assessment

For this product a chemical safety assessment was not carried out

SECTION 16: Other information

Full text of H-Statements referred to under sections 2 and 3.

Acute Tox.	Acute toxicity
Carc.	Carcinogenicity
Eye Irrit.	Eye irritation
H302	Harmful if swallowed.
H315	Causes skin irritation.
H319	Causes serious eye irritation.
H331	Toxic if inhaled.
H336	May cause drowsiness or dizziness.
H351	Suspected of causing cancer.
H361d	Suspected of damaging the unborn child.
H372 Repr.	Causes damage to organs through prolonged or repeated exposure. Reproductive toxicity

Full text of R-phrases referred to under sections 2 and 3

Xn	Harmful
R20	Harmful by inhalation.
R22	Harmful if swallowed.
R36/38	Irritating to eyes and skin.
R40	Limited evidence of a carcinogenic effect.
R48/20/22	Harmful: danger of serious damage to health by prolonged exposure through inhalation and if swallowed.
R63	Possible risk of harm to the unborn child.
R67	Vapours may cause drowsiness and dizziness.

Further information

The above information is believed to be correct but does not purport to be all inclusive and shall be used only as a guide. The information in this document is based on the present state of our knowledge and is applicable to the product with regard to appropriate safety precautions. It does not represent any guarantee of the properties of the product. Central Drug House (P) Ltd and its Affiliates shall not be held liable for any damage resulting from handling or from contact with the above product. See www.cdhfinechemical.com for additional terms and conditions of sale.

M-1093

SAFETY DATA SHEET

1/12

Nonflammable Gas Mixture: Carbon Monoxide / Hydrogen Sulfide / Methane / Nitrogen / Oxygen

Section 1. Identification

GHS product identifier	: Nonflammable Gas Mixture: Carbon Monoxide / Hydrogen Sulfide / Methane / Nitrogen / Oxygen
Other means of identification	: Not available.
Product use	: Synthetic/Analytical chemistry.
SDS #	: 017447
Supplier's details	: Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Emergency telephone number (with hours of operation)	: 1-866-734-3438

Section 2. Hazards identification

OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	: GASES UNDER PRESSURE - Compressed gas
GHS label elements	
Hazard pictograms	
Signal word	: Warning
Hazard statements	: Contains gas under pressure; may explode if heated. May displace oxygen and cause rapid suffocation.
Precautionary statements	
General	: Read and follow all Safety Data Sheets (SDS'S) before use. Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand. Close valve after each use and when empty. Use equipment rated for cylinder pressure. Do not open valve until connected to equipment prepared for use. Use a back flow preventative device in the piping. Use only equipment of compatible materials of construction. Do not depend on odor to detect presence of gas.
Prevention	: Not applicable.
Response	: Not applicable.
Storage	: Protect from sunlight when ambient temperature exceeds 52°C/125°F. Store in a well- ventilated place.
Disposal	: Not applicable.
Hazards not otherwise classified	: In addition to any other important health or physical hazards, this product may displace oxygen and cause rapid suffocation.

Section 3. Composition/information on ingredients

Substance/mixture Other means of

identification

: Mixture

: Not available.

CAS number/other identifiers

CAS number	: Not applicable.
Product code	: 017447

Ingredient name	%	CAS number
Nitrogen	77 - 99	7727-37-9
oxygen	0.0001 - 19.5	7782-44-7
methane	0.0001 - 3	74-82-8
hydrogen sulfide	0.0001 - 0.2499	7783-06-4
carbon monoxide	0.0001 - 0.0999	630-08-0

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact	 Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention if irritation occurs. 		
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention if adverse health effects persist or are severe. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband. In case of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed person may need to be kept under medical surveillance for 48 hours.		
Skin contact	 Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Get medical attention if symptoms occur. Wash clothing before reuse. Clean shoes thoroughly before reuse. 		
Ingestion	: As this product is a gas, refer to the inhalation section.		
Most important symptoms/effects, acute and delayed			
Potential acute health e	ffects		
Eye contact	: Contact with rapidly expanding gas may cause burns or frostbite.		
Inhalation	: No known significant effects or critical hazards.		
Skin contact	: Contact with rapidly expanding gas may cause burns or frostbite.		
Frostbite	: Try to warm up the frozen tissues and seek medical attention.		
Ingestion	: As this product is a gas, refer to the inhalation section.		
Over-exposure signs/symptoms			
Eye contact	: No specific data.		
Inhalation	: No specific data.		
Skin contact			

Ingestion : No specific data.

: 4/1/2016

Date of	issue/Date	e of revision

Date of previous issue

e : 4/1/2016

Section 4. First aid measures

Indication of immediate med	lica	l attention and special treatment needed, if necessary
Notes to physician	:	In case of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed person may need to be kept under medical surveillance for 48 hours.
Specific treatments	1	No specific treatment.
Protection of first-aiders	:	No action shall be taken involving any personal risk or without suitable training. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media	
Suitable extinguishing media	: Use an extinguishing agent suitable for the surrounding fire.
Unsuitable extinguishing media	: None known.
Specific hazards arising from the chemical	: Contains gas under pressure. In a fire or if heated, a pressure increase will occur and the container may burst or explode.
Hazardous thermal decomposition products	: Decomposition products may include the following materials: carbon dioxide carbon monoxide nitrogen oxides
Special protective actions for fire-fighters	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Contact supplier immediately for specialist advice. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protec	tiv	e equipment and emergency procedures
For non-emergency personnel	:	No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Avoid breathing gas. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	:	If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	:	Ensure emergency procedures to deal with accidental gas releases are in place to avoid contamination of the environment. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).
Methods and materials for co	nta	ainment and cleaning up
Small spill	:	Immediately contact emergency personnel. Stop leak if without risk.
Large spill	:	Immediately contact emergency personnel. Stop leak if without risk. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling					
Protective measures	:	Put on appropriate personal protective equipment (see Section 8). Contains gas under pressure. Avoid contact with eyes, skin and clothing. Avoid breathing gas. Empty containers retain product residue and can be hazardous. Do not puncture or incinerate container. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement.			
Advice on general occupational hygiene	:	Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.			
Conditions for safe storage, including any incompatibilities	:	Store in accordance with local regulations. Store in a segregated and approved area. Store away from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10). Keep container tightly closed and sealed until ready for use. Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F).

Section 8. Exposure controls/personal protection

Appropriate engineering controls	:	Good general ventilation should be sufficient to control worker exposure to airborne contaminants.	
Environmental exposure controls	:	Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipmen will be necessary to reduce emissions to acceptable levels.	
Individual protection measu	ires		
Hygiene measures	:	Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.	
Eye/face protection	:	Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: safety glasses with side-shields.	
Skin protection			
Hand protection	:	Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.	
Body protection	:	Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.	
Other skin protection	:	Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.	
Respiratory protection	:	Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.	

Section 9. Physical and chemical properties

Section 9. Physical and chemical properties

Evaporation rate	1	Not available.
Flammability (solid, gas)	1	Not available.
Lower and upper explosive (flammable) limits	:	Not available.
Vapor pressure	1	Not available.
Vapor density	1	Highest known value: 1.1 (Air = 1) (oxygen). Weighted average: 0.98 (Air = 1)
Gas Density (lb/ft ³)	:	Weighted average: 0.08
Relative density	:	Not applicable.
Solubility	1	Not available.
Solubility in water	1	Not available.
Partition coefficient: n- octanol/water	:	Not available.
Auto-ignition temperature	1	Not available.
Decomposition temperature	1	Not available.
SADT	:	Not available.
Viscosity	:	Not applicable.

Section 10. Stability and reactivity

Reactivity	:	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	:	The product is stable.
Possibility of hazardous reactions	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	:	No specific data.
Incompatibility with various substances	:	Extremely reactive or incompatible with the following materials: reducing materials and combustible materials.
Hazardous decomposition products	:	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 13. Disposal considerations

Disposal methods :	The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Empty Airgas-owned pressure vessels should be returned to Airgas. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Do not puncture or incinerate

SAFETY DATA SHEET

Isobutylene

Section 1. Identification

GHS product identifier	: Isobutylene
Chemical name	: 2-methylpropene
Other means of identification	 1-Propene, 2-methyl-; Isobutene; Isobutylene; 1-Propene, 2-methyl- (isobutene); 1, 1-Dimethylethylene; Isopropylidenemethylene; iso-Butene; i-Butene; 2-Methylpropylene; 2-Methyl-2-propene; 2-Methyl-1-propene
Product type	: Gas.
Product use	: Synthetic/Analytical chemistry.
Synonym	 1-Propene, 2-methyl-; Isobutene; Isobutylene; 1-Propene, 2-methyl- (isobutene); 1, 1-Dimethylethylene; Isopropylidenemethylene; iso-Butene; i-Butene; 2-Methylpropylene; 2-Methyl-2-propene; 2-Methyl-1-propene 001031
Supplier's details	Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
24-hour telephone	1-866-734-3438

Section 2. Hazards identification

OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	: FLAMMABLE GASES - Category 1 GASES UNDER PRESSURE - Liquefied gas
GHS label elements	
Hazard pictograms	
Signal word	: Danger
Hazard statements	: Extremely flammable gas. May form explosive mixtures with air. Contains gas under pressure; may explode if heated. May displace oxygen and cause rapid suffocation.
Precautionary statements	
General	: Read and follow all Safety Data Sheets (SDS'S) before use. Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand. Close valve after each use and when empty. Use equipment rated for cylinder pressure. Do not open valve until connected to equipment prepared for use. Use a back flow preventative device in the piping. Use only equipment of compatible materials of construction. Always keep container in upright position. Approach suspected leak area with caution.
Prevention	: Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.
Response	: Leaking gas fire: Do not extinguish, unless leak can be stopped safely. Eliminate all ignition sources if safe to do so.
Storage	: Protect from sunlight. Store in a well-ventilated place.
Disposal	: Not applicable.
Hazards not otherwise classified	: In addition to any other important health or physical hazards, this product may displace oxygen and cause rapid suffocation.

Date of issue/Date of revision	: 5/10/2018	Date of previous issue	: 7/11/2016	Version : 0.02	1/11

Isobutylene

Section 3. Composition/information on ingredients

Substance/mixture	: Substance
Chemical name	: 2-methylpropene
Other means of identification	 1-Propene, 2-methyl-; Isobutene; Isobutylene; 1-Propene, 2-methyl- (isobutene); 1, 1-Dimethylethylene; Isopropylidenemethylene; iso-Butene; i-Butene; 2-Methylpropylene; 2-Methyl-2-propene; 2-Methyl-1-propene
Product code	: 001031

CAS number/other identifiers

CAS number	: 115-11-7		
Ingredient name		%	CAS number
Isobutylene		100	115-11-7

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact	 Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention if irritation occurs.
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention if adverse health effects persist or are severe. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Skin contact	: Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. To avoid the risk of static discharges and gas ignition, soak contaminated clothing thoroughly with water before removing it. Get medical attention if symptoms occur. Wash clothing before reuse. Clean shoes thoroughly before reuse.
Ingestion	: As this product is a gas, refer to the inhalation section.

Potential acute health e	ffects
Eye contact	: No known significant effects or critical hazards.
Inhalation	: No known significant effects or critical hazards.
Skin contact	: No known significant effects or critical hazards.
Frostbite	: Try to warm up the frozen tissues and seek medical attention.
Ingestion	: As this product is a gas, refer to the inhalation section.
Over-exposure signs/sy	mptoms
Eye contact	: No specific data.
Inhalation	: No specific data.
Skin contact	: No specific data.
Ingestion	: No specific data.
Indication of immediate	nedical attention and special treatment needed, if necessary
Notes to physician	: Treat symptomatically. Contact poison treatment specialist immediately if large

Notes to physician	: Treat sym quantities	Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.		
Specific treatments	: No specif	ic treatment.		
Date of issue/Date of revision	: 5/10/2018	Date of previous issue	: 7/11/2016	Version : 0.02

2/11

Section 4. First aid measures

Protection of first-aiders

: No action shall be taken involving any personal risk or without suitable training. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

See toxicological information (Section 11)

Section 5. Fire-fighting measures **Extinguishing media** Suitable extinguishing : Use an extinguishing agent suitable for the surrounding fire. media Unsuitable extinguishing : None known. media Specific hazards arising : Contains gas under pressure. Extremely flammable gas. In a fire or if heated, a from the chemical pressure increase will occur and the container may burst, with the risk of a subsequent explosion. **Hazardous thermal** : Decomposition products may include the following materials: carbon dioxide decomposition products carbon monoxide **Special protective actions** : Promptly isolate the scene by removing all persons from the vicinity of the incident if for fire-fighters there is a fire. No action shall be taken involving any personal risk or without suitable training. Contact supplier immediately for specialist advice. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool. If involved in fire, shut off flow immediately if it can be done without risk. If this is impossible, withdraw from area and allow fire to burn. Fight fire from protected location or maximum possible distance. Eliminate all ignition sources if safe to do so. **Special protective** : Fire-fighters should wear appropriate protective equipment and self-contained breathing equipment for fire-fighters apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protec	ive equipment and emergency procedures
For non-emergency personnel	: Accidental releases pose a serious fire or explosion hazard. No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing gas. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	: If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	: Ensure emergency procedures to deal with accidental gas releases are in place to avoid contamination of the environment. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).
Methods and materials for co	ntainment and cleaning up
Small spill	: Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment.
Largo spill	: Immediately contact emergency personnel. Stop leak if without risk. Use spark proof

 Large spill
 Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling	9	
Protective measures	:	Put on appropriate personal protective equipment (see Section 8). Contains gas under pressure. Avoid breathing gas. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Do not puncture or incinerate container. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement. Use only non-sparking tools. Avoid contact with eyes, skin and clothing. Empty containers retain product residue and can be hazardous. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment.
Advice on general occupational hygiene	:	Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
Conditions for safe storage, including any incompatibilities	:	Store in accordance with local regulations. Store in a segregated and approved area. Store away from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10). Eliminate all ignition sources. Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F). Keep container tightly closed and sealed until ready for use. See Section 10 for incompatible materials before handling or use.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name		Exposure limits
Isobutylene		ACGIH TLV (United States, 3/2017). TWA: 250 ppm 8 hours.
Appropriate engineering controls	: Use only with adequate ver other engineering controls recommended or statutory vapor or dust concentration ventilation equipment.	ntilation. Use process enclosures, local exhaust ventilation or to keep worker exposure to airborne contaminants below any limits. The engineering controls also need to keep gas, as below any lower explosive limits. Use explosion-proof
Environmental exposure controls	: Emissions from ventilation they comply with the require cases, fume scrubbers, filte will be necessary to reduce	or work process equipment should be checked to ensure ements of environmental protection legislation. In some ers or engineering modifications to the process equipment emissions to acceptable levels.
Individual protection measure	<u>ures</u>	
Hygiene measures	: Wash hands, forearms and eating, smoking and using Appropriate techniques sho Wash contaminated clothin showers are close to the wa	I face thoroughly after handling chemical products, before the lavatory and at the end of the working period. build be used to remove potentially contaminated clothing. Ing before reusing. Ensure that eyewash stations and safety orkstation location.
Eye/face protection	: Safety eyewear complying assessment indicates this i gases or dusts. If contact i the assessment indicates a shields.	with an approved standard should be used when a risk s necessary to avoid exposure to liquid splashes, mists, s possible, the following protection should be worn, unless higher degree of protection: safety glasses with side-
Skin protection		

Section 8. Exposure controls/personal protection

Hand protection	: Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.
Body protection	: Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. When there is a risk of ignition from static electricity, wear anti-static protective clothing. For the greatest protection from static discharges, clothing should include anti-static overalls, boots and gloves.
Other skin protection	: Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Respiratory protection	: Based on the hazard and potential for exposure, select a respirator that meets the appropriate standard or certification. Respirators must be used according to a respiratory protection program to ensure proper fitting, training, and other important aspects of use. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

<u>Appearance</u>		
Physical state	:	Gas. [Compressed gas.]
Color	:	Colorless.
Odor	:	Characteristic.

Section 10. Stability and reactivity

Reactivity	: No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	: The product is stable.
Possibility of hazardous reactions	: Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	: Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition.
Incompatible materials	: Oxidizers
Hazardous decomposition products	: Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 12. Ecological information

Other adverse effects

: No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Empty Airgas-owned pressure vessels should be returned to Airgas. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Do not puncture or incinerate container.

Section 16. Other information

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks. Although HMIS® ratings and the associated label are not required on SDSs or products leaving a facility under 29 CFR 1910.1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered trademark and service mark of the American Coatings Association, Inc.

The customer is responsible for determining the PPE code for this material. For more information on HMIS® Personal Protective Equipment (PPE) codes, consult the HMIS® Implementation Manual.

Notice to reader

To the best of our knowledge, the information contained herein is accurate. However, neither the above-named supplier, nor any of its subsidiaries, assumes any liability whatsoever for the accuracy or completeness of the information contained herein.

Final determination of suitability of any material is the sole responsibility of the user. All materials may present unknown hazards and should be used with caution. Although certain hazards are described herein, we cannot guarantee that these are the only hazards that exist.

SAFETY DATA SHEET

Airgas

Isopropyl Alcohol (Isopropanol)

Section 1. Identification

GHS product identifier	:	Isopropyl Alcohol (Isopropanol)
Chemical name	:	Isopropyl alcohol
Other means of identification	:	propan-2-ol; 2-Propanol; isopropanol; isopropyl alcohol
Product use	:	Synthetic/Analytical chemistry.
Synonym SDS #	:	propan-2-ol; 2-Propanol; isopropanol; isopropyl alcohol 001105
Supplier's details	:	Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Emergency telephone	:	1-866-734-3438

Emergency telephone number (with hours of operation)

Section 2. Hazards identification

OSHA/HCS status	 This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	: FLAMMABLE LIQUIDS - Category 2 SERIOUS EYE DAMAGE/ EYE IRRITATION - Category 2 SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Narcotic effects) - Category 3
GHS label elements	
Hazard pictograms	
Signal word	: Danger
Hazard statements	 Highly flammable liquid and vapor. May form explosive mixtures with air. Causes serious eye irritation. May cause drowsiness and dizziness.
Precautionary statements	
General	: Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand.
Prevention	: Wear protective gloves. Wear eye or face protection. Keep away from heat, sparks, open flames and hot surfaces No smoking. Use explosion-proof electrical, ventilating, lighting and all material-handling equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Keep container tightly closed. Use only outdoors or in a well-ventilated area. Avoid breathing vapor. Wash hands thoroughly after handling. Use and store only outdoors or in a well ventilated place.

Section 2. Hazards identification

Response	 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Call a POISON CENTER or physician if you feel unwell. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water or shower. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical attention.
Storage	: Store locked up. Store in a well-ventilated place. Keep cool.
Disposal	: Dispose of contents and container in accordance with all local, regional, national and international regulations.
Hazards not otherwise classified	: None known.

Section 3. Composition/information on ingredients

Substance/mixture	:	Substance
Chemical name	:	Isopropyl alcohol
Other means of identification	:	propan-2-ol; 2-Propanol; isopropanol; isopropyl alcohol

CAS number/other identifiers

CAS number	: 67-63-0		
Product code	: 001105		
Ingredient name		%	CAS number
propan-2-ol		100	67-63-0

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary f	irst aid measures
Eye contact	 Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention. If necessary, call a poison center or physician. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Skin contact	 Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Get medical attention if symptoms occur. Wash clothing before reuse. Clean shoes thoroughly before reuse.
Ingestion	: Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Get medical attention. If necessary, call a poison center or physician. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention
Date of issue/Date of revision	: 5/20/2015. Date of previous issue : 10/28/2014. Version : 0.02 2/14

Section 4. First aid measures

immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Most important symptoms/effects, acute and delayed

Potential acute health effe		
Eye contact	Causes serious eye irritation.	
Inhalation	 Can cause central nervous system (CNS) depression. May cause drowsiness a dizziness. 	and
Skin contact	No known significant effects or critical hazards.	
Frostbite	Try to warm up the frozen tissues and seek medical attention.	
Ingestion	 Can cause central nervous system (CNS) depression. Irritating to mouth, throa stomach. 	t and
Over-exposure signs/sym	<u>ns</u>	
Eye contact	Adverse symptoms may include the following: pain or irritation watering redness	
Inhalation	Adverse symptoms may include the following: nausea or vomiting headache drowsiness/fatigue dizziness/vertigo unconsciousness	
Skin contact	No specific data.	
Ingestion	No specific data.	
Indication of immediate me	al attention and special treatment needed, if necessary	
Notes to physician	Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.	!
Specific treatments	No specific treatment.	
Protection of first-aiders	No action shall be taken involving any personal risk or without suitable training. suspected that fumes are still present, the rescuer should wear an appropriate r self-contained breathing apparatus. It may be dangerous to the person providir give mouth-to-mouth resuscitation.	If it is mask or າg aid to

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media	
Suitable extinguishing media	: Use dry chemical, CO ₂ , water spray (fog) or foam.
Unsuitable extinguishing media	: Do not use water jet.
Specific hazards arising from the chemical	: Highly flammable liquid and vapor. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. The vapor/gas is heavier than air and will spread along the ground. Vapors may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back. Runoff to sewer may create fire or explosion hazard.

Date of issue/Date of revision	: 5/20/2015.	Date of previous issue	: 10/28/2014.	Version : 0.02	3/14
--------------------------------	--------------	------------------------	---------------	----------------	------

Section 5. Fire-fighting measures

Hazardous thermal decomposition products	: Decomposition products may include the following materials: carbon dioxide carbon monoxide
Special protective actions for fire-fighters	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel	:	No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	:	If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	:	Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Small spill	: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.
Large spill	: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

Protective measures	: Put on appropriate personal protective equipment (see Section 8). Do not ingest. Avoid contact with eyes, skin and clothing. Avoid breathing vapor or mist. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container.

Section 7. Handling and storage

Advice on general occupational hygiene	: Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.	
Conditions for safe storage, including any incompatibilities	Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.	

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
propan-2-ol	ACGIH TLV (United States, 3/2012). TWA: 200 ppm 8 hours. STEL: 400 ppm 15 minutes. OSHA PEL 1989 (United States, 3/1989). TWA: 400 ppm 8 hours. TWA: 980 mg/m ³ 8 hours. STEL: 500 ppm 15 minutes. STEL: 1225 mg/m ³ 15 minutes. NIOSH REL (United States, 1/2013). TWA: 400 ppm 10 hours. TWA: 980 mg/m ³ 10 hours. STEL: 500 ppm 15 minutes. STEL: 1225 mg/m ³ 15 minutes. STEL: 1225 mg/m ³ 15 minutes. STEL: 1225 mg/m ³ 15 minutes. STEL: 400 ppm 8 hours. TWA: 400 ppm 8 hours. TWA: 980 mg/m ³ 8 hours.

Appropriate engineering controls	Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.
Environmental exposure controls	Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.
Individual protection measures	
Hygiene measures	Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Date of issue/Date of revision : 5/20/2015. Date	ate of previous issue	10/28/2014.	Version :	0.02	5/14
--	-----------------------	-------------	-----------	------	------

Section 8. Exposure controls/personal protection

Eye/face protection	: Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: chemical splash goggles.
Skin protection	
Hand protection	: Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.
Body protection	: Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. When there is a risk of ignition from static electricity, wear antistatic protective clothing. For the greatest protection from static discharges, clothing should include anti-static overalls, boots and gloves.
Other skin protection	: Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Respiratory protection	: Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

<u>Appearance</u>		
Physical state	: Liquid. [COLORLESS LIQUID WITH THE ODOR OF RUBBING ALCOHOL]	
Color	: Colorless.	
Molecular weight	: 60.11 g/mole	
Molecular formula	: C3-H8-O	
Boiling/condensation point	: 83°C (181.4°F)	
Melting/freezing point	: -90°C (-130°F)	
Critical temperature	: Not available.	
Odor	: Alcohol-like.	
Odor threshold	: Not available.	
рН	: Not available.	
Flash point	: Closed cup: 11.7°C (53.1°F)	
Burning time	: Not applicable.	
Burning rate	: Not applicable.	
Evaporation rate	: 1.7 (butyl acetate = 1)	
Flammability (solid, gas)	: Not available.	
Lower and upper explosive (flammable) limits	: Lower: 2% Upper: 12%	
Vapor pressure	: 4.4 kPa (33.002681467 mm Hg) [room temperature]	
Vapor density	: 2.1 (Air = 1)	
Specific Volume (ft ³ /lb)	: 1.2739	
Gas Density (lb/ft ³)	: 0.785	
Relative density	: 0.79	
Date of issue/Date of revision	: 5/20/2015. Date of previous issue : 10/28/2014. Version : 0.02	6/14

Section 9. Physical and chemical properties

Solubility	: Not available.
Solubility in water	: Not available.
Partition coefficient: n- octanol/water	: 0.05
Auto-ignition temperature	: 456°C (852.8°F)
Decomposition temperature	: Not available.
SADT	: Not available.
Viscosity	: Not available.

Section 10. Stability and reactivity

Reactivity	:	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	:	The product is stable.
Possibility of hazardous reactions	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	:	Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition. Do not allow vapor to accumulate in low or confined areas.
Incompatibility with various substances	:	Highly reactive or incompatible with the following materials: acids and moisture.
Hazardous decomposition products	:	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 11. Toxicological information

Section 13. Disposal considerations

Disposal methods

: The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Hazardous Material Information System (U.S.A.)

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks Although HMIS® ratings are not required on SDSs under 29 CFR 1910. 1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint & Coatings Association (NPCA). HMIS® materials may be purchased exclusively from J. J. Keller (800) 327-6868.

Quebec Designated Substances: This material is not listed.

The customer is responsible for determining the PPE code for this material.

2.1. Classification of the substance or mixture

Section 2: Hazards identification

Classification (GHS-US)

Flammable liquids Category 2 Acute toxicity (inhalation:vapor) Category 4 Germ cell mutagenicity Category 1B Carcinogenicity Category 2

Reproductive toxicity Category 2

Specific target organ toxicity (single exposure) Category 3 - Respiratory irritation

Specific target organ toxicity (single exposure) Category 3 - Narcotic effects

Specific target organ toxicity (repeated exposure) Category 2 Aspiration hazard Category 1

2.2. Label elements

GHS-US labeling

Hazard pictograms (GHS-US)

Signal word (GHS-US)	: Danger
Hazard statements (GHS-US)	 Highly flammable liquid and vapor May be fatal if swallowed and enters airways Harmful if inhaled May cause respiratory irritation May cause drowsiness or dizziness May cause genetic defects Suspected of causing cancer Suspected of damaging fertility or the unborn child May cause damage to organs (hearing organ (loss of hearing), kidneys) through prolonged or repeated exposure
Precautionary statements (GHS-US)	 Obtain special instructions before use. Do not handle until all safety precautions have been read and understood.
Date of issue: 08/17/2015	EN (English US)

<u>.</u>		
		 Keep away from heat, hot surfaces, open flames, sparks No smoking. Keep container tightly closed. Ground/bond container and receiving equipment. Use explosion-proof electrical, lighting, ventilating equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Do not breathe mist, spray, vapors. Use only outdoors or in a well-ventilated area. Wear eye protection, flame retardant protective clothing, impermeable protective gloves. If swallowed: Immediately call a doctor, poison center. Do NOT induce vomiting. If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. If inhaled: Remove person to fresh air and keep comfortable for breathing. If exposed or concerned: Get medical advice/attention. Get medical advice/attention if you feel unwell. In case of fire: Use carbon dioxide (CO2), dry chemical, foam, water spray to extinguish. Store in a well-ventilated place. Keep cool. Store locked up. Dispose of contents and container in accordance with all local, regional, national and international regulations.
2.3.	Hazards not otherwise classified	
Other ha	azards not contributing to the ation	: Product can accumulate electrostatic charges that may cause fire by electrical discharges.
2.4. Not app	Unknown acute toxicity (GHS-US) licable	
2.5.	Additional information	
Based c	on conditions common to industrial	: May cause mild eve irritation.

workplace use of this product

May cause mild eye irritation. May cause mild skin irritation.

Section 3: Composition/inf	formation on ingredients		
3.1. Substance			
Name	: Ethylbenzene		
CAS No	: 100-41-4		
Formula	: C8H10		
Impurities and/or Stabilizing Add	itives which Contribute to the Classification:		
Name	CAS No	%	
Benzene (Impurity)	71-43-2	<= 0.2	
Toluene (Impurity)	108-88-3	<= 0.2	

3.2. Mixture

Not applicable

Section 4: First aid measures			
4.1. Description of first aid measures			
First-aid measures general	:	Never give anything by mouth to an unconscious person. If exposed or concerned: Get mediadvice/attention.	ical
First-aid measures after inhalation	:	Remove victim to fresh air and keep at rest in a position comfortable for breathing. Call a poison center/doctor/physician if you feel unwell.	
First-aid measures after skin contact	:	Rinse skin with water/shower. Remove/Take off immediately all contaminated clothing.	
First-aid measures after eye contact	:	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if prese and easy to do. Continue rinsing.	ent
First-aid measures after ingestion	:	Rinse mouth. Do NOT induce vomiting. Immediately call a poison center or doctor/physician.	
4.2. Most important symptoms and effect	cts,	both acute and delayed	
Symptoms/injuries	:	May cause genetic defects. Suspected of damaging fertility or the unborn child. Causes damage to organs.	
Symptoms/injuries after inhalation	:	May cause drowsiness or dizziness. May cause respiratory irritation.	
Symptoms/injuries after skin contact	:	May cause mild skin irritation.	
Symptoms/injuries after eye contact	:	May cause mild eye irritation.	
Date of issue: 08/17/2015	ł	EN (English US) 2	2/9

Safety Data Sheet	
Symptoms/injuries after ingestion	: May be fatal if swallowed and enters airways.
Chronic symptoms	: May cause cancer. May cause genetic defects.
4.3. Indication of any immediate medical a	attention and special treatment needed
No additional information available	
Section 5: Firefighting measures	
5.1. Extinguishing media	
Suitable extinguishing media	: Foam. Dry powder. Carbon dioxide. Water spray. Sand.
Unsuitable extinguishing media	: Do not use a heavy water stream.
5.2. Special hazards arising from the cher	nical
Fire hazard	: Highly flammable liquid and vapor.
Explosion hazard	: May form flammable/explosive vapor-air mixture.
5.3. Advice for firefighters	
Firefighting instructions	: Use water spray or fog for cooling exposed containers. Exercise caution when fighting any chemical fire. Prevent fire-fighting water from entering environment.
Protection during firefighting	: Do not enter fire area without proper protective equipment, including respiratory protection.
Section 6: Accidental release measur	es
6.1. Personal precautions, protective equi	ipment and emergency procedures
Emergency procedures for non-emergency personnel	: Evacuate unnecessary personnel.
Emergency procedures for emergency responders	: Ventilate area.
6.2. Methods and material for containmen	it and cleaning up
For containment	: Take up liquid spill into absorbent material, e.g.: sand, earth, vermiculite. Do not allow material to contaminate ground water system.
Methods for cleaning up	: Soak up spills with inert solids, such as clay or diatomaceous earth as soon as possible. Collect spillage. Store away from other materials.

6.3. Reference to other sections

See section 8. Exposure controls/personal protection.

Sectio	n 7: Handling and storage	
7.1.	Precautions for safe handling	
Addition	al hazards when processed	: Handle empty containers with care because residual vapors are flammable.
Precauti	ons for safe handling	: Wash hands and other exposed areas with mild soap and water before eating, drinking or smoking and when leaving work. Provide good ventilation in process area to prevent formation of vapor. No bare lights. No smoking. Use only non-sparking tools. Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Eliminate all ignition sources if safe to do so. Avoid breathing vapors, mist, spray. Use only outdoors or in a well-ventilated area.
7.2.	Conditions for safe storage, including	any incompatibilities
Technica	al measures	Proper grounding procedures to avoid static electricity should be followed. Ground/bond container and receiving equipment. Use explosion-proof electrical, lighting, ventilating equipment. All efforts should be made to prevent any leaks or spills. Storage tanks should be engineered to prevent contact with water resources, as this material could contaminate the water resources. Surface spills can reach groundwater through porous soil or cracked surfaces. The storage tanks should be monitored regularly for leaks. Where spills or leaks are possible, a comprehensive response plan should be developed and implemented.
Storage	conditions	: Keep only in the original container in a cool, well ventilated place away from : flames, heat sources, Direct sunlight, sparks. Keep in fireproof place. Keep container tightly closed.
Incompa	atible materials	: Sources of ignition. Direct sunlight. Heat sources.

Section 8: Exposure controls/personal protection

8.1. Occupational Exposure Limits

The following constituents are the only constituents of the product which have a PEL, TLV, or other recommended exposure limit. At this time, the other constituents have no known exposure limits.

Ethylbenzene (100-41-4)		
USA ACGIH	ACGIH TWA (ppm)	20 ppm

Safety Data Sheet

USA OSHA	OSHA PEL (TWA) (mg/m³)	435 mg/m³
USA OSHA	OSHA PEL (TWA) (ppm)	100 ppm
Benzene (71-43-2)		
USA ACGIH	ACGIH TWA (ppm)	0.5 ppm
USA ACGIH	ACGIH STEL (ppm)	2.5 ppm
USA OSHA	OSHA PEL (TWA) (ppm)	1 ppm
USA OSHA	OSHA PEL (STEL) (ppm)	5 ppm
USA OSHA	Remark (OSHA)	(see 29 CFR 1910.1028)
Toluene (108-88-3)		
USA ACGIH	ACGIH TWA (ppm)	20 ppm
USA OSHA	OSHA PEL (TWA) (ppm)	200 ppm
USA OSHA	OSHA PEL (Ceiling) (ppm)	300 ppm
USA OSHA	Remark (OSHA)	See 29 CFR 1910.1000 TABLE Z-2.
00 E ()		· · · · · · · · · · · · · · · · · · ·

8.2. Exposure controls Appropriate engineering controls

: Ensure adequate ventilation

Personal protective equipment

•	Linsule adequate ventilation.
:	Avoid all unnecessary exposure.

Hand protection

Eye protection

: Impermeable protective gloves. Choosing the proper glove is a decision that depends not only on the type of material, but also on other quality features, which differ for each manufacturer. Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough. The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.

- : Chemical goggles or safety glasses.
- : Wear fire/flame resistant/retardant clothing.

: Do not eat, drink or smoke during use.

- : An approved organic vapor respirator/supplied air or self-contained breathing apparatus must be used when vapor concentration exceeds applicable exposure limits.
- Other information

Respiratory protection

Skin and body protection

Section 9: Physical and chemical properties

9.1. Information on basic physical and	chemical properties
Physical state	: Liquid
Appearance	: Clear, colorless, volatile liquid.
Color	: Colorless.
Odor	: Characteristic. Aromatic. Sweet.
Odor threshold	: No data available
рН	: Not applicable
Relative evaporation rate (butyl acetate=1)	: No data available
Relative evaporation rate (ether=1)	: < 94
Melting point	: -94.9 °C
Freezing point	: -94.9 °C
Boiling point	: 136 °C
Flash point	: 21 (21 - 23) °C
Auto-ignition temperature	: 432 °C
Decomposition temperature	: No data available
Flammability (solid, gas)	: No data available
Vapor pressure	: 9.3 mm Hg @ 25°C
Relative vapor density at 20 °C	: 3.7 Air =1
Relative density	: 0.9
Solubility	: Water: 0.2 g/l Organic solvent:100 %
Log Kow	: 2.2 - 2.7
Viscosity, kinematic	: 0.64 cSt @ 40°C
Viscosity, dynamic	: No data available
Explosive limits	: 1 - 7 vol %

Safety Data Sheet

Caloty Bata Cheot	
9.2. Other information	
VOC content	: 100 %
Section 10: Stability and reactivity	
10.1. Reactivity	
Flammable liquid and vapor.	
10.2. Chemical stability	
Stable at ambient temperature and under normal	conditions of use.
10.3. Possibility of hazardous reactions	
Under normal conditions of storage and use, haz	ardous polymerization will not occur.
10.4. Conditions to avoid	
Direct sunlight. Extremely high or low temperatur	res. Open flame.
10.5. Incompatible materials	
Strong oxidizing agents.	
10.6. Hazardous decomposition products	
Hazardous decomposition products formed unde	r fire conditions: carbon monoxide, carbon dioxide, toxic fumes.
Section 11: Toxicological informatio	n
11.1. Information on toxicological effects	
Likely routes of exposure	: Inhalation. Ingestion. Skin and eye contact.
Acute toxicity	: Inhalation:vapor: Harmful if inhaled.
Ethylbenzene (100-41-4)	1 and 1
LD50 oral rat	3500 mg/kg
LD50 dermal rabbit	15354 mg/kg
LC50 inhalation rat	17.2 mg/l/4h
Skin corrosion/irritation	: Not classified
Serious eye damage/irritation	: Not classified
Respiratory or skin sensitization	: Not classified
Germ cell mutagenicity	: May cause genetic defects.
	Classification as a Mutagen 1B is due to the benzene content of this material.
	: Suspected of causing cancer.
Ethylbenzene (100-41-4)	-
Additional information	IARC has evaluated ethylbenzene as 2B, possibly carcinogenic to humans. In IARC's evaluation, it states that:
	"There is inadequate evidence in humans for the carcinogenicity of ethylbenzene. There is sufficient evidence in experimental animals for the carcinogenicity of ethylbenzene."
	IARC also notes that ethylbenzene typically contains, $0.1 - 0.3$ wt % benzene, similar to the benzene content of this product (≤ 0.2 wt %). Benzene is a known human carcinogen.
	Additionally, the types of cancers observed in experimental animals exposed to ethylbenzene are not the same as the types of cancers known to be caused by exposure to benzene.
	There is inadequate evidence that exposure to ethylbenzene containing low levels (≤ 0.2 wt %) of benzene causes carcinogenicity in humans, while there is sufficient evidence that exposure to ethylbenzene causes carcinogenicity in experimental animals. Therefore, ethylbenzene has been US-GHS classified as Carcinogen 2.
Ethylbenzene (100-41-4)	
IARC group	2B - Possibly carcinogenic to humans
Benzene (71-43-2)	4. Consistentia to humana
Notional Taxicale str Dramon (NTD) Obstan	I - Carcinogenic to numans
Inational Toxicology Program (NTP) Status	

OSHA Carcinogen Status Additional information In OSHA Specifically Regulated Carcinogen list Benzene is a known human carcinogen and is known to cause acute myeloid leukemia & myelodysplastic syndrome (disease that affects the bone marrow and blood) in

Safety Data Sheet

	humans who have been repeatedly exposed to benzene.	
Toluene (108-88-3)		
IARC group	3 - Not classifiable	
Reproductive toxicity	: Suspected of damaging fertility or the unborn child.	
	Based on animal studies, exposure to high levels of ethylbenzene may cause developmental effects (decreases in growth and increased skeletal variations).	
Specific target organ toxicity (single exposure)	: May cause respiratory irritation. May cause drowsiness or dizziness.	
Specific target organ toxicity (repeated exposure)	: May cause damage to organs (hearing organ (loss of hearing), kidneys) through prolonged or repeated exposure.	
Aspiration hazard	: May be fatal if swallowed and enters airways.	
Section 12: Ecological information		

12.1. Toxicity Ecology - general

: Harmful to aquatic life with long lasting effects.

12.2. Persistence and degradability

No additional information available

12.3. Bioaccumulative potential

Ethylbenzene (100-41-4)	
Log Pow	3.6
Log Kow	2.2 - 2.7

12.4. Mobility in soil

No additional information available

12.5. Other adverse effects

Other information

: Avoid release to the environment.

Section 13: Disposal considerations		
13.1. Waste treatment methods		
Waste disposal recommendations	Dispose in a safe manner in accordance with local/national regulations. Dispose of contents and container in accordance with all local, regional, national and international regulations.	
Additional information	: Handle empty containers with care because residual vapors are flammable.	
Ecology - waste materials	: Avoid release to the environment. Hazardous waste due to toxicity.	

Section 14: Transport information

US Transport (DOT) for Bulk Shipments (Non-Bulk Shipments May Differ)	
Transport document description	: UN1175, Ethylbenzene, 3, PGII
UN or NA Number	: UN1175
Proper Shipping Name	: Ethylbenzene
Primary Hazard Class	: 3 - Flammable liquid
Packing Group	: PGII
Reportable Quantities (RQ)*	: Ethylbenzene 1000 lbs (454 kg), Benzene 10 lbs (4.54 kg), Toluene 1000 lbs (454 kg)
*It is the shipper's responsibility to determine whether an RQ must be reported for each individual shipment.	
Hazard labels	
Emergency Response Guide (ERG) Number	: 130
Transport by sea (IMDG)	
Transport document description	: UN1175, ETHYLBENZENE, 3, PGII

Safety Data Sheet

US OSHA LABEL as specified under 29 CFR §1910.1200 (f)

Ethylbenzene

Total Petrochemicals & Refining USA, Inc. PO Box 674411 Houston, TX 77267-4411 USA Tel. 713-483-5000 or 1-877-871-2709

Danger

Highly flammable liquid and vapor May be fatal if swallowed and enters airways Harmful if inhaled May cause respiratory irritation May cause drowsiness or dizziness May cause genetic defects Suspected of causing cancer Suspected of damaging fertility or the unborn child May cause damage to organs (hearing organ (loss of hearing), kidneys) through prolonged or repeated exposure
Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Keep away from heat, hot surfaces, open flames, sparks No smoking. Keep container tightly closed. Ground/bond container and receiving equipment. Use explosion-proof electrical, lighting, ventilating equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Do not breathe mist, spray, vapors. Use only outdoors or in a well-ventilated area. Wear eye protection, flame retardant protective clothing, impermeable protective gloves. If swallowed: Immediately call a doctor, poison center. Do NOT induce vomiting. If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. If inhaled: Remove person to fresh air and keep comfortable for breathing. If exposed or concerned: Get medical advice/attention. Get medical advice/attention if you feel unwell. In case of fire: Use carbon dioxide (CO2), dry chemical, foam, water spray to extinguish. Store in a well-ventilated place. Keep cool. Store locked up. Dispose of contents and container and accordance with all local, regional, national and international regulations.
Supplemental Information
Product can accumulate electrostatic charges that may cause fire by electrical discharges.

Version : 2.2 Date of issue : August 17, 2015

SDS Template - TOTAL SDS US (GHS HazCom 2012) TPRI Version 4.02

The information contained in this Safety Data Sheet (SDS) is believed by Total Petrochemicals & Refining USA, Inc. (TPRI) to be accurate on the date issued. However, materials may present unknown hazards and should be used with caution. Final determination of suitability and use of any material is the sole responsibility of the user. Neither TPRI nor any of its subsidiaries or affiliated companies assumes any liability whatsoever for the accuracy or completeness of the information contained herein or reliance thereto. If the material is repackaged, the user is responsible and must ensure that proper health, safety and other necessary information is included with the material and/or on the container. NO WARRANTIES OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE MADE REGARDING THE MATERIALS OR THE INFORMATION CONTAINED IN THIS SDS. ALTERATION OF THIS DOCUMENT IS STRICTLY PROHIBITED.

SAFETY DATA SHEET

Vinyl Chloride (Chloroethylene)

Section 1. Identification

GHS product identifier	: Vinyl Chloride (Chloroethylene)
Chemical name	: vinyl chloride
Other means of identification	: chloroethylene; Ethene, chloro-; Vinyl chloride monomer; Chloroethene; Vinyl chloride, monomer; Ethene, chloro- (vinyl chloride); VCM; VC; Monochloroethylene; Monochloroethene
Product use	: Synthetic/Analytical chemistry.
Synonym	: chloroethylene; Ethene, chloro-; Vinyl chloride monomer; Chloroethene; Vinyl chloride, monomer; Ethene, chloro- (vinyl chloride); VCM; VC; Monochloroethylene; Monochloroethene
SDS #	: 001067
Supplier's details	: Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Emergency telephone number (with hours of operation)	: 1-866-734-3438

Section 2. Hazards identification

OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	: FLAMMABLE GASES - Category 1 GASES UNDER PRESSURE - Liquefied gas CARCINOGENICITY - Category 1 SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) (liver) - Category 2
GHS label elements	
Hazard pictograms	
Signal word	: Danger
Hazard statements	 Extremely flammable gas. Contains gas under pressure; may explode if heated. May cause frostbite. May displace oxygen and cause rapid suffocation. May cause cancer.
	May cause damage to organs through prolonged or repeated exposure. (liver)
Precautionary statements	
General	: Read and follow all Safety Data Sheets (SDS'S) before use. Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand. Close valve after each use and when empty. Use equipment rated for cylinder pressure. Do not open valve until connected to equipment prepared for use. Use a back flow preventative device in the piping. Use only equipment of compatible materials of construction. Always keep container in upright position. Approach suspected leak area with caution.

Date of issue/Date of revision	: 10/16/2014.	Date of previous issue	:10/13/2014.	Version : 0.03	1/13
--------------------------------	---------------	------------------------	--------------	----------------	------

Section 2. Hazards identification

	Prevention	Never Put cylinders into unventilated areas of passenger vehicles. Obtain special nstructions before use. Do not handle until all safety precautions have been read and understood. Use personal protective equipment as required. Keep away from heat, sparks, open flames and hot surfaces No smoking. Do not breathe gas. Use and store only outdoors or in a well ventilated place.
	Response	Set medical attention if you feel unwell. IF exposed or concerned: Get medical attention. Leaking gas fire: Do not extinguish, unless leak can be stopped safely. Eliminate all ignition sources if safe to do so.
	Storage	Store locked up. Protect from sunlight. Protect from sunlight when ambient emperature exceeds 52°C/125°F. Store in a well-ventilated place.
	Disposal	Dispose of contents and container in accordance with all local, regional, national and nternational regulations.
H Cl	azards not otherwise lassified	n addition to any other important health or physical hazards, this product may displace oxygen and cause rapid suffocation.

Section 3. Composition/information on ingredients

Substance/mixture	:	Substance
Chemical name	:	vinyl chloride
Other means of identification	:	chloroethylene; Ethene, chloro-; Vinyl chloride monomer; Chloroethene; Vinyl chloride, monomer; Ethene, chloro- (vinyl chloride); VCM; VC; Monochloroethylene; Monochloroethene

CAS number/other ide	ntifiers		
CAS number	: 75-01-4		
Product code	: 001067		
Ingredient name		%	CAS number
vinyl chloride		100	75-01-4

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact	 Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Skin contact	Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. To avoid the risk of static discharges and gas ignition, soak contaminated clothing thoroughly with water before removing it. Continue to rinse for at least 10 minutes. Get medical attention. Wash clothing before reuse. Clean shoes thoroughly before reuse.
Ingestion	: As this product is a gas, refer to the inhalation section.

Section 4. First aid measures

Most important symptoms/e	fects, acute and delayed
Potential acute health effect	<u>ts</u>
Eye contact	: No known significant effects or critical hazards.
Inhalation	: No known significant effects or critical hazards.
Skin contact	: No known significant effects or critical hazards.
Frostbite	: Try to warm up the frozen tissues and seek medical attention.
Ingestion	: As this product is a gas, refer to the inhalation section.
Over-exposure signs/symp	<u>ioms</u>
Eye contact	: No specific data.
Inhalation	: No specific data.
Skin contact	: No specific data.
Ingestion	: No specific data.
Indication of immediate med	ical attention and special treatment needed, if necessary
Notes to physician	 Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.
Specific treatments	: No specific treatment.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wash contaminated clothing thoroughly with water before removing it, or wear gloves.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media	
Suitable extinguishing media	: Use an extinguishing agent suitable for the surrounding fire.
Unsuitable extinguishing media	: None known.
Specific hazards arising from the chemical	: Contains gas under pressure. Extremely flammable gas. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion.
Hazardous thermal decomposition products	: Decomposition products may include the following materials: carbon dioxide carbon monoxide halogenated compounds
Special protective actions for fire-fighters	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Contact supplier immediately for specialist advice. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool. If involved in fire, shut off flow immediately if it can be done without risk. If this is impossible, withdraw from area and allow fire to burn. Fight fire from protected location or maximum possible distance. Eliminate all ignition sources if safe to do so.
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.
Date of issue/Date of revision	: 10/16/2014. Date of previous issue : 10/13/2014. Version : 0.03 3/13

Section 6. Accidental release measures

Personal precautions, protec	tive equipment and emergency procedures
For non-emergency personnel	: Accidental releases pose a serious fire or explosion hazard. No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing gas. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	: If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	: Ensure emergency procedures to deal with accidental gas releases are in place to avoid contamination of the environment. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).
Methods and materials for co	ntainment and cleaning up
Small spill	: Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment.
Large spill	: Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

Protective measures	: Put on appropriate personal protective equipment (see Section 8). Contains gas under pressure. Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not get in eyes or on skin or clothing. Do not breathe gas. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Empty containers retain product residue and can be hazardous. Do not puncture or incinerate container. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement.
Advice on general occupational hygiene	: Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
Conditions for safe storage, including any incompatibilities	: Store in accordance with local regulations. Store in a segregated and approved area. Store away from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10). Store locked up. Eliminate all ignition sources. Keep container tightly closed and sealed until ready for use. Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F).

Date of issue/Date of revision	:10/16/2014.	Date of previous issue	: 10/13/2014.	Version	:0.03	4/13

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
vinyl chloride	ACGIH TLV (United States, 3/2012). TWA: 1 ppm 8 hours. OSHA PEL (United States, 6/2010). STEL: 5 ppm 15 minutes. TWA: 1 ppm 8 hours. OSHA PEL 1989 (United States, 3/1989). STEL: 5 ppm 15 minutes. TWA: 1 ppm 8 hours.

Appropriate engineering controls	: Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.
-------------------------------------	---

Environmental exposure controls : Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

Hygiene measures	Wash hands, forearms and face thoroughly after handlin eating, smoking and using the lavatory and at the end of Appropriate techniques should be used to remove poter Wash contaminated clothing before reusing. Section 9. Physical and chemical properties

<u>Appearance</u>	
Physical state	: Gas. [COLORLESS GAS OR LIQUID (BELOW 7 F) WITH A PLEASANT ODOR AT HIGH CONCENTRATIONS. [NOTE: SHIPPED AS A LIQUEFIED COMPRESSED GAS.]
Color	: Colorless.
Molecular weight	: 62.5 g/mole
Molecular formula	: C2-H3-Cl
Boiling/condensation point	: -13.4°C (7.9°F)
Melting/freezing point	: -153.8°C (-244.8°F)
Critical temperature	: 158.45°C (317.2°F)
Odor	: Characteristic.
Odor threshold	: Not available.
рН	: Not available.
Flash point	: Closed cup: -78°C (-108.4°F)
Burning time	: Not applicable.
Burning rate	: Not applicable.
Evaporation rate	: Not available.
Flammability (solid, gas)	: Not available.
Lower and upper explosive (flammable) limits	: Lower: 3.8% Upper: 29.3%
Vapor pressure	: Not available.
Vapor density	: 2.2 (Air = 1)
Specific Volume (ft ³ /lb)	: 1.0989
Gas Density (lb/ft ³)	: 0.91 (20°C / 68 to °F)
Relative density	: Not applicable.
Solubility	: Not available.
Solubility in water	: 1.1 g/l
Partition coefficient: n- octanol/water	: 1.38
Auto-ignition temperature	: 472°C (881.6°F)
Decomposition temperature	: Not available.
SADT	: Not available.
Viscosity	: Not applicable.

Section 10. Stability and reactivity

Reactivity	1	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	:	The product is stable.
Possibility of hazardous reactions	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	:	Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition.

6/13

Section 10. Stability and reactivity

Incompatibility with various : Extremely reactive or incompatible with the following materials: oxidizing materials. substances

Hazardous decomposition : Under normal conditions of storage and use, hazardous decomposition products should not be produced. products

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 13. Disposal considerations

Disposal methods : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Empty Airgas-owned pressure vessels should be returned to Airgas. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Do not puncture or incinerate container.

2. Hazard(s) identification

Classification

This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

Skin Corrosion/irritation	Category 2
Serious Eye Damage/Eye Irritation	Category 2
Carcinogenicity	Category 1B
Specific target organ toxicity (single exposure)	Category 3
Target Organs - Central nervous system (CNS), Respirato	ry system.
Specific target organ toxicity - (repeated exposure)	Category 2
Target Organs - Liver, Kidney, Blood.	

Label Elements

Signal Word Danger

Hazard Statements

Causes skin irritation Causes serious eye irritation May cause respiratory irritation May cause drowsiness or dizziness May cause cancer May cause damage to organs through prolonged or repeated exposure

Precautionary Statements Prevention

Obtain special instructions before use

Do not handle until all safety precautions have been read and understood

Use personal protective equipment as required

Wash face, hands and any exposed skin thoroughly after handling

Wear eye/face protection

Do not breathe dust/fume/gas/mist/vapors/spray

Use only outdoors or in a well-ventilated area

Response

IF exposed or concerned: Get medical attention/advice

Inhalation

IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing

Skin

IF ON SKIN: Wash with plenty of soap and water

If skin irritation occurs: Get medical advice/attention

Take off contaminated clothing and wash before reuse

Eyes

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing If eye irritation persists: Get medical advice/attention

Storage

Store locked up

Store in a well-ventilated place. Keep container tightly closed

Disposal

Dispose of contents/container to an approved waste disposal plant

Hazards not otherwise classified (HNOC)

WARNING! This product contains a chemical known in the State of California to cause cancer, birth defects or other reproductive harm.

3. Composition / information on ingredients

Component	CAS-No	Weight %
Methylene chloride	75-09-2	>99.5
Methyl alcohol	67-56-1	0 - 0.4
Cyclohexene	110-83-8	0 - 0.01
2-Methyl-2-butene	513-35-9	0 - 0.01

4. First-aid measures		
General Advice	If symptoms persist, call a physician.	
Eye Contact	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Obtain medical attention.	
Skin Contact	Wash off immediately with plenty of water for at least 15 minutes. Obtain medical attention.	

Inhalation	Move to fresh air. If breathing is difficult, give oxygen. Obtain medical attention.
Ingestion	Do not induce vomiting. Call a physician or Poison Control Center immediately.
Most important symptoms/effects	Breathing difficulties. Inhalation of high vapor concentrations may cause symptoms like beadache dizziness tiredness nausea and vomiting
Notes to Physician	Treat symptomatically

5. Fire-fighting measures

Suitable Extinguishing Media	Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.
Unsuitable Extinguishing Media	No information available
Flash Point Method -	No information available No information available
Autoignition Temperature Explosion Limits	556 °C / 1032.8 °F
Upper	23 vol %
Lower	13 vol %
Sensitivity to Mechanical Impac	t No information available
Sensitivity to Static Discharge	No information available

Specific Hazards Arising from the Chemical

Thermal decomposition can lead to release of irritating gases and vapors. Keep product and empty container away from heat and sources of ignition.

Hazardous Combustion Products

Carbon monoxide (CO) Carbon dioxide (CO₂) Hydrogen chloride gas Phosgene

Protective Equipment and Precautions for Firefighters

As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

<u>NFPA</u>

Health 2	Flammability 1	Instability 0	Physical hazards N/A
	6. Accidental rel	ease measures	
Personal Precautions	Use personal protective equipment. Ensure adequate ventilation. Avoid contact with skin, eyes and clothing. Keep people away from and upwind of spill/leak.		
Environmental Precautions	Should not be released into information.	the environment. See Section	12 for additional ecological

Methods for Containment and Clean Soak up with inert absorbent material. Keep in suitable, closed containers for disposal. Up

	7. Handling and storage
Handling	Wear personal protective equipment. Do not get in eyes, on skin, or on clothing. Avoid ingestion and inhalation. Use only under a chemical fume hood.

Storage

Keep containers tightly closed in a dry, cool and well-ventilated place.

8. Exposure controls / personal protection

Legend

ACGIH - American Conference of Governmental Industrial Hygienists OSHA - Occupational Safety and Health Administration NIOSH IDLH: The National Institute for Occupational Safety and Health Immediately Dangerous to Life or Health

Engineering Measures	Use only under a chemical fume hood. Ensure that eyewash stations and safety showers are close to the workstation location.
Personal Protective Equipment	
Eye/face Protection	Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.
Skin and body protection	Wear appropriate protective gloves and clothing to prevent skin exposure.
Respiratory Protection	Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.
Hygiene Measures	Handle in accordance with good industrial hygiene and safety practice.

	9. Physical and chemical properties
Physical State	Liquid
Appearance	Colorless
Odor	sweet
Odor Threshold	No information available

10. Stability and reactivity

Reactive Hazard	None known, based on information available
Stability	Stable under normal conditions.
Conditions to Avoid	Incompatible products. Excess heat.
Incompatible Materials	Strong oxidizing agents, Strong acids, Amines
Hazardous Decomposition Products	Carbon monoxide (CO), Carbon dioxide (CO ₂), Hydrogen chloride gas, Phosgene
Hazardous Polymerization	Hazardous polymerization does not occur.
Hazardous Reactions	None under normal processing.

Persistence and Degradability Bioaccumulation/ Accumulation

Persistence is unlikely based on information available. No information available.

Mobility

Will likely be mobile in the environment due to its volatility.

Component	log Pow
Methylene chloride	1.25
Methyl alcohol	-0.74

Cyclohexene

13. Disposal considerations

Waste Disposal Methods

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. Chemical waste generators must also consult local, regional, and national hazardous waste regulations to ensure complete and accurate classification.

X - Listed

E - Indicates a substance that is the subject of a Section 5(e) Consent order under TSCA.

F - Indicates a substance that is the subject of a Section 5(f) Rule under TSCA.

N - Indicates a polymeric substance containing no free-radical initiator in its inventory name but is considered to cover the designated polymer made with any free-radical initiator regardless of the amount used.

P - Indicates a commenced PMN substance

R - Indicates a substance that is the subject of a Section 6 risk management rule under TSCA.

S - Indicates a substance that is identified in a proposed or final Significant New Use Rule

T - Indicates a substance that is the subject of a Section 4 test rule under TSCA.

XU - Indicates a substance exempt from reporting under the Inventory Update Rule, i.e. Partial Updating of the TSCA Inventory Data Base Production and Site Reports (40 CFR 710(B).

Y1 - Indicates an exempt polymer that has a number-average molecular weight of 1,000 or greater.

Y2 - Indicates an exempt polymer that is a polyester and is made only from reactants included in a specified list of low concern reactants that comprises one of the eligibility criteria for the exemption rule.

SAFETY DATA SHEET

Toluene

Section 1. Identification

GHS product identifier	: Toluene
Chemical name	: toluene
Other means of identification	: Benzene, methyl-; Methylbenzene; Toluol; toluene, pure
Product use	: Synthetic/Analytical chemistry.
Synonym SDS #	 Benzene, methyl-; Methylbenzene; Toluol; toluene, pure 001063
Supplier's details	: Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Emergency telephone number (with hours of	: 1-866-734-3438

operation)

Section 2. Hazards identification

OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	: FLAMMABLE LIQUIDS - Category 2 SKIN CORROSION/IRRITATION - Category 2 TOXIC TO REPRODUCTION (Fertility) - Category 2 TOXIC TO REPRODUCTION (Unborn child) - Category 2 SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Narcotic effects) - Category 3 SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) - Category 2
GHS label elements	
Hazard pictograms	
Signal word	: Danger
Hazard statements	 Highly flammable liquid and vapor. May form explosive mixtures with air. Causes skin irritation. Suspected of damaging fertility or the unborn child. May cause drowsiness and dizziness. May cause damage to organs through prolonged or repeated exposure.
Precautionary statements	
	Development to be for a super-life on a staff or a share of a bildress. If we all a divises in we added

General

: Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand.

1/14

Section 2. Hazards identification

Prevention	: Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Use personal protective equipment as required. Wear protective gloves. Wear eye or face protection. Keep away from heat, sparks, open flames and hot surfaces No smoking. Use explosion-proof electrical, ventilating, lighting and all material-handling equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Keep container tightly closed. Do not breathe vapor. Wash hands thoroughly after handling.
Response	: Get medical attention if you feel unwell. IF exposed or concerned: Get medical attention. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water or shower. IF ON SKIN: Wash with plenty of soap and water. Take off contaminated clothing. If skin irritation occurs: Get medical attention. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical attention.
Storage	: Store locked up. Store in a well-ventilated place. Keep cool.
Disposal	: Dispose of contents and container in accordance with all local, regional, national and international regulations.
Hazards not otherwise classified	: None known.

Section 3. Composition/information on ingredients

Substance/mixture	:	Substance
Chemical name	:	toluene
Other means of identification	:	Benzene, methyl-; Methylbenzene; Toluol; toluene, pure

CAS number/other identifiers		
CAS number	:	108-88-3
Product code	:	001063

Ingredient name	%	CAS number
toluene	100	108-88-3

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact	: Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Skin contact	: Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Continue to rinse for at least 10 minutes. Get medical attention. Wash clothing before reuse. Clean shoes thoroughly before reuse.

Date of issue/Date of revision : 5/20/2015.	Date of previous issue	: 10/16/2014.	Version : 0.04	2/14
---	------------------------	---------------	----------------	------

Section 4. First ai	id measures
Ingestion	: Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Get medical attention. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Most important symptoms/	effects, acute and delayed
Potential acute health effe	<u>cts</u>
Eye contact	: Causes serious eye irritation.
Inhalation	: No known significant effects or critical hazards.
Skin contact	: Causes skin irritation.
Frostbite	: Try to warm up the frozen tissues and seek medical attention.
Ingestion	: Irritating to mouth, throat and stomach.
Over-exposure signs/sym	<u>ptoms</u>
Eye contact	: Adverse symptoms may include the following: pain or irritation watering redness
Inhalation	: Adverse symptoms may include the following: reduced fetal weight increase in fetal deaths skeletal malformations
Skin contact	: Adverse symptoms may include the following: irritation redness reduced fetal weight increase in fetal deaths skeletal malformations
Ingestion	: Adverse symptoms may include the following: reduced fetal weight increase in fetal deaths skeletal malformations
Indication of immediate me	dical attention and special treatment needed, if necessary
Notes to physician	 Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.
Specific treatments	: No specific treatment.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media	
Suitable extinguishing media	: Use dry chemical, CO ₂ , water spray (fog) or foam.
Unsuitable extinguishing media	: Do not use water jet.
Specific hazards arising from the chemical	: Highly flammable liquid and vapor. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. The vapor/gas is heavier than air and will spread along the ground. Vapors may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back. Runoff to sewer may create fire or explosion hazard.
Hazardous thermal decomposition products	: Decomposition products may include the following materials: carbon dioxide carbon monoxide
Special protective actions for fire-fighters	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protec	tive equipment and emergency procedures
For non-emergency personnel	: No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	: If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	: Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).
Methods and materials for co	ntainment and cleaning up
Small spill	: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.
Large spill	: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Date of issue/Date of revision : 5/20/20	15. Date of p	previous issue	: 10/16/2014.	Version	:0.04	4/14
--	---------------	----------------	---------------	---------	-------	------

Section 7. Handling and storage

Precautions for safe handling	L	
Protective measures	:	Put on appropriate personal protective equipment (see Section 8). Avoid exposure - obtain special instructions before use. Avoid exposure during pregnancy. Do not handle until all safety precautions have been read and understood. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not ingest. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container.
Advice on general occupational hygiene	:	Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
Conditions for safe storage, including any incompatibilities	:	Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
toluene	ACGIH TLV (United States, 3/2012). TWA: 20 ppm 8 hours.
	NIOSH REL (United States, 1/2013).
	STEL: 560 mg/m ³ 15 minutes.
	STEL: 150 ppm 15 minutes.
	TWA: 375 mg/m ³ 10 hours.
	TWA: 100 ppm 10 hours.
	OSHA PEL 1989 (United States, 3/1989).
	STEL: 560 mg/m ³ 15 minutes.
	STEL: 150 ppm 15 minutes.
	TWA: 375 mg/m ³ 8 hours.
	TWA: 100 ppm 8 hours.
	OSHA PEL Z2 (United States, 11/2006).
	AMP: 500 ppm 10 minutes.
	CEIL: 300 ppm
	TWA: 200 ppm 8 hours.

Appropriate engineering controls

: Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.

Section 8. Exposure controls/personal protection

=	
Environmental exposure controls	: Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.
Individual protection meas	<u>ures</u>
Hygiene measures	: Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.
Eye/face protection	: Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: chemical splash goggles.
Skin protection	
Hand protection	: Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.
Body protection	: Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. When there is a risk of ignition from static electricity, wear anti-static protective clothing. For the greatest protection from static discharges, clothing should include anti-static overalls, boots and gloves.
Other skin protection	 Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Respiratory protection	: Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

<u>Appearance</u>		
Physical state	: Liquid. [Watery liquid.]	
Color	: Colorless.	
Molecular weight	: 92.14 g/mole	
Molecular formula	: C7-H8	
Boiling/condensation point	: 110.6°C (231.1°F)	
Melting/freezing point	: -95°C (-139°F)	
Critical temperature	: 318.65°C (605.6°F)	
Odor	: Characteristic.	
Odor threshold	: Not available.	
рН	: Not available.	
Flash point	: Closed cup: 4.4°C (39.9°F)	
Burning time	: Not applicable.	
Burning rate	: Not applicable.	
Date of issue/Date of revision	: 5/20/2015. Date of previous issue : 10/16/20	14. Version : 0.04 6/14

Section 9. Physical and chemical properties

Evaporation rate	1	2 (butyl acetate = 1)
Flammability (solid, gas)	÷	Not available.
Lower and upper explosive (flammable) limits	:	Lower: 1.1% Upper: 7.1%
Vapor pressure	÷	3.1 kPa (23.168353815 mm Hg) [room temperature]
Vapor density	;	3.1 (Air = 1)
Specific Volume (ft ³ /lb)	:	1.1494
Gas Density (lb/ft ³)	÷	0.87 (20°C / 68 to °F)
Relative density	÷	0.87
Solubility	÷	Not available.
Solubility in water	÷	0.573 g/l
Partition coefficient: n- octanol/water	:	2.73
Auto-ignition temperature	÷	480°C (896°F)
Decomposition temperature	÷	Not available.
SADT	÷	Not available.
Viscosity	:	Dynamic (room temperature): 0.56 mPa·s (0.56 cP)

Section 10. Stabili	ty	and reactivity
Reactivity	:	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	:	The product is stable.
Possibility of hazardous reactions	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	:	Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition. Do not allow vapor to accumulate in low or confined areas.
Incompatibility with various substances	:	Extremely reactive or incompatible with the following materials: oxidizing materials.
Hazardous decomposition products	:	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 11. Toxicological information

: Not available.

Other adverse effects

: No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

SAFETY DATA SHEET

Benzene

Section 1. Identification

GHS product identifier	: Benzene
Chemical name	: benzene
Other means of identification	: benzene, purebenzol; cyclohexatriene; phenyl hydride; phene; coal naphtha; pyrobenzol
Product use	: Synthetic/Analytical chemistry.
Synonym	 benzene, purebenzol; cyclohexatriene; phenyl hydride; phene; coal naphtha; pyrobenzol
SDS #	: 001062
Supplier's details	: Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Emergency telephone number (with hours of operation)	: 1-866-734-3438

Section 2. Hazards identification

OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	 FLAMMABLE LIQUIDS - Category 2 SKIN CORROSION/IRRITATION - Category 2 SERIOUS EYE DAMAGE/ EYE IRRITATION - Category 2 GERM CELL MUTAGENICITY - Category 1B CARCINOGENICITY - Category 1 SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) (bone marrow) - Category 1

GHS label elements	
Hazard pictograms	
Signal word	: Danger
Hazard statements	 Highly flammable liquid and vapor. May form explosive mixtures with air. Causes serious eye irritation. Causes skin irritation. May cause genetic defects. May cause cancer. Causes damage to organs through prolonged or repeated exposure. (bone marrow)
Precautionary statements	
General	: Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand.

Section 2. Hazards identification

Prevention	: Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Use personal protective equipment as required. Wear protective gloves. Wear eye or face protection. Keep away from heat, sparks, open flames and hot surfaces No smoking. Use explosion-proof electrical, ventilating, lighting and all material-handling equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Keep container tightly closed. Do not breathe vapor. Do not eat, drink or smoke when using this product. Wash hands thoroughly after handling.
Response	: Get medical attention if you feel unwell. IF exposed or concerned: Get medical attention. IF SWALLOWED: Call a POISON CENTER or physician if you feel unwell. Rinse mouth. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water or shower. IF ON SKIN: Wash with plenty of soap and water. Take off contaminated clothing. If skin irritation occurs: Get medical attention. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical attention.
Storage	: Store locked up. Store in a well-ventilated place. Keep cool.
Disposal	 Dispose of contents and container in accordance with all local, regional, national and international regulations.
Hazards not otherwise classified	: None known.

Section 3. Composition/information on ingredients

Substance/mixture	:	Substance
Chemical name	:	benzene
Other means of identification	:	benzene, purebenzol; cyclohexatriene; phenyl hydride; phene; coal naphtha; pyrobenzol

CAS number/other identifiers

CAS number	: 71-43-2		
Product code	: 001062		
Ingredient name		%	CAS number
benzene		100	71-43-2

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary	first aid measures
Eye contact	 Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Date of issue/Date of revision : 4/26/2	2015. Date of prev	ious issue : 10/16/201	14. Version	:0.03	2/14
---	--------------------	------------------------	-------------	-------	------

Section 4. First aid measures

Skin contact	: Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Wash contaminated clothing thoroughly with water before removing it, or wear gloves. Continue to rinse for at least 10 minutes. Get medical attention. Wash clothing before reuse. Clean shoes thoroughly before reuse.
Ingestion	: Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Get medical attention. If necessary, call a poison center or physician. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Most important symptoms/effects, acute and delayed

Potential acute health effec	ts
Eye contact	: Causes serious eye irritation.
Inhalation	: No known significant effects or critical hazards.
Skin contact	: Causes skin irritation.
Frostbite	: Try to warm up the frozen tissues and seek medical attention.
Ingestion	: Harmful if swallowed. Irritating to mouth, throat and stomach.
Over-exposure signs/symp	toms
Eye contact	: Adverse symptoms may include the following: pain or irritation watering redness
Inhalation	: No specific data.
Skin contact	: Adverse symptoms may include the following: irritation redness
Ingestion	: No specific data.
Indication of immediate med	ical attention and special treatment needed, if necessary
Notes to physician	 Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.
Specific treatments	: No specific treatment.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wash contaminated clothing thoroughly with water before removing it, or wear gloves.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media	
Suitable extinguishing media	: Use dry chemical, CO ₂ , water spray (fog) or foam.
Unsuitable extinguishing media	: Do not use water jet.
Specific hazards arising from the chemical	: Highly flammable liquid and vapor. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. The vapor/gas is heavier than air and will spread along the ground. Vapors may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back. Runoff to sewer may create fire or explosion hazard.
Hazardous thermal decomposition products	: Decomposition products may include the following materials: carbon dioxide carbon monoxide
Special protective actions for fire-fighters	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protect	<u>tiv:</u>	e equipment and emergency procedures
For non-emergency personnel	:	No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	:	If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	:	Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).
Methods and materials for co	ont	ainment and cleaning up
Small spill	:	Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.
Large spill	:	Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact

Date of issue/Date of revision	: 4/26/2015.	Date of previous issue	: 10/16/2014.	Version : 0.03	4/14
--------------------------------	--------------	------------------------	---------------	----------------	------

information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling	L	
Protective measures	:	Put on appropriate personal protective equipment (see Section 8). Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not ingest. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container.
Advice on general occupational hygiene	:	Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
Conditions for safe storage, including any incompatibilities	:	Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
benzene	ACGIH TLV (United States, 3/2012). Absorbed through skin. STEL: 8 mg/m ³ 15 minutes. STEL: 2.5 ppm 15 minutes. TWA: 1.6 mg/m ³ 8 hours. TWA: 0.5 ppm 8 hours. NIOSH REL (United States, 1/2013). STEL: 1 ppm 15 minutes. TWA: 0.1 ppm 10 hours. OSHA PEL (United States, 6/2010). STEL: 5 ppm 15 minutes. TWA: 1 ppm 8 hours. OSHA PEL 1989 (United States, 3/1989). STEL: 5 ppm 15 minutes. TWA: 1 ppm 8 hours. OSHA PEL 22 (United States, 11/2006). AMP: 50 ppm 10 minutes. CEIL: 25 ppm TWA: 10 ppm 8 hours.

Date of issue/Date of revision	: 4/26/2015.	Date of previous issue	: 10/16/2014.	Version	: 0.03	5/14

Section 8. Exposure controls/personal protection

Appropriate engineering controls	: Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.
Environmental exposure controls	: Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.
Individual protection measu	res
Hygiene measures	: Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.
Eye/face protection	: Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: chemical splash goggles.
Skin protection	
Hand protection	: Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.
Body protection	: Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. When there is a risk of ignition from static electricity, wear anti-static protective clothing. For the greatest protection from static discharges, clothing should include anti-static overalls, boots and gloves.
Other skin protection	: Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Respiratory protection	: Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

Appearance				
Physical state	: Liquid. [Watery liquid.]			
Color	: Colorless. Yellowish.			
Molecular weight	: 78.12 g/mole			
Molecular formula	: C6-H6			
Boiling/condensation point	: 80.09°C (176.2°F)			
Melting/freezing point	: 5.49°C (41.9°F)			
Critical temperature	: 288.95°C (552.1°F)			
Odor	: Characteristic.			
Odor threshold	: Not available.			
Date of issue/Date of revision	: 4/26/2015. Date of previous issue	: 10/16/2014.	Version : 0.03	6/14

Section 9. Physical and chemical properties

рН	1	Not available.
Flash point	:	Closed cup: -11°C (12.2°F)
Burning time	:	Not applicable.
Burning rate	:	Not applicable.
Evaporation rate	:	3.5 (butyl acetate = 1)
Flammability (solid, gas)	:	Not available.
Lower and upper explosive (flammable) limits	:	Lower: 1.2% Upper: 7.8%
Vapor pressure	:	10 kPa (75.006094245 mm Hg) [room temperature]
Vapor density	:	2.7 (Air = 1)
Specific Volume (ft ³ /lb)	:	1.1403
Gas Density (lb/ft ³)	:	0.877 (20°C / 68 to °F)
Relative density	:	0.88
Solubility	:	Not available.
Solubility in water	:	1.88 g/l
Partition coefficient: n- octanol/water	:	2.13
Auto-ignition temperature	:	498°C (928.4°F)
Decomposition temperature	:	Not available.
SADT	:	Not available.
Viscosity	:	Dynamic (room temperature): 0.604 mPa·s (0.604 cP)

Section 10. Stability and reactivity

Reactivity	1	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	:	The product is stable.
Possibility of hazardous reactions	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	:	Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition. Do not allow vapor to accumulate in low or confined areas.
Incompatibility with various substances	:	Highly reactive or incompatible with the following materials: oxidizing materials.
Hazardous decomposition products	:	Under normal conditions of storage and use, hazardous decomposition products should not be produced.
Hazardous polymerization	:	Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 11. Toxicological information

	<u> </u>	
Skin contact	: Causes skin irritation.	
Ingestion	: Harmful if swallowed. Irritating to mouth, throat and stomach.	
Symptoms related to the phy	ical, chemical and toxicological characteristics	
Eye contact	: Adverse symptoms may include the following: pain or irritation watering redness	
Inhalation	: No specific data.	
Skin contact	: Adverse symptoms may include the following: irritation redness	
Ingestion	: No specific data.	
Delayed and immediate effe	s and also chronic effects from short and long term exposure	
<u>Short term exposure</u>		
Potential immediate effects	: Not available.	
Potential delayed effects	: Not available.	
<u>Long term exposure</u>		
Potential immediate effects	: Not available.	
Potential delayed effects	: Not available.	
Potential chronic health eff	<u>ets</u>	
Not available.		
General	: Causes damage to organs through prolonged or repeated exposure.	
Carcinogenicity	: May cause cancer. Risk of cancer depends on duration and level of exposure.	
Mutagenicity	: May cause genetic defects.	
Teratogenicity	: No known significant effects or critical hazards.	
Developmental effects	: No known significant effects or critical hazards.	
Fertility effects	: No known significant effects or critical hazards.

Section 13. Disposal considerations

- **Disposal methods**
- : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Hazardous Material Information System (U.S.A.)

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks Although HMIS® ratings are not required on SDSs under 29 CFR 1910. 1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint & Coatings Association (NPCA). HMIS® materials may be purchased exclusively from J. J. Keller (800) 327-6868.

The customer is responsible for determining the PPE code for this material.

SAFETY DATA SHEET

Xylenes

Section 1. Identification

GHS product identifier	: Xylenes
Chemical name	: xylene
Other means of identification	: Benzene, dimethyl-; Xylol; Benzene, dimethyl-, mixed isomers; xylene, mixed isomers, pure; Benzene, dimethyl-,; Xylene (mixed)
Product use	: Synthetic/Analytical chemistry.
Synonym	: Benzene, dimethyl-; Xylol; Benzene, dimethyl-, mixed isomers; xylene, mixed isomers, pure; Benzene, dimethyl-,; Xylene (mixed)
SDS #	: 001064
Supplier's details	: Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Emergency telephone number (with hours of operation)	: 1-866-734-3438

Section 2. Hazards identification

OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	: FLAMMABLE LIQUIDS - Category 3 ACUTE TOXICITY (dermal) - Category 4
	ACUTE TOXICITY (inhalation) - Category 4 SKIN CORROSION/IRRITATION - Category 2
GHS label elements	
Hazard pictograms	
Signal word	: Warning
Hazard statements	 Flammable liquid and vapor. May displace oxygen and cause rapid suffocation. Harmful in contact with skin or if inhaled. Causes skin irritation.
Precautionary statements	
General	: Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand.
Prevention	: Wear protective gloves. Wear eye or face protection. Wear protective clothing. Keep away from heat, sparks, open flames and hot surfaces No smoking. Use explosion-proof electrical, ventilating, lighting and all material-handling equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Keep container tightly closed. Use only outdoors or in a well-ventilated area. Avoid breathing vapor. Wash hands thoroughly after handling.

Airgas.

Section 2. Hazards identification

Section 3. Composition/information on ingredients

Substance/mixture	:	Substance
Chemical name	1	xylene
Other means of identification	:	Benzene, dimethyl-; Xylol; Benzene, dimethyl-, mixed isomers; xylene, mixed isomers, pure; Benzene, dimethyl-,; Xylene (mixed)

<u>CAS</u>	number/other	identifiers	
0.44	0		

CAS number	: 1330-20-7		
Product code	: 001064		
Ingredient name		%	CAS number
xylene		100	1330-20-7

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact	: Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention if adverse health effects persist or are severe. If necessary, call a poison center or physician. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Skin contact	: Wash with plenty of soap and water. Remove contaminated clothing and shoes. Wash contaminated clothing thoroughly with water before removing it, or wear gloves. Continue to rinse for at least 10 minutes. Get medical attention. If necessary, call a poison center or physician. Wash clothing before reuse. Clean shoes thoroughly before reuse.

Date of issue/Date of revision : 10	0/16/2014.	Date of previous issue	: 10/12/2014.	Version	:0.02	2/1
-------------------------------------	------------	------------------------	---------------	---------	-------	-----

4

Section 4. First ai	id measures
Ingestion	: Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Get medical attention if adverse health effects persist or are severe. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Most important symptoms/	effects, acute and delayed
Potential acute health effe	<u>cts</u>
Eye contact	: Causes serious eye irritation.
Inhalation	: Harmful if inhaled.
Skin contact	: Harmful in contact with skin. Causes skin irritation.
Frostbite	: Try to warm up the frozen tissues and seek medical attention.
Ingestion	: Irritating to mouth, throat and stomach.
Over-exposure signs/sym	<u>otoms</u>
Eye contact	: Adverse symptoms may include the following: pain or irritation watering redness
Inhalation	: No specific data.
Skin contact	: Adverse symptoms may include the following: irritation redness
Ingestion	: No specific data.
Indication of immediate me	dical attention and special treatment needed, if necessary
Notes to physician	 Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.
Specific treatments	: No specific treatment.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wash contaminated clothing thoroughly with water before removing it, or wear gloves.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media	
Suitable extinguishing media	: Use dry chemical, CO ₂ , water spray (fog) or foam.
Unsuitable extinguishing media	: Do not use water jet.

Date of issue/Date of revision : 10/16/2014	Date of previous issue	: 10/12/2014.	Version : 0.02

3/14

Section 5. Fire-fighting measures

Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.
for fire-fighters	there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.
Special protective actions	: Promptly isolate the scene by removing all persons from the vicinity of the incident if
Hazardous thermal decomposition products	: Decomposition products may include the following materials: carbon dioxide carbon monoxide
Specific hazards arising from the chemical	: Flammable liquid and vapor. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. The vapor/gas is heavier than air and will spread along the ground. Vapors may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back. Runoff to sewer may create fire or explosion hazard.

Section 6. Accidental release measures

Personal precautions, protec	tiv	e equipment and emergency procedures
For non-emergency personnel	:	No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	:	If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	:	Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).
Methods and materials for co	ont	ainment and cleaning up
Small spill	:	Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.
Large spill	:	Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling		
Protective measures	:	Put on appropriate personal protective equipment (see Section 8). Do not ingest. Avoid contact with eyes, skin and clothing. Avoid breathing vapor or mist. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container.
Advice on general occupational hygiene	:	Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
Conditions for safe storage, including any incompatibilities	:	Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
xylene	ACGIH TLV (United States, 3/2012). STEL: 651 mg/m ³ 15 minutes. STEL: 150 ppm 15 minutes. TWA: 434 mg/m ³ 8 hours. TWA: 100 ppm 8 hours. OSHA PEL (United States, 6/2010). TWA: 435 mg/m ³ 8 hours. TWA: 100 ppm 8 hours. OSHA PEL 1989 (United States, 3/1989). STEL: 655 mg/m ³ 15 minutes. STEL: 150 ppm 15 minutes. TWA: 435 mg/m ³ 8 hours. TWA: 435 mg/m ³ 8 hours. TWA: 400 ppm 8 hours.

Section 8. Exposure controls/personal protection

•	· ·
Individual protection measures	
Hygiene measures :	Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.
Eye/face protection :	Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: chemical splash goggles.
Skin protection	
Hand protection :	Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.
Body protection :	Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. When there is a risk of ignition from static electricity, wear anti-static protective clothing. For the greatest protection from static discharges, clothing should include anti-static overalls, boots and gloves.
Other skin protection :	Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Respiratory protection :	Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

Appearance	
Physical state	: Liquid. [COLORLESS LIQUID WITH AROMATIC ODOR]
Color	: Colorless.
Molecular weight	: 106.17 g/mole
Molecular formula	: C8-H10
Boiling/condensation point	: 136.16°C (277.1°F)
Melting/freezing point	: -94.96°C (-138.9°F)
Critical temperature	: Not available.
Odor	: Aromatic.
Odor threshold	: Not available.
рН	: Not available.
Flash point	: Closed cup: 18°C (64.4°F)
Burning time	: Not applicable.
Burning rate	: Not applicable.
Evaporation rate	: 0.77 (butyl acetate = 1)
Flammability (solid, gas)	: Not available.
Lower and upper explosive (flammable) limits	: Lower: 0.8% Upper: 6.7%

6/14

Section 9. Physical and chemical properties

Vapor pressure	:	0.89 kPa (6.7 mm Hg) [room temperature]
Vapor density	:	3.7 (Air = 1)
Specific Volume (ft ³ /lb)	:	1.1628
Gas Density (lb/ft ³)	:	0.86 (25°C / 77 to °F)
Relative density	:	0.861
Solubility	:	Not available.
Solubility in water	:	0.146 g/l
Partition coefficient: n- octanol/water	:	3.12
Auto-ignition temperature	:	432°C (809.6°F)
Decomposition temperature	:	Not available.
SADT	:	Not available.
Viscosity	:	Dynamic (room temperature): 0.581 mPa⋅s (0.581 cP)

Section 10. Stability and reactivity

Reactivity	: No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	: The product is stable.
Possibility of hazardous reactions	: Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	: Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition. Do not allow vapor to accumulate in low or confined areas.
Hazardous decomposition products	: Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

SAFETY DATA SHEET

Section 1. Identification

GHS product identifier	: Methane
Chemical name	: methane
Other means of identification	: Methane or natural gas; Marsh gas; Methyl hydride; CH4; Fire Damp;
Product use	: Synthetic/Analytical chemistry.
Synonym SDS #	 Methane or natural gas; Marsh gas; Methyl hydride; CH4; Fire Damp; 001033
Supplier's details	: Airgas USA, LLC and its affiliates 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Emergency telephone	: 1-866-734-3438

Emergency telephone number (with hours of operation)

Section 2. Hazards identification

	(29 CFR 1910.1200).
Classification of the substance or mixture	: FLAMMABLE GASES - Category 1 GASES UNDER PRESSURE - Compressed gas
GHS label elements	
Hazard pictograms	
Signal word	: Danger
Hazard statements	 Extremely flammable gas. May form explosive mixtures with air. Contains gas under pressure; may explode if heated. May displace oxygen and cause rapid suffocation.
Precautionary statements	
General	: Read and follow all Safety Data Sheets (SDS'S) before use. Read label before use. Keep out of reach of children. If medical advice is needed, have product container or label at hand. Close valve after each use and when empty. Use equipment rated for cylinder pressure. Do not open valve until connected to equipment prepared for use. Use a back flow preventative device in the piping. Use only equipment of compatible materials of construction. Approach suspected leak area with caution.
Prevention	: Never Put cylinders into unventilated areas of passenger vehicles. Keep away from heat, sparks, open flames and hot surfaces No smoking. Use and store only outdoors or in a well ventilated place.
Response	: Leaking gas fire: Do not extinguish, unless leak can be stopped safely. Eliminate all ignition sources if safe to do so.
Storage	 Protect from sunlight. Protect from sunlight when ambient temperature exceeds 52°C/125°F. Store in a well-ventilated place.
Disposal	: Not applicable.
Date of issue/Date of revision	: 5/20/2015. Date of previous issue : 1/27/2015. Version : 0.04 1/12

Airgas.

Section 2. Hazards identification

Hazards not otherwise :	In addition to any other important health or physical hazards, this product may displace
classified	oxygen and cause rapid suffocation.

Section 3. Composition/information on ingredients

Substance/mixture	:	Substance
Chemical name	:	methane
Other means of identification	:	Methane or natural gas; Marsh gas; Methyl hydride; CH4; Fire Damp;

CAS number/other identifiers

CAS number	: 74-82-8		
Product code	: 001033		
Ingredient name		%	CAS number
methane		100	74-82-8

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact	 Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention if irritation occurs.
Inhalation	: Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention if adverse health effects persist or are severe. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Skin contact	: Wash contaminated skin with soap and water. Remove contaminated clothing and shoes. To avoid the risk of static discharges and gas ignition, soak contaminated clothing thoroughly with water before removing it. Get medical attention if symptoms occur. Wash clothing before reuse. Clean shoes thoroughly before reuse.
Ingestion	: As this product is a gas, refer to the inhalation section.
Most important symptoms	/effects. acute and delayed
Potential acute health eff	<u>ects</u>
Eye contact	: Contact with rapidly expanding gas may cause burns or frostbite.
Inhalation	: No known significant effects or critical hazards.
Skin contact	: Contact with rapidly expanding gas may cause burns or frostbite.
Frostbite	: Try to warm up the frozen tissues and seek medical attention.
Ingestion	: As this product is a gas, refer to the inhalation section.
Over-exposure signs/sym	<u>iptoms</u>
Eye contact	: No specific data.
Inhalation	: No specific data.
Skin contact	: No specific data.
Date of issue/Date of revision	: 5/20/2015. Date of previous issue : 1/27/2015. Version : 0.04 2/12

Section 4. First aid measures

Ingestion

```
: No specific data.
```

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician	 Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.
Specific treatments	: No specific treatment.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

See toxicological information (Section 11)

Section 5. Fire-fighting measures Extinguishing media Suitable extinguishing : Use an extinguishing agent suitable for the surrounding fire. media Unsuitable extinguishing : None known. media Specific hazards arising : Contains gas under pressure. Extremely flammable gas. In a fire or if heated, a from the chemical pressure increase will occur and the container may burst, with the risk of a subsequent explosion. Hazardous thermal Decomposition products may include the following materials: decomposition products carbon dioxide carbon monoxide **Special protective actions** : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable for fire-fighters training. Contact supplier immediately for specialist advice. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool. If involved in fire, shut off flow immediately if it can be done without risk. If this is impossible, withdraw from area and allow fire to burn. Fight fire from protected location or maximum possible distance. Eliminate all ignition sources if safe to do so. Fire-fighters should wear appropriate protective equipment and self-contained breathing **Special protective** apparatus (SCBA) with a full face-piece operated in positive pressure mode. equipment for fire-fighters

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel	:	Accidental releases pose a serious involving any personal risk or witho Keep unnecessary and unprotected sources. No flares, smoking or flar adequate ventilation. Wear approp on appropriate personal protective	fire or explosion hazard. No ut suitable training. Evacuar d personnel from entering. S mes in hazard area. Environmental precautions	:	Ensure emergency procedures to c contamination of the environment. caused environmental pollution (se	leal with accidental gas releat Inform the relevant authoriti wers, waterways, soil or air)	ases are ies if the	in place to product h	o avoid as
Date of issue/Date of revision		: 5/20/2015. Date of previous issue	: 1/27/2015.	Version	: 0.04	3/12

Section 6. Accidental release measures

Methods and materials for containment and cleaning up

Small spill	: Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment.
Large spill	: Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

Protective measures	Put on appropriate personal protective equipment (see Section 8). Contains gas under pressure. Avoid contact with eyes, skin and clothing. Avoid breathing gas. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Empty containers retain product residue and can be hazardous. Do not puncture or incinerate container. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement.
Advice on general occupational hygiene	Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
Conditions for safe storage, including any incompatibilities	Store in accordance with local regulations. Store in a segregated and approved area. Store away from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10). Eliminate all ignition sources. Keep container tightly closed and sealed until ready for use. Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F).

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits		
methane	ACGIH TLV (United States, 3/2012). TWA: 1000 ppm 8 hours.		

Appropriate engineering controls	: Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.
Environmental exposure controls	: Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

Date of issue/Date of revision	: 5/20/2015.	Date of previous issue	: 1/27/2015.	Version : 0.04	4/12

Section 8. Exposure controls/personal protection

Hygiene measures	: Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.
Eye/face protection	: Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: safety glasses with side-shields.
Skin protection	
Hand protection	: Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.
Body protection	: Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. When there is a risk of ignition from static electricity, wear anti-static protective clothing. For the greatest protection from static discharges, clothing should include anti-static overalls, boots and gloves.
Other skin protection	: Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Respiratory protection	: Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

Appearance		
Physical state	:	Gas. [Compressed gas.]
Color	:	Colorless.
Molecular weight	:	16.05 g/mole
Molecular formula	:	C-H4
Boiling/condensation point	:	-161.48°C (-258.7°F)
Melting/freezing point	:	-187.6°C (-305.7°F)
Critical temperature	:	-82.45°C (-116.4°F)
Odor	:	Odorless.
Odor threshold	:	Not available.
рН	:	Not available.
Flash point	:	Closed cup: -188.15°C (-306.7°F)
Burning time	:	Not applicable.
Burning rate	:	Not applicable.
Evaporation rate	:	Not available.
Flammability (solid, gas)	:	Extremely flammable in the presence of the following materials or conditions: open flames, sparks and static discharge and oxidizing materials.
Lower and upper explosive (flammable) limits	:	Lower: 1.8% Upper: 8.4%

Section 10. Stability and reactivity

Reactivity	:	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	:	The product is stable.
Possibility of hazardous reactions	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	:	Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition.
Incompatibility with various substances	:	Extremely reactive or incompatible with the following materials: oxidizing materials.
Hazardous decomposition products	:	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 13. Disposal considerations

Disposal methods : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Empty Airgas-owned pressure vessels should be returned to Airgas. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Do not puncture or incinerate container.

24-HOUR EMERGENCY TELEPHONE

SPRAGUE: 603-431-1000

CHEMTREC: 800-424-9300

SDS – SAFETY DATA SHEET

1. Identification

Product Identifier: ULTRA LOW SULFUR DIESEL FUEL # 2 Synonyms: HIGHWAY DIESEL FUEL OIL, #2, FUEL OIL (ULTRA LOW SULFUR DIESEL) Chemical Formula: Not applicable to mixtures Recommended Use of the Chemical and Restrictions On Use: Fuel Manufacturer / Supplier: Sprague Operating Resources LLC 185 International Drive, Portsmouth, NH 03801 Emergency Phone Number: SPRAGUE: 603-431-1000; CHEMTREC: 800-424-9300

2. Hazard(s) Identification

Classification of the Substance or Mixture:

Flammable Liquids - Category 4 Carcinogenicity - Category 2 Specific Target Organ Toxicity (Single Exposure) – Category 3 Aspiration Hazard – Category 1 Acute Aquatic Toxicity – Category 3

Risk Phrases:

- R40: Limited evidence of a carcinogenic effect.
- R52: Harmful to aquatic organisms.
- R65: Harmful: may cause lung damage if swallowed.
- R67: Vapors may cause drowsiness and dizziness.

Label Elements:

Trade Name: ULTRA LOW SULFUR DIESEL FUEL # 2

Signal Word: Warning

Hazard Statements:

- H227: Combustible liquid.
- H304: May be fatal if swallowed and enters airways.
- H336: May cause drowsiness or dizziness.
- H351: Suspected of causing cancer.
- H402: Harmful to aquatic life.

Precautionary Statements:

P261: Avoid breathing dust / fume / gas / mist / vapors / spray.
P281: Wear protective equipment as required.
P301 + 310: IF SWALLOWED: Immediately call a POISON CENTER or doctor / physician.
P331: Do NOT induce vomiting.

3. Composition / Information on Ingredients

CAS Number: Not applicable to mixtures EC Number: Not applicable to mixtures Index Number: Not applicable to mixtures Molecular Weight: Not applicable to mixtures

Ingredient	CAS Number	Percent	Hazardous	Chemical Characterization
Fuel, Diesel	68476-34-6	99%	Yes	Substance
Polycyclic Hydrocarbons	08-007-452	< 1%	Yes	Substance

4. First-aid Measures

Inhalation: Remove from vapor to fresh air. If breathing has stopped, give artificial respiration. Get medical Immediately.

Ingestion: DO NOT INDUCE VOMITING or give anything by mouth to an unconscious person. If more than 1 mg/kg of petroleum distillates are swallowed, remove by gastric ravage by qualified medical personnel. If vomiting occurs, keep person's head lower than hips to help prevent pulmonary aspiration. After vomiting stops, give 30-60 ml of Fleet's Phosphor-Soda diluted 1:4 in water. Get medical attention immediately.

Skin Contact: Remove contaminated clothing. Wipe off excess oil with a dry cloth and then wash affected area with soap or mild detergent and large amounts of water until no evidence of chemical remains (approximately 15-20 minutes.) If irritation develops, seek medical aid.

Eye Contact: Check for and remove any contact lenses. Flush eyes immediately with large amounts of water, occasionally lifting upper and lower lids until no evidence of chemical remains (approximately 15-20 minutes). Get medical attention if symptoms occur.

5. Fire-fighting Measures

Fire: Flammable Liquid and Vapor!

Explosion: Do not mix or store with strong oxidants. Do not store or pour near sources of ignition. Do not pressurize, cut, heat, weld, or expose empty containers to sources of ignition. Vapors are heavier than air and may travel a considerable distance to a source of ignition and flash back.

Fire Extinguishing Media: Foam, Carbon Dioxide, Dry Chemical, and for larger fires, Water Spray, Fog, or Foam.

Special Information: Use supplied-air breathing equipment for enclosed areas. Cool exposed containers with water spray. Continue water spray until entire container contents are cool. Withdraw immediately in the event of rising sound from venting safety device or any discoloration of storage tank due to fire (subject to the fire chief's directions.)

6. Accidental Release Measures

Personal Precautions, Protective Equipment and Emergency Procedures: No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment as per Section 8.

Environmental Precautions and Methods and Materials for Containment and Cleaning Up: Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Observe local, state and federal governmental spill and water quality regulations.

If properly trained, proceed with the following measures:

- 1. For small spills: Stop leak if without risk. Move containers from spill area. take up with sand or other absorbent material and place into containers for alter disposal.
- 2. For large spills: Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water courses, basements or confined areas. Dike far ahead of spill to prevent entrance into watercourses and / or ground water.

Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product.

7. Handling and Storage

Precautions for Safe Handling and Conditions for Safe Storage, Including Any Incompatibilities:

Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use non-sparking tools. Take precautionary measures against electrostatic discharges. To avoid fire or explosion, dissipate static electricity during transfer by grounding and bonding containers and equipment before transferring material. Empty containers retain product residue and can be hazardous. Do not reuse container.

Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Use appropriate containment to avoid environmental contamination.

8. Exposure Controls / Personal Protection

Airborne Exposure Limits:

ACGIH Threshold Limit Value (TWA): 100 mg/m3 (measured as total hydrocarbons) 8 h (skin)

Ventilation System: Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved): A respirator is not needed under normal and intended conditions of use. If the exposure limit is exceeded and engineering controls are not feasible, use a mask with an organic vapor cartridge or positive pressure air supplied (SCBA) unit. Breathing air quality must meet the requirements of the OSHA respiratory protection standard (29CFR1910.134).

Skin Protection: Gloves – Neoprene, PVC. Disposable outer garments or impervious garments of equal or greater protection should be worn.

Eye Protection: Use chemical safety goggles and / or a full face shield where splashing is possible.

Hygiene Measures: Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

9. Physical and Chemical Properties

Appearance: Clear, slightly viscous liquid **Odor:** Gasoline-like, diesel fuel odor

Odor Threshold: Not determined **pH:** No information found % Volatiles by volume @ 21C (70F): Greater than 50% Melting Point: Not determined Boiling Point / Boiling Range: 200 - 350C (392 - 662F) at 1,013 hPa (750 mm Hg) Flash Point: 50 - 80C (122 - 176F) Closed Cup Evaporation Rate (BuAC=1): Not determined Flammability: Combustible Upper / Lower Flammability or Explosive Limits: Upper - 10.0 / Lower - 0.6 Vapor Pressure (mm Hg): 1 mm Hg @ 20C (68F) Vapor Density (Air=1): Greater than 5 Relative Density: 0.86 Solubility: Insoluble Partition Coefficient: n-octanol / water: Not determined Auto-ignition Temperature: > 260C (500F) Decomposition Temperature: Not determined Viscosity: Not determined

10. Stability and Reactivity

Reactivity and / or Chemical Stability: Stable under ordinary conditions of use and storage at normal temperatures and pressures.

Possibility of Hazardous Reactions and Conditions to Avoid: Heat, flames, ignition sources and incompatibles.

Incompatible Materials: Reactive or incompatible with oxidizing materials.

Hazardous Decomposition Products: Thermal decomposition may release various hydrocarbons and hydrocarbon derivatives including carbon dioxide, water, organic acids, and aldehydes.

11. Toxicological Information

Emergency Overview: WARNING! COMBUSTIBLE. CAUSES RESPIRATORY TRACT, EYE AND SKIN IRRITATION. HARMFUL IF INGESTED. ASPIRATION HAZARD.

Combustible liquid. Keep away from heat, sparks and flame. Avoid exposure - obtain special instructions before use. Do not breathe vapor or mist. Do not ingest. Avoid contact with eyes, skin and clothing. Wash thoroughly after handling.

Potential Health Effects:

Inhalation: Mist or vapor may cause respiratory tract irritation. CNS depressant. High levels may cause giddiness, headache, dizziness, nausea, vomiting, and loss of coordination, narcosis, stupor, coma, and unconsciousness.

Ingestion: Irritation, giddiness, vertigo, headache, anesthetic stupor, CNS depression, coma and death.

Skin Contact: Drying, cracking, and defatting dermatitis. Direct contact may cause extreme irritation with severe erythema and edema with blistering and open sores. Absorption of large amounts may result in narcosis.

Eye Contact: Moderately irritating to eyes.

Chronic Exposure:

Inhalation: Prolonged exposure may cause dizziness, weakness, weight loss, anemia, nervousness, and pain in the limbs, peripheral numbness, and paresthesia. Renal failure possible. Degenerative changes of liver and kidneys may occur after prolonged exposure to high concentrations.

Skin Contact: Repeated or prolonged exposure may cause irritation, dermatitis, and a rash of pimples and spots.

Carcinogenicity:

For Fuel, Diesel:

ACGIH: A3 - Animal carcinogen. "Available evidence suggests that the agent is not likely to cause cancer in humans except under uncommon or unlikely routes or levels of exposure."

IARC: 3 - The agent (mixture, exposure circumstance) is not classifiable as to its carcinogenicity to humans.

Reproductive Toxicity: This product is not reported to have any reproductive toxicity effects.

Specific Target Organ Toxicity - Single Exposure (Globally Harmonized System:) May cause drowsiness or dizziness.

Specific Target Organ Toxicity - Repeated Exposure (Globally Harmonized System:) No data available.

Aspiration Respiratory Organs Hazard: The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs,) severe lung damage, respiratory failure and even death.

Acute Toxicity: Oral LD50: > 5000 mg/kg (rat)

12. Ecological Information

Ecotoxicity: Very toxic to aquatic life with long lasting effects. 96 h LC50 Pimephales promelas - 35 mg/L (flow-through)

Persistence and Degradability: No information available

Bioaccumulative Potential: No information available

Mobility in Soil: No information available

Other adverse effects: No information available

13. Disposal Considerations

The generation of waste should be avoided or minimized wherever possible. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe way. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal should be in accordance with applicable regional, national, state, and local laws and regulations. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

14. Transport Information

Packing Group: III

Land Transport ADR/RID and GGVS/GGVE (Cross Border / Domestic) UN Number: UN1993 UN Proper Shipping Name: COMBUSTIBLE - LIQUID, N.O.S. (FUEL, DIESEL) Transport Hazard Class(es): Combustible Liquid Maritime Transport IMDG/GGVSea UN Number: UN1202 UN Proper Shipping Name: FLAMMABLE LIQUID, N.O.S. (FUEL, DIESEL) Not regulated if flashpoint is > 60C Transport Hazard Class(es): 3 Marine Pollutant: Yes

Air Transport ICAO-TI and IATA-DGR UN Number: UN1202 UN Proper Shipping Name: FLAMMABLE LIQUID, N.O.S. (FUEL, DIESEL) Not regulated if flashpoint is > 60C Transport Hazard Class(es): 3

Transport in Bulk according to Annex II of MARPOL 73/78 and the IBC Code

Special Precautions for User: No additional information

15. Regulatory Information

HCS Classification:	Combustible liquid Carcinogen
U.S. Federal Regulations:	 TSCA 4(a) final test rules: No products listed. TSCA 8(a) PAIR: No products listed. United States inventory (TSCA 8b): All components are listed or exempted. TSCA 12(b): No products listed. SARA 302/304/311/312 extremely hazardous substances: No products listed. SARA 302/304/311/312 hazardous chemicals: No products listed. SARA 302/304/311/312 hazardous chemicals: No products listed. SARA 311/312 MSDS distribution - chemical inventory - hazard identification: No products listed. Clean Water Act (CWA) 307: Ethylbenzene Clean Air Act (CAA) 112 accidental release prevention: No products were found. Clean Air Act (CAA) 112 regulated flammable substances: No products listed.
SARA 313	Form R – Reporting Requirements and Supplier Notification: No products listed. SARA 313 notifications must not be detached from the SDS and any copying and redistribution of the SDS shall include copying and redistribution of the notice attached to copies of the SDS subsequently redistributed.
State Regulations:	Connecticut Carcinogen Reporting: None of the components are listed. Connecticut Hazardous Material Survey: None of the components are listed. Florida substances: None of the components are listed. Illinois Chemical Safety Act: None of the components are listed. Illinois Toxic Substances Disclosure to Employee Act: None listed. Louisiana Reporting: None of the components are listed. Louisiana Spill: None of the components are listed. Massachusetts Spill: None of the components are listed. Massachusetts Substances: None of the components are listed. Michigan Critical Material: None of the components are listed. Minnesota Hazardous Substances: None of the components are listed. New Jersey Hazardous Substances: The following components are listed: Fuel New Jersey Spill: None of the components are listed. New York Acutely Hazardous Substances: None of the components are listed. New York Toxic Chemical Release Reporting: None of the components are listed.
Pennsylvania RTK Hazardous Substances: None of the components are listed. **Rhode Island Hazardous Substances**: None of the components are listed.

California Prop. 65	Cancer	Reproductive	No significant Risk Level	Maximum Acceptable Dosage
Ingredient Name Ethylbenzene	Yes	No	No	Level No

International Lists:

This product, (and its ingredients) is (are) listed on national inventories, or is (are) exempted from being listed, in Australia (AICS), in Europe (EINECS/ELINCS), in Korea (TCCL), in Japan (METI), in the Philippines (RA6969.)

16. Other Information

Acetone

Safety Data Sheet 75004 according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations Date of issue: 11/12/1998 Revision date: 10/01/2013 Supersedes: 06/11/2013

Version: 1.1

SECTION 1: Identification of the su	ubstance/mixture and of t	ne company/undertaking	
1.1. Product identifier			
Product form	: Substance		
Substance name	: Acetone		
CAS No	: 67-64-1		
Product code	: LC10420, LC10425		
Formula	: C3H6O		
Svnonvms	: 2-propanone / beta-ketopro	oane / dimethyl formaldehyde / dimethyl ketone / di	methvlketal / DMk
	(=dimethyl ketone) / keto pr	opane / methyl ketone / pyroacetic acid / pyroacetic	ether / pyroacetic
	spirit		
BIG no	: 10001		
1.2. Relevant identified uses of the su	bstance or mixture and uses ad	vised against	
Use of the substance/mixture	: Solvent		
	Cleansing product Chemical raw material		
1.3. Details of the supplier of the safet	ty data sheet		
LabChem Inc			
Jackson's Pointe Commerce Park Building 10	00, 1010 Jackson's Pointe Court		
Zelienople, PA 16063 - USA			
I 412-826-5230 - F 724-473-0647			
1.4. Emergency telephone number		0 014 702 507 2007	
Emergency number	: CHEMTREC: 1-800-424-93	JU OF 011-703-527-3887	
SECTION 2: Hazards identification			
2.1. Classification of the substance or	mixture		
GHS-US classification			
Flam, Lig. 2 H225			
Eye Irrit. 2A H319			
GHS-US labelling Hazard pictograms (GHS-US)		>	
Signal word (GHS-US)	· Danger		
Hazard statements (GHS-US)	· H225 - Highly flammable lig	id and vapour	
	H319 - Causes serious eye	irritation	
	H336 - May cause drowsine	ss or dizziness	
Precautionary statements (GHS-US)	: P210 - Keep away from hea P233 - Keep container tight P240 - Ground/bond contain	t, hot surfaces, open flames, sparks No smoking y closed er and receiving equipment	
	P241 - Use explosion-proof	electrical, lighting, ventilating equipment	
	P242 - Use only non-sparkii P243 - Take precautionary	ig tools neasures against static discharge	
	P261 - Avoid breathing mist	spray, vapours	
	P264 - Wash exposed skin	horoughly after handling	
	P271 - Use only outdoors o	in a well-ventilated area	105
	P303+P361+P353 - IF ON \$	SKIN (or hair): Remove/Take off immediately all cor	ntaminated
	clothing. Rinse skin with wa	er/shower	
	P304+P340 - IF INHALED:	Remove person to fresh air and keep comfortable f	or breathing
	lenses, if present and easy	o do. Continue rinsing	Remove contact
	P312 - Call a POISON CEN	TER/doctor//if you feel unwell	
	P337+P313 - If eye irritation	persists: Get medical advice/attention	oorbon diasida
	(CO2) for extinction	use ary chemical powder, alconol-resistant toam,	
	P403+P233 - Store in a wel	-ventilated place. Keep container tightly closed

Obtain medical assistance.

SECTION 5: Firefighting measures	
5.1. Extinguishing media	
Suitable extinguishing media	: Preferably: alcohol resistant foam. Water spray. Polyvalent foam. BC powder. Carbon dioxide.
Unsuitable extinguishing media	: Solid water jet ineffective as extinguishing medium.
5.2. Special hazards arising from the sub	stance or mixture
Fire hazard	: DIRECT FIRE HAZARD. Highly flammable. Gas/vapour flammable with air within explosion limits. INDIRECT FIRE HAZARD. May be ignited by sparks. Gas/vapour spreads at floor level: ignition hazard. Reactions involving a fire hazard: see "Reactivity Hazard".

Safety Data Sheet according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

Explosion hazard	: DIRECT EXPLOSION HAZARD. Gas/vapour explosive with air within explosion limits. INDIRECT EXPLOSION HAZARD. Heat may cause pressure rise in tanks/drums: explosion risk. may be ignited by sparks. Reactions with explosion hazards: see "Reactivity Hazard".
Reactivity	: Upon combustion: CO and CO2 are formed. Violent to explosive reaction with many compounds. Prolonged storage: on exposure to light: release of harmful gases/vapours. Reacts violently with (strong) oxidizers: peroxidation resulting in increased fire or explosion risk.
5.3. Advice for firefighters	
Firefighting instructions	: Cool tanks/drums with water spray/remove them into safety. Physical explosion risk: extinguish/cool from behind cover. Do not move the load if exposed to heat. After cooling: persistant risk of physical explosion.
Protection during firefighting	: Heat/fire exposure: compressed air/oxygen apparatus.
SECTION 6: Accidental release meas	ures

6.1.	Personal precautions, protective equipment and emergency procedures		
6.1.1.	For non-emergency personnel		
Protective	equipment	Gloves. Protective goggles. Protective clothing. Large spills/in enclosed spaces: compressed air apparatus.	
Emergen	cy procedures	Keep upwind. Mark the danger area. Consider evacuation. Seal off low-lying areas. Close doors and windows of adjacent premises. Stop engines and no smoking. No naked flames or sparks. Spark- and explosionproof appliances and lighting equipment. Keep containers closed. Wash contaminated clothes.	
6.1.2.	For emergency responders		
Protective	equipment	Equip cleanup crew with proper protection.	
Emergen	cy procedures	Ventilate area.	
6.2.	Environmental precautions		
Prevent s	preading in sewers.		
6.3.	Methods and material for containmen	t and cleaning up	
For conta	inment	Contain released substance, pump into suitable containers. Consult "Material-handling" to select material of containers. Plug the leak, cut off the supply. Dam up the liquid spill. Try to reduce evaporation. Measure the concentration of the explosive gas-air mixture. Dilute/disperse combustible gas/vapour with water curtain. Provide equipment/receptacles with earthing. Do not use compressed air for pumping over spills.	
Methods t	ior cleaning up	Take up liquid spill into inert absorbent material, e.g.: sand, earth, vermiculite. Scoop absorbed substance into closing containers. See "Material-handling" for suitable container materials. Spill must not return in its original container. Carefully collect the spill/leftovers. Damaged/cooled tanks must be emptied. Do not use compressed air for pumping over spills. Clean contaminated surfaces with an excess of water. Take collected spill to manufacturer/competent authority. Wash clothing and equipment after handling.	

Reference to other sections 6.4.

See Heading 8. Exposure controls and personal protection.

SECTION 7: Handling and storage	
7.1. Precautions for safe handling	
Precautions for safe handling	: Comply with the legal requirements. Remove contaminated clothing immediately. Clean contaminated clothing. Handle uncleaned empty containers as full ones. Thoroughly clean/dry the installation before use. Do not discharge the waste into the drain. Do not use compressed ai for pumping over. Use spark-/explosionproof appliances and lighting system. Take precautions against electrostatic charges. Keep away from naked flames/heat. Keep away from ignition sources/sparks. Avoid prolonged and repeated contact with skin. Keep container tightly closed. Measure the concentration in the air regularly. Work under local exhaust/ventilation.
Hygiene measures	Do not eat, drink or smoke when using this product. Wash contaminated clothing before reuse. Wash hands and other exposed areas with mild soap and water before eating, drinking or smoking and when leaving work.
7.2. Conditions for safe storage, includin	any incompatibilities
Storage conditions	Keep only in the original container in a cool, well ventilated place away from : Heat sources, Direct sunlight, incompatible materials. Keep container closed when not in use.
Incompatible products	Strong bases. Strong acids.
Incompatible materials	Sources of ignition. Direct sunlight.
Storage temperature	: 15 - 20 °C
Heat and ignition sources	KEEP SUBSTANCE AWAY FROM: heat sources. ignition sources.
Prohibitions on mixed storage	KEEP SUBSTANCE AWAY FROM: oxidizing agents. reducing agents. (strong) acids. (strong) bases. halogens. amines.

Safety Data Sheet

according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

Storage area	:	Store in a cool area. Keep out of direct sunlight. Store in a dry area. Store in a dark area. Ventilation at floor level. Fireproof storeroom. Provide for an automatic sprinkler system. Provide for a tub to collect spills. Provide the tank with earthing. Meet the legal requirements.
Special rules on packaging	:	SPECIAL REQUIREMENTS: closing. with pressure relief valve. clean. opaque. correctly labelled. meet the legal requirements. Secure fragile packagings in solid containers.
Packaging materials	:	SUITABLE MATERIAL: steel. stainless steel. carbon steel. aluminium. iron. copper. nickel. bronze. glass. MATERIAL TO AVOID: synthetic material.

7.3. Specific end use(s)

No additional information available

SECTION 8: Exposure controls/personal protection

8.1. Control parameters		
Acetone (67-64-1)		
USA ACGIH	ACGIH TWA (ppm)	500 ppm
USA ACGIH	ACGIH STEL (ppm)	750 ppm
USA OSHA	OSHA PEL (TWA) (mg/m³)	2400 mg/m³
USA OSHA	OSHA PEL (TWA) (ppm)	1000 ppm

8.2. Exposure controls

Appropriate engineering controls	Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure.
Materials for protective clothing	GIVE EXCELLENT RESISTANCE: No data available. GIVE GOOD RESISTANCE: butyl rubber. tetrafluoroethylene. GIVE LESS RESISTANCE: chlorosulfonated polyethylene. natural rubber. neoprene. polyurethane. PVA. styrene-butadiene rubber. GIVE POOR RESISTANCE: nitrile rubber. polyethylene. PVC. viton. nitrile rubber/PVC.
Hand protection	Gloves.
Eye protection	Protective goggles.
Skin and body protection	Head/neck protection. Protective clothing.
Respiratory protection	Wear gas mask with filter type A if conc. in air > exposure limit.
Other information	Do not eat, drink or smoke during use.

SECTION 9: Physical and chemical properties

9.1. Information on basic physical and ch	9.1. Information on basic physical and chemical properties			
Physical state	:	Liquid		
Appearance	:	Liquid.		
Molecular mass	:	58.08 g/mol		
Colour	:	Colourless.		
Odour	:	Aromatic odour. Sweet odour. Fruity odour.		
Odour threshold	:	306 - 653 ppm 737 - 1574 mg/m³		
рН	:	7		
Relative evaporation rate (butylacetate=1)	:	6		
Relative evaporation rate (ether=1)	:	2		
Melting point	:	-95 °C		
Freezing point	:	No data available		
Boiling point	:	56 °C		
Flash point	:	-18 °C		
Critical temperature	:	235 °C		
Self ignition temperature	:	465 °C		
Decomposition temperature	:	No data available		
Flammability (solid, gas)	:	No data available		
Vapour pressure	:	247 hPa		
Vapour pressure at 50 °C	:	828 hPa		
Critical pressure	:	47010 hPa		
Relative vapour density at 20 °C	:	2.0		
Relative density	:	0.79		
Relative density of saturated gas/air mixture	:	1.2		
Density	:	786 kg/m³		

Safety Data Sheet

according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

Solubility	: Soluble in water. Soluble in ethanol. Soluble in ether. Soluble in dimethyl ether. Soluble in petroleum spirit. Soluble in chloroform. Soluble in dimethylformamide. Soluble in oils/fats. Water: Complete Ethanol: Complete Ether: Complete
Log Pow	: -0.24 (Test data)
Log Kow	: No data available
Viscosity, kinematic	: 0.417 mm²/s
Viscosity, dynamic	: 0.00033 Pa.s
Explosive properties	: No data available.
Oxidising properties	: None.
Explosive limits	: 2 - 12.8 vol % 60 - 310 g/m ³
9.2. Other information	
Minimum ignition energy	: 1.15 mJ
Specific conductivity	: 500000 pS/m
Saturation concentration	: 589 g/m³
VOC content : 100 %	
Other properties	: Gas/vapour heavier than air at 20°C. Clear. Highly volatile. Substance has neutral reaction.

SECTION 10: Stability and reactivity

10.1. Reactivity

Upon combustion: CO and CO2 are formed. Violent to explosive reaction with many compounds. Prolonged storage: on exposure to light: release of harmful gases/vapours. Reacts violently with (strong) oxidizers: peroxidation resulting in increased fire or explosion risk.

10.2.	Chemical stability			
Unstable	Unstable on exposure to light.			
10.3.	Possibility of hazardous reactions			
Not estat	Not established.			
10.4.	Conditions to avoid			
Direct sunlight. Extremely high or low temperatures.				
10.5.	Incompatible materials			
Strong a	cids. Strong bases.			
10.6.	Hazardous decomposition products			
fume. Carbon monoxide. Carbon dioxide.				

SECTION 11: Toxicological information

11.1. Information on toxicological effects

Acute toxicity	: Not classified
Acetone (\f)67-64-1	
LD50 oral rat	5800 mg/kg (Rat; Experimental value, Rat; Experimental value)
LD50 dermal rabbit	20000 mg/kg (Rabbit; Experimental value, Rabbit; Experimental value)
LC50 inhalation rat (mg/l)	71 mg/l/4h (76 mg/l/4h; Rat; Rat; Experimental value; Experimental value,76 mg/l/4h; Rat; Rat; Experimental value; Experimental value)
LC50 inhalation rat (ppm)	30000 ppm/4h (Rat; Experimental value,Rat; Experimental value)
Skin corrosion/irritation	: Not classified
	pH: 7
Serious eye damage/irritation	: Causes serious eye irritation.
	pH: 7
Respiratory or skin sensitisation	: Not classified
Germ cell mutagenicity	: Not classified
	Based on available data, the classification criteria are not met
Carcinogenicity	: Not classified
Reproductive toxicity	: Not classified
	Based on available data, the classification criteria are not met
Specific target organ toxicity (single exposure)	: May cause drowsiness or dizziness.

Safety Data Sheet

according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

Specific target organ toxicity (repeated	:	Not classified
exposure)		Based on available data, the classification criteria are not met
Aspiration hazard	:	Not classified
		Based on available data, the classification criteria are not met
Potential Adverse human health effects and symptoms	:	Based on available data, the classification criteria are not met.
Symptoms/injuries after inhalation	:	EXPOSURE TO HIGH CONCENTRATIONS: Feeling of weakness. Irritation of the respiratory tract. Nausea. Vomiting. Headache. Central nervous system depression. Dizziness. Narcosis. Excited/restless. Drunkenness. Disturbed motor response. Respiratory difficulties. Disturbances of consciousness.
Symptoms/injuries after skin contact	:	ON CONTINUOUS EXPOSURE/CONTACT: Dry skin. Cracking of the skin.
Symptoms/injuries after eye contact	:	Irritation of the eye tissue.
Symptoms/injuries after ingestion	:	Dry/sore throat. Risk of aspiration pneumonia. Symptoms similar to those listed under inhalation. AFTER ABSORPTION OF HIGH QUANTITIES: Irritation of the gastric/intestinal mucosa. Change in the haemogramme/blood composition. Change in urine output. Affection of the renal tissue. Enlargement/affection of the liver.
Symptoms/injuries upon intravenous administration	:	Not available.
Chronic symptoms	:	ON CONTINUOUS/REPEATED EXPOSURE/CONTACT: Red skin. Skin rash/inflammation. Dry/sore throat. Headache. Nausea. Feeling of weakness. Loss of weight. Possible inflammation

SECTION 12: Ecological information	
12.1. Toxicity	
Ecology - general	: Classification concerning the environment: not applicable.
Ecology - air	: TA-Luft Klasse 5.2.5.
Ecology - water	: Not harmful to fishes (LC50(96h) >1000 mg/l). Not harmful to invertebrates (Daphnia). Not harmful to algae (EC50 >1000 mg/l). Not harmful to plankton. Inhibition of activated sludge.
A ((

of the respiratory tract.

Acelone (07-04-1)	
LC50 fishes 1	6210 mg/l (96 h; Pimephales promelas; NOMINAL CONCENTRATION)
EC50 Daphnia 1	8800 mg/l (48 h; Daphnia pulex)
LC50 fish 2	5540 mg/l 96 h; Salmo gairdneri (Oncorhynchus mykiss)
TLM fish 1	13000 ppm (96 h; Gambusia affinis; TURBULENT WATER)
TLM fish 2	> 1000 ppm (96 h; Pisces)
Threshold limit other aquatic organisms 1	3000 mg/l (Plankton)
Threshold limit other aquatic organisms 2	28 mg/l (Protozoa)
Threshold limit algae 1	7500 mg/l (Scenedesmus quadricauda; PH = 7)
Threshold limit algae 2	3400 mg/l (48 h; Chlorella sp.)

12.2. Persistence and degradability

Acetone (67-64-1)		
Persistence and degradability	Readily biodegradable in water. Biodegradable in the soil. Biodegradable in the soil under anaerobic conditions. No (test)data on mobility of the substance available.	
Biochemical oxygen demand (BOD)	1.43 g O ² /g substance	
Chemical oxygen demand (COD)	1.92 g O ² /g substance	
ThOD	2.20 g O ² /g substance	

12.3. Bioaccumulative potential

Acetone (67-64-1)		
BCF fish 1	0.69 (Pisces)	
BCF other aquatic organisms 1	3	
Log Pow	-0.24 (Test data)	
Bioaccumulative potential	Not bioaccumulative.	
12.4. Mobility in soil		
Acetone (67-64-1)		
Surface tension	0.0237 N/m	
12.5. Other adverse effects		

Other information

: Avoid release to the environment.

Safety Data Sheet according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

SECTION 13: Disposal consideration	S
13.1. Waste treatment methods	
Waste disposal recommendations	: Remove waste in accordance with local and/or national regulations. Hazardous waste shall not be mixed together with other waste. Different types of hazardous waste shall not be mixed together if this may entail a risk of pollution or create problems for the further management of the waste. Hazardous waste shall be managed responsibly. All entities that store, transport or handle hazardous waste shall take the necessary measures to prevent risks of pollution or damage to people or animals. Recycle by distillation. Remove to an authorized waste incinerator for solvents with energy recovery. Do not discharge into drains or the environment.
Additional information	: LWCA (the Netherlands): KGA category 03. Hazardous waste according to Directive 2008/98/EC.
Ecology - waste materials	: Avoid release to the environment.

Classification according to Directive 67/548/EEC or 1999/45/EC

F; R11 Xi; R36 R66 R67 Full text of R-phrases: see section 16

15.2.2. National regulations

Acetone (67-64-1)

Listed on the Canadian Ingredient Disclosure List

15.3. US State regulations

No additional information available

SECTION 16: Other inform	ation		
Indication of changes	: Revision - See : *.		
Other information	: None.		
Full text of H-phrases: see section 1	6:		
Eye Irrit. 2A		Serious eye damage/eye irritation, Category 2A	
Flam. Liq. 2		Flammable liquids, Category 2	
10/01/2013	EN (English)	SDS ID: 75004	8/0

Safety Data Sheet according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

STOT SE 3	Specific target organ toxicity — Single exposure, Category 3, Narcosis
H225	Highly flammable liquid and vapour
H319	Causes serious eye irritation
H336	May cause drowsiness or dizziness

NFPA health hazard	: 1 - Exposure could cause irritation but only minor residual injury even if no treatment is given.
NFPA fire hazard	: 3 - Liquids and solids that can be ignited under almost all ambient conditions.
NFPA reactivity	: 0 - Normally stable, even under fire exposure conditions, and are not reactive with water.
HMIS III Rating	
Health	: 1 Slight Hazard - Irritation or minor reversible injury possible
Flammability	: 3 Serious Hazard
Physical	: 0 Minimal Hazard
Personal Protection	: C

Safety Data Sheet Gasoline, Unleaded

SECTION 1. PRODUCT A	ND	COMPANY IDENTIFICATION
Product name	:	Gasoline, Unleaded
Synonyms	:	Blend of Highly Flammable Petroleum Distillates, Regular, Mid-Grade, Premium, 888100008809
SDS Number	:	888100008809 Version : 1.1
Product Use Description	:	Fuel
Company	:	For: Tesoro Refining & Marketing Co. 19100 Ridgewood Parkway, San Antonio, TX 78259
Tesoro Call Center	:	(877) 783-7676 Chemtrec : (800) 424-9300 (Emergency Contact)
SECTION 2. HAZARDS ID	EN	FIFICATION
Classifications	:	Flammable Liquid – Category 1 or 2 depending on formulation. Aspiration Hazard – Category 1 Carcinogenicity – Category 2 Specific Target Organ Toxicity (Repeated Exposure) – Category 2 Specific Target Organ Toxicity (Single Exposure) – Category 3 Skin Irritation – Category 2 Eye Irritation – Category 2B Chronic Aquatic Toxicity – Category 2
Pictograms	:	
Signal Word	:	Danger
Hazard Statements		Extremely flammable liquid and vapor. May be fatal if swallowed and enters airways – do not siphon gasoline by mouth. Suspected of causing blood cancer if repeated over-exposure by inhalation and/or skin contact occurs. May cause damage to liver, kidneys and nervous system by repeated and prolonged inhalation or skin contact. Causes eye irritation. Can be absorbed through skin. May cause drowsiness or dizziness. Extreme exposure such as intentional inhalation may cause unconsciousness, asphyxiation and death. Repeated or prolonged skin contact can cause irritation and dermatitis.

SAFETY DATA SHEET

GASOLINE, UNLEADED

	Harmful to aquatic life.		
Precautionary statements			
Prevention	Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Keep away from heat, sparks, open flames, welding and hot surfaces. No smoking. Keep container tightly closed. Ground and/or bond container and receiving equipment. Use explosion-proof electrical equipment. Use only non-sparking tools (if tools are used in flammable atmosphere). Take precautionary measures against static discharge. Wear gloves, eye protection and face protection (as needed to prevent skin and eye contact with liquid). Wash hands or liquid-contacted skin thoroughly after handling. Do not eat, drink or smoke when using this product. Do not breathe vapors. Use only outdoors or in a well-ventilated area.		
Response	 In case of fire: Use dry chemical, CO2, water spray or fire fighting foam to extinguish. If swallowed: Immediately call a poison center, doctor, hospital emergency room, medical clinic or 911. Do NOT induce vomiting. Rinse mouth. If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. If in eye: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If skin or eye irritation persists, get medical attention. If inhaled: Remove person to fresh air and keep comfortable for breathing. Get medical attention if you feel unwell. 		
Storage	Store in a well ventilated place. Keep cool. Store locked up. Keep container tightly closed. Use only approved containers. Some containers not approved for gasoline may dissolve and release flammable gasoline liquid and vapors.		
Disposal	Dispose of contents/containers to approved disposal site in accordance with local, regional, national, and/or international regulations.		

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Component	CAS-No.	Weight %
Gasoline, natural; Low boiling point naphtha	8006-61-9	10 - 30%
Toluene	108-88-3	10 - 30%
Xylene	1330-20-7	10 - 30%
Ethanol; ethyl alcohol	64-17-5	0-8.2%
Trimethylbenzene	25551-13-7	1 - 5%
Isopentane; 2-methylbutane	78-78-4	1 - 5%

GASOLINE, UNLEADED

Naphthalene	91-20-3	1 - 5%
Benzene	71-43-2	Less than 1.3%
Pentane	109-66-0	1 - 5%
Cyclohexane	110-82-7	1 - 5%
Ethylbenzene	100-41-4	1 - 5%
Butane	106-97-8	1 - 20%
Heptane [and isomers]	142-82-5	0.5 - 0.75%
N-hexane	110-54-3	0.5 - 0.75%

SECTION 4. FIRST AID MEASURES			
Inhalation	:	If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Seek medical attention immediately.	
Skin contact	:	In case of contact, immediately flush skin with plenty of water. Take off contaminated clothing and shoes immediately. Wash contaminated clothing before re-use. Contaminated leather, particularly footwear, must be discarded. Note that contaminated clothing may be a fire hazard. Seek medical advice if symptoms persist or develop.	
Eye contact	:	Remove contact lenses. Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Seek medical advice if symptoms persist or develop.	
Ingestion	:	Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Obtain medical attention.	
Notes to physician	:	Symptoms: Dizziness, Discomfort, Headache, Nausea, Kidney disorders, Liver disorders. Aspiration may cause pulmonary edema and pneumonitis. Swallowing gasoline is more likely to be fatal for small children than adults, even if aspiration does not occur.	

SECTION 5. FIRE-FIGHTING MEASURES

Suitable extinguishing media	:	SMALL FIRES: Any extinguisher suitable for Class B fires, dry chemical, CO2, water spray or fire fighting foam. LARGE FIRES: Water spray, fog or fire fighting foam. Water may be ineffective for fighting the fire, but may be used to cool fire-exposed containers. Keep containers and surroundings cool with water spray.
Specific hazards during fire fighting	:	Extremely flammable liquid and vapor. This material is combustible/flammable and is sensitive to fire, heat, and static discharge.
Special protective equipment for fire-fighters	:	Firefighting activities that may result in potential exposure to high heat, smoke or toxic by-products of combustion should require NIOSH/MSHA- approved pressure- demand self-contained breathing apparatus with full facepiece and full protective clothing.

Further information :	Isolate area around container involved in fire. Cool tanks, shells, and containers exposed to fire and excessive heat with water. For massive fires the use of unmanned hose holders or monitor nozzles may be advantageous to further minimize personnel exposure. Major fires may require withdrawal, allowing the tank to burn. Large storage tank fires typically require specially trained personnel and equipment to extinguish the fire, often including the need for properly applied fire fighting foam. Exposure to decomposition products may be a hazard to health. Use extinguishing measures that are appropriate to local circumstances and the surrounding environment. Use water spray to cool unopened containers. Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations.
-----------------------	--

SECTION 6. ACCIDENTAL RELEASE MEASURES **Personal precautions** Evacuate personnel to safe areas. Ventilate the area. Remove all sources of ignition. Response and clean-up crews must be properly trained and must utilize proper protective equipment (see Section 8). Discharge into the environment must be avoided. If the product contaminates **Environmental precautions** rivers and lakes or drains inform respective authorities. Contain and collect spillage with non-combustible absorbent material, (e.g. sand, Methods for cleaning up earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations. **SECTION 7. HANDLING AND STORAGE** Precautions for safe handling Keep away from fire, sparks and heated surfaces. No smoking near areas where material is stored or handled. The product should only be stored and handled in areas with intrinsically safe electrical classification. Hydrocarbon liquids including this product can act as a non-conductive flammable liquid (or static accumulators), and may form ignitable vapor-air mixtures in storage tanks or other containers. Precautions to prevent static-initated fire or explosion during transfer, storage or handling, include but are not limited to these examples: (1) Ground and bond containers during product transfers. Grounding and bonding may not be adequate protection to prevent ignition or explosion of hydrocarbon liquids and vapors that are static accumulators. (2) Special slow load procedures for "switch loading" must be followed to avoid the static ignition hazard that can exist when higher flash point material (such as fuel oil or diesel) is loaded into tanks previously containing low flash point products (such gasoline or naphtha). (3) Storage tank level floats must be effectively bonded. For more information on precautions to prevent static-initated fire or explosion, see NFPA 77, Recommended Practice on Static Electricity (2007), and API Recommended Practice 2003, Protection Against Ignitions Arising Out of Static, Lightning, and Stray Currents (2008). Keep away from flame, sparks, excessive temperatures and open flame. Use Conditions for safe storage, including incompatibilities approved containers. Keep containers closed and clearly labeled. Empty or partially full product containers or vessels may contain explosive vapors. Do not pressurize, cut, heat, weld or expose containers to sources of ignition. Store in a well-ventilated area. The storage area should comply with NFPA 30 "Flammable and Combustible Liquid Code". The cleaning of tanks previously containing this product should follow API Recommended Practice (RP) 2013 "Cleaning Mobile Tanks In Flammable and Combustible Liquid Service" and API RP 2015 "Cleaning

Petroleum Storage Tanks".

Page 5 of 14

Reports suggest that government-mandated ethanol, if present, may not be compatible with fiberglass gasoline tanks. Ethanol may dissolve fiberglass resin, causing engine damage and possibly allow leakage of explosive gasoline.

Keep away from food, drink and animal feed. Incompatible with oxidizing agents. Incompatible with acids.

No decomposition if stored and applied as directed. Emergency eye wash capability should be available in the near proximity to operations presenting a potential splash exposure. Store only in containers approved and labeled for gasoline.

SECTION 8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines

List	Components	CAS-No.	Туре:	Value
OSHA	Benzene	71-43-2	TWA	1 ppm
		71-43-2	STEL	5 ppm
		71-43-2	OSHA_ACT	0.5 ppm

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance	:	Clear to straw colored liquid
Odor	:	Characteristic hydrocarbon-like
Odor threshold		0.5 - 1.1 ppm
рН	:	Not applicable
Melting point/freezing point		About -101°C (-150°F)
Initial boiling point & range		Boiling point varies: 30 – 200°C (85 – 392°F)
Flash point		< -21°C (-5.8°F)
Evaporation rate	:	Higher initially and declining as lighter components evaporate
Flammability (solid, gas)	:	Flammable vapor released by liquid

SAFETY DATA SHEET

GASOLINE, UNLEADED

Upper explosive limit	7.6 %(V)
Lower explosive limit	1.3 %(V)
Vapor pressure	345 - 1,034 hPa at 37.8 °C (100.0 °F)
Vapor density (air = 1)	Approximately 3 to 4
Relative density (water = 1)	0.8 g/mL
Solubility (in water)	Negligible
Partition coefficient (n-octanol/water)	2 – 7 as log Pow
Auto-ignition temperature	Approximately 250°C (480°F)
Decomposition temperature	Will evaporate or boil and possibly ignite before decomposition occurs.
Kinematic viscosity	0.64 to 0.88 mm ² /s range reported for gasoline
Conductivity : (conductivity can be reduced by environmental factors such as a decrease in temperature)	Hydrocarbon liquids without static dissipater additive may have conductivity below 1 picoSiemens per meter (pS/m). The highest electro-static ignition risks are associated with "ultra-low conductivities" below 5 pS/m. See Section 7 for sources of information on defining safe loading and handling procedures for low conductivity products.

SECTION 10. STABILITY AND REACTIVITY			
Reactivity	:	Vapors may form explosive mixture with air. Hazardous polymerization does not occur.	
Chemical stability	:	Stable under normal conditions.	
Possibility of hazardous reactions		Can react with strong oxidizing agents, peroxides, alkaline products and strong acids. Contact with nitric and sulfuric acids will form nitrocresols that can decompose violently.	
Conditions to avoid	:	Avoid high temperatures, open flames, sparks, welding, smoking and other ignition sources. Avoid static charge accumulation and discharge (see Section 7).	
Hazardous decomposition products	:	Ignition and burning can release carbon monoxide, carbon dioxide and non- combusted hydrocarbons (smoke).	

SECTION 11. TOXICOLOGICAL INFORMATION			
Skin contact	: Irritating to skin. Can be partially absorbed through skin.		
Eye contact	: Irritating to eyes.		
Ingestion	: Aspiration hazard if liquid is inhaled into lungs, particularly from vomiting after ingestion. Aspiration may result in chemical pneumonia, severe lung damage, respiratory failure and even death. Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest and death may occur.		

GASOLINE, UNLEADED

Inhalation and further information	Acute toxicity of benzene results primarily from depression of the central nervous system (CNS). Inhalation of concentrations over 50 ppm can produce headache, lassitude, weariness, dizziness, drowsiness, over excitation. Exposure to very high levels can result in unconsciousness and death.				
	Repeated over-exposure may cause liver and kidney injuries. Components of the product may affect the nervous system.				
	IARC has determined that gasoline and gasoline exhaust are possibly carcinogenic in humans. Inhalation exposure to completely vaporized unleaded gasoline caused kidney cancers in male rats and liver tumors in female mice. The U.S. EPA has determined that the male kidney tumors are species-specific and are irrelevant for human health risk assessment. The significance of the tumors seen in female mice is not known. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with effects to the central and peripheral nervous systems, liver, and kidneys. The significance of these animal models to predict similar human response to gasoline is uncertain. This product contains benzene. Human health studies indicate that prolonged and/or repeated overexposure to benzene may cause damage to the blood-forming system (particularly bone marrow), and serious blood disorders such as aplastic anemia and leukemia. Benzene is listed as a human carcinogen by the NTP, IARC, OSHA and ACGIH.

	Packaging group ICAO-Labels Packing instruction (passenger aircraft) Packing instruction (passenger aircraft)	::	II 3 353 Y341
IMDG-Code			
	UN-No.	:	UN 1203
	Description of the goods	:	Gasoline
	Class	:	3
	Packaging group	:	II
	IMDG-Labels	:	3
	EmS Number	:	F-E S-E
	Marine pollutant	:	No

SECTION 15. REGULATORY INFORMATION

OSHA Hazards	: Flammable liquid Highly toxic by ingestion Moderate skin irritant Severe eye irritant Carcinogen	
TSCA Status	: On TSCA Inventory	
DSL Status	: . All components are on the Canadi	an DSL list.
SARA 311/312 Hazards	 Fire Hazard Acute Health Hazard Chronic Health Hazard <u>CERCLA SECTION 103 and SARA SECTION 304 (RELEASE TO THE ENVIROMENT)</u> The CERCLA definition of hazardous substances contains a "petroleum exclusion" clause which exempts crude oil. Fractions of crude oil, and products (both finished and intermediate) from the crude oil refining process and any indigenous components of such from the CERCLA Section 103 reporting requirements. However, other federal reporting requirements, including SARA Section 304, as well as the Clean Water Act may still apply. 	
California Prop. 65	: WARNING! This product contains a chemical known to the State of California to cause birth defects or other reproductive harm.	
	Toluene	108-88-3
	Benzene	71-43-2
1		

SECTION 16. OTHER INFORMATION

Further information

The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.

Material Safety Data Sheet Carbon tetrachloride MSDS

Section 1: Chemical Product and Company Identification		
Product Name: Carbon tetrachloride	Contact Information:	
Catalog Codes:	Sciencelab.com, Inc. 14025 Smith Rd. Houston, Texas 77396	
CAS#: 56-23-5		
RTECS: FG4900000	US Sales: 1-800-901-7247 International Sales: 1-281-441-4400 Order Opline: Sciencel ab com	
TSCA: TSCA 8(b) inventory: Carbon tetrachloride		
CI#: Not available.	CHEMTREC (24HR Emergency Telephone), call: 1-800-424-9300	
Synonym: Tetrachloromethane		
Chemical Formula: CCl4	International CHEMTREC, call: 1-703-527-3887	
	For non-emergency assistance, call: 1-281-441-4400	

Section 2: Composition and Information on Ingredients Composition: CAS # % by Weight Carbon tetrachloride 56-23-5 100

Toxicological Data on Ingredients: Carbon tetrachloride: ORAL (LD50): Acute: 2350 mg/kg [Rat]. 8263 mg/kg [Mouse]. 6380 mg/kg [Rabbit]. DERMAL (LD50): Acute: 15000 mg/kg [Rabbit]. 5070 mg/kg [Rat]. VAPOR (LC50): Acute: 8000 ppm 4 hour(s) [Rat]. 13471.8 ppm 4 hour(s) [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:

Extremely hazardous in case of ingestion, of inhalation. Hazardous in case of skin contact (irritant, permeator), of eye contact (irritant).

Potential Chronic Health Effects:

Very hazardous in case of skin contact (irritant, permeator), of eye contact (irritant), of ingestion, of inhalation. CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified 2B (Possible for human.) by IARC. Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, the nervous system, liver, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated or prolonged inhalation of vapors may lead to chronic respiratory irritation.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used. Do not use an eye ointment. Seek medical attention.

Skin Contact:

After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact:

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:

Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:

Do not induce vomiting. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Non-flammable.

Auto-Ignition Temperature: Not applicable.

Flash Points: Not applicable.

Flammable Limits: Not applicable.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances: Not applicable.

Explosion Hazards in Presence of Various Substances:

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions: Not applicable.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:

Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:

Keep locked up Do not ingest. Do not breathe gas/fumes/ vapour/spray. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes

Storage:

Carcinogenic, teratogenic or mutagenic materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection:

Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:

TWA: 10 CEIL: 20 (ppm) TWA: 65 CEIL: 130 (mg/m3)Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Not available.

Taste: Not available.

Molecular Weight: 153.82 g/mole

Color: Not available.

pH (1% soln/water): Not available.

Boiling Point: 76.54°C (169.8°F)

Melting Point: -23°C (-9.4°F)

Critical Temperature: Not available.

Specific Gravity: 1.594 (Water = 1)

Vapor Pressure: 91.3 mm of Hg (@ 20°C)

Vapor Density: 5.3 (Air = 1)

Volatility: Not available.

Odor Threshold: 50 ppm

Water/Oil Dist. Coeff.: The product is equally soluble in oil and water; log(oil/water) = 0

lonicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Very slightly soluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Dermal contact. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:

WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 2350 mg/kg [Rat]. Acute dermal toxicity (LD50): 5070 mg/kg [Rat]. Acute toxicity of the vapor (LC50): 8000 ppm 4 hour(s) [Rat].

Chronic Effects on Humans:

CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified 2B (Possible for human.) by IARC. Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. The substance is toxic to kidneys, lungs, the nervous system, liver, mucous membranes.

Other Toxic Effects on Humans:

Extremely hazardous in case of ingestion, of inhalation. Hazardous in case of skin contact (irritant, permeator).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Embryotoxic and/or foetotoxic in animal. Detected in maternal milk in human.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are more toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Special Provisions for Transport: Marine Pollutant

Section 15: Other Regulatory Information

Federal and State Regulations:

California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Carbon tetrachloride California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Carbon tetrachloride Pennsylvania RTK: Carbon tetrachloride Massachusetts RTK: Carbon tetrachloride TSCA 8(b) inventory: Carbon tetrachloride CERCLA: Hazardous substances.: Carbon tetrachloride

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):

CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):

R36/38- Irritating to eyes and skin. R45- May cause cancer.

HMIS (U.S.A.):

Health Hazard: 2

Fire Hazard: 0

Reactivity: 0

Personal Protection: h

National Fire Protection Association (U.S.A.):

Health: 2

Flammability: 0

Reactivity: 0

Specific hazard:

Protective Equipment:

Gloves. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Splash goggles.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients Composition: Name CAS # % by Weight Trichloroethylene 79-01-6 100

Toxicological Data on Ingredients: Trichloroethylene: ORAL (LD50): Acute: 5650 mg/kg [Rat]. 2402 mg/kg [Mouse]. DERMAL (LD50): Acute: 20001 mg/kg [Rabbit].

Section 3: Hazards Identification

Potential Acute Health Effects: Hazardous in case of skin contact (irritant, permeator), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:

CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified A5 (Not suspected for human.) by ACGIH. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, the nervous system, liver, heart, upper respiratory tract. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used. Do not use an eye ointment. Seek medical attention.

Skin Contact:

After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact:

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:

Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:

Do not induce vomiting. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 420°C (788°F)

Flash Points: Not available.

Flammable Limits: LOWER: 8% UPPER: 10.5%

Products of Combustion: These products are carbon oxides (CO, CO2), halogenated compounds.

Fire Hazards in Presence of Various Substances: Not available.

Explosion Hazards in Presence of Various Substances:

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:

SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:

Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:

Keep locked up Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/ vapour/

spray. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes

Storage:

Keep container dry. Keep in a cool place. Ground all equipment containing material. Carcinogenic, teratogenic or mutagenic materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection:

Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:

TWA: 50 STEL: 200 (ppm) from ACGIH (TLV) TWA: 269 STEL: 1070 (mg/m3) from ACGIH Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Not available.

Taste: Not available.

Molecular Weight: 131.39 g/mole

Color: Clear Colorless.

pH (1% soln/water): Not available.

Boiling Point: 86.7°C (188.1°F)

Melting Point: -87.1°C (-124.8°F)

Critical Temperature: Not available.

Specific Gravity: 1.4649 (Water = 1)

Vapor Pressure: 58 mm of Hg (@ 20°C)

Vapor Density: 4.53 (Air = 1)

Volatility: Not available.

Odor Threshold: 20 ppm

Water/Oil Dist. Coeff.: The product is equally soluble in oil and water; log(oil/water) = 0

lonicity (in Water): Not available.

Dispersion Properties: See solubility in water, methanol, diethyl ether, acetone.

Solubility:

Easily soluble in methanol, diethyl ether, acetone. Very slightly soluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity:

Extremely corrosive in presence of aluminum. Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Dermal contact. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:

Acute oral toxicity (LD50): 2402 mg/kg [Mouse]. Acute dermal toxicity (LD50): 20001 mg/kg [Rabbit].

Chronic Effects on Humans:

CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified A5 (Not suspected for human.) by ACGIH. The substance is toxic to kidneys, the nervous system, liver, heart, upper respiratory tract.

Other Toxic Effects on Humans: Hazardous in case of skin contact (irritant, permeator), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Passes through the placental barrier in human. Detected in maternal milk in human.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are more toxic.

Special Remarks on the Products of Biodegradation: Not available.

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
{1,1,1-}Trichloroethane	71-55-6	100

Toxicological Data on Ingredients: 1,1,1-Trichloroethane: ORAL (LD50): Acute: 9600 mg/kg [Rat]. 6000 mg/kg [Mouse]. DERMAL (LD50): Acute: 15800 mg/kg [Rabbit]. VAPOR (LC50): Acute: 18000 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:

Very hazardous in case of eye contact (irritant), of ingestion. Hazardous in case of skin contact (irritant, permeator), of inhalation. Inflammation of the eye is characterized by redness, watering, and itching.

Potential Chronic Health Effects:

CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to lungs, the nervous system, liver, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used. Do not use an eye ointment. Seek medical attention.

Skin Contact:

After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact:

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:

Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:

Do not induce vomiting. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 537°C (998.6°F)

Flash Points: Not available.

Flammable Limits: LOWER: 7.5% UPPER: 12.5%

Products of Combustion: These products are carbon oxides (CO, CO2), halogenated compounds.

Fire Hazards in Presence of Various Substances: Slightly flammable to flammable in presence of oxidizing materials, of acids, of alkalis.

Explosion Hazards in Presence of Various Substances:

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available. Slightly explosive to explosive in presence of oxidizing materials, of acids, of alkalis.

Fire Fighting Media and Instructions:

SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:

Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/ vapour/spray. In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes

Storage:

Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Combustible materials should be stored away from extreme heat and away from strong oxidizing agents.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection:

Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:

TWA: 350 STEL: 440 CEIL: 440 (ppm) from ACGIH (TLV) [1995] TWA: 1900 STEL: 2460 CEIL: 2380 (mg/m3) from ACGIH [1995]Consult local authorities for acceptable exposure limits.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Dermal contact. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:

WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 6000 mg/kg [Mouse]. Acute dermal toxicity (LD50): 15800 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 18000 ppm 4 hour(s) [Rat].

Chronic Effects on Humans: The substance is toxic to lungs, the nervous system, liver, mucous membranes.

Other Toxic Effects on Humans:

Very hazardous in case of ingestion. Hazardous in case of skin contact (irritant, permeator), of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Detected in maternal milk in human.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are more toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : 1,1,1-Trichloroethane : UN2831 PG: III

Section 15: Other Regulatory Information

Federal and State Regulations:

Pennsylvania RTK: 1,1,1-Trichloroethane Massachusetts RTK: 1,1,1-Trichloroethane TSCA 8(b) inventory: 1,1,1-Trichloroethane SARA 313 toxic chemical notification and release reporting: 1,1,1-Trichloroethane CERCLA: Hazardous substances.: 1,1,1-Trichloroethane

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada): CLASS D-1B: Material causing immediate and serious toxic effects (TOXIC).

DSCL (EEC):

R38- Irritating to skin. R41- Risk of serious damage to eyes.

HMIS (U.S.A.):

Material Safety Data Sheet 1,2-Dichloroethane MSDS

Section 1: Chemical Product and Company Identification

Product Name: 1,2-Dichloroethane

Catalog Codes: SLD2521, SLD3721

CAS#: 107-06-2

RTECS: KH9800000

TSCA: TSCA 8(b) inventory: 1,2-Dichloroethane

Cl#: Not available.

Synonym: Ethylene dichloride

Chemical Formula: C2H4CL2

Contact Information:

Sciencelab.com, Inc. 14025 Smith Rd. Houston, Texas 77396

US Sales: **1-800-901-7247** International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call: 1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients Composition: CAS # % by Weight {1,2-}Dichloroethane 107-06-2 100 Toxicological Data on Ingredients: 1,2-Dichloroethane: ORAL (LD50): Acute: 670 mg/kg [Rat]. 413 mg/kg [Mouse].

DERMAL (LD50): Acute: 2800 mg/kg [Rabbit]. VAPOR (LC50): Acute: 1414.2 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:

Extremely hazardous in case of ingestion. Very hazardous in case of eye contact (irritant), of inhalation. Hazardous in case of skin contact (irritant). Corrosive to skin and eyes on contact. Liquid or spray mist may produce tissue damage particularly on mucous membranes of eyes, mouth and respiratory tract. Skin contact may produce burns. Inhalation of the spray mist may produce severe irritation of respiratory tract, characterized by coughing, choking, or shortness of breath. Inflammation of the eye is characterized by redness, watering, and itching.

Potential Chronic Health Effects:

Very hazardous in case of ingestion, of inhalation. CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified 2B (Possible for human.) by IARC. Classified 2 (Reasonably anticipated.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to lungs, the nervous system, liver, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated or prolonged contact with spray mist may produce chronic eye irritation and severe skin irritation. Repeated or prolonged exposure to spray mist may produce respiratory tract irritation leading to frequent attacks of bronchial infection.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used. Do not use an eye ointment. Seek medical attention.

Skin Contact:

If the chemical got onto the clothed portion of the body, remove the contaminated clothes as quickly as possible, protecting your own hands and body. Place the victim under a deluge shower. If the chemical got on the victim's exposed skin, such as the hands : Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact:

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek immediate medical attention.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:

Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

Ingestion:

Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Flammable.

Auto-Ignition Temperature: 413°C (775.4°F)

Flash Points: CLOSED CUP: 13°C (55.4°F). OPEN CUP: 18°C (64.4°F).

Flammable Limits: LOWER: 6.2% UPPER: 15.6%

Products of Combustion: These products are carbon oxides (CO, CO2).

Fire Hazards in Presence of Various Substances:

Flammable in presence of open flames and sparks. Slightly flammable to flammable in presence of oxidizing materials.

Explosion Hazards in Presence of Various Substances:

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available. Slightly explosive to explosive in presence of oxidizing materials.

Fire Fighting Media and Instructions:

Flammable liquid, soluble or dispersed in water. SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use alcohol foam, water spray or fog.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:

Flammable liquid. Corrosive liquid. Keep away from heat. Keep away from sources of ignition. Stop leak if without risk. Absorb with DRY earth, sand or other non-combustible material. Do not get water inside container. Do not touch spilled material. Use water spray curtain to divert vapor drift. Prevent entry into sewers, basements or confined areas; dike if needed. Eliminate all ignition sources. Call for assistance on disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:

Keep locked up Keep container dry. Keep away from heat. Keep away from sources of ignition. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/ vapour/spray. Never add water to this product In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes

Storage:

Flammable materials should be stored in a separate safety storage cabinet or room. Keep away from heat. Keep away from sources of ignition. Keep container tightly closed. Keep in a cool, well-ventilated place. Ground all equipment containing material. A refrigerated room would be preferable for materials with a flash point lower than 37.8°C (100°F).

Section 8: Exposure Controls/Personal Protection

Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection:

Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:

TWA: 10 CEIL: 75 (ppm) from ACGIH (TLV) TWA: 40 CEIL: 300 (mg/m3) from ACGIHConsult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Not available.

Taste: Not available.

Molecular Weight: 98.96 g/mole

Color: Not available.

pH (1% soln/water): Not available.

Boiling Point: 83.5°C (182.3°F)

Melting Point: -35.3°C (-31.5°F)

Critical Temperature: Not available.

Specific Gravity: 1.2351 (Water = 1)

Vapor Pressure: 61 mm of Hg (@ 20°C)

Vapor Density: 3.42 (Air = 1)

Volatility: Not available.

Odor Threshold: 26 ppm

Water/Oil Dist. Coeff.: The product is equally soluble in oil and water; log(oil/water) = 0

lonicity (in Water): Not available.

Dispersion Properties: See solubility in water, methanol, diethyl ether, n-octanol, acetone.

Solubility:

Easily soluble in methanol, diethyl ether, n-octanol, acetone. Very slightly soluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Eye contact. Inhalation. Ingestion.

Toxicity to Animals:

WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 413 mg/kg [Mouse]. Acute dermal toxicity (LD50): 2800 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 1414.2 ppm 4 hour(s) [Rat].

Chronic Effects on Humans:

CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified 2B (Possible for human.) by IARC. Classified 2 (Reasonably anticipated.) by NTP. The substance is toxic to lungs, the nervous system, liver, mucous membranes.

Other Toxic Effects on Humans:

Extremely hazardous in case of ingestion. Very hazardous in case of inhalation. Hazardous in case of skin contact (irritant).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Passes through the placental barrier in animal. Excreted in maternal milk in human.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are more toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: Class 3: Flammable liquid.

Identification: : Ethylene dichloride : UN1184 PG: II

Special Provisions for Transport: Marine Pollutant

Section 15: Other Regulatory Information

Federal and State Regulations:

California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: 1,2-Dichloroethane California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: 1,2-Dichloroethane Pennsylvania RTK: 1,2-Dichloroethane Massachusetts RTK: 1,2-Dichloroethane TSCA 8(b) inventory: 1,2-Dichloroethane CERCLA: Hazardous substances.: 1,2-Dichloroethane

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):

CLASS B-2: Flammable liquid with a flash point lower than 37.8°C (100°F). CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC). CLASS E: Corrosive liquid.

DSCL (EEC):

R11- Highly flammable. R20/22- Harmful by inhalation and if swallowed. R38- Irritating to skin. R41- Risk of serious damage to eyes. R45- May cause cancer.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 537°C (998.6°F)

Flash Points: Not available.

Flammable Limits: LOWER: 7.5% UPPER: 12.5%

Products of Combustion: These products are carbon oxides (CO, CO2), halogenated compounds.

Fire Hazards in Presence of Various Substances: Slightly flammable to flammable in presence of oxidizing materials, of acids, of alkalis.

Explosion Hazards in Presence of Various Substances:

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available. Slightly explosive to explosive in presence of oxidizing materials, of acids, of alkalis.

Fire Fighting Media and Instructions:

SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:

Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:

Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/ vapour/spray. In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes

Storage:

Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Combustible materials should be stored away from extreme heat and away from strong oxidizing agents.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection:

Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:

TWA: 350 STEL: 440 CEIL: 440 (ppm) from ACGIH (TLV) [1995] TWA: 1900 STEL: 2460 CEIL: 2380 (mg/m3) from ACGIH [1995]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Not available.

Taste: Not available.

Molecular Weight: 133.41 g/mole

Color: Not available.

pH (1% soln/water): Not available.

Boiling Point: 74.1°C (165.4°F)

Melting Point: -32.5°C (-26.5°F)

Critical Temperature: Not available.

Specific Gravity: 1.3376 (Water = 1)

Vapor Pressure: 100 mm of Hg (@ 20°C)

Vapor Density: 4.6 (Air = 1)

Volatility: Not available.

Odor Threshold: 400 ppm

Water/Oil Dist. Coeff.: The product is equally soluble in oil and water; log(oil/water) = 0

lonicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Very slightly soluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Dermal contact. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:

WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 6000 mg/kg [Mouse]. Acute dermal toxicity (LD50): 15800 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 18000 ppm 4 hour(s) [Rat].

Chronic Effects on Humans: The substance is toxic to lungs, the nervous system, liver, mucous membranes.

Other Toxic Effects on Humans:

Very hazardous in case of ingestion. Hazardous in case of skin contact (irritant, permeator), of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Detected in maternal milk in human.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are more toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : 1,1,1-Trichloroethane : UN2831 PG: III

Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:

Pennsylvania RTK: 1,1,1-Trichloroethane Massachusetts RTK: 1,1,1-Trichloroethane TSCA 8(b) inventory: 1,1,1-Trichloroethane SARA 313 toxic chemical notification and release reporting: 1,1,1-Trichloroethane CERCLA: Hazardous substances.: 1,1,1-Trichloroethane

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada): CLASS D-1B: Material causing immediate and serious toxic effects (TOXIC).

DSCL (EEC): R38- Irritating to skin. R41- Risk of serious damage to eyes.

HMIS (U.S.A.):

Health Hazard: 2

Fire Hazard: 1

Reactivity: 0

Personal Protection: h

National Fire Protection Association (U.S.A.):

Health: 2

Flammability: 1

Reactivity: 0

Specific hazard:

Protective Equipment:

Gloves. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Splash goggles.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

MATERIAL SAFETY DATA SHEET

SRM Supplier: National Institute of Standards and Technology Standard Reference Materials Group 100 Bureau Drive, Mail Stop 2321 Gaithersburg, Maryland 20899

MSDS Coordinator: Carmen S. Davis Phone: (301) 975-6776 ChemTrec: 1-800-424-9300 SRM Number: 1867a MSDS Number: 1867a SRM Name: Uncommon Commercial Asbestos Date of Issue: 12 March 2003

FAX: (301) 926-4751 E-mail: SRMMSDS@nist.gov

SECTION I. MATERIAL IDENTIFICATION

Material Name: Uncommon Commercial Asbestos

Description: This standard reference material (SRM) is comprised of three uncommon commercial asbestos materials (tremolite asbestos, actinolite asbestos, and anthophyllite asbestos. Each unit of SRM 1867a consists of a set of three bottles, each containing several grams of one of the three mine-grade asbestos materials.

Other Designations: Actinolite (actinolite asbestos)

Anthophyllite (azbolen asbestos; anthophylite asbestos)

Tremolite (tremolite asbestos)

Chemical Name Actinolite	Chemical Formula Not Available	CAS Registry Number 77536-66-4
Anthophyllite	$(MgFe)_7Si_8O_{22}(OH)_2$ (idealized molecule)	77536-67-5
Tremolite	$Ca_2Mg_5Si_8O_{22}(OH)_2$ (idealized molecuke)	77536-68-6

DOT Classification: Miscellaneous (Class 9) Asbestos ID #: NA 2212

Manufacturer/Supplier: Available from a number of suppliers

SECTION II. HAZARDOUS INGREDIENTS

Hazardous Components	Nominal Concentration (%)	Exposure Limits and Toxicity Data
Actinolite	100	ACGIH TWA: 0.1 fibers/cc
		OSHA TWA: 0.1 fibers/cc
		Rat, Intraperitonral: TD _{LO} : 50 mg/kg (tumorigenic)
Anthophyllite 100		ACGIH TWA: 0.1 fibers/cc
		OSHA TWA: 0.1 fibers/cc
		Rat, Intraperitonral: TD _{LO} : 250 mg/kg (tumorigenic)
Tremolite 100		ACGIH TWA: 0.1 fibers/cc
		OSHA TWA: 0.1 fibers/cc
		Rat, Intrapleural: TD _{LO} : 100 mg/kg (tumorigenic)

SECTION III. PHYSICAL/CHEMICAL CHARACTERISTICS

SECTION IV. FIRE AND EXPLOSION HAZARD DATA

Asbestos

Flash Point: Not applicableMethod Used: Not applicableAutoignition Temperature: Not applicable

Flammability Limits in Air (Volume %): UPPER: Not applicable LOWER: Not applicable

Unusual Fire and Explosion Hazards: Asbestos materials are negligible fire hazards.

Extinguishing Media: Use extinguishing media that is appropriate to the surrounding fire.

Special Fire Procedures: Fire fighters should wear full protective clothing and self-contained breathing apparatus when this material is involved in a fire.

SECTION V. REACTIVITY DATA

Stability:

X Stable

Unstable

Conditions to Avoid: Avoid temperatures in excess of 600 °C.

Incompatibility (Materials to Avoid): Asbestos materials are incompatible with acids and bases.

See Section IV: Fire and Explosion Hazard Data

Hazardous Decomposition or Byproducts: Thermal decomposition of asbestos may release toxic and/or hazardous gases.

Hazardous Polymerization _____ Will Occur _____ X ___ Will Not Occur

SECTION VI. HEALTH HAZARD DATA								
Route of Entry:	X Inhalation	X Skin	X Ingestion					

Actinolite, Anthopyllite, Tremolite Asbestos: Exposure to asbestos dusts may be irritating, producing a severe cough and chest pain. Animal studies indicate that lung tumors or mesotheliomas have occurred with exposure as short as one day. Repeated or prolonged exposure may cause asbestosis, an interstitial fibrosis of the lung tissue, which may develop fully within four to nine years; however, onset is typically delayed 20 years to 40 years after the initial exposure. Fatal exposures may be as brief as 3 months during childhood. The initial symptom is a progressive exertional dyspnea, followed by dry cough and expectoration, chest pain, decreased vital capacity, tachypnea, persistent dry rales, cyanosis, anorexia, malaise, weakness, backache, weight loss, and cor pulmonale. In some cases, clubbing of the fingers and toes has been reported. Secondary lung infections may also occur. Radiologic studies may show a diffuse increase in lung density, pleural plaques, and pleural calcification. Death from asbestosis may be due to respiratory or cardiac failure. Asbestos workers show an increase in pleural and peritoneal mesothelimoas, bronchogenic carcinoma, lung cancer, cancers of the gastrointestinal tract including the esophagus, stomach, colon, and rectum, and also cancer of the larynx. Mesothelial tumors are characterized by bloody effusion with pain, dyspnea, cough, swelling, weight loss, fatigue, hypoatremia, and death due to pulmonary insufficiency. The latent period for mesothelioma is 3.5 years to 40 years; for lung cancer it is 15 years to 30 years. Smoking enhances the risk of lung cancer. Some studies indicate that lymposarcoma and malignant lympoma, renal cancer, and an increased incidence of ovarian cancer may be associated with exposure to asbestos. In addition, cancers of the liver and mammary glands have been reported in rats.

Skin and/or eye contact with asbestos may cause irritation. Asbestos fibers may penetrate the skin and result in asbestos corns, due to the thickening of the skin around the implanted fiber. These usually occur on the hands and forearms. These corns do not lead to skin tumors and are of minor health significance. They disappear on removal of the fibers.

Ingestion of asbestos may cause gastrointestinal irritation. Repeated or prolonged ingestion of asbestos fibers may be involved in cancers of the buccal cavity and pharynx, esophagus, stomach, colon, and rectum. Ingestion of asbestos-contaminated rice has been suggested as the cause for a high incidence of stomach cancer in Japan.

Medical Conditions Generally Aggravated by Exposure: Not Available

Listed as a Carcinogen/Potential Carcinogen (Actinolite, Anthopyllite, Tremolite Asbestos):

	Yes	No
In the National Toxicology Program (NTP) Report on Carcinogens	Χ	
In the International Agency for Research on Cancer (IARC) Monographs	Χ	
By the Occupational Safety and Health Administration (OSHA)	Χ	

EMERGENCY AND FIRST AID PROCEDURES:

Skin Contact: Remove contaminated shoes and clothing. Rinse affected area with copious amounts of water for at least 15 minutes while removing contaminated clothing. Obtain medical assistance if necessary.

Eye Contact: Immediately flush eyes, including under the eyelids, with copious amounts of water for at least 15 minutes. Obtain medical assistance if necessary.

Inhalation: Immediately remove victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen. Lay victim with head and chest lower than hips to improve drainage of fluids from the lungs. Obtain medical assistance.

Ingestion: If ingested, wash out mouth with water. Obtain medical assistance immediately.

TARGET ORGAN(S) OF ATTACK: upper respiratory tract (URT) and gastrointestinal tract

SECTION VII. PRECAUTIONS FOR SAFE HANDLING AND USE

Steps to be Taken in Case Material Is Released: Notify safety personnel of major spills and/or leaks. Evacuate nonessential personnel. Collect material and place into containers for disposal.

Waste Disposal: Follow all federal, state, and local laws governing disposal.

Handling and Storage: Persons handling this material must wear protective eyewear, clothing, and gloves to prevent contact with this material.

NOTE: Contact lenses pose a special problem; soft lenses may absorb irritants and all lenses concentrate them. **DO NOT** wear contact lenses in the laboratory.

Store in well ventilated areas.

Instructions

Work-Area Evaluation for Confined Spaces

The project team must evaluate each work area to determine if confined spaces are present.

Section 1: Confined Space Evaluation

If the project team identifies a space that is classified as a confined space, they are to designate which type and communicate the evaluation to the PM.

To classify a space as a confined space, all three of the following criteria must be met:

Size: Is the space large enough and so configured that an employee can bodily enter and perform assigned work?

<u>Access/Egress:</u> Are there limited or restricted means of access or egress? Can the employee easily egress (exit) the space if there is an emergency? Can rescue personnel easily enter the space?

<u>Occupancy:</u> Is the space *not* designed for continuous human occupancy? Is the space only designed to house equipment? Are there normal-sized doorways and windows?

If the space is classified as a *confined space*, the next step is to evaluate it as a *permit-required confined space*.

Section 2: Permit-Required Confined Space Evaluation

To classify a *confined space* as a *permit-required confined space*, *any* of the following criteria must be met:

- 1. Contains or has a potential to contain a hazardous atmosphere:
 - A. Flammable gas, vapor, or mist in excess of 10 percent of its lower flammable limit (LFL);
 - B. Airborne combustible dust at a concentration that meets or exceeds its LFL;
 NOTE: This concentration may be approximated as a condition in which the dust obscures vision at a distance of 5 feet or less.
 - C. Atmospheric oxygen concentration below 19.5 percent or above 23.5 percent;
 - D. Atmospheric concentration of any toxic substance above its permissible exposure limit (PEL); or
 - E. Any other atmospheric condition that is immediately dangerous to life or health.
- 2. Contains a material that has the potential for engulfing an entrant;
- 3. Has an internal configuration such that an entrant could be trapped or asphyxiated by inwardly converging walls or by a floor that slopes downward and tapers to a smaller cross-section; or
- 4. Contains any other recognized serious safety or health hazard.

Section 2: Space Designation

If there are no confined spaces identified in the work area, check the box indicating so and file the form.

If there are confined spaces identified in the work area:

- 1. Check the box indicating so.
- 2. Give the location, identification, and a description of the confined space (e.g., tank farm 1, MW-01, monitoring well vault).
- 3. Designate if the space is a non-regulated space, confined space, or permit-required confined space.
- 4. Communicate the evaluation to the PM and project-team members.
- 5. File the form in the project filing system.

GasAlertMicroClip

Introduction

▲ Warning

To ensure personal safety, read <u>Safety Information - Read</u> <u>First</u> and the Cautions before using the detector.

The GasAlertMicroClip XT, XL and X3 ("the detector") warns of hazardous gas at levels above user-defined alarm setpoints.

The detector is a personal safety device. It is your responsibility to respond properly to the alarm.

Table 1. lists the gases monitored.

Zeroing the Sensors

To zero the sensors, refer to steps #1-3 in Connecting to the IR Link.

Table 1. Gases Monitored

Gas Detected	Unit of Measure
Hydrogen sulfide (H ₂ S)	parts per million (ppm)
Carbon monoxide (CO)	parts per million (ppm)
Oxygen (O ₂)	percent by volume (%)
Combustible gases (LEL) Field selectable for:	 percent of lower explosive limit (% LEL) percent by volume methane 0-5.0% v/v

ISO 9001

Safety Information - Read First

Use the detector only as specified in this guide and the operator's manual, otherwise the protection provided by the detector may be impaired.

International symbols on the detector and in this manual are explained in Table 2.

Read the Cautions on the following pages before using the detector.

This instrument contains a lithium polymer battery. Dispose of lithium cells immediately. Do not disassemble and do not dispose of in fire. Do not mix with the solid waste stream. Spent batteries must be disposed of by a qualified recycler or hazardous materials handler.

▲ Cautions

- Warning: Substitution of components may impair Intrinsic Safety.
- Before using the detector, refer to <u>Sensor Poisons and</u> <u>Contaminants</u>.
- *Warning:* For safety reasons, this equipment must be operated and serviced by qualified personnel only. Read and understand the user manual completely before operating or servicing.
- Do not use the detector if it is damaged. Inspect the detector before using. Look for cracks and/or missing parts.
- If the detector is damaged or parts are missing, contact <u>BW</u> <u>Technologies by Honeywell</u> immediately.
- Only use sensor(s) that are specifically designed for the GasAlertMicroClip. Refer to <u>Replacement Parts and Accessories</u>.

- Calibrate the detector before first-time use and then on a regular schedule, depending on use and sensor exposure to poisons and contaminants. BW recommends calibrating at least once every 180 days (6 months).
- BW recommends to "bump test" the sensors before each day's use to confirm their ability to respond to gas by exposing the detector to a gas concentration that exceeds the alarm setpoints. Manually verify that the audible and visual alarms are activated. Calibrate if the readings are not within the specified limits.
- BW recommends the combustible sensor be checked with a known concentration of calibration gas after any known exposure to catalyst contaminants/poisons (sulfur compounds, silicon vapors, halogenated compounds, etc).
- The combustible sensor is factory calibrated to 50% LEL methane. If monitoring a different combustible gas in the % LEL range, calibrate the sensor using the appropriate gas.
- Caution: High off-scale readings may indicate an explosive concentration.
- Only the combustible gas detection portion of this instrument has been assessed for performance by CSA International.
- Protect the combustible sensor from exposure to lead compounds, silicones, and chlorinated hydrocarbons.
- Sensor exposure to certain organic vapors (such as leaded gasoline and halogenated hydrocarbons) may temporarily inhibit sensor performance. After exposure, a bump test or calibration is recommended.
- For use only in potentially explosive atmospheres where oxygen concentrations do not exceed 20.9% (v/v).

- Any rapid up-scaling reading followed by a declining or erratic reading may indicate a gas concentration beyond upper scale limit, which may be hazardous.
- Only calibrate the detector in a fresh air environment and in a safe area.
- Use only BW approved batteries for the GasAlertMicroClip detector. Refer to <u>Specifications</u>.
- Charge the detector before first-time use. BW recommends the detector be charged after every workday.
- Charge the detector using the recommended charging adapter only. Do not use any other charging adapter. Failure to adhere to this caution can lead to fire and/or explosion.
- Extended exposure of the detector to certain concentrations of combustible gases and air may stress a detector element that can seriously affect its performance. If an alarm occurs due to high concentration of combustible gases, calibrate the detector. If necessary, replace the sensor.
- Do not test the combustible sensor's response with a butane cigarette lighter; doing so will damage the sensor.
- Do not expose the detector to electrical shock and/or severe continuous mechanical shock.
- Do not attempt to disassemble, adjust, or service the detector unless instructions for that procedure are provided in the technical reference guide, and/or that part is listed as a replacement part. Use only BW Technologies by Honeywell replacement parts. Refer to <u>Replacement Parts and Accessories</u>.
- The detector warranty will be voided if customers, personnel, or third parties damage the detector during repair attempts. Non-BW Technologies by Honeywell repair/service attempts void this warranty.

Table 2. International Symbols

Symbols	Description
c C Us	Approved to both U.S. and Canadian Standards by CSA International
(Ex)	European Explosive Protection

Sensor Poisons and Contaminants

Several cleaners, solvents, and lubricants can contaminate and cause permanent damage to sensors. Before using cleaners, solvents, and lubricants in close proximity to the detector sensors, read the following cautions and refer to the lists below.

▲ Caution

Use only the following BW Technologies by Honeywell recommended products and procedures:

- Use water based cleaners.
- Use non-alcohol based cleaners.
- Clean the exterior of the detector with a soft, damp cloth.
- Do not use soaps, polishes, or solvents.

Below are common products to avoid using around sensors.

Cleaners and Lubricants

- Brake cleaners
- Lubricants
- Rust inhibitors
- · Window and glass cleaners
- Dishsoaps
- · Citrus based cleaners
- · Alcohol based cleaners
- · Hand sanitizers
- Anionic detergents
- Methanol (fuels and antifreezes)

GasAlertMicroClip

User Manual

Silicones

- · Silicone cleaners and protectants
- · Silicone based adhesives, sealants, and gels
- · Hand/body and medicinal creams containing silicone
- Tissues containing silicone
- Mold releasing agents
- Polishes

Aerosols

- · Bug repellents and sprays
- Lubricants
- Rust inhibitors
- Window cleaners

Getting Started

The list below provides the standard items included with the detector. If the detector is damaged or parts are missing, contact the place of purchase immediately.

- Sensors: H₂S, CO, O₂, and combustible (LEL)
- · Calibration cap and hose
- · Charging adapter
- Printed Operator's Manual
- Supplementary Booklet, including a Quick Reference Card
- CD-ROM, including translated operator's manuals

Configuration Software: The detector is configured with Fleet Manager II software. It can be downloaded for free from BW Technologies by Honeywell website: <u>www.gasmonitors.com</u>.

Fleet Manager II CD-ROM is shipped with the MicroDock II base station and IR Link kit.

The detector is shipped with the sensors and rechargeable battery installed.

Battery Replacement: To replace the battery, contact <u>BW Technologies</u> <u>by Honeywell</u>. The battery can only be replaced by the manufacturer.

Charge Battery and Replace Sensors: To charge the battery and replace the sensors and/or sensor filter, refer to the following:

- Battery Cautions
- Replacing a Sensor or Sensor Filter

To order replacement parts, refer to <u>Replacement Parts and</u> <u>Accessories</u>.

To become oriented with the features and functions of the detector, refer to the following figures and tables:

- Figure 1. and Table 3. describes the detector's components.
- Figure 2. and Table 4. describes the detector's display elements.
- <u>Table 5.</u> describes the detector's pushbutton.

Pushbutton

Table 5. Pushbutton

Pushbutton	Description
Pushbutton	Description To activate the detector press . To deactivate the detector, press and hold until the OFF countdown is complete and the LCD deactivates. To view the TWA, STEL, and peak (maximum) readings, press twice. To clear the TWA, STEL, and peak readings, press when the LCD displays RESET. To initiate calibration, deactivate the detector. Press and hold while the detector performs the
\bigcirc	 OFF countdown. Continue holding () while the LCD briefly deactivates. The LCD reactivates and then begins the CAL countdown. Release () when the CAL countdown is complete. To activate the backlight in normal operation, press (). To acknowledge latched alarms, press (). To acknowledge a low alarm and disable the audible alarm, press () (if the Low Alarm Acknowledge option is enabled).

Activating the Detector

▲ Caution

Only activate the detector in a fresh air environment and in a safe area.

To activate the detector, press \bigcirc .

Self-Test

The following startup tests are written as startup performance is intended. If an error occurs, refer to <u>Startup Troubleshooting</u>.

When the detector is activated, it performs several startup tests. Confirm the following tests occur.

Battery Test

The detector performs a battery test during startup. If the battery has insufficient power to operate, the following screen displays.

Charge the battery for 2-3 hours before restarting the detector. Refer to <u>Charging the Battery</u>.

Audible/Visual Test

1. All of the LCD elements display simultaneously as the detector beeps, flashes, vibrates, and activates the backlight.

Detector Version

2. The current firmware version of the detector then displays on the LCD.

Startup Message

3. If data is entered in the **Startup Message** option (25 characters maximum) of Fleet Manager II, that data will display during the startup self-test. To enter a startup message, refer to <u>Detector</u> <u>Identification</u> or the *Fleet Manager II Operator's Manual*.

Alarm Setpoints

4. Next, the TWA, STEL, low, and high alarm setpoints display.

Note

Alarm setpoints may vary by region. Refer to <u>Factory Gas Alarm</u> <u>Setpoints</u>.

Sensor and Power Test

5. The detector then tests the sensors.

After testing the sensors, the following screen displays to verify all sensors have passed.

If an error message displays, refer to Startup Troubleshooting.

Note

The sensors are tested continuously while the detector is activated.

GasAlertMicroClip User Manual

Automatic Zero and O₂ Calibration (optional)

 Auto-Zero on Startup: If enabled, the H₂S, CO, and LEL sensors are automatically zeroed during startup. Each sensor is enabled individually. The auto-zero option is enabled for each sensor upon shipment.

 O_2 Auto-Calibration on Startup: If enabled, the O_2 sensor is automatically calibrated during startup. The auto-calibration option is enabled for the O_2 sensor upon shipment.

If the O₂ Auto-Calibration on Startup option is enabled, and the Auto-Zero on Startup option is disabled for all sensors, the following screen displays.

Note

If oxygen is configured to measure 20.8% vol., the oxygen calibration screen displays $20.8\% O_2$.

Calibration Due Date (optional)

7. The following screen displays the number of days remaining before calibration is due. The number of days that displays is when the next sensor calibration should be performed.

Note

If the **Calibration Interval** option is defined as **0**, the calibration due date is bypassed during startup.

Last Calibration Failed (optional)

If any sensor failed the last calibration, **CAL FAILURE** displays on the screen.

Note

When the CAL FAILURE displays, the previous calibration has failed but the calibration is still valid until the next calibration due date.

Overdue Calibration

If any sensor is past due for calibration, the detector beeps, flashes, vibrates, and the following screen displays.

If calibration is overdue and the **Force Calibration When Overdue** option is enabled, a calibration must be performed to enter normal operation. Refer to <u>Calibration</u>. Note

If calibration is not performed, or \bigcirc is not pressed within 2 minutes, the detector automatically deactivates.

If the **Force Calibration When Overdue** is disabled, press \bigcirc to acknowledge the warning. The detector continues with the startup self-tests and then enters normal operation.

Cal IR Lock

If the Cal Lock option is enabled, the following screen displays.

Refer to Startup Troubleshooting.

Bump Test

Note

A bump test cannot be conducted if the detector has just been calibrated. If the <u>Bump Interval</u> option is defined as **0** in Fleet Manager II, the bump test is bypassed.

BW recommends to "bump test" the sensors, before each day's use, to confirm their ability to respond to gas by exposing the detector to a gas concentration that exceeds the alarm setpoints.

GasAlertMicroClip

User Manual

Last Bump Test Failed

If any sensor failed the last calibration, **CAL FAILURE** displays on the screen.

Note

When the **BUMPCHK FAILURE** displays, the previous calibration has failed but the calibration is still valid until the next bump test due date.

Force Bump (optional)

8. If the **Force Bump** option is enabled and the sensors are due have a bump test, the following screen displays.

A bump test must be performed to enter normal operation. Apply gas to the sensors. Ensure the visual, audible, and vibrator alarms activate. When the gas is removed, the detector briefly remains in alarm until the gas has cleared from the sensors.

When the sensors successfully pass the bump check, the following screen displays showing the number of days remaining until the next bump check is due (I d = 1 day).

If Force Bump is disabled, press \bigcirc to continue with the startup self-tests.

Note

If **BUMPCHK todAY** displays again after performing a bump check, refer to <u>Startup Troubleshooting</u>.

Self-Test Pass

When the detector has passed all startup self-tests, it enters normal operation. The LCD displays the ambient gas readings.

The detector automatically begins

- · recording the peak (maximum) gas exposure,
- · calculating the short-term exposure level (STEL), and
- calculating the time-weighted average (TWA) exposures.

Self-Test Fail

If the following error message displays after entering normal operation, refer to <u>Startup Troubleshooting</u>.

Battery Test

The battery is tested when the detector is activated and continuously thereafter. See Specifications for Battery Runtimes.

- Battery power is continually displayed during normal operation. If battery power is low, and flashes. The detector performs a sequence of 10 rapid sirens and alternating flashes with 7 seconds of silence in between (continues for 15 minutes).
- If battery power becomes critically low, **Description** and **LOW BAT** display. The detector performs a sequence of 10 rapid sirens with 1 second of silence in between (sequence reactivates seven times). The detector then displays **OFF** and the detector deactivates.

Note

If enabled, **Confidence Beep** and **IntelliFlash** automatically deactivate during a low battery alarm. Refer to <u>Confidence Beep</u>

Backlight

The backlight automatically activates

- during startup,
- when the pushbutton is pressed (then deactivates after 5 seconds), and
- when there is an alarm condition (unless **Stealth** is enabled).

Deactivating the Detector

To deactivate the detector, press and hold $\bigcirc.$ The detector

- performs a sequence of two sirens with alternating flashes,
- · vibrates,
- · initiates the deactivation countdown, and
- displays OFF.

Note

If \bigcirc is released before the countdown is complete, the detector will not deactivate.

Installing Fleet Manager II

Fleet Manager II is required to configure the detector and sensors. And IR Link is also required. To purchase contact <u>BW Technologies by</u><u>Honeywell</u>.

To install Fleet Manager II complete the following:

- Install Fleet Manager II using the Fleet Manager CD-ROM (available with MicroDock II and the IR Link), or download (at no cost) from BW Technologies by Honeywell website: <u>www.gasmonitors.com</u>.
- 2. Follow the installation wizard.
- 3. When installation is complete, open Fleet Manager II.
- 4. Click Administration located on the left toolbar.
- 5. Click the Login/Logout button.

6. When the Password dialog box displays, enter **Admin** (password is case sensitive).

- 7. Click OK.
- 8. From the Devices toolbar, click Configure Device via IR Link.

9. When the Device Selection dialog box displays, select **GasAlertMicroClip Series** and click **OK**.

Device Selection	X
GasAlertMicroClip	
○ GasAlertMax XT	
○ GasAlertQuattro	
🗇 IR Link	
OK Cancel	

Fleet Manager II displays the **Sensors** tab that includes the following sections:

- Detector Identification
- CO, O₂, H₂S, LEL <u>Sensor Configuration</u>
- User Options
- Language Menu

GasAlertMicroClip User Manual

Using Fleet Manager II to Configure the Detector

Table 6: Connecting to the IR Link

Item	Item Description	
1	Detector	
2	IR and charger interface	
3	IR Link	

- 1. Activate the detector and wait for the startup tests to complete.
- 2. Connect the USB cable to the USB port on the computer.
- 3. Connect the USB cable to the IR Link.
- 4. Insert the IR link onto the IR interface on the back of the detector.
- 5. Open Fleet Manager II and access the **Sensors** tab. Refer to Installing Fleet Manager II.

6. From the **Sensors** tab, click **Retrieve from Device** at the bottom of the window.

The fields will populate with the detector's current configurations.

- 7. Refer to the descriptions in the following sections to define settings and enable/disable options:
 - Detector Identification
 - Sensor Configuration (CO, O₂, H₂S, and LEL)
 - User Options
 - Language Menu
- 8. When configuration of new settings is complete, click **Save to Device** at the bottom of the window. The detector automatically updates with the new settings.

Detector Identification

The **Detector Identification** section provides information about the detector, current firmware revision, and hardware revision. Data can also be entered (25 characters per line) to display as a startup message on the detector LCD each time it is activated.

Detector Identification	
Serial Number	
Hardware/Firmware Revision	
Startup Message Top Line	
Startup Message Bottom Line	

Figure 3. Detector Identification

Serial Number

Enter the serial number of the detector. The serial number is located on the back of the detector. The serial number is listed above the **S**: bar code. This cannot be altered.

Note

GasAlertMicroClip serial numbers use the KA serial number prefix.

Hardware/Firmware Revision

Hardware/Firmware Revision cannot be altered. The field automatically populates when data is retrieved from the detector. If new firmware is downloaded to the detector, the field automatically updates when data is retrieved.

The firmware version displays on the detector LCD during the startup self-tests.

Startup Message

Enter text (25 characters per line) to display on the detector LCD during startup. Enter information such as employee name, plant, area, emergency numbers, etc.

Depending upon the length of the message, it will either

- a) display on the LCD for 3 seconds (shorter message), or
- b) scroll twice on the LCD (longer message).

Sensor Configuration

Settings for the sensors are configured individually. Enter values or enable/disable options. Refer to <u>Factory Gas Alarm Setpoints</u> for setpoint values.

Note

Depending upon the sensor, the options may vary.

Carbon Monoxide (CO)			
			Disabled
Cal Gas:	10.0	*	ppm
Cal Interval:	180	*	days
Bump Interval:	1	*	days
Low Alarm:	35.0	*	ppm
High Alarm:	200.0	*	ppm
TWA Alarm:	35.0	*	ppm
STEL Alarm:	50.0	*	ppm
STEL Interval:	5	*	minutes
CO Auto-Zer	o on Startup		

Figure 4. CO Sensor Configuration

Sensor Disabled

▲ Warning

Use extreme caution when disabling a sensor. The disabled sensor cannot detect and alarm against the applicable gas.

- 1. Click **Retrieve from Device** to populate the fields with the current detector settings.
- 2. Click the **Disabled** checkbox for the required sensor.

Hydrogen Sulphide (H2S)			
		V (Disabled
Cal Gas:	10.0	÷	ppm
Cal Interval:	180	÷	days
Bump Interval:	1	÷	days
Low Alarm:	10.0	÷	ppm
High Alarm:	15.0	÷	ppm
TWA Alarm:	10.0	÷	ppm
STEL Alarm:	15.0	\$	ppm
STEL Interval:	5	÷	minutes
H25 Auto-Ze	ro on Startup		

Figure 5. Disabled Sensor

The fields for the applicable sensor become inactive (greyed out) until the sensor is again enabled.

- 3. Click the **Save to Device** button located at the bottom of the window.
- 4. The detector LCD automatically updates. The gas type and sensor readings no longer display on the LCD for the applicable sensor.

 Enable the sensor as soon as possible. If the sensor is damaged, replace it immediately. Refer to <u>Replacing a Sensor or</u> <u>Sensor Filter</u>.

Calibration Gas Concentration

▲ Caution

The gas concentration value entered in Fleet Manager II must match the gas concentration value on the gas cylinder.

- 1. Refer to the following list of recommended gas mixtures:
 - CO: 100 ppm balance N₂
 - H₂S: 25 ppm balance N₂
 - LEL: 50% LEL or 2.5% by vol. methane balance air
 - + O_2 : 20.9% balanced with N_2
- 2. Select/enter the gas concentration value in the **Calibration Gas** field of the applicable sensor.

Calibration Interval

▲ Caution

BW recommends that the sensors be calibrated once every 180 days (6 months).

Define how often a sensor should be calibrated in the **Calibration Interval** field. A different calibration interval can be defined for each sensor.

- 1. Enter the value (0-365 days) for each sensor.
- 2. Enter **0** to disable the calibration interval option. Entering zero automatically deactivates the **Force Calibration When Overdue** user option.

The detector is shipped with the factory default set to 180 days.

Bump Interval

Define how often a bump check should be performed for each sensor in the **Bump Interval** field. A different bump interval can be defined for each sensor.

- 1. Enter the value (0-365 days) for each sensor.
- 2. Enter 0 to disable the **Bump Interval** option. Entering 0 automatically disables the **Force Bump When Overdue** option.

The detector is shipped with the factory default set to **0** days.

Note

BW recommends to bump test the sensors before each day's use to confirm their ability to respond to gas by exposing the detector to a gas concentration that exceeds the alarm setpoints. Verify that the audible and visual alarms activate. Calibrate if the readings are not within the specified limits.

Low Alarm

Enter the low alarm setpoints for each sensor. Refer to <u>Factory Gas</u> <u>Alarm Setpoints</u> for factory defined alarm setpoints.

Applicable to all sensors.

High Alarm

Enter the high alarm setpoints for each sensor. Refer to <u>Factory Gas</u> Alarm Setpoints for factory defined alarm setpoints.

Applicable to all sensors.

TWA Alarm

The time-weighted average (TWA) is a safety measure used to determine accumulated average exposure to gases. An average is determined using the US Occupational Safety and Health Administration (OSHA) method to ensure the worker is warned when the maximum average is accumulated.

The US OSHA method is defined as a moving average that accumulates over an 8-hour average. If the worker is in the field longer, the oldest accumulated values (first hour) are replaced by the newest values (ninth hour). This continues for the duration of the work shift until the detector is deactivated.

TWA Alarm applies to CO and H₂S sensors only.

- 1. Refer to <u>Factory Gas Alarm Setpoints</u> for the factory alarm setpoints.
- 2. Enter the setpoint in the TWA Alarm field.

STEL Alarm

The short-term exposure limit (STEL) is the maximum permissible gas concentration a worker can safely be exposed to for short periods of time (5-15 minutes maximum).

STEL Alarm applies to CO and H₂S sensors only.

Note

Standard factory Alarm Setpoints vary by region. Refer to <u>Factory Gas Alarm Setpoints</u> for OSHA factory settings.

1. Refer to the applicable regulatory requirements in your area for defining STEL alarm setpoints.
2.Enter the setpoint for the CO and H₂S sensor in the **STEL Alarm** field. Proceed to <u>STEL Interval</u>.

STEL Interval

STEL Interval provides protection for workers from over exposure to high concentrations of gas, and is based on used-defined **5-15** minute intervals. When the maximum STEL is reached, the detector alarms to notify the worker.

▲ Caution

Follow all safety procedures as defined by your employer.

Enter the interval (5-15 minutes) in the STEL Interval field. The detector is shipped with the factory default setting of 15 minutes.

Auto Zero on Startup

When enabled, the sensors automatically zero during the startup self-tests. The **Auto-Zero on Start-up** option is available for the CO, H_2S , and LEL sensors. Not applicable to O_2 .

1. Click the checkbox of each sensor that will be auto zeroed during startup.

The detector is shipped with the **Auto-Zero on Start-up** option enabled for the CO, H_2S , and LEL sensor.

O₂ Auto-Calibration on Startup (Automatic O₂ Calibration)

When enabled, the O_2 sensor is automatically calibrated during the startup self-tests.

The detector is shipped with the O_2 Auto-Calibration on Startup option enabled.

LEL By Vol CH₄

When enabled, the detector displays the LEL value as CH_4 %, assuming a methane environment.

The **LEL By Vol CH_4** option is applicable to the LEL sensor only. The detector is shipped with the **LEL by Vol CH_4** disabled.

User Options

The user options section provides detector features that can be enabled or disabled. The green checkmark indicates the option is enabled. Click the checkbox to disable the option.

Figure 6. Fleet Manager II IR Link User Options

Latching Alarms

When enabled, a low alarm persists until the alarm is acknowledged and gas concentrations are below the low alarm setpoint. The audible alarm can be temporarily deactivated by pressing \bigcirc , but the LCD continues to

display the peak concentration values until the alarm condition no longer exists.

The detector is shipped with Latching Alarms disabled.

Safe Mode

When enabled, **SAFE** displays continuously on the LCD unless an alarm condition occurs. **Safe Mode** provides visual confirmation that no (monitored) hazardous gas is present.

The detector is shipped with Safe Mode disabled.

Stealth Mode

When enabled, the backlight, visual alarms, and audible alarms are disabled. \Rightarrow displays continuously on the LCD.

During an alarm, the vibrator activates and readings display on the LCD.

The detector is shipped with Stealth Mode disabled.

Low Alarm Acknowledge

When enabled, the audible alarm can be deactivated during a low alarm for the CO, H_2S , and LEL sensors. The LED and visual alarm indicators remain active until the alarm condition changes or the detector deactivates.

 $\ensuremath{\mathsf{Press}}\xspace$ to acknowledge the low alarm and deactivate the audible alarm.

Note

Low Alarm Acknowledge is not applicable to O₂.

The detector is shipped with Low Alarm Acknowledge disabled.

Force Calibration When Overdue

When enabled, if a sensor(s) is past due, the sensor(s) must be calibrated immediately, otherwise the detector deactivates.

Enable **Force Calibration When Overdue** to ensure calibrations are performed regularly and sensors are operating correctly. The following screen displays during the startup sequence when the option is enabled and the sensor(s) is overdue.

To enable Force Calibration When Overdue, complete the following:

- 1. Click the Force Calibration When Overdue checkbox to enable.
- 2. Enter a value (1-365 days) in the <u>Calibration Interval</u> (Cal Interval) field.

▲ Caution

If 0 (zero) is entered in the Cal Interval field, the Force Calibration When Overdue option is automatically disabled.

The detector is shipped with Force Calibration When Overdue disabled.

For more information, refer to Calibration.

Cal Lock (Calibration IR Lock)

When enabled, the sensors can only be calibrated using an infrared (IR) device to ensure calibrations are recorded. The following are IR devices:

- IR Link with Fleet Manager (refer to Connecting to the IR Link),
- MicroDock II base station (refer to the MicroDock II User Manual).

If **Cal Lock** is enabled and calibration is attempted, the following screen displays.

Note

If **Cal Lock** is enabled, the detector will still auto zero the sensors.

The detector is shipped with Cal Lock disabled.

Force Bump When Overdue

When enabled, if a sensor(s) is past due for a bump test, the sensor(s) must be bump tested immediately, otherwise the detector deactivates.

A bump test should be performed regularly to ensure the sensors are responding correctly to gas. The following screen displays when the option is enabled and the sensor(s) is overdue.

To enable Force Bump When Overdue, complete the following:

- 1. Click the Force Bump When Overdue checkbox to enable.
- 2. Enter a value (1-365 days) in the <u>Bump Interval</u> field.

▲ Caution

If 0 is entered in the Bump Interval field, the Force Bump When Overdue option is automatically disabled.

The detector is shipped with Force Bump When Overdue disabled.

For information and procedures, refer to Bump Test.

Confidence Beep

When enabled, the confidence beep provides continuous audible confirmation that the detector is operating correctly by beeping once every second.

Note

Confidence beep automatically disables during a low battery alarm, a self-test fail, a calibration fail, a bump test fail, or during an alarm event.

To define how often Confidence Beep occurs (**1-60** seconds), refer to <u>Confidence Beep and IntelliFlash Interval</u>. Default setting is 1 second.

The detector is shipped with the **Confidence Beep** disabled.

IntelliFlash

When enabled, the green LED flashes to provide continuous visual confirmation that the detector is operating correctly.

Note

IntelliFlash is only applicable to GasAlertMicroClip XT, XL and X3.

IntelliFlash automatically deactivates during a low battery alarm, a self-test fail, a calibration fail, a bump test fail, or during an alarm event.

To define how often IntelliFlash occurs (**1-60** seconds), refer to <u>Confidence Beep and IntelliFlash Interval</u>. Default interval is **1** second. The detector is shipped with **IntelliFlash** enabled.

Datalog Interval

Enter a value (1-120 seconds). The default datalog interval is one reading every 15 seconds.

Confidence Beep and IntelliFlash Interval

Enter a value (**1-60** seconds) to define how often IntelliFlash occurs and the detector beeps. Intelliflash and/or Confidence Beep must be enabled in order to define Confidence Beep and IntelliFlash Interval.

Refer to <u>Confidence Beep and IntelliFlash Interval</u>. Default interval is **1** second.

Note

IntelliFlash and IntelliFlash Interval are only applicable to GasAlertMicroClip XT, XL and X3.

Language Menu

The detector can display warnings and notifications in five different languages. Refer to the following illustration.

-Language
💽 English
🔘 Français
🔘 Deutsch
🔘 Español
O Português

Click a language. When the settings are saved to the detector, the LCD displays warnings and notifications in the selected language.

The detector is shipped with **English** as the default language.

Alarms

Table 7. describes the detector alarms and corresponding screens. During an alarm condition, the detector activates the backlight, audible/ visual/vibrator alarms, and displays the current ambient readings. If more than one type or level of alarm occurs simultaneously, a multi-gas alarm results. If Stealth is enabled, the audible and visual alarms are disabled, and only the vibrator alarm activates.

To change the factory-defined alarm setpoints, refer to <u>Low Alarm</u>, <u>High</u><u>Alarm</u>, <u>TWA Alarm</u>, and <u>STEL Alarm</u>.

Table	7./	Alar	ms
-------	-----	------	----

Alarm	Screen	Alarm	Screen
Low Alarm Slow siren Slow alternating flash ALARM and gas bar flash		 TWA Alarm Slow siren Slow alternating flash ALARM and gas bar flash Vibrate clarm activities 	
 Vibrator alarm activates High Alarm Fast siren Fast alternating flash Material and gas bar flash Vibrator alarm activates 		Vibrator alarm activates STEL Alarm Fast siren Fast alternating flash ALARM and gas bar flash Vibrator alarm activates	

Note

If **Low Alarm Acknowledge** is enabled, the audible alarm can be disabled during a low alarm condition. The vibrator and visual alarm indicators remain active until the alarm condition changes or the detector deactivates. Press \bigcirc to acknowledge the low alarm and deactivate the audible alarm. If the alarm escalates to a high, TWA, or STEL alarm, the audible alarm reactivates.

If enabled, Latched Alarms causes the low and high gas alarms (audible, visual, and vibrator) to persist until the alarm is acknowledged (by pressing \bigcirc) and the gas concentration is

below the low alarm setpoint. The LCD displays the peak concentration and the audible, visual, and vibrator indicators persist until the alarm condition no longer exists. Enable/disable Latching Alarms in Fleet Manager II. Local regulations may require Latching Alarms be enabled.

GasAlertMicroClip User Manual

Alarm	Screen	Alarm	Screen
 Multi-Gas Alarm Sequence alternating low and high alarm siren and flash MARM and gas bars flash Vibrator alarm activates 		 Over Limit (OL) Alarm Fast siren and alternating flash ALASM and gas bar flash Vibrator alarm activates OL displays

Computed Gas Exposures

▲ Warning

To avoid possible personal injury, do not deactivate the detector during a work shift. TWA, STEL, and MAX readings reset once the detector is deactivated.

Table 8. Computed Gas Exposures

Gas Exposures	Description
TWA (H ₂ S and CO only)	Time-weighted average (TWA) based on accumulated exposure to toxic gases averaged over a workday according to US OSHA method. OSHA: 8 hour moving average
STEL (H ₂ S and CO only)	Short-term exposure limit (STEL) to gas based on a 5-15 minute user-defined period.
Peak* (maximum)	Peak concentration encountered during work shift.

* For oxygen, it is the highest or the lowest concentration encountered.

Viewing Gas Exposures

To view the TWA, STEL, and peak (maximum) readings, press \bigcirc twice. The LCD first displays the TWA gas exposures.

Then the LCD displays the STEL gas exposures.

Finally the LCD displays the peak (maximum) readings.

User Manual

Clearing Gas Exposures

▲ Caution

Follow all safety procedures as defined by your employer. Confirm with your supervisor before clearing TWA and STEL alarms.

To clear the TWA, STEL, and peak exposure readings, press \bigcirc when the LCD displays RESET.

Gas Alarm Setpoints

Gas alarms are activated when detected gas concentrations are above or below the user-defined setpoints. Gas alarms are described below.

Table 9. Gas Alarm Setpoints

Alarm	Condition
Low	<i>Toxics and combustibles:</i> Ambient gas level above low alarm setpoint.
	<i>Oxygen:</i> Ambient gas level may be set above or below 20.9% (or 20.8%).
High	<i>Toxics and combustibles:</i> Ambient gas level above high alarm setpoint.
	<i>Oxygen:</i> Ambient gas level may be set above or below 20.9% (or 20.8%).
TWA	<i>Toxics only:</i> Accumulated value above the TWA alarm setpoint.
STEL	<i>Toxics only:</i> Accumulated value above the STEL alarm setpoint.
Downscale	<i>Toxics only:</i> If sensor reading is negative (half of the TWA setpoint)
Multi-gas	Two or more gas alarm conditions.

Alarm	Condition
Over Limit (OL)	OL displays when readings are above or below the sensor detection range. Refer to <u>Specifications</u> for detection ranges.

Factory Gas Alarm Setpoints

Note

Standard factory alarm setpoints may vary by region.

<u>Table 10.</u> lists the factory alarm setpoints as defined by Occupational Safety and Health Association (OSHA).

Table 10. Sample Factory Alarm Setpoints

Gas	TWA	STEL	Low	High
0 ₂	N/A	N/A	19.5% vol.	23.5% vol.
LEL	N/A	N/A	10% LEL	20% LEL
CO	35 ppm	50 ppm	35 ppm	200 ppm
H ₂ S	10 ppm	15 ppm	10 ppm	15 ppm

Note

To disable an alarm, set the alarm setpoint to **0** (zero) in Fleet Manager II. Refer to <u>Using Fleet Manager II to Configure the</u> <u>Detector</u> for complete instructions.

Changing Alarm Setpoints

To change alarm setpoints, use the base station or IR Link and refer to the following under <u>Sensor Configuration</u>:

- Low Alarm
- <u>High Alarm</u>
- TWA Alarm
- STEL Alarm

Stopping a Gas Alarm

The low and high alarms stop when the ambient gas concentration returns to the acceptable range.

Note

If alarms are set to latch, press \bigcirc to reset the alarms.

The detector calculates the TWA value based on OSHA standards and the STEL value based on a user-defined 5 to 15 minute period. Refer to <u>STEL Interval</u>.

To stop a TWA or STEL alarm, perform one of the following:

- 1. Deactivate and reactivate the detector.
- Reset the TWA/STEL/peak exposure readings. Refer to <u>Viewing</u> <u>Gas Exposures</u>).

▲ Warning

Follow all safety procedures as defined by your employer. Confirm with your supervisor before clearing TWA and STEL alarms.

User Manual

Sensor Alarm

The detector tests for missing or defective sensors during the startup self-test and continuously thereafter.

- During start-up if a sensor fails, Error and the sensor name displays.

Low Battery Alarm

 Battery power is continually displayed during normal operation. If battery power is low, and flashes. The detector performs a sequence of 10 rapid sirens and alternating flashes with 7 seconds of silence in between (continues for 15 minutes).

 If battery power becomes critically low, and LOW BAT display. The detector performs a sequence of 10 rapid sirens with 1 second of silence in between (sequence reactivates seven times). The detector then displays OFF and the detector deactivates.

Charge the battery immediately. Refer to Charging the Battery.

Note

Confidence Beep automatically disables during a low battery alarm.

Automatic Deactivation Alarm

An automatic deactivation alarm will occur if

- · the battery voltage is too low to operate the detector,
- calibration is due but not performed (when the **Force Calibration** option is enabled),
- bump test is due but not performed (when the **Force Bump** options is enabled) and
- all sensors fail during the startup self-test.

The detector performs a sequence of 10 rapid sirens with alternating flashes with 1 second of silence in between (sequence reactivates seven times). **OFF** then displays and the detector deactivates.

Bump Test

Gas Cylinder Guidelines (Bump Test)

- To ensure an accurate bump check, use a premium-grade gas. Use gases approved by the National Institute of Standards and Technology.
- Do not use a gas cylinder that is past its expiration date.

Gas Cylinder Connection

1. Connect the calibration hose to the 0.5 l/min regulator on the gas cylinder. For use with the MicroDock II, use a demand flow regulator.

NOTE: Cylinders that are used with a demand flow regulator must meet the following maximum inlet pressure specifications:

- Disposable cylinders 0-1000 psig/70 bar
- Refillable cylinders 0-3000 psig/207 bar

To perform an automated bump check, refer to the MicroDock II User Manual.

- 2. Connect the calibration hose to the calibration cap.
- 3. Attach the calibration cap to the detector.
- 4. Apply gas. Verify the visual and audible alarms activate.
- Close the regulator and remove the calibration cap from the detector. NOTE: The detector will temporarily remain in alarm until the gas clears from the sensors.
- 6. Disconnect the hose from the calibration cap and the regulator.

Note Only use the calibration cap during calibration and bump check.	

User Manual

Calibration

Guidelines

When calibrating the detector, adhere to the following guidelines:

 Recommended gas mixture: CO: 100 ppm balance N₂
 H₂S: 25 ppm balance N₂

LEL: 50% LEL or 2.5% for NA (2.2% for EU) by vol. methane

balance air

O₂: 18% by volume, balance N₂.

- To ensure accurate calibration, use a premium-grade calibration gas. Gases approved by the National Institute of Standards and Technology (NIST) improve the accuracy of the calibration.
- Do not use a gas cylinder past its expiration date.
- Calibrate a new sensor before use. Install the sensor, activate the detector, and allow the sensor to stabilize before starting calibration (used sensor: 60 seconds / new sensor: 5 minutes, for X3 O₂ stabilization takes 60 minutes.
- Calibrate the sensors at least once every 180 days, depending on use and sensor exposure to poisons and contaminants.
- Calibrate the detector if the gas readings varies during startup.
- Calibrate the sensor before defining the alarm setpoints.8
- Calibrate only in a safe area that is free of hazardous gas in an atmosphere of 20.9% oxygen.
- Do not calibrate the detector during or immediately after charging is complete.
- The oxygen sensor can be automatically calibrated each time upon activation (if this feature is enabled). Activate the detector in a normal (20.9%/20.8% oxygen) atmosphere.

- Allow the detector to stabilize for 1 minute after activation before performing a calibration or bump test.
- If a certified calibration is required, contact <u>BW Technologies by</u> <u>Honeywell</u>.

Diagnostics Test

The detector tests the air (auto zero) and the span gas that is applied (auto span) to ensure it meets expected values. Auto zero sets the zero-gas level of the sensor.

Auto Zero: If target gas is present, the zero level will be incorrect and the sensor will fail. If a sensor fails, an error message displays.

Auto Span: If the target gas does not meet expected values, an error message displays.

A sensors that fails to span retains the previous span value, and does not continue with the calibration process.

Connecting the Gas Cylinder to the Detector

Refer to the following <u>Figure 7.</u>, <u>Table 11.</u>, and procedures to connect the gas cylinder to the detector for calibration.

Note

Wind currents may cause false readings and poor calibrations.

Figure 7. Connecting the Gas Cylinder to the Detector

Table 11. Connecting the Gas Cylinder to the Detector

ltem	Description
1	Calibration cap
2	Calibration hose
3	Gas cylinder with 0.5 ml/min regulator

Read the following steps (1-7) before beginning calibration.

- Verify the calibration gas being used matches the span concentration value(s) that are set for the detector. Refer to Calibration Gas in Fleet Manager II.
- 2. Attach a 0.5 ml/min regulator to the gas cylinder. To perform an automated calibration, use a demand flow regulator and refer to the *MicroDock II User Manual*.
- 3. Connect the calibration hose to the calibration cap.
- 4. Connect the other end of the calibration hose to the regulator on the gas cylinder.
- 5. Refer to Calibration Setup to apply gas.
- 6. When calibration is complete turn off gas and disconnect the hose from the calibration cap and regulator.
- 7. Ensure the gas cylinder is stored according to the manufacturer's specifications.

User Manual

Calibration Setup

The following calibration procedures are written as calibration performance is intended. If an error or failure occurs, refer to <u>Calibration</u><u>Troubleshooting</u>.

▲ Caution

Only calibrate in a fresh air environment and in a safe area. Do not calibrate the detector during or immediately after charging.

Note

Calibration can be aborted at any time. To abort calibration, press _. The following screen displays.

Setting Span Gas Concentration Values

- 1. Activate the detector and allow startup to complete.
- 2. Connect the IR Link to the computer
- 3. Insert the IR Link into the IR interface on the back of the detector.
- 4. On the PC, open Fleet Manager II.
- Login to the Administration functions. From the Devices toolbar, click Configure Device via IR Link and select GasAlertMicroClip.

- Click Retrieve From Device
 The fields populate with the detector's current settings.
- 7. Refer to Calibration Gas Concentration for span gas values.
- 8. Ensure the sensors to be calibrated are enabled in Fleet Manager II.
- Using , select the concentration value(s) in the Calibration Gas field for each sensor. The values entered in Fleet Manager II must match the gas concentration values on the gas cylinder.
- 10. Click Save To Device to save the settings to the detector.

Connecting to the IR Link

Table 12: Connecting to the IR Link

ltem	Description
1	Detector
2	IR and charger interface
3	IR Link

Calibrating with the IR Link

▲ Caution

Only calibrate in a fresh air environment and in a safe area. Do not calibrate the detector during or immediately after charging.

To calibrate the detector with the IR Link, complete the following procedure:

- 1. Complete steps #1-10 under Setting Span Gas Concentration Values.
- 2. Click on the Device Operations tab.
- 3. Click **Calibrate**. The detector begins calibration. Refer to <u>Auto</u> <u>Zero and Oxygen Sensor Calibration</u>.

Calibration Procedure

▲ Caution

Only calibrate in a fresh air environment and in a safe area. Do not calibrate the detector during or immediately after charging.

1. Press and hold ○. The detector performs the **OFF** countdown. Continue holding ○ as the detector briefly deactivates.

2. The detector then reactivates and performs the CAL countdown. Continue holding ⊖ until the CAL countdown is complete.

Note

If \bigcirc is not held for the entire countdown, the detector will deactivate.

User Manual

Auto Zero and Oxygen Sensor Calibration

Note

Do not apply calibration gas until **APPLY GAS** displays, otherwise the auto zero function will fail.

3. <u>AUTO-ZERO</u> flashes while the detector zeroes the combustible and toxic sensors, and calibrates the oxygen sensor.

When auto zero is complete, the detector beeps twice.

Auto Zero Successful: If the sensors successfully zero, the detector proceeds to the <u>Auto Span</u> function.

Auto Zero Unsuccessful: If the sensors fail auto zero, an error message displays showing which sensor failed. Refer to <u>Calibration</u> <u>Troubleshooting</u>.

ERROR H<u>2</u>5

Auto Span

4. When auto zero is complete, APPLY GAS displays.

 Attach the calibration cap to the detector. Refer to <u>Figure 7</u>. Open the valve on the regulator and apply gas at a flow rate of 250-500 ml/min.

■ flashes and AUTO-SPAN displays

When a sufficient amount of gas has been detected (approximately 30 seconds after the gas has been applied), the detector beeps once, Autospan flashes, and remains lit while the detector completes the span (approximately 2 minutes).

Successful Span

If the sensors have spanned successfully, the detector beeps and the calibration procedure continues.

Unsuccessful Span

If any sensors fail the span, the following screen displays. Refer to <u>Calibration Troubleshooting</u>.

Calibration Due Date

Note

If a sensor fails calibration, the next due date for that sensor will not reset. Refer to <u>Calibration Troubleshooting</u>.

6. After calibration is complete, **CAL DUE** displays and all successfully calibrated sensors automatically reset the calibration due dates according to the calibration intervals in Fleet Manager II.

7. The number of days that displays is when the next sensor calibration should be performed.

GasAlertMicroClip User Manual

Failed Sensor Past Calibration Due Date: If a sensor fails the span and it is past the calibration due date, the following three screens display.

1. Press \bigcirc to acknowledge the warning. The detector returns to normal operation.

Note

A negative number indicates that sensor is overdue for a calibration.

Verification

- 1. After calibration is complete and the detector returns to normal operation, verify the calibration using a gas cylinder other than the one used for calibration.
- 2. The gas concentration should not exceed the sensor's detection range. Confirm the LCD shows the expected concentration.
- 3. To ensure the readings are accurate, apply the verification gas for the same amount of time as was applied to the sensor when it was calibrated.

Example: H_2S span time 2 minutes therefore, apply verification gas for 2 minutes.

Datalogs

The detector records various information that can be compiled to create a report. The detector is capable of storing 16 hours of information (when recording a datalog every 15 seconds). When the memory is full, the detector replaces the oldest datalogs with the most recent datalogs

Event Logs

The detector records the 10 most recent gas alarm events. The following information is recorded:

- · Serial number of the detector
- · Start time of alarm
- Type, level and duration of alarm
- Peak exposure level (ppm or %)
- · Status of the sensor

Downloading Datalogs and Event Logs

The datalog and event log files can only be downloaded to a PC using an IR Link or the MicroDock II base station. Refer to the *Fleet Manager II Operator's Manual* or *MicroDock II User Manual*.

Software Requirements

To create spreadsheet reports of event logs, datalogs, and bump and calibration results, the following software applications are required:

- · Fleet Manager II, and
- Microsoft Excel.

User Manual

Maintenance

To maintain the detector in good operating condition, perform the following basic maintenance as required.

- · Calibrate, bump check, and inspect the detector at regular intervals.
- Maintain an operations log of all maintenance, bump checks, calibrations, and alarm events.
- Clean the exterior with a soft damp cloth. Do not use solvents, soaps, or polishes.
- · Do not immerse the detector in liquids.

Battery Cautions

▲ Warning

To avoid personal injury and/or property damage, adhere to the following:

- The detector must be deactivated to charge the battery.
- Charge the battery immediately when the detector emits a low battery alarm. Refer to <u>Charging the Battery</u>.
- Charge the battery in a safe area that is free of hazardous gas in temperatures of 32°F to 113°F (0°C to 45°C).
- Charge the battery using the BW Multi-Unit Cradle Charger or charger adapter only. Do not use any other charging adapters. Failure to adhere to this caution can lead to fire and/or explosion.
- The charging adapter is voltage specific to your region. Use of the charging adapter outside your region will damage the charger and the detector.
- Do not calibrate the detector during or immediately after charging the battery.

- The battery can only be replaced by the manufacturer. Failure to adhere to this caution can lead to fire and/or explosion.
- *Warning:* The GasAlertMicroClip uses a lithium battery that may present a risk of fire or chemical burn hazard if misused. Do not disassemble, heat above 212° (100°C), or incinerate.
- *Warning:* Lithium polymer cells exposed to heat at 266°F (130°C) for 10 minutes can cause fire and/or explosion.

Charging the Battery

To charge the battery, refer to $\underline{Figure 8.}$, $\underline{Table 13.}$, and the following procedures (1-8).

Figure 8. Connecting the Charging Adapter

Table 13. Connecting the Charging Adapter

ltem	Description
1	Detector
2	IR and charger interface
3	Charging adapter
4	Charging cable

▲ Warning

The detector must be charged in a safe area that is free of hazardous gas in temperatures of 32° F to 113° F (0°C to 45° C).

- 1. Deactivate the detector.
- 2. Plug the charging adapter into an AC outlet.

▲ Caution

The charging adapter is voltage specific to your region. Use of the charging adapter outside your region will damage the charger and the detector.

- 3. Attach the charging adapter to the charger interface. Refer to Figure 8.
- 4. Allow the battery to charge per battery specifications. The charging indicator flashes on the LCD while the detector is being charged.

User Manual

 When charging is complete, the charging indicator stops flashing and displays to indicate a full charge. Remove the charging adapter and activate the detector.

If the battery indicator does not display, refer to Troubleshooting.

6. Charge the battery after each workday.

Note

To reach full battery capacity, allow the battery to fully charge and fully discharge three times.

Charging the detector in temperatures above 113°F (45°C) will greatly reduce the number of charges the detector can accept.

The detector may be warm immediately following charging. This is normal.

Replacing a Sensor or Sensor Filter

▲ Warning

To avoid personal injury, only use sensors that are specifically designed for the detector. Refer to <u>Replacement</u> <u>Parts and Accessories</u>.

Use proper ESD handling practices.

- Each sensor has a high degree of resistance to common vapors and gases. To clear a sensor, move the detector to a non-hazardous environment and wait 10 to 30 minutes.
- Do not expose a sensor to vapors of inorganic solvents such as fumes from paint thinners, or organic solvents such as benzoic acids and acrylic acids.
- Ensure hands are clean or wear gloves before handling components.

To replace a sensor or sensor filter, refer to

- <u>Table 14</u>,
- <u>Figure 11</u>,
- Figure 12
- Figure 13, and
- the following procedures.

Figure 9. Replacing a Sensor or Sensor Filter

Table 14. Replacing a Sensor or Sensor Filter

ltem	Description
1	Front shell
2	Combustible (LEL) sensor
3	РСВ
4	PCB screws (2)
5	Rear shell
6	Machine screws (6)
7	Sealing rib
8	Carbon monoxide (CO) sensor
9	Hydrogen sulfide (H_2S) sensor
10	Oxygen (O ₂) sensor
11	Sensor filter

Removing the back shell

- 1. Deactivate the detector. On a clean surface, place the detector face down.
- 2. Remove the six machine screws on the rear shell.
- 3. Remove the back cover by lifting the top and the bottom upwards simultaneously to prevent damaging the charger pins.

Replacing the Sensor Filter

1. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB. Remove the PCB carefully.

▲ Caution

Ensure no damage occurs to the battery.

- 2. Remove the old sensor filter. It may be stuck to the sensors.
- 3. Pull the liner tab, if present, to remove the liner from the sensor filter. Do not fold the sensor filter.
- 4. Verify that the black gasket is facing the front shell and the large diameter circle on the gasket is aligned with the large circle on the front shell.
- 5. Place the gasket as shown, and then use your fingers to apply even pressure to the entire gasket.
- 6. To reassemble the detector, refer to Reassembling the detector.

User Manual

Replacing the H₂S, CO, and LEL sensor

1. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB. Remove the PCB carefully.

 $\underline{\Lambda} \mbox{ Caution} \\ \mbox{Ensure no damage occurs to the battery.} \\$

If the sensor filter is stuck to the sensors, remove and replace the sensor filter into the front shell.

2. Slide the sensors out.

Note

Detectors that are configured for 1, 2, or 3 gases may contain a dummy sensor in one of the four sensor locations.

3. Insert the new sensor(s). For sensor positioning, refer to Figure 11.

Note: The Oxygen sensor is located in the bottom left corner of the detector.

4. To complete the detector, refer to <u>Reassembling the</u> <u>detector</u>.

Figure 11. Sensor Positioning

GasAlertMicroClip Maintenance

Replacing the Oxygen Sensor XT and XL

Note: Detectors that are configured for 1, 2, or 3 gases may contain a dummy sensor in one of the four sensor locations.

- 1. Gently remove the circular rigidified flex PCB atop the sensor from the metal sensor posts. Take care not to tear the flex cable.
- 2. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB.

▲ Caution

Ensure no damage occurs to the battery.

- 3. Lift the PCB straight up. The oxygen sensor will stay in the front shell. Remove the sensor.
- 4. On roughly the same spot on the front shell, place the new sensor. Lower the PCB over the oxygen sensor.
- 5. Carefully replace the circular rigidified flex PCB atop the metal sensor posts. Ensure the plastic sensor post is inserted into the clear plastic hole. Take care not to tear the flex cable.
- 6. Press down to secure the circular rigidified flex PCB atop the metal sensor posts. Take care not to press down too hard and accidentally activate the detector.
- 7. To complete the detector, refer to Reassembling the detector.

Replacing the Oxygen Sensor X3

Note: Detectors that are configured for 1, 2, or 3 gases may contain a dummy sensor in one of the four sensor locations.

- 1. Gently remove the circular rigidified flex PCB atop the sensor from the metal sensor posts. Take care not to tear the flex cable.
- 2. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB.

▲ Caution

Ensure no damage occurs to the battery.

- 3. Lift the PCB straight up. The oxygen sensor will stay in the front shell. Remove the sensor.
- 4. On roughly the same spot on the front shell, place the new sensor. Lower the PCB over the oxygen sensor.
- 5. Carefully replace the circular rigidified flex PCB atop the metal sensor posts. Take care not to tear the flex cable.
- 6. Press down to secure the circular rigidified flex PCB atop the metal sensor posts. Take care not to press down too hard and accidentally activate the detector.
- 7. To complete the detector, refer to Reassembling the detector.

User Manual

Reassembling the detector

- 1. To re-assemble the detector, perform the following:
 - Verify the PCB is seated correctly and inserted exactly as it was removed (sensors facing the front shell).
 - Replace the two PCB screws.
 - Visually inspect the battery to ensure no damage has occurred.
 - When replacing the rear shell, ensure the charging pins (bottom of inside rear shell) are aligned with the corresponding holes on the PCB. If the contact pins are bent, the battery will not charge correctly.

Note

Ensure the rib on the interior rear shell 1 inserts between the battery and the PCB 2.

XL-X3 ModelsIs

Figure 14. Replacing the Rear Shell

- Press the front and rear shells together firmly to ensure a proper seal. Ensure the front and rear shell have a uniform, tight 1/16 in (1 mm) seal on all sides of the detector.
- When replacing the screws, they must be seated properly to prevent cross threading. Turn the screw counter-clockwise until a click is heard and then begin tightening the screw clockwise.
- 2. New sensors must be calibrated. Activate the detector and calibrate the sensor(s). Refer to <u>Calibration</u>.

User Manual

Troubleshooting

If a problem occurs, refer to the solutions in the Troubleshooting section.

If the problem persists, contact <u>BW Technologies by Honeywell</u>

Table	15.	Troubleshooting
-------	-----	-----------------

Problem	Possible Cause	Solution
Startup		
The detector does not activate.	Depleted battery	Charge battery. Refer to Charging the Battery.
	Damaged or defective detector	Contact BW Technologies by Honeywell.
The detector enters alarm immediately	Sensor needs to stabilize	Used sensor: wait 60 seconds
when activated.		New sensor: wait 5 minutes
		(The oxygen sensor in the X3 needs 60 minutes to stabilize)
	Low battery alarm	Charge battery. Refer to Charging the Battery.
	Detector requires calibration	Calibrate the detector. Refer to <u>Calibration</u> .
	Hazardous environment	Leave the area immediately. Deactivate and reactivate in a safe area that is free of hazardous gas, in an atmosphere of 20.9% oxygen.
The activation self-test fails.	General fault	Contact BW Technologies by Honeywell.
	Sensor failure	Replace the sensor. Refer to <u>Replacing a Sensor or</u> <u>Sensor Filter</u> .
Detector automatically deactivates during	Battery power too low to operate	Charge battery. Refer to Charging the Battery.
startup.	Force Calibration When Overdue option is enabled and calibration is not attempted	Calibrate the sensor(s) immediately. Refer to <u>Calibration</u> .
	Force Bump When Overdue option is enabled and a bump test is not attempted	Bump test the sensor(s) immediately. Refer to <u>Bump Test</u> .

Table 15. Troubleshooting

Problem	Possible Cause	Solution
Detector Operation		
Detector does not display expected gas readings after activation self-test.	Sensor not stabilized	Used sensor: wait 60 seconds New sensor: wait 5 minutes (The oxygen sensor in the X3 needs 60 minutes to
		stabilize)
	Sensor(s) requires calibration	Calibrate the sensor(s). Refer to <u>Calibration</u> .
	Target gas is present	Detector is operating properly. Use caution in suspect areas.
Detector does not respond to pushbutton.	Battery is depleted	Charge battery. Refer to <u>Charging the Battery</u> .
	Detector is performing operations that do not require user input	Pushbutton operation restores automatically when the operation ends.
Detector does not accurately measure	Sensor(s) requires calibration	Calibrate the sensors. Refer to <u>Calibration</u> .
gas.	Detector is colder/hotter than ambient gas	Allow the detector to attain ambient temperature before use.
	Sensor filter is blocked	Replace the sensor filter. Refer to <u>Replacing a</u> <u>Sensor or Sensor Filter</u> .
Detector does not enter into alarm.	Alarm setpoint(s) defined incorrectly	Reset alarm setpoints. Refer to <u>Factory Gas Alarm</u> <u>Setpoints</u> and <u>Sensor Configuration</u> .
	Alarm setpoint(s) set to zero	Reset alarm setpoints. Refer to <u>Factory Gas Alarm</u> <u>Setpoints</u> and <u>Sensor Configuration</u> .
	Detector is in calibration mode	Complete the calibration procedure.

Table 15. Troubleshooting

Problem Possible Cause		Solution
Detector intermittently enters alarm without reason.	Ambient gas levels are near alarm setpoint or the sensor is exposed to a puff of the target gas	Detector is operating normally. Use caution in suspect areas. Check the peak (maximum) gas exposure reading.
	Alarm setpoints defined incorrectly	Reset alarm setpoints. Refer to <u>Factory Gas Alarm</u> <u>Setpoints</u> and <u>Sensor Configuration</u> .
	Detector requires calibration	Calibrate the sensors. Refer to <u>Calibration</u> .
	Missing or faulty sensor(s)	Replace the sensor. Refer to <u>Replacing a Sensor or</u> <u>Sensor Filter</u> .
Features and options are not operating as expected.	Changes have been made in Fleet Manager II	Verify settings in Fleet Manager II are correct.
Charging		
Battery has been charging for 3+ hours (XT model) or 6+ hours (XL-X3 models). The charging indicator on the detector LCD shows the battery is still charging.	Battery is trickle charging	Battery is fully charged and ready for operation.
Battery indicator does not display when charging.	Detector is depleted below normal levels	Charge the battery for 8 hours. Detector LEDs may light during first 5 hours. This is normal. If the battery indicator does not light after charging for 8 hours, contact <u>BW Technologies by Honeywell</u> .
When detector is activated after charging, the battery indicator does not display.	Battery is defective	Contact <u>BW Technologies by Honeywell</u> .

Startup Troubleshooting

Error Screen	Problem	Solution	Error Screen	Problem	Solution
ERROR H <u>2</u> 5	Sensor Error The sensor failed during the self-test.	Calibrate the sensor(s). Refer to <u>Calibration</u> . Reactivate the detector. If error displays again, replace the sensor. Refer to <u>Replacing a Sensor or</u> <u>Sensor Filter</u> .	IR-LOCK	IR Lock Enabled If the IR Lock screen displays, an IR device is required to calibrate the sensors.	Perform calibration using the IR Link with Fleet Manager II software, or insert the detector into the MicroDock II station. Refer to <u>Cal Lock</u> (<u>Calibration IR Lock</u>) in User Options and <u>Calibration</u> .
CAL ILLE Eodard	Calibration Overdue Displays when calibration is overdue. If the Force Calibration When Overdue option is enabled, the sensor(s) must be calibrated to enter normal operation.	Press () to continue and calibrate the sensor(s) immediately. Refer to <u>Calibration</u> . If the IR Lock enabled screen displays, the MicroDock II station or the IR Link with Fleet Manager II must be used to calibrate.	ЭЦМРСНК ЕодПУ	Bump Test Fail A bump test has just been performed. The detector is prompting for another bump test because a sensor(s) has failed.	Perform another <u>Bump Test</u> . Ensure the cylinder is not empty and that the cylinder is not past the expiry date. Ensure the regulator is fully opened to apply gas. If Bump Check Today displays again, calibrate the sensors. Refer to <u>Calibration</u> . If the calibration is unsuccessful, refer to <u>Replacing a Sensor or Sensor</u> <u>Filter</u> .
FORCE D C <u>P</u> L	Forced Calibration If Force Calibration When Overdue is enabled, the sensors must be calibrated to enter normal operation.	Press and hold () to calibrate the sensors, or press () and release to deactivate the detector. Refer to <u>Calibration</u> . If the IR Lock enabled screen displays, an IR device must be used to calibrate.		Sensor Fail A sensor has failed during the startup self-test.	Perform a <u>Bump Test</u> and reactivate the detector. If the sensor fails again, perform <u>Calibration</u> . Reactivate the detector again. If the sensor still does not pass, refer to <u>Replacing a Sensor or Sensor</u> <u>Filter</u> .

Calibration Troubleshooting

Error Screen	Problem	Solution	Error Screen	Problem	Solution
ERROR H <u>2</u> 5	Auto-zero Unsuccessful H_2S , CO, or LEL sensor fails to auto- zero, or O_2 sensor fails to calibrate.	Attempt calibration again. Refer to <u>Calibration</u> . If ERROR displays again, replace the sensor. Refer to <u>Replacing a Sensor or</u> <u>Sensor Filter</u> .	FRILLIRE -	No Gas Detected If the gas is not detected about 30 seconds after the APPLY GAS message is displayed, the detector fails the calibration.	Ensure the sensor is enabled. Verify gas cylinder is not empty or past the expiration date. Check/replace the regulator. Attempt calibration again. If the calibration fails again, refer to <u>Replacing a Sensor or</u> <u>Sensor Filter</u> .
ERROR H <u>2</u> 5	Auto Span Unsuccessful H_2S , CO, or LEL, or O_2 sensor fails to auto-span.	Ensure sensor is enabled. Verify gas cylinder is not empty or past the expiration date. Check/replace the regulator. Attempt calibration again. If the sensor fails the span again, refer to <u>Replacing a Sensor</u> <u>or Sensor Filter</u> .		Calibration Due Date Overdue A sensor displays a negative number for a next due date after calibration is performed.	Calibration for the sensor was unsuccessful. The due date will not reset. Attempt calibration of the sensor again. If still unsuccessful, refer to <u>Replacing a Sensor or</u> <u>Sensor Filter</u> . Calibrate the new sensor immediately.
IR-LOCK -	IR Lock Enabled IR-Lock displays when calibration is attempted.	Perform calibration using the IR Link with Fleet Manager II software, or insert the detector into the MicroDock II station. Refer to <u>Cal Lock (Calibration IR</u> <u>Lock)</u> in User Options and <u>Calibration</u> .			

Replacement Parts and Accessories

▲ Warning

To avoid personal injury and/or damage to the detector, use only the specified replacement parts.

To order parts or accessories listed in the following table, contact <u>BW</u> <u>Technologies by Honeywell</u>.

Table 16. Replacement Parts and Accessories

Model No.	Description
Sensors	
SR-W-MP75C	MICROpeL combustible (LEL) sensor
SR-H-MC	MICROceL hydrogen sulfide (H ₂ S) sensor
SR-M-MC	MICROceL carbon monoxide (CO) sensor
SR-DUMM1	Replacement dummy O ₂ sensor
SR-TOX-MC-DUMM	Replacement dummy CO or H ₂ S sensor
SR-W-MC-DUMM	Replacement dummy LEL sensor
SR-X3P	Replacement O_2 Sensor (Compatible with X3 only)
SR-X2V	Replacement O ₂ sensor (Compatible with XT and XL only)
Sensor filters	

Model No.	Description	
MC2-SS	Replacement quad sensor screens (Kit of 2).	
MC2-SS-K1	Replacement quad sensor screens (Kit of 10)	
MC-AF-1	Auxiliary adapter (filters not included)	
MC-SS-AF-K1	Auxiliary kit (adapter with 10 filters)	
Regulator		
Reg-0.5	Regulator (0.5 l/min)	
Gas Cylinders		
CG-Q58-4	Quad gas cylinder: CH ₄ (2.5%), O ₂ (18.0%), H ₂ S (25 ppm), CO (100 ppm), bal. N ₂ (58 l)	
CG-Q34-4	Quad gas cylinder: CH ₄ (2.5%), O ₂ (18.0%), H ₂ S (25 ppm), CO (100 ppm), bal. N ₂ (34 l)	
CG-T34	Dual gas cylinder: 50% LEL (CH ₄ 2.5%) O ₂ (20.9%), bal. N ₂ (34 I)	
СК-Q58-4	Quad calibration kit with regulator, quad gas cylinder (CG-Q58-4), hose, and carrying case	
G0042-H25	Single gas cylinder: H_2S (25 ppm), bal. N_2 (58 l)	
Model No.	Description	
-------------------------	---	--
CG2-M-200-103	Single gas cylinder: CO (100 ppm), bal N ₂ (103 l)	
CG-BUMP1	Bump alarm gas aerosol: CH ₄ (2.5%), O ₂ (10%), H ₂ S (40 ppm), CO (200 ppm)	
Charger and Accessories		
MC2-CO1-MC5*	Multi-unit (5) cradle charger	
GA-PA-1-MC5*	Multi-unit wall outlet power adapter	
GA-PA-3	12-24 VDC direct-wire power adapter	
GA-PA-1*	Replacement wall outlet power adapter	
GA-VPA-1	12-24 VDC Vehicle power adaptor	
Confined space kit		
MC-CK-DL	Deluxe confined space kit for the GasAlertMicroClip products.	
MC-CK-CC	Carry case and foam insert for the GasAlertMicroClip products	
MicroDock II and Module		
DOCK2-2-1C1P-00-G*	MicroDock II Automatic Test and Calibration System, GasAlertMicroClip XT/XL module, and charging cable	
DOCK2-2-1P-00-G*	MicroDock II Automatic Test and Calibration System and GasAlertMicroClip XT/XL module	

Model No.	Description	
DOCK2-0-1P-00-G	GasAlertMicroClip XT/XL docking	
	module	
Datalogging Accessories		
GA-USB1-IR	IR Connectivity Kit	
	(with Fleet Manager II)	
Sampling/Testing Equipment		
MC-TC-1	Replacement test cap	
MC-AS01	Manual aspirator pump kit with probe	
	(1 ft. / 0.3 m)	
MC-TC-1	Calibration cap	
Carrying Accessories		
GA-NS-1	Neck strap with safety release	
GA-LY-1	Short strap 6 in. (15.2 cm)	
GA-ES-1	Extension strap 4 ft. (1.2 m)	
GA-CH-2	Chest harness	
MC2-LC-1	Black leather PVC carrying holster for	
	ХТ	
Miscellaneous		
MCX3-FC1	Replacement front enclosure - Yellow	
	(Compatible with X3 only)	

Model No.	Description
MCX3-FC1B	Replacement front enclosure - Black (Compatible with X3 only)
MCX3-BC1	Replacement back enclosure - Yellow (Compatible with X3 only)
MCX3-BC1B	Replacement back enclosure - Black (Compatible with X3 only)
MCX3-FPCB1	Replacement flex PCB (Compatible with X3 only)
MCX3-MPCB1	Replacement main PCB and battery (Compatible with X3 only)
MCXL-FC1	Replacement front enclosure – Yellow
MC2-FC1	(compatible with XL only))
MCXL-FC1B	Replacement front enclosure – Black
MC2-FCIB	(compatible with XL only)
MCXL-BC1	Replacement back enclosure – Yellow
MC2BC1	(compatible with XL only)
MCXL-BC1B	Replacement back enclosure – Black
MC2-BCIB	(compatible with XL only)
MC2-FPCB1	Replacement flex PCB (for XT)

Model No.	Description	
MCXL-MPCB1	Replacement main PCB and battery	
MC2-MCPCB1	(compatible with XL only)	
MC-LCD-K1	Replacement LCD (for XT)	
MC-SCREW-K1	Replacement screw kit (for XT)	

*Add one of the following applicable suffixes to the end of the order number to ensure power adapter is correct for region.

-UK for United Kingdom

-EU for Europe,

-AU for Australia/China,

-NA for North America,

-CN for China,

-BR for Brazil,

Specifications

Instrument dimensions:

XT: 11.25 x 6.00 x 2.89 cm (4.4 x 2.4 x 1.1 in.) **XL-X3:** 11.25 x 6.00 x 3.22 cm (4.4 x 2.4 x 1.2 in.)

Weight:

XT: 170 g (6.0 oz.)

XL: 190 g (6.7 oz.)

X3: 179 g (6.3 oz.)

Operating temperature: -4°F to +122°F (-20°C to +50°C) () **Storage temperature:** -40°F to +122°F (-40°C to +50°C)

Operating humidity: 0% to 95% relative humidity (non-condensing)

Alarm setpoints: May vary by region and are user defined. All setpoints automatically display during the startup self-test

Detection range:

 $H_2S: 0 - 100 \text{ ppm} (1 / 0.1 \text{ ppm increments})$

CO: 0 – 500 ppm (1 ppm increments)

O2: 0 - 30.0% vol. (0.1% vol. increments)

Combustible (LEL): 0% to 100% LEL (1% LEL increments) or 0.0% to 5.0% v/v methane

Alarm conditions: TWA alarm, STEL alarm, low alarm, high alarm, multi-gas alarm, over limit (OL) alarm, low battery alarm, confidence beep, automatic deactivation alarm

Audible alarm: 95 dB at 30 cm (1 ft.) (100 dB typical) variable pulsed beeper

Visual alarm: Red light-emitting diodes (LED)

Display: Alphanumeric liquid crystal display (LCD)

Backlight: Activates when the pushbutton is pressed and deactivates after 5 seconds; also activates during an alarm condition

Self-test: Initiated upon activation

Calibration: Automatic zero and automatic span

Oxygen sensor: Automatic span upon activation (enable/disable)

User field options: Startup message, Confidence Beep, latching alarms, enable/disable safe display mode, oxygen measurement, combustible sensor measurement, sensor disable, define calibration interval, force calibration, calibration lock, force bump, define bump interval, bump due lock, stealth mode, low alarm acknowledge, language selection, enable/disable automatic oxygen calibration, enable/disable auto zero at startup, define alarm setpoints, span concentration values, define STEL calculation period, IntelliFlash, and Confidence Beep and IntelliFlash Interval

Table 17: Battery Operating Time

	XL-X3	ХТ
Typical Battery Life*	18 hours	10 hours
	Recharges in less than 6 hours	Recharges in less than 4 hours
Cold Weather		-
Battery Life**	12 hours at -4°F / - 20°C	

*Approximately 20% capacity loss is normal with lithium polymer batteries after 500 charge cycles. Refer to the Operator's Manual for additional information.

**Battery is guaranteed to have 12 hour runtime during warranty period under normal operating temperature of -4°F / -20°C to 122°F/50°C.

GasAlertMicroClip

User Manual

Manufacture: RAE Systems (Shanghai) Inc.

Address: 990 East Huiwang Road, Jiading District, Shanghai, China 201815

Tel: =86-21-69522616

Year of manufacture: The detector's year of manufacture is determined from the serial number. The second and third number after the letters determines the year of manufacture

E.g.: KA410-000001 = 2010 year of manufacture

Approved battery:

Approved batteries for GasAlertMicroClip XT: Narada NL 503759

Approved batteries for GasAlertMicroClip XL: Narada NLP883759LT20

Approved batteries for GasAlertMicroClip X3: Narada NLP883759LT20

Rechargeable batteryTemperature codeLithium polymer $-20^{\circ}C \le Ta \le +50^{\circ}C$ T4

Battery charger: GasAlertMicroClip charging adapter

▲ Warning

Charge only in a safe area that is free of hazardous gas and within temperatures of 32°F to 113°F (0°C to 45°C) First-time charge:

XT: 2-3 hours

XL-X3: 5-6 hours

Normal charge:

XT: 2-3 hours

XL-X3: 5-6 hours

Warranty XT-XL: 2 years including sensors

Warranty X3: 3 years including sensors

Guarantee: Battery is guaranteed to have a 12 hour runtime during warranty period under the normal operating temperature of -4°F/-20°C to 122°F/50°C

Approvals:

Approved by CSA to both U.S. and Canadian Standards CAN/CSA C22.2 No. 157 and C22.2 152 ANSI/UI – 913 and ANSI/ISA – 12,13,01 Part 1 CSA Class I, Division 1, Group A, B, C, and D ATEX CE 0539 📾 II 1 G Ex da ia IIC T4 Ga Sira 13ATEX2330 EN 60079-0. ICES-003 Canadian EMI requirements. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of more of the following measures:

- Reorient or relocate the receiving antenna.
- · Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

General Datalogger Specifications

Storage: 16 hours at 15-second intervals

Memory type: Wraparound memory ensures most recent data is always saved

Datalog Interval: The default interval is one reading every 15 seconds. The user has the option to change the intervals to rates from 1 to 120 seconds.

Data recorded: All sensor readings, all alarm conditions, calibrations, event flags, battery status, sensor status, confidence beep activation, and detector status with the time and date for each reading and unit serial number

Operation: Requires no user intervention (automatic)

Compatible with: Desktop PC computer or laptop

Operating system: Windows 2000 or higher

Download via: IR device (IR Link adapter or MicroDock II base station)

Software required:

- · Fleet Manager II application,
- Microsoft Excel (optional) to create custom reports.

Wear yellow. Work safe.

1.0 PANDEMIC PREPAREDNESS PLAN

1.1 INTRODUCTION

This Pandemic Preparedness Plan was created to provide guidance and address concerns regarding a possible pandemic. This plan provides information on decision-making and details appropriate actions to be taken by Trihydro in the event of a pandemic. This document will be reviewed and/or tested annually and may be updated and amended at any time in the future.

1.2 BACKGROUND

A pandemic is a disease occurring over large areas and affecting large numbers of individuals. A pandemic is determined when:

- A novel (new) virus sub-type arises whereas humans have little or no immunity to the virus.
- The virus spreads easily from person to person, (e.g., through sneezing or coughing).
- A wide-spreading disease that spans a broad geographical area and affects large numbers of people.

Examples of diseases that could result in a pandemic include but are not limited to Influenza and Coronavirus (i.e., MERS, SARS, and COVID-19).

Pandemic viruses are likely to cause similar symptoms as seasonal flu, but the symptoms may be more severe. As with any novel disease, symptoms of a pandemic are ambiguous and will continue to be ambiguous until the disease has existed within the population for a given time period.

According to the Centers for Disease Control and Prevention (CDC), "on February 11, 2020, the World Health Organization (WHO) <u>announced</u> an official name for the disease that is causing the 2019 novel coronavirus outbreak, first identified in Wuhan China. The new name of this disease is coronavirus disease 2019, abbreviated as COVID-19. In COVID-19, 'CO' stands for 'corona,' 'VI' for 'virus,' and 'D' for disease. Formerly, this disease was referred to as "2019 novel coronavirus" or "2019-nCoV" (CDC 2020). COVID-19 is a new disease, caused by a novel (or new) coronavirus that has not previously been seen in humans.

🔊 Trihydro

1.3 PANDEMIC PHASES

WHO has defined phases of a pandemic to help assist with planning and response activities; Figure 1-1 illustrates these phases:

- <u>Phase 1</u>—No animal-to-human transmission reported
- <u>Phase 2</u> Some animal-to-human transmission
- <u>Phase 3</u> Limited human-to-human transmission
- <u>Phase 4</u> Increased human-to-human transmission
- <u>Phase 5</u> Significant human-to-human transmission
- <u>Phase 6</u> –Sustained human-to-human transmission

As determined by the H1N1 Pandemic of 2009, this chart does not account for *virulence* of the novel strain. Therefore, these phases simply indicate the type of transmission; no information is implied relative to severity through use of these phases.

1.4 PLANNING FOR A PANDEMIC

The Health and Safety Manager, Todd Forry and Human Resources Director, Karissia Kersey, are Trihydro's designated pandemic coordinators.

The Pandemic Response Team (PRT) includes:

- Jack Bedessem President
- Bradley Mallberg, Esq. Vice President of Risk Management
- Brian Pelan Director of Operational Service and Excellence Programs
- Jana Brinkman Health and Safety Coordinator
- Tony Kupilik Health and Safety Coordinator

The primary functions of the pandemic response team include:

- Maintaining the team's awareness of global developments.
- Developing awareness and preparedness materials for Trihydro personnel.
- Maintaining links with external stakeholders for pandemic planning.
- Planning for effects of the flu pandemic on the company.

Each Trihydro office has an Office Health & Safety Coordinator (OHSC), which is designated as a pandemic response team member. The OHSC primary contact information is provided in each office Emergency Action Plan (EAP).

1.5 PANDEMIC RESPONSE

1.5.1 INFECTION CONTROL

Trihydro will seek to reduce the overall and specific risks to staff members by taking reasonable appropriate infectioncontrol actions.

Upon notification that a pandemic is occurring, the PRT and its coordinators will attempt to complete the following:

- Post prominent notices at facility entry points advising staff and visitors not to enter for at least 24 hours after their fever has broken.
- Educate employees through e-mail or hardcopy on recommended measures to stop the virus from spreading.

7 Trihydro

• Check supplies and re-stock if necessary.

At the discretion of the company, it may purchase and maintain a stock of health protection supplies to be distributed to and used by Trihydro employees in the event of an influenza pandemic. The company is under no obligation to provide such supplies during an influenza pandemic.

The items that may be purchased for pandemic preparedness include, but are not limited to:

- Liquid-hand sanitizers
- Tissues
- Nitrile gloves
- Other appropriate protective gear

Basic health protection advice will be issued to staff, including but not limited to, the information in Sections 1.5.4 and 1.5.5 of this document.

1.5.2 WORK PRACTICES

Employees are encouraged to stay home from work when feeling ill, or while members of their household have flu-like symptoms. Trihydro reserves the right to send anyone home who appears ill or contagious. If an employee becomes ill, or observes another person exhibiting flu-like symptoms at work, notify Human Resources or their supervisor as soon as possible. Employee(s) are encouraged to seek medical care and report diagnosed influenza or COVID-19. The employee will be required to provide a fit-for-duty at the discretion of the company. Individuals who have symptoms of acute respiratory illness should not return to the workplace until they are fever free for 24-hours without the use of fever-reducing or other symptom-altering medications and/or the approval of a qualified health care provider. Some project sites may have alternative procedures for coverage if/when applicable.

Pursuant to the <u>Trihydro Sick Leave Policy</u> employees should notify their direct supervisor and stay home if they are sick. In the event of a <u>severe</u> pandemic (20% absenteeism), employees may be allowed to work from home using the Internet, e-mail, telephone, and fax. Consult with your business unit leader for prior approval to work from home.

1.5.3 TRAINING

Training is covered in the Trihydro Hazard Communication Program. Additional steps will be taken as new information is available from the CDC and local and state agencies.

Lessons learned will be shared along with additional guidance from Trihydro, clients, local, and federal agencies on Trihydro's internal teams page for review by Trihydro employees and subcontractors.

1.5.4 SOCIAL DISTANCING

During a pandemic, employees are encouraged to practice social distancing, which includes but is not limited to:

- Avoiding hand shaking
- Avoiding face-to-face meetings
- Maintaining a safe distance of at least 6 feet during face-to-face meetings
- Avoiding crowded places or heavily populated gatherings
- Avoiding congregating
- Avoiding unnecessary trips outside of the office
- Bringing lunch and washing your own silverware or containers
- Avoiding sharing telephones

1.5.5 PREVENTION MEASURES

Employees are encouraged to practice respiratory etiquette and hand hygiene, including (CDC 2020):

- Clean your hands often with an alcohol-based hand sanitizer that contains at least 60-95% alcohol
- Regularly wash hands with soap and water for at least 20 seconds
- Avoid touching your eyes, nose, and mouth with unwashed hands
- <u>Cover your mouth and nose</u> with a tissue when you cough or sneeze
- Put your used tissue in a waste basket
- If you don't have a tissue, cough or sneeze into your upper sleeve, not your hands
- Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe
- Maintain healthy habits that support your immune system (e.g., get enough rest and sleep, eat a healthy diet, exercise)
- Recommended that you get appropriate immunizations, if not already done so

⊽ Trihydro

1.6 COMPENSATION

In the event an employee is unable to work, time shall be recorded in accordance with the company's paid sick leave policy on a case by case basis.

1.7 TRAVEL

Travel restrictions may be enforced by the federal government and Trihydro. Whereby, only essential business travel would be permitted during a pandemic, and procedures for approving travel would require authorization from senior management. Additionally, employees who visit pandemic-affected areas on business will be provided with the appropriate health precautions and personal protective equipment (PPE). Employees visiting affected areas for non-business purposes during a pandemic are to notify HR and may be required to work from home for a specified period of quarantine and may not return to work without a "fit-for-duty" release.

Specific to the 2020 COVID-19 outbreak, employees, contractors, or subcontractors who have travelled to the following locations or who have experienced the following (subject to change per CDC notices) in the past 14 days, regardless of symptoms, should not enter the workplace until further notice (CDC 2020):

- Travel to or through Mainland China, South Korea, Italy, Japan, Iran, Singapore, Hong Kong, Taiwan or any other country for which the CDC has issued a Travel Notice (See <u>CDC COVID-19 Travel Notices</u>)
- Close contact with persons who have traveled to or through Mainland China, South Korea, Italy, Japan, Iran or any other country for which the CDC has issued a Travel Notice (See <u>CDC COVID-19 Travel Notices</u>)
- Close contact with persons who may have been exposed to the virus or have been diagnosed with COVID-19

Employees meeting any of these criteria should avoid entering the workplace and contact their direct supervisor and Human Resources to coordinate alternative work arrangements (e.g., home or other isolated location) if possible. Instructions will be provided regarding return to work procedures based on each circumstance and in accordance with local public health direction. Guidance should be given to contractors or subcontractors that any of their employees experiencing any of the above should remain off-site and seek direction from their direct supervisor and client representative.

If you believe the situation merits trained medical personnel, please contact WorkCare[™] at (888) 449-7787 or 911 immediately and inform the WorkCare[™] attending physician or 911 operator of the individual's symptoms, location, and any other pertinent information.

- Consider avoiding or deferring unnecessary and nonessential travel for business and work; particularly when
 - Travelling via commercial airlines and mass transit systems (e.g. subway, train, bus, etc.)
 - Travelling to a heavily populated area and/or meeting or conference where lot of people will be congregating and interacting
- If you are unsure about travelling or whether your travel is necessary/essential, you should contact your direct supervisor and/or use your stop work authority
- Check with clients and/or conference leaders for special site restrictions and changes to scheduled events
- Stay abreast of current travel guidance from reputable health organizations (e.g., CDC, State Health Departments)
- Employees who need to travel are encouraged to check themselves for symptoms of <u>acute respiratory illness</u> before starting and upon returning from travel
- If you become sick while traveling for work, you should notify your supervisor and promptly contact WorkCare[™] or a qualified health care provider for advice
- Personal travel:
 - CDC guidelines restricting travel to certain areas should always be followed. There is increased risk that any travel, particularly to international locations, could be disrupted without prior notice. We encourage employees and their families to consider the potential that personal travel plans could be disrupted while in transit, that exit or entrance to airports, cruise ships, or across borders could be denied, or that you or family members could be placed into quarantine while on travel or upon return. Travel of any kind during pandemics should be limited to essential situations only.

1.8 PANDEMIC RECOVERY

Trihydro will take reasonable steps to keep appropriate lines of communication open with staff during the recovery stage. Regular updates on recovery interventions and preparedness for subsequent pandemic waves will be communicated via email and Teams website as they become available to the company.
