Construction Closure

Wyckoff/Eagle Harbor Superfund Site

May 2025

Construction Closure

The U.S. Environmental Protection Agency and the U.S. Army Corps of Engineers will be replacing the existing sheet pile wall that is around the perimeter of the Wyckoff/Eagle Harbor Site. Construction began in March 2025.

For public safety, portions of the site that were previously accessible to the public will be closed during construction. Barricades are placed to prevent access to construction zones.

The map below and the photos on page 2 show the areas that are now closed to public access.
