GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	RINGWOOD MINE/ LANDFILL	**Lab Number:**	L1625725
Project Number:	140802-015	**Report Date:**	09/29/16

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: ***EPA 3050B***

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Mansfield Facility:

Drinking Water
EPA 200.7: Ba, Be, Cd, Cr, Cu, Ni, Na, Ca. **EPA 200.8:** Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Ni, Se, TL. **EPA 245.1** Hg.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.
EPA 245.1 Hg.
SM2340B

Sample Delivery Group Information

Sample Delivery Group Form

Laboratory Job number: L1625892
Project Manager: Nichole Hunt **Review Date:** 08/23/2016
Project Number: 140802-015
Project Name: FORD-RINGWOOD **Received:** 08/18/2016 07:58
Client Account: Cornerstone/Cadena Co. joint account **Received by:** KB

Samples Delivered by: COURIER **Call Tracker #**
Bill Of Laden N/A **Trackingnum**
Coc Present Present

Container Status Intact **Sample IDs** rec'd in MF at 2.2c, 3.2c (9849).

All Containers Accounted For? Yes

Were Extra Samples Received? No

Do Sample Labels and COC agree? Yes

Are Samples in Appropriate Containers? Yes

Are Samples Received within Holding time? Yes

pH of Samples upon Receipt 7 **Are samples Properly Preserved?** Yes
Initial pH **preserved in house with** **Final pH**
Other Issues
Chlorine Check N/A

Are VOA/VPH Vials Present? No
Aqueous: Do Vials Contain Head Space? N/A
Soils: Is MeOHCovering the Soil? N/A
Reagent H2O Preserved vials Frozen on N/A
Frozen by Client N/A

Cooler	Seal	Ice Present	Blue Ice Present	Temp. (Celsius)	Frozen upon Receipt	Delivered Direct from Site
B	Absent	Yes	No	4.6 - IR Gun	No	No

A	Absent	Yes	No	2.5 - IR Gun	No	No

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	YES
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	YES
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	NO

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: FORD-RINGWOOD **Lab Number:** L1625892
Project Number: 140802-015 **Report Date:** 08/28/16

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives

Semi-Volatiles

In reference to question 5a:

Reporting limits were not specified.

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORD-RINGWOOD	**Lab Number:**	L1625892
Project Number:	140802-015	**Report Date:**	08/28/16

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	YES
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	YES
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	NO

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: FORD-RIDGEWOOD **Lab Number:** L1626118
Project Number: 140802-015 **Report Date:** 08/26/16

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: 140802-015 **Report Date:** 08/26/16

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives

Report Submission

In reference to question 5a:

Reporting limits were not specified.

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name: FORD-RIDGEWOOD **Lab Number:** L1626118

Project Number: 140802-015 **Report Date:** 08/26/16

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name: FORD-RIDGEWOOD
Project Number: 140802-015
Lab Number: L1626118
Report Date: 08/26/16

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: ***EPA 3050B***

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Mansfield Facility:

Drinking Water
EPA 200.7: Ba, Be, Cd, Cr, Cu, Ni, Na, Ca. **EPA 200.8:** Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Ni, Se, TL. **EPA 245.1** Hg.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.
EPA 245.1 Hg.
SM2340B

Instrument Performance Check
Decafluorotriphenylphosphine (DFTPP)
Form 5

Client	: Cornerstone/Cadena Co. joint accoun	**Lab Number**	: L1626118
Project Name	: FORD-RIDGEWOOD	**Project Number**	: 140802-015
Instrument ID	: BNA6	**Analysis Date**	: 08/24/16 20:02
Tune Standard	: WG925553-4	**Tune File ID**	: F608241613_tune

m/e	Ion Abundance Criteria	%Relative Abundance
51	10.0 - 80.0% of Base Peak	27.1
68	Less than 2.0% of mass 69	0 (0)1
70	Less than 2.0% of mass 69	0.2 (.6)1
127	10.0 - 80.0% of Base Peak	37.6
197	Less than 2.0% of mass 198	0
198	Base Peak, or >50% of mass 442	100
199	5.0 - 9.0% of mass 198	6.9
275	10.0 - 60.0% of Base Peak	29
365	Greater than 1.0% of mass 198	2.8
441	Present, but less than 24% of mass 442	15.6
442	Base Peak, or >50% of mass 198	94.6
443	15.0 - 24.0% of mass 442	18.5 (19.6)2

1-Value is % of mass 69 2-Value is % of mass 442

This Check Applies to the following Samples, MS, MSD, Blanks, and Standards:

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	YES
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	YES
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	NO

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: FORD-RIDGEWOOD **Lab Number:** L1626448
Project Number: Not Specified **Report Date:** 09/01/16

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives

Semi-Volatiles

In reference to question 5a:

Reporting limits were not specified.

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name: FORD-RIDGEWOOD **Lab Number:** L1626448

Project Number: Not Specified **Report Date:** 09/01/16

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS

Container Type: A
Preservative: A

Preservative Code:
A = None
B = HCl
C = HNO_3
D = H_2SO_4
E = NaOH
F = MeOH
G = $NaHSO_4$
H = $Na_2S_2O_3$
K/E = Zn Ac/NaOH
O = Other

Container Code
P = Plastic
A = Amber Glass
V = Vial
G = Glass
B = Bacteria Cup
C = Cube
O = Other
E = Encore
D = BOD Bottle

Project Information

Project Name: Ford - Ringwood
Project Location: Ringwood NJ
Project #
(Use Project name as Project #) ☐
Project Manager: Tim Roeper
ALPHAQuote #:

Turn-Around Time

Standard ☑ Due Date:
Rush (only if pre approved) ☐ # of Days:

Deliverables

☐ NJ Full / Reduced
☐ EQuIS (1 File) ☐ EQuIS (4 File)
☐ Other

Regulatory Requirement

☐ SRS Residential/Non Residential
☐ SRS Impact to Groundwater
☐ NJ Ground Water Quality Standards
☐ NJ IGW SPLP Leachate Criteria
☐ Other

Billing Information

☐ Same as Client Info
PO #

Site Information

Is this site impacted by Petroleum? Yes ☐
Petroleum Product:

These samples have been previously analyzed by Alpha ☐

For EPH, selection is REQUIRED:
☐ Category 1
☐ Category 2

For VOC, selection is REQUIRED:
☐ 1,4-Dioxane
☐ 8011

Other project specific requirements/comments:

Please specify Metals or TAL.

ANALYSIS

A2 1,4 Dioxane SIM - PPB

Sample Filtration
☐ Done
☐ Lab to do
Preservation

ALS Vial : 9 Sample Multiplier: 1

Quant Time: Sep 07 11:04:04 2016
Quant Method : O:\Organics\DATA\BNA6\2016\Sep\Sep06\14DIOX0906BNA6.M
Quant Title : Semivolatiles by GC/MS
QLast Update : Wed Sep 07 11:02:54 2016
Response via : Initial Calibration

Sub List : Default - All compounds listed

Work Group

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	NO
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	YES
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	NO

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: FORD-RINGWOOD
Project Number: 140802-015

Lab Number: L1626610
Report Date: 09/29/16

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

This report replaces the re-issued report from September 7, 2016. Both the initial and re-extraction results for sample L1626610-06 have been included.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives

Report Submission

In reference to question 1a:

Sample L1626610-06 was re-extracted and reported eight days beyond the hold time.

In reference to question 5a/b:

Reporting limits were not specified.

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name: FORD-RINGWOOD **Lab Number:** L1626610

Project Number: 140802-015 **Report Date:** 09/29/16

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility

EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: ***EPA 3050B***

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Mansfield Facility:

Drinking Water
EPA 200.7: Ba, Be, Cd, Cr, Cu, Ni, Na, Ca. **EPA 200.8:** Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Ni, Se, TL. **EPA 245.1** Hg.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.
EPA 245.1 Hg.
SM2340B

Sample Delivery Group Information

Sample Delivery Group Form

Laboratory Job number: L1626817
Project Manager: Nichole Hunt **Review Date:** 08/30/2016
Project Number: 140802-015
Project Name: FORD-RINGWOOD **Received:** 08/25/2016 08:32
Client Account: Cornerstone/Cadena Co. joint account **Received by:** KB

Samples Delivered by: COURIER **Call Tracker #**
Bill Of Laden N/A **Trackingnum**
Coc Present Present

Container Status Intact **Sample IDs**

All Containers Accounted For? Yes

Were Extra Samples Received? No

Do Sample Labels and COC agree? Yes

Are Samples in Appropriate Containers? Yes

Are Samples Received within Holding time? Yes

pH of Samples upon Receipt 7 **Are samples Properly Preserved?** Yes
Initial pH **preserved in house with** **Final pH**
Other Issues
Chlorine Check N/A

Are VOA/VPH Vials Present? No
Aqueous: Do Vials Contain Head Space? N/A
Soils: Is MeOHCovering the Soil? N/A
Reagent H2O Preserved vials Frozen on N/A
Frozen by Client N/A

Cooler	Seal	Ice Present	Blue Ice Present	Temp. (Celsius)	Frozen upon Receipt	Delivered Direct from Site
A	Absent	Yes	No	2.0 - IR Gun	No	No

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	YES
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	YES
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	YES

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: FORD-RINGWOOD **Lab Number:** L1626817
Project Number: 140802-015 **Report Date:** 09/01/16

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives

Semi-Volatiles

In reference to question 5a:

Reporting limits were not specified.

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORD-RINGWOOD	**Lab Number:**	L1626817
Project Number:	140802-015	**Report Date:**	09/01/16

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: ***EPA 3050B***

Sample Delivery Group Information

Sample Delivery Group Form

Laboratory Job number: L1626902
Project Manager: Nichole Hunt **Review Date:** 08/30/2016
Project Number: 140802-015
Project Name: FORD-RINGWOOD **Received:** 08/26/2016 14:45
Client Account: Cornerstone/Cadena Co. joint account **Received by:** BB

Samples Delivered by: **Call Tracker #**
Bill Of Laden N/A **Trackingnum**
Coc Present Present

Container Status Intact **Sample IDs**

All Containers Accounted For? Yes

Were Extra Samples Received? No

Do Sample Labels and COC agree? Yes

Are Samples in Appropriate Containers? Yes

Are Samples Received within Holding time? Yes

pH of Samples upon Receipt 7 **Are samples Properly Preserved?** Yes
Initial pH **preserved in house with** **Final pH**
Other Issues
Chlorine Check N/A

Are VOA/VPH Vials Present? No
Aqueous: Do Vials Contain Head Space? N/A
Soils: Is MeOHCovering the Soil? N/A
Reagent H2O Preserved vials Frozen on N/A
Frozen by Client N/A

Cooler	Seal	Ice Present	Blue Ice Present	Temp. (Celsius)	Frozen upon Receipt	Delivered Direct from Site
A	Absent	Yes	No	2.0 - IR Gun	No	No

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	YES
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	YES
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	NO

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: FORD-RINGWOOD
Project Number: 140802-015

Lab Number: L1626902
Report Date: 09/02/16

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: FORD-RINGWOOD **Lab Number:** L1626902

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives

Semi-Volatile Organics

In reference to question 5a:

Reporting limits were not specified.

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORD-RINGWOOD	**Lab Number:**	L1626902
Project Number:	140802-015	**Report Date:**	09/02/16

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Instrument Performance Check
Decafluorotriphenylphosphine (DFTPP)
Form 5

Client	: Cornerstone Environmental Group, LL	**Lab Number**	: L1626902
Project Name	: FORD-RINGWOOD	**Project Number**	: 140802-015
Instrument ID	: BNA7	**Analysis Date**	: 09/01/16 02:19
Tune Standard	: WG927825-4	**Tune File ID**	: F708311617_tune

m/e	Ion Abundance Criteria	%Relative Abundance
51	10.0 - 80.0% of Base Peak	49
68	Less than 2.0% of mass 69	0.6 (1.5)1
70	Less than 2.0% of mass 69	0.2 (.5)1
127	10.0 - 80.0% of Base Peak	60.9
197	Less than 2.0% of mass 198	0.8
198	Base Peak, or >50% of mass 442	100
199	5.0 - 9.0% of mass 198	7
275	10.0 - 60.0% of Base Peak	21.3
365	Greater than 1.0% of mass 198	2.8
441	Present, but less than 24% of mass 442	14.6
442	Base Peak, or >50% of mass 198	59.3
443	15.0 - 24.0% of mass 442	11.4 (19.3)2

1-Value is % of mass 69 2-Value is % of mass 442

This Check Applies to the following Samples, MS, MSD, Blanks, and Standards:

Client Sample ID	Lab Sample ID	File ID	Analysis Date/Time

Sample Delivery Group Information

Sample Delivery Group Form

Laboratory Job number: L1627228
Project Manager: Nichole Hunt **Review Date:** 09/01/2016
Project Number: 140802-015
Project Name: FORD-RINGWOOD **Received:** 08/30/2016 15:30
Client Account: Cornerstone/Cadena Co. joint account **Received by:** KB

Samples Delivered by: COURIER **Call Tracker #**
Bill Of Laden N/A **Trackingnum**
Coc Present Present

Container Status Intact **Sample IDs** rec'd in MF at 2.3c (9829)

All Containers Accounted For? Yes

Were Extra Samples Received? No

Do Sample Labels and COC agree? Yes

Are Samples in Appropriate Containers? Yes

Are Samples Received within Holding time? Yes

pH of Samples upon Receipt 7 **Are samples Properly Preserved?** Yes
Initial pH **preserved in house with** **Final pH**
Other Issues
Chlorine Check N/A

Are VOA/VPH Vials Present? No
Aqueous: Do Vials Contain Head Space? N/A
Soils: Is MeOHCovering the Soil? N/A
Reagent H2O Preserved vials Frozen on N/A
Frozen by Client N/A

Cooler	Seal	Ice Present	Blue Ice Present	Temp. (Celsius)	Frozen upon Receipt	Delivered Direct from Site
A	Absent	Yes	No	2.9 - IR Gun	No	No

Project Information

Project Name: FORD - Ringwood
Project Location: RINGWOOD NJ
Project #: 140802-015
(Use Project name as Project #) ☐ 140802-015
Project Manager: Tim Reeper
ALPHAQuote #:

Turn-Around Time

Standard ☒ Due Date:
Rush (only if pre approved) ☐ # of Days:

Deliverables

☐ NJ Full / Reduced
☐ EQuIS (1 File) ☐ EQuIS (4 File)
☐ Other

Regulatory Requirement

☐ SRS Residential/Non Residential
☐ SRS Impact to Groundwater
☐ NJ Ground Water Quality Standards
☐ NJ IGW SPLP Leachate Criteria
☐ Other

Billing Information

☐ Same as Client Info
PO #

Site Information

Is this site impacted by Petroleum? Yes ☐
Petroleum Product:

These samples have been previously analyzed by Alpha ☐

For EPH, selection is REQUIRED:
☐ Category 1
☐ Category 2

For VOC, selection is REQUIRED:
☐ 1,4-Dioxane
☐ 8011

Other project specific requirements/comments:

Please specify Metals or TAL.

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	YES
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	YES
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	YES

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: FORD-RINGWOOD
Project Number: 140802-015

Lab Number: L1627228
Report Date: 09/02/16

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives

Report Submission

In reference to question 5a/b:

Reporting limits were not specified.

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Elizabeth Porta

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORD-RINGWOOD	**Lab Number:**	L1627228
Project Number:	140802-015	**Report Date:**	09/02/16

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Site Information
Is this site impacted by Petroleum? Yes ☐
Petroleum Product:

These samples have been previously analyzed by Alpha ☐

For EPH, selection is REQUIRED:
☐ Category 1
☐ Category 2

For VOC, selection is REQUIRED:
☐ 1,4-Dioxane
☐ 8011

Other project specific requirements/comments:

Please specify Metals or TAL.

RE: **Ford Ringwood 140802-015**
Pace Workorder: 20025

Dear Tim Roeper:

Enclosed are the analytical results for sample(s) received by the laboratory on Wednesday, August 24, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 09/23/2016

LABORATORY ACCREDITATIONS & CERTIFICATIONS

Accreditor:	Pennsylvania Department of Environmental Protection, Bureau of Laboratories
Accreditation ID:	02-00538
Scope:	NELAP Non-Potable Water and Solid & Hazardous Waste
Accreditor:	South Carolina Department of Health and Environmental Control, Office of Environmental Laboratory Certification
Accreditation ID:	89009003
Scope:	Clean Water Act (CWA); Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: New Jersey, Department of Environmental Protection
Accreditation ID:	PA026
Scope:	Non-Potable Water; Solid and Chemical Materials
Accreditor:	NELAP: New York, Department of Health Wadsworth Center
Accreditation ID:	11815
Scope:	Non-Potable Water; Solid and Hazardous Waste
Accreditor:	State of Connecticut, Department of Public Health, Division of Environmental Health
Accreditation ID:	PH-0263
Scope:	Clean Water Act (CWA) Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: Texas, Commission on Environmental Quality
Accreditation ID:	T104704453-09-TX
Scope:	Non-Potable Water
Accreditor:	State of New Hampshire
Accreditation ID:	299409
Scope:	Non-potable water
Accreditor:	State of Georgia
Accreditation ID:	Chapter 391-3-26
Scope:	As per the Georgia EPD Rules and Regulations for Commercial Laboratories, PAES is accredited by the Pennsylvania Department of Environmental Protection Bureau of Laboratories under the National Environmental Laboratory Approval Program (NELAC).

ANALYTICAL RESULTS QUALIFIERS

Workorder: 20025 Ford Ringwood 140802-015

DEFINITIONS/QUALIFIERS

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
s	Subcontracted to Pace Florida under NELAC Certification Number - PA68-00547
G	Subcontracted to Pace Greensburg under NELAC Certification Number - PA65-00282
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.
s	Subcontracted; for any related quality nonconformance see additional report(s)

REPORT OF ENVIRONMENTAL FORENSICS ISOTOPE ANALYSES

Date Received: 8/24/2016
Date Reported: 9/15/2016

Water sample submitted for $\delta^{13}C$ (‰ VPDB) and $\delta^{2}H$ (‰ VSMOW) stable isotope analysis of 1,4-Dioxane

Pace CSIA Lab ID	Client's Sample ID Description	$\delta^{13}C$ 1,4-Dioxane	$\delta^{2}H$ 1,4-Dioxane
20025-1	RW-11D(262-267)-082316	-29.71	-97.31
20025-2	PMP-AS-180-082316	-29.55	[JA] -110.61
20025-3	PMP-AS-230-082316	-29.86	-103.75
20025-4	R-3DD(175-180)-082316	-29.24	[JA] -105.04

[J]-Target analyte produced a low peak signal and the result is considered usable to ± 2‰, but not the standard ± 0.5‰
[JA]-Target analyte produced a low peak signal and the result is considered usable to ± 20‰, but not the standard ± 10‰
[U]-Either there was no peak corresponding to the target analyte or that such a peak did not produce a reliable CSIA result due to sample matrix or high dilutions applied to avoid instrument contamination
Method: Compound Specific Isotope Analysis for ^{13}C and ^{2}H by GC-IRMS, for ^{37}Cl by GC-qMS
VPDB: Vienna Pee Dee Belemnite (carbon isotope international standard)
VSMOW: Vienna Standard Mean Ocean Water (hydrogen isotope international standard)

RE: Project: 20025
Pace Project No.: 35262213

Dear Ruth Welsh:
Enclosed are the analytical results for sample(s) received by the laboratory on August 26, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bo Garcia

REPORT OF LABORATORY ANALYSIS

QUALIFIERS

Project: 20025
Pace Project No.: 35262213

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Pace Project No.: 30194224

Dear Jianwu Tang:
Enclosed are the analytical results for sample(s) received by the laboratory on August 25, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Rachel D Christner

PROJECT NARRATIVE

Project: 20025
Pace Project No.: 30194224

Method: **EPA 8260B**
Description: 8260B MSV
Client: Pace Analytical Energy Services, LLC
Date: September 01, 2016

General Information:
4 samples were analyzed for EPA 8260B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

REPORT OF LABORATORY ANALYSIS

QUALIFIERS

Project: 20025
Pace Project No.: 30194224

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	*Reference Method*	*Analyte Listing*
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality

	assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

ALLTESTING PARAMETERS

GC/MS SVOC SIM

CCV outliers in analytical batch 388049 and 388356 CCV response outliers were low and outside the specified criteria for PENTACHLOROPHENOL Client sample results (samples -001, -002, -003, -004, -005, -006, -007) for this analytes should be considered to be estimated and qualified with a UJ flags if non-detect.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GC/MS VOC

CCV outliers in analytical batch 386844 CCV were high and outside the specified criteria for TRICHLOROFLUOROMETHANE AND DICHLOROFLUOROMETHANE. Associated client results were non-detect so qualification was not required based on the high bias QC outliers.

GCMS VOC QC did not include MS/MSD recovery data.

ALL PARAMETERS

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GC/MS SVOC, VOC SIM, SVOC SIM, and PCB

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

GC/MS SVOC

CCV outliers in analytical batch 387551 were high and outside the specified criteria for N-NITROSO-DI-N-PROPYLAMINE and 4-CHLORO-3-METHYLPHENOL. Associated client results were non-detect so qualification was not required based on the high bias QC outliers.

PCB

Sample -001 and -007 surrogate recoveries associated with p flags for difference between primary and confirmatory column results greater than 40% did not result in qualification for client sample data.

METALS

Sample -006 Post Digestion Spike (PDS) recovery outside of method criteria for dissolved silver did not result in qualification for client sample data.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -001, -005, -006, -007. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

LCS - GCMS SVOC QC prep batch 387311 and QC prep batch 387196 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL, CAPROLACTAM, HEXACHLOROBUTADIENE, HEXACHLOROBENZENE, 1,2,4,5-TETRACHLOROBENZENE, HEXACHLOROCYCLOPENTADIENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL - samples -001, -002, -003, -004, -005, -006, -007; CAPROLACTAM, HEXACHLOROBUTADIENE, HEXACHLOROBENZENE, HEXACHLOROCYCLOPENTADIENE, 1,2,4,5-TETRACHLOROBENZENE - samples -001, -002, -003, -004, -005, -007.

MBK - GCMS SVOC QC batch 387196 method blanks had detections below the RL for the following analytes: BIS-2-ETHYLHEXYLPHTHALATE, DI-N-BUTYLPHTHALATE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: BIS-2-ETHYLHEXYLPHTHALATE - samples -001, -003, -004, -007; DI-N-BUTYLPHTHALATE - samples -001, -002, -003, -004, -005, -007. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: BIS-2-ETHYLHEXYLPHTHALATE - samples -002, -005.

MSD - METALS sample -001 MS recovery outliers (NO MSD FOR THIS BATCH) were outliers with the recovery biased low for the following analytes: SILVER, ANTIMONY, SELENIUM. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

GCMS SVOC QC prep batch 387311 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

PCB QC batch 386833 LCS recoveries were outliers biased high for the following analytes: AROCLOR 1260. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers

METALS QC batch 387371 method blanks had detections below the RL for the following analytes: CALCIUM. Qualification of client sample results was not required based on these method blank detections.

METALS QC batch 387370 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS sample -001 MS and or MSD recovery outliers were not used to qualify results for BARIUM, ALUMINUM, POTASSIUM, CALCIUM, SODIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

CYANIDE sample -003 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.
The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary..

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

FORD RINGWOOD MINES PROJECT
NEW JERSEY FULL PACKAGE MINI FINAL REPORT - LEVEL 4
E203361

Description

- Polychlorinated Biphenyls Data (PCB)
  - QC Summary data
    - Surrogate recoveries (form II)
    - Check Sample Recovery data (form III)
    - Method Blank data (form IV)
    - Analytical sequence with RT check (Form VIII)
    - Identification Summary (Form X)
  - Sample Data
    - Organics Analysis Data Sheet (Form I)
    - Raw integration data from instrument
    - Chromatogram
  - Standards Data (both columns)
    - Initial Calibration Data External Standard RT Summary (Form VI)
    - Initial Calibration Data Summary with average RF
    - Raw integration data from instrument with manual integrations where applicable
    - ICAL chromatograms
    - Continuing Calibration Data (Form VII) with RT Summaries
    - ICV raw integration and chromatograms
    - CCV raw integration data from instrument
    - CCV chromatogram
  - Raw QC Data
    - LCS/LCSD sample data report and integration and chromatograms
    - Method blank integration and chromatograms
  - Miscellaneous Data
    - Sequence table (run log)
    - PCB Batch Worksheet
- HPLC/IC - 9056A ORGFM_28D - Anions, Ion Chromatography - Sulfate and Chloride
  - Raw Data and Data Summaries for:
    - LCS/LCSD (form III)
    - MS/MSD (form III)
    - METHOD BLANKS (Form IV)
    - SAMPLE DATA (Form I)
      - Raw instrument data and chromatography
      - Manual Integration (if applicable)
    - ICAL (Form VI)
      - Raw instrument data and chromatography
      - Manual Integration (if applicable)
    - ICAL (Form VII)
      - Raw instrument data and chromatography
      - Manual Integration (if applicable)
    - QC DATA (Form I)
      - Raw instrument data and chromatography
    - Analysis Run Logs

APPENDIX 2

Description

METALS DATA (ICPMS and mercury)
- Forms Data
  - Cover Page
  - Inorganic Analysis Data Sheet - Metals Dissolved/Total Recoverable (1A-IN)
  - CCV standard report - mercury and ICPMS (2A-IN)
  - CRQL report - mercury and ICPMS (2B-IN)
  - ICB report - mercury and ICPMS (3-IN)
  - Method blank report (3-IN)
  - Interference check standard A - ICPMS (4A-IN)
  - Interference check standard AB - ICPMS (4A-IN)
  - MS/MSD Sample recovery (5A-IN)
  - PDS Summary (5B-IN)
  - LCS Recovery form (7A-IN)
  - LCS Duplicate Recover (7D-IN)
  - ICP-MS Serial Dilutions (8-IN)
  - Detection Limits Form (9-IN)
  - Linear dynamic ranges - ICPMS (11-IN)
  - Prep log - mercury and ICPMS (12-IN)
  - Run log - ICPMS and Mercury (13-IN)
  - ICP-MS TUNE (14-IN)
  - ICPMS Internal Standards Relative Intensity Summary (15-IN)
- Instrument Printouts
  - ICP-MS Raw instrument data
  - Mercury raw instrument data, run logs and calibrations
- Miscellaneous Data
  - Metals Batch Worksheet

GENERAL CHEMISTRY - Total and Amenable Cyanide and Alkalinity
- Cover Page
- Raw Data and Data Summaries for:
  - Sample Data (Form 1B-IN)
  - CCV/CCB (Form 2-IN)
  - METHOD BLANKS (Form 3-IN)
  - MATRIX SPIKES (Form 5-IN)
  - Sample DUPLICATES (Form 6-IN)
  - LCS/LCSD (Form 7-IN)
  - Detection Limits Form (9-IN)
  - Prep log (12-IN)
  - Analysis Run Logs (13-IN)
  - Raw Data - instrument sample sequence and calibration curve
  - Alkalinity Reagents
  - Alkalinity pH meter calibration
  - Alkalinity sequence log and raw data
  - General Chemistry Batch Worksheets

Shipping and Receiving Documents
- COC forms
- Cooler Receipt Form, checklist and narrative

APPENDIX 5

September 11, 2016

Tim Roeper
Cornerstone EG
100 Crystal Run Road
Suite 101
Middletown, NY 10941

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 119092-1
Sample date: 2016-08-23
Report received by CADENA: 2016-09-09
Initial Data Verification completed by CADENA: 2016-09-11

The following minor QC exceptions or missing information were noted:

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -001, -005, -006, -007. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

LCS - GCMS SVOC QC batch 387311 and QC batch 387196 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL, CAPROLACTAM, HEXACHLOROBUTADIENE, HEXACHLOROBENZENE, 1,2,4,5-TETRACHLOROBENZENE, HEXACHLOROCYCLOPENTADIENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL - samples -001, -002, -003, -004, -005, -006, -007; CAPROLACTAM, HEXACHLOROBUTADIENE, HEXACHLOROBENZENE, HEXACHLOROCYCLOPENTADIENE, 1,2,4,5-TETRAHCLOROBENZENE - samples -001, -002, -003, -004, -005, -007.

MBK - GCMS SVOC QC batch 387196 method blanks had detections below the RL for the following analytes: BIS-2-ETHYLHEXYLPHTHALATE, DI-N-BUTYLPHTHALATE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: BIS-2-ETHYLHEXYLPHTHALATE - samples -001, -003, -004, -007; DI-N-BUTYLPHTHALATE - samples -001, -002, -003, -004, -005, -007. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: BIS-2-ETHYLHEXYLPHTHALATE - samples -002, -005.

MSD - METALS sample -001 MS recovery outliers (NO MSD FOR THIS BATCH) were outliers with the recovery biased low for the following analytes: SILVER, ANTIMONY, SELENIUM. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

GCMS VOC QC batch 386844 and GCMS SVOC QC batch 387551 and GCMS SVOC-SIM QC batch 388049, 388356 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS SVOC QC batch 387311 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS QC batch 387370 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

PCB QC batch 386833 LCS recoveries were outliers biased high for the following analytes: AROCLOR 1260. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

METALS QC batch 387371 method blanks had detections below the RL for the following analytes: CALCIUM. Qualification of client sample results was not required based on these method blank detections.

METALS sample -001 MS and or MSD recovery outliers were not used to qualify results for BARIUM, ALUMINUM, POTASSIUM, CALCIUM, SODIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

CYANIDE sample -003 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

7 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard

Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound

	but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

GC/MS SVOC

CCV outliers in analytical batch 388683 CCV response outlier was low and outside the specified criteria for 2,4-DINITROPHENOL. Client sample results for this analyte should be considered to be estimated and qualified with a UJ flags if non-detect.

GC/MS SVOC SIM

CCV outliers in analytical batch 388366 CCV response outlier was low and outside the specified criteria for BIS(2-CHLOROETHYL)ETHER Client sample results for this analyte should be considered to be estimated and qualified with a UJ flags if non-detect.

METALS

PSP - sample -005 Post Digestion Spike (PDS) recovery outside high of method criteria for TOTAL POTASSIUM resulted in qualification of client sample data.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GC/MS VOC

CCV outliers in analytical batch 387388 CCV were high and outside the specified criteria for CHLOROBROMOMETHANE. Associated client results were non-detect so qualification was not required based on the high bias QC outlier.

ALL PARAMETERS

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GC/MS SVOC and SVOC SIM

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -003, -004, -005, -006, -007, -008, -009. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

LCS - GCMS VOC QC batch 387388 LCS recoveries were outliers biased low for the following analytes: VINYL CHLORIDE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: VINYL CHLORIDE - ALL SAMPLE RESULTS.

MSD - GCMS SVOC sample -005 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: 2-NITROPHENOL. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

LCS - GCMS SVOC-SIM QC batch 387456 LCS recoveries were outliers biased low for the following analytes: BENZO(B)FLUORANTHENE, BENZO(A)PYRENE, DIBENZO(AH)ANTHRACENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: BENZO(B)FLUORANTHENE, BENZO(A)PYRENE, DIBENZO(AH)ANTHRACENE - ALL SAMPLE RESULTS.

GCMS SVOC sample -005 MS or MSD recoveries but not both or RPD only were outliers for 2,4-DICHLOROPHENOL, 4-NITROPHENOL, BENZO(K)FLUORANTHENE so client sample results were not qualified based on these QC outliers alone.

GCMS SVOC sample -005 surrogate recovery outliers (1 of 3 acid outlier biased high) did not result in qualification of client sample data.

METALS sample -005 duplicate RPD outliers were not used to qualify results for ALUMINUM since the relative difference between replicates was acceptable based on low concentration criteria.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.
The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary..

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration	14 days if preserved. 24 hours or sooner if unpreserved

			at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

Report received by CADENA: 2016-09-12
Initial Data Verification completed by CADENA: 2016-09-13

The following minor QC exceptions or missing information were noted:

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -003, -004, -005, -006, -007, -008, -009. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

LCS - GCMS VOC QC batch 387388 LCS recoveries were outliers biased low for the following analytes: VINYL CHLORIDE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: VINYL CHLORIDE - ALL SAMPLE RESULTS.

MSD - GCMS SVOC sample -005 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: 2-NITROPHENOL. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

LCS - GCMS SVOC-SIM QC batch 387456 LCS recoveries were outliers biased low for the following analytes: BENZO(B)FLUORANTHENE, BENZO(A)PYRENE, DIBENZO(AH)ANTHRACENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: BENZO(B)FLUORANTHENE, BENZO(A)PYRENE, DIBENZO(AH)ANTHRACENE - ALL SAMPLE RESULTS.

GCMS SVOC-SIM QC batch 388366, GCMS SVOC QC batch 388683, GCMS VOC QC batch CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS SVOC sample -005 MS or MSD recoveries but not both or RPD only were outliers for 2,4-DICHLOROPHENOL, 4-NITROPHENOL, BENZO(K)FLUORANTHENE so client sample results were not qualified based on these QC outliers alone.

GCMS SVOC sample -005 surrogate recovery outliers (1 of 3 acid outlier biased high) did not result in qualification of client sample data.

METALS sample -005 duplicate RPD outliers were not used to qualify results for ALUMINUM since the relative difference between replicates was acceptable based on low concentration criteria.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

8 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.

EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

GC/MS VOC

CCV outliers in analytical batch 387955 CCV response outlier was low and outside the specified criteria for BROMOFORM, DICHLORODIFLUOROMETHANE, TRICHLOROFLUOROMETHANE Client sample results for this analytes should be considered to be estimated and qualified with a UJ flags if non-detect.

GC/MS SVOC

CCV outliers in analytical batch 388683 CCV response outlier was low and outside the specified criteria for 2,4-DINITROPHENOL. Client sample results for this analytes should be considered to be estimated and qualified with a UJ flags if non-detect.

GC/MS SVOC SIM

CCV outliers in analytical batch 388366 CCV response outlier was low and outside the specified criteria for BIS(2CHLOROETHYL)ETHER. Client sample results for this analytes should be considered to be estimated and qualified with a UJ flags if non-detect.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS VOC SIM and HPLC/IC QC did not include MS/MSD recovery data.

ALL PARAMETERS

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GC/MS SVOC and SVOC SIM

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

GC/MS VOC

CCV outliers in analytical batch 387955 CCV were high and outside the specified criteria for 1,1,2,2-TRICHLOROETHANE. Associated client results were non-detect so qualification was not required based on the high bias QC outliers.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

TBK - GCMS VOC TRIP blanks had detections below the RL for the following analytes: ACETONE, METHYLENE CHLORIDE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: ACETONE - sample -008; METHYLENE CHLORIDE - samples -003, -007. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -002, -003, -004, -005, -006, -009, -010, -011. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

LCS - GCMS VOC QC batch 387955 LCS recoveries were outliers biased low for the following analytes: BROMOFORM. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: BROMOFORM - ALL SAMPLE RESULTS.

LCS - GCMS SVOC-SIM QC batch 387456 LCS recoveries were outliers biased low for the following analytes: BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE - ALL SAMPLE RESULTS.

METALS QC batch 389580, 389608, 389017 and GCMS SVOC QC batch 388683 and GCMS VOC QC batch 387955 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.

The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary..

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

Description

GCMS Semivolatiles Data - Method 8270D and SIM

- QC Summary Data
  - Surrogate recoveries (form II)
  - Check Sample recoveries (form III)
  - Method blank report (form IV)
  - Tuning and mass calibrations (form V) (not applicable for SIM)
  - Internal Standard and RT area summary (form VIII)
- Sample Data
  - GCMS VOA Organics Analysis Data Sheet (Form I)
  - Raw integration data from instrument
  - Total Ion Profile Chromatogram
  - Ion profiles of detected target analyte peaks
  - Manual integration if applicable
  - Tentatively Identified Compound Reports (if applicable)
- Standards Data
  - GCMS VOA Initial Calibration Data Internal Standard Curve Evaluation (Form VI)
  - ICAL Raw integration data from instrument
  - ICAL Total Ion Profile Chromatogram
  - ICV check standard recovery report
  - ICV check standard total ion profile with integration
  - GCMS VOA Continuing Calibration Data (Form VII)
  - CCV raw integration data from instrument
  - CCV Total Ion Profile Chromatogram
  - Manual integration if applicable
- Raw QC Data
  - Tune information (not applicable for SIM)
  - Method Blank integration/internal standard and total ion profile raw data
  - LCS and LCSDuplicate integration/internal standard and total ion profile raw data
- Miscellaneous Data
  - Instrument run logs
  - Extraction bench sheets

APPENDIX 2
LABORATORY DOCUMENTS SUBMITTED FOR REVIEW
FORD RINGWOOD MINES PROJECT
NEW JERSEY FULL PACKAGE MINI FINAL REPORT - LEVEL 4
E203361

Description

- Polychlorinated Biphenyls Data (PCB)
  - QC Summary data
    - Surrogate recoveries (form II)
    - Check Sample Recovery data (form III)
    - Method Blank data (form IV)
    - Analytical sequence with RT check (Form VIII)
    - Identification Summary (Form X)
  - Sample Data
    - Organics Analysis Data Sheet (Form I)
    - Raw integration data from instrument
    - Chromatogram
  - Standards Data (both columns)
    - Initial Calibration Data External Standard RT Summary (Form VI)
    - Initial Calibration Data Summary with average RF
    - Raw integration data from instrument with manual integrations where applicable
    - ICAL chromatograms
    - Continuing Calibration Data (Form VII) with RT Summaries
    - ICV raw integration and chromatograms
    - CCV raw integration data from instrument
    - CCV chromatogram
  - Raw QC Data
    - LCS/LCSD sample data report and integration and chromatograms
    - Method blank integration and chromatograms
  - Miscellaneous Data
    - Sequence table (run log)
    - PCB Batch Worksheet
- HPLC/IC - 9056A ORGFM_28D - Anions, Ion Chromatography - Sulfate and Chloride
  - Raw Data and Data Summaries for:
    - LCS/LCSD (form III)
    - MS/MSD (form III)
    - METHOD BLANKS (Form IV)
    - SAMPLE DATA (Form I)
      - Raw instrument data and chromatography
      - Manual Integration (if applicable)
    - ICAL (Form VI)
      - Raw instrument data and chromatography
      - Manual Integration (if applicable)
    - ICAL (Form VII)
      - Raw instrument data and chromatography
      - Manual Integration (if applicable)
    - QC DATA (Form I)
      - Raw instrument data and chromatography
    - Analysis Run Logs

APPENDIX 2
LABORATORY DOCUMENTS SUBMITTED FOR REVIEW
FORD RINGWOOD MINES PROJECT
NEW JERSEY FULL PACKAGE MINI FINAL REPORT - LEVEL 4
E203361

Description

METALS DATA (ICPMS and mercury)
- Forms Data
  - Cover Page
  - Inorganic Analysis Data Sheet - Metals Dissolved/Total Recoverable (1A-IN)
  - CCV standard report - mercury and ICPMS (2A-IN)
  - CRQL report - mercury and ICPMS (2B-IN)
  - ICB report - mercury and ICPMS (3-IN)
  - Method blank report (3-IN)
  - Interference check standard A - ICPMS (4A-IN)
  - Interference check standard AB - ICPMS (4A-IN)
  - MS/MSD Sample recovery (5A-IN)
  - PDS Summary (5B-IN)
  - LCS Recovery form (7A-IN)
  - LCS Duplicate Recover (7D-IN)
  - ICP-MS Serial Dilutions (8-IN)
  - Detection Limits Form (9-IN)
  - Linear dynamic ranges - ICPMS (11-IN)
  - Prep log - mercury and ICPMS (12-IN)
  - Run log - ICPMS and Mercury (13-IN)
  - ICP-MS TUNE (14-IN)
  - ICPMS Internal Standards Relative Intensity Summary (15-IN)
- Instrument Printouts
  - ICP-MS Raw instrument data
  - Mercury raw instrument data, run logs and calibrations
- Miscellaneous Data
  - Metals Batch Worksheet

GENERAL CHEMISTRY - Total and Amenable Cyanide and Alkalinity
- Cover Page
- Raw Data and Data Summaries for:
  - Sample Data (Form 1B-IN)
  - CCV/CCB (Form 2-IN)
  - METHOD BLANKS (Form 3-IN)
  - MATRIX SPIKES (Form 5-IN)
  - Sample DUPLICATES (Form 6-IN)
  - LCS/LCSD (Form 7-IN)
  - Detection Limits Form (9-IN)
  - Prep log (12-IN)
  - Analysis Run Logs (13-IN)
  - Raw Data - instrument sample sequence and calibration curve
  - Alkalinity Reagents
  - Alkalinity pH meter calibration
  - Alkalinity sequence log and raw data
  - General Chemistry Batch Worksheets

Shipping and Receiving Documents
- COC forms
- Cooler Receipt Form, checklist and narrative

APPENDIX 3

APPENDIX 5

September 12, 2016

Tim Roeper
Cornerstone EG
100 Crystal Run Road
Suite 101
Middletown, NY 10941

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 119270-1
Sample date: 2016-08-26 2016-08-25
Report received by CADENA: 2016-09-12
Initial Data Verification completed by CADENA: 2016-09-13

The following minor QC exceptions or missing information were noted:

TBK - GCMS VOC TRIP blanks had detections below the RL for the following analytes: ACETONE, METHYLENE CHLORIDE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: ACETONE - sample -008; METHYLENE CHLORIDE - samples -003, -007. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -002, -003, -004, -005, -006, -009, -010, -011. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

LCS - GCMS VOC QC batch 387955 LCS recoveries were outliers biased low for the following analytes: BROMOFORM. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: BROMOFORM - ALL SAMPLE RESULTS.

LCS - GCMS SVOC-SIM QC batch 387456 LCS recoveries were outliers biased low for the following analytes: BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE - ALL SAMPLE RESULTS.

GCMS SVOC-SIM QC batch 388366, GCMS SVOC QC batch 388683, GCMS VOC-SIM QC batch 388124 and GCMS VOC QC batch 387955 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

METALS QC batch 389580, 389608, 389017 and GCMS SVOC QC batch 388683 and GCMS VOC QC batch 387955 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

10 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	*Reference Method*	*Analyte Listing*
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all

subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a

	tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

ALLTESTING PARAMETERS

No additional qualifiers required.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GC/MS VOC/SVOC

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GC/MS SVOC

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

CCV outliers in analytical batch 387153 biased high for 4-nitrophenol, pentachlorophenol and surrogate 2,4,6-tribromophenol and in QC batch 387247 biased high for phenol, 2-chlorophenol and surrogate 2-fluorophenol did not result in qualification of client sample data since all associated field results were non-detect (with the exception of the surrogates) so were not affected by this high bias.

PCB

Sample -002, -003, -006, -007, -010, -010MS, -010MSD surrogate recoveries associated with p flags for difference between primary and confirmatory column results greater than 40% did not result in qualification for client sample data.

METALS

Sample -010 Post Digestion Spike (PDS) recoveries outside of method criteria for dissolved barium, sodium, calcium and TOTAL barium, sodium, calcium did not result in qualification for client sample data.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

LCS - GCMS SVOC QC batch 385957 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL - ALL SAMPLES.

MSD - SULFATE sample -003 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased high. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected.

MSD - GCMS SVOC sample -010 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: 2-METHYLPHENOL. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

GCMS SVOC QC batch 387153, 387247 and GCMS VOC QC batch 386373 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS VOC TRIP blanks had detections above the RL for the following analytes: METHYLENE CHLORIDE. Qualification of client sample results was not required based on these TRIP blank detections.

GCMS SVOC sample -002 through -015 (all samples) and batch 385957 method blank and LCS and matrix spike surrogate recovery outliers (1 out of 3 acid fraction biased high) did not result in qualification of client sample data.

PCB sample -010MSD surrogate recovery outliers did not result in qualification of client sample data.

PCB sample -010 MS/MSD recoveries were outliers biased high for the following analytes: AROCLOR 1260, AROCLOR 1016. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

METALS sample -003 MS and or MSD recovery outliers were not used to qualify results for CALCIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

CHLORIDE sample -003 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.
The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary..

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD
4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction -

				Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

APPENDIX 5

September 02, 2016

Tim Roeper
Cornerstone EG
100 Crystal Run Road
Suite 101
Middletown, NY 10941

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 118778-1
Sample date: 2016-08-16
Report received by CADENA: 2016-09-01
Initial Data Verification completed by CADENA: 2016-09-02

The following minor QC exceptions or missing information were noted:

LCS - GCMS SVOC QC batch 385957 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL - ALL SAMPLES.

MSD - SULFATE sample -003 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased high. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected.

MSD - GCMS SVOC sample -010 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: 2-METHYLPHENOL. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

GCMS SVOC QC batch 387153, 387247 and GCMS VOC QC batch 386373 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS VOC TRIP blanks had detections above the RL for the following analytes: METHYLENE CHLORIDE. Qualification of client sample results was not required based on these TRIP blank detections.

GCMS SVOC sample -002 through -015 (all samples) and batch 385957 method blank and LCS and matrix spike surrogate recovery outliers (1 out of 3 acid fraction biased high) did not result in qualification of client sample data.

PCB sample -010MSD surrogate recovery outliers did not result in qualification of client sample data.

PCB sample -010 MS/MSD recoveries were outliers biased high for the following analytes: AROCLOR 1260, AROCLOR 1016. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

METALS sample -003 MS and or MSD recovery outliers were not used to qualify results for CALCIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

CHLORIDE sample -003 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

14 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

LISTS OF APPNEDICES

(Following Text)

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	*Reference Method*	*Analyte Listing*
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard

Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound

	but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

GCMS VOC

Continuing Calibration Verification (CCV) standard responses were outside of method criteria biased low for BROMOFORM in analytical batches 386113 and 386206. All client sample BROMOFORM results should be considered to be estimated and qualified with UJ flags (all results were non-detect).

The following observations **DID NOT** result in qualification but were noted during the validation review:

GC/MS VOC/SVOC

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GCMS VOC and GCMS SVOC CCV high bias outliers in QC batch 386113 and 386206 for 1,1,2-trichloro-1,2,2-trifluoroethane and QC batch 386897, 387629, 386667 for phenol and pentachlorophenol did not require qualification of client sample results since all associated sample results were non-detect.

GC/MS SVOC

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

PCB
No non-conformances were observed.

METALS
No non-conformances were observed.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: METHYLENE CHLORIDE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: METHYLENE CHLORIDE - sample -010.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

GCMS VOC QC batch 386113, 386206 and GCMS SVOC QC batch 386667, 386897, 387329 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS VOC BATCH 386206 QC results did not include MS/MSD recovery data.

GCMS SVOC batch 386082 LCS or LCSD recoveries but not both or RPD only were outliers so for 2-METHYLPHENOL so were not used to qualify client sample results based on these QC outliers alone.

GCMS SVOC sample -008, -009, -011 surrogate recovery outliers (1 out of 3 acid fraction biased high) did not result in qualification of client sample data.

METALS, PCB QC batch MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

FLUORIDE sample -002 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone..

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.

The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary..

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent

sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding

times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 118817-1
Sample date: 2016-08-17
Report received by CADENA: 2016-08-31
Initial Data Verification completed by CADENA: 2016-09-01

The following minor QC exceptions or missing information were noted:

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: METHYLENE CHLORIDE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: METHYLENE CHLORIDE - sample -010.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

GCMS VOC QC batch 386113, 386206 and GCMS SVOC QC batch 386667, 386897, 387329 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS VOC BATCH 386206 QC results did not include MS/MSD recovery data.

GCMS SVOC batch 386082 LCS or LCSD recoveries but not both or RPD only were outliers so for 2-METHYLPHENOL so were not used to qualify client sample results based on these QC outliers alone.

GCMS SVOC sample -008, -009, -011 surrogate recovery outliers (1 out of 3 acid fraction biased high) did not result in qualification of client sample data.

METALS, PCB QC batch MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

FLUORIDE sample -002 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

13 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

TABLE OF CONTENTS

LISTS OF APPNEDICES
(Following Text)

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	*Reference Method*	*Analyte Listing*
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all

subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a

	tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

GCMS VOC

Continuing Calibration Verification (CCV) standard responses were outside of method criteria biased low for 1,1,2,2-TETRACHLOROETHANE in analytical batch 386495. All client sample 1,1,2,2-TETRACHLOROETHANE results should be considered to be estimated and qualified with UJ flags (all results were non-detect).

The following observations **DID NOT** result in qualification but were noted during the validation review:

ALL TEST DATA

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GCMS VOC

GCMS VOC CCV high bias outliers in QC batch 386495 for TRICHLOROFLUOROMETHANE did not require qualification of client sample results since all associated sample results were non-detect.

GC/MS SVOC

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

GCMS SVOC CCV high bias outliers in QC batch 387265 for 4-NITROPHENOL, PENTACHLOROPHENOL and surrogate 2,4,6-TRIBROMOPHENOL and CCV high bias outliers in QC batch 387329 for N-NITROSODIMETHYLAMINE, PYRIDINE, PHENOL and surrogate 2-FLUOROPHENOL did not require qualification of client sample results since all associated target analyte results were non-detect.

GC/MS SVOC-SIM

General note that calibration curves using LINEAR regression algorithms typically show reduced accuracy near the reporting limit. In the case of PENTACHLOROPHENOL for this data package the linear regression curve showed poor linearity at levels below the 0.4ug/l concentration sample analyte level. Several sample results were quantitated below that level but have not been qualified based on this calibration curve observation since they are already qualified as estimated due to being detected at levels below the RL.

PCB

No non-conformances were observed.

METALS

No non-conformances were observed.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

LCS - GCMS SVOC QC batch 386330 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL - all samples.

MSD - GCMS SVOC sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: 2-METHYLPHENOL. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

MSD - METALS sample -004 MS recovery (no MSD performed) were outliers with the recovery biased low for the following analytes: SILVER. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

MSD - SULFATE sample -014 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

GCMS SVOC sample -002, -003, -004, -005, -007, -009, -010, -011, -012, -013, -014, -015, -004MS, -004MSD, LCS surrogate recovery outliers (1 out of 3 acid fraction surrogates only were outliers biased high) did not result in qualification of client sample data.

PCB sample -004 MS or MSD recoveries but not both or RPD only were outliers for AROCLOR 1260 so client sample results were not qualified based on these QC outliers alone.

PCB QC batch 386623 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS QC batch 387091 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

SULFATE QC batch 387602 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

CHLORIDE QC batch 387602 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS sample -004 MS and or MSD recovery outliers were not used to qualify results for MANGANESE, SODIUM, MAGNESIUM, CALCIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

SULFATE sample -009 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

CHLORIDE sample -009 MS and or MSD recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.
The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary..

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 118898-1
Sample date: 2016-08-18
Report received by CADENA: 2016-09-09
Initial Data Verification completed by CADENA: 2016-09-11

The following minor QC exceptions or missing information were noted:

LCS - GCMS SVOC QC batch 386330 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL - all samples.

MSD - GCMS SVOC sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: 2-METHYLPHENOL. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

MSD - METALS sample -004 MS recovery (no MSD performed) were outliers with the recovery biased low for the following analytes: SILVER. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

MSD - SULFATE sample -014 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

GCMS SVOC sample -002, -003, -004, -005, -007, -009, -010, -011, -012, -013, -014, -015, -004MS, -004MSD, LCS surrogate recovery outliers (1 out of 3 acid fraction surrogates only were outliers biased high) did not result in qualification of client sample data.

PCB sample -004 MS or MSD recoveries but not both or RPD only were outliers for AROCLOR 1260 so client sample results were not qualified based on these QC outliers alone.

PCB QC batch 386623 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS QC batch 387091 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

SULFATE QC batch 387602 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

CHLORIDE QC batch 387602 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS sample -004 MS and or MSD recovery outliers were not used to qualify results for MANGANESE, SODIUM, MAGNESIUM, CALCIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

SULFATE sample -009 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

CHLORIDE sample -009 MS and or MSD recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

14 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

(Following Text)

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

METALS

Sample -004 duplicate RPD was outside of laboratory control limits for DISSOLVED SODIUM. Client sample -004 dissolved sodium results should be considered to be estimated and qualified with a J flag.

ION CHROMATOGRAPHY

Sulfate results for client sample -006 had the qualification REMOVED (J flag) since only the MS sulfate recovery was an outlier biased low and the MSD recovery and MS/MSD RPD were within laboratory control limits.

The following observations **DID NOT** result in qualification but were noted during the validation review:

ALL TEST DATA

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GCMS VOC

GCMS VOC CCV high bias outliers in QC batch 386590 and 386348 for TRICHLOROFLUOROMETHANE did not require qualification of client sample results since all associated sample results were non-detect.

GC/MS SVOC and GCMS SVOC-SIM

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

GCMS SVOC CCV high bias outliers in QC batch 387628 for 1,1-BIPHENYL and PENTACHLOROPHENOL did not require qualification of client sample results since all associated target analyte results were non-detect.

GC/MS SVOC-SIM

General note that calibration curves using LINEAR regression algorithms typically show reduced accuracy near the reporting limit. In the case of PENTACHLOROPHENOL for this data package the linear regression curve showed poor linearity at levels below the 0.4ug/l concentration sample analyte level. Several sample results were quantitated below that level but have not been qualified based on this calibration curve observation since they are already qualified as estimated due to being detected at levels below the RL.

PCB

P flags (relative percent different of greater than 40% for results between primary and secondary columns) were assigned by the lab for surrogates only in client samples -001, -006 and -007 so qualification of client sample results was not required based on these flagged QC results.

METALS

No non-conformances were observed.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: ACETONE - sample -003 the following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - sample -004, -005, -006, -007, -008, -010, -

011, -012, -017. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

LCS - GCMS SVOC-SIM QC batch 386536 LCS recoveries were outliers biased low for the following analytes: BENZO(A)ANTHRACENE, BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE, HEXACHLOROBENZENE, INDENO(123-CD)PYRENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: ALL sample results for BENZO(A)ANTHRACENE, BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE, HEXACHLOROBENZENE, INDENO(123-CD)PYRENE .

MSD - SULFATE sample -006 MS recovery outliers (no MSD in batch) were outliers with the recovery biased low. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

GCMS VOC sample -004 MS/MSD recoveries were outliers biased high for the following analytes: CHLOROETHANE. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

GCMS SVOC QC batch 387628, GCMS VOC QC batch 386590, 386348 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GC VOC sample -004 MS or MSD recoveries but not both or RPD only were outliers for ETHYLENE DIBROMIDE so client sample results were not qualified based on these QC outliers alone.

GCMS SVOC sample -004 MS or MSD recoveries but not both or RPD only were outliers for 2-METHYLPHENOL, PYRENE so client sample results were not qualified based on these QC outliers alone.

PCB sample -004 MS or MSD recoveries but not both or RPD only were outliers for AROCLOR 1260 so client sample results were not qualified based on these QC outliers alone.

GCMS SVOC sample -003, -004, -005, -006, -007 surrogate recovery outliers (1 out of 3 acid fraction surrogates only) did not result in qualification of client sample data.

METALS sample -004 MS and or MSD recovery outliers were not used to qualify results for TOTAL CALCIUM, DISSOLVED SODIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

METALS QC batch 387306, 387370 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.

The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration	14 days if preserved. 24 hours or sooner if unpreserved

			at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

Middletown, NY 10941

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 118951-1
Sample date: 2016-08-19
Report received by CADENA: 2016-09-02
Initial Data Verification completed by CADENA: 2016-09-04

The following minor QC exceptions or missing information were noted:

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: ACETONE - sample -003 the following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - sample -004, -005, -006, -007, -008, -010, -011, -012, -017. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

LCS - GCMS SVOC-SIM QC batch 386536 LCS recoveries were outliers biased low for the following analytes: BENZO(A)ANTHRACENE, BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE, HEXACHLOROBENZENE, INDENO(123-CD)PYRENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: ALL sample results for BENZO(A)ANTHRACENE, BENZO(A)PYRENE, BENZO(B)FLUORANTHENE, DIBENZO(AH)ANTHRACENE, HEXACHLOROBENZENE, INDENO(123-CD)PYRENE .

MSD - SULFATE sample -006 MS recovery outliers (no MSD in batch) were outliers with the recovery biased low. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

GCMS VOC sample -004 MS/MSD recoveries were outliers biased high for the following analytes: CHLOROETHANE. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

GCMS SVOC QC batch 387628, GCMS VOC QC batch 386590, 386348 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GC VOC sample -004 MS or MSD recoveries but not both or RPD only were outliers for ETHYLENE DIBROMIDE so client sample results were not qualified based on these QC outliers alone.

GCMS SVOC sample -004 MS or MSD recoveries but not both or RPD only were outliers for 2-METHYLPHENOL, PYRENE so client sample results were not qualified based on these QC outliers alone.

PCB sample -004 MS or MSD recoveries but not both or RPD only were outliers for AROCLOR 1260 so client sample results were not qualified based on these QC outliers alone.

GCMS SVOC sample -003, -004, -005, -006, -007 surrogate recovery outliers (1 out of 3 acid fraction surrogates only) did not result in qualification of client sample data.

METALS sample -004 MS and or MSD recovery outliers were not used to qualify results for TOTAL CALCIUM, DISSOLVED SODIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

METALS QC batch 387306, 387370 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

FLUORIDE batch 386769 LCS or LCSD recoveries but not both or RPD only were outliers so were not used to qualify client sample results based on these QC outliers alone.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

17 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GC VOC, GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***Analyte Listing***
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

GCMS VOC

Continuing Calibration Verification (CCV)386589 response was outside of lab and method criteria biased low for BROMOFORM. All client sample BROMOFORM results should be considered to be estimated and qualified with UJ flags (all associated results were non-detect).

ION CHROMATOGRAPHY

Sulfate and Chloride MS/MSD recoveries were outliers with the CHLORIDE recoveries biased high and SULFATE recoveries biased low for client sample -009. Samples and MS/MSD were analyzed at dilutions but all results were above RL and considered to still be statistically reliable. Client sample -009 results for CHLORIDE and SULFATE should be considered to be estimated and qualified with J flags.

The following observations **DID NOT** result in qualification but were noted during the validation review:

ALL TEST DATA

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GC/MS SVOC and GCMS SVOC-SIM

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

GC/MS SVOC-SIM

General note that calibration curves using LINEAR regression algorithms typically show reduced accuracy near the reporting limit. In the case of PENTACHLOROPHENOL for this data package the linear regression curve showed poor linearity at levels below the 0.4ug/l concentration sample analyte level. Several sample results were quantitated below that level but have not been qualified based on this calibration curve observation since they are already qualified as estimated due to being detected at levels below the RL.

METALS

SERIAL DILUTION (SD) for sample -008 POTASSIUM was reported on the QC summary form in the level 4 data package as being an outlier. Evaluation of the associated raw data revealed that the dilution factor (5x) was not included for the serial dilution calcualtion so the reported SD result was not correct. The serial dilution result for POTASSIUM was within acceptable method criteria once re-quantified with the dilution factor included so qualification was not required based on this reported outlier.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

LCS - GCMS SVOC QC batch 387194 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL, CAPROLACTAM. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL and CAPROLACTAM - ALL samples.

MBK - GCMS SVOC QC batch 387194 method blanks had detections below the RL for the following analytes: DI-N-BUTYLPHTHALATE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: DI-N-BUTYLPHTHALATE - samples ALL.

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: ACETONE - samples -001, -004, -005, -006, -014. The following client sample results should be considered

to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -002, -003, -007, -008, -009, -010, -011, -012, -013, -016. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

MSD - CHLORIDE sample -003 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased high. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected.

GCMS VOC QC batch 386589 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS SVOC batch 387194 LCS or LCSD recoveries but not both or RPD only were outliers so for 2,4,6-TRICHLOROPHENOL so were not used to qualify client sample results based on these QC outliers alone.

PCB QC batch 386469, 386833 LCS recoveries were outliers biased high for the following analytes: AROCLOR 1260. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

METALS QC batch 388296, 387370 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS sample -008 MS and or MSD recovery outliers were not used to qualify results for SODIUM, CALCIUM, POTASSIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

SULFATE and CHLORIDE sample -009 MS and or MSD recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.

SULFATE sample -003 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.
The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP’s and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 119025-1
Sample date: 2016-08-22 2016-08-23
Report received by CADENA: 2016-09-07
Initial Data Verification completed by CADENA: 2016-09-08

The following minor QC exceptions or missing information were noted:

LCS - GCMS SVOC QC batch 387194 LCS recoveries were outliers biased low for the following analytes: 2-METHYLPHENOL, CAPROLACTAM. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: 2-METHYLPHENOL and CAPROLACTAM - ALL samples.

MBK - GCMS SVOC QC batch 387194 method blanks had detections below the RL for the following analytes: DI-N-BUTYLPHTHALATE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: DI-N-BUTYLPHTHALATE - samples ALL.

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the RL and qualified with UB flags: ACETONE - samples -001, -004, -005, -006, -014. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -002, -003, -007, -008, -009, -010, -011, -012, -013, -016. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

MSD - CHLORIDE sample -003 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased high. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected.

GCMS VOC QC batch 386589 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS SVOC batch 387194 LCS or LCSD recoveries but not both or RPD only were outliers so for 2,4,6-TRICHLOROPHENOL so were not used to qualify client sample results based on these QC outliers alone.

PCB QC batch 386469, 386833 LCS recoveries were outliers biased high for the following analytes: AROCLOR 1260. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

METALS QC batch 388296, 387370 MS/MSD recovery outliers or sample duplicate RPD outliers were not determined using a client sample so qualification was not required based on these sample-specific QC outliers.

METALS sample -008 MS and or MSD recovery outliers were not used to qualify results for SODIUM, CALCIUM, POTASSIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

SULFATE and CHLORIDE sample -009 MS and or MSD recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.

SULFATE sample -003 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

FLUORIDE sample -003 duplicate RPD outlier as noted in the laboratory submittal case narrative was not supported by batch QC data so was not used to qualify client sample results.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

15 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by TestAmerica-Edison Laboratory the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	*Reference Method*	*Analyte Listing*
GCMS VOC Organics	OSW-8260C	Target Compound List
GCMS VOC Organics-SIM	OSW-8260C-SIM	1,2-Dibromo-3-chloropropane and EDB
Semi-Volatile Organics	OSW-8270D	Target Compound List
Semi-Volatile Organics	OSW-8270D/SIM	PAH, PCP, HCB, B2CEE
GC ECD Semi-Volatiles	OSW-8082A	PCB's
Metals by ICP/MS	OSW-6020A	Target Analyte List(total,dissolved)
Mercury by Cold Vapor	OSW-7470A	Mercury(total, dissolved)
Total Cyanide	OSW-9012B	Total Cyanide
Ion Chromatography	OSW-9056A	Chloride, Sulfate
Alkalinity	APHA-2320B	Alkalinity, Bicarbonate Alkalinity

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.

NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

Additional data qualifications based on review of the level 4 data package using laboratory criteria provided if required are noted below. Qualifications that would be required based on comparison to NFG criteria are noted where applicable. These qualifications would be added to the database and associated summary tables in the appendices if applicable.

GCMS SVOC

Continuing Calibration Verification (CCV)388875 response was outside of lab and method criteria biased low for CAPROLACTAM, ATRAZINE. Client samples -007 and -008 ATRAZINE results should be considered to be estimated and qualified with UJ flags (associated results were non-detect). Caprolactam results were already qualified as estimated due to associated LCS recovery low bias outliers.

The following observations **DID NOT** result in qualification but were noted during the validation review:

ALL TEST DATA

Certificates of analysis for standards and all working/primary standard concentrations that are required to verify calibration standard concentrations and spike levels were not available in the laboratory data package for review.

GC/MS SVOC and GCMS SVOC-SIM

Initial Calibration Verification (ICV) raw data was not available for reconstruction/re-calculation of ICV results.

GCMS VOC

Continuing Calibration Verification (CCV) 388349 responses were outliers biased high for trichlorofluoromethane. Qualification of client sample results was not required based on this high bias CCV outlier (all associated results were non-detect).

GC/MS SVOC-SIM

Continuing Calibration Verification (CCV) 388366 responses were outliers biased high for bis-2-chloroethyl ether as well as 1 base-neutral fraction surrogate. Qualification of client sample results was not required based on this high bias CCV outlier (all associated results were non-detect).

METALS

SERIAL DILUTION (SD) for sample -008 POTASSIUM was reported on the QC summary form in the level 4 data package as being an outlier. Evaluation of the associated raw data revealed that the dilution factor (5x) was not included for the serial dilution calcualtion so the reported SD result was not correct. The serial dilution result for POTASSIUM was within acceptable method criteria once re-quantified with the dilution factor included so qualification was not required based on this reported outlier.

VERIFICATION SUMMARY

The following qualifications and associated data flags were applied based on the initial level 2 review of this data package.

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -002, -003, -004, -005, -006, -007, -008. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

MSD - GCMS VOC sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: BROMOFORM. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC, GCMS SVOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

LCS - GCMS SVOC QC batch 388379 LCS recoveries were outliers biased low for the following analytes: CAPROLACTAM, 2-METHYLPHENOL, NAPHTHALENE, HEXACHLOROBUTADIENE, 2-METHYLNAPHTHALENE. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: CAPROLACTAM, 2-METHYLPHENOL, NAPHTHALENE, HEXACHLOROBUTADIENE, 2-METHYLNAPHTHALENE - samples -002, -003, -004, -005, -006, -007, -008.

MSD - GCMS SVOC sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: MULTIPLE - SEE QAR TABLE ATTACHED. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

MSD - METALS sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: DISSOLVED IRON. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

GCMS VOC QC batch 388349, GCMS SVOC QC batch 388379, GCMS SVOC-SIM QC batch 388366 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS SVOC QC batch 388379 LCS surrogate recovery outliers did not result in qualification of client sample data.

PCB QC batch 388507 LCS recoveries were outliers biased high for the following analytes: AROCLOR 1260 and 1016. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

PCB sample -004 MS or MSD recoveries but not both or RPD only were outliers for AROCLOR 1016, AROCLOR 1260 so client sample results were not qualified based on these QC outliers alone.

METALS sample -004 MS and or MSD recovery outliers were not used to qualify results for SODIUM, CALCIUM, MANGANESE, MAGNESIUM, POTASSIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

SULFATE sample -006 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

SULFATE sample -006 duplicate RPD outliers were not used to qualify results since the sample duplicate value was considered to be estimated since it was above the upper calibration range of the instrument and qualified with an E flag by the lab.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 VOLATILE ORGANIC COMPOUNDS (VOCs) – METHOD SW846 8260C and SIM ANALYSIS

See Attachments for submittal-specific review summary of QC requirements noted below.
The target analyte list was defined by the client-project as TCL List OLM4.2 for 8260C full scan and as noted in section 1 above for SIM analysis.

2.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) VOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS VOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS VOCs

Initial calibration data for VOCs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS VOCs

Initial calibration data for VOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.2 CONTINUING CALIBRATION – GC/MS VOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless otherwise noted in the executive summary noted above and qualified in the data tables. Target analytes associated with CCV compounds outside of method criteria were qualified as estimated with J flags if sample results were non-detect and estimated with UJ flags if CCV bias was low and sample results was

non-detect and J flags if sample results were detections. Non-detect results were not qualified if CCV bias was high and sample results were non-detect.

2.3 INTERNAL STANDARDS – GC/MS VOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS VOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS VOCs

A laboratory control sample (LCS) was prepared and analyzed for VOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless otherwise noted in the executive summary and as qualified the QAR and ARS data tables found in the appendices.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS VOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS VOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS VOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS VOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS VOCs

Tentatively Identified Compounds (TIC) searches were associated with each sample analysis and should all be considered to be estimated and qualified with NJ flags when detected.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS VOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D and SIM analysis – GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

3.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

3.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

3.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

3.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

3.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response without exception.

3.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

3.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) was prepared and analyzed for the target analyte SVOCs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

3.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

The MS/MSD recoveries and RPD's – unless otherwise not evaluated as noted above - were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

3.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

3.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

3.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

3.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

3.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal..

4.0 POLYCHLORINATED BIPHENYLS (PCBs) – METHOD SW846 8082A

The target analyte list was defined by the client as the standard 7 aroclors.

4.1 CALIBRATION – GAS CHROMATOGRAPH-ECD

4.1.1 TUNING AND MASS CALIBRATION – PCB

Not applicable for this analysis.

4.1.2 INITIAL CALIBRATION – PCB

Initial calibration data for PCBs were reviewed and met the criteria for instrument sensitivity and linearity of response without exception.

4.1.3 INITIAL CALIBRATION VERIFICATION – PCB

Initial calibration verification (ICV) standards for PCB analyses were reviewed and met criteria specified by the laboratory with no exceptions.

4.2 CONTINUING CALIBRATION – PCBs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

4.3 INTERNAL STANDARDS – PCB

Internal standard (IS) data were reviewed and met criteria unless noted otherwise in verification/validation summary. (NOTE: Lab quantitation approach DID use internal standard quantitation for this submittal).

4.4 SURROGATE SPIKE RECOVERIES – PCB

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were within the established laboratory control limits unless noted otherwise in verification/validation summary.

4.5 LABORATORY CONTROL SAMPLE ANALYSES - PCB

A laboratory control sample (LCS) was prepared and analyzed for PCBs. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

4.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - PCB

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

CADENA does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

4.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - PCB

There were no field duplicate comparisons performed as part of this validation request.

4.8 EXTRACT CLEANUP - PCB

Extract cleanups were performed in accordance with laboratory SOP's and as noted in level 4 data package prep logs.

4.9 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - PCB

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

4.10 TENTATIVELY IDENTIFIED COMPOUNDS - PCB

Not requested for this analytical procedure.

4.11 BLANKS – METHOD/FIELD/CALIBRATION - PCB

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

5.0 HPLC/IC – METHOD SW846 9056A – CHLORIDE AND SULFATE

5.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

5.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

5.3 CONTINUTING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

5.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

5.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD's were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

5.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

5.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

5.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

6.0 METALS – ICPMS by Method 6020A TOTAL AND DISSOLVED and Mercury by Method 7470A

The following samples provided in this SDG underwent a Level IV review for either/and metals or mercury analyses:

- Method 6020A: ALL
- Method 7470A: ALL

6.1 ICP/MS TUNING AND MASS CALIBRATION

Instrument tuning data were reviewed. Tuning elements were analyzed. All tuning criteria were met for the analyses, indicating proper optimization of the instrumentation.

6.2 INITIAL CALIBRATION

Initial calibration data for metals and mercury were reviewed and met the criteria for linearity of response without exception.

6.3 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards for metals and mercury analyses were reviewed and met criteria unless otherwise noted in verification/validation summary section of this document.

An initial calibration blank (ICB) was analyzed for metals and mercury analyses. Metals and mercury were reported as non-detect in each ICB analysis unless noted otherwise in verification/validation summary.

6.4 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for metals and mercury analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

6.5 INTERFERENCE CHECK STANDARD

The interference check standard results were reviewed and found to meet criteria.

6.6 INTERNAL STANDARDS

Internal standard (IS) data were reviewed and found to meet criteria unless noted otherwise in verification/validation summary.

6.7 LABORATORY CONTROL SAMPLE ANALYSIS

A laboratory control sample (LCS) was prepared and analyzed for metals and mercury. The LCS recoveries were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

6.8 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE (MS/MSD) ANALYSES

The MS/MSD recoveries and RPD's were either not performed using a client sample or were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

6.9 CONTRACT REQUIRED DETECTION LIMIT STANDARD ANALYSES

Each contract required detection limit (CRDL) standard was analyzed at the proper frequency and were within laboratory control limits unless noted otherwise in verification/validation summary.

6.10 ICP SERIAL DILUTION

Serial dilutions were analyzed at the proper frequency and were either not performed using the client sample or were within laboratory control limits unless noted otherwise in verification/validation summary.

6.11 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

6.12 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

6.13 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

7.0 GENERAL CHEMISTRY- TOTAL AND AMENABLE CYANIDE AND ALKALINITY – METHODS 9012B and 2320B

7.1 INITIAL CALIBRATION

Initial calibration data were reviewed and met the criteria for linearity of response unless noted otherwise in verification/validation summary.

7.2 INITIAL CALIBRATION VERIFICATION

Initial calibration verification (ICV) standards reviewed and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

7.3 CONTINUING CALIBRATION

Continuing calibration verification (CCV) standards for these analyses were analyzed at the required frequency and met criteria specified by the laboratory unless noted otherwise in verification/validation summary.

The continuing calibration blanks (CCB) were analyzed at the proper frequency and were reported as non-detect unless noted otherwise in verification/validation summary.

7.4 LABORTORY CONTROL SAMPLE ANALYSES

A laboratory control sample (LCS) was prepared and analyzed for these analyses. The LCS recoveries were within the laboratory control limits unless noted otherwise in verification/validation summary.

7.5 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES

The MS/MSD recoveries and RPD’s were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

Cadena does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

7.6 FIELD QA/QC – FIELD DUPLICATE ANALYSES

There were no field duplicate comparisons performed as part of this validation request.

7.7 TARGET ANALYTES AND REQUIRED LIMITS OF DETECTION

Target analyte lists were based on project specific requirements. Limits of detection were not specifically provided for water matrices. Analyte lists reported by laboratory were in compliance with available reference documents (COC).

7.8 BLANKS – METHOD/FIELD/CALIBRATION

The method blank results for samples from the SDG covered in this evaluation were all non-detect at the method detection limit unless noted otherwise in verification/validation summary.

8.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

8.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Volatile Organics by GCMS	OSW-8260C/SIM	Water	Acidify ph<2 Refrigeration 0-6oC	14 days
Semivolatile Organics by GCMS	OSW-8270D/SIM	Water	Refrigeration 0-6oC	7 days Extraction 40 days Analysis
Polychlorinated Biphenyls by GC/ECD	OSW-8082A	Water	Refrigeration 0-6oC	365 days - Extraction - Analysis
Metals by ICP/ICPMS Spectroscopy	OSW-6010B OSW-6020A	Water	Acidify pH<2 Refrigeration 0-6oC	180 days
Mercury in Aqueous Waste	OSW-7470A	Water	Acidify pH<2 Refrigeration 0-6oC	28 days
Alkalinity	EPA 2320B	Water	Refrigeration 0-6oC	14 days
Chloride and Sulfate	OSW-9056A	Water	Refrigeration 0-6oC	28 days
Total and Amenable Cyanide	OSW-9012B	Water	Test for presence of Sulfide – if unknown collect two samples and treat one with Lead Carbonate. Then adjust sample to pH of greater than or equal to 12with NaOH. Refrigeration at 0-4C –(also may require treatment for aldehydes and chlorine/hypochlorite/sulfite)	14 days if preserved. 24 hours or sooner if unpreserved

8.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

9.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

10.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

APPENDIX 5

September 18, 2016

Tim Roeper
Cornerstone EG
100 Crystal Run Road
Suite 101
Middletown, NY 10941

CADENA project ID: E203361
Project: Ford Ringwood Mines Project
Project number:
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: TestAmerica - Edison
Laboratory submittal: 119489-1
Sample date: 2016-08-29 2016-08-30
Report received by CADENA: 2016-09-14
Initial Data Verification completed by CADENA: 2016-09-18

The following minor QC exceptions or missing information were noted:

TBK - GCMS VOC TRIP blanks had detections above the RL for the following analytes: ACETONE. The following client sample results should be considered to be non-detect at the concentration reported and qualified with B flags: ACETONE - samples -002, -003, -004, -005, -006, -007, -008. NOTE: Sample dilution factors are not included when assigning qualification based on trip blank detections.

MSD - GCMS VOC sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: BROMOFORM. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

TIC - GCMS VOC, GCMS SVOC Tentatively Identified Compounds (TIC's) detected results should be considered to be estimated and qualified with NJ flags.

LCS - GCMS SVOC QC batch 388379 LCS recoveries were outliers biased low for the following analytes: CAPROLACTAM, 2-METHYLPHENOL, NAPHTHALENE, HEXACHLOROBUTADIENE, 2-METHYLPHENOL. The following client sample results should be considered to be estimated and qualified with J flags if detected or UJ flags if non-detect: CAPROLACTAM, 2-METHYLPHENOL, NAPHTHALENE, HEXACHLOROBUTADIENE, 2-METHYLPHENOL - samples -002, -003, -004, -005, -006, -007, -008.

MSD - GCMS SVOC sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: MULTIPLE - SEE QAR TABLE ATTACHED. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

MSD - METALS sample -004 MS and MSD recovery outliers or one recovery along with the MS/MSD RPD were outliers with the recovery biased low for the following analytes: DISSOLVED IRON. Client sample results for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flags if non-detect.

GCMS VOC QC batch 388349, GCMS SVOC QC batch 388379, GCMS SVOC-SIM QC batch 388366 CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

GCMS SVOC QC batch 388379 LCS surrogate recovery outliers did not result in qualification of client sample data.

PCB QC batch 388507 LCS recoveries were outliers biased high for the following analytes: AROCLOR 1260. Associated client sample results were non-detect so qualification was not required based on these high bias QC outliers.

PCB sample -004 MS or MSD recoveries but not both or RPD only were outliers for AROCLOR 1016, AROCLOR 1260 so client sample results were not qualified based on these QC outliers alone.

METALS sample -004 MS and or MSD recovery outliers were not used to qualify results for SODIUM, CALCIUM, MANGANESE, MAGNESIUM, POTASSIUM due to high levels of these target analytes in the original sample relative to the spike concentration (4X rule).

SULFATE sample -006 MS or MSD recoveries but not both or RPD only were outliers so client sample results were not qualified based on these QC outliers alone.

SULFATE sample -006 duplicate RPD outliers were not used to qualify results since the sample duplicate value was considered to be estimated since it was above the upper calibration range of the instrument and qualified with an E flag by the lab.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

7 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC Other, Metals, General Chemistry and MISC parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

TABLE OF CONTENTS

LISTS OF APPNEDICES

(Following Text)

LIST OF ATTACHMENTS

1.1 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.

R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.2 VALIDATION QUALIFIER EXECUTIVE

SUMMARY <u>VALIDATION SUMMARY</u>

<u>GCMS SVOC/SIM</u>

The following observations **DID NOT** result in qualification but were noted during the validation review:

<u>GCMS SVOC-SIM</u>

Sample L1625725-11 was spiked with 1.0 ml of surrogate instead of the expected 0.5 ml. As expected the lab Quantitation Report indicates twice the normal 1,4-dioxane-d8 surrogate response with a percent recovery of 54%. Since in this case the surrogate doubles as the Internal Standard which is used to normalize the 1,4-dioxane concentration, the initial raw data indicated the sample concentration was half what would be expected for the 1,4-dioxane target analyte response at 0.14 ug/L. Upon request by the validator the data was manually re-calculated by the lab based on the known internal standard concentration (1000ng/ml instead of 500ng/ml) to generate the corrected surrogate recovery of 27% (previously 54%) and 1,4-dioxane concentration of 0.28ug/L. Data qualification was not required based on this laboratory protocol non-conformance but revised lab report was generated and CLMS database updated with a revised lab EDD.

Sample RW-155 (110-120) – 082416 was collected and analyzed in triplicate as L1626817-04, -05, and -06, and ran as the MS/MSD on L1626817-05.

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

MANUAL INTEGRATION – No “before” manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (expected bias would be high when using this quantification approach).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected prior to analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. It is not known if the State of New Jersey or an associated accreditation body has approved this modification.

CONFORMANCE - NON-CONFORMANCE SUMMARY QUESTIONAIRE – Line item #7 stated "No" when a client specific MS/MSD was included in the data set.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

The target analyte list was defined by the client-project as 1,4-dioxane.

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC Samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirements.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6$_{o}$C	7days 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

APPENDIX 1

SAMPLING AND ANALYSIS SUMMARY

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.

R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

No additional qualifications were made based on the level 4 data package validation review.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

BATCH ID's – only one batch ID was used for both prep (method 3510C) and analysis (method 8270D) in the lab report and EDD submittal. QC batch association had to be made by date and in reference to the analytical sequence and prep sequence logs.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4-dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (higher bias would be expected using this quantification approach).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule for that internal standard. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected at analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. The status of lab specific State of New Jersey or associated accreditation body approval associated with this quantitation approach for 1,4-dioxane should be confirmed.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

The target analyte list was defined by the client-project as 1,4-dioxane.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6$_{o}$C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.
Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.

NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (high bias of field sample results would be expected using this quantification technique).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected prior to analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. It is not known if the State of New Jersey or an associated accreditation body has approved this modification.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below
The target analyte list was defined by the client-project as 1,4-dioxane.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6^{o}C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

LISTS OF APPNEDICES

(Following Text)

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in

	data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (higher bias for

field sample results would be expected using this quantification technique).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected prior to analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. It is not known if the State of New Jersey or an associated accreditation body has approved this modification.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below
The target analyte list was defined by the client-project as 1,4-dioxane.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6$_{o}$C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

(Following Text)

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Lab Sample ID	Sample ID	Collection Date	Collection Time	OSW-8270D
L1626610-01	RW-11D (262-267)-082316	8/23/2016		X

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the

instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered

	non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (high bias for field sample results would be expected using this quantification technique).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected prior to analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. It is not known if the State of New Jersey or an associated accreditation body has approved this modification.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below

The target analyte list was defined by the client-project as 1,4-dioxane.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6$_o$C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Lab Sample ID	Sample ID	Collection Date	Collection Time	OSW-8270D

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the

instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.

UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

HTQ – SVOC SIM sample -006 re-analysis was re-prepped (extracted) outside of reference holding time by 8 days so the associated result should be considered to be estimated and qualified with a J flag. The original analysis sample -006 1,4-dioxane result was 152 ug/l. This result was not consistent with sample location expectations for 1,4-dioxane so the second of two 500ml sample containers was re-extracted (out of hold) and re-analyzed for 1,4-dioxane with a final reported result of 29.2 ug/l. Validation review of the DPKG-FULL data package did not reveal any QC or contamination issues with the laboratory prep or analysis that would indicate a cause for the high bias in the initial result.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (high bias for field sample results would be expected using this quantification technique).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule. The rule is therefore applied only to

the surrogates associated with samples that had internal standards injected prior to analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. It is not known if the State of New Jersey or an associated accreditation body has approved this modification.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below
The target analyte list was defined by the client-project as 1,4-dioxane.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary.

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6^{o}C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

LISTS OF APPNEDICES

(Following Text)

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.

UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

.

MBK - QC batch WG926574 method blank had a detection below the RL for the following analyte: 1,4-DIOXANE. The following client sample results should be considered be non-detected at the concentration reported and qualified with B flags: -04, -05, and -06.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

Sample RW-155 (110-120) – 082416 was collected and analyzed in triplicate as L1626817-04, -05, and -06, and ran as the MS/MSD on L1626817-05.

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so

data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (higher bias of field sample results would be expected using this quantification approach).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected prior to analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. It is not known if the State of New Jersey or an associated accreditation body has approved this modification.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below
The target analyte list was defined by the client-project as 1,4-dioxane.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6^{o}C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

LIST OF ATTACHMENTS

1.0 INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.

UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

No additional qualifications were made beyond those determined from level 2 verification review as noted below.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

SEQUENCE TABLE SAMPLE ID's – The method blank, LCS and LCD names were designated on the Work Group Report and sample quants as WG927825-1, -2, and -3, but were listed on the Analytical Log File as WG926918-1, -2, and -3.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique is not considered to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by conventional internal standard quantification techniques (high bias of field results would be expected using this quantification approach).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected prior to analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. It is not known if the State of New Jersey or an associated accreditation body has approved this modification.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below
The target analyte list was defined by the client-project as 1,4-dioxane.

3.1 CALIBRATION – GAS CHROMATOGRAPH/MASS SPECTROMETER (GC/MS) SVOCs

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

NOTE: MS/MSD QC samples were not analyzed as part of this QC batch.

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs

There were no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs

Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	*Reference Method*	*Matrix*	*Preservation & Storage*	*Holding Times*
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6^{o}C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.

1.0`INTRODUCTION

The following document details an assessment of the analytical data reported by ALPHA Analytical Laboratory Mansfield and Westborough MA the data in the submittals listed below which were collected from the Ringwood Mines/Landfill site as noted. The sampling and analysis summary listing sample ID's and testing as related to the laboratory submittal numbers is presented in Appendix 1. The summary of all of the field sample results and qualifiers associated with this submittal is presented in Appendix 3. Executive summary of qualified data only is reported in Appendix 4. Lab deliverables relevant to this submittal are included as attachments at the end of this report.

Table 1.1

Table 1.2 below lists the project-specific analytes or analyte lists associated with the methods referenced in Table 1.1:

Table 1.2

Parameter	***Reference Method***	***AnalyteListing***
Semi-Volatile Organics	OSW-8270D/SIM - ISOTOPE DILUTION	1,4-Dioxane only

All "OSW" analytical methods were referenced from "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", Third editions final update IV or latest revision (with all subsequent revisions). The "SM" analytical method was referenced from the "Standard Methods for the Examination of Water and Waste water", latest promulgated revision. "EPA" methods were referenced from the revisions noted.

Laboratory Standard Operating Procedures (SOPs) associated with the methods utilized for this laboratory submittal were not available to CADENA for the purpose of validating this SDG.

Level IV data review provides a comprehensive or extensive review of the analytical data allowing for the complete reconstruction of the chemical analysis.

All of the data that was recalculated was consistent with the reported results to within at least 2 significant figures. Final results may not recalculate exactly beyond this level of precision, in some cases, due to differences in available significant figures between the hardcopy raw data provided and the data utilized for calculations by the laboratory that came directly from the instrument. A table of the laboratory documents reviewed in preparing this report is included in Appendix 2.

The data was reviewed in accordance with the analytical methods and the documents listed below: (NOTE: laboratory criteria – control limits – were utilized to evaluate the data where available. Comparison to NFG criteria are noted when lab criteria was not available or for informational purposes when lab data exceeds NFG criteria).

i.) "Standard Operating Procedure HW-6 Rev12 March 2001: CLP Organics Data Review and Preliminary Review" USEPA Region 2 as identified in project QAPP.

ii.) "Standard Operating Procedure HW-2, Rev11, Jan 1992: Evaluation of Metals Data for the CLP Program" as identified in the project QAPP.

The Level VI review findings are summarized in the Executive Summary section below.

Process controls for the validation review of the level 4 laboratory data package are referenced in the tables by method/analytical group within the body of this report.

Definitions for data qualifiers that may have been incorporated into the data tables for this report are noted below:

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
NJ	Tentatively identified compound with approximated concentration.

R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

1.1 VALIDATION QUALIFIER EXECUTIVE SUMMARY

VALIDATION SUMMARY

GCMS SVOC/SIM

No additional qualifications were made based on the level 4 data package validation review.

The following observations **DID NOT** result in qualification but were noted during the validation review:

GCMS SVOC-SIM

CLARIFICATION - Issues arose finding the calibration curve identification, located possibly only in the Table of Contents and the analytical batch identification was derived from reviewing the sequence table. Although the data package was well organized and title pages were helpful, the raw data Quant reports were not intuitive for recognizing method blank, LCS and other QC analyses.

SEQUENCE TABLE SAMPLE ID's – The method blank, LCS and LCD names were designated on the Work Group Report and sample quants as WG928084-1, -2, and -3, but were listed on the Analytical Log File as WG928082-1, -2, and -3.

MANUAL INTEGRATION – No "before" manual integration chromatograms were available for the 1,4-dioxane peaks that were flagged as being manually integrated, only the post integration chromatograms.

GENERAL METHODOLOGY – Laboratory used GCMS SVOC method 8270D-SIM with method 3510C prep. The 1,4-dioxane analyte concentration was quantitated against the 1,4- dioxane-D8 surrogate which was also used as the internal standard. Method is considered to be isotope dilution however the "surrogate as internal standard" technique has not been observed to be the industry standard quantitation approach. This would be considered to be a "results corrected for percent recovery" quantification technique so data generated using these calculations would not be comparable to field sample results generated by industry standard internal standard quantification

techniques (high bias would be expectation for this quantification approach).

Analysis did not follow the referenced SW-846 8270D Method and merits a statement of modification. Introducing the internal standard, 1,4-dioxane-d8 prior to sample extraction prevents using the 50% to 200% IS recovery rule for that internal standard. The rule is therefore applied only to the surrogates associated with samples that had internal standards injected at analysis, and this data is provided in the Level 4, Form 8 Internal Standard and RT summary table. The status of lab specific State of New Jersey or associated accreditation body approval associated with this quantitation approach for 1,4-dioxane should be confirmed.

VERIFICATION SUMMARY

No level 2 data package was available for review prior to receipt and processing of the level 4 data package.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

2.0 SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs) – METHOD SW846 8270D -SIM analysis with ISOTOPE DILUTION– GENERAL QC REQUIREMENTS

See Attachments for submittal-specific review summary of QC requirements noted below
The target analyte list was defined by the client-project as 1,4-dioxane.

2.1.1 TUNING AND MASS CALIBRATION – GC/MS SVOCs

Tuning compounds were analyzed at the required frequency and met the tuning criteria specified in the method without exception.

2.1.2 INITIAL CALIBRATION – GC/MS SVOCs

Initial calibration data for SVOCs met the method criteria for instrument sensitivity, retention time drift and linearity of response unless noted otherwise in verification/validation summary.

2.1.3 INITIAL CALIBRATION VERIFICATION – GC/MS SVOCs

Initial calibration verification (ICV) standards for SVOC analyses were reviewed and met criteria specified by the laboratory with no exceptions.

2.2 CONTINUING CALIBRATION – GC/MS SVOCs

Continuing calibration standards were analyzed at the required frequency and the results met the criteria for instrument sensitivity and linearity of response unless noted otherwise in verification/validation summary

2.3 INTERNAL STANDARDS – GC/MS SVOCs

Internal standard (IS) data were reviewed and met criteria for retention time and response. See executive summary for information concerning quantitation technique associated with internal standards.

2.4 SURROGATE SPIKE RECOVERIES – GC/MS SVOCs

If surrogate recoveries are outside of established control limits, presumably due to matrix effects, these interferences must be confirmed by sample re-analysis or other acceptable standard techniques.

If in order to overcome sample matrix interferences or to quantitate elevated target compound levels for an investigative sample, the surrogate results are diluted to below the laboratories limits of quantitation, these surrogate results will not be utilized to qualify data.

All surrogate recoveries were quantitated against the 1,4-dichlorobenzene-d4 internal standard and were within the established laboratory control limits unless noted otherwise in verification/validation summary. Note: surrogate analyte responses (1,4-dioxane-D8) were also used as internal standards.

2.5 LABORATORY CONTROL SAMPLE ANALYSES - GC/MS SVOCs

A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed for the target analyte SVOCs. The LCS recoveries and LCS/LCSD RPD were within the laboratory control limits for all compounds of interest unless noted otherwise in verification/validation summary.

2.6 MATRIX SPIKE/MATRIX-SPIKE-DUPLICATE ANALYSES - GC/MS SVOCs

Validator does not have enough information regarding the nature and consistency of the investigative field samples to apply the valid qualifiers to additional samples beyond the parent sample for the MS/MSD outlier. The end data user must determine whether or not to extend qualification based on knowledge of the investigative field samples and project requirements.

2.7 FIELD QA/QC – FIELD DUPLICATE ANALYSES - GC/MS SVOCs There were

no field duplicate comparisons performed as part of this validation request.

2.8 TARGET COMPOUNDS AND REQUIRED LIMITS OF DETECTION - GC/MS SVOCs

All target analytes were reported based on comparison to project-specific target analyte requirments.

2.9 COMPOUND IDENTIFICATION AND QUANTITATION - GC/MS SVOCs

All laboratory target compound identifications and quantitation for the client samples reviewed were acceptable without exception.

2.10 TENTATIVELY IDENTIFIED COMPOUNDS - GC/MS SVOCs Not required for this sampling event or laboratory submittal.

2.11 BLANKS – METHOD/FIELD/CALIBRATION - GC/MS SVOCs

Method blanks are evaluated if detected above the MDL. Client sample results that are less than 5 times the amount found in the blank for organic analytes (10X if analyte is considered to be a common lab contaminant) or less than 10 times the amount found in the blank for inorganic/metals analysis are flagged as non-detect at the RL with a UB flag if sample result is less than RL or non-detect at the concentration reported with a B flag if sample result is above the RL. See verification/validation summary for findings specific to this submittal.

3.0 REPRESENTATIVENESS EVALUATION

Representativeness is a qualitative evaluation of whether the data represents actual environmental conditions. Representativeness was evaluated using the criteria noted in the following sections.

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

3.1 SAMPLE PRESERVATION AND HOLDING TIMES

Holding time criteria, which reflect the length of time after sample collection that a sample or extract remains representative of environmental conditions. Depending on the analysis, either one or two holding times were evaluated.

i.) For those analyses that do not include a sample extraction, only one holding time was evaluated: the length of time between sample collection and analysis.

ii.) For analyses that require sample extraction prior to analysis, two holding times were evaluated: the length of time from sampling until extraction and the length of time from extraction to analysis.

Holding times are compared to standard method specific holding times accepted or recommended by the United States Environmental Protection Agency (USEPA). Those holding times outside of USEPA acceptance criteria are qualitatively evaluated to determine their effect on sample representativeness.

All sample extractions and/or analyses were performed within the specified holding times unless noted otherwise in verification/validation summary.

EPA Sample Holding Time and Preservation Requirements

Parameter	***Reference Method***	***Matrix***	***Preservation & Storage***	***Holding Times***
Semi-volatile Organics by GCMS	OSW-8270D-SIM	Water	Refrigeration 0-6^{o}C	7days Extraction 40 days Analysis

3.2 METHOD BLANK SUMMARY

Representativeness was also evaluated by analysis of laboratory method blanks and field equipment blanks. Laboratory method blanks and field equipment blanks are used to identify sources of contamination not associated with environmental conditions.

4.0 USABILITY AND COMPARABIILTY

Usability of data was evaluated by assuring that all the analytical requests were met, samples were received in the proper condition, and all analyses were performed within the appropriate holding times unless noted otherwise in verification/validation summary

No data evaluated within this delivery group was considered unusable (qualified with an R flag) due to sample integrity, sample matrix interference or batch quality control issues unless noted otherwise in verification/validation summary.

5.0 QC SUMMARY

All sample results were compliant with the project specific QAPP standard (if available) for usability with exceptions defined by validation and verification qualifiers as applied. Please reference the following tables for a summary of the investigative field sample data and their valid qualifiers based on Level 4 technical review of the analytical data.
