Please contact D.A.R.P.A. for ways to cost effectively destroy ASBESTOS, TCE, DCE, and the worst issues related to the RAYMARK SUPERFUND site.

They seek solutions for Department of Defense, which has many properties needing remediation.  
Cost effective remediation can become a profit and job creating industry

Hi George,

Ok, now I know who you meant, Bryan Olson. Bryan is the Director of the Superfund Program (Office of Site Remediation and Restoration); [olson.bryan@epa.gov](mailto:olson.bryan@epa.gov) and 617-918-1201.

I really am barred from responding to individual questions which are submitted during the public comment period. But let me see what I can do. We may have researched this technology already. If so, I may be able to get something to you quickly. If not, it will take time to research anyway.

My general response in cases like this is that even if Amiante Ovens can effectively treat the concentrations of asbestos were have measured in soil in Stratford, it likely would not touch the other toxic chemicals which are co-located in this buried waste, or worse yet, heating the soil to treat the asbestos could form toxic vapors from the other chemicals (e.g., PCBs or dioxins). That is generally the problem we face in the Superfund program is that a treatment process works great for 1 chemical, or even a group of chemicals, but doesn't touch all the other chemicals, or even makes the other chemicals worse in some way. It's the mixed nature of these chemicals which is the real problem when it comes to treatment. These technologies all look at treating a single chemical or chemical group. The mixture of chemicals in Raymark Waste is unique, as is the mixed mess of chemicals at any individual Superfund site. But, I do try to keep an open mind!

I will try to get back to you later today.

Jim

Jim,

Marilyn came out with your boss and we spoke.  
Please reply with his name.

Do you have / can you get, BEFORE Public Forum,  
FEED BACK if the **AMIANTE OVENS** work or don't  
work? Timing and information would affect comments  
for Public to comment about the plans?

Hoping between today and Tuesday you can get  
**PRICING** and **SPECS** for different size **AMIANTE  
OVENS?**

- What would the projected **cost** be to destroy all  
ASBESTOS / WASTE at FERRY CREEK?
- What would the projected **cost** be to destroy all  
ASBESTOS / WASTE at Ball field?
- What would the projected **cost** be to destroy all  
ASBESTOS / WASTE at other Stratford OU?
- What would the projected **life span** destroy other  
ASBESTOS / WASTE at other sites?

You must know ball park (pun) **cost** for dump truck runs.

Hi George,

I can't respond to these questions informally during the public comment period. I will add these questions to the formal record and I assure you will receive a written response to each of your questions through the formal response to comments process.

Marilyn St. Fluer's email and phone number on at the bottom of page 1 of the Proposed Plan. Please contact her and I.

Thank You,  
Jim

I'd like to know prices / spec capacities vs. likely needs for different size / capacity ovens?

I'd like to know budgeted amounts just for dump truck runs  
~ excluding clean fill dump truck runs?  
I request a general cost benefit analysis if the Amiante were bought just for Raymark?

I request a general cost benefit analysis if there were amortization of the Amiante over the projected life of the oven if it was bought for as many projects as viable?

You are off Friday. Would like late Monday.

What is your boss and Marilyn's phone + email?

I'll have more for you in weekend.

Thank you.

Interested in technology that completely destroys Asbestos for  
superfund site in Stratford CT USA

- Want pricing and SPECS for mobile unit and few of large size.
- This site has 100,000 to 500,000 cubic yards of ground waste
- and 500 + acres of ground water with VOC causing TCE + DCE
