Certification Summary

Client: Cornerstone Environmental Group, LLC
Project/Site: FORD Ringwood Mines E203361

TestAmerica Job ID: 490-85948-1

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
New Jersey	NELAP	2	TN965	09-30-15

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8082A	3510C	Water	Polychlorinated biphenyls, Total
8260C		Water	Dichlorobromomethane
8260C SIM		Water	1,2,3-Trichloropropane
8260C SIM		Water	1,2-Dibromo-3-Chloropropane
8260C SIM		Water	1,4-Dioxane
8260C SIM		Water	Ethylene Dibromide
SM 2320B		Water	Bicarbonate Alkalinity as CaCO3

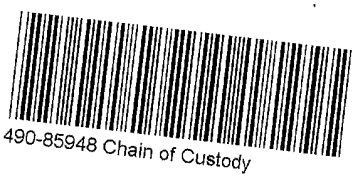
COOLER RECEIPT FOR



Cooler Received/Opened On: 8/26/2015 @0915

1. Tracking # 3364 (last 4 digits, FedEx)

Courier: Fed-Ex IR Gun ID: 14740456

2. Temperature of rep. sample or temp blank when opened: 1.8 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO NA

4. Were custody seals on outside of cooler? YES..NO..NA

If yes, how many and where: 0

5. Were the seals intact, signed, and dated correctly? YES...NO..NA

6. Were custody papers inside cooler? YES..NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) HKG

7. Were custody seals on containers: YES NO and Intact YES...NO..NA

Were these signed and dated correctly? YES...NO..NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES..NO...NA

12. Did all container labels and tags agree with custody papers? YES..NO...NA

13a. Were VOA vials received? YES..NO...NA

b. Was there any observable headspace present in any VOA vial? YES..NO..NA

14. Was there a Trip Blank in this cooler? YES..NO...NA If multiple coolers, sequence # 1

I certify that I unloaded the cooler and answered questions 7-14 (intial) HKG

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..NA

b. Did the bottle labels indicate that the correct preservatives were used YES..NO...NA

16. Was residual chlorine present? YES..NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) HKG

17. Were custody papers properly filled out (ink, signed, etc)? YES..NO...NA

18. Did you sign the custody papers in the appropriate place? YES..NO...NA

19. Were correct containers used for the analysis requested? YES..NO...NA

20. Was sufficient amount of sample sent in each container? YES..NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) HKG

I certify that I attached a label with the unique LIMS number to each container (intial) HKG

21. Were there Non-Conformance issues at login? YES..NO Was a NCM generated? YES..NO..#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

CASE NARRATIVE

Client: Cornerstone Environmental Group, LLC

Project: FORD Ringwood Mines E203361

Report Number: 490-86046-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Nashville attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/27/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.9º C and 4.3º C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3), TB-14-082515 (490-86046-4) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 09/04/2015 and 09/05/2015.

Methylene Chloride was detected in method blank MB 490-279465/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

1,1-Dichloroethane, cis-1,2-Dichloroethene and Cyclohexane failed the recovery criteria high for LCS 490-279129/3. Refer to the QC report for details.

Cyclohexane failed the recovery criteria high for the MS of sample RW-2 (452-462)-082515MS (490-86046-2) in batch 490-279129. Refer

Job ID: 490-86046-1 (Continued)

Laboratory: TestAmerica Nashville (Continued)

to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC-MS SIM)

Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3), TB-14-082515 (490-86046-4) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for volatile organic compounds (GC-MS SIM) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 09/03/2015.

1,2-Dichloroethane-d4 (Surr) failed the surrogate recovery criteria high for RW-3DS (155-160)-082515 (490-86046-1). This sample did not contain any target analytes in the affected range; therefore, re-extraction and/or re-analysis was not performed.

The continuing calibration verification (CCV) associated with batch 490-278757 recovered marginally above the upper control limit for 1,4-Dioxane and 4-Bromofluorobenzene (Surr). The samples associated with this CCV have been reported. The following samples are impacted: RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3), RW-11D (262-267)-082615 (490-86046-5) and (CCVIS 490-278757/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GC MS)

Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for semivolatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 09/01/2015 and analyzed on 09/05/2015.

Benzaldehyde failed the recovery criteria high for LCS 490-277997/2-A. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples RW-3DS (155-160)-082515 (490-86046-1), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared and analyzed on 09/09/2015.

There was insufficient sample available for the extraction and analysis of samples RW-2 (452-462)-082515.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCYCLIC AROMATIC HYDROCARBONS (PAHS)

Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for polycyclic aromatic hydrocarbons (PAHs) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 09/01/2015 and 09/03/2015 and analyzed on 09/01/2015 and 09/04/2015.

Benzo[a]anthracene, Benzo[a]pyrene and Benzo[b]fluoranthene failed the recovery criteria high for LCS 490-278994/2-A.
Pentachlorophenol exceeded the RPD limit for LCSD 490-277972/3-A.
Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Pentachlorophenol exceeded the RPD limit for LCSD 490-278994/3-A.
Refer to the QC report for details. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED METALS (ICPMS)

Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Methods 6020A. The samples were prepared on 08/28/2015 and analyzed on 09/03/2015.

Job ID: 490-86046-1 (Continued)

Laboratory: TestAmerica Nashville (Continued)

Manganese and Vanadium were detected in method blank MB 490-277068/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Calcium, Potassium and Sodium failed the recovery criteria low for the MS of sample RW-2 (452-462)-082515MS (490-86046-2) in batch 490-279070.
Calcium, Potassium and Sodium failed the recovery criteria low for the MSD of sample RW-2 (452-462)-082515MSD (490-86046-2) in batch 490-279070. Refer to the QC report for details.

Samples RW-3DS (155-160)-082515 (490-86046-1)[5X], RW-2 (452-462)-082515 (490-86046-2)[5X], Dup-04-082515 (490-86046-3)[5X] and RW-11D (262-267)-082615 (490-86046-5)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

METALS (ICPMS)
Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for Metals (ICPMS) in accordance with EPA SW-846 Methods 6020A. The samples were prepared on 08/30/2015 and analyzed on 08/31/2015 and 09/01/2015.

Vanadium was detected in method blank MB 490-277578/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Calcium and Sodium failed the recovery criteria low for the MS of sample RW-2 (452-462)-082515MS (490-86046-2) in batch 490-278353.
Potassium failed the recovery criteria high.
Calcium and Potassium failed the recovery criteria high for the MSD of sample RW-2 (452-462)-082515MSD (490-86046-2) in batch 490-278353. Refer to the QC report for details.

Samples RW-3DS (155-160)-082515 (490-86046-1)[50X], RW-2 (452-462)-082515 (490-86046-2)[50X], Dup-04-082515 (490-86046-3)[50X] and RW-11D (262-267)-082615 (490-86046-5)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED MERCURY (CVAA)
Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 08/31/2015 and analyzed on 09/02/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY
Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 09/01/2015 and analyzed on 09/02/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ALKALINITY
Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for alkalinity in accordance with SM 2320B. The samples were analyzed on 08/27/2015.

Job ID: 490-86046-1 (Continued)

Laboratory: TestAmerica Nashville (Continued)

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL CYANIDE

Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for total cyanide in accordance with EPA SW-846 Method 9012B. The samples were prepared on 08/29/2015 and analyzed on 08/30/2015.

Cyanide, Total failed the recovery criteria low for the MS of sample RW-2 (452-462)-082515MS (490-86046-2) in batch 490-277627. Cyanide, Total failed the recovery criteria low for the MSD of sample RW-2 (452-462)-082515MSD (490-86046-2) in batch 490-277627. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ANIONS

Samples RW-3DS (155-160)-082515 (490-86046-1), RW-2 (452-462)-082515 (490-86046-2), Dup-04-082515 (490-86046-3) and RW-11D (262-267)-082615 (490-86046-5) were analyzed for anions in accordance with SW-846 Method 9056. The samples were analyzed on 09/01/2015 and 09/04/2015.

Chloride and Sulfate failed the recovery criteria low for the MS of sample RW-2 (452-462)-082515MS (490-86046-2) in batch 490-278255. Chloride and Sulfate failed the recovery criteria low for the MSD of sample RW-2 (452-462)-082515MSD (490-86046-2) in batch 490-278255. Refer to the QC report for details.

Samples RW-3DS (155-160)-082515 (490-86046-1)[5X], RW-2 (452-462)-082515 (490-86046-2)[5X] and Dup-04-082515 (490-86046-3) [5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
X	Surrogate is outside control limits
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
E	Result exceeded calibration range.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	RPD of the LCS and LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client: Cornerstone Environmental Group, LLC
Project/Site: FORD Ringwood Mines E203361

TestAmerica Job ID: 490-86046-1

Client Sample ID: RW-3DS (155-160)-082515
Date Collected: 08/25/15 08:40
Date Received: 08/27/15 10:00

Certification Summary

Client: Cornerstone Environmental Group, LLC
Project/Site: FORD Ringwood Mines E203361

TestAmerica Job ID: 490-86046-1

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
New Jersey	NELAP	2	TN965	09-30-15

The following analytes are included in this report, but are not certified under this certification:

Analysis Method	Prep Method	Matrix	Analyte
8270D	3510C	Water	1,4-Dioxane

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8082A	3510C	Water	Polychlorinated biphenyls, Total
8260C		Water	Dichlorobromomethane
8260C SIM		Water	1,2,3-Trichloropropane
8260C SIM		Water	1,2-Dibromo-3-Chloropropane
8260C SIM		Water	1,4-Dioxane
8260C SIM		Water	Ethylene Dibromide
SM 2320B		Water	Bicarbonate Alkalinity as CaCO3

COOLER RECEIPT FORM

490-86046 Chain of Custody

Cooler Received/Opened On 8/27/2015 @ 1000

1. Tracking # 3445 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 12080142

2. Temperature of rep. sample or temp blank when opened: 1.9 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO NA

4. Were custody seals on outside of cooler? YES..NO..NA

If yes, how many and where: _____

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES..NO..NA

I certify that I opened the cooler and answered questions 1-6 (intial) DA

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES..NO...NA

13a. Were VOA vials received? YES..NO...NA

b. Was there any observable headspace present in any VOA vial? YES..NO..NA

14. Was there a Trip Blank in this cooler? YES..NO..NA If multiple coolers, sequence # 2

I certify that I unloaded the cooler and answered questions 7-14 (intial) HKG

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES..NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) HKG

17. Were custody papers properly filled out (ink, signed, etc)? YES..NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) HKG

I certify that I attached a label with the unique LIMS number to each container (intial) HKG

21. Were there Non-Conformance issues at login? YES..NO Was a NCM generated? YES..NO...#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

Narrative

CASE NARRATIVE

Client: Cornerstone Environmental Group, LLC

Project: FORD Ringwood Mines E203361

Report Number: 490-85948-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Nashville attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 8/26/2015 11:53 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.3º C, 1.2º C and 1.8º C.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples RW-5A-082415 (490-85948-4) and RW-4A (113-123)-082415 (490-85948-6) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 11/17/2015 and analyzed on 11/18/2015.

Original analysis of these samples were reported in TestAmerica job 490-85948-1. Re-analysis from additional containers from original submittal was requested.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 490-299311.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
New Jersey	NELAP	2	TN965	11-30-15

The following analytes are included in this report, but are not certified under this certification:

Analysis Method	Prep Method	Matrix	Analyte
8082A	3510C	Water	PCB-1016
8082A	3510C	Water	PCB-1221
8082A	3510C	Water	PCB-1232
8082A	3510C	Water	PCB-1242
8082A	3510C	Water	PCB-1248
8082A	3510C	Water	PCB-1254
8082A	3510C	Water	PCB-1260

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8082A	3510C	Water	Polychlorinated biphenyls, Total

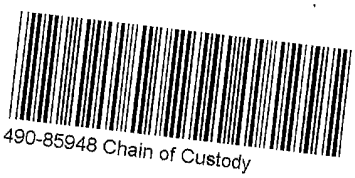
COOLER RECEIPT FOR



Cooler Received/Opened On: 8/26/2015 @0915

1. Tracking # 3364 (last 4 digits, FedEx)

Courier: Fed-Ex IR Gun ID: 14740456

2. Temperature of rep. sample or temp blank when opened: 1.8 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO NA

4. Were custody seals on outside of cooler? YES..NO..NA

If yes, how many and where: 0

5. Were the seals intact, signed, and dated correctly? YES...NO..NA

6. Were custody papers inside cooler? YES..NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) HKG

7. Were custody seals on containers: YES NO and Intact YES...NO..NA

Were these signed and dated correctly? YES...NO..NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES..NO...NA

12. Did all container labels and tags agree with custody papers? YES..NO...NA

13a. Were VOA vials received? YES..NO...NA

b. Was there any observable headspace present in any VOA vial? YES..NO..NA

14. Was there a Trip Blank in this cooler? YES..NO...NA If multiple coolers, sequence # 1

I certify that I unloaded the cooler and answered questions 7-14 (intial) HKG

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..NA

b. Did the bottle labels indicate that the correct preservatives were used YES..NO...NA

16. Was residual chlorine present? YES..NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) HKG

17. Were custody papers properly filled out (ink, signed, etc)? YES..NO...NA

18. Did you sign the custody papers in the appropriate place? YES..NO...NA

19. Were correct containers used for the analysis requested? YES..NO...NA

20. Was sufficient amount of sample sent in each container? YES..NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) HKG

I certify that I attached a label with the unique LIMS number to each container (intial) HKG

21. Were there Non-Conformance issues at login? YES..NO Was a NCM generated? YES..NO..#_____

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

ATTACHMENT A CHAIN OF CUSTODY DOCUMENT(S)

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-84420-1	8/04/2015	8/06/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
GCMS SVOC-SIM
Client samples -001 and -002 were re-analyzed outside of the referenced holding time (QC batch 272814) in response to low QC batch LCS recoveries for pentachlorophenol (QC batch 272220) so these re-analysis results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected with the exception of pentachlorophenol results which are R flagged for both analyses.
PCB
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
METALS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
INORGANICS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:
GCMS VOC – Initial Calibration – cyclohexane RRF and RSD values reported in summary sheet were based on calibration levels 2 through 7 (as opposed to levels 1 through 9). This is not immediately evident based on initial observations but was confirmed by recalculating RRF and RSD using only levels 2 through 7.
CCV – For sequence dated 8/15 had multiple outliers biased high that did not affect client sample results (associated results were non-detect). CCV response for 1,4-Dioxane was biased low but this analyte was not quantified as part of this analytical batch.
GCMS SVOC – ICV was used in place of CCV for sequence confirmation of 8/11. ICV outliers for Caprolactam (low bias) and Benzaldehyde (high bias) did not affect qualification of client sample results.
METALS – Sample 84420-2 Total Magnesium analysis QC summary form showed an internal standard failure biased low for Li-6. Raw data for this analysis showed internal standard results were within referenced criteria so qualification was not made based on the summary form alone.
CRQL's outside of lab criteria biased high did not affect qualification of client sample results.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for non-aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation. There was no ending CCV reported for the sequence evaluated.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following significant QC anomalies were identified during verification of the analytical report:

GCMS SVOC QC batch LCS recoveries were outliers biased high for benzaldehyde and biased low and less than 10% for pentachlorophenol. Client samples -001 and -002 pentachlorophenol results should be considered to be unusable and qualified with R flags if non-detect and estimated with J flags if detected. Benzaldehyde results did not require qualification.

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch method blanks had detections below the RL for 1,2,4-trichlorobenzene, methylene chloride, hexachlorobutadiene and naphthalene. Qualification of client sample results was not required based on these method blank detections.

GCMS VOC trip blank had a detection below the RL for acetone. Qualification of client sample results was not required based on this trip blank detection.

GCMS VOC QC batch LCS recoveries were outliers biased high for cyclohexane. Client samples -001 and -002 results for this analyte should be considered to be estimated and qualified with J flags.

GCMS VOC QC batch MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code.

GCMS SVOC QC batch 272218 and PCB QC batch 272220 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

Metals method blanks had detections below the RL in QC batch 272053 for arsenic and vanadium and in QC batch 272304 for arsenic, copper and vanadium. Client samples -001 and -002 total and dissolved arsenic results and client samples -001 and -002 dissolved vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -001 and -002 total vanadium results should be considered to be non-detect at the concentration reported and qualified with B flags.

Metals QC batch 272053 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Cyanide sample -001 MSD recovery only was an outlier biased low so qualification was not required based on this QC outlier alone. QC batch sample duplicate RPD outlier was not determined using a sample from this submittal so qualification of client sample results was not required based on this sample-specific QC outlier.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific criteria. Potential non-conformances with project requirements were not observed.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific criteria. Potential non-conformances with project requirements are noted below:

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Reconciliation of laboratory target compounds and corresponding limits of detection against the client QAPP was not performed as part of this validation request.

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria without exception.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary..

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Reconciliation of laboratory target compounds and corresponding limits of detection against the client QAPP was not performed as part of this validation request.

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Reconciliation of laboratory target compounds and corresponding limits of detection against the client QAPP was not performed as part of this validation request.

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-84595-1	8/05-06/2015	8/07/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
GCMS SVOC-SIM
Client samples -001, -002, -003, -004 and -005 were re-analyzed outside of the referenced holding time (QC batch 273404) in response to low QC batch LCS recoveries for pentachlorophenol (QC batch 272220) so these re-analysis results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected for pentachlorophenol results.
PCB
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
METALS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
INORGANICS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:
GCMS VOC
CCV/ICV – Sequences had outliers biased high that did not affect client sample results (associated results were either non-detect or outliers were not associated with target analytes).
GCMS SVOC – ICV was used in place of CCV for sequence confirmation of 8/11. ICV outliers for Caprolactam (low bias) and Benzaldehyde (high bias) did not affect qualification of client sample results.
METALS – Internal standard outliers as noted in raw data were not associated with final reported sample results.
CRQL's outside of lab criteria biased high did not affect qualification of client sample results.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for non-aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation. There was no ending CCV reported for the sequences evaluated.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following significant QC anomalies were identified during verification of the analytical report:

GCMS SVOC QC batch 272218 LCS recoveries were outliers biased high for benzaldehyde and QC batch 272220 biased low and less than 10% for pentachlorophenol. Client samples original analyses results for pentachlorophenol should be considered to be unusable and qualified with R flags if non-detect and estimated with J flags if detected. Sample re-analysis results for pentachlorophenol were prepped outside of the referenced holding time but with acceptable LCS recoveries so these re-analysis results should be considered to be estimated and qualified with J flags if detected and UJ flags if non-detect. Benzaldehyde results did not require qualification

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch 273831 method blank had a detection below the RL for carbon disulfide. Qualification of client sample results was not required based on these method blank detections.

GCMS VOC trip blank had a detection below the RL for acetone. Client sample -004 acetone results should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code.

GCMS SVOC QC batch 272218 and 272220 and GCMS VOC QC batch 274395 and 273958 and PCB QC batch did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

Metals method blanks had detections below the RL in QC batch 272053 for arsenic and vanadium and in QC batch 272304 for arsenic and vanadium and in QC batch 272910 for vanadium. Client samples -001 and -003 total and dissolved arsenic results and client sample -005 dissolved arsenic results and client samples -001, -002, -003 and -005 dissolved vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -002 dissolved arsenic results and client samples -001, -002, -003, -004, -005 total vanadium and sample -004 dissolved vanadium results should be considered to be non-detect at the concentration reported and qualified with B flags.

Metals QC batch 272053 and 272910 and Mercury QC batch 272423 and Cyanide QC batch 271876 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

ATTACHMENT A CHAIN OF CUSTODY DOCUMENT(S)

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-84672-1	8/06-07/2015	8/08/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
GCMS SVOC and SIM
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
PCB
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
METALS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
INORGANICS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:
GCMS VOC
CCV/ICV – Sequences had outliers biased high that did not affect client sample results (associated results were either non-detect or outliers were not associated with target analytes).
GCMS VOC-SIM
QC batch 274966 MS recovery outliers were not determined using samples from this submittal so qualification was not required based on these sample-specific QC outliers.
GCMS SVOC – CCAL and ICV outliers were either biased high or not target analytes for this submittal so did not affect client sample results. This includes analytical batch 274426 CCV as noted below where target analyte benzo(a)pyrene was an outlier biased high – batch included analysis of sample -004 as well as the MBLK/LCS for prep batch 274147.
METALS – Internal standard outliers, serial dilution and PDS outliers as noted in raw data were not associated with final reported sample results.
CRQL's outside of lab criteria biased high did not affect qualification of client sample results.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation. There was no ending CCV reported for the sequences evaluated.

VERIFICATION SUMMARY
The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

GCMS VOC QC batch 273831 method blank had a detection below the RL for carbon disulfide. Qualification of client sample results was not required based on these method blank detections.

GCMS VOC trip blank was non-detect for all target analytes.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS VOC QC batch 273958 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS SVOC PAH analytical batch 274426 CCV response outliers were not used to qualify client sample results as part of this level 2 verification review. This level 4 data package QC information will be evaluated as part of the pending validation review and data will be qualified if applicable.

GCMS SVOC QC batch 272786 LCS recoveries were outliers biased high for benzaldehyde. Qualification of client sample results was not required based on this high bias QC outlier.

GCMS SVOC sample -001 MS/MSD recoveries were outliers for multiple analytes biased high along with several MS/MSD RPD outliers. Qualification of client sample results was not required based on these high bias QC outliers.

GCMS SVOC SIM QC batch 274147 LCS recoveries were outliers biased low and less than 10% for pentachlorophenol. Client samples were not analyzed as part of this QC batch so qualification of client sample results was not required based on this low bias QC outlier.

GCMS SVOC SIM sample -001 MS/MSD RPD only was an outlier for pentachlorophenol and caprolactam. Qualification of client sample results was not required based on these QC outliers alone.

Metals method blanks had detections below the RL in QC batch 272053 for arsenic and vanadium and in QC batch 272304 for copper and vanadium and in QC batch 272584 for arsenic and vanadium. Client samples -001, -002, -003, -004, -008, -009 total arsenic results and client samples-001, -002, -003, -004, -005 and -006 dissolved arsenic results and client samples -001, -004, -005, -006, -008 total and dissolved vanadium results and client sample -008 dissolved copper result should be considered to be non-detect at the RL and qualified with UB flags. Client samples -007 total arsenic results and client samples -002, -003, -009 total and dissolved vanadium results should be considered to be non-detect at the concentration reported and qualified with B flags.

Metals sample -001 MS recovery and MS/MSD RPD were outliers with the recoveries biased high for zinc and manganese. Client sample -001 total manganese results should be considered to be estimated and qualified with a J flag.

GCMS-SIM VOC QC batch 274966 and Cyanide QC batch 271876 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Cyanide QC batch 273142 sample -001 MS/MSD recoveries were outliers biased low. Client sample -001 cyanide result should be considered to be estimated and qualified with a UJ flag. QC batch 272365 MS recovery only outlier for sample -00 did not require qualification of client sample results.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

ATTACHMENT A CHAIN OF CUSTODY DOCUMENT(S)

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85153-1	8/12-13/2015	8/14-15/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
GCMS SVOC and SIM
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
PCB
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
METALS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
INORGANICS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:
GCMS VOC
CCV/ICV – CCV for analytical batch 275550 analyzed on 8/23 has %D outliers (20% max) biased low for target analytes acetone and biased high for target analytes cyclohexane and cyclohexanone (%D was less than 30% for all). Qualification of client sample results was not made based on these CCV percent difference outliers as only analyte detection associated with these outliers was already J flagged due to being detected below the RL.
GCMS VOC-SIM
No additional non-conforming observations to report.
GCMS SVOC
Sample was received at a pH of 10 (recommended pH 7) for sample -007 GCMS SVOC analysis. Sample pH was adjusted to pH 2 prior to initial extraction so sample preservation non-conformance did not require qualification.
METALS
PDS and SERIAL DILUTION analytical sequence outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.
CRQL's outside of lab criteria biased high did not affect qualification of client sample results.
NOTE: QC batch 27599 thallium raw data results for samples -001 and -002 did not match the reported results. Lab inquiry in progress – database and report will be corrected if applicable pending lab response.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation. There was no ending CCV reported for the sequences evaluated.

Laboratory "P" flag outliers noted for quantification differences determined from the two analytical columns were associated with surrogate recoveries only for samples that were non-detect on both columns so qualification was not required based on these "P" flags.

LABORATORY FOLLOW-UP

Total thallium results for client samples -001 and -002 were re-visited with the lab as the reported results were marginally different from raw data values. Revised level 4 laboratory data package was received 2015-10-27 and original data was confirmed using updated data package.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank had a detection below the RL for methylene chloride. Client samples -003, -004, -005, -006 and -007 methylene chloride results should be considered to be non-detect at the RL and qualified with UB flags.

GCMS VOC QC batch 275550 LCS recovery was an outlier biased high for cis-1,2-dichloroethylene. Qualification of client sample results was not required based on this high bias QC outlier.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS SVOC QC batch 274686 and PCB QC batch 277885 and PAH QC batch 274580 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS SVOC QC batch 274686 LCS recoveries were outliers biased high for benzaldehyde. Qualification of client sample results was not required based on this high bias QC outlier. LCS/LCSduplicate RPD only was an outlier for pentachlorophenol so qualification was not required based on this QC outlier alone.

GCMS SVOC QC batch 274686 method blank had detections above the RL for benzo(ghi)perylene, dibenzo(ah)anthracene and indeno(123cd)pyrene. Client sample -004 benzo(ghi)perylene results should be considered to be non-detect at the RL and qualified with a UB flag.

PCB results qualified by the laboratory with P flags indicating that the relative percent difference between confirmatory results was greater than 40% were not qualified as part of this level 2 verification review but will be evaluated in the level 4 validation package review.

Metals method blanks had detections below the RL in QC batch 272053 for total arsenic, manganese, antimony and vanadium and in QC batch 275991 for aluminum and above the RL in QC batch 274351 for vanadium. Client samples -001, -003, -006 total arsenic results and client samples -001, -002, -004 total antimony results and client samples -001, -003, -004 total vanadium results and client samples -001, -003, -004 dissolved vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -004 total arsenic results and client samples -005, -006 total vanadium results and client sample -007 total manganese results and client samples -002, -005, -006 and -007 dissolved vanadium results and client samples -001 and -003 total aluminum results should be considered to be non-detect at the concentration reported and qualified with B flags.

Metals QC batch 276031, 273945 and 275991 and Cyanide QC batch 273559 and 274313 MS recovery

outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

APPENDIX 5

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

ATTACHMENT A CHAIN OF CUSTODY DOCUMENT(S)

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85229-1	8/13-14/2015	8/15/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM
GCMS VOC CCVIS 490-276265/2 responses were outliers biased low for target analytes bromomethane. Client samples (all) bromomethane results should be considered to be estimated and qualified with UJ flags. Remaining CCV outliers were either for non-target analytes or were high bias outliers associated with non-detect sample results.
GCMS SVOC and SIM
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
PCB
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
METALS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
INORGANICS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:
GCMS VOC
CCV outliers were not associated with target analytes for this submittal.
GCMS VOC-SIM
No additional non-conforming observations to report.
GCMS SVOC
Sample-001 was received at a pH of 12 (recommended preservation pH is 7). Sample was adjusted to pH 2 prior to initial prep so qualification based on initial sample pH was not required.
GCMS SVOC-SIM
Sample-001 was received at a pH of 11 (recommended preservation pH is 7). Sample was adjusted to pH 2 prior to initial prep so qualification based on initial sample pH was not required.
METALS
Total metals PDS performed on sample -012 had outliers biased low for barium, calcium, magnesium, potassium, sodium and zinc with zinc, sodium and calcium results subject to 4X rule so were not used for qualification. Qualification of client sample results were assigned based on MS/MSD recovery data for sample -012 so no further qualification was required based on these PDS recovery outliers. Dissolved PDS sample -012 outliers were subject to 4X rule so were not used for qualification.
CRQL's were consistently within lab control limits with the exception of potassium which was consistently biased high.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation.

RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:
Metals – raw instrument data from 9/2 for samples 85229-1, -2, -3, -4, -5 and -7 was not included for total potassium, sodium, calcium, copper, manganese and nickel. (Received 2015-10-27).

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank was non-detect for all target analytes.

GCMS VOC QC batch 276265 method blank had a detection below the RL for toluene. Client sample -001 toluene results should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS-SIM SVOC surrogate recoveries were outliers biased high for 2 out of 3 surrogates in client sample -012. Qualification of client sample results was not required based on these high bias QC outliers.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

PCB QC batch 277885 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

(See Validation Summary above for observations associated with this verification comment) Laboratory case narrative indicated that sample preservation for client sample -001 was outside of method criteria biased high (pH was 11). The lab submittal did not indicate which method was referenced for this potential sample preservation outlier so qualification was not applied based on the case narrative comment alone. This potential preservation outlier will be evaluated further as part of the pending level 4 data package validation review.

GCMS SVOC QC batch 274736 LCS recoveries were outliers biased high for bis-2-chloroethylether. Qualification of client sample results was not required based on this high bias QC outlier.

GCMS SVOC surrogate recoveries were outliers biased high for 1 out of 3 acid fraction surrogates in client samples -001 and -007. Qualification of client sample results was not required based on these high bias QC outliers alone.

GCMS SVOC MS/MSD recovery data for client sample -012 was not reported in laboratory submittal QC summary other than the associated surrogate recovery results. These recoveries will be evaluated further as part of the level 4 data package review. (note: validation review showed no recovery outliers for the sample -012 MS/MSD QC sample)

Metals method blanks had detections below the RL in QC batch 274876 for manganese and vanadium and in QC batch 275634 for arsenic and vanadium. Client samples -010 and -011 total arsenic results and client samples -001 total manganese results and client samples -001, -011, -012 total vanadium results and client samples -003, -004, -005, -006, -007, -010, -011, -012, -008 dissolved vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -008 and -012 total arsenic results and client samples -002, -003, -004, -005, -006, -007, -008 total vanadium results and client samples -002 dissolved vanadium results should be considered to be non-detect at the concentration reported and qualified

with B flags.

Metals QC batch 274876 and Cyanide QC batch 275318 and Chloride QC batch 276233 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Metals sample -012 MS/MSD recoveries were not considered to be statistically reliable due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule) so were not used to qualify results for total and dissolved calcium, iron, manganese, sodium and zinc. MSD recovery only was an outlier for dissolved selenium so qualification was not required based on this QC outlier alone.

Cyanide client sample -012 and -001 MS/MSD recoveries were outliers biased low. Client samples -001 and -012 cyanide results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected.

Chloride client sample -012 MS/MSD recoveries were outliers biased low. Client sample -012 chloride results should be considered to be estimated and qualified with a J flag.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

APPENDIX 5

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85658-1	8/19-20/2015	8/21/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM

GCMS VOC Continuing Calibration Verification standard 278001/3 analyzed on 9/1 had multiple responses outside of laboratory control limits. High bias outliers did not have an effect on client sample data or were not associated with target analytes for this submittal (cis-1,2-dichlroethylene was already qualified as estimated due to being detected below the RL so no further qualification was required based on the CCV outlier). Low bias recoveries were observed for target analyte methyl acetate and TIC analyte isopropylalcohol. The TIC analyte was already qualified as estimated due to being detected below the RL. All client sample methyl acetate results were non-detect so the associated reporting limits should be considered to be estimated and qualified with UJ flags based on the low bias CCV response.

GCMS SVOC and SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

PCB

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

METALS

Metals Continuing Calibration Blank (CCB) CCB-490-275984/109 at 21:16 of 9/24 analytical sequence had a detection for selenium above the MDL but below the RL. Based on this CCB detection client sample 490-85658-3 total selenium result should be considered to be non-detect at the RL and qualified with a UB flag.

INORGANICS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC

CCV outliers were not associated with target analytes for this submittal.

GCMS VOC-SIM

CCV for sequence 276673 on 8/27 had outliers that were not associated with reported sample results. ICV for sequence 277064 on 8/28 were reported on form VII as outliers based on known spike values reported. Verification with laboratory indicated that the known spike values should have been 10 and 0.5 (instead of 2000/100) as was historically reported for other sequences to these ICV recoveries were considered to be acceptable when compared to these historical values.

GCMS SVOC

CCV for sequence 276363 on 8/26 had outliers that were not associated with reported sample results.

GCMS SVOC-SIM

No additional observations to report based on review of level 4 data package.

METALS

QC batch PDS and SERIAL DILUTION outliers were not determined using samples from this submittal so qualification was not required based on these sample-specific QC outliers.
CRQL's were consistently within lab control limits with the exception of potassium which was consistently biased high.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not result in qualification of final client sample results.
RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:
No additional requests for data associated with this submittal were required of the laboratory.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank had a detection below the RL for acetone. Qualification of client sample results was not required based on this trip blank detection.

GCMS-SIM VOC surrogate recoveries were outliers biased high for 1 out of 4 surrogates in client sample -002re-analysis and -007re-analysis. GCMS-SIM VOC detected results in these samples should be considered to be estimated and qualified with J flags. Non-detect results do not require qualification.

GCMS-SIM VOC QC batch 276673 LCS recovery was an outlier for ethylene dibromide. QC batch 276673 LCS/LCSduplicate recovery outliers were not associated with reportable results so qualification was not required based on these QC outliers.

GCMS-SIM VOC QC batch 277393 and 277754 and GCMS SVOC QC batch 276223 and PCB QC batch 278338 and PAH QC batch 276166 and cyanide batch 276486 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS VOC QC batch 278001 LCS recovery was an outlier biased high for cyclohexane. Qualification of client sample results was not required based on this QC outlier alone.

GCMS-SIM SVOC QC batch 276166 LCS/LCSduplicate RPD was an outlier for pentachlorophenol. Qualification of client sample results was not required based on this method blank detection.

GCMS SVOC QC batch 276223 LCSduplicate recovery only was an outlier biased high for benzaldehyde. Qualification of client sample results was not required based on this high bias QC outlier.

Metals method blanks had detections below the RL in QC batch 275634 for arsenic and vanadium and in QC batch 276235 for vanadium. Client samples -001, -002, -003, -004 and -006 dissolved vanadium results and client samples -002 and -005 total vanadium results and client samples -002, -004 and -005 total arsenic results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -001, -003, -004, -006 total vanadium results and client sample -005 dissolved vanadium result and client samples -001, -003 and -006 total arsenic results should be considered to be non-detect at the concentration reported and qualified with B flags.

GCMS VOC QC batch 278001 and Metals QC batch 276235 and 275634 MS recovery outliers were not determined

using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Cyanide client sample -006 MS/MSD recoveries were outliers biased low (MS/MSD RPD also an outlier). Client samples -006 cyanide results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.
If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.
CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent

sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

LIST OF ATTACHMENTS

ATTACHMENT A CHAIN OF CUSTODY DOCUMENT(S) and LABORATORY CORRESPONDENCES

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85779-1	8/20-21/2015	8/22/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM

GCMS VOC Continuing Calibration Verification standards 278001/3 analyzed on 9/1 and CCV 278444/2 analyzed on 9/2 had multiple responses outside of laboratory control limits. High bias outliers did not have an effect on client sample data or were not associated with target analytes for this submittal. Low bias recoveries were observed for target analytes chloromethane and methyl acetate in the CCV from 9/1 and chloromethane, bromomethane, acetone and methyl acetate from 9/2. The TIC analyte was already qualified as estimated due to being detected below the RL. All client sample methyl acetate and chloromethane results and client samples -001, -002, -003, -004, -005, -006, -007 acetone and bromomethane results were non-detect so the associated reporting limits should be considered to be estimated and qualified with UJ flags based on the low bias CCV responses.

GCMS SVOC and SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

PCB

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

METALS

Metals Continuing Calibration Blank (CCB) CCB-490-277043/43 at 16:04 of 8/27 analytical sequence had a detection for selenium above the MDL but below the RL. Based on this CCB detection client samples 490-85779-002, -004, -005 and -007 total selenium results should be considered to be non-detect at the RL and qualified with UB flags.

Client sample -003 total sodium result was above the instrument linear dynamic range (LDR) so this result should be considered to be estimated and qualified with an E flag.

INORGANICS

CYANIDE – Sample -006 raw data recalculation generated a result of <0.007mg/L but the original lab report value was 0.0084mg/L for cyanide. Lab provided the following explanation for the discrepancy: 490-58779-06 – Cyanide - The instrument/ raw data records the final result to the 4th exponent during the upload the data was transferred to TALS as the 3rd exponent. Result has been changed from 0.00845 to 0.000845. We will be getting you revised reports on this one.

Revised data has been re-loaded to CLMS database and revised report posted to project. Revised data is reflected in this validation report as well.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC

CCV outliers were not associated with target analytes for this submittal.

GCMS VOC-SIM

CCV for sequence 276673 on 8/27 had outliers that were not associated with reported sample results. ICV for sequence 277064 on 8/28 were reported on form VII as outliers based on known spike values reported. Verification with laboratory indicated that the known spike values should

have been 10 and 0.5 (instead of 2000/100) as was historically reported for other sequences to these ICV recoveries were considered to be acceptable when compared to these historical values.

GCMS SVOC

No additional observations to report based on review of level 4 data package.

GCMS SVOC-SIM

No additional observations to report based on review of level 4 data package.

METALS

QC batch PDS and SERIAL DILUTION outliers were not determined using samples from this submittal so qualification was not required based on these sample-specific QC outliers.

CRQL's were consistently within lab control limits with the exception of potassium which was consistently biased high.

PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not result in qualification of final client sample results.

RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:

CYANIDE – Confirmation was required from lab for sample -006 cyanide result which did not reconcile with re-calculated results.

DISSOLVED MERCURY – Sample raw data was not included – duplicate of total mercury run was reported instead.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank had a detection below the RL for acetone. Client samples -008 and -010 acetone results should be considered to be non-detect at the RL and qualified with UB flags.

GCMS-SIM VOC surrogate recoveries were outliers biased high for 1 out of 4 surrogates in client sample -003. GCMS-SIM VOC detected results in this sample should be considered to be estimated and qualified with J flags. Non-detect results do not require qualification.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS VOC QC batch 278001 and 278444 LCS recovery was an outlier biased high for cyclohexane. Qualification of client sample results was not required based on these high bias QC outliers.

GCMS VOC QC batch 278444 method blank had a detection below the RL for methylene chloride. Qualification of client sample results was not required based on this method blank detection.

GCMS SVOC QC batch 276471 and 276884 MS recoveries were not reported in the laboratory submittal QC summary. These QC results will be evaluated as part of the level 4 data package review to follow. (no MS/MSD results were reported in level 4 data package for these batches either).

Metals method blanks had detections below the RL in QC batch 275892 and 276511 for total and dissolved vanadium. Client samples -001, -002, -003, -004, -005, -006, -007, -008, -009 and -010 dissolved vanadium results and client samples -001, -002, -003, -004, -008, -009 and -010 total vanadium results should be considered to be

non-detect at the RL and qualified with UB flags. Client samples -005, -006 and -007 total vanadium results should be considered to be non-detect at the concentration reported and qualified with B flags.

GCMS VOC QC batch 278001 and 278444 and Cyanide QC batch 276133 and Inorganic Ion QC batch 278255 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Cyanide sample -010 MS recovery only was an outlier biased low. Qualification of client sample results is not required based on this QC outlier alone.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.
If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.
All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.
CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified

as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

FORD RINGWOOD MINES PROJECT
NEW JERSEY FULL PACKAGE MINI FINAL REPORT - LEVEL 4
E203361 - 490-85779-1
August 2015

Description

METALS DATA (ICPMS and mercury)
- Forms Data
  - Cover Page
  - Inorganic Analysis Data Sheet - Metals Dissolved/Total Recoverable (1A-IN)
  - CCV standard report - mercury and ICPMS (2A-IN)
  - CRQL report - mercury and ICPMS (2B-IN)
  - ICB report - mercury and ICPMS (3-IN)
  - Method blank report (3-IN)
  - Interference check standard A - ICPMS (4A-IN)
  - Interference check standard AB - ICPMS (4A-IN)
  - MS/MSD Sample recovery (5A-IN)
  - PDS Summary (5B-IN)
  - LCS Recovery form (7A-IN)
  - LCS Duplicate Recover (7D-IN)
  - ICP-MS Serial Dilutions (8-IN)
  - Detection Limits Form (9-IN)
  - Linear dynamic ranges - ICPMS (11-IN)
  - Prep log - mercury and ICPMS (12-IN)
  - Run log - ICPMS and Mercury (13-IN)
  - ICP-MS TUNE (14-IN)
  - ICPMS Internal Standards Relative Intensity Summary (15-IN)
- Instrument Printouts
  - ICP-MS Raw instrument data
  - Mercury raw instrument data, run logs and calibrations
- Miscellaneous Data
  - Metals Batch Worksheet

GENERAL CHEMISTRY - Total and Amenable Cyanide and Alkalinity
- Cover Page
- Raw Data and Data Summaries for:
  - Sample Data (Form 1B-IN)
  - CCV/CCB (Form 2-IN)
  - METHOD BLANKS (Form 3-IN)
  - MATRIX SPIKES (Form 5-IN)
  - Sample DUPLICATES (Form 6-IN)
  - LCS/LCSD (Form 7-IN)
  - Detection Limits Form (9-IN)
  - Prep log (12-IN)
  - Analysis Run Logs (13-IN)
  - Raw Data - instrument sample sequence and calibration curve
  - Alkalinity Reagents
  - Alkalinity pH meter calibration
  - Alkalinity sequence log and raw data
  - General Chemistry Batch Worksheets

Shipping and Receiving Documents
- COC forms
- Cooler Receipt Form, checklist and narrative

APPENDIX 3

Analytical Results Summary

Subject: RE: FORD Ringwood PM

Thanks Cathy,
One more level 4 reviewed – 490-85779-1 and have a couple more questions:

CYANIDE - SAMPLE -006 - RAW DATA INDICATES RESULT OF 0.000845 (<0.007) BUT REPORTED RESULT WAS 0.0084? Analysis date 8/25

DISSOLVED MERCURY - SAMPLE RAW DATA NOT REPORTED - DUPLICATE OF 8/25 RUN REPORTED INSTEAD.

Thanks again for your help.

Hi, Jim,

I will pass this on to the lab.

I did get your last 2 e-mails as well about the additional issues.

Jim,

I have a little bit of information for you.

490-84924 – 8270 The amount used for extraction was 950 ml which gives a prep factor of 1.052. Multiply by raw result 3.44 for final calculation = 3.6.

490-58779-06 – Cyanide - The instrument/ raw data records the final result to the 4th exponent During the upload the data was transferred to TALS as the 3rd exponent. Result has been changed from 0.00845 to 0.000845. We will be getting you revised reports on this one.

The inorganics Operations manager is looking at the metals data. So far, all of the raw data has been in the Level 4 reports.

For example - Job 85779 Dissolved Mercury – pages 20153-57.

He is going to be working on pulling all of those numbers for you.

Cathy

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-86046-1	8/25-26/2015	8/27/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM

GCMS VOC Continuing Calibration Verification standards CCV 279129/2 analyzed on 9/4 had multiple responses outside of laboratory control limits. High bias outliers did not have an effect on client sample data or were not associated with target analytes for this submittal. Low bias recoveries were observed for target analyte methyl acetate. All client sample methyl acetate and results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected based on this low bias CCV responses.

CCV 279465/2 analyzed on 9/5 was used to calculate re-analysis results for client samples -001 and -003. This CCV also had multiple outliers biased high and low but was acceptable for the reduces list target analytes associated with this sequence (1,1-dichloroethane only) so qualification was not required based on these CCV response outliers.

GCMS VOC-SIM Continuing Calibration Verification standard 278757/2 had an outlier biased high for 1,4-dioxane and 1 out of 4 surrogates. Client samples -001, -002, -003 and -005 1,4-dioxane results should be considered to be estimated and qualified with J flags based on this high bias CCV response outlier.

GCMS SVOC and SIM

GCMS SVOC sample results for 2,4-dinitrophenol were based on an initial calibration linear curve that has poor linearity for the concentration levels below the lowest concentration standard in the curve (2mg/L). This is reflected by the relatively similar results (about 6ug/l) for this analyte in spite of instrument responses that vary by over 10 times. All sample results for this analyte are already J flagged as estimated due to being detected below the RL (MDL=5.9ug/l) but qualifier code has been revised to BCL indicating that results are below reliable calibration levels so should be considered to be estimated with the potential for significant high bias.

GCMS SVOC-SIM sample re-extractions were performed outside of the referenced holding time so these results should be considered to be estimated and qualified with J flags if detected and UJ flags if non-detect. Note: these re-analysis results are not present in database so qualified data was not reported in ARS table associated with this validation report.

PCB

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

METALS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

INORGANICS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC

No additional observations to report.

GCMS VOC-SIM

ICV for sequence 277064 on 8/28 were reported on form VII as outliers based on known spike values reported. Verification with laboratory indicated that the known spike values should have been 10 and 0.5 (instead of 2000/100) as was historically reported for other sequences to these ICV recoveries were considered to be acceptable when compared to these historical values.

GCMS SVOC

Samples -002, -003, -005 were received at a pH of 12 according to the laboratory submittal prep log. This is outside of recommended preservation range for this analysis but sample pH was adjusted prior to sample prep so qualifications were not applied based on this preservation non-conformance.

GCMS SVOC-SIM

Samples -001, -002, -003, -005 were received at a pH of 11 according to the laboratory submittal prep log. This is outside of recommended preservation range for this analysis but sample pH was adjusted prior to sample prep so qualifications were not applied based on this preservation non-conformance.

METALS

Serial dilution sample -002 outliers (Barium, Calcium, Potassium, Sodium and Vanadium) noted in raw data were considered to be acceptable based on re-calculation of raw data so no qualification was required based on serial dilution outliers for this submittal. PDS results were either acceptable or not performed using a sample from this submittal so qualification was not required based on PDS QC results. CRQL responses were consistently high for Potassium but acceptable for all remaining elements.

PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not result in qualification of final client sample results.

Sample RW-2 (452-462)-082515 did not have sufficient sample volume available to be analyzed for PCB analysis.

RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:

TOTAL and DISSOLVED MERCURY – raw data reported did not include information specific to samples from this submittal. (Received from lab 2015-10-27).

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank had a detection below the RL for acetone. Client sample -003 acetone result should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS-SIM VOC QC batch 278757 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify results as part of this level 2 data package review.

GCMS-SIM and GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS-SIM VOC sample -001 surrogate recoveries were outliers biased high for 1 out of 4 surrogates. Client

sample -001 detected results should be considered to be estimated and qualified with J flags. Non-detect results do not require qualification.

GCMS VOC QC batch 279129 LCS recoveries were outliers biased high for cyclohexane, 1,1-dichloroethane and cis-1,2-dichloroethylene. Qualification of client sample results was not required based on these high bias QC outliers.

GCMS VOC QC batch 279465 method blank had a detection below the RL for methylene chloride. Qualification of client sample results was not required based on this method blank detection.

GCMS VOC sample -002 MS recovery only was an outlier biased high for cyclohexane. Qualification of client sample results was not required based on this QC outlier alone.

PCB sample -002 analysis was not performed due to insufficient sample volume available according to the laboratory submittal case narrative.

GCMS VOC QC batch 279465 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

GCMS SVOC QC batch 277997 LCS recoveries were outliers biased high for benzaldehyde. Qualification of client sample results was not required based on this high bias QC outlier. Surrogates were outliers biased high for 1 out of 2 acid fraction surrogates in the QC batch LCS and method blank but qualification was not required based on these QC outliers alone.

GCMS-SIM SVOC QC batch 278972 LCS recoveries were outliers biased high along with the LCS/LCSduplicate RPD outliers for benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene. QC batch 277972 LCS/LCSduplicate RPD only was an outlier for pentachlorophenol. Qualification of client sample results was not required based on these high bias QC outliers. QC batch 278994 LCS/LCSduplicate RPD's only were outliers for these sample analytes and also did not result in qualification for client sample results.

Metals method blanks had detections below the RL in QC batch 277068 for dissolved manganese and dissolved vanadium and in QC batch 277578 for total vanadium. Client samples -001, -003, -005 dissolved vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -003 and -005 total vanadium results should be considered to be non-detect at the concentration reported and qualified with B flags.

Metals sample -002 MS/MSD recoveries were not considered to be statistically reliable due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule) so were not used to qualify results for total and dissolved calcium, potassium and sodium.

Cyanide sample -002 MS/MSD recoveries were outliers biased low. Client sample -002 cyanide results should be considered to be estimated and qualified with a UJ flag.

Chloride and Sulfate sample -002 MS/MSD recoveries were outliers biased low. Client sample -002 chloride and sulfate results should be considered to be estimated and qualified with J flags.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.
CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

ATTACHMENT A CHAIN OF CUSTODY DOCUMENT(S)

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-84924-1	8/10-11/2015	8/12/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM

GCMS VOC CCVIS 490-273958/2 responses were outliers biased low for bromomethane. Client sample -010 bromomethane results should be considered to be estimated and qualified with a UJ flag. Remaining CCV outliers were either for non-target analytes or were biased high for non-detect sample results.

GCMS SVOC and SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

PCB

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

METALS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

INORGANICS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC

CCV/ICV – Sequences had outliers biased high that did not affect client sample results (associated results were either non-detect or outliers were not associated with target analytes).

GCMS VOC-SIM

No additional non-conforming observations to report.

GCMS SVOC

Sample 84924-008 phenol result did not re-calculate to reconcile with reported result within acceptable significant figure requirements. Reported phenol result was 3.6ug/L and recalculated result was 3.44ug/L. Discrepancy due to sample prep factors - reported result was correct.

METALS

CCV – analytical sequence 278731 beryllium response was an outlier high for both total and dissolved beryllium. All associated field sample results were less than the detection limit so qualification was not required based on these high bias QC outliers.

PDS - for sample -005 had recovery outliers biased low for calcium and silver. Calcium PDS was not considered to be reliable due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule) so was not used to qualify client sample data and silver MS/MSD recoveries for sample -005 were acceptable so qualification was not made based on the low bias PDS recovery.

CRQL's outside of lab criteria biased high did not affect qualification of client sample results.

INFORMATION NOT INCLUDED WITH ORIGINAL LABORATORY LEVEL 4 DATA PACKAGE - ICPMS raw data for the analysis performed on 9/1/2015 was not included with

data package – This information was required only to confirm the total copper result for client sample 84924-011. Received from lab 10/19/2015.
MERCURY raw data for sequence date 08/19/2015 could not be located in data package – two sets of data for sequence date 8/18/2015 were reported. This is required for validation of all total mercury results. Received from lab 10/19/2015.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation. There was no ending CCV reported for the sequences evaluated.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.
The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank was non-detect for all target analytes.

GCMS VOC field blank had detections below the RL for bis-2-ethylhexylphthalate, total vanadium, dissolved vanadium and dissolved antimony. Client results for bis-2-ethylhexylphthalate should be considered to be non-detect at the concentration reported and qualified with B flags for samples -001, -002, -003, -004 and -008 and considered to be non-detect at the RL and qualified with UB flags for samples -005, -006 and -009.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

Dissolved metals analytical batch 278731 CCV response outliers were not used to qualify client sample results as part of this level 2 verification review. This level 4 data package QC information will be evaluated as part of the pending validation review and data will be qualified if applicable.

GCMS VOC SIM sample -005 MS/MSD recoveries were outliers biased low for 1,4-dioxane. Client sample -005 1,4-dioxane results should be considered to be estimated and qualified with a J flag.

Metals method blanks had detections below the RL in QC batch 272910 for sodium and vanadium and in QC batch 273171 for dissolved vanadium. Client samples -001, -002, -003, -004, -005, -006, -009, -010 and -011 total and dissolved vanadium results should be considered to be non-detect at the RL and qualified with UB flags.

Metals sample -005 MS and MSD recoveries were outliers with the recoveries biased low for total selenium. Client sample -005 total selenium results should be considered to be estimated and qualified with a UJ flag. MS/MSD recoveries for total and dissolved iron and total and dissolved calcium and total and dissolved manganese and dissolved magnesium were not considered to be statistically reliable so were not used to qualify results due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule).

Cyanide client sample -005 MS/MSD recoveries were outliers biased low. Client sample -005 cyanide results should be considered to be estimated and qualified with a UJ flag. Cyanide QC batch 27467 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

  - MS/MSD Sample recovery (5A-IN)
  - PDS Summary (5B-IN)
  - LCS Recovery form (7A-IN)
  - LCS Duplicate Recover (7D-IN)
  - ICP-MS Serial Dilutions (8-IN)
  - Detection Limits Form (9-IN)
  - Linear dynamic ranges - ICPMS (11-IN)
  - Prep log - mercury and ICPMS (12-IN)
  - Run log - ICPMS and Mercury (13-IN)
  - ICP-MS TUNE (14-IN)
  - ICPMS Internal Standards Relative Intensity Summary (15-IN)
- Instrument Printouts
  - ICP-MS Raw instrument data
  - Mercury raw instrument data, run logs and calibrations
- Miscellaneous Data
  - Metals Batch Worksheet

GENERAL CHEMISTRY - Total and Amenable Cyanide and Alkalinity
- Cover Page
- Raw Data and Data Summaries for:
  - Sample Data (Form 1B-IN)
  - CCV/CCB (Form 2-IN)
  - METHOD BLANKS (Form 3-IN)
  - MATRIX SPIKES (Form 5-IN)
  - Sample DUPLICATES (Form 6-IN)
  - LCS/LCSD (Form 7-IN)
  - Detection Limits Form (9-IN)
  - Prep log (12-IN)
  - Analysis Run Logs (13-IN)
  - Raw Data - instrument sample sequence and calibration curve
  - Alkalinity Reagents
  - Alkalinity pH meter calibration
  - Alkalinity sequence log and raw data
  - General Chemistry Batch Worksheets

Shipping and Receiving Documents
- COC forms
- Cooler Receipt Form, checklist and narrative

APPENDIX 3

Analytical Results Summary

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85437-1	8/17-18/2015	8/19/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
GCMS SVOC and SIM
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
PCB
No additional qualifications were made beyond those determined from level 2 verification review as noted below.
METALS
Sample -004 dissolved sodium result was reported from a value that exceeded the instrument linear dynamic range (LDR) so this result should be considered to be estimated and qualified with a E flag.
INORGANICS
No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:
GCMS VOC
CCV outliers were not associated with target analytes for this submittal.
GCMS VOC-SIM
Ethylene dibromide (EDB) response was an outlier in the Continuing Calibration Verification Standard (CCV) for 8/26. CCV from the re-analysis on 8/29 was acceptable for EDB so final data for this analyte was reported from that sequence.
GCMS SVOC
No additional non-conforming observations to report.
METALS
PDS and SERIAL DILUTION analytical sequence outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.
CRQL's were consistently within lab control limits with the exception of potassium which was always biased high.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation. There was no ending CCV reported for the sequences evaluated.
RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:
Metals – raw instrument data from 9/2 for samples 85437-1, -2, -3, -5 total copper and 9/2 raw instrument data for total mercury for samples -001 and -002.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank had detections below the RL for naphthalene and acetone. Client sample -001 naphthalene result and client samples -004 and -006 acetone results should be considered to be non-detect at the RL and qualified with UB flags.

GCMS-SIM VOC surrogate recoveries were outliers biased high for 1 out of 4 surrogates in client sample -002. GCMS-SIM VOC sample -002 detected results should be considered to be estimated and qualified with J flags. Non-detect results do not require qualification.

GCMS-SIM VOC LCS/LCSduplicate RPD only was an outlier for 1,4-dioxane. Qualification of client sample results was not required based on this QC outlier alone.

GCMS-SIM VOC QC batch 277393 and GCMS SVOC QC batch 275780 and PCB QC batch 277676 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

Metals method blanks had detections below the RL in QC batch 274876 for manganese and vanadium and in QC batch 276235 for vanadium. Client samples -006 total manganese results and client samples -001, -002, -003, -005, -006 dissolved vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -002, -003, -004, -005, -006 total vanadium results should be considered to be non-detect at the concentration reported and qualified with B flags.

Metals QC batch 274876, 276235, 276944 and 278307 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Cyanide client sample -001 MS/MSD recoveries were outliers biased low. Client samples -001 cyanide results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

APPENDIX 1

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85529-1	8/18/2015	8/20/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM

GCMS VOC-SIM sample -004 result for 1,2,3-trichloropropane which was originally qualified as estimated with a J flag has been re-qualified as non-detect at the RL with a UB flag. Basis for qualification change was poor ion profile match between the peak in this sample and the reference ion profile and a non-detect for this analyte in the re-analysis of sample -004.

GCMS SVOC and SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

PCB

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

METALS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

INORGANICS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC

No additional non-conforming observations to report.

GCMS VOC-SIM

Ethylene dibromide (EDB) response was an outlier in the Continuing Calibration Verification Standard (CCV) for 8/26 and EDB, 1,2-dibromo-3-chloropropane and 1,2,3-trichloropropane were outlier for the 8/27 CCV. CCV from the re-analysis on 8/29 was acceptable for EDB so final data for this analyte was reported from that sequence.

GCMS SVOC

No additional non-conforming observations to report.

METALS

PDS and SERIAL DILUTION analytical sequence outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

CRQL's were consistently within lab control limits with the exception of potassium which was always biased high.

PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not affect sample quantitation. There was no ending CCV reported for the sequences evaluated.

RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:

Metals – raw instrument data from 9/1 for sample 85529-1 dissolved calcium, manganese and zinc results. Raw instrument data for all sample dissolved mercury results of 8/31.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank was non-detect for all target analytes.

REMOVED BASED ON LEVEL 4 DATA PACKAGE REVIEW - GCMS-SIM VOC surrogate recoveries were outliers biased high for 1 out of 4 surrogates in client sample -004. GCMS-SIM VOC sample -004 detected results should be considered to be estimated and qualified with J flags. Non-detect results do not require qualification.

GCMS-SIM VOC QC batch 276290 LCS/LCSduplicate RPD only was an outlier for 1,4-dioxane. Qualification of client sample results was not required based on this QC outlier alone. QC batch 276673 LCS/LCSduplicate recovery outliers were not associated with reportable results so qualification was not required based on these QC outliers.

GCMS-SIM VOC QC batch 277393 and GCMS SVOC QC batch 275885 and 276363 and PCB QC batch 277676 and PAH QC batch 275872 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS VOC QC batch LCS/LCSduplicate RPD was an outlier for 1,1-dichloroethylene. Qualification of client sample results was not required based on this QC outlier alone.

GCMS-SIM SVOC QC batch 275872 method blank had a detection above the RL for hexachlorobenzene. Qualification of client sample results was not required based on this method blank detection.

GCMS SVOC QC batch 275885 LCS recoveries were outliers biased high for benzaldehyde. Qualification of client sample results was not required based on this high bias QC outlier.

Metals method blanks had detections below the RL in QC batch 275634 for arsenic and vanadium and in QC batch 276235 for vanadium. Client samples -001, -002, -003, -005 dissolved vanadium results and client samples -003 and -005 total vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -002 and -004 total vanadium results and client sample -004 dissolved vanadium result and client samples -001, -002, -003 and -005 total arsenic results should be considered to be non-detect at the concentration reported and qualified with B flags.

GCMS VOC QC batch 277302 and Metals QC batch 276235 and 275634 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

Cyanide client sample -003 MS/MSD recoveries were outliers biased low. Client samples -003 cyanide results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected.

Chloride client sample -002 MS/MSD recoveries were outliers biased low. Client sample -002 chloride results should be considered to be estimated and qualified with a J flag.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

APPENDIX 5

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

ATTACHMENT A CHAIN OF CUSTODY DOCUMENT(S)

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85780-1	8/21/2015	8/22/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM

GCMS VOC Continuing Calibration Verification standards 278001/3 analyzed on 9/1 and CCV 278444/2 analyzed on 9/2 had multiple responses outside of laboratory control limits. High bias outliers did not have an effect on client sample data or were not associated with target analytes for this submittal. Low bias recoveries were observed for target analytes chloromethane and methyl acetate in the CCV from 9/1 and chloromethane, bromomethane, acetone and methyl acetate from 9/2. All client sample methyl acetate, acetone, bromomethane and chloromethane results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected based on these low bias CCV responses.

GCMS SVOC and SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

PCB

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

METALS

Client sample -003 total manganese result was above the instrument linear dynamic range (LDR) so this result should be considered to be estimated and qualified with an E flag.

INORGANICS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC

CCV outliers were not associated with target analytes for this submittal.

GCMS VOC-SIM

CCV for sequence 276673 on 8/27 had outliers that were not associated with reported sample results. ICV for sequence 277064 on 8/28 were reported on form VII as outliers based on known spike values reported. Verification with laboratory indicated that the known spike values should have been 10 and 0.5 (instead of 2000/100) as was historically reported for other sequences to these ICV recoveries were considered to be acceptable when compared to these historical values.

CCV 278441 had one surrogate outlier biased high – qualification of client sample results was not required based on this surrogate recovery outlier.

GCMS SVOC

Sample -010 was received with a pH of 14 according to the laboratory prep log. Sample was acidified to pH 2 prior to the initial extraction so qualification was not made based on this sample condition.

QC batch 276471 MS/MSD was not spiked during QC prep and was consequentially re-extracted outside of the referenced hold time criteria.

GCMS SVOC-SIM

Sample -008 and -011was received at a pH of 11 according to the laboratory prep log. Sample was acidified to pH 2 prior to the initial extraction so qualification was not made based on this sample condition.

METALS

No additional observations to report.

PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not result in qualification of final client sample results.

RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:

DISSOLVED MERCURY – Sample raw data was not included – duplicate of total mercury run was reported instead.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank was non-detect for all target analytes.

GCMS-VOC SIM QC batch 278441 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify results as part of this level 2 data package review.

GCMS-VOC SIM QC batch 278441 LCS and LCSduplicate recoveries were outliers biased low for ethylene dibromide. Qualification of client sample results was not required based on this QC outlier.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS VOC QC batch 278444 LCS recovery was an outlier biased high for cyclohexane. Qualification of client sample results was not required based on these high bias QC outliers.

GCMS VOC QC batch 278444 method blank had a detection below the RL for methylene chloride. Qualification of client sample results was not required based on this method blank detection.

GCMS VOC sample -005 MSD recovery only was an outlier biased high for cyclohexane. Qualification of client sample results was not required based on this QC outlier alone.

GCMS VOC SIM QC batch 277754 MS recoveries were not performed due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS SVOC and GCMS-SIM SVOC sample -005 MS recoveries were not reported in the laboratory submittal QC summary. These QC results will be evaluated as part of the level 4 data package review to follow.

GCMS SVOC-SIM sample -005 was re-analyzed outside of the referenced holding time so these re-analysis results should be considered to be estimated and qualified with J flags if detected and UJ flags if noon-detect.

GCMS SVOC QC batch 277998 LCS recoveries were outliers biased high for benzaldehyde. Qualification of client sample results was not required based on this high bias QC outlier.

Note: sample -008 preservation outlier (pH of 11) could not be evaluated based on the level 2 data package so will be addressed as part of the level 4 data package review.

PCB sample -008 was not analyzed due to insufficient sample volume available.

GCMS-SIM SVOC surrogate recoveries were outliers biased low and less than 10% for at least 1 out of 3 acid fraction surrogates in client samples -004, -005, -008 and -010. Base-neutral fraction surrogates were outliers biased low and less than 10% for at least 1 out of 3 base-neutral surrogates in client samples -005, -008 and -010 and 1 out of 3 base-neutral fraction surrogates was an outlier biased low but greater than 10% for client sample -004. Client sample -004, -005, -008 and -010 initial analysis GCMS SVOC-SIM acid fraction results and client samples -005, -008 and -010 base-neutral fraction results should be considered to be unusable and qualified with R flags if non-detect and estimated with J flags if detected. Samples -004, -005, -008 and -010 were re-analyzed outside of the referenced holding time so these re-analysis results should all be considered to be estimated and qualified with J flags if detected and UJ flags if non-detect. Surrogate recovery outliers for QC batch 277998 LCS did not require qualification of client sample results.

GCMS-SIM SVOC LCS/LCSduplicate RPD for QC batch 277972 was an outlier for pentachlorophenol. Qualification of client sample results was not required based on this QC outlier alone.

Metals method blanks had detections below the RL in QC batch 275892 and 276511 for total and dissolved vanadium. Client samples -001, -002, -003, -004, -005, -006, -007 dissolved vanadium results and client samples -001, -002, -003, -004, -005, -007, -008 total vanadium results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -006 total vanadium results should be considered to be non-detect at the concentration reported and qualified with B flags.

Cyanide sample -005 MS recovery only was an outlier biased low. Qualification of client sample results is not required based on this QC outlier alone. QC batch 276133 MS recovery outliers were not determined using samples from this submittal.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.
If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.
All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.
CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD’s were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Nashville Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. A sampling and analysis summary that lists all sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. A summary of all of the analytical data is presented in Appendix 3. Copies of sample Chain of Custody (COC) documents and cooler receipt forms for samples discussed in this report are included in Attachment A.
Note: One field sample from this submittal was collected in triplicate to facilitate use of this sample as the QC batch MS/MSD for each analysis where appropriate (MS not required for alkalinity).

Table 1.1

Laboratory Submittal	***Sample Date***	***Laboratory Receipt Date***
490-85948-1	8/24-25/2015	8/26/2015

The samples noted below were validated against the associated method/parameter in order to achieve the validation requirements for this SDG:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
Volatile Organics	OSW-8260C	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8260CSIM	1,2-Dibromo-3-Chloropropane,1,4-Dioxane,EthyleneDibromide,1,2,3-Trichloropropane
Semi-Volatile Organics	OSW-8270D	TCL List OLM4.2 plus 15 TIC's
Custom Short List	OSW-8270DSIM	Extended list includes the following: Benzo(a)anthracene,Benzo(a)pyrene, Benzo(b)fluoranthene,Hexachlorobenzene, Hexachlorobutadiene,N-Nitrosodimethylamine,Pentachlorophenol
PCB	OSW-8082A	7 Standard Aroclors
Metals	OSW-6020A/7470A	Total and dissolved TAL Metals
Ion Chromatography	OSW-9056A	Chloride and Sulfate
Total Cyanide	OSW-9021B	Total and Amenable Cyanide
General Chemistry	APHA-2320B	Total and Bicarbonate Alkalinity

All "SW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third Edition, November 1986 (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis. A Level IV (Tier 3) data review was performed on the samples listed in Table 1.2 above by (CADENA).

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.
ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are presented in the following subsections.

An overview of the review findings is presented in table format. Several data qualifier flags were utilized in the review process. The definitions of these qualifier flags are as follows:

- J Indicates an estimated value.
- U Indicates the compound or analyte was analyzed for, but not detected at or above the stated limit.
- UJ The analyte/compound was not detected above the reported sample quantitation limit. However, the quantitation limit is considered to be approximate due to associated quality assurance results.
- UB The analyte was detected in the sample at a level between the MDL and RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the reporting limit.
- B The analyte was detected in the sample at a level above the RDL. For organics the sample concentration for common lab contaminates was less than 10 times the blank concentration or 5 times for other organic compounds and for inorganics the sample concentration was less than 10 times the blank concentration. The sample result should be considered non-detect at the concentration reported.
- R The analyte/compound results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte/compound cannot be verified.

All flags have been incorporated into the data tables in this report.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS VOC and SIM

GCMS VOC Continuing Calibration Verification standards CCV 278804/2 analyzed on 9/3 had multiple responses outside of laboratory control limits. High bias outliers did not have an effect on client sample data or were not associated with target analytes for this submittal. Low bias recoveries were observed for target analytes chloromethane and methyl acetate in the CCV from 9/3. All client sample methyl acetate and methyl acetate results should be considered to be estimated and qualified with UJ flags if non-detect and J flags if detected based on these low bias CCV responses.

GCMS SVOC and SIM

GCMS SVOC Continuing Calibration Verification (CCV) standard 277755/3 had multiple response outliers biased high and target analyte 2,2'-oxybis(1-chloropropane) response biased low. This analyte reporting limit and result should be considered to be estimated and qualified with UJ flags for all samples. Target analyte high bias outliers did not result in qualification of client data since associated sample results were all non-detect.

PCB

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

METALS

Client sample -005 dissolved manganese result was above the instrument linear dynamic range (LDR) so this result should be considered to be estimated and qualified with an E flag (total manganese for sample -004 was marginally over the LDR (less than 10%) so the associated result was not qualified.

Dissolved selenium result for sample -002 was qualified with a B flag due to detections in associated calibration blank CCB 490-278732/125. Total thallium and total lead in client sample -001 were qualified with UB flags due to detections in associated calibration blank CCB 490-277352/18.

INORGANICS

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC

No additional observations to report.

GCMS VOC-SIM

CCV for sequence 278757 on 9/3 had an outlier biased high for 1,4-dioxane and one surrogate. Since all associated client sample 1,4-dioxane results were non-detect qualifications were not applied based on this high bias calibration response outlier. ICV for sequence 277064 on 8/28 were reported on form VII as outliers based on known spike values reported. Verification with laboratory indicated that the known spike values should have been 10 and 0.5 (instead of 2000/100) as was historically reported for other sequences to these ICV recoveries were considered to be acceptable when compared to these historical values.

GCMS SVOC
No additional observations to report.
GCMS SVOC-SIM
No additional observations to report.
METALS
No additional observations to report.
PCB – internal standard technique was used for both columns. Some initial and continuing calibration outliers were observed for specific aroclor 1016/1260 peaks on the secondary columns but these outliers did not result in qualification of final client sample results.
Sample -007 was received at a pH of 10 according to the laboratory submittal prep log. This is outside of recommended preservation range for this analysis but sample pH was adjusted prior to sample prep so qualifications were not applied based on this preservation non-conformance.
RAW DATA NOT INCLUDED IN ORIGINAL LAB LEVEL 4 DATA PACKAGE:
TOTAL MERCURY – Sample raw data was not included – duplicate of total mercury run was reported instead. (Received from lab 2015-10-27)
CYANIDE – raw data from sequence analyzed on 8/27. (Received from lab 2015-10-27)

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

The following minor QC exceptions or missing information were noted:

GCMS VOC trip blank was non-detect for all target analytes.

GCMS-SIM VOC QC batch 278757 and GCMS SVOC QC batch 277755 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify results as part of this level 2 data package review.

GCMS VOC and GCMS SVOC TIC results should be considered to be estimated and qualified with NJ flags unless the TIC analyte detected is an instrument calibrated compound that is just not part of the TAL for this submittal in which case no qualification is required other than the TIC qualification code or J flag if the result is detected below the RL.

GCMS VOC QC batch 278804 LCS recovery was an outlier biased high for cyclohexane. Qualification of client sample results was not required based on these high bias QC outliers.

GCMS VOC QC batch 278804 method blank had a detection below the RL for methylene chloride. Client sample -003 result for this analyte should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS VOC sample -001 MS recovery only was an outlier biased low for 1,1-dichloroethylene. Qualification of client sample results was not required based on this QC outlier alone.

PAH QC batch 277571 MS recoveries were not performed due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS SVOC QC batch 277572 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

GCMS SVOC QC batch 277572 LCS recoveries were outliers biased high for benzaldehyde. Qualification of

client sample results was not required based on this high bias QC outlier.

GCMS SVOC surrogate recoveries were outliers biased high for only 1 out of 3 acid fraction surrogates in QC batch 277572 method blank and LCS. Qualification based on these surrogate recovery outliers was not required.

Metals method blanks had detections below the RL in QC batch 276608 for total silver and total vanadium and in QC batch 277682 for dissolved vanadium and in QC batch 277068 for dissolved vanadium and dissolved manganese. Client samples -003, -004, -005 dissolved vanadium results and client samples -003.-005, -006 total vanadium results and client sample -003 dissolved manganese results should be considered to be non-detect at the RL and qualified with UB flags. Client samples -006 total vanadium results and client samples -001, -002, -006 dissolved vanadium results and client sample -004 dissolved manganese results should be considered to be non-detect at the concentration reported and qualified with B flags.

Metals sample -001 MS/MSD recoveries were not considered to be statistically reliable due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule) so were not used to qualify results for manganese.

Cyanide sample -004 MSD recovery only was an outlier biased low. Qualification of client sample results is not required based on this QC outlier alone. QC batch sample duplicate RPD outlier was not performed using a sample from this submittal so qualification was not required based on this sample-specific QC outlier.

Note: Field blank data, if available, was not utilized to qualify client sample results as part of this level 2 data package verification review.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM Analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration verification (ICV) standards for VOC analyses were reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.
If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.
All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.
CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable unless noted otherwise in verification/validation summary.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis

The target analyte list was defined by the client-project as TCL List OLM4.2.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds (Bromofluorobenzene or BFB) were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs were reviewed and met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

TIC detections that are not supported by the calibration criteria available in the level 4 data package were qualified with NJ flags including the total alkane parameters. Detections made using the TIC approach that are supported by calibration and retention time data were qualified as target analytes using J flags for detections below the RL and no qualifiers for results above the RL that are supported with compliant batch and instrument QC.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020 TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time and preservation requirements are summarized in Appendix 5.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

All samples were properly preserved and cooled to 0-6^{o}C after collection.

8.2 METHOD BLANK SUMMARY

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

Evaluation of blank contamination includes directions on the interpretation of the affected analytical results.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results meet the project specific QAPP standard for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Laboratory: TestAmerica - Nashville
Laboratory submittal: 85948-2
Sample date: 2015-08-24
Report received by CADENA: 2015-11-20
Initial Data Verification completed by CADENA: 2015-11-20

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

2 Water sample(s) were analyzed for PCB parameter(s).

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

SAMPLING AND ANALYSIS SUMMARY

RE: Ringwood Mines - 1508008

Enclosed are the results of analyses for samples received by the laboratory on 08/06/2015. The signature below reflects the laboratory's approval of the reported results. If you have any questions concerning this report, please refer to Project Number 1508008 and contact John Birri by phone at 732-906-6886, or via Email at birri.john@epa.gov.

Sincerely,

John R. Bourbon
Chief, DESA/LB

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Region 2 Laboratory

Final Report

Project: Ringwood Mines - 1508008

Project Number: 1508008

Project Narrative:

The National Environmental Laboratory Accreditation Conference Institute (TNI) is a voluntary environmental laboratory accreditation association of State and Federal agencies. TNI established and promoted a National Environmental Laboratory Accreditation Program (NELAP) that provides a uniform set of standards for the generation of environmental data that are of known and defensible quality. The EPA Region 2 Laboratory is NELAP accredited. The Laboratory tests that are accredited have met all the requirements established under the TNI Standards.

Condition Comments

PCB Aroclors - The Surrogate recoveries in either columns and in some instances both columns were very low on samples 1508008-02, 1508008-03, 1508008-04, 1508008-06 and 1508008-07, thus the Aroclors results on these samples were qualified with "L".

Comment(s):

The "Sample Analysis Date and Time" is included in the results section for any analyte with a prescribed holding time of 72 hours or less.

Data Qualifier(s):

U- The analyte was not detected at or above the Reporting Limit.
J- The identification of the analyte is acceptable; the reported value is an estimate.
K- The identification of the analyte is acceptable; the reported value may be biased high.
L- The identification of the analyte is acceptable; the reported value may be biased low.
NJ- There is presumptive evidence that the analyte is present; the analyte is reported as a tentative identification. The reported value is an estimate.

Reporting Limit(s):The Laboratory was able to achieve the appropriate limits for each analyte requested, except for the following:

Semi-Volatile Organic Compounds: The CRQL for 2,4-Dinitrophenol and 4,6-Dinitro-2-Methylphenol in water is 5.0 ug/L. The Laboratory Reporting Limits is raised due to problems associated with the initial calibration curve for all samples.
