## TECHNICAL MEMORANDUM

**To:** Don Carpenter, IDEQ, Boise

**From:** Robin Nimmer, TerraGraphics, Moscow

**Date:** October 7, 2016

**Project Code:** IDEQ C985 16028-09-02

**Subject:** Summary of the April 2016 Semi-Annual Water Monitoring Event at the East Mission Flats Repository

---

The purpose of this memorandum is to summarize the East Mission Flats Repository (EMFR) April 2016 Semi-Annual Water Monitoring event and present the data. An evaluation and discussion of the results will be completed in the 2016 annual water monitoring report for EMFR.

### 1 Sampling Summary

Figure 1 shows the locations of the seven groundwater monitoring wells, one decontamination well, two piezometers, and two floodwater levellogger sites in the vicinity of EMFR.

A detailed description of the field sampling, handling, documentation, and analytical procedures is provided in the *Sampling and Analysis Plan (SAP)/Quality Assurance Project Plan (QAPP) for Water Monitoring at the East Mission Flats Repository, Revision No. 2* (TerraGraphics 2014), hereinafter referred to as the EMFR SAP/QAPP; and *Sample Plan Alteration Form (SPAFT) #1 of the EMFR SAP/QAPP* (TerraGraphics 2015a), hereinafter referred to as SPAF #1.

Samples were collected from all seven of the groundwater monitoring wells on April 5, 2016.

All field and analytical procedures were conducted according to the EMFR SAP/QAPP and subsequent SPAF (TerraGraphics 2014, 2015a), with the exception that no resampling was conducted based on the prediction limits because the U.S. Environmental Protection Agency (USEPA) is completing an optimization review of past data that may result in changes to the prediction limits or sampling approach currently in use.

Attachment A contains the field sheets for each sampled well.

## 2 Water Levels and Hydrographs

Figure 2 shows hydrographs of the water levels recorded by levelloggers at seven monitoring wells and two floodwater monitoring locations in the immediate vicinity of the repository and data from the U.S. Geological Survey (USGS) Gage Station 12413500 on the Coeur d'Alene River near Cataldo, Idaho (USGS 2015) through April 2016.

Since the last monitoring event in October 2015, no water was detected at the floodwater levellogger sites or in piezometers 10-EMF-PZ-A and 10-EMF-PZ-B. The field sampling crew downloaded levelloggers at LL-1, LL-2, and piezometers 10-EMF-PZ-A and 10-EMF-PZ-B during the April semi-annual event.

## 3 Groundwater Monitoring Results

The hydraulic gradient observed during the April 2016 Sampling Event is generally to the west (Figure 3). The historical gradient is to the southwest, although the gradient does shift depending on the river level. Data from 09-EMF-MW-C Deep and 08-EMF-MW-E are not used to develop groundwater elevation contours because 09-EMF-MW-C Deep is screened deeper than the other monitoring wells, and 08-EMF-MW-E appears to be in a different hydrologic unit from the other wells based on water levels and water quality data.

Table 1 and Figure 4 display the cumulative field parameter data for the groundwater sites. The specific conductance values measured at 07-EMF-MW-B, 07-EMF-MW-C, and 08-EMF-MW-F; dissolved oxygen (DO) values measured at 09-EMF-MW-C Deep and 07-EMF-MW-D; and oxidation reduction potential (ORP) values measured at 09-EMF-MW-C Deep in April 2016 were the highest yet recorded at these sites. The meter was calibrated at the start of the day and checked at the end of the day, and the data were considered acceptable.

Table 2 and Figure 5 display the cumulative groundwater sample results for dissolved metals.

Dissolved metal concentrations for this project are compared to the groundwater total metal regulatory thresholds because no specific dissolved metal regulatory thresholds exist, and it is assumed that dissolved concentrations are indicators of contamination in groundwater under all conditions (CH2M Hill 2006). There were no dissolved metal regulatory threshold exceedences in groundwater for the April 2016 sampling event.

Dissolved cadmium and zinc at 08-EMF-MW-F exceeded the PLs of 0.001 milligrams per liter (mg/L) and 3.82 mg/L, respectively, and dissolved zinc exceeded the PLs of 0.0264 mg/L at 07-EMF-MW-B and 2.03 mg/L at 07-EMF-MW-C in the April 2016 semi-annual event. A statistically significant increase (SSI) was previously declared for cadmium and zinc at 08-EMF-MW-F and zinc and 07-EMF-MW-C based on prior sampling results. Although zinc at 07-EMF-MW-B qualifies for resampling, no resampling is being conducted at this time because the USEPA is completing an optimization review of past data that may result in changes to the prediction limits or sampling approach currently in use.

Attachment B contains the USEPA Contract Laboratory Program (CLP) analytical results (dissolved cations and dissolved metals). Attachment C contains the SVL analytical results (dissolved anions and total alkalinity).

The data from the April 2016 Semi-Annual sampling event were considered acceptable, and no laboratory or field data were rejected. The following data were qualified as estimates (*J*) as discussed in the data quality review (TerraGraphics 2016):

- Dissolved arsenic results at 07-EMF-MW-A, 07-EMF-MW-B, 07-EMF-MW-C, 07-EMF-MW-D, 08-EMF-MW-E, 08-EMF-MW-F (original only), and 09-EMF-MW-C-Deep because the results were greater than the method detection limit (MDL) but less than the contract required quantitation limit (CRQL)
- Dissolved cadmium results at 07-EMF-MW-D because the results were greater than the MDL but less than the CRQL
- Dissolved lead results at 08-EMF-MW-F (duplicate only) because the results were greater than the MDL but less than the CRQL
- Dissolved potassium at 07-EMF-MW-A and 08-EMF-MW-F (duplicate only) because the result was greater than the MDL but less than the CRQL
- Dissolved zinc results at 07-EMF-MW-B, 08-EMF-MW-E, and 09-EMF-MW-C-Deep due to the field blank results
- Dissolved calcium, magnesium, and sodium results due to differences when comparing results to historical data

Any qualified data should be reviewed by an experienced data analyst before data analysis and interpretation.

Notes:

$^{\circ}\text{C}$  = degrees Celsius

mg/L = milligrams per liter

mV = millivolts

$\mu\text{S}/\text{cm}$  = microSiemens per centimeter

amsl = above mean sea level

DO = Dissolved oxygen

ORP = Oxidation-reduction potential

NS = Not sampled

R = Rejected

J = Estimate

= Data from the recent sampling events.

Notes:

mg/L = milligrams per liter

NS = Not sampled

U = Concentration was not detected (detection limits used by the laboratories are the contract required quantitation limit, the reporting limit, or the method detection limit, depending on the laboratory).

J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J\* = The result is an estimated quantity. This analyte was detected in both the sample and an associated field blank sample during the same sampling event.

a. National Primary Drinking Water Regulation (Maximum Contaminant Level)

b. National Secondary Drinking Water Regulation

Antimony no longer analyzed for as of December 2014.

= Value exceeds the regulatory threshold  
= Data from the recent sampling events.

**TECHNICAL MEMORANDUM**

**To:** Christina Johnson, MFA, Kellogg  
**CC:** Alan Hughes, MFA, Vancouver  
**From:** Greg Malone, TerraGraphics, Kellogg  
Robin Nimmer, TerraGraphics, Moscow  
**Date:** November 30, 2016  
**Project Code:** 16001-05-01  
**Subject:** **Field Summary for the East Mission Flats Repository (EMFR) Second 2016 Bi-Annual Sampling Event**

---

The purpose of this technical memorandum is to summarize the field activities for ongoing bi-annual monitoring at the East Mission Flats Repository (EMFR). This technical memorandum contains a description of the second 2016 bi-annual sampling event, as well as any deviations from the sampling plans (TerraGraphics 2014, 2015, MFA 2016).

## **1 Field Trip Summary**

TerraGraphics' field crew conducted water sampling on October 25, 2016 at EMFR. The field crew visited a total of seven groundwater monitoring locations as listed below.

- 07-EMF-MW-A
- 07-EMF-MW-B
- 07-EMF-MW-C
- 07-EMF-MW-D
- 08-EMF-MW-E
- 08-EMF-MW-F
- 09-EMF-MW-C DEEP

Groundwater sample collection, handling, and labeling followed the Sampling and Analysis Plan/Quality Assurance Project Plan (SAP/QAPP) (TerraGraphics 2014) and the EMFR Sample Plan Alteration Form (SPAFT) #1 and #2 (TerraGraphics 2015, MFA 2016), with any deviations listed in Section 2. The field crew also visited the two piezometers located in the waste mass to download water level data. Both piezometers at the time of download were dry.

## 2 Sample Collection and Field Data

The field crew collected a total of 10 samples: 7 groundwater sites and 3 quality assurance/quality control (QA/QC) samples. A “sample” represents all of the bottles collected at a particular site. All samples were collected in accordance with the QAPP and both SPAFs. There were no deviations from the QAPP and SPAFs.

QA/QC samples were collected from the following locations:

- Duplicate sample: 08-EMF-MW-E
- Filter blank sample: 08-EMF-MW-F
- Matrix spike/matrix spike duplicate (MS/D) sample: 07-EMF-MW-B

Groundwater samples were shipped to the Pace Laboratory for analysis of dissolved metals and cations. Short hold time samples were submitted to Silver Valley Laboratory (SVL) for analysis of alkalinity and dissolved anions.

Low-flow sampling techniques were implemented using dedicated QED micropurge pumps to collect water quality samples at all groundwater sites. Field parameters were measured at all monitoring locations and include pH, temperature (in degrees Celsius [°C]), specific conductance (in microSiemens per centimeter [ $\mu\text{S}/\text{cm}$ ]), dissolved oxygen (DO, in milligrams per liter [mg/L]), oxidation-reduction potential (ORP, in millivolts [mV]), and turbidity (in Nephelometric Turbidity Units [NTU]). Depth to water was also measured. Field parameter data are presented in Table 1 and depth to water and calculated water column heights for all groundwater wells are presented in Table 2.

Table 1. Water Quality Parameters

| Site                | Date      | Parameter |  |                  |           |          |                 |
|---------------------|-----------|-----------|--|------------------|-----------|----------|-----------------|
|                     |           | pH        | Specific Conductance ( $\mu\text{S}/\text{cm}$ ) | Temperature (°C) | DO (mg/L) | ORP (mV) | Turbidity (NTU) |
| 07-EMF-MW-A         | 25-Oct-16 | 5.37      | 129  | 9.68             | 0.86      | 117      | 203             |
| 07-EMF-MW-B         | 25-Oct-16 | 5.47      | 129  | 10.20            | 0.89      | 139      | 1.03            |

| 07-EMF-MW-D      | 25-Oct-16 | 9.10                  | 30.35                  | 21.25                         |
| 08-EMF-MW-E      | 25-Oct-16 | 6.51                  | 27.44                  | 20.93                         |
| 08-EMF-MW-F      | 25-Oct-16 | 10.76                 | 31.69                  | 20.93                         |
| 09-EMF-MW-C DEEP | 25-Oct-16 | 8.20                  | 98.27                  | 90.07                         |

### 3 Electronic Data

All seven electronic pressure transducers at groundwater sites plus two piezometer sites in the repository were downloaded and corrected with the barometric pressure transducer installed in monitoring well BH-SF-E-0104-U, as part of OU2, because the barologger at EMFR was not functioning. The barometric pressure transducer used to correct water level data at BCR was removed and installed at site 08-EMF-MW-F during this event, because it was no longer needed at BCR. All data in upcoming events will be corrected using this on-site barometric pressure transducer. All data were of acceptable quality and submitted to MFA.

Two electronic pressure transducers used to monitor floodwater are currently installed at EMFR. Both transducers were downloaded on November 30, 2016 and corrected using both the OU2 and newly installed EMFR barologger. The pressure transducer at site LL-2 is functioning properly while the pressure transducer at site LL-1 is malfunctioning. When the two electronic pressure transducers are corrected using the OU2 barologger, they display a positive psi value, which indicates the presence of water. However, the pressure transducer at LL-1 also displays numerous negative spikes associated with increased temperature values. When the pressure transducer at site LL-2 is corrected using the EMFR barologger, level values approach zero, indicative of no water present. When the pressure transducer at site LL-1 is corrected using the EMFR barologger, level values drop 0.20 feet below zero. TerraGraphics will work with MFA to troubleshoot both electronic pressure transducers installed at the two floodwater locations.
