| 926 |                                                                                                                                         |   |   |        |   |   |                                                     |   |   |       |   |   |
| 927 | Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.            |   |   |        |   |   |                                                     |   |   |       |   |   |
| 928 | Recommendations are based upon data size, data distribution, and skewness.                                                              |   |   |        |   |   |                                                     |   |   |       |   |   |
| 929 | These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).                |   |   |        |   |   |                                                     |   |   |       |   |   |
| 930 | however, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statisticia |   |   |        |   |   |                                                     |   |   |       |   |   |
| 931 |                                                                                                                                         |   |   |        |   |   |                                                     |   |   |       |   |   |
| 932 | <b>ProUCL computes and outputs H-statistic based UCLs for historical reasons only.</b>                                                  |   |   |        |   |   |                                                     |   |   |       |   |   |
| 933 | <b>H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.</b>           |   |   |        |   |   |                                                     |   |   |       |   |   |
| 934 | <b>It is therefore recommended to avoid the use of H-statistic based 95% UCLs.</b>                                                      |   |   |        |   |   |                                                     |   |   |       |   |   |
| 935 | <b>Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.</b>       |   |   |        |   |   |                                                     |   |   |       |   |   |
| 936 |                                                                                                                                         |   |   |        |   |   |                                                     |   |   |       |   |   |
| 937 |                                                                                                                                         |   |   |        |   |   |                                                     |   |   |       |   |   |

| 4077 | or 95% H-UCL                                                                                                                             |   |   | 50770     |                                                     |   |   |   |   |       |   |
| 4078 |                                                                                                                                          |   |   |           |                                                     |   |   |   |   |       |   |
| 4079 | Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.             |   |   |           |                                                     |   |   |   |   |       |   |
| 4080 | Recommendations are based upon data size, data distribution, and skewness.                                                               |   |   |           |                                                     |   |   |   |   |       |   |
| 4081 | These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).                 |   |   |           |                                                     |   |   |   |   |       |   |
| 4082 | however, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician |   |   |           |                                                     |   |   |   |   |       |   |
| 4083 |                                                                                                                                          |   |   |           |                                                     |   |   |   |   |       |   |
| 4084 | <b>ProUCL computes and outputs H-statistic based UCLs for historical reasons only.</b>                                                   |   |   |           |                                                     |   |   |   |   |       |   |
| 4085 | <b>H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.</b>            |   |   |           |                                                     |   |   |   |   |       |   |
| 4086 | <b>It is therefore recommended to avoid the use of H-statistic based 95% UCLs.</b>                                                       |   |   |           |                                                     |   |   |   |   |       |   |
| 4087 | <b>Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.</b>        |   |   |           |                                                     |   |   |   |   |       |   |

|      | A                                                                                | B | C | D      | E | F | G                                                   | H | I | J      | K | L |

| 4322 | Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.                      |   |   |       |                                                |   |   |        |   |   |   |  |
| 4323 | Recommendations are based upon data size, data distribution, and skewness.                                                                        |   |   |       |                                                |   |   |        |   |   |   |  |
| 4324 | These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).                          |   |   |       |                                                |   |   |        |   |   |   |  |
| 4325 | However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.         |   |   |       |                                                |   |   |        |   |   |   |  |
| 4326 |                                                                                                                                                   |   |   |       |                                                |   |   |        |   |   |   |  |
| 4327 | <b>ProUCL computes and outputs H-statistic based UCLs for historical reasons only.</b>                                                            |   |   |       |                                                |   |   |        |   |   |   |  |
| 4328 | <b>H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.</b>                     |   |   |       |                                                |   |   |        |   |   |   |  |
| 4329 | <b>It is therefore recommended to avoid the use of H-statistic based 95% UCLs.</b>                                                                |   |   |       |                                                |   |   |        |   |   |   |  |
| 4330 | <b>Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.</b>                 |   |   |       |                                                |   |   |        |   |   |   |  |
| 4331 |                                                                                                                                                   |   |   |       |                                                |   |   |        |   |   |   |  |

| 471 |                                                                                                                                          |   |   |        |                                                     |   |   |       |   |   |   |  |
| 472 | Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.             |   |   |        |                                                     |   |   |       |   |   |   |  |
| 473 | Recommendations are based upon data size, data distribution, and skewness.                                                               |   |   |        |                                                     |   |   |       |   |   |   |  |
| 474 | These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).                 |   |   |        |                                                     |   |   |       |   |   |   |  |
| 475 | however, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician |   |   |        |                                                     |   |   |       |   |   |   |  |
| 476 |                                                                                                                                          |   |   |        |                                                     |   |   |       |   |   |   |  |
| 477 | <b>ProUCL computes and outputs H-statistic based UCLs for historical reasons only.</b>                                                   |   |   |        |                                                     |   |   |       |   |   |   |  |
| 478 | <b>H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.</b>            |   |   |        |                                                     |   |   |       |   |   |   |  |
| 479 | <b>It is therefore recommended to avoid the use of H-statistic based 95% UCLs.</b>                                                       |   |   |        |                                                     |   |   |       |   |   |   |  |
| 480 | <b>Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.</b>        |   |   |        |                                                     |   |   |       |   |   |   |  |
| 481 |                                                                                                                                          |   |   |        |                                                     |   |   |       |   |   |   |  |
| 482 |                                                                                                                                          |   |   |        |                                                     |   |   |       |   |   |   |  |
