Notes:
Shaded/Bolded Cell = Detected result exceeds PAL
U = Not Detected; J = Estimated Value; R = Rejected
PAL = Project Action Level (Effects Range Median, September 1999); except total Arochlor, 4,4-DDE, and zinc which are based on site-specific study (SAIC,1998)
Maximum value presented when original and duplilcate samples were analyzed
Parameters that have been detected in at least one sample since ME01 are included on the table

Notes:
Shaded/Bolded Cell = Detected result exceeds PAL
U = Not Detected; J = Estimated Value; R = Rejected
PAL = Project Action Level (Effects Range Median, September 1999); except total Arochlor, 4,4-DDE, ar
Maximum value presented when original and duplilcate samples were analyzed
Parameters that have been detected in at least one sample since ME01 are included on the table

Notes:
U = Not Detected; J = Estimated Value; R = Rejected
Shaded/Bolded Cell = Detected result exceeds PAL
Maximum value presented when original and duplilcate samples were analyzed
All sediment depths are presented
Parameters that have been detected in at least one sample since ME01 are included on the table

Notes:
U = Not Detected; UJ = Detection Limit Approximate; J = Quantitation Approximate; R = Rejected
(1) If sample was not detected, one half of detection limit was used in calculation of average concentration.
Maximum value presented when original and duplilcate samples were analyzed
Parameters that have been detected in at least one sample since ME01 are included on the table

TABLE F-2
SUMMARY OF DESCRIPTIVE STATISTICS FOR PIEZOMETER AT SITE 09 - ALLEN HARBOR LANDFILL
FORMER NCBC DAVISVILLE, NORTH KINGSTOWN, RHODE ISLAND

Location ID	Parameter	Sample Collection Date(s) of Highest Concentration	Sample ID with Hightest Concentration	Sample Result for Highest Concentration	Average of All Results[(1)]	Units	Number of Samples	Number Detected	Percent Detects

Notes:
U = Not Detected; UJ = Detection Limit Approximate; J = Quantitation Approximate; R = Rejected
(1) If sample was not detected, one half of detection limit was used in calculation of average concentration.
Maximum value presented when original and duplilcate samples were analyzed
Parameters that have been detected in at least one sample since ME01 are included on the table

Notes:
U = Not Detected; UJ = Detection Limit Approximate; J = Quantitation Approximate; R = Rejected
(1) If sample was not detected, one half of detection limit was used in calculation of average concentration.
Maximum value presented when original and duplilcate samples were analyzed
Shallow sediment depths are presented
Parameters that have been detected in at least one sample since ME01 are included on the table

TABLE F-4
SUMMARY OF DESCRIPTIVE STATISTICS FOR TISSUE AT SITE 09 - ALLEN HARBOR LANDFILL
FORMER NCBC DAVISVILLE, NORTH KINGSTOWN, RHODE ISLAND

Location ID	Parameter	Sample Collection Date(s) of Highest Concentration	Sample ID with Hightest Concentration	Sample Result for Highest Concentration	Average of All Results[(1)]	Units	Number of Samples	Number Detected

U = Not Detected; UJ = Detection Limit Approximate; J = Quantitation Approximate; R = Rejected
(1) If sample was not detected, one half of detection limit was used in calculation of average concentration.
Maximum value presented when original and duplilcate samples were analyzed
Parameters that have been detected in at least one sample since ME01 are included on the table

Notes:
Datasets presented for all analytes detected in at least one location since ME-01.
Field duplicates assigned the maximum value.
A significance level of 95% was used to interpret results.
* - When N > 10, the Normal approximation is used and calculated per box 4-9 in
Data Quality Assessment: Statistical Methods for Practitioners.
EPA QA/G-9S. When the normal approximation is used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made.
NA = The Mann-Kendall Trend Test was not computed because there were not at least 4 samples,
or there were less than 3 detected concentrations.

Notes:

Datasets presented for all analytes detected in at least one location since ME-01.

Field duplicates assigned the maximum value.

A significance level of 95% was used to interpret results.

* - When N > 10, the Normal approximation is used and calculated per box 4-9 in Data Quality Assessment: Statistical Methods for Practitioners. EPA QA/G-9S. When the normal approximation is used, the critical value is the standard normal distribution.

When S is 0, no critical value is calculated and a conclusion of no trend is made.

NA = The Mann-Kendall Trend Test was not computed because there were not at least 4 samples, or there were less than 3 detected concentrations.

Location	Analyte	N	S	Test Statistic*	Critical Value	Trend
SED09-12B	TOLUENE	3	---	---	NA	NA
SED09-12B	TRANS-1,2-DICHLOROETHENE	3	---	---	NA	NA
SED09-12B	TRANS-1,3-DICHLOROPROPENE	3	---	---	NA	NA
SED09-12B	TRICHLOROETHENE	3	---	---	NA	NA
SED09-12B	VINYL CHLORIDE	3	---	---	NA	NA

Notes:
Datasets presented for all analytes detected in at least one location since ME-01.
Field duplicates assigned the maximum value.
A significance level of 95% was used to interpret results.
* - When N > 10, the Normal approximation is used and calculated per box 4-9 in
Data Quality Assessment: Statistical Methods for Practitioners.
EPA QA/G-9S. When the normal approximation is used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made.
NA = The Mann-Kendall Trend Test was not computed because there were not at least 4 samples,
or there were less than 3 detected concentrations.

Table F-8
Site 9 Tissue Mann Kendall Trend Tests
Former NCBC Davisville
North Kingston, Rhode Island
11 of 11

Location	Analyte	N	S	Test Statistic*	Critical Value	Trend

Notes:

Datasets presented for all analytes detected in at least one location since ME-01.

Field duplicates assigned the maximum value.

One half the detection limit was used for non-detect concentrations.

A significance level of 95% was used to interpret results.

* - When N > 10, the Normal approximation is used and calculated per box 4-9 in

Data Quality Assessment: Statistical Methods for Practitioners.

EPA QA/G-9S. When the normal approximation is used, the critical value is the standard normal distribution.

When S is 0, no critical value is calculated and a conclusion of no trend is made.

NA = The Mann-Kendall Trend Test was not computed because there were not at least 4 samples.

ND = There were less than 3 detected concentrations, therefore the Mann-Kendall Trend Test was not computed.

- = Analyte results not available for location.

Wet weighht results used for Mann-Kendall tests
