As we continue to adjust to the evolving COVID-19 situation, EPA is taking the necessary steps to ensure that decisions about ongoing cleanup activities at Superfund sites are made with the health and safety of communities, EPA staff, US Army Corps of Engineers staff, state and tribal partners, and contractors as the priority.

Because the work at Hopewell Junction involves contractors entering people's homes, EPA will suspend this portion of our work until further notice. The suspension of work is a temporary measure as we adjust to the ongoing situation with COVID-19. We will be periodically reassessing this decision moving forward and are prepared to come back to the site to continue work as soon as possible. The decision to suspend work was made in consultation with, or at the recommendation of, the Town of East Fishkill. All other work, including site restoration and water line completion, will continue

given its proximity to completion scheduled for May 2020. As the situation evolves, EPA will continue to inform residents of any updates. EPA will continue to work closely with state and local health officials, and all partners and stakeholders, to make determinations about site work based on guidance from the Centers for Disease Control and Prevention (CDC).

It is important to know that under the current situation, EPA has maintained its ability to respond to human health or environmental emergencies at Superfund sites, or in any situation where we are called upon to address immediate risks from releases of chemical, oil, radiological, biological, and other hazardous materials.

In May 2017, EPA established a task force to restore the Superfund program to its rightful place at the center of the Agency's core mission to protect health and the environment.
