## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### FEDERAL ASTM STANDARD

**NPL:** Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/14/2004 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<b>CENTREDALE MANOR RESTORATION P</b>	<b>2072 AND 2074 SMITH STR</b>	<b>1/2 - 1 SSE</b>	<b>18</b>	<b>12</b>

**RCRAInfo:** RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act ( RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store , treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/23/2004 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

NPL SUMMARY:

Summary :

Conditions at Proposal (October 22, 1999): The site consists of an area of contaminated fill on parts of both the Centredale Manor and Brook Village apartment complex properties in North Providence, Rhode Island. The 4.7 acre Centredale Manor property and the 4.3 acre Brook Village property are bordered by Route 44 (Smith Street) to the north, a small wooded area and an unpaved perennial drainage channel (alternately referred to as the drainage channel or former tail race) to the east, a wooded wetland area to the south, and the Woonasquatucket River to the west. The site comprises an area of contaminated fill where the dioxin 2,3,7,8 tetrachlorodiben o p dioxin (TCDD) and other hazardous substances have been disposed or have come to be located. From at least 1921 to 1940, the site was used for textile manufacturing by the Centredale Worsted Mill and then the Olneyville Wool Combing Company. It is currently unknown what type of activities occurred at the site between 1940 and 1943. Between 1943 and 1971, the site was used by two companies, the Atlantic Chemical Company/Metro Atlantic, Inc., for chemical manufacturing and New England Container Company, Inc. for drum recycling. Aerial photographs taken during the 1960s and 1970s show areas of uncovered, outdoor drum storage in the central area of the site, along with disturbed areas in the southern portion of the site. On site observations of the disturbed areas indicate that they comprise areas of fill containing glass, concrete, paint, and other wastes. Sanborn Fire Insurance Rate maps compiled in 1956 and 1965 depict areas of drum storage and drum cleaning bordering the former tail race (now the drainage channel) in the southern portion of the site. During the early 1970s, the mill buildings that housed the former textile and chemical companies on the property were demolished. The fate of the demolition debris is unknown. Brook Village was constructed sometime between 1976 and 1979 on Lot 200 (north end) and Centredale Manor was constructed in 1982 on Lot 250 (southern end). In 1977, the Rhode Island Department of Health, Division of Air Pollution Control responded to complaints of fumes at the property, which resulted in the discovery of greater than 50 abandoned drums. In the early 1980s, additional abandoned drums were identified at the site by the Rhode Island Department of Environmental Management (RI DEM) Division of Air and Hazardous Waste Management. One drum apparently contained

ined polychlorinated biphenyls (PCBs), while some drums may have contained an acid or caustic material based on the presence of polyliners), solvents, and ink wastes. A Notice of Violation was issued for violations of the State Hazardous Waste Management Act. In February 1982, approximately 300 drums were removed under the supervision of RI DEM. The Woonasquatucket River borders the site to the west and a drainage channel borders to the east. The drainage channel was formerly a channel that extended north of Route 44, diverting water for use at the Centredale Worsted Mill. It is now blocked to the north of Route 44, and receives storm water runoff via a head wall at its northern end, via overland flow from the eastern half of the site, and via a drainage pipe from the roof of the Centredale Manor building. The site includes portions of the Woonasquatucket River 10 year floodplain. A low lying area in the west central portion of the site has been documented to flood during periods of high water for the Woonasquatucket River. Surface water runoff from the site enters the Woonasquatucket River and drainage channel at numerous points. Contaminated fill (an estimated 219,869 square feet) at the site is located on a peninsula bounded by Route 44 to the north, the Woonasquatucket River to the west, the drainage channel to the east, and extends approximately 135 feet south of the southernmost parking area to the south. TCDD has been disposed or has come to be located on portions of Lot 200 and Lot 250. Historical information indicates that former mill and drum recycling activities took place in portions of the area of contaminated fill. The source of the hazardous substances present in the contaminated fill is unknown, but is likely due to the largely unregulated use, storage, and disposal of hazardous substances on the property from at least 1921 until 1977. On February 16 and 17, 1999, shallow soil samples were collected from the contaminated fill. TCDD was detected at concentrations up to 115.82 parts per billion (ppb). Additional analytical results from previous sampling events indicated the presence of volatile organic compounds, semivolatile organic compounds, pesticides, PCBs, and inorganic elements in samples collected on or around Lot 200 and Lot 250. However, for purposes of HRS scoring, only the TCDD analytical results are evaluated at this time. Status February 2000: EPA is considering various alternatives for this site. The description of the site release is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Elapsed ASTM days:** Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

### FEDERAL ASTM STANDARD RECORDS

#### **NPL: National Priority List**

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

#### **CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

### **RCRA:** Resource Conservation and Recovery Act Information

Source: EPA  
Telephone: 800-424-9346

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### **UMTRA:** Uranium Mill Tailings Sites

Source: Department of Energy  
Telephone: 505-845-0011

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

### **RAATS:** RCRA Administrative Action Tracking System

Source: EPA

Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### **US BROWNFIELDS:** A Listing of Brownfields Sites

Source: Environmental Protection Agency  
Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
