Disclaimer

The document provides technical guidance to U.S. Environmental Protection Agency (EPA) staff for sites contaminated with lead (Pb). The document is designed to implement national policy regarding the characterization and cleanups of lead contaminated sites. This document does not substitute for EPA's statutes or regulations, nor is it a regulation. Thus, it cannot impose legally binding requirements on EPA, states, or the regulated community, and may not apply to a specific situation based upon the circumstances. EPA recognizes that there may be certain cases where site information and professional judgment may provide sufficient rationale to deviate from the recommendations described herein. EPA may change this document in the future, as appropriate. Any decisions regarding a specific situation are expected to be made based on site-specific factors considering EPA guidance, applicable statutes, and the regulations.

Acknowledgements

The development of this document was a team effort led by the staff of the Office of Superfund Remediation and Technology Innovation (OSRTI) and Region 7. Michele Burgess, Ph.D. served as the lead on the overall effort with Kelly O’Neal, Ph.D. and Preston Law as primary authors, reviewers, and overall management of the effort. The document was developed through the cooperative efforts of the Technical Review Workgroup (TRW) for Metals and Asbestos: Lead Committee, the TRW for Metals and Asbestos: Bioavailability Committee, the Agency for Toxic Substances and Disease Registry (ATSDR), OSRTI staff and the Office of Research and Development (ORD) staff.

Technical and editorial assistance was provided by SRC, Inc. under Contract 68HERH19D0022.
