

Cleanup at Success Mine Begins in June 2016

Cleanup work at the old Success Mine is set to begin. The complex is located up in the East Fork Ninemile area. The CDA Work Trust expects the cleanup to take 4 years. Regular local roads will remain open. The access roads highlighted on the map, between the Success Complex and the Waste Consolidation Area, are expected to be closed to the public **Monday through Friday from 5 a.m. to 6 p.m.**

Those roads will be open for public access after 6 p.m. Monday through Friday and all day on Saturday and Sunday. Trucks will haul contaminated waste from Success to the Waste Consolidation Area up canyon. The project will help control sources of heavy metals like lead, protecting the local ecology and people downstream.

Blasting at the WCA quarry will occur once in mid-June and once in early to mid-July. People in the area may hear the explosion. Since several blasts are loaded and set off at the same time, the boom could last for up to 30 seconds.

Cleaning up the old Success Mine will protect the local ecology and people downstream.

Old mine tailings harbor heavy metals.
