I.read the Superfund Proposed Plan for the Gowanus Canal and I wanted to make sure you knew about a technology I heard about called OPFLEX. OPFLEX material can help with the Combined Sewer Overflows and discharge from the Manufactured Gas Plants mentioned in the plan. It would not cost much money for the DEC to get this material and put it out in the canal and it would greatly decrease the amount of pollution. The material can also be re-used – which would decrease the cost of each use. Please explore OPFLEX for use in your plan.

Sincerely,
Skye Wallin

I applaud the Environmental Protection Agency's decision to include sharp reductions in sewage overflows as part of the proposed Superfund cleanup targeting toxic waste in the Gowanus Canal. Tackling combined sewage overflow (CSO) discharges, which typically occur during rain and wash high volumes of untreated sewage and other contaminants into the canal, is essential, particularly given the results of Riverkeeper's water quality tests on the Gowanus.

Hi Christos,

Is there a reason why the EPA isn't looking into bioremediation as an alternative to dredging? Please see a fellow ecological designer's work in restoring a polluted canal in China to its natural beauty: http://toddecological.com/PDFs/100623.casestudy.baima.pdf

I could see why dredging would be a favorable option if the excess sediment is making the canal too shallow for the barges to safely pass, but to dredge the toxic sludge just to move it elsewhere seems like a waste of time and money if bioremediation is a less expensive and safer option with a better long term investment for the community.

If you'd like me to develop preliminary designs as to what a bio-remediated Gowanus Canal might look like at this time, I'd be happy to do so. I plan on being in attendance at this Thursday's evening, so hoping to meet you and your panel then.

Kind Regards,
Krissie

Hi Natalie,

My husband and I have lived on Sackett Street between Smith and Hoyt for the past 20 years – just a few blocks away from the Gowanus canal.
I am also co-President of the Sackett Street Block Association.

We were at the public meeting on Wed night at PS 58 and we were incredibly impressed with the EPA's presentation and plan.

We had to leave right before 9pm, so I didn't get a chance to ask my question:

It seems that the Gowanus clean-up won't be completed for at least 10 years.

I was wondering if the EPA has a position on the 700-unit rental building that the Lightstone Group wants to erect at 363-365 Bond Street.

Do you feel that it is safe for these 700+ additional residents to be living in the immediate area (directly on the banks of the Gowanus) while the Superfund clean-up is underway?

Thanks for any information that you can provide.

Best,

Jenny Mandel

Mr. Tsiamis,

I am a member of the community around the **Gowanus Canal Superfund Site** and have recently read the proposed plan as put out by the EPA (http://www.epa.gov/region2/superfund/npl/gowanus/pdf/gowanus_prap.pdf). I have reviewed the alternatives for remediation and the options for treatment and disposal. I strongly believe that any solutions which include on or offsite beneficial use (Options D and E) should be removed from consideration.

Any beneficial use would require close monitoring for many years to make sure that the materials are not escaping back into our environment. In particular, I worry about Option E, which might include putting back into the bay just to create a benefit for a private owner of newly created land. The location mentioned in Option E is near an area which is currently used by the community, particularly children, on a regular basis. If Option E is considered, there should be considerate planning for environmental impacts if there is a flood event during the life of the project.

Without a specific plan for how the materials would be tested during and after the project for any beneficial use, there is no way to price those options properly. Also missing from the pricing of Options D and E are the tests which the EPA's document states have not been specified yet. Continuous testing for years after the project is complete could completely reverse any savings over even Option A.

Options F & G which include onside storage in a CDF would also require some method for testing. There should also be an environmental impact study on how those CDFs will fare against flood events, some possibly as strong as or stronger than Sandy. It does not make sense to spend half a billion dollars, to have all the work reversed in a single event. None of these costs are included in the EPA's study. Perhaps a plan which included a mix of options would be better, such as On-site stabalization and encapsulation some of which is kept in a CDF and some of which is transported to a landfill. This means that risk is distributed across multiple sites.

I hope to see you at one of the next meetings.

Sincerely,
Benjamin Peikes

Good morning,

I am writing to find out some information on the Gowanus Canal remedial proposal. I have read through some of the documents but was unable to find the answers. My questions are:
-How much volume of canal sediment is contaminated?
-How much volume under the proposed remedy would be dredged?
-How much would be capped?
-What is the concentration threshold for dredging? (if the canal sediment has a concentration of X ppm or greater then it must be dredged)

Thank you for your time and I look forward to your response.

Jacob Terrance

Concerns about the cement-like material for Caps and CDFs in Gowanus Canal project
Rowland Laedlein
to:
Region2 GowanusCanalComments

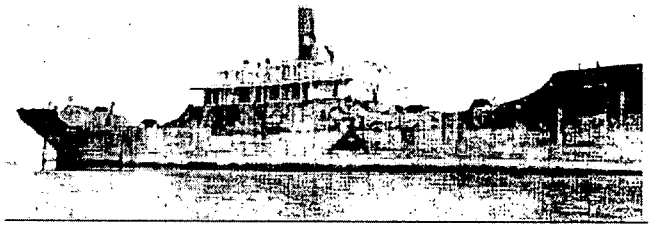
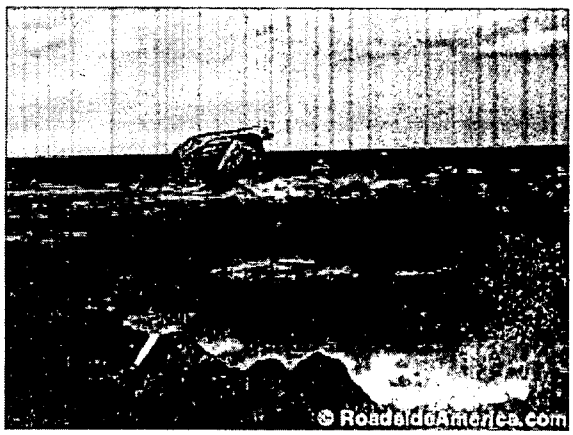
Hide Details
From: Rowland Laedlein <rskclaedlein@gmail.com>

To: Region2 GowanusCanalComments@EPA

During the public session held in the Pal Miccio Center in Red Hook last month, a concern was raised about the life expectancy of the material used to create the cap on the bottom of the canal as well as in the confined disposal facilities planned under some proposed solutions. While a response was provided that the material had been tested and would be effective even in a salt water environment, I have some remaining concerns.

I am not a chemist or engineer who can speak to the issues of the impact of salt on the deterioration of cement, but have a layman's observation of the impact of rock salt on fresh concrete, as well as my own observation of the deterioration of a concrete ship which was grounded off Cape May, New Jersey after World War I. The top picture below is what it looked like when it was grounded in 1926. I remember seeing the ship in two sections back in the 1950's when it still resembled a ship. The picture at the bottom is what is left now. While certainly this wreck was subject to ocean waves that would impact its durability, it was also subject to constant exposure to salt water. Any containment facility for storage of Gowanus sediment would be intended to hold a salt laden material mixed with cement. The cap would also be exposed continuously to salt water and subject to tidal water movement and other storm water flow. The examples shown in the slide at the presentation were of facilities holding sediment from a fresh water source. Can you advise how testing has been conducted that makes EPA sure the salt water exposure will not affect the durability of the cap or the CDF?





Rowland Laedlein

Hello, I am a resident of Brooklyn, a journalist, blogger, and work for the CAG, and these are my comments and questions I would like on the record for the RPAP.

- In a post-Sandy New York, all communities, including the Gowanus Canal, should work towards softer (parks) or rugged (highly resilient) waterfront development. The EPA remedy should address that with restored wetlands beyond just the 1st Street Basin, and with requirements of green infrastructure, oyster reefs, elevated utilities, and decreased densities inside the 100-year floodplain surrounding the canal in order to preventing sewage, oil, and other decentralized forms of contamination from re-contaminating the remedy during a flood or storm surge event.
- What restrictions are available to EPA for implementation in the Gowanus Community in order to prevent decentralized forms of contamination, like sewage and oil from a storm surge event, from recontaminating the remedy?
- What are the types of specific actions EPA will take to secure the clean up site in the event of a major storm like Hurricane Sandy?
- What steps and technology will be used by EPA to ensure that any processing facilities located in Red Hook will not result in health risks to Red Hook, particularly during flooding and storm surge events?
- What steps and technology will be used by EPA to ensure that any processing facilities located in Red Hook will not result in noxious odors, noises, or traffic?
- Is it possible to require that the CDF be open and available to the public for inspection 24/7?
- Is it possible to require that the CDF only be implemented under the condition of an enforceable community benefits agreement?

I was at the meeting last night as for me I would love to see Mr Quadrozzi place with this equipment to purify the slush coming from the Gowanus canal. Unfortunate a lot of people from Redhook is not into the technology of today. It would be a shame that this station is not allowed to be in redhook because of that. EPA have cleared up all doubts for some but unfortunate for others it's not clear. I believe if the person that was chosen to give this demonstation were able to explain himself better it would have been ok. Unfortunate because of his speech not being clear and the way he spoke lots of folks didn 't get the message straight. His english was kind of limited.

Dear Mr. Tsiamis . I was at last nights meeting at PS15 and you gave little or no info on John Quadrazzi. The land owner . http://www.dnainfo.com/new-york/20121211/red-hook/toxic-sludge-developer-owes-up-20m-for-environmental-violations

I find it hard to believe that this plan is even being considered . We are in a flood zone. You would fill in more Red Hook waterfront and then give it to a private land owner who has numerous environmental violations, and a concrete plant that he will expand. This sludge remediation site is also next to a ball field where thousands of kids play, and also right next to one of NYC largest housing projects. I have to say I was surprised by how vague your answers were last eve. I am strongly against the EPA processing any Gowanus waste in Red Hook. Off site remediation options pose less risk to our community.

Thanks. Todd Bonne

Good Afternoon,

I went to the meeting of last week 2/13/13 at PS 15 in Red Hook.

I went with an open mind. It is my opinion that there was lack of specifics and more vagueness expressed to the public.

Based on the information provided by the EPA, I would have to say I DO NOT wish to have the drudged material brought to Red Hook for treatment. Send everything off-site instead.

No real tangible (believable) benefit was provided at this meeting.

Thank you for your time. I appreciate the opportunity to express my opinion. I do hope it is taken into consideration.

Hello. My name is Justin Burke and I am in 8th grade. Our science class at the Hellenic Classical Charter School has been researching the plans to clean up the Gowanus Canal, and I have a few questions.

- When the first and second sections are cleared of the contaminated sediments, what happens to the sediments?

- How do you plan to clean the water out?

- Wouldn't adding all of those extra layers in the ground lead to the waters being higher, which could lead to overflowing problems?

- Wouldn't the special clay need to be removed from the ground? if so, how would it be moved with the armored layer and the sand on top of it?

- How do you plan to get the garbage & litter out of the canal?

- If the canal opens up, it would probably be a great tourist attraction. When/ if this happens, how do you plan to keep litter out of the Gowanus canal?

Thanks for your time,

Justin Burke

Dear Mr. Tsiamis,

I think that the Gowanus Canal should be cleaned up because it is the only body of water we have in our neighborhood and its contaminated and germ infested. It used to be the home of beautiful fish and foot long oysters who have long since perished due to contaminated water. The water being polluted deosnt benefit anyone in any way and if anything it is dangerous. Breathing in air from the water increases your risk of getting cancer. It was once a very beautiful water body but now its nothing more than a dump that people throw their trash into when they pass it. Please consider taking serious measures toward cutting of the sewer system for the canal and restoring it to its natural beauty.

Sincerely,
Despina Giasemis

Hello,

As residents of the community of Red Hook, Brooklyn, we are strongly opposed to the proposed processing of toxic sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility which would be built right next to the Red Hook Ball Fields and Pool.

We want the toxic sludge to be shipped out of the area to be processed.

Thank you,

Allyn Bacher

Dear Mr. Tsiamis,
Thank you for your presentation at the Red Hook public school two weeks ago. Had the sound quality from the PA system been better, it might have been a nicer experience. I am against this proposed facility in Red Hook, Brooklyn: my vote is **NO**.
I am a resident of Red Hook, Brooklyn, NY. I have the following points and questions about the EPA proposal to de-water material from Gowanus Canal and to stabilize this material at Quadrozi's pier.
- Would the proposed facilityto be constructed to new FEMA standards, with the 'ground level' being @ 12 foot above mean high tide. If not, why not.

- Would the proposed facility be in compliance with NYC Department of Building codes? If not, why not.
- How dry does the material get after de-watering, before stabilizing in a cementicious mixture ? In other words, or you talking about a paste, an absolutely dry powder, a heavy, sludge-like liquid mass? What is the proposed viscosity of the de-watered material?
- Are the proposed shed / containment structures rated for Category 1, 2, 3 or 4 hurricanes? If not, why not.

- Are you aware that offering employment to people who live in one area is not legal. It violates equal employment. An entity can only offer, as a tactic to divide communbities and to win approvals, and then only two weeks in advance of open solicitation, the opportunity to apply for employment to 'local' residents.

- Is the EPA, when the votes are tallied on whether or not to construct this proposed facility, to count votes from Red Hook only? Or from the total of votes received? Is the vote tabulation process transparent?

- How is the EPA addressing rumors/facts that Quadrozzi has violated clean air/ clean water regulations?

- How can anyone guarantee that, in perpetuity, that the proposed landfill / made-land site will be used as currently planned, without the heavy metal containment being compromised?

- How is it justified that anyone, in this case Quadrozzi, is getting what is essentially free land?

- Does any Municipal, State or Federal Agency take Quadrozzi's plans seriously? That boat is a piece of junk. Those grain towers should be taken down before they become a hazard.

Thank you for taking the time to read this.
Once again, my vote is **NO** to this proposed facility in Red Hook.

Sincerely,
Stephen Kondaks

NO!! to proposed Gowanus plan for Red Hook

alexandra grablewski to: Region2 GowanusCanalComments 03/05/2013 12:19 PM

Dear EPA
I am a resident of Red Hook Brooklyn and have attended several meetings related to the placement and treatment of the materials removed from the Gowanus to our neighborhood, on the water front. At the latest meeting at PS 15 it was BLATANTLY obvious that the community of Red Hook is ABSOLUTELY against the proposed plan.
The EPA says they will not move forward without community approval, and I think it is very clear that you do NOT have it.
It is truly the most insane plan I have ever heard. In addition, many of us feel like there is a lot of underhanded business going on here. The piddling amount of jobs you think will "benefit" this community is actually an insult.
I am writing as requested to voice my opinion via email that PLEASE!!!! MOVE THE MATERIALS ELSEWHERE!!!
RED HOOK DOES NOT WANT IT!!!
Please respect our community's wishes.
Thank you.
Sincerely,
Alexandra

alexandra grablewski

No sludge to Redhook!

sevabelli to: Region2 GowanusCanalComments 03/05/2013 01:19 PM

Please don't locate the sludge removal plant in Red Hook. This neighborhood has been already hit hard by so much.
Please Locate it somewhere else, away from families trying create a healthy thriving community.

To Whom It May Concern:

My daughter had just finished renovating her home at 25 Wolcott Street in Red Hook, Brooklyn. She is still in the process of cleaning up damage from four feet of raw sewage to her first floor following the onslaught by Sandy (and, I might add, at great sacrifice to her own finances due to shameful insurance reimbursement policies). How can you even think of placing a storage/treatment facility for toxic material from the Gowanus Canal at the flood prone Red Hook waterfront? People in Red Hook object and we, as parents of a young person who works, lives and has invested in her Red Hook neighborhood, strongly object!

Sincerely,
Charlotte and John Kuczynski

I, the sender, vote that I do not want this project to proceed.

Subject: : Proposed Plan For the Clean-up Of the Gowanus Canal

Dear. Mr. Tsiamis,

First, I would like to thank you and your Region 2 team for your tireless work to right an environmental wrong that has plagued my community for decades. For the first time since I moved to Carroll Gardens/ Gowanus in 1985, I have real hope that the Gowanus Canal will be a source of pride rather than a shameful, dirty and harmful waterway in the middle of several residential Brooklyn neighborhoods.

I would also like to thank you and the team for your transparency, your professionalism and most of all, for your patient effort to explain the science involved in the clean-up of the canal to those like me, who are less knowledgeable. Most of all, I have been impressed by the fact that EPA Region 2 has kept to the timeline set at the beginning of the Gowanus Superfund process.

As a local resident and member of the Gowanus Community Advisory Group, I have taken the time to attend both of your public meetings, one in Carroll Gardens and one in Red Hook, to familiarize myself with the Proposed Plan, which was released in December 2012.

I am in full support of the plan and applaud the fact that EPA has not only addressed the toxins at the bottom of the canal and the contamination coming from the uplands, but also includes Combined Sewer Outflow control measures.

I believe that the two retention tanks proposed for outfalls RH-034 and OH-007, two of the largest contributors of CSO discharges, will be the most effective solution to this ongoing problem.

Regarding the three former Manufacturing Gas Plants (MGPs), I ask that EPA demand the highest level of remediation possible of National Grid, the PRP responsible for remediation at the former Fulton, Citizens/ Public Place and Metropolitan sites.

In particular, I ask that the Fulton Site at Nevins and Douglass Streets in Gowanus, which is currently used as a public park and public swimming pool, be remediated to the same level as Public Place.

I believe that the EPA Gowanus Superfund clean-up is an unparalleled opportunity for the residents of this area. After decades of neglect, we are so very close to addressing this environmental nightmare. This moment will not come again, so let us do this in the most thorough, most complete way so that future generations can live and thrive alongside the Gowanus.

Most importantly, let us get to a Record of Decision as soon as possible.

With all my appreciation,

Katia Kelly

DDBCommentsPRAP.docx

Comments by Diane Buxbaum on the Proposed Remedial Action Plan (PRAP) for the Gowanus Canal Superfund Site

To: Christos Tsiamis, Project Manager, USEPA Region 2, 290 Broadway, 20th floor, New York, NY 10007; GowanusCanalComments.Region2@epa.gov

Set 1: Proposed Remedial Action Plan Comments

1. The PRAP addresses many of the community concerns. Thank you for taking these into account.
2. Because of the inability of National Grid to remove all of the contaminants from the MGP sites, is it possible for EPA to promote or if possible mandate that these spaces be used for open spaces, parklands or restored wetlands and to oppose all residential development. Unforeseen events such as Sandy, or much worse will occur. Potential future residents should not be subject to these events in vulnerable areas where toxins may potentially in some unforeseen manner be released.
3. I strongly support the 2 proposed storm water storage tanks. Legal assurances must be in place to ensure maintenance of these structures by NYC DEP.
4. Given the possibility of an accidental spill or breakdown or storm damage, we request that all dredged materials be treated offsite.

5. Given that likelihood of greater storm events, can it be written into the final plan that reviews take place more often than every 5 years, particularly after storm events. If this a part of the final plan, it is more likely to occur than what is in the current wording: "CERCLA requires that the site be reviewed at least once every 5 years, and can that wording include reviews of the functions of the other government agencies that are responsible for relevant actions: NYC DEP for the CSOs and the tanks; NYS DEC for the contaminated MGP sites.
6. Would it be possible for the proposed plan to include a well publicized proposed cleanup schedule and a tentative proposed community/EPA meeting schedule? Both of these schedules could have strong caveats, but would enable the community to have some idea of the timeline for the cleanup.
7. Although this is not a part of the PRAP, acknowledgement of a) the Community's strong support of a higher level of reclassification of the Canal should be included. Some in the community still have a vision of a swimmable Gowanus Canal, and b) support habitat restoration at all levels, benthic, aquatic, and where available canal bank areas.
8. Try to use the lowest carbon footprint possible.

OVERALL I am grateful for the openness and availability of EPA staff members. I strongly support and thank EPA for doing an excellent job in developing a Proposed Remedial Action Plan that will result in a cleaner canal, a healthier environment for the community and a wonderful outcome for my community. Thank you.

Dear Christos Tsiamis,

I attended your presentation last Tuesday about the Gowanus Canal. It seems to me that you and your staff have been doing everything possible to make the cleanup of the canal happen, something that is extremely necessary. Residents of the area also seem pleased that you care about their concerns as well as the need for a clean canal.

I was also pleased to learn that you are trying to make sure that the canal will continue to be an even cleaner waterway, by monitoring and closing waste pipes and seepage from adjacent old industrial sites, and by pushing for better sewage maintenance.

Thank you for all that you are doing and thank you for a very informative presentation. I just hope that the projected 10 year plan doesn't get dragged out. The Gowanus area has waited long enough for this cleanup.

Sincerely,

Ginny

Dear Mr. Tsiamis:

Good morning. My name is Harold Peterson, and I am writing to comment on the proposed cleanup of the Gowanus Canal Superfund Site.

From 2004 to 2008 I lived in Reno, NV. I saw firsthand the long term effects of contamination on a watershed. Back in the 19th century mercury was used to facilitate gold mining in the vicinity of the Carson River. To this day mercury levels are elevated downstream of Carson City all the way to the Fallon area. It is unsafe to eat any fish from this stretch of the river, despite the lack of other natural food resources. (Irrigation abounds at the lower end of the river, but I do not see this as sustainable.) This problem will never go away on its own.

I recently read about the pollutants in Gowanus Canal. I also believe these pollutants will not disappear without outside intervention. An immediate intervention in the canal is needed to reverse these effect. Therefore I support the proposed cleanup plan for this site as written.

Sincerely,

Harold Peterson

Brooke Connolly to: Region2 GowanusCanalComments 03/17/2013 02:33 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Gowanus Canal Must Be Cleaned Up

Phil Konigsberg to: Region2 GowanusCanalComments 03/17/2013 04:45 PM

I think a comprehensive clean-up of the Gowanus Canal must be commenced as soon as possible and not be compromised by cost to do so. We should extract the necessary funds from those who caused the conditions that are now before us.

Thank you.

Dear Mr. Tsiamis,

I hope you are well. As a Resident of Red Hook, Brooklyn, and as a Business owner with office in Red Hook, could you please answer the following:

Is the proposed facility (de-watering / remediation with concrete and incinerator) to be elevated above Base Flood Elevation (BFE) as indicated in the new FEMA maps?

I hope to hear from you soon.

Sincerely,

Stephen Kondaks

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Rose Saxe to: Region2 GowanusCanalComments 03/19/2013 12:25 PM

As a local parent, I am strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The Red Hook pool is truly one of the most special places in Brooklyn - my son learned to swim there, and we use it constantly in the summer. Please don't jeopardize this neighborhood - which has suffered enough from the effects of Sandy.

I fully support cleaning up the Gowanus, but there have to be other options to explore.

Lise Engber to: Region2 GowanusCanalComments 03/19/2013 02:51 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

d weeks to: Region2 GowanusCanalComments 03/20/2013 02:58 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

As a resident of the community of Red Hook, we are strongly opposed to the processing of toxic sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility proposed to be built right next to the Red Hook Ball Fields and Pool on property owned by an individual who has incurred serious fines for environmental violations in the past. It is the wrong site for this important facility.

Sue Kues to: Region2 GowanusCanalComments 03/21/2013 10:08 AM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, I object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. Not to mention that he has neglected his property on Henry Street in Cobble Hill, allowing it to fall into disrepair, "demolition by neglect. He is not a good neighbor. This will benefit one individual financially at the expense of the entire area.

I, the sender, vote that I do not want this project to proceed.
Henrietta Perkins to: Region2 GowanusCanalComments 03/24/2013 12:36 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Gowanus Canal

Frank, Timothy to: Region2 GowanusCanalComments 03/28/2013 11:45 AM

Please respond to franktv

I just heard on News12 Brooklyn you are starting to clean up the canal. I would urge you to talk to the Syracuse NY community. Onondaga Lake currently is being cleaned up and making progress. I am sure they will give you advice. Lastly if it was up to me I would urge you to pump out the water, and give it to a water treatment plant, or a bio engineering company who may be able to use the material. Once the water is gone, removing the sludge and waste on the bottom can be treated using nature rather then digging it up and spreading the material around and putting a lot of people in contact with the hazardous material.

A concerned resident

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

CG CORD Comment on the EPA Proposed Plan for the Gowanus Canal Clean-Up.docx

Dear Sir or Madame:

Attached you will find the CG CORD Comment on the EPA Proposed Gowanus Canal Clean-Up Plan featured at
http://www.epa.gov/region2/superfund/npl/gowanus/pdf/gowanus_prap.pdf
Thank you.

Sincerely yours,

CORD Co-Founders:
Lucy DeCarlo
Rita Miller
Triada Samaras

CG CORD/Carroll Gardens Coalition for Respectful Development

Brooklyn, NY
March 28, 2013

CG CORD Comment on the EPA Proposed Gowanus Canal Clean-Up Plan

We at CORD, the Carroll Gardens Coalition for Respectful Development wish to begin by thanking our "team" at Region 2 for their leadership, transparency and timeliness. But most of all, we wish to express our gratitude for their clear and ever present dedication to our Community.

We are very supportive of the Proposed Plan. We are delighted with the inclusion of the retention tanks. We totally support the suggested locations of those tanks, the "salt lot" on Second Avenue, and under the former MGP site at the head of the Canal, AKA Thomas Greene Park.

It is our sincere wish that the retention tank system be implemented.

We see the New York City Long Term Control Plan mentioned many many times in the PRAP. In our experience, the City of New York has fallen short on most if not all of their promises regarding the Gowanus Canal and we see no reason to believe that their track record will improve anytime soon. With that in mind, we feel that the retention tank system is the only logical way to appropriately address the problems brought on by the CSO's. Any additional improvements/benefit that may eventually be enjoyed city wide by the NYC LTCP will be much appreciated icing on the cake--

Regarding the CDF/Red Hook Facility suggestion- we stand solidly behind the wishes of our neighbors in the Red Hook Community. We want whatever they want.

CG CORD Co-Founders:

Lucy DeCarlo
Rita Miller
Triada Samaras

I, the sender, vote that I do not want this project to proceed.
Aaron Vail to: Region2 GowanusCanalComments 04/02/2013 07:59 AM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Gowanus plan objection over Red Hook toxic sludge placement;
todd bonne to: Region2 GowanusCanalComments 04/04/2013 03:35 PM

Hi Christos. My name is Todd Bonne I live over at 25 Wollcott st Red Hook ,Brookyn I live very close to the suggested remediation site you have proposed over in Red Hook. I think it's an extremely bad idea. Our community just experienced massive flooding from hurricane sandy ,and the last thing we need is this suggested remedy. Also filling in Red Hook waterfront for a private concrete plant owner is unacceptable. Why not clean up the Henry st basin as well. It's a great spot over that way. I'm not sure why the EPA would want to take the risk of putting the material in our community next to ball fields where kids play. Another question is what will happen with future use of the Quadrazzi land fill. We can only speculate. That's not good enough. If you walk down the streets of Red Hook and talk to people in the Community you will be very aware that most residents are against processing the sludge in our neighborhood . People actually have signs on there houses opposing this option. A recent Editorial in the Red Hook Star Revue pretty much some up how many of us feel.
http://redhookstar.wordpress.com/2013/03/26/vote-your-disapproval-of-the-epa-plan-for-red-hook-editorial / Please do not put this facility in RedHook ! Thanks Todd Bonne

Gowanus Superfund Comment
Lisanne M to: Region2 GowanusCanalComments 04/04/2013 05:25 PM

To whom it may concern:

I live one block from the canal on Bond Street. I am highly aware of it's toxicity and I was overjoyed when the EPA decided to Superfund the canal several years ago.

I am now commenting again in favor of cleaning the canal. It is important to me that the work be protected, as described in the Plan, from future contamination of all toxic inputs.

As someone who is living so close by, it is extremely important to me that the work be carried out in a safe manor without truck traffic as described in the Plan. I've been following this issue very closely through the years along with my neighbors. We deserve to live near a body of water that is free from contaminants which would encourage the growth of a healthy eco-system in the canal and reduce our own personal exposure to it's hazzards. It is an important first step for the future of the Gowanus Canal and our neighborhood that surrounds it.

Please clean it as proposed in the plan.

Thank you
Lisanne McTernan
378 Bond St, Brooklyn NY

I, the sender, vote that I do not want this project to proceed.

- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Barbara Elovic to: Region2 GowanusCanalComments 04/04/2013 07:53 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Comments on Gowanus Canal Proposed Plan

Jean Bonnes to: Region2 GowanusCanalComments 04/17/2013 11:44 AM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to Jean Bonnes

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Jean Bonnes
120 W 140th St Apt N3t
New York, NY 10030-3437
(646) 340-3035

I, the sender, vote that I do not want this project to proceed.

Fwd: Statement of Support on the Proposed Superfund Cleanup
joeandlinda393 to: Region2 GowanusCanalComments 04/17/2013 08:43 AM

-----Original Message-----
From: stud <joeandlinda393@aol.com>
To: Tsiamis.Christos <Tsiamis.Christos@epamail.epa.gov>
Sent: Wed, Apr 10, 2013 9:05 pm
Subject: Statement of Support on the Proposed Superfund Cleanup

Superfund Cleanup Plan
To the Superfund Staff Region 2, New York,

I wish to say I have wholeheartedly supported the Superfund for the Gowanus since the Gowanus Canal was nominated to the National Priorities List in 2009. I am a co-founder of FROGG (Friends and Residents Of the Greater Gowanus) .FROGG has worked very hard to bring the nomination to a reality (Superfund Site) in 2010. I am also a member of the CAG since its inception and serve on the Archaeology Committee.

My husband Joseph and I completely support the EPA Superfund Cleanup Plan and hope that by working together we can someday see a clean Gowanus Canal.We have lived in the Gowanus neighborhood since 1976. We have hope that some day the Gowanus Canal will be clean and will support all the wonderful ecological possibilities for the future of our community.The State and the City agencies have ignored us for a hundred and fifty years, finally an agency that CARES about our environment and will FIX it too.

I wish to thank the EPA, Region 2 staff in particular, Christos Tsiamis, Walter Mugdan, Natalie Loney and Brian Carr for their patient and sincere contributions to this Superfund project. I thank the EPA staff for their resolve to find a solution to the problems we face here and their continued dedication and participation with the Gowanus and Red Hook Communities.

Sincerely and Gratefully,

Linda and Joseph Mariano

I, the sender, vote that I do not want this project to proceed.

Gowanus cleanup
Teresa Solomita to: Region2 GowanusCanalComments 04/17/2013 06:54 AM

Christos Tsiamis
Remedial Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor

New York, New York 10007-1866

As the Proposed Plan Cleanup Plan for the Gowanus Canal establishes methods for removal of contaminated sediments for the entire width and length of the canal, to the depth of clean native sediment, and has identified ways to prevent re-contamination and halt future toxic inputs; I supports the EPA Proposed Plan to clean the Gowanus Superfund site.

I appreciate that the plan will not remove canal sediment by trucking, but will use the water way for this purpose. As the design for this work moves forward, I ask that remediation methods with the lowest carbon-foot-print be employed where possible. I support the constructive use of sediment materials following EPA regulations. And it is important to me that this cleanup plan grant the EPA the necessary authority to insure the sewer overflows do not foul the finished remedy.

I look forward to a finished canal remedy that will make for a healthy community and an environment that will be capable of supporting a vibrant aquatic ecosystem.

Thank you,
Teresa Solomita

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

R.R.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

R.P.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

Mr. Tsiamis:

I am writing to register my opposition to the currently proposed location for dewatering the toxic sludge resulting from the clean-up of the Gowanus Canal.

I am opposed to any solution which involves stabilizing the sludge on-site and keeping it in Red Hook in any form. I am concerned that the amount of toxicity released into the atmosphere in the dewatering process has not been studied thoroughly and that the sludge processed at this site and transformed into a concrete form (as planned) could leak toxic materials in the future. According to the EPA's own report, "Tests to assess the leachability of NAPL (toxic contaminants)... would need to be performed (on the concrete)... Permanent institutional controls would be required to ensure the long-term effectiveness of this option..." I do not want a site built with materials potentially leaching toxic contaminants near my home and requiring a permanent monitoring facility where I live and breathe.

The estimated $37 million dollar savings for this method does not benefit the community, but rather reduces the expenses of the clean-up for the original polluters. Additionally, this proposal includes the building of additional waterfront bulkhead land for a private entity, which, by their own admission, has not been thoroughly vetted or designed. I am concerned that once this project is in motion, the requests and the needs of the community will be lost as a private developer seeks to increase profit with no benefit to the community. It appears that all parties in this plan stand to benefit in some way from storing this material in Red Hook, with the very notable exception of the residents.

The EPA has a list of remedies that involve processing and containment of dredged material off-site for beneficial use such as the capping of existing landfill sites, I urge the EPA to select any option that involves off-site processing and off-site disposal.

Thank You,

Elaine Fulder

Additionally, this proposal includes the building of additional waterfront bulkhead land for a private entity, which, by their own admission, has not been thoroughly vetted or designed. I am concerned that once this project is in motion, the requests and the needs of the community will be lost as a private developer seeks to increase profit with no benefit to the community. It appears that all parties in this plan stand to benefit in some way from storing this material in Red Hook, with the very notable exception of the residents.

The EPA has a list of remedies that involve processing and containment of dredged material off-site for beneficial use such as the capping of existing landfill sites, I urge the EPA to select any option that involves off-site processing and off-site disposal.

Thank You,

Drew Perri

Anthony Serrano to: Region2 GowanusCanalComments 04/16/2013 12:35 AM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Gowanus Canal, Brooklyn, NY Superfund Site Remediation
Elfreud to: Region2 GowanusCanalComments 04/16/2013 04:03 PM

GowanusCanalComments.Region2@epa.gov

Christos Tsiamis
Remedial Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor

New York, New York 10007-1866

As the Proposed Plan Cleanup Plan for the Gowanus Canal establishes methods for removal of contaminated sediments for the entire width and length of the canal, to the depth of clean native sediment, and has identified ways to prevent re-contamination and halt future toxic inputs; I supports the EPA Proposed Plan to clean the Gowanus Superfund site.

I appreciate that the plan will not remove canal sediment by trucking, but will use the water way for this purpose. As the design for this work moves forward, I ask that remediation methods with the lowest carbon-foot-print be employed where possible. I support the constructive use of sediment materials following EPA regulations. And it is important to me that this cleanup plan grant the EPA the necessary authority to insure the sewer overflows do not foul the finished remedy.

I look forward to a finished canal remedy that will make for a healthy community.

siobhan towey to: Region2 GowanusCanalComments 04/16/2013 05:08 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages

Comments on Gowanus Canal Project
Gary Nickerson to: Region2 GowanusCanalComments 04/16/2013 05:23 PM

Christos Tsiamis
Remedial Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor

New York, New York 10007-1866

As the Proposed Plan Cleanup Plan for the Gowanus Canal establishes methods for removal of contaminated sediments for the entire width and length of the canal, to the depth of clean native sediment, and has identified ways to prevent re-contamination and halt future toxic inputs; I support the EPA Proposed Plan to clean the Gowanus Superfund site.

I appreciate that the plan will not remove canal sediment by trucking, but will use the water way for this purpose. As the design for this work moves forward, I ask that remediation methods with the lowest carbon-foot-print be employed where possible. I support the constructive use of sediment materials following EPA regulations. And it is important to me that this cleanup plan grant the EPA the necessary authority to insure the sewer overflows do not foul the finished remedy.

I look forward to a finished canal remedy that will make for a healthy community.

Dear Mr. Tsiamis,

I support the Proposed Clean-up Plan for the Gowanus Canal. I am a former resident of the area with many friends still in the bordering neighborhoods. Removing contaminated sediments from the entire canal and the recommendations that will prevent further toxins entering the canal will benefit human health and allow a restoration of the aquatic ecosystem of the waterway.

Additionally, the community needs to know that the good work that will be done in the Clean-up Plan will grant the EPA authority to prescribe guidelines that must be put in place to prevent future CSOs.

Sincerely,
Enid Braun

No on the CDF Option

Edward Williams to: Region2 GowanusCanalComments 04/16/2013 10:22 PM

Dear EPA,

I am a fairly new resident of Redhook. I moved here about 2 years ago. I live and work in the neighborhood. Wanted to write and express my opposition to the proposed CDF that is mentioned in the Gowanus superfund cleanup proposal.

http://www.epa.gov/region2/superfund/npl/gowanus/pdf/gowanus_prap.pdf

I grew up in Southwestern Colorado. Radioactive uranium waste was and still is a part of the history, the landscape, and the lives of a lot of people in that area. The town I grew up in was one of the sites that the DOE worked to clean up in the 1980s. We used to believe that uranium talings were perfectly safe. Heck, we even used to thing asbestos was perfectly safe. But our understanding of the world around us and our place in that world and our effect on that world is alwas changing. Thing is, there really is no way to just make something like radioactive tailings disappear. Even after the clean up we will always have to ask ourselves what next? What do we do with this stuff now? Same thing goes for Gowanus sludge. It will never really go away.

Even when the clean up is done with the best of intentions, if the material we are working with is not safe, there is always a chance that something can go wrong. No matter what you do to stabilize it. Even when the stuff is dealt with in the safest possible way based on our most informed, most thorough current understanding of the pollutants, there is always the possibility that some harmful outcome was not accounted for. And the benefits of storing the waste here aren't worth the risk of harming even one person. Much less an area as populated as Redhook.

There really is no perfect solution to cleaning up something like the sludge in the Gowanus canal. But stabilizing that material and using it as landfill in Redhook seems like a terrible idea. Even if according to everything we know now it would be perfectly safe. I am not sure that there is a good solution, but the CDF is not even close to the best of the bad solutions. It is not something I want in my new backyard. It isn't something people should have to live next to, work work next to, and spend the next few decades or more monitoring in case something goes wrong. Or, even worse, something that is just forgotten about. Until the next time we have to clean it up.

Thanks for taking the time to read this.

Ed

I, the sender, vote that I do not want this project to proceed.
Tevina Willis to: Region2 GowanusCanalComments 04/16/2013 10:35 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Email: GowanusCanalComments.Region2@epa.gov

Mr. Tsiamis:

I am writing to register my opposition to the currently proposed location for dewatering the toxic sludge resulting from the clean-up of the Gowanus Canal.

I am opposed to any solution which involves stabilizing the sludge on-site and keeping it in Red Hook in any form. I am concerned that the amount of toxicity released into the atmosphere in the dewatering process has not been studied thoroughly and that the sludge processed at this site and transformed into a concrete form (as planned) could leak toxic materials in the future. According to the EPA's own report, "Tests to assess the leachability of NAPL (toxic contaminants)... would need to be performed (on the concrete)... Permanent institutional controls would be required to ensure the long-term effectiveness of this option..." I do not want a site built with materials potentially leaching toxic contaminants near my home and requiring a permanent monitoring facility where I live and breathe.

The estimated $37 million dollar savings for this method does not benefit the community, but rather reduces the expenses of the clean-up for the original polluters. Additionally, this proposal includes the building of additional waterfront bulkhead land for a private entity, which, by their own admission, has not been thoroughly vetted or designed. I am concerned that once this project is in motion, the requests and the needs of the community will be lost as a private developer seeks to increase profit with no benefit to the community. It appears that all parties in this plan stand to benefit in some way from storing this material in Red Hook, with the very notable exception of the residents.

The EPA has a list of remedies that involve processing and containment of dredged material off-site for beneficial use such as the capping of existing landfill sites, I urge the EPA to select any option that involves off-site processing and off-site disposal.

Thank You,

Anette Amendola

Re: Comment about cleanup plan for Gowanus Canal Superfund site

Dear Mr. Tsiamis:

I appreciate the opportunity to comment on the proposed cleanup plan for the Gowanus Canal.

The Workforce Development Institute, which is a statewide non-profit committed to helping working families, sees the cleanup of contaminants in the Gowanus Canal as an opportunity to generate economic development along that waterway, while improving the lives of residents in the Canal's proximity. In considering the proposal for cleanup, I hope that the Environmental Protection Agency takes into account the potential local workforce impact of the cleanup. Let me explain.

Across the country businesses are encouraged to move into a region, often with government incentives and infrastructure improvements. These businesses need skilled workers. As an illustration, about a decade ago, the Metropolitan Transportation Authority (MTA) awarded a contract for rail cars to Kawasaki, in Yonkers. Without a workforce impact statement as part of the bid, Kawasaki decided regional workers did not have the skills required to fulfill the terms of the contract. Rather than working with regional employers, Workforce Investment Boards (WIBs), state agencies, schools, unions and training providers to develop the appropriate skills, Kawasaki brought workers in from Japan under special visas. These temporary workers came, worked and brought their skills home with them.

With the above example in mind, WDI supports the notion that any public funds used for cleanup of the Canal be used to strengthen the local skill base. In the same way that Environmental Impact Statements are frequently required for local building projects, I am suggesting that plans associated with this cleanup include a provision that

contractors work with local agencies, including schools, unions and other training providers to train as many local workers as possible. This is particularly important in an area with a composite New York City unemployment rate that is over nine percent; Brooklyn is at 10.7 percent and the Bronx 13.4 percent.

The language I am proposing is:

"In order to foster New York job creation, hire unemployed workers and build a foundation for a stronger regional economy, Requests for Proposals (RFP) or similar procurement instruments for cleanup of the Gowanus Canal that involve public funds require the applicant to submit a Workforce Impact Statement (WIS). This Impact Statement must identify the workforce skills needed to accomplish the purpose of the procurement or grant, include an applicable skills inventory of workers available within a 50 mile radius of the project, and a strategy for hiring or retraining workers to meet the demands of the project. The training strategy will include an inventory of strategic partners within the region and their proposed role in addressing the workforce demands of the project."

This language asks those responsible for the cleanup to directly pay attention to local jobs. Where the required skills do not exist, local workforce agencies can assist, where practicable, to acquire the needed training.

I am available to discuss this concept further.

Sincerely,

Ed Murphy
Executive Director

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

20th Floor
NY NY 10007

Dear Christos Triamis,

I am writing you regarding the proposed Gowanus Canal EPA Superfund Plan

I own The New York Art Foundry, a small manufacturing business along the Gowanus Canal in Brooklyn.
My neighbors are also mostly small manufacturing businesses.
We were hit very hard by 6' tidal waters from Hurricane Sandy and also endured flooding last year from Hurricane Irene.

Fortunately we received federal funding to rebuild our business.

I am writing in regards to the EPA plan to begin dredging the Gowanus Canal. The plan was created before the interruption of businesses from the flooding from Hurricane Sandy.

I strongly recommend that the dredging and disruption of the bottom of one of the most toxic water ways in this country be put on hold for two years while they evaluate weather patterns and the likelihood of severely toxic silt entering homes and business along the Gowanus Canal if we are flooded.

Our company was able to rebuild from the high tidal water of Hurricane Sandy, but ~~this~~ building and all the shops and business along the Canal will certainly be quarantined if we're inundated with toxic sludge from a hurricane while they are dredging.

I am appalled that the EPA thinks a good plan for our community is to dredge the canal for 4 years -filling and running barges from the Gowanus Canal to Red Hook. The plan calls for the discharge of the toxic sludge along a beautiful park called 'The Ball Fields' in Red Hook. It is one of the largest parks in New York City, used from early spring to fall by hundreds of soccer and baseball teams. Also at this site is a beautiful Olympic sized pool used all summer by families in Park slope, Brooklyn Heights, and Carroll Gardens, Red Hook etc. Families of all races stand in long lines starting in early summer to use this wonderful pool. It's a Brooklyn past time to visit the Red Hook pool and then have picnic lunches at the park across the street.

What are legislators thinking?
Not only is this the site of an important recreation area, but also has everyone already forgotten that Hurricane Sandy turned the main street of Red Hook into an extension of the East River just 7 months ago?
Van Brunt became in a 4-foot deep estuary of the east River. If another hurricane should hit our shores again, not only will Red Hook be flooded, but also toxic sludge will most certainly inundate the shores of from this proposed facility.

I support the Red Hook Option of the EPA Gowanus Canal Superfund cleanup.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

The Gowanus Canal Super fund plan
Foundry New York Foundry New York 04/13/2013 09:08 PM
To: Region2 GowanusCanalComments

I own The New York Art Foundry, a small manufacturing business in the Gowanus area of Brooklyn. My neighbors are also mostly small manufacturing business

For the last two years hurricanes have brought high tides into our shops. In 2011 Hurricane Irene brought in six inches of water , 7 months ago hurricane Sandy brought 6 foot of tidal Gowanus canal water into our shop. Tidal waters broke through our doors and came through our walls . When the tide went out , our equipment and projects in production were ruined from the salt water.
Fortunately the Federal Government approved a small business disaster loan for us for a 150,000 to help us rebuild.

I am writing in regards to the EPA plan to begin dredging the Gowanus Canal. The plan was created before the interruption of businesses from the flooding from the Gowanus Canal.
I strongly recommend that the dredging and disruption of the bottom of one of the most toxic water ways in this country be put on hold for two year while they evaluate the circumstances o f severely toxic silt and
mud entering homes and business along the Gowanus Canal.
Our company was able to rebuild from the high tidal water. But this building and all the shops and business along the Canal will certainly be quarantined if inundated with toxic sludge from a hurricane while they are dredging.

History: This message has been replied to.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Alison Filosa to: Region2 GowanusCanalComments 04/14/2013 05:34 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

cleaning the Gowanus Superfund site
Lorna Clark to: Region2 GowanusCanalComments 04/15/2013 02:34 PM

To whom it may concern:

I support the Superfund Cleanup and the EPA's proposed methods for cleaning this Gowanus Superfund site. It is important to me that the work be protected, as described in the Plan, from future contamination of all toxic inputs. It is also important to me that the work be carried out in a safe manner and without truck traffic as described in the Plan. I ask that the work be accomplished with the lowest possible carbon foot print as carbon output is contributing to climate change conditions this area is facing.

Sincerely,

Lorna Clark
Park Slope Brooklyn resident

I, the sender, vote that I do not want this project to proceed.

- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

aaron.vincent@yahoo.com

I, the sender, vote that I do not want this project to proceed.

Lisa Jiang to: Region2 GowanusCanalComments 04/15/2013 11:11 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

business

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

RP

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

SAY NO TO A TOXIC RED HOOK

WWW.NOTOXICREDHOOK.COM

I, the sender, vote that I do not want this project to proceed.
Zachary Knudson to: Region2 GowanusCanalComments 04/10/2013 08:31 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Listing of the Gowanus Superfund site
Melissa Harty to: Region2 GowanusCanalComments 04/10/2013 08:23 PM

I live 10 blocks from the canal. I support the Listing of the Gowanus Superfund site.

I have followed the discussions of the Superfund Cleanup and support the EPA's proposed methods for cleaning this Gowanus Superfund site.

It is important to me that the work be protected, as described in the Plan, from future contamination of all toxic inputs.

It is also important to me that the work be carried out in a safe manner and without truck traffic as described in the Plan.

I ask that the work be accomplished with the lowest possible carbon foot print as carbon output is contributing to climate change conditions this area is facing.

melissa harty

I, the sender, vote that I do not want this project to proceed.

Wilfredo Garay to: Region2 GowanusCanalComments 04/10/2013 05:52 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Gowanus Canal Superfund PRAP comment
Maryann Young to: Region2 GowanusCanalComments 04/10/2013 05:28 PM
Cc: Maryann Young

History: This message has been forwarded.

VIA EMAIL:

April 10, 2013

Mr. Christos Tsiamis
Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis:

Words cannot fully express my gratitude I have for you and your (Region 2) team. Your expertise and passion in doing the right thing to protect our environment and the overall health and safety of this community have been proven many times over with your dedicated and transparent commitment in working closely with us and helping us to understand the full Superfund process.

Scientifically technical and politically sensitive, you and your team were there to clarify and balance the differences and to unite a community toward a comprehensive cleanup so desperately and deservingly due.

To find a place you can call home is a rare find. To find a place with selfless, generous, caring community-minded people is a blessing. I have been fortunate to come across both and now triple-blessed to have you and your team a part of it.

I wholeheartedly support the PRAP and deeply believe and trust you and your team will thoroughly clean and protect the Gowanus Canal for us now and all future generations to come.

With the deepest respect and thanks,

Maryann Young
Carroll Gardens Resident and Condo Owner

Deco Zapata to: Region2 GowanusCanalComments 04/10/2013 11:47 AM

I live in Red Hook and I do not want Gowanus Canal toxins to be stored or treated in my neighborhood.

Please spend the $37 million to take the toxins to an already licensed treatment facility that wants this material.

Red Hook cleanup site

Anthony Schloss to: Region2 GowanusCanalComments 04/10/2013 11:40 AM

As you know, the Red Hook community is strongly against a clean up site in its area, next to its recreation areas. No one in Red Hook excepting John Quadrozzi and his company stands to benefit from this plan. Perhaps there will be a cost savings to the project, but is that savings worth the possible deleterious effects to a community, with no benefit to it? I feel we all must do our part to support our neighbors in NYC, but this asks too much of Red Hook community, especially as it brings no benefit to us.
I do have one suggestion-if you hope to move forward with this plan, why not incorporate some positive improvement to Red Hook? A detoxifying plant and the few jobs is not much improvement at all. Surely there could be a use for the detoxified material that might be a benefit for the community? Or add something not related to the sludge to make the plan have some good effect for the people of Red Hook?
I feel that is the only way you may get support from Red Hook residents. And if it is true that you do care about our opinions, then please heed this email and the others you receive.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

No to toxic dump in Red Hook

Mohamed Yahia to: Region2 GowanusCanalComments 04/09/2013 11:58 AM

Dear Sir or Madam,

I am a disabled resident of Red Hook with three children. I have no other place to go. Please do not dump the waste from the Gowanus canal in Red Hook. I do not want my and my kids' and family's health to be affected. I beg you. Please don't do it. Please!!!!

Regards,

Mohamed Yahia

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

Gowanus Superfund
jamie mirabella to: Region2 GowanusCanalComments 04/08/2013 09:46 PM

To Whom it May Concern,

I am writing to express my support for the Listing of the Gowanus Superfund site. I have followed the discussions of the Superfund Cleanup and support the EPA's proposed methods and want the work to be protected, as described in the Plan, from future contamination of all toxic inputs.

It is also important to me that the work be carried out in a safe manner and without truck traffic as described in the Plan. This work should be accomplished with the lowest possible carbon foot print as carbon output is contributing to climate change conditions this area is facing.

Sincerely,
Jamie Mirabella

Please respond to Julie Taylor

To Whom it May Concern:

I live 1.5 blocks from the canal. I support the Listing of the Gowanus Superfund site.

I have followed the discussions of the Superfund Cleanup and support the EPA's proposed methods for cleaning this Gowanus Superfund site.

It is important to me that the work be protected, as described in the Plan, from future contamination of all toxic inputs.

It is also important to me that the work be carried out in a safe manner and without truck traffic as described in the Plan.

I ask that the work be accomplished with the lowest possible carbon foot print as carbon output is contributing to climate change conditions this area is facing.
Thank you,
Julie Veto

Resident Support for Gowanus Superfund Cleanup

catherine steindler to: Region2 GowanusCanalComments 04/07/2013 08:01 AM

Dear Mr. Tsiamis,

I am a resident of Cobble Hill and live near the Gowanus Superfund site. I am writing to register my strong support for the EPA's plan to clean this site. It is important to me that this project move forward, that the site be protected from future contamination, and that the work be carried out in a safe manner as described in the plan. I ask that the work be accomplished with the lowest possible carbon foot print. What is most important to me--much more important than speed-- is that the EPA do their clean up work thoroughly and that the canal remain clean.

Many thanks,

Catherine Steindler
193 Kane Street, Apt. 4
Brooklyn NY 11231

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013 DEADLINE*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

Sara Guilbeau to: Region2 GowanusCanalComments 04/06/2013 07:59 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Statement in Support of EPA Superfund Cleanup Plans for Gowanus Canal

David Congdon to: Region2 GowanusCanalComments 04/06/2013 04:27 PM

Cc: Nancy Golladay, David Congdon

Dear EPA:

I am writing this statement to the EPA in support of the Proposed Superfund Cleanup Plan for the Gowanus Canal. My wife and I have lived 1 ½ blocks from the Gowanus canal since 1976. I have strongly supported proposals intended to clean up the canal, including the initial Listing of the Gowanus Canal on the EPA's Superfund site. I have followed the discussions of the Superfund Cleanup at all of the different meetings (Federal, City, Community Board, CoRD, and FROGG), and support the EPA's proposed methods for cleaning up the Gowanus Canal Superfund site.

It is important to me that the work be protected from future recontamination of all toxic inputs, as described in the Plan. Also, it is important to me that the work be carried out in a safe manor and without truck traffic, as described in the Plan.

Since 1982, I have patiently listening to New York City officials promise to clean up the Gowanus Canal. Nothing ever came of those empty promises. Over the last three years, I have attended many community meetings listening to New York City officials claim that the EPA should step aside and let the City and their real estate developer cronies clean up the Gowanus Canal. I do not believe that this City administration has the political will or intention of cleaning up the canal. The City should pull its collective socks up and start complying with the NYSDEC Water Quality Standards instead.

Thank you,

David Congdon and Nancy Golladay

Gowanus Superfund site
Mike Yuen to: Region2 GowanusCanalComments 04/05/2013 12:41 PM

To whom it may concern,
I live 2 blocks from the canal and completely I support the Listing of the Gowanus Superfund site.

Having lived in the area for close to 15 years, we were very excited to hear that someone was going to take the time and money to clean up what is considered one of the most polluted waterways in America. I have two youg children and the toxins that are in the Gowanus is an ongoing concern. I have followed the discussions of the Superfund Cleanup and support the EPA's proposed methods for cleaning this Gowanus Superfund site.

It is important to me that the work be protected, as described in the Plan, from future contamination of all toxic inputs.

It is also important to me that the work be carried out in a safe manner and without truck traffic as described in the Plan.

I ask that the work be accomplished with the lowest possible carbon foot print as carbon output is contributing to climate change conditions this area is facing.

Gowanus Canal
Jennifer Frantz to: Region2 GowanusCanalComments 04/05/2013 12:01 PM

I live a few short blocks from the canal. I support the Listing of the Gowanus Superfund site.

I have followed the discussions of the Superfund Cleanup and support the EPA's proposed methods for cleaning this Gowanus Superfund site.

It is important to me that the work be protected, as described in the Plan, from future contamination of all toxic inputs.

It is also important to me that the work be carried out in a safe manner and without truck traffic as described in the Plan.

I ask that the work be accomplished with the lowest possible carbon foot print as carbon output is contributing to climate change conditions this area is facing.

Thank you,
Jennifer Frantz

Rachael Laumann to Region2 GowanusCanalComments 04/05/2013 11:04 AM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations profiting from the project. It is the wrong site for this important facility.

Gowanus Canal Superfund Cleanup Proposal

Barbara Brookhart to: Region2 GowanusCanalComments 04/05/2013 10:41 AM

April 5, 2013

Christos Tsiamis
Remedial Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor
New York, New York 10007-1866

Dear Mr. Tsiamis,

As a 30+ year resident of Carroll Gardens, I support the EPA's proposed methods for cleaning this Gowanus Superfund site. The communities adjacent to the canal have advocated for the clean up of the canal for many years, and we wholeheartedly supported the designation of the canal as a Superfund site, and support the EPA's Gowanus Canal Superfund Cleanup proposal.

I want to commend the US Environmental Protection Agency and its staff for an open and comprehensive community participatory process. It was quite an education, and the technical discussions were made in a way that lay people could understand the cleanup problems and proposal.

I am especially concerned about the combined sewer overflow problem, and any plans for more upland development should be put on hold until the City fully addresses this issue. They have been reluctant participants in the process, especially the CSO issue, and all of the clean up that is planned by the EPA would be for naught, if the CSO problem isn't ADEQUATELY addressed. The flooding of the adjacent neighborhoods with sewage during the Sandy hurricane should make the resolving of this problem the number one priority, and is why it is so important that the cleanup work be protected, as described in the Plan, from future contamination of all toxic inputs, especially the CSO outlets.

It is also important that the work be carried out in a safe manner, and without truck traffic as described in the Plan, as it is important that the work be accomplish with the lowest possible carbon footprint.

Dear Mr. Tsiamis,

I am a life long resident of First Street in Brooklyn, one block from the Gowanus Canal. Two of my grandchildren also live on First Street. They are the sixth generation of my family to live in such close proximity to the Gowanus Canal. I applaud your very fine work in having the canal declared a super fund site, and very much appreciate your serious work improving the quality of life for all those people who live in and visit our neighborhood.

For more than 100 years the City of New York did nothing to relieve or eliminate the constant contamination of the canal. To date, the City continues to do nothing and literally exasperates the condition by encouraging high density housing along the shores of the Gowanus.

I just want you to know how vey much I, my family, and my neighbors, appreciate and applaud all that you are doing. I look forward to my grandchildren crossing the Carroll Street bridge on their way to school and witnessing a vastly improved eco system below and along the shores of the bridge. Thank you for your challenging and truly noble work.

Respectfully,

James J. Kenna

Gowanus Canal
paul heller to: Region2 GowanusCanalComments 04/04/2013 08:23 PM
Please respond to paul heller

Dear Mr. Tsiamis,

I live near Fifth Avenue a few blocks away from the Gowanus Canal. I want you to know how strongly I and many of my neighbors feel about the premature nature of the Lightstone development. The EPA plan for remediation of some of the worse toxic conditions of the canal is what we want. After that is done, then there should be some discussion on whether commercial or non commercial development should take place along the canal. I urge the EPA to implement its plan as proposed.

The city government has clearly shown no interest in doing anything serious to clean the canal in the past. The history of the city's neglect is a fact. In the future, I would hate for people to say that we could have prevented another Love Canal but allowed developers who have greater influence on the city to build and then walk away. At the time of the Love Canal disaster it was said by a state official that the canal would be a "national symbol of a failure to exercise a sense of concern for future generations". We now have an opportunity to place safety and common sense over greed.

Respectfully,

Paul Heller, 322 First Street, Brooklyn, NY

I, the sender, vote that I do not want this project to proceed.

derek dominy to: Region2 GowanusCanalComments 04/04/2013 08:05 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children

Please respond to Lena Golze Desmond

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Lena Golze Desmond

After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. Joseph Alfano

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. It's time to address the toxic sludge at the bottom of the canal and ongoing pollution.

It is critical for the EPA to stand firm on requiring retention tanks to control Combined Sewer Overflows and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite.

I also believe the community in Red Hook is correct to oppose the building of a Confined Disposal Facility on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. gregory durniak

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. valerie gilbert

I, the sender, vote that I do not want this project to proceed.

Tamika Easterling to Region2 GowanusCanalComments 04/17/2013 11:53 AM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. David Gordon

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to safety for the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls, many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal. New York City might very well try to waiver from a full elimination--the EPA needs to be a powerful ally and supporter of full cleanup and of New York City.

I support the EPA's commitment to dredge as much as ten feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment. Red Hook is a developing area with the potential for mixed income housing--a need in New York City. The neighborhood, historically poor, has for decades endured the pollution from the Canal. In the interests of environmental justice, the EPA needs to listen to the residents.

Sincerely,

Mr. Ethan Middlebrooks
3817 52nd St
Sunnyside, NY 11104-1027

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. Javier Rivera

I, the sender, vote that I do not want this project to proceed.

Jessica Byrne to: Region2 GowanusCanalComments 04/17/2013 12:54 PM

As Resident of the community of Brooklyn, I am strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Pam Kray Gallivan

Re Gowanus Superfund site comments
Irene Van Slyke to: Region2 GowanusCanalComments 04/17/2013 02:25 PM

I strongly support the EPA Proposed Plan to clean the Gowanus Superfund site.

As the Proposed Plan establishes methods for removal of contaminated sediments for the entire width of the canal to the depth of clean native sediment, to permanently and impermeably cover whatever might remain, and has identified ways to prevent re-contamination and halt future toxic inputs;

Please respond to Carl Arnold

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. Carl Arnold
156 Prospect Park W
Brooklyn, NY 11215-4513

Dear Mr. Tsiamis,

Mr. Tsiamias,

I strongly support the proposed cleanup plan. I am an undergrad student who has grown up very close to the canal and am intensely aware of the need for remedial action on the site. This goal needs protection against the interests of developers in order to ensure even somewhat acceptable environmental health, especially for the residents in the area.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

More than anything, I'm looking to see the Gowanus Canal cleanup to be used as a model for environmental cleanups in similarly polluted water bodies. Biological treatment may be slower than some other proposed treatment methods, but I think that the benefits of a truly clean Gowanus would be worth the time and effort invested. Please support the use of bacteria, fungi, algae, oysters, mussels, etc. in the remediation efforts. We can't afford to look at the end of our nose, and use typical methodology that aren't often all that clean in themselves. We must look beyond to the goal of establishing biodiversity and new life in Gowanus and the entire NY Harbor. Dredging may be partially necessary, but it cannot be looked to as the complete answer.

Sincerely,

Mr. Mike Escobar

New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Helen Cu

Gowanus Canal PRAP Comment Attached

Mark Shames to: Region2 GowanusCanalComments 04/17/2013 04:36 PM

Dear Mr. Tsiamis:

Debra Scotto and I attach our personal comment with regard to the PRAP. We wish to thank you individually for your total commitment to the project but even more so for the surprising degree of frankness in your interactions with the community. We had come to expect obfuscation and opacity from our public officials as a matter of course. You restore hope for better days.

These comments are separate and apart from our participation on Community Board 6 and the CAG and are not intended to be viewed as a reflection of the sentiments of either the community board or the CAG.

Sincerely,

Mark C. Shames PRAP comment.pdf

GowanusCanalComments.Region2@epa.gov

Dear Mr. Tsiamis:

Let us begin by expressing our appreciation to the Environmental Protection Agency, Region 2 for adhering to the schedule that it set out at the commencement of this CERCLA process.

We were among those who were skeptical of EPA oversight of the Gowanus Canal. Our main environmental concerns for our neighborhood with respect to the canal were the coal tars in the upland MPG sites, the quality of the water in the canal and persistent localized flooding in the area adjacent to the canal that also resulted in sewer back up into the basements of homes along the canal. Unfortunately CERCLA was not designed to directly address these problems other than the coal tars.

Under those circumstances contra to our usual inclinations, we had judged it best to engage in a less demand oriented (Robert Moses) and more organic (Jane Jacobs) process. We envisioned the upland sites first being remediated along with the City's planned upgrades to the flushing tunnel and then once the sources of contamination were removed coming back to complete dealing with the issues remaining in the waters of the canal proper.

In that way, we hoped that it would jump start economic development with its substantial benefits along with a greater private participation in reducing sewer overflows into the canal. Such an approach would allow for a more flexible time horizon for attaining the secondary contact water quality that we believe essential to the best interests of our community. Under the CERCLA process it would be foolish not to coordinate completion of all elements within the, ten year, completion schedule.

We applaud the EPA for doing that testing which enabled it to determine that a failure to deal, at least in part, with the inflows of raw sewage into the canal would lead to its recontamination by toxins thus indirectly addressing a part of the water quality issue within the Superfund process.

The construction of retention basins suggested by the EPA in the PRAP will not only keep a significant amount of raw sewage out of the canal but it will undoubtedly aid in reducing the amount of flooding that is experienced by portions of the community. Retention basins seem to be the only option that will accomplish the goals of the community.

These unanticipated benefits from the CERCLA process unite the community behind the PRAP. These benefits must be maintained. While the construction of retention basins may exceed anticipated costs, they are the key element in justifying the initial massive cost of the project.

We are extremely disappointed that the language calling for the retention system is suggestive rather than compulsory. We are not sure that our municipality strapped for funds will feel that it can afford to take the hint. We fully support the remedy proposed with particular emphasis on the inclusion of the retention basins at the sites suggested in the PRAP.

Despite the cost savings that might be realized by doing containment of the less contaminated sediments locally it is in the best interests of area wide harmony to do dewatering by barge and treatment and disposal outside of the canal area. We have heard enough from our neighbors in Red Hook at various meetings to know that they do not want treatment

of the dredged materials in the area. We are equally confident that the Park Slope, Cobble Hill, Carroll Gardens, and Gowanus residents would reject accommodating the treatment of sediments within their borders, as well. We urge the EPA to abandon such local options.

If local treatment and containment were the EPA's preferred options, then local concerns should not have been a key element in the decision making process. Without the EPA standing firmly out front of such approaches, it was inevitable that the community would say no, even if such a stance may reflect an excess of caution.

There was also a paucity of outreach to the general public and even the opinion leaders of the community before rolling out such options in a comment period of limited duration. This has exposed the limitations to an approach where one supports and talks, almost exclusively, with those who will reflectively nod in agreement while failing to seek out those who are more questioning. The proposal as put forward provided negligible benefits to the local residents particularly when weighed against the perceived negatives.

We continue to have serious concern that carrying out the remedy will have deleterious effects on bulkheads throughout the canal area and that the cost of replacing deteriorated bulkheads may be a burden that will break the backs of innocent (non-prp) landowners. The issue of the bulkheads together with other important issues is not fully addressed in the plan and we must take on faith that approaches that work for the community will be found.

We have been advocates for connecting the residential communities of Carroll Gardens and Park Slope by expanding the residential character of much of the Gowanus corridor. With that future in mind the canal remediation ought to be undertaken with a view to achieving the highest standards reasonably attainable.

Sincerely,

Mark C. Shames

Debra Scotto

Proposed Gowanus Canal EPA PRAP
Joe Gardella to: Region2 GowanusCanalComments 04/17/2013 04:36 PM

Christos Tsiamis
Remedial Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor
New York, New York 10007-1866

Dear Christos Tsiamis

I am writing to provide my support in favor of the EPA PRAP (Proposed Remedial Action Plan) for the Gowanus Canal. I have been involved in some consultations with college faculty in New York City interested in long term environmental monitoring, and in the past months, at EPA Citizen Science workshops sponsored by Region 2 where issues on the Gowanus Canal are discussed.

I have been involved in similar issues in WNY, including the cleanup and removal of sediment in the Buffalo River.

As the Proposed Plan establishes methods for removal of contaminated sediments for the entire width of the canal to the depth of clean native sediment and to permanently and impermeably cover whatever might remain, and has identified ways to prevent re-contamination and halt future toxic inputs; I strongly support the EPA Proposed Plan to clean the Gowanus Superfund site.

Sincerely,

Joseph A. Gardella, Jr., Ph.D.

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. Pat Almonrode

I, the sender, vote that I do not want this project to proceed.

Kirsten Osthus to: Region2 GowanusCanalComments 04/17/2013 07:12 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Marcia Robinson

I, the sender, vote that I do not want this project to proceed.

Thomas Wilk to: Region2 GowanusCanalComments 04/17/2013 10:11 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Sharon Nolting

SAY NO TO A TOXIC RED HOOK

WWW.NOTOXICREDHOOK.COM

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

R.S.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

Christos Tsiamis
Remedial Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor
New York, New York 10007-1866

April 18, 2013

Dear Christos Tsiamis

I am writing to provide my support in favor of the EPA PRAP (Proposed Remedial Action Plan) for the Gowanus Canal. I have been involved in some consultations with college faculty in New York City interested in long term environmental monitoring, and in the past months, at EPA Citizen Science workshops sponsored by Region 2 where issues on the Gowanus Canal are discussed.

I run a small neighborhood environmental education group called Grass-roots and am concerned about many environmental issues. When I took a tour of the Gowanus and the neighborhood led by FROGGs last Spring I was so distraught with what these people are living with. How wonderful that it might now be cleaned up. I am all for the EPA plan!

As the Proposed Plan establishes methods for removal of contaminated sediments for the entire width of the canal to the depth of clean native sediment and to permanently and impermeably cover whatever might remain, and has identified ways to prevent re-contamination and halt future toxic inputs; I strongly support the EPA Proposed Plan to clean the Gowanus Superfund site.

Sincerely,

Bonnie Lane Webber

Apr 17, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mrs. Sandra Dal Cais
4534 Bliss street
Woodside, NY 11377

Please respond to Tom Dowling

Apr 18, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

Greetings.

This is to advise you I support the EPA's proposed plan to clean up the Brooklyn, NY Gowanus Canal Superfund site. It is very polluted and it's only right to clean it up.

Also, a comprehensive plan that addresses ongoing pollution from combined sewer outfalls (CSOs) is important to restoring some semblance of cleanliness to this waterway and the harbor and swimming areas it is close to such as Coney Island and South Beach, Staten Island, etc.

Please require retention tanks or a similar solution to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal and treat and dispose of this contaminated sediment offsite.

Thank you and regards.

Sincerely,

Mr. Tom Dowling
832 40th St

Brooklyn, NY 11232-3843

I, the sender, vote that I do not want this project to proceed.

Yvette Rojas to: Region2 GowanusCanalComments 04/18/2013 06:05 AM

History: This message has been replied to.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Apr 18, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Rimma Bitman
230 Riverside Dr
New York, NY 10025-6105

Gowanus Canal Proposed Plan Cleanup
Robert Rice to: Region2 GowanusCanalComments 04/18/2013 09:26 AM

History: This message has been replied to.

Christos Tsiamis
Remedial Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor

New York, New York 10007-1866

As the Proposed Plan Cleanup Plan for the Gowanus Canal establishes methods for removal of contaminated sediments for the entire width and length of the canal, to the depth of clean native sediment, and has identified ways to prevent re-contamination and halt future toxic inputs; I supports the EPA Proposed Plan to clean the Gowanus Superfund site.

I appreciate that the plan will not remove canal sediment by trucking, but will use the water way for this purpose. As the design for this work moves forward, I ask that remediation methods with the lowest carbon-foot-print be employed where possible. I support the constructive use of sediment materials following EPA regulations. And it is important to me that this cleanup plan grant the EPA the necessary authority to insure the sewer overflows do not foul the finished remedy.

I look forward to a finished canal remedy that will make for a healthy community.
In future, it would be better for EPA to be proactive to prevent the need for clean-ups. It's disheartening to

James Wisz to: Region2 GowanusCanalComments 04/18/2013 12:17 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Please respond to Valerie Dare

Apr 18, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Miss Valerie Dare
12017 Newport Ave

Apr 18, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am not even certain if the Gowanus Canal can be cleaned up after all the spillage by Mobil Oil and it's big oil cousins during World War II. But if it can be cleaned, it should be. People live in the immediate area and when there's a heavy rain the Canal overflows directly into the East River ... the Atlantic Ocean is right there.

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

I, the sender, vote that I do not want this project to proceed.

Hannah Holden to: Region2 GowanusCanalComments 04/18/2013 11:53 PM

History: This message has been forwarded.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE APRIL 26th, 2013 DEADLINE!

RP

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and for the community of the Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

Comments on Gowanus Canal Proposed Plan

David Danziger to: Region2 GowanusCanalComments 04/19/2013 01:29 AM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to David Danziger

History: This message has been forwarded.

Apr 19, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. David Danziger
35 Prospect Park W
Brooklyn, NY 11215-2393

Comments on Gowanus Canal Proposed Plan

Anna Ellis to: Region2 GowanusCanalComments 04/19/2013 07:30 AM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to Anna Ellis

Apr 19, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

I grew up next to the Gowanus Canal - smelling the stench from the CSOs during summer rainstorms and marveling at the oil spills as I walked over the Union Street bridge. The EPA's plan will stop CSOs from further polluting the Canal, at the same time as removing contaminated sediment at the bottom of the waterway. The EPA is addressing both of these issues with cleanup methods that will eliminate pollution from the canal and prevent future contaminations.

Sincerely,

Ms. Anna Ellis
460 Sackett St
Brooklyn, NY 11231-5019

EPA Clean-up of the Gowanus

Carl Teitelbaum to: Region2 GowanusCanalComments 04/19/2013 10:02 AM

Hello,

I live one block away from the Gowanus Canal and I'm in favor of a full EPA clean-up of all toxins in the canal. In doing so, all development of the land contiguous to the canal should be subject to a full Environmental Impact Study focusing on how any proposed development of the land and proposed changes to the bulkhead will impact the clean-up effort, the flow of water in the canal, the impact of storms on the canal and surrounding properties, the CSO situation and all pertinent environmental issues.

The canal must be cleaned up. Any development next to the canal must be thoroughly studied to determine long-term effects.

Sincerely,

Carl Teitelbaum
374 Bond Street
Brooklyn, NY 11231

After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. Ciro Di Donna

I, the sender, vote that I do not want this project to proceed.

Sharon Johnson to: Region2 GowanusCanalComments 04/19/2013 10:54 AM

As a resident of the community of Red Hook, I am strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

19 April 2013

Mr. Tsiamis:

I am certain you are aware of the firestorm surrounding the EPA proposals regarding dewatering and containment of the toxic sludge resulting from clean – up of the Gowanus Canal. As the deadline for public comments approaches I felt compelled to add my voice to personally appeal to you for sanity in this proposal.

This area was recently decimated by superstorm Sandy, and along with the water from the bay the toxins and who knows what else came into our neighborhood, as our streets were flooded up to 5 feet in some areas. And yet the EPA continues with some of the proposals to place a dewatering plant and CDF in this very area.

My first question would be: has anyone thought of the potential damage that would ensue from another storm? After all, we have been virtually guaranteed one, in our flood rezoning, insurance increases and the recommendations to build our homes 5-8 feet above the current ground level.

I must also wonder why, when there are clearly many safe, effective methods for de-watering sludge in place on barges, would a proposal be put forth to add additional handling to this highly toxic material, bring it onto the land in my neighborhood near a neighborhood recreational facility?

Why must my neighborhood process and house this waste, placed here by corporations who have no interest in the health and well- being of my neighbors? Why must we bear the burden just to save the polluters themselves money?

I am vehemently opposed to any solution which involves stabilizing the sludge on-site and keeping it in Red Hook in any form. I am concerned that the dewatering of the sludge will create odors which are inappropriate next to the Red Hook Ball Fields and the beloved Red Hook Food Vendors. The amount of stench produced and the area it affects has not been sufficiently studied. What we do know is that it would last, at minimum, six years, and this is an unhealthy situation for those of us who use this area for fitness and recreation. Would we find ourselves in the same situation as the residents of the towns surrounding Onondoga Lake?

Additionally, in an area where such healthy endeavors are occurring, and the amount of toxicity released into the atmosphere in the dewatering process has not been studied, it seems inappropriate to house waste from the canal in any here. According to your [EPA's] own report, "Tests to assess the leachability of NAPL (toxic contaminants)... would need to be performed (on the concrete)... Permanent institutional controls would be required to ensure the long-term effectiveness of this option..." The Red Hook community, already suffering from such health situations such as high asthma rates from the Brooklyn Queens Expressway, does not desire a site built with materials potentially leaching toxic contaminants.

The EPA can do better than this. I am certain of it. I am certain that if everyone really considered the health and well- being of the community, another solution could be found. I politely request that the EPA, the city and my representatives take into consideration these concerns as they all plan for my future as a Red Hook resident, public space user, city resident and fresh air breather.

Thank You,

Melissa Callahan - Whelan

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and for the community of the Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

Apr 20, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. I live one block from this site. I have lived here for over 30 years. Periodically attempts have been made to reduce the stench and to reduce the waste disposal problem that plagues our community.

It is essential that the EPA insist upon retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge at least 10 feet of contaminated sediment from the entire length of the canal. They must build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should heed the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,
Rosaro Murphy

Comments on Gowanus Canal Proposed Plan

Lara Frater to: Region2 GowanusCanalComments 04/20/2013 03:34 PM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to Lara Frater

Apr 20, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. Lara Frater
8949 Metropolitan Ave
Rego Park, NY 11374-5325
(718) 478-1773

I, the sender, vote that I do not want this project to proceed.

Paul Cowler to: Region2 GowanusCanalComments 04/20/2013 06:55 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Please respond to Andrew Martin

Apr 20, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

Hi,

I want to send a note in support of the EPA's proposed plan to clean up the Gowanus Canal Superfund site.

I am no expert on the specifics of what is required to make the Gowanus healthy and vibrant; however, I know that substantial, and possibly costly, action will be required to make it so.

As a New York and Brooklyn resident I express a strong desire to bring this contaminated and neglected waterway back to health.

Sincerely,

Mr. Andrew Martin
308 Knickerbocker Ave # 3
Brooklyn, NY 11237-3104
(718) 644-0021

Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor
New York, New York 10007-1866

Dear Christos Tsiamis

I am writing to provide my support in favor of the EPA PRAP (Proposed Remedial Action Plan) for the Gowanus Canal. As the Proposed Plan establishes methods for removal of contaminated sediments for the entire width of the canal to the depth of native sediment and to permanently and impermeably cover whatever might remain, and has identified ways to prevent re-contamination and halt future toxic inputs; I strongly support the EPA Proposed Plan to clean the Gowanus Superfund site.

Although I do not live near the Canal, I am aware of the issues and support the EPA's plan to clean it up.

Sincerely,

Bernice Haber

350 First Avenue - 1C
New York, NY 10010

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

History: This message has been replied to.

Dear Mr. Tsiamis:

Words cannot fully express my gratitude I have for you and your (Region 2) team. Your expertise and passion in doing the right thing to protect our environment and the overall health and safety of this community have been proven many times over with your dedicated and transparent commitment in working closely with us and helping us to understand the full Superfund process.

Scientifically technical and politically sensitive, you and your team were there to clarify and balance the differences and to unite a community toward a comprehensive cleanup so desperately and deservingly due.

To find a place you can call home is a rare find. To find a place with selfless, generous, caring community-minded people is a blessing. I have been fortunate to come across both and now triple-blessed to have you and your team a part of it.

I wholeheartedly support the PRAP and deeply believe and trust you and your team will thoroughly clean and protect the Gowanus Canal for us now and all future generations to come.

With the deepest respect and thanks,

Gowanus Canal

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

Comments on Gowanus Canal Proposed Plan

Margaret Ellis to: Region2 GowanusCanalComments 04/22/2013 11:39 AM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to Margaret Ellis

Apr 22, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Miss Margaret Ellis
460 Sackett St
Brooklyn, NY 11231-5019

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community. As a New York City kayaker, I am particularly interested in seeing the Canal cleaned. Pollution in the Canal affects all of our local waterways.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite.

Sincerely,

Mrs. Kara Matthews

Re: Proposed Remedial Action Plan for Gowanus Canal Superfund Site

Dear Mr. Tsiamos:

I am writing to advise you that at its April 8, 2013 general meeting Brooklyn Community Board 6 resolved unanimously to conditionally approve of the Environmental Protection Agency's (EPA's) Proposed Remedial Action Plan (PRAP) for the Gowanus Canal Superfund Site in our district, as released by the agency in December 2012, and to submit the following comments concerning the PRAP in connection with the current public comment process.

Before turning to the substance of our comments, it is important that we take a moment to acknowledge the extraordinary lengths, depths and breadths you and your colleagues have gone to in working with us and our community. Many members of our community have commented on the energy, care and accessibility your team has demonstrated by attending numerous meetings, patiently educating us and generally raising awareness about the importance of remediating the Gowanus Canal environment. We also commend the EPA for adhering to the timeframes it projected when it launched this undertaking. The speed, accessibility and transparency with which the EPA has approached this project has set a high bar and a great example to which other agencies and projects should aspire.

The following substantive comments are primarily the result of careful consideration, discussion and drafting by the dedicated members of our Environmental Protection Committee and our District Office staff. However, it is also important to note that in submitting these comments, we are not writing on a blank slate. Indeed, many of the comments below are drawn from or built upon prior resolutions and positions that Brooklyn CB6 has taken in a variety of contexts as we have dealt with Gowanus Canal issues and proposals. Some of our comments are presented in the form of questions to which we respectfully request that EPA provide responses in due course.

1. Our initial comments concern the EPA's remedial action objectives (PRAP, page 15):

Comment 1(A): *We generally concur with the EPA's Remedial Action Objectives, with the exceptions noted in the next two comments.*

Comment 1(B): *Brooklyn CB6 has consistently supported Gowanus Canal water quality improvement to SC (secondary contact) standards with regular pathogen monitoring. We urge the City, State and Federal government to commit that this will be the standard achieved for water quality in the Canal.*

Comment 1(C): *We are very concerned that this PRAP may not eliminate migration of Nonaqueous Phase Liquid (NAPL) into the canal, nor prevent/minimize NAPL serving as a source of future contamination, given that (i) two of the three Manufactured Gas Plant (MGP) sites do not have remedial plan commitments, and (ii) the dredge/cap options do not include native sediment, where NAPL is found in its greatest concentration.*

2. With regard to the proposed Remedial Action Alternatives relating to Dredging/Capping Sediment Alternatives (PRAP, page 18, pp 20-22):

Comment 2(A): *NAPL that is less dense than water, or LNAPL, has a tendency to rise to the height of the water table over time. The majority of the NAPL constituents are LNAPL, and it was found to be in greatest concentration in the native sediment in RTA 2. We question why all of the remedies only suggest going as deep as the soft sediment and not include portions of the native sediment where NAPL may be a source of recontamination over time; we have no assurances that the treatment, isolation and armor layers as generically described will be effective. We would like more specificity regarding the layers, particularly the type(s) of treatment that would be considered for this location.*

Comment 2(B): *Capital Costs include assumption that cost of bulkhead upgrade/stabilization will be included (Table 9, Note 1). We assume these costs to be expensive. We believe that Potentially Responsible Parties (PRPs) should bear those costs, and that non-PRP property owners should not have to shoulder the cost of bulkhead work that is necessary because of the remedies selected, and would like assurances that non-PRPs will not be responsible for them.*

Comment 2(C): *Bulkhead upgrade and stabilization work also has the potential to be extremely disruptive to existing property owners and businesses. What is the plan for minimizing interruptions to existing businesses and compensating for temporary relocations if needed, business losses and other undue negative economic impacts?*

Comment 2(D): *We urge the integration of soft edges as an alternative to metal bulkheads wherever practicable, and the introduction of flora and fauna appropriate for the absorption of run-off and natural treatment of contaminants and toxins that may be present.*

Comment 2(E): *We understand that the PRP's under EPA oversight will be responsible for contracting the actual remediation work. In that connection, we highlight that Brooklyn CB6 has a responsible development policy which recommends, among other things, the use of local*

and diverse contractors, local hiring, prevailing wages, employing green practices, etc. To the extent practicable, we urge the EPA to insist that any work done under this remedial action plan adheres to the Brooklyn CB6 Responsible Development Policy (attached).

Comment 2(F): *We ask that the EPA ensure that the community is meaningfully involved in the siting and ultimate selection of any upland staging area(s) that would be used as part of the PRAP. It is our strong view that criteria for the selection of staging areas should include (i) minimizing negative impacts on surrounding communities, and (ii) not impeding progress on any other existing and contemplated projects. We also request more descriptive detail concerning the actual dredging and treatment operations.*

Comment 2(G): *In considering proposed remedial alternatives, the lack of access to professional and objective technical assistance for members of our community in Gowanus and in the adjacent Red Hook community, especially at this critical juncture, has become a significant constraint. We would appreciate a written response to the Technical Assistance Grant application that we previously submitted through Friends of Brooklyn CB6, Inc. (the Community Board's affiliate 501c3 organization), which would have given us access to such resources.*

3. With regard to the proposed Remedial Action Alternatives relating to Sediment Treatment/Disposal Options (PRAP, pages 18-19; 20-24):

Comment 3(A): *We regret that there has not been a greater opportunity to engage the broader community to fully understand and explore the impacts of the various options on our neighborhoods. There remains considerable opposition, and lack of community acceptance, to on-site stabilization and treatment, especially in the absence of any well-defined public benefits that the impacted community would derive.*

Comment 3(B): *Is there a limitation, a radius, on how far the dredged sediment could be transported to a local, on-site dewatering and transfer facility? Who would own/operate/monitor the dewatering and transfer facility? What are the associated impacts from such an operation?*

Comment 3(C): *It becomes somewhat of an academic exercise to consider Options A, B and C without factoring in the surrounding context as a frame of reference. To that extent, we are curious and would like to know what sites were under active consideration and what criteria the EPA uses to evaluate them.*

Comment 3(D): *Can the end product from Options D and E be used locally in flooding remediation projects (like the DEP high-level storm sewer Capital project), distributed green infrastructure projects (like the construction of bioswales, etc.), and other Capital projects similarly supported and requested by Brooklyn CB6 to reduce project costs? Can it be used for construction of other projects under consideration as Source Control Remedial Components (such as in-line storage tanks, etc.) and associated impacts from former Manufactured Gas Plant remediation efforts (such as a replacement pool facility, etc.)? Knowing the ultimate end use possibilities would better illustrate any possible public benefits and give the community vital information to make better, informed recommendations.*

Comment 3(E): *Does having an abundance of construction product available to the community under Options D and E make the necessary Capital work in the Gowanus area more attractive to the City as a cost-savings? Who owns the product? Can it be given back to the community in the form of making it available for Capital projects?*

Comment 3(F): *The Confined Disposal Facility (CDF) in Options F and G would only be considered further based on community acceptance and approval by NYSDEC and other agencies. "Community acceptance" is a highly subjective measure. How will the EPA evaluate and measure "community acceptance"?*

Comment 3(G): *Of the three concrete mixing facilities located at the canal, two have expressed an interest in providing stabilization services for the project (PRAP, page 24). How will EPA evaluate them? Can the stabilization services component be subject to the same applicable provisions of the Brooklyn CB6 Responsible Development Policy in terms of hiring locally, use of local and diverse contractors, prevailing wages, green practices, etc.?*

Comment 3(H): *With regard to Option G, how will the EPA guarantee that the public is protected from possible exposure pathways being created by the impact of storm and tidal surge events on the on-site processing equipment at the CDF? Who owns the existing waterbody at the CDF? Could an equal amount of land at the north end of the CDF property be ceded to the Parks Department and become part of the existing public park as a public benefit? What is the public benefit in the current concept? Can the CDF activities be subject to the same applicable provisions of the Brooklyn CB6 Responsible Development Policy in terms of local hiring, use of local contractors, prevailing wages, green processes, etc.? What are the costs and the benefits of Option G, specifically with regard to the impact and the risks of the CDF on the Red Hook community?*

4. With regard to the proposed Remedial Action Alternatives relating to the Manufactured Gas Plant Source Control Measures (PRAP page 19):

Comment 4(A): *As noted above in Comment 2A, LNAPL was found to be in greatest concentration in the native sediment in RTA 2, particularly in areas around the three MGP sites. Without knowing the MGP remedies, there is no way to ensure that the elimination of NAPL migration into the canal will be accomplished, which are two of the EPA's Remedial Action Objectives. How will the EPA guarantee that its remedial strategies will effectively prevent or minimize the recontamination of the canal without having remedial commitments in place for all three MGP sites?*

Comment 4(B): *What contingencies will the EPA be prepared to employ in the event of subsequent recontamination coming from MGP sites? What role will the EPA play in the future monitoring of this potential source of recontamination?*

Comment 4(C): *What is the statute of limitations for how long a potential responsible party is responsible after the oversight agency has signed off on their proposed remedy and it has been implemented?*

5. With regard to the proposed Remedial Action Alternatives relating to Combined Sewer Overflow (CSO) Solids Control Measures (PRAP, pages 19-20):

Comment 5(A): *On its face, the proposed use of large in-line storage tanks appears to have great merit; however, to fully and fairly evaluate this concept, we request additional information about the proposed in-line storage tanks, including, at a minimum, (i) a detailed explanation how their respective recommended sizes were determined, (ii) projections modeling their anticipated impact on retaining CSO solids, and (iii) a basis for cost estimates.*

Comment 5(B): *If in-line storage tanks are added to the City's existing sewage infrastructure we request inclusion of other beneficial elements that would add further value to the system, such as deodorization treatment and other possible in-vessel pre-treatments.*

Comment 5(C): *Brooklyn CB6 finds the separation of CERCLA remedies from CWA concerns troubling and invites an even more aggressive approach to CSO abatement provided that sufficient modeling and justification is presented and included in the discussion. To that end, what influences will EPA have over the development of an LTCP that fully reflects the community's goals, particularly as it applies to water quality standards?*

Comment 5(D): *Can the EPA insist that a "demand response" campaign be included amongst the proposed remedies to raise awareness, affect normative behaviors, and include a community action component to reduce CSO impacts? Can the EPA demonstrate its support by making resources available to implement such a campaign?*

Comment 5(E): *If an in-line storage tank is sited at the Thomas Greene Park and Douglass-Degraw Pool, will the EPA help offset the resulting temporary loss of access to this public facility?*

6. Lastly, with regard to the EPA's Proposed Remedies by Remedial Target Areas (PRAP, pages 29-31?):

Comment 6(A): *Brooklyn CB6 would like to see the Fifth Street Basin included in the scope of the remedial action plan for environmental remediation as it was originally an integral part of the canal and its inclusion would eliminate its potential as a source of recontamination in the future.*

Comment 6(B): *Overall, Brooklyn CB6 would like to support the PRAP, but cannot yet endorse the plan fully without addressing the many concerns and unanswered questions raised in our comments. In particular, we are not convinced that the disposal options as set forth in Options D and G are appropriate, without a clear demonstration of community acceptance for either option. We believe the EPA must first offer a positive finding that the social, economic and political implications of each option have been considered so that this exercise becomes more about real, contextual community planning.*

* * *

Thank you for the opportunity to comment on the PRAP. Again, we deeply appreciate the EPA's efforts to date and look forward to our continued work together on this critical long-term remedial project.

Sincerely,

/ S /

Brooklyn Community Board 6
RESPONSIBLE DEVELOPMENT POLICY

Adopted by a unanimous vote of the Community Board at its December 9, 2009 general meeting; Revised at its February 9, 2011 general meeting

WHEREAS Brooklyn Community Board 6 is deeply concerned about the quality of life, health and safety, the quality of construction, and working conditions and employment opportunities on construction projects in our district, the preservation of the "essential character of the community", and our environment, and the avoidance of actions "detrimental to the public welfare"; and

WHEREAS, too often, our community has seen developers, contractors and subcontractors who violate the health, safety, buildings, noise, and workplace laws and standards of New York City, jeopardize the health and lives of their workers, and permit dangerous and severe nuisances for adjacent property owners; and

WHEREAS we believe that responsible developers and contractors can deliver quality construction projects and operate quality developments to benefit and not unnecessarily harm the community or the environment; and

WHEREAS governing law contemplates a broad role for the Community Board in weighing the interests of public welfare within its community district regarding land use, development and improvement matters ("Land Use Matters") in general, and in particular regarding Land Use Matters that come before the Community Board for findings and recommendations in connection with an application for a variance, a zoning change, an amendment of an urban renewal plan, a disposition of City-owned property or another action under the City's Uniform Land Use Review Procedures ("ULURP")[1];

COMMUNITY BOARD 6 of the BOROUGH OF BROOKLYN hereby RESOLVES to encourage all developers, contractors, subcontractors, architects, and engineers working in our district to abide by as many of the Responsible Development Standards outlined below as possible, to the greatest extent possible, with the understanding that it may not be possible to meet all standards due to the cost constraints inherent in particular

---

[1] The Community Board, as the first of its many enumerated duties, must "consider the needs of the district which it serves" (Charter of the City of New York, Chapter 70, Section 2800(d)(1)).

The Community Board exercises "the initial review of applications and proposals of public agencies and private entities for the use, development or improvement of land located in the community district, including the conduct of a public hearing and the preparation and submission to the city planning commission of a written recommendation" (City Charter, Chapter 70, Section 2800(d)(17)).

The Community Board and, in turn, the Board of Standards and Appeals, in reviewing any application for a variance of zoning provisions governing such land use, must make specific findings "so that the spirit of the law shall be observed, public safety secured, and substantial justice done" (Zoning Resolution of the City of New York, Article VII, Chapter 2, Section 72-21). The "Board of Standards and Appeals may prescribe such conditions or restrictions applying to the grant of a variance as it may deem necessary in the specific case, in order to minimize the adverse effects of such variance upon other property in the neighborhood" (Zoning Resolution, Article VII, Chapter 2, Section 72-22).

Among the specific findings required as a condition to the grant of any such variance is "that the variance, if granted, will not alter the essential character of the neighborhood or district in which the zoning lot is located; will not substantially impair the appropriate use or development of adjacent property; and will not be detrimental to the public welfare" (Zoning Resolution, Article VII, Chapter 2, Section 72-21(c)).

projects, and with the understanding that fulfillment of some of the standards may involve tradeoffs that make fulfillment of other standards difficult or impossible to attain.

COMMUNITY BOARD 6 hereby further RESOLVES, in connection with any Land Use Matter involving new construction, substantial renovations or additions totaling at least 10,000 square feet that comes before it for findings and recommendations in connection with an application for a variance, a zoning change, an amendment of an urban renewal plan, a disposition of City-owned property or another action under ULURP, Community Board 6 shall take the following actions (collectively, the "Large Project Review Process"):

1. request information from the applicant regarding the extent to which the applicant intends to comply, and has complied, with the standards herein, with respect to the applicant, the developer, the contractor, the subcontractors, the architect, and the engineer, including information documenting their respective track records; and

2. request that the applicant make a commitment that it, the developer, the contractor, the subcontractors, the architect, and the engineer will comply with these Responsible Development Standards to the greatest possible extent (subject to the limitations expressed above); and

3. ask the applicant to identify the developer, the contractor, major subcontractors, the architect, and the engineer, at the time of the application, rather than after project approval; but where this is not feasible, to ask the applicant and developer to commit to selecting responsible contractors, architects, and engineers; require contractors to select responsible subcontractors; and provide CB6 with documentation of compliance, when determined; and

4. consider such information and the track records of the applicant and the developer, contractor, subcontractors, architect, and engineer, in each case to the extent that they relate to safety issues, in determining whether the intended course of action may be detrimental to the public welfare or instead likely to secure public safety and minimize adverse effects on our district.

To facilitate the Large Project Review Process, Community Board 6 will ask the applicants and developers to submit documentation to the Community Board documenting their track records and commitment, and that of their contractor, major subcontractors, architect, and engineer in the areas above. Where possible, we will accept and consider reports, licensing, registration, or other information provided by the relevant parties to the City of New York, or collected and provided by the City. In each of these areas, we are looking for both a documented track record, and a stated commitment to operate in a responsible way on the project.

Flexibility in documenting a multi-year track record will be given to new businesses which provide evidence of commitment to these Responsible Development Standards, but do not yet have a multi-year track record. Construction managers (and others who shall perform a role similar to, or in supervision of, a general contractor) should be treated as contractors for all purposes under these Responsible Development Standards.

CB6 shall make a form with a checklist for this policy available on its website, so that applicants and developers can learn of it as early as possible, and shall advise applicants of this policy at the initial meeting (if one is held prior to the official review process), or as soon as we receive notice that an application has been filed with a public agency. Applicants and developers should submit their responses in writing at least one (1) week prior to the Land Use or other CB6 committee meeting at which the project will be reviewed, including copies of all responses and attachments by email, so that they may forwarded easily to committees.

If information is not supplied, we may consider that failure in making our findings and recommendations.

Responsible Development Standards

Category	Evidenced by:
Experience/ capacity	• Track record of successfully performing the services at issue, on projects of similar size and scope. • References from other communities that provide evidence of past compliance with these standards.
Compliance with local laws	• A history (generally of at least five years) of, and a commitment to, complying with applicable public laws, including health and safety, wage & hour, insurance and bonding, and anti-discrimination/equal employment opportunity laws.
Good neighbor policies	• A commitment to meeting with neighboring residents and businesses on a regular basis to discuss and plan schedules, equipment routings, traffic impacts, and other disruptions, and the handling of complaints. • A 24-hour contact number for neighbors • A commitment to notify local precincts of street closures well in advance. • References from other communities that provide evidence of past compliance with these standards.
Construction safety	• A track record of, and commitment to, operating worksites that are safe and healthy, for both workers and neighbors, as evidenced by OSHA-10 (all workers) and OSHA-30 (supervisors) forms, as well as other information provided by the City, State, or Federal government.
Wage & benefits standards	• A track record of, and a commitment to, paying prevailing wages and benefits, area-standard wages & benefits, or living wages & benefits, as applicable.
Hiring & training	• Documented participation (and commitment to continued participation) in New York State-certified apprenticeship programs in trades in which they are working. • A track record of, and commitment to, giving local residents, women, and minorities an affirmative opportunity to obtain and retain employment.
Disclosure	• Willingness to disclose the necessary information for the community board to consider the applicant/developer/contractor's track record and commitment to these Responsible Development Standards.
Union contractor or comparable safety records	• Establishment of safe worksites, appropriate safety training, and fair worker treatment (including an opportunity for workers to organize and express grievances), to ensure compliance with safety rules and safe working conditions.
Locally-owned and locally-based businesses	• Support the use of local contractors and other businesses to maximize the positive economic impact of development investment in our community, and make it more likely that local employees will be hired.
Affirmative opportunities	• Support women-owned, minority-owned and veteran-owned, developers, contractors, subcontractors, architects, engineers, and other businesses.
Affordable housing	• Wherever possible, incorporate affordable housing to the greatest extent possible.
Contextual development; commercial and residential streets	• Development should fit in with its surroundings in a reasonable manner. • We encourage active streetscapes on commercial blocks, and encourage the maintenance of quiet residential side streets.
Environmental Impact/Sustainability	• Compliance with the standards of applicable green rating programs, such as the Energy Star Plus Indoor Air Package; Energy Star Advanced New Home Construction; Enterprise Green Communities Initiative; NAHB Green Building Standards; and/or the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) Certification program.

BROOKLYN ECONOMIC DEVELOPMENT CORPORATION

April 23, 2013

Christos Tsiamis
Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor
New York, New York 10007-1866

Dear Mr. Tsiamas:

On behalf of Brooklyn Economic Development Corporation (BEDC), I am writing to support the GBX/Gowanus Bay Terminal proposal for treating and disposing of the sludge removed from the Gowanus Canal.

When the determination of the Canal as a Superfund site was first promulgated, I had deep concerns on many levels. While I know and understand that the toxicity the Canal in it current form poses to the community, I also feared that the designation would halt any kind of redevelopment efforts for many years as the logistical questions of how to clean the canal and where to dump the sludge were negotiated. I know that there are few places left in the US that willingly accept toxic sludge and I understand why; as communities all over the country try to clean up and reuse brownfield sites for purposes of job creation and community revitalization, who would want to *add* contaminants to the soil where they might leach and contaminate adjacent sites and aquifers?

The GBX Terminal solves this problem in a very elegant and prudent way! It dramatically reduces the potential truck trips to and from the site, carrying their toxic cargo – this benefits the community not only from a noise and congestion standpoint, but as a way to avoid truck exhaust that has led to asthma and other respiratory problems in the Red Hook community.

Secondly, the end result is a community amenity – a waterfront park will further add to the livability of this community, which is so congested with high-rise housing and closely built industrial plants. As the Greenway project grows and expends in Brooklyn, this park will add another link to the green "necklace" that the Brooklyn waterfront can become.

Third, it helps preserve jobs and industry in a community that desperately needs them. So many "economic development" projects in Red Hook have had disappointing results – the Cruise Ship Terminal that created few jobs, the IKEA that created part-time retail jobs. Certainly, these projects have enhanced the Red Hook community, but their local economic impact has been muted.

2001 Oriental Boulevard, T-4162
Brooklyn, New York 11235-2333
(718) 368-6790 telephone
(718) 368-6788 fax
www.bedc.org
www.facebook.com/BrooklynEDC
Blog.bedc.org

The Gowanus Bay terminal has been a presence in Red Hook for many years. The product they provide is *essential* to the continued rebuilding of New York City. There are few places for them to relocate to if Red Hook completely de-industrializes and that is not a desired outcome in the continuing redevelopment of Red Hook! The most vibrant communities in NYC support jobs and industries of many types. BEDC has been an advocate for industrial uses, *where appropriate,* in Brooklyn for our entire 34-year history. This is an appropriate use, and the GBX Terminal will not only allow The Gowanus Bay Terminal to stay and grow, but benefit the community in terms of jobs and amenities.

If this plan is implemented, the clean-up of the Gowanus Canal can begin sooner rather than later and the community can begin planning for a future without a toxic gash running through it. That dream has been a long time coming, and this project helps move it closer to reality.

I have been an advocate of community-based brownfield clean-ups for many years. I was part of the original statewide Pocantico Roundtable on Brownfields which advocated for better Brownfield clean-up regulations in New York State. I currently serve as Vice Chair of the Board of New Partners for Community Revitalization, a non-profit organization well known to your agency, which is in the forefront of environmental solutions to brownfield issues. [Note: I write as an individual and not on behalf of New Partners.] Certainly the Gowanus Canal rises to a higher threat level than a typical brownfield, but as governments across New York State avoid clean-ups because they know there are no easy solutions to where to put the waste and what to do with the remediated land, we in Brooklyn are not subject to that same dilemma. We have a sound clean-up solution and we have a community that is desirable and ready to react to the positive change that a cleaner Gowanus Canal can bring.

The people of Red Hook, the residents of Public Housing, who have stuck it out for many years amidst decay, crime, being ignored, marginalized and dumped on, support this project. They see its intrinsic value. They do not support it based on whether or not the value of their houses will go up or down – they understand that it is about the long-term, healthy future for ALL Red Hook residents.

Based on the soundness of the science, the positive economic development impacts, and the faith of the long-term residents of Red Hook, BEDC endorses this project and urges you to move it forward.

Sincerely,

Joan Bartolomeo
President, BEDC

ABOUT BEDC

Brooklyn Economic Development Corporation's mission is to seek to create and expand economic opportunity throughout Brooklyn by implementing business and neighborhood development and planning activities to support and create sustainable jobs, industries and communities.

Founded in 1979 to stimulate economic growth and neighborhood stability in Kings County, the Brooklyn Economic Development Corporation (BEDC) has evolved into a multi-service, business and community development organization serving over 1000 clients per year. Our expanding and enhanced services are structured to meet the unique challenges facing entrepreneurs in a constantly changing, dynamic urban economic environment. In thirty-four years of service to the business community, BEDC has provided training, technical assistance and counseling to over 20,000 established or potential business owners.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and for the community of the Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the Red Hook Option of the EPA Gowanus Canal Superfund cleanup.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

Comments on Gowanus Canal Proposed Plan

Pam Devereux to: Region2 GowanusCanalComments 04/23/2013 07:11 AM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to Pam Devereux

Apr 23, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site, a critically important project for transforming this long neglected waterway into a community asset.

I cannot support the building of a CDF on the Red Hook waterfront to dispose contaminated sediment from the canal. Relocating the blight of one community to another is not a reasonable solution.The economic health of Red Hook is highly dependent on the health of its waterfront and the public perception of the environmental health of the community. Contamination led to economic decline in Gowanus, and the same will happen in Red Hook -- a community that has done much to pull itself up.

I ask that you please listen to the Red Hook community's requests and find another location for the CDF. Red Hook is not your answer.

Sincerely,

Ms. Pam Devereux

Apr 23, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mrs. Alicia Rubi

I, the sender, vote that I do not want this project to proceed.

jason maas to: Region2 GowanusCanalComments 04/23/2013 12:02 PM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Dear Mr. Tsiamis:

As someone who lives and work in the area and have been an eyewitness to the foulness that descends, I support your plan to clean the Gowanus Canal. I want the EPA to DO IT.
Please clean the canal and including the CSO's.

Let's stop the toxic waste overflows ASAP.

Sincerely yours,

Anne Darer

Amyt Eckstein to: Region2 GowanusCanalComments 04/23/2013 04:04 PM

As a resident and parks user in Red Hook, I strongly oppose the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The possible toll on the community is tremendous. It seems better to leave the toxic waste where it is then to process in a residential area.

The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Comments on Gowanus Canal Proposed Plan

alida davis to: Region2 GowanusCanalComments 04/23/2013 10:06 PM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to alida davis

History: This message has been forwarded.

Apr 23, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Ms. alida davis
193 Wilson Park Dr
Tarrytown, NY 10591-3031
(413) 923-4632

I support the Red Hook Option of the EPA Gowanus Canal Superfund cleanup.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

GowanusCanalComments.Region2@epa.gov

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the EPA Gowanus Canal Superfund - Red Hook option.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community is without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

I support the Red Hook Option of the EPA Gowanus Canal Superfund cleanup.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

krystle cooper to: Region2 GowanusCanalComments 04/24/2013 12:32 AM

History: This message has been forwarded.

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

Mr. Christos Tsiamis,

I have spent a great deal of my life going back and forth through Red Hook , working as a young boy with my father and living in other parts of Brooklyn. I always had faith in Red Hook, even when people said don't walk the streets here years ago I never paid mind because there was always feeling of unity here regardless of the path people had taken they stood together to protect this area RIGHT or WRONG.

A new dawn has occurred here with educated, health conscious people that are graciously filled the streets adopting Red Hook as their own. I have grasped Red Hook and not only grown as a businessman here but opened my heart and moved my whole life here. Now that I am fully invested and growing a family here You would like to replenish the poison once here but in a different way.

I am first and foremost a business minded professional and I understand the logistics and power created with assets and I am aware of the circulation of monies within.

I ask you this question :

How will this development benefit the people fully invested here ?

It will not, this will force me to move my investments prior to appreciation
force me to move my family and begin to set roots elsewhere

Then my business will follow on the outward progression leaving Red Hook stranded again, giving allegiance to others to proceed as they see fit without regard.

I understand this is what you want and I can not sit idle to allow this to reroute my home.

Maybe you can come down here and fool some masses but I am not so obedient. I will fight for my home and I will strive to implode any plans against my business here.

We have a great community here the stands together and does not panic during depression but only unites and prospers.

My family left Greece for a better way to provide for me and sacrificed there life for mine, I will not let them down and allow the destruction of what they built. I know were I came from and am willing to fight for were I am.

It is possible that legislation may provide a path for this, but I live here and a clear path of prosperity will not easily be taken.

YOU WANT RED HOOK ? YOU WILL HAVE TO FIGHT FOR IT AS I DID.

Even if I cannot stop you I can make sure others will not benefit from this and there will be a mass of contractors deterred from losing money to benefit you.

Is it really worth it to take my home ? Do you really want to look all the babies here and smile while you destroy their future.

Please advise me accordingly Tell me how will this benefit me as a resident ?
How will you guarantee the security and safety of my family ?

I appreciate your time. John Alatsis

EPA GOWANUS CANAL CLEAN-UP PLAN

Dillon, Lori to: Region2 GowanusCanalComments 04/24/2013 10:07 AM
Cc: Natalie Loney

Dear Mr. Tsiamis:

No more Poo Poo Tsunamis!

I love your plan to clean the Gowanus Canal AS IS and I want the EPA to JUST DO IT!

Clean the entire canal including the CSO's!

In the immortal words of Princess Leia:

This is our most desperate hour. Help [us], Obi-Wan Kenobi. You're [our] only hope!

Sincerely yours,
Lori

DO you want another poo poo tsunami in the Gowanus Canal??
Write to the EPA by Friday! See BELOW:

Do you remember the Gowanus Canal's Poo Poo Tsunami? You SHOULD!
It was a toxic and disgusting event fully illustrating the Gowanus Canal's CSO's (Combined Sewer Overflows) problem in video better than any full length lecture on the topic could ever do. The PMFA bog exclaimed: "HOLY CRAP!" and featured the video.

Do we, the residents of the Gowanus Canal area, want the Gowanus Canal to have any more poo poo tsunamis??? Of course not! The EPA's Proposed PRAP (Plan to Clean Up the Gowanus Canal) currently includes the treatment of the CSO problem.

If you would like to see the CSO's problem addressed along with the other chemical contamination in the Gowanus Canal, you must speak up by the Friday April 27 deadline. You must make your voice heard this week.

We at CORD urge you to: PLEASE!
Take one giant civic step forward for our neighborhood and send a "YES" email to the EPA!

Write to the EPA by Friday! See BELOW:

Dear Mr. Tsiamis:

RE: GENERAL LETTER OF SUPPORT FOR THE GOWANUS CANAL SUPERFUND PLAN, RED HOOK LANDFILL OPTION, AS WELL AS CONCERNS & SUGGESTIONS FOR ADDITIONAL ACTIONS (5TH STREET BASIN, CANAL WIDENING, UPLAND SITE ACQUISITION & FLOOD MANAGEMENT PLANNING)

Dear Superfund Team,

I would like to compliment the community groups, USEPA, NYSDEC and New York City on working together to cleanup our neighborhood waterway and to create a world class waterfront asset for New York City.

Overall, I think this is a good well thought out plan, prepared in an impressively short time with meaningful and constructive community input.

The inclusion of the community concerns about combined sewer overflows and long term water quality improvements will be an investment appreciated for generations to come.

I strongly support the Superfund Team's philosophy of "What happens in Vegas, stays in Vegas" and feel that the on site management of dredge spoils at the proposed Red Hook Landfill Facility or some other locally selected site is the most sustainable and cost effective solution.

I would like to comment in greater detail on a number of aspects of the Plan:

1- Landfilling & Sludge Management Proposals
2- Canal Edge Treatment & Wetland Reconstruction
3- Soil Remediation & Water Quality Standards Targets & Use Attainability Analysis
4- Integration of Watershed wide planning into the water quality remediation plan
5- Upland opportunity sites for the Plan
6- Archeological commemoration projects

Thank you for the hard work you have all put into this plan.

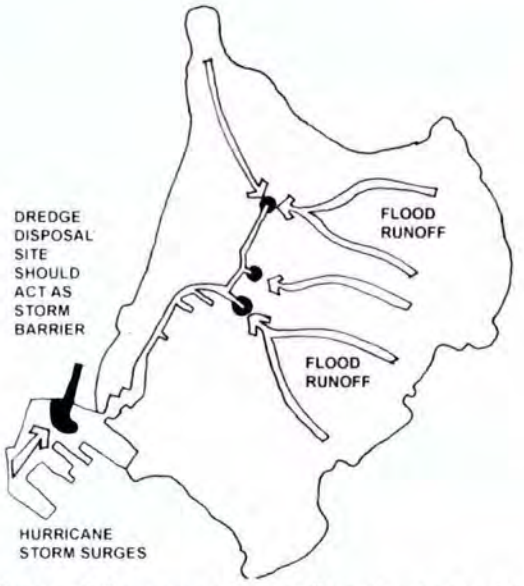
Eymund

Landfilling & Sludge Management Proposals

Remediation of contaminated dredge spoils should happen locally. This includes the more contaminated coal tar sludges from the upper part of the Canal.

I support the proposal to have a remediation facility built on the Gowanus Bay Terminal site in Red Hook. It will provide an opportunity to rebuild the Red Hook waterfront on a more sustainable, community friendly partnership model.

Because it is uniquely sited at the mouth of the Gowanus Canal it can help advance the goals of the City's Coastal Resiliency Plan to create storm surge breakers that can **help reduce flooding levels** in Red Hook and Gowanus.



General Gowanus Canal floodwater entry points in the Watershed

The Gowanus Bay Terminal waterfront redevelopment plan **supports the City's commitment to improving air quality by reducing freight truck traffic** on local highways and increasing facilities for low emissions waterborne transport. Air pollution from the Brooklyn Queens Expressway is currently the primary environmental health hazard for local residents, far greater than any risks from buried Gowanus industrial pollutants.

Supporting the lowest carbon footprint solution by looking at local water borne based scenarios and maintaining a sustainable industrial waterfront will help reduce air pollution while **finding a common ground for the sometimes competing land uses that will revitalize the Gowanus Canal and its watershed.**

2012 Red Hook proposed oyster reefs wave breakers, Scape_Landscape Architecture, Rising Currents MOMA Exhibit

Primary Public Hazard in Red Hook and Gowanus is Air Pollution, not Soil or Water Pollution

Local Superfund sludge processing and new docks can help with this Air Quality problem: Darker brown on map shows major truck generated PM 2.5 dust pollutants from Brooklyn Queens Expressway, closer to housing than the Gowanus Bay Terminal (GBX) site. A revitalized harbor transport system will help move bulk transport from trucks to cleaner barges.
Map from 2009 NYC Community Air Quality Survey.

Diesel truck yard parking lot at 2nd Street and Gowanus Canal with asthma causing fume traces on wall

By designing the Superfund plan to use waterborne transport, and restructuring the Canal to make it easier to use for sustainable water based transport, the Superfund Team will be improving not just water and soil pollution reduction targets, but air quality goals ones as well.

Respect Red Hook Residents' Concerns about "No Toxics" in our backyard. Even at a distance of 2000 feet from the closest home, the concerns by some local residents that a temporary state of the art Red Hook waste management facility is an undesirable neighbor is appreciated and should be addressed. More education and outreach focused on Red Hook is needed for dialogue as the Plan moves forward.

The **measure of community support or opposition for the landfill site should be based on an objective survey or referendum of local residents**, not just a vocal minority. Should the Red Hook site be rejected, the Superfund Team should make every effort to find another **local** processing alternative. All sites should be subject to the SEQRA environmental review process. Other potential Gowanus Canal sludge processing site candidates could include the following:

Public Place
(459 Smith Street)

Bayside Fuel Depot
(510 Sackett Street) for which redevelopment and remediation plans have been considered

Thomas Greene Park waterfront site
(226 Nevins, corner of Nevins and Butler Street)

Oil saturated soils at the Fulton MGP / Thomas Greene Park, 226 Nevins waterfront lot truck yard
31 July 2011

Abandoned Bayside Fuel Depot site on Sackett Street, affected by Fulton MGP plume and oil runoff.
8 July 2112

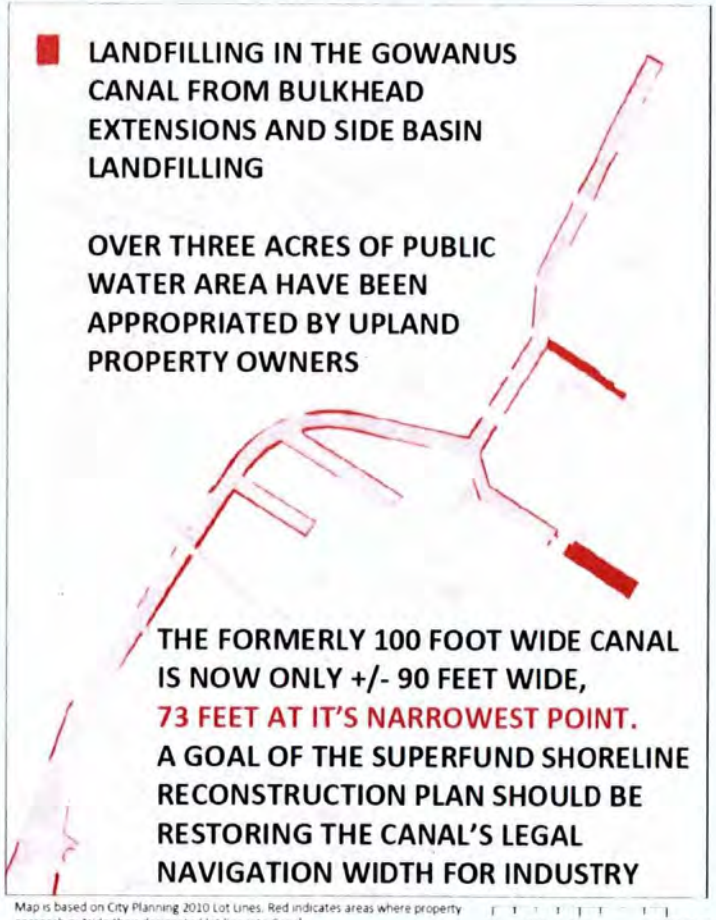
Public Place / Citizens Manufacturing Gas Plant site / Gowanus Green Redevelopment Site, Huntington St.
15 December 2012

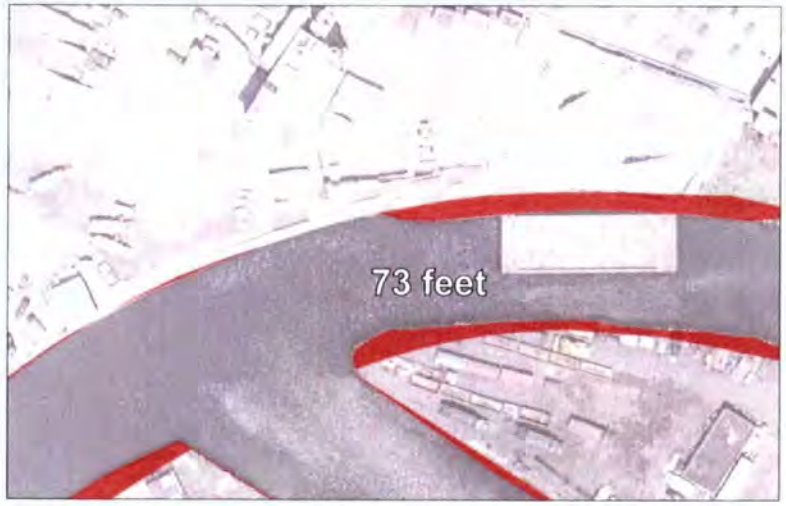
All pictures courtesy of the Gowanus Canal Conservancy Grassroots Mapping Balloon Photography Program

All the above Gowanus waterfront sites are already heavily contaminated and should be looked at as potential staging areas for the sludge processing as the cleanup proceeds from north to south, and from the side basins to the main Canal.

Eminent domain measures have been used unsuccessfully by the City to revitalize Gowanus Canal sites such as Public Place. Instead of eminent domain, the City and EPA should work cooperatively with the current owners through the Mayor's Office for Environmental Remediation to integrate these upland sites into the current Superfund Plan. The current property owners would all benefit from increased property values as a result of both on site cleanup and Canal remediation.
As a local resident, **I would personally welcome a temporary cleanup facility at the end of my Sackett Street block** given the promises of a cleaned up waterfront and street end water access.

To support waterfront industrial redevelopment, the Superfund team should **strategically pursue landfilling opportunities that can help better engineer the Gowanus flood plain for climate change**, for example at the mouth of the Canal. It also needs to address the haphazard water encroachments that have occurred over the decades. The Plan should be reviewed by qualified flood plain specialists from the US Army Corps of Engineers.



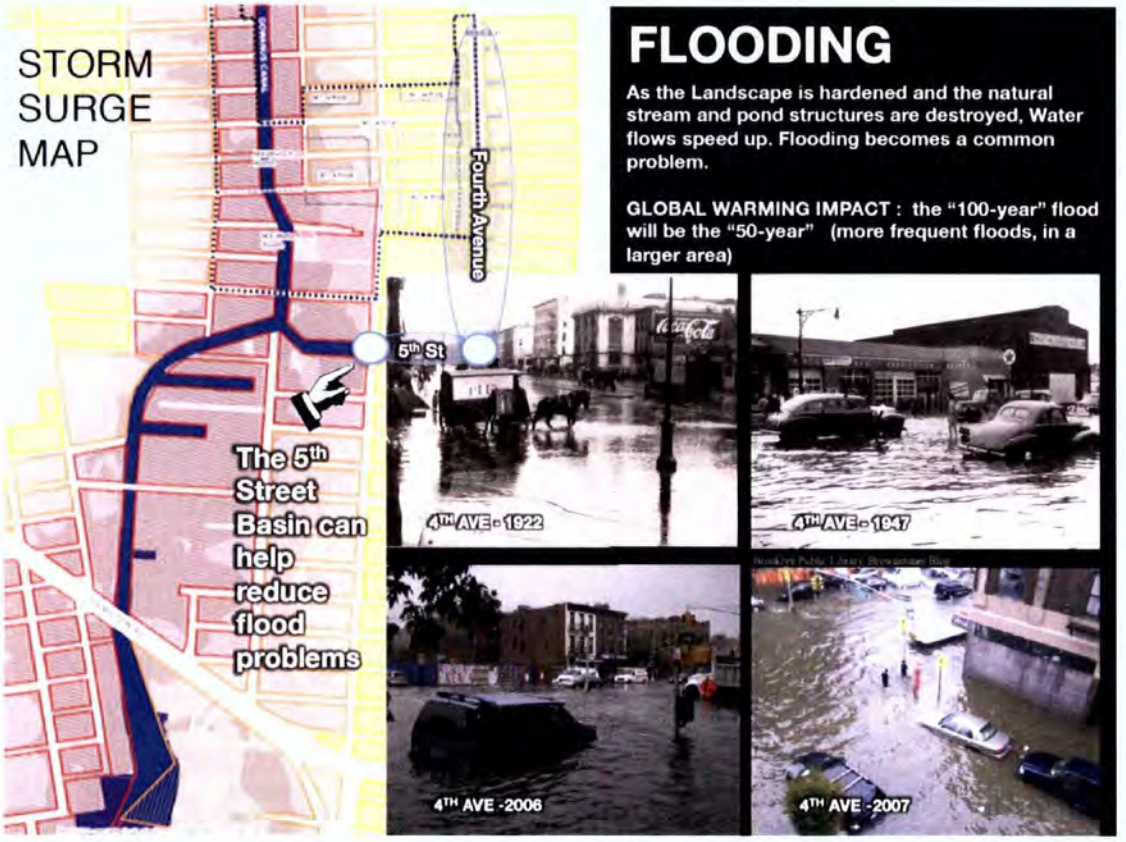


73 feet wide Gowanus Canal Bottleneck at Marmurstein Bus Depot and Ferrara Brothers Site. Canal was originally 100 feet wide, but illegal encrochments now make barging difficult

The Plan should remove the landfilling that is contributing to higher flood plain levels for local residents. The Community Advisory Group unanimously passed a resolution calling for the Superfund Plan to aim at **maintaining historical bulkhead heights** (+/- 4 feet above mean sea level) and **maintaining the historical canal width** (100 feet) where this was practicable.

There is concern that the current Remedial Design bulkhead proposal will further worsen the already congested Canal by adding a third generation of bulkheads.

Local barge operators have pointed out that to meet the City's transportation goals of a Sustainable Waterfront that obstructions in the Gowanus Canal would have to be removed to make larger barge navigation possible. This means **widening the Canal** in strategic spots.



"These houses are built on low ground, and the kindness of the contractor in making a public dump of the vacant lot in front of them has so arranged matters that ***the rain water from the lot in question and also from the property between there and Third avenue flood into them****. When it rains, they are flooded, and the surface drains become a nuisance instead of a help, the drains are so elevated that the ends of the perimeter are actually lower than the ends of the street.* ***Connection with the canal which is only sixty or a hundred feet away would remove all the trouble****."*

A TOUR THROUGH THE THIRD DISTRICT; Some Objectionable Italian Tenements and Pestilential Dumping Grounds
THE CONDITION OF BROOKLYN'S STREETS AND HOUSES.
Brooklyn Daily Eagle,
9 May 1885

Great grandpa's old fashioned common sense flood engineering advice should be integrated into the Superfund Plan.

The Plan's proposal to remove contaminated landfill in the First Street Basin is an excellent one. A second candidate for similar treatment is **5th Street Basin**. The strategic location of the landfilled 5th Street Basin will help alleviate the recurring flooding problem centered near 4th Avenue and Third Street. By including the 5th Street Basin in the final cleanup plan local property owners who have endured a century of contaminated flooding will be able to say: "Superfund made a real difference".

Reducing runoff flooding has been identified as goal of the PlaNYC Climate Resiliency Plan. A Superfund plan that does not strategically address measures to control future contamination dispersal from almost certain future flooding is not a plan.

Soft Edges should be a key part of the new shoreline design
Brooklyn Bridge Park wetlands

Canal Soft Edge Treatment & Wetland Reconstruction;

"I bend, therefore I survive"
The marsh reed in Aesop's Fables

THE REMEDIATION DESIGN MUST SUPPORT THE US ARMY CORPS HARBOR ESTUARY PROGRAM'S ECOLOGICAL RESTORATION GOALS.

The Superfund Plan needs to detail the issues of **wetlands mitigation banking** as it applies to the proposed remedy. The Red Hook disposal facility is projected to landfill 10 acres of what are currently legally protected "Open Waters of the US". In addition, another 3 acres of the Gowanus Canal have been filled over the last decades, and are legally outstanding violations of the Clean Water Act.

The Plan needs to clarify **legal status of Gowanus Canal infilling** and what needs to be removed under existing waterfront / wetland management laws, and what falls under CERCLA jurisdiction / obligations. There is concern that the Canal bulkhead prototypes being developed by NYSDEC and National Grid will further **shrink already limited water area of Canal by building out additional bulkheads** into water.

It should instead be expanding them, and integrating the proposed 70 foot rezoned Public Access canal edge setback into the engineering design of the new bulkheads. It should consider **the possibility of a curvilinear wetland enhanced Canal edge at strategic sites** where major excavation will be necessary, such as at Thomas Greene Park and at Public Place.

The Plan should restore the Canal to its 100 foot minimum width as a navigable waterway. Where new bulkheads have to encroach into water for pollution control and logistics reasons (e.g. the Bond Lorraine Sewer restriction on Public Place) then the opposite site of the Canal has to be expanded and owners compensated where there is a property taking (versus an encroachment removal).

Under the Army Corps "No Net Loss of Wetlands" policy, this will provide opportunities to implement habitat restoration goals of the Harbor Estuary Program and the Comprehensive Restoration Plan.

SUPERFUND & FLOOD MANAGEMENT
Superfund managers have clearly stated that the "Environmental Protection Agency is not in the business of flood management". By dredging the Canal from its current average 8 foot depth to a new depth of 19 feet, they will defacto be increasing the Canal's capacity for receiving flood waters by 100%. **Whether they like it or not, the Superfund program *is* in the business of flood management.**

Some candidate sites for flood plain reconstruction and wetland mitigation banking:
First Street Gowanus Canal Basin (currently landfilled)

5th Street Gowanus Canal Basin / 4th Street Basin (currently landfilled)

7th Street Basin (currently very shallow open water)

Marmurstein Bus Lot / Salt Lot waterfront edge, opposite Public Place 73 foot wide "bottleneck" section (see earlier map).

Brooklyn Rapid Transit / Powerhouse Environmental Arts Center Canal waterfront edge site (70 feet right of way would need to be purchased by City from the current owner)

Former City Waterworks Site; the upland portion of the truck maintenance lot between **Thomas Greene Park** and Gowanus Canal is heavily contaminated. It will need to be excavated and purchased by the City, potentially for a CSO or storm tank and the doubling of the Park's size.

Fig. 25: The water square during dry periods (ca. 90 % of the year)
Fig. 26: During medium rainfall the water square serves as water playground (approx. 30 times a year)
Fig. 27: Only the heaviest and longest rainfalls raise the level of water to one meter (once a year)
Fig. 25 – 27: Rendering of the pilot water square with different water levels (© De Urbanisten)

Fig. 28: Top view of the pilot water square during dry periods, medium rain and heavy storms (left to right) (© De Urbanisten)

Water Sensitive Urban Design; "Flood Park" in Rotterdam Holland, designed to absorb flood surges.

Thomas Greene Park (the Fulton Gas Works Site) should have its "brownfield cap" removed, the coal tar plume should be excavated, and the flood management functions of historic Brouwer's Pond (which the Gas Works was built on) should be restored and integrated with the Canal.

The doubling of the Park's size would compensate the community for the time the Park and pool is unusable during the necessary coal tar removal and remediation.

The concept of Potentially Responsible Parties / City Tax Payers purchasing land as part of the Remedy must be discussed to meet stated goals and obligations (e.g. CSO reduction / storm tanks) and the City's CEQR guidelines to provide upgraded Gowanus open space requirements under the rezoning plan. Given the trend towards future planned recreational waterfront uses for the Canal, industrial stakeholders should also be consulted for barge access priorities and integration planning with community "soft edges" and recreational goals for the Canal.

FLOOD MANAGEMENT PLANNING SUMMARY

The Superfund Plan engineering solutions should support the City's Coastal Resiliency Plan and the USACE Harbor Estuary Program. A **watershed wide model for water runoff** should quantify Canal sewer, runoff impacts and pollution dispersal during severe flood scenarios and dredging and bulkhead designs matched accordingly. Specific opportunities for a flood management include the remediation of Thomas Greene Park (The Fulton MGP site). The Park's expanded Canal waterfront should be regraded to a 4 ft grade above mean sea level, down 8 feet from its current 12 ft elevation. This would allow the now expanded Park to act as an emergency flood water basin.

For Public Place (the Citizens MGP site), Canal side public access along waterway portions of site of should be regraded to the lower 4ft grade to better manage storm surges and waterfront enjoyment issues. The grade can go higher once past the proposed setback to address water table and residential construction concerns.

Keeping the lower historical bulkhead height has the benefit of allowing the new 50 feet steel bulkheads to be driven 8 feet deeper, providing that much more sub surface barrier control for the coal tar plume.

First Street Basin Fresh Water Restoration Site - 2012 December 15 Denton's Spring fresh water inflow diluting Post Hurricane Sandy Gowanus Canal raw sewage overflows, captured by a camera mounted on a balloon sponsored by Liberty Industrial Gases and pulled by Gowanus Dredgers Canoe Club / Conservancy Grassroots Mappers

THERE IS HOPE - WHAT CLEAN WATER MAKES POSSIBLE... Reappearance of Denton's Pond when toxic soils dug were out of Whole Foods site. *Photo by Robert Gusskind, 2007, July 10*

If ducks tried to cross Denton's Pond today ... How can Superfund help reestablish a more natural infrastructure ?

PHASING OF REMEDIATION - The Superfund Plan should **prioritize those sections of the site where the most human activity is expected**. This highlights the 4th Street Basin, / 5th Street Basin restoration, and the Al Madinah School area and Whole Foods Area open space reconstruction. Prioritizing high density use areas in the side basins could run concurrently with the current North South dredging and cleanup proposal.

By prioritizing high human use areas of the Canal, immediate high profile impacts can be achieved from what will be a very long term process. A key priority area is the Fifth Street Basin / Whole Foods Site, expected to attract thousands of people to the Canal waterfront, with public waterfront access currently under construction.

CONTROLLING OUTFLOWS & NOT THROWING OUT THE BABY WITH THE BATHWATER.

The Superfund Plan has stated that all outflows that have been identified will be blocked. But... some outflows are beneficial.

Fresh water should not be treated as a negative piped outflow to be blocked. Where possible, Superfund Plan should integrate **stream daylighting goals** and natural habitat restoration plans into the City owned abandoned Canal street ends, in particular on Second Street and First Street. This will earn the Team some appreciative quacks.

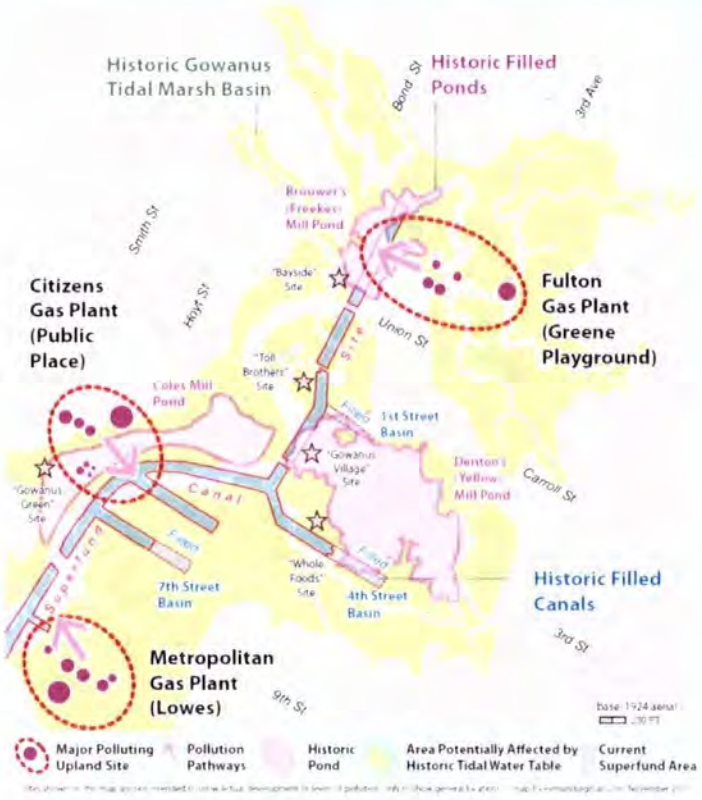
Bergen Stream, currently a flowing stream being permanently pumped out of local basements needs to be disconnected from its suspected sewer connection to the Bond Lorraine Sewer Main and the RH 35 CSO and reconnected to the Canal.

The Superfund Team needs to work with NYCDEP to systematically map historic streams that have been diverted into the now overwhelmed sewer system. This can be done by reviewing the existing NYCDEP video footage of the Bond Lorraine sewer shot by Gannett Fleming / Dvirka and Bartilucci and looking for unmapped side inflows. Dye tracing and wet weather underwater tunnel photography is also needed. Where such fresh water loads can be identified they should be redirected to street end waterfront "Sponge Park" connections to the Canal to reduce combined sewer overflows.

Inflows of Seabring's Brook into the Gowanus Flushing Tunnel, February 2013
An example of technical challenges faced by the City's engineers. The new sewer force main is being used temporarily as a pump pipe for natural stream inflows during tunnel construction.

Denton's Pond creek, hidden behind bulwarks at 2nd Street and flowing into Canal, March 2011
An example of a natural watercourse that could be restored by "Green Infrastructure" connections for the Third Avenue High Level Storm Sewer - currently planned to be discharged at Carroll Street Bridge with possible scouring impacts.

INTEGRATE CRITICAL UPLAND SITES INTO THE RECORD OF DECISION LONG TERM PLANNING GOALS



The Plan is still missing an integrated mapping of overall polluted upland sites and their impacts on the water.

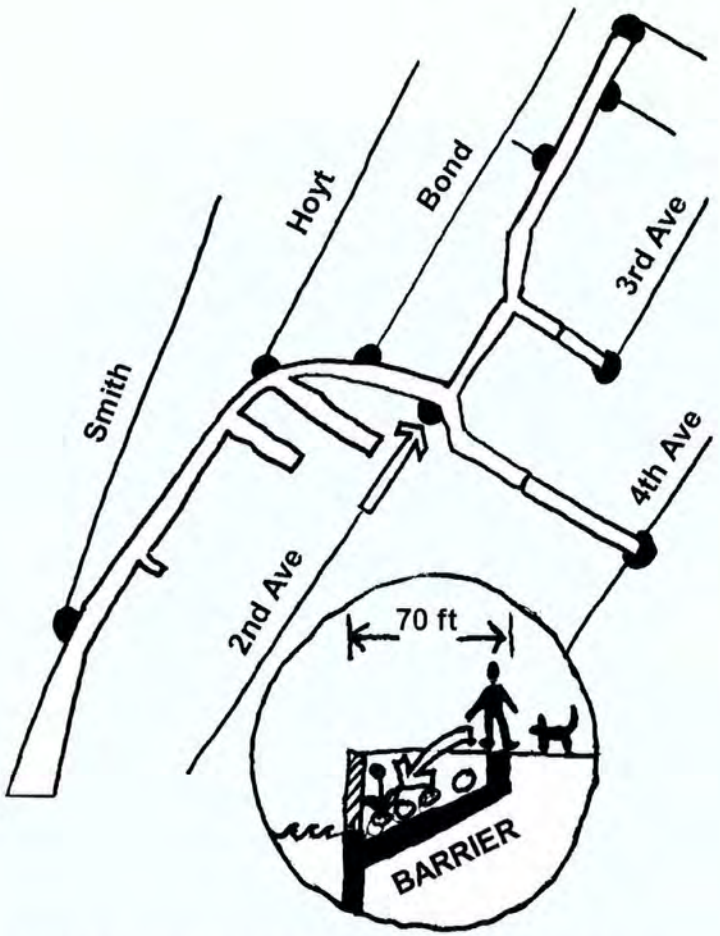
The overall brownfield "plume" area is estimated to be 178 acres, based on a 2007 Columbia University study. The extents and depth of three major MGP coal tar plumes should be clearly shown on a single map using the latest EPA and NYSDEC findings.

The Remedial Investigation has sidestepped this issue of an integrated flood plain wide pollution assessment. The Plan could benefit from a better **structural overview of contaminated landfilled soil area**, the depth and nature of landfilling, location of pollution plumes, and dispersion estimates on streams and tidal forces that disperse those pollutant hot spots. Some notes on landfilling history around 4th Ave are given later in my comments.

This would give people interested in investing in the Canal's future a clearer spatial sense beyond the otherwise very well researched waterfront lots. The EPA has stated that remediation standards and actions will be informed by long term plans for the Canal and its adjacent uplands.

SUPERFUND IS NOT "JUST A CLEANUP" – IT IS **A HALF A BILLION DOLLAR INVESTMENT PLAN INTO OUR INDUSTRIAL, RESIDENTIAL AND RECREATIONAL WATERFRONT FUTURE.**

The Superfund Design Plan and the Final Record of Decision (ROD) need to **integrate upland linkages** from various community plans into the structural design of the new bulkheads and dredging. Existing community plans (Gowanus Community Development Corporation Plan, City Planning Rezoning Plan, Friends of CB6 Brownfields Opportunity Area Plan) all need to be part of the cleanup decision making PLANNING process.
This includes plans for new residential developments at both the Carroll Street Bridge (Lightstone) and Public Place (Gowanus Green), both including canoe dock and waterfront access proposals. Both of these proposals will require custom bulkhead designs (e.g. steps to water access) and the proposed Remedy must be flexible enough to accommodate these proposals.



REMEDIAL DESIGN SHOULD INCLUDE PUBLIC WATERFRONT STREET END SETBACKS IN CLEANUP SOLUTION

Another example is the City's Green Infrastructure Plan for the Canal, as demonstrated by Sponge Park Plan prototype for 2nd Street. New bulkheads should be inset and stepped at street ends to allow for street end bio filter designs.

I would like to further highlight and discuss some of the sites around the Canal that can contribute to better integration between the federal dredging program and the State and City upland site remediation plans.

It is important that strategic sites that provide opportunity for the surrounding community be included in Superfund's Record of Decision. They need to be identified, thoroughly discussed and integrated into a coherent plan that meshes with Superfund's remediation and engineering goals.

Several sites around the Canal are "Keystone" sites that will connect our rapidly growing neighborhoods with the remediated waterfront.

Local Gowanus Canal Citizens using Grassroots Mapping tools to highlight sites and local knowledge that are important to them. As follows are some details on particular strategic Superfund relevant sites.

The Gowanus Canal Sponge Park Plan (Gowanus Canal Conservancy / dland studio) with historic overlay notes from the CAG Archeology Committee discussions highlighting sites of special interest. These areas have been the focus of more detailed research by the Conservancy's Grassroots Mapping team, with help from the Gowanus Dredgers and Proteus Gowanus.

Thomas Greene Park / Fulton Manufacturing Gas Plant Site Remediation and Expansion

Side of Canal next to Thomas Greene Park should be used for storm holding tanks, cleaned sludge disposal and an expanded park and new community recreation center.

Photos: Google Aerials Circa 2010

Park redesign courtesy of Joseph Barrick, Gowanus by Design Water Works competition.

The 2011 Superfund Tourism Map, showing generalized outline of Fulton MGP Coal Tar Plume that needs to be excavated down to 30 feet (or as deemed necessary)

The City would acquire the parcels between Thomas Greene Park and the Gowanus Canal as part of its Combined Sewer Overflow (CSO) elimination requirement. The first 100 feet from Canal would be reconstructed as a tidal wetlands to create filter habitats, with stormwater holding tanks under the reconstructed Park and pools.

1766 Ratzer Map of Thomas Green Park Area with 2011 Kite Aerial showing how sinking tarmac matches streams. Coal Tar leaches from Park to Canal via spring system

Potential spring outflow at end of Degraw Street from Park

Sinking at Thomas Greene Park from historic stream beds

2011 May 31 photo by Eymund Diegel

What can we do better ?

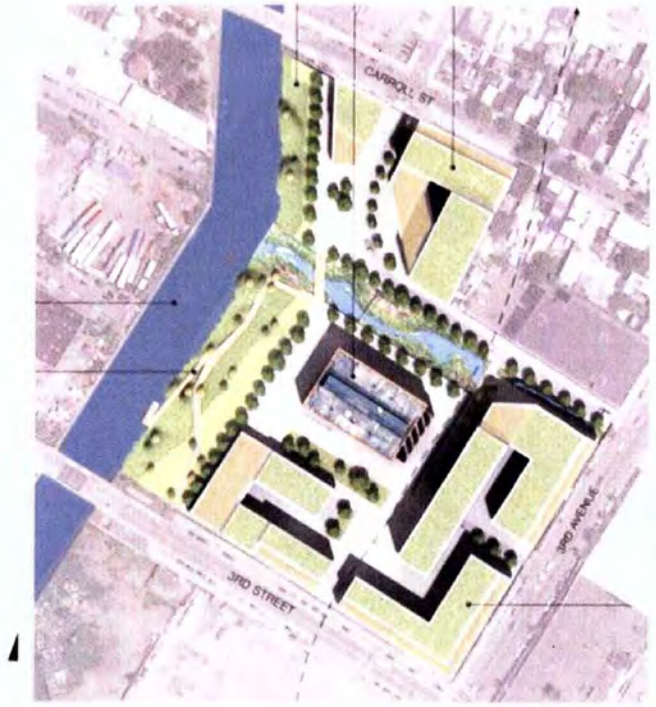
The City, instead of properly cleaning up the Fulton Manufacturing Gas Plant site simply covered it with tarmac and called it Thomas Greene Park.

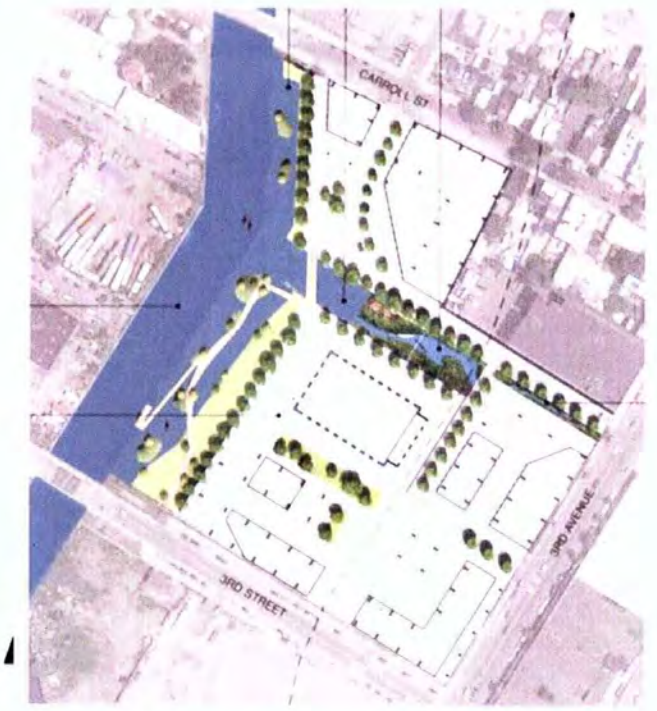
Over the years, streams and tidal marshes on which the gas plant was built have caused parts of Park to subside, while carrying coal tar contamination into the Gowanus Canal waters. Currently the "remediation" plan calls for building a wall along the Canal to block the contamination.

That is not good enough.

The New York City Park's Department needs to work with the EPA, National Grid and NYSDEC to properly excavate the coal tar contaminated soils under the pools.

DEVELOPMENT STUDY SITE





THE FIRST STREET BASIN WATERFRONT AREA : A Conceptual Study for the Daylighting of the First Street Basin and the integration of a tidal wetland bank by Ate Atema, 2011. With the acquisition of this site by the Powerhouse Environmental Arts Foundation, and the site opposite by the Lightstone Residential development, it is important that special attention be given to waterfront design requirements and Superfund dredging implications for any plans these sites may have.

Overlay of a 1766 Map of the Denton Tide Mill on top of a 2012 balloon aerial of the First Street Basin

Gowanus Dredger at the First St. Basin landfill. The Basin contains historic Denton's Spring: Check out the stream video of a restoration opportunity.

LOCAL KNOWLEDGE COMMUNITY PARTICIPATION FEEDBACK / "GRASSROOTS" MAPPING OF DENTON'S SPRING.
An example of how weed patterns growing through concrete cracks led to the discovery of substantial fresh water flows coming out from underneath the Figliolia Building's foundations. **This outflow was missed by the Superfund Pipe Survey,** and with a second one hidden behind the bulwarks at 2nd Street, they have the highest flows of any pipes going into the Canal.

REMEMBERING AMERICA – MOVING FROM SUPERFUND TO CELEBRATING THE CANAL'S UNIQUE HISTORY

UNION STREET BRIDGE / BROUWER'S MILL DAM ARCHEOLOGICALLY SIGNIFICANT AREA

This is the main area of the Superfund Site with historical commemorative significance. Once dredged this strategic site of America's First Battle for Independence should be commemorated by an appropriate waterfront feature, whether an underwater bridge, tidal steps, or some other design the community feels appropriate.

GOWANUS TIDAL MILLS

KEEPING THE WHEELS OF PROGRESS TURNING..
The comprehensive and well researched Archeological Study of the Gowanus Canal Superfund Site and its surrounding areas by Hunter Research noted the significance of the First Street Basin Site in American history. The site was the backdrop for an 1858 painting by Alonzo Chappel depicting the Battle of Long Island.

With the growing interest in Battle of Brooklyn events, the report's recommendation to study the site for a commemorative structure is an important one. For example, a reconstructed tidal mill could serve as water science education center for local schools. The Canal is currently a field trip destination for several local schools.

It is suggested that as the dredging program moves forward that the Superfund Team consider the Figliolia Building property, (currently for rent) and the adjoining First Street Basin (City owned) as a construction site management office. **The First Street Basin lot would be the perfect place for a community information trailer on Superfund progress as the plan moves forwards.**

AN EXAMPLE OF A HISTORIC TIDAL MILL THAT COULD BE RECONSTRUCTED AS AN ENVIRONMENTAL SCIENCE CENTER IN THE FIRST STREET BASIN

COMMUNITY OUTREACH & ENVIRONMENTAL EDUCATION

2012, 5 March – "How Bridges Work", an educational program on the Gowanus Canal sponsored by the Gowanus Dredgers Canoe Club, here with International School of Brooklyn students. The Gowanus Canal has become a major educational destination for local schools, used as a workshop site by local universities and toured by many overseas delegations.

As part of the Community Advisory Groups and the Superfund Team's Public Information campaign it is proposed that construction management facilities for the Superfund cleanup include a physical public information center. It can be as humble as a weather protected information board with progress maps and key facts. As funding and community organizations evolve, it could become **a permanent Environmental Education Center** located on one of the currently landfilled Canal basins.

INCLUSION OF THE 5TH STREET BASIN (4th STREET BASIN EXTENSION) INTO THE FINAL SUPERFUND PLAN
The Superfund Team made the decision to include First Street Basin in the Cleanup Plan but not the Fifth Street Basin. The Community Advisory Group unanimously supported the 5th Street Basin's inclusion in the Cleanup Plan. Below is more detailed discussion as to why the 5th Street Basin should be included:

POLLUTION: It is polluted enough to qualify as an integral part of Superfund Site. Many other parts of current Gowanus Canal Superfund Site are less polluted than the Fifth Street Basin.

FLOOD MANAGEMENT: The Basin is strategically located to reduce contaminated flooding for local businesses

COMBINED SEWER OVERFLOW (CSO) REDUCTION: The 5th Street Basin provides a better strategic location for stormwater or CSO tanks. Both of the current CSO tank proposals (Salt Lot and Greene Park) are located in the worst section of the Gowanus flood zone, while the 5th Street Basin is located at edge of the flood zone.

OPEN SPACE REQUIREMENTS: The City needs to expand open space for the growing population of the watershed's neighborhoods. 600 students are directly adjacent to the Canal Superfund site, without recreational open space.

EPA HAS LEGAL MANDATE: Cleanup to open space standards can best be achieved by Federal EPA standards, not City or State ones, which have failed the community, both in allowing illegal dumping in the Canals and Park construction on coal tar plumes.

SUSTAINABLE: The 5th Street Basin was the historic outflow for Vechte's Creek, the natural outflow point for Park Slope rain waters. These waters are currently mechanically pumped and sent all the way to the Brooklyn Navy Yard through a failing overwhelmed sewer system. The 5th Street Basin provides a sustainable **gravity fed** solution to stormwater management.

CONNECTION CORRIDOR: The Basin is a key identified greenway linkage in the Gowanus Canal Conservancy's Sponge Park Plan, currently being used by the City as part of its Green Infrastructure Strategy. Thousands of shoppers and recreational users are expected to converge on the redeveloped 4th Street Basin / Whole Foods Park, and the currently landfilled basin is the missing link to Brooklyn's Greenway and open space network. The 5th Street Basin provides a connection opportunity for Park Slope to the watershed's largest open space: the Gowanus Canal – it brings people to Superfund's results.

2011, 31 July – Balloon aerial of 5th Street Basin / 4th Street Basin Connection, Al Madinah School, American Can Factory, Whole Foods Site and Third Ave.

4th Street / 5th Street Basin Remediation. The 4th Street Basin is mapped as one of the highest coal tar contaminant zones in the Canal. It is slated for contaminated sludge removal and in-situ stabilization. Currently, the immediately connecting landfilled (confusingly named) 5th Street Basin is only proposed for remediation under the States Brownfield program. The Superfund Team's reason for this is that it is not contaminated enough to qualify for inclusion in the Superfund Remediation.

There has been concern expressed by artists at the American Can Factory that the "triage" approach being used by the EPA, of only remediating the "worst offenders" is still letting substantially contaminated areas slip through the cracks.

WHO SHOULD BE IN CHARGE ? HAS ENFORCEMENT OF NEW YORK STATE DEPT. OF ENVIRONMENTAL CONSERVATION (NYSDEC) CLEANUP STANDARDS BY THE ENVIRONMENTAL PROTECTION AGENCY (EPA**)** BEEN ADEQUATE ?
I am concerned that NYSDEC is not enforcing cleanup standards required by the EPA on polluted upland Gowanus Canal sites. An example is the NYSDEC Brownfield Whole Foods Site, which was allowed to proceed with construction while pollution remained in the ground. Cleanup requirements seem to have been negotiated downwards to a "good enough" standard.

photo of Whole Foods construction site by Martin Bisi, Dec. 2013

Map of Contaminants Remaining on Whole Foods Site by BL Co.

The Whole Foods / BL Co. Site Remediation Report, available at the Carroll Gardens Public Library lists *unremediated* lead concentrations of 2320 parts per million (ppm), arsenic at 24.7 ppm and Benzoathracene at 7.4 ppm. This is for an area under construction as a recreational waterfront greenway, and remaining contamination levels don't meet NYSDEC standards.

Some questions are raised by the Whole Foods Report: Will the Superfund Canal Cleanup and State Brownfield Cleanup only clean out the "worst offenders" ? Will substantial pollution still be left behind ? **The Record of Decision should aim for the highest cleanup standards, and apply and enforce those standards to upland NYSDEC managed sites as well.**

There is strong concern that the "Use Attainability Analysis" strategy adopted NYSDEC and NYCDEP of "well, we can only cleanup to what is reasonable" may result in a substandard cleanup, especially for the community's water quality and open space recreation goals. After listening to the DEP's lawyers at a CAG meeting, I became concerned that my young daughter would be invoking "Use Attainability Analysis" for why the "Clean Room Act" did not apply to her having to clean her room.

It is important that the various cleanup agencies clearly explain what cleanup standards have been met and not met and avoid using legal tactics to evade publically mandated responsibilities to ensure clean and safe environments.

The Superfund Team must enforce the law, both for CERCLA and the directly related Clean Water Act, and **reject legal attempts to dilute cleanup standards**.

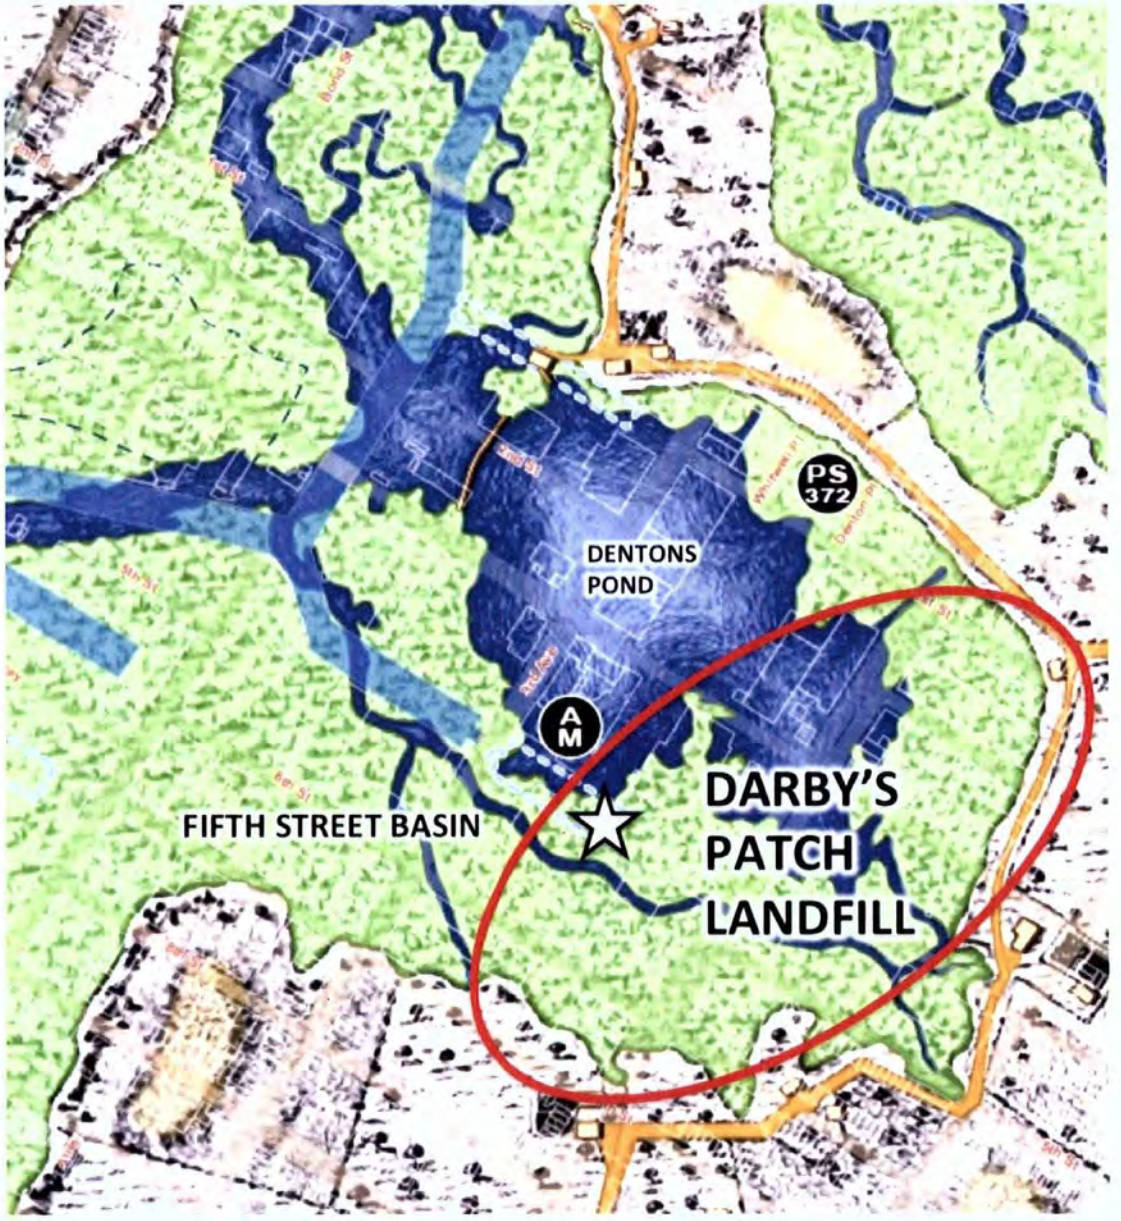
List of Contaminants remaining on Whole Foods Site by BL Co. Engineers

Local library kids on top of site plan of their future Whole Foods play ground What is "clean enough ?"

1766 Ratzer Map with 5th street Basin & Darby's Patch Landfill



The Gowanus Canal was formerly one of the largest tidal salt marshes in New York City. Within the marshes, Denton's Pond was fed by the rapid rainwater runoff from Park Slope and a number of natural springs, including Vechte's Spring which used to provide the drinking water for what is now the Old Stone House.

From the 1850's onwards the pond started being landfilled, with the area along the Gowanus Road being used as a municipal garbage dump known as Darby's Patch.

When Fourth Avenue was surveyed in 1851, more rapid landfilling occurred with 20 to 30 feet of fill, ash and industrial wastes from waterfront factories burying the Pond.

Because of its strategic location the 5th Street Basin, built on the Pond's edge, can play a key role in restoring the natural functions of the Canal in receiving Park Slope's water.

The 5th Street basin is being proposed as a cheaper more effective alternative than the proposed sewer tanks closer to the Canal. I support its inclusion in the Superfund Cleanup Plan.

A HISTORY OF LANDFILLING OF THE GOWANUS CANAL SUPERFUND SITE UPLAND AREA

The Remedial Investigation had some data gaps with regards to the nature of landfilling around the Gowanus Canal Superfund site. Some background material is submitted here to suggest that the 5th Street Basin, currently excluded from the Cleanup Plan, be given a second look and included in the remediation proposals. There is concern that the eastern end of the 5th street landfill, closest to 4th avenue was used as a municipal landfill by the City, and would contain **contaminants typical of 1850's industrial Brooklyn**. Additional soil borings should be taken there in light of community efforts to get the 5th Street Basin become the solution to 4th Avenues flooding and sewer overflow problems.

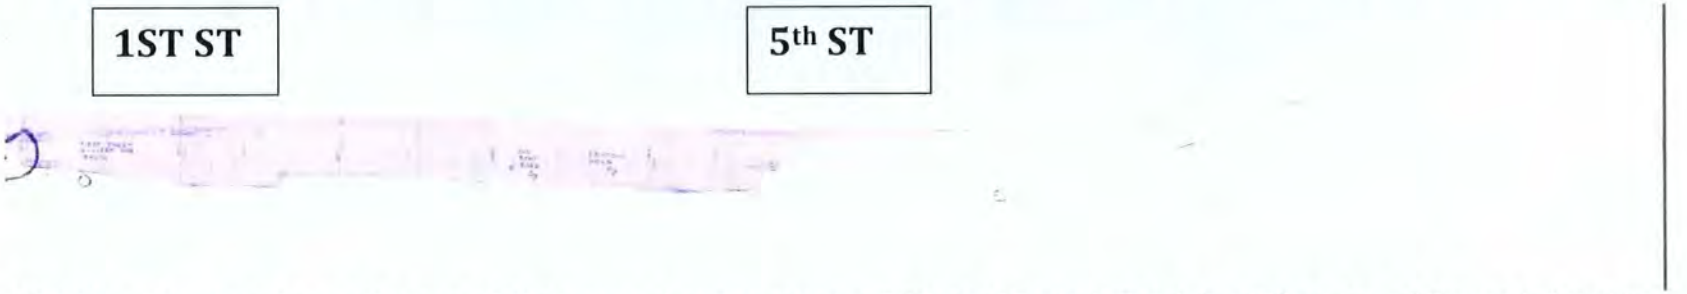
Brooklyn Landfill Dump, circa 1872, typical of those that filled the Gowanus tidal marshes, and a garbage dump rag picker photo by George Bradford Brainerd, courtesy of Brooklyn Museum

A HISTORIC DESCRIPTION OF DARBY'S PATCH LANDFILL

The sunken lots, which two years ago were twenty feet below the street surface, are being filled in fast nominally with ashes, but really with lobster and fruit cans, waste paper, rags, old boots and in some instances, garbage and street refuse. Fifty or sixty teams and wagons are now filling in the ***great sunken lot on the corner of Carroll and Fourth avenue*** *....Darby's Patch was a densely populous shanty town containing over a thousand squatters who paid no rent and acknowledged no rivals except the grim and dignified goat, the phlegmatic hog and the independent flocks of geese and ducks which went sailing down the filthy ponds between the* ***great heaps of ashes and refuse which the city was kind enough to throw there****.... The sunken block upon which the shanties stood is now the property of a gentleman named LYNCH. He is selling city lots in it. They would not have brought $500 each a year ago, when there were* ***thirty feet below street*** *level in some places. The surface of these lots is clean earth, but* ***the substratum is ashes and refuse.***

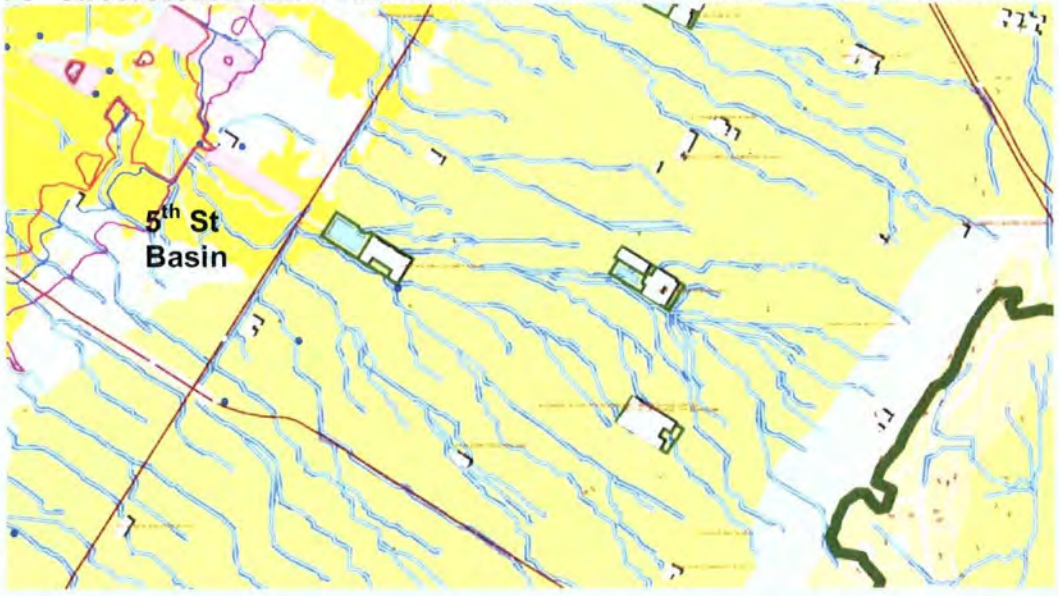
A TOUR THROUGH THE THIRD DISTRICT Some Objectionable Italian Tenements and Pestilential Dumping Grounds THE CONDITION OF BROOKLYN'S STREETS AND HOUSES. Brooklyn Daily Eagle, 9 May 1885

4th Avenue Landfilling Concerns on 5th Street Basin Component of Gowanus Canal Superfund Site Study Area



1851 Road Grading Survey Section of 4th Avenue showing average 25 feet of Darby's Patch landfill on top of Denton's Pond in blue and oldest shallow section of 5th Street section that would have received oldest most varied industrial and urban wastes

Fourth Street Basin frozen with remnant outflows of Vechtes Brook melting the ice
photo by K_Lapp, January 18 2009



Runoff Model showing convergence of surface runoff to the 5th Street Basin. This rapid runoff is the major cause of 4th Avenue property flooding. Blue squares indicate rain holding cisterns that could be built in City owned playgrounds to retain runoff for later discharge via the 5th street Basin. Yellow shows the historic Gowanus Marsh and blue the general direction of runoff and groundwater infiltration today. Red shows the extent of the Sandy Flood Area and lavender various storm and sewer holding tank options.
(modeled by Eymund Diegel using a 2004 Digital Elevation Model and ArcHydro software)

The Gowanus Canal Conservancy Grassroots 2012 Mapping program noted melted ice at this location (similar to the 2009 photo) indicative of salt runoff , However, the Third Ave roadbed is bermed here, making salt runoff unlikely. There is a need to cross check the source of melting chemical or warmer water.

The current plan calls for some form of barrier at the end of the 4th Street Basin to prevent any form of contamination that may leach from the upland area. This is a problem, as hydrologically, this particular point is the primary runoff flow connection from Park Slope. Any blocking off of the 4th Street Basin / 5th Street basin will exacerbate flooding and water table problems for 4th Avenue residents, and the American Can Factory in particular.

It is proposed that the Superfund Plan include the currently landfilled segment of the 5th Street Basin to become an integral part of the Gowanus Canal, with open water and a reconstructed wetland park connected to the Whole Foods Greenway.

The 5th Street Basin should be added to the list of sites submitted by EPA to NYCDEP for study as to its suitability for Combined Sewer Overflow tanks (currently limited to the 2nd Avenue Salt Lot and Thomas Greene Park). Better still, as part of the NYC Green Infrastructure Plan it is proposed that the site be studied for a **stormwater diversion** area (not sewer overflow tank) that would be a cheaper and more sustainable alternative to the CSO holding tank proposal.

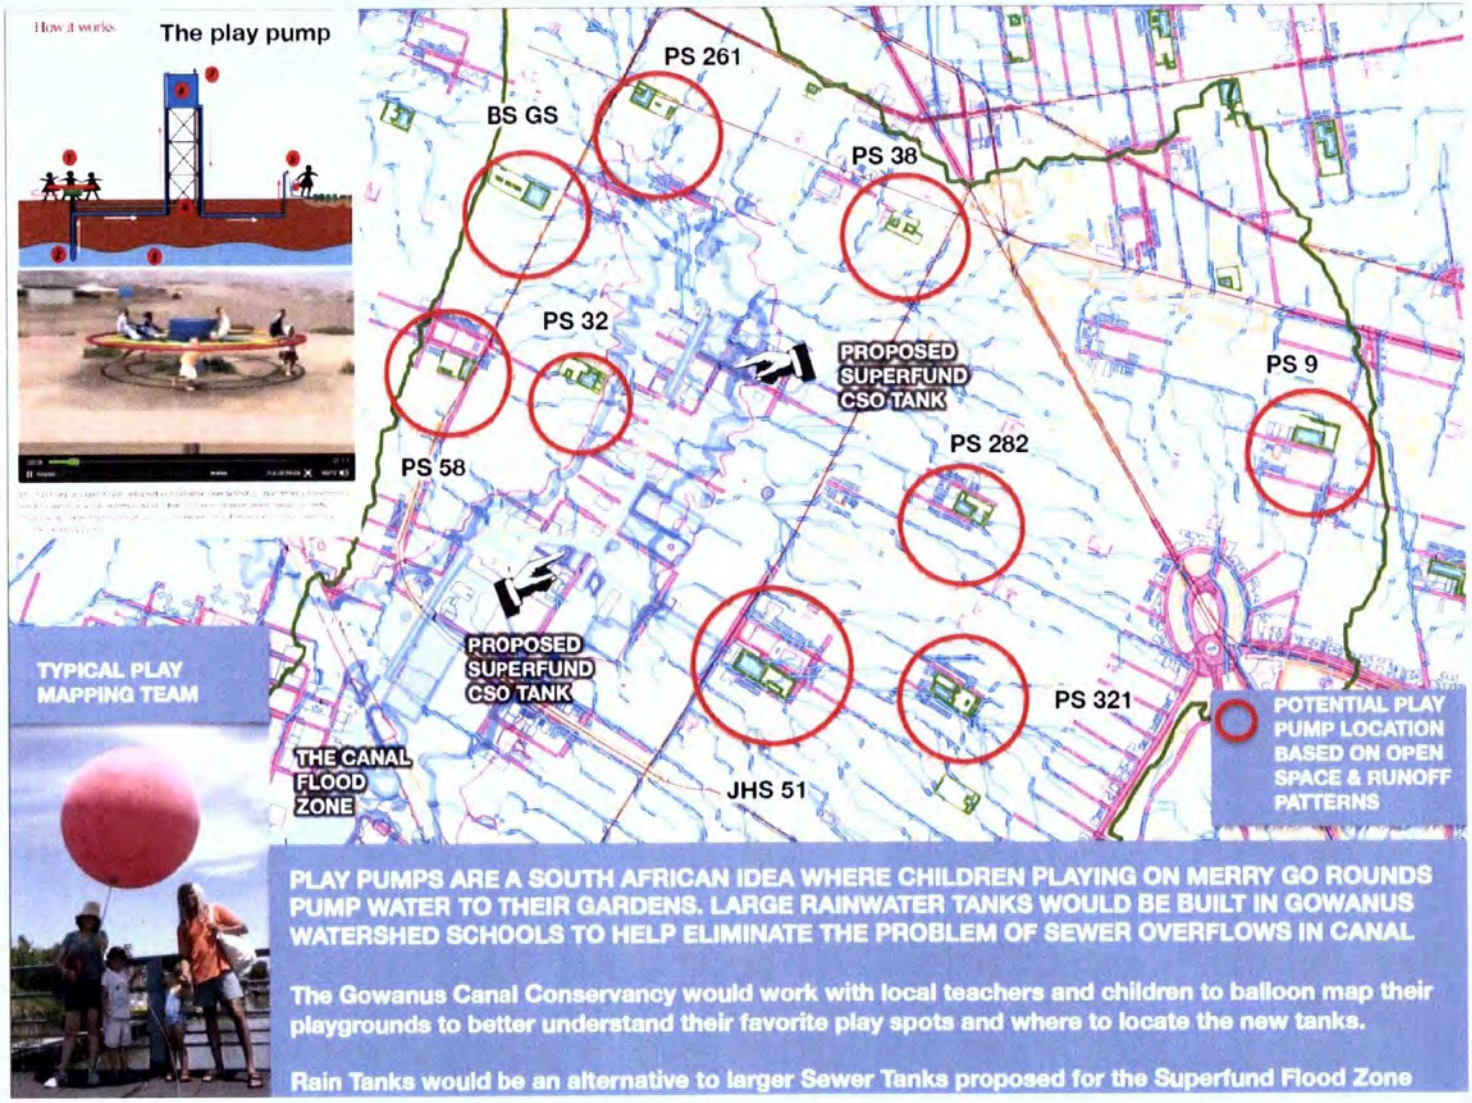
I think that combined sewer tanks are bad idea. They are only treating the symptom, not the cause of the problem.
A better solution are smaller more strategically located rain water holding tanks in upslope sites that would make the more expensive (tax payer funded) sewer tanks unnecessary by diverting overflow causing rainwater from the sewer pipes. Rainwater, even when polluted by street runoff is much easier to treat than toilet and industrial sewage.

The 5th Street Basin would be restored to its natural function as a stream and public park incorporating pollution runoff best management practices tested in the Staten Island Bluebelt Plan.

The 5th Street Basin would be part of a comprehensive watershed stormwater management plan incorporating street creeks, holding tank and infiltration swale technologies as appropriate that would be linked to Green Infrastructure in the adjacent JJ Byrne Park , Old Stone House gardens and Junior High School 51 playgrounds and proposed 4th Street Park.

THE 5TH STREET BASIN MAKES A BETTER ALTERNATIVE FOR STORMWATER AND SEWER OVERFLOW MANAGEMENT THAN THE CURRENTLY PROPOSED CSO RETENTION TANK AT 2ND AVENUE & 5TH STREET 9 (THE " SALT LOT") AND AT THOMAS GREENE PARK.

THE PLAY PUMP PLAN – a rough study on the feasibility of identifying school owned playgrounds suitable for the construction of large rain holding tanks. Kids playing on merry go rounds would pump rainwater back to street and trees after the storm has passed. This is an example of Watershed wide planning supported by the Conservancy.



CONCLUSION

Watershed Wide Superfund Solution: A rebuilt tree pit area next to PS 58 could help reduce Gowanus Canal RH 35 toxic sewer overflows

Rainwater Tanks for a gravity fed playground and street runoff management system that reconstructs natural hydrology

GOWANUS CANAL SUPER FUND ME!

Sludgie the Superfund whale graphic by Anne Martin, 2009

Community groups have worked hard to develop cleaner sustainable neighborhoods around the Gowanus Canal, and to support the City and Government to meet their environmental mandates.

The Superfund Cleanup Plan is a unique opportunity for City, State and Federal agencies to find a common ground that can help improve New York City as a whole.

Superfund and the Clean Water Act need to work together to ensure that cleanup goals for the Gowanus Canal are not just hypothetical percentages of "modeled" sewer volumes but real reductions aiming to bring sewer volumes and toxic contaminants to Zero.

The primary goal of the Clean Up Plan remains the removal of centuries of contaminated sludge and preventing recontamination. However, for the person walking across a Canal bridge, it is the *visible* component of the cleanup that will define its success - the removal of the floating sewage and oil slicks.

With the well thought strategies that the Environmental Protection Agency has come up with, and the great Team they have assembled, I look forward to the Plan's implementation and a cleaner Canal.

I, the sender, vote that I do not want this project to proceed.

Leslie Shipman to: Region2 GowanusCanalComments 04/24/2013 10:36 AM

As (one of the options above) of the community of Red Hook, I/We am/are strongly opposed to the processing of contaminated sludge dredged from the Gowanus Canal Superfund Cleanup Site at a facility at the proposed location. The cost savings are negligible, and the Red Hook Ball Fields and Pool are used in public trust. The community does not want to create more land from this contaminated sludge adjacent to one of the most heavily used recreation areas in New York City. People and organizations adversely affected include (but are not limited to!):

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood
- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

Further, we object to an individual (John Quadrozzi), who has incurred serious fines for environmental violations, from profiting from the project.

TERUMI MATTHEWS to: Region2 GowanusCanalComments 04/24/2013 11:08 AM

Dear Mr. Christos,

Thank you so much for listening to our community regarding the CDF, and agreeing that it will not come to Red Hook. It meant a lot to us that Walter Mudgan came to our neighborhood to speak to us on April 16th, 2013, at the Brooklyn Community High School on Conover Street, and told us that if the community does not want it, then it will not happen.

Best,
Terumi Matthews

I, the sender, vote that I do not want this project to proceed.

Dear Mr. Tsiamis,

We are desperately in need of the help you propose for the Gowanus area. People live, work and die of disease in the area given the century long neglect that you are able to redress. We are most grateful to the EPA for this effort and find it a wonderful demonstration of reasoned democracy for the good of all in Brooklyn and those the city serves.

Yours truly,

To Christos Tsiamis
Project Manager, Central New York Remediation Center

Dear Christos,

Attached are the comments of Rd Hook GAGS(Groups Against Garbage Sites). These comments were unanimously approved by 9 to 0 by our board of directors.

Red Hook GAGS
(Groups Against Garbage Sites)

200 Conover Street
Brooklyn, NY 11231

Phone & Fax: (718) 624-4643
Email: redhookgagsbklyn@AOL.com

Red Hook GAGS (Groups Against Garbage Sites) has been a leading environmental advocacy organization that has been fighting for Environmental Justice and to keep noxious and environmentally harmful uses out of Red Hook since 1997. Our Board of Directors is comprised of a cross section of Red Hook, including 5 members from Red Hook Public Housing and this comment statement was voted on unanimously by our board.

Though we fully support the Superfund clean up of the Gowanus Canal, it is our position that the dewatering of all of its toxic material and the detoxification of 1/3 of this material should not be located at the GBX facility in the Gowanus Bay Terminal in Red Hook, and building a CDF (Confined Disposal Facility) on an expanded footprint of this site is detrimental to all of the residents of Red Hook.

In the first place, this site is adjacent to one of Red Hooks most important assets: The Red Hook Recreational Area and Park. This area is home to 9 Baseball fields, 2 soccer fields, a world class running track, one of Brooklyn's largest public pools with an attached gymnasium, an urban farm and Brooklyn's beloved Central American food vendors. This park provides immeasurable economical and quality of life value to the Red Hook community and to all of Brooklyn. Common sense and science indicates that the odor alone from bringing all of this toxic waste is detrimental to all of the positive uses close to this site. Furthermore, the amount of toxicity released into the air during the loading and unloading involved in the dewatering and detoxification process has not been fully studied and is a major concern to Red Hook and the people who use these facilities:

- Children
- Numerous public and private schools which use the fields for physical education & sports teams
- Residents of the Red Hook Houses and the surrounding neighborhood

- Soccer, softball, baseball, football, handball, basketball, track & field teams and enthusiasts
- Swimmers of all ages
- The Red Hook Food vendors and their customers
- Other visitors to our community

With all of the promises from the EPA, their own record indicates that nothing is 100 percent guaranteed from mishaps. This is especially true of this facility after Super Storm Sandy, with the risk of immitigable consequences for not only our park but the whole neighborhood including Public Housing, which is extremely close to the proposed site.

As regards to the CDF, According to the EPA's own report, "Tests to assess the leach ability of NAPL (toxic contaminants)... would need to be performed and permanent institutional controls would be required to ensure the long-term effectiveness of this option..." The Red Hook community does not desire a site built with materials that needs permanent monitoring because of potentially leaching toxic contaminants.

With all due respect, there is a serious lack of trust in the owner of and lobbyist for this site. They have floated 3 different drafts of what they propose. Every time the community finds dangerous flaws in their proposals, they change the proposal to placate the concerns. This moving target leads to more distrust. What this pattern says to the community is that they'll say anything and then do whatever they want. Why in their second proposal do they proudly announce that they would convert waste to energy and oddly enough a study was done by Columbia University on the feasibility of importing tons of putrescible garbage(that's the stinky stuff) a day to burn at the Quadrozzi site. But when the community (excuse the play on words) got wind of it, it was no longer mentioned or addressed. Whatever they build on this site from concrete plants to asphalt plants or a garbage burning facility, will bring increased truck traffic to a park. GBX has told us on many occasions that they have the right of way to build whatever the zoning allows. That might be true, but we don't want to give them more land mass to facilitate them doing it.

Red Hook has been the target of noxious use facilities for over 20 years. To float a relatively small number of jobs at the expense of dumping on

this community negates the environmental justice which we have been fighting for, for years. And this is clearly an Environmental Justice issue.

As the EPA has a list of remedies that involve processing the dredged material off-site for beneficial use, we strongly urge them to select ***any*** option that will prevent Red Hook from once again being a dumping ground.

Respectfully Submitted by

Lou Sones
Coordinator
Red Hook GAGS

Comments on Gowanus Canal Proposed Plan

Gabriel Reichler to: Region2 GowanusCanalComments 04/24/2013 08:41 PM

Sent by: **Riverkeeper <info@Riverkeeper.org>**

Please respond to Gabriel Reichler

Apr 24, 2013

Mr. Christos Tsiamis
290 Broadway, 20th Floor
New York, NY 10007-1866

Dear Mr. Tsiamis,

I am writing to support the EPA's proposed plan to clean up the Gowanus Canal Superfund site. After 150 years of pollution a comprehensive plan that addresses the toxic sludge at the bottom of the canal and ongoing pollution from CSOs and upland contamination is critically important to returning this long neglected waterway to the community.

While the EPA's plan takes the critical step of calling for CSO retention for two of the Canal's worst outfalls many details will not be solidified until New York City submits their CSO Long Term Control Plan in 2015. It is critical for the EPA to stand firm on requiring retention tanks to control CSOs and to work with New York City towards the eventual goal of 100% elimination of CSOs from the Canal.

I support the EPA's commitment to dredge as much as 10 feet of contaminated sediment from the entire length of the canal, build a multi-layer cap on the bottom, and treat and dispose of this contaminated sediment offsite. I also believe that the EPA should listen to the wishes of the community in Red Hook who oppose the building of a CDF on the Red Hook waterfront to dispose of the least contaminated sediment.

Sincerely,

Mr. Gabriel Reichler

From:
Andrea Kondaks Sansom
206 Richards Street
Brooklyn, NY 11231

Dear Mr Tsiamis -

Thank you for the considerable time and dedication you've given to those Brooklyn communities affected by the Gowanus Superfund Site and thank you, especially, for the EPA willingness to hear those in Red Hook, Brooklyn. That the EPA stated at the last and final meeting here on April 16th, 2013, that the proposed Confined Disposal Facility does not have community support and therefore will not happen in Red Hook is a tremendous relief to our community.

While I fully support and recognize the necessity of the Gowanus clean-up, it is for manifold reasons that I am against the Red Hook option and, having been to the meetings and spoken with you on the phone, I'll not repeat myself here.

I am obliged, however, to enter my objection and please read beyond the ellipses below for my less technical response:

With regard to the EPA Gowanus Superfund Site Proposal (from PRAP, page 19, pages 22–24):

I oppose any options in the PRAP that include on-site stabilization of dredged materials and maintaining these materials in any form within the confines of the neighborhood of Red Hook. While the Gowanus Canal stretches through many neighborhoods, and was polluted over the course of many years by a variety of offenders, these proposals place undue burden with the remedy for cleanup in perpetuity in Red Hook. The neighborhoods impacted by the canal will be dredged, and the canal will be cleaned, the polluters will have completed their requirements under the PRAP the EPA will complete the task and leave the site, yet Red Hook will be "stuck" with the toxic remnants of the substances dredged from the bottom of the canal. Additionally, Red Hook residents will be faced with a CDF that it is vehemently opposed to, that adds no value to the environs of the neighborhood and is owned by a corporation/individual with an exceptionally poor environmental and community track record.

Likewise, I oppose Option E: On-site stabilization and on-site beneficial use.

The on- site beneficial use requirements remain undefined, and as such may still pose a significant risk to the health to the residents of my community. While beneficial use may be limited for the areas indicated in beneficial use, the residents of my neighborhood, both current and future, have no guarantee as to the level of enforcement of such, and to the level of adherence to property owners of such restrictions. The current proposed property owner currently has unpaid fines for illegal dumping of toxic material into Erie Basin, and was also cited in court for dumping in Newtown Creek. We cannot trust this corporation to be a good steward of our coastal waters.

I also oppose Option g: On-site stabilization and placement in on-site constructed CDF

With the creation of the CDF comes a substantial amount of land granted to a private land owner as a result of the on-site stabilization use of the dewatered material. NTRH also opposes the grant of land to a private developer in an undefined manner. I oppose this option, or any option, that includes the granting of new land to a private entity.

Lastly, I oppose Option f: Off-site stabilization and placement in on-site constructed CDF.

As previously stated, any option that brings a CDF to the neighborhood for long term storage of dewatered "sludge" is unacceptable. Research is beginning to demonstrate that the disruption of equilibrium by internal or external effects will eventually result in the release of contaminants from dewatered materials previously thought stabilized in CDFs. This indicates that there is insufficient evidence to tell us that over time and in response to changing conditions mobilization of some contaminants is possible, and I I do not accept this option in my neighborhood.

...

With regard to the necessary de-watering of the dredged material, it is my understanding that this phase of the clean-up will not be determined until the initial proposed remedies are decided upon. I understand, then, that at some later date there will be another round of public forum to address the options for the de-watering phase. What I respectfully ask is that the burden of de-watering be equally borne by those communities affected by the superfund site at large; that no cost is spared by those responsible for the clean-up in this de-watering phase; that remedies that will instead spare the various communities the particulate, vapor, odiferous, or any potentially toxic or sickening result of de-watering be utilized with re-time monitoring.

I oppose the installation of a de-watering facility in Red Hook, any facility that stockpiles dredged material and particularly one adjacent to a very popular and widely utilized recreational area, a public pool and the proposed Brooklyn Greenway initiative.

I strenuously oppose the installation of a CDF and/or de-watering facility being constructed in flood zone A and, thereby, any remedy that would have even the remotest chance of introducing contaminants in any form - dredged, dessicated, liquid - to the community of Red Hook in the event of a devastating weather event. Given the fact that Red Hook has experienced two flooding events in the past three years, one of which having disastrous effects on the community which will require years of recovery, I am astonished that the proposal was put forth in the first place; that EPA, city officials, CAG members, etc., did not see fit to revisit the implications of such a facility in a flood-prone area.

I need to express to you the sadness, confusion and outrage that has arisen in my community as a result of the EPA/GBX CDF and de-watering proposal. Red Hook residents – and then only some – learned of the Red Hook option during or after the February 13th, 2013 meeting at a time when most if not all of this community were still trying to put our lives back together – as we continue to do now – post Superstorm Sandy. That we were then burdened with the demanding and urgently time-sensitive need to research, respond to and, to the best of our ability, reasonably grasp the long and short-term implications of this complex and extremely important proposal is something we should have been spared. Those of us in the community who took it upon ourselves to learn as much as we could, being non-scientists, feel we should have had our own expert guidance and council and that, under the serious flood circumstances, these should have been provided us.

If we have made any errors in our efforts to galvanize the very reasonable resistance collectively expressed throughout all of our community, we urge you to forgive those slight mistakes and recognize the passion, care and determination that have resulted in this brief public comment period. We have spent countless hours and precious energy in informing ourselves and our community. We absolutely wish that the April 16th meeting arranged by GBX and Reg Flowers had been announced to the general community of Red Hook by its organizers. This privately arranged meeting amounted, in my mind, to subterfuge and was a shameful attempt to co-opt the very well-intended and tremendous concern felt throughout all of our corner of South Brooklyn.

That there was such a turnout and resounding opposition to the Red Hook option even when this meeting was at the bidding of GBX could be no better testament to the consensus of our community.

Similarly, it was very confusing to anyone who attended the February 13th meeting to find the GBX literature entitled "Fulfilling a Green Future" distributed at what we believed was an EPA meeting. Most if not all of us assumed this to be EPA literature and, when we discovered this false, felt duped and misled.

With regard to the EPA's responsibility toward Environmental Justice, it is clear that Red Hook, being in great part a minority or low-income community, falls under EPA determinations of Environmental Justice. Further, as Red Hook already suffers a disproportionate rate of asthma owing to it's proximity to the Brooklyn Queens

Expressway, extant or previous waste facilities, other local industry, I assume that section 6.2.1 under EPA Environmental Justice guidelines is pertinent to Red Hook.

Because no substantial and permanent employment would come to Red Hook as a result of the Red Hook/GBX proposal(s), no persuasive argument can be made that this community stands to benefit overall from the Red Hook option. Residents were clear at the April 16th meeting that the risk of toxic exposure, even if you say it is remote, is not worth a few job training positions.

At this point, Christos, I'd like to remind you that when I asked you if you would want a CDF/de-watering facility in your own community on the property of an individual who has not demonstrably remedied or acknowledged his own company's environmental violations, your response was: probably not.

I and we in Red Hook hope that our community will cease to bear the environmental burden it has borne historically and that, given our recent flood experience, the community of Red Hook be given full consideration and due care in the future unfolding of the Gowanus clean-up. Should it be the case that we will need to continue to oppose any remedy, we will do so with steadfast determination.

Again, thank you for your patience, hard work and willingness to listen.

Re: Gowanus Canal Superfund Site – Proposed Plan

Dear Mr. Tsiamis:

On behalf of Natural Resources Defense Council ("NRDC") and its 1.3 million members and activists, I write to submit comments in support of the Environmental Protection Agency's ("EPA") December 2012 "Proposed Plan" for the Gowanus Canal Superfund Site.[1] NRDC commends EPA for focusing its attention on this long-neglected, highly polluted, urban waterway and for developing a plan intended to remove from the canal, and/or permanently sequester from potential routes of human and ecological exposure, the most significant toxic contamination in the canal. We express our support for community efforts to ensure that the cleanup is completed both expeditiously and safely.

We submit this letter to emphasize our support for EPA's proposal to address ongoing sources of contamination as part of the Superfund remedy, particularly combined sewage overflows ("CSOs") near the head of the canal, which threaten to recontaminate areas targeted for intensive cleanup.

NRDC has been involved for decades in efforts to ensure that New York City solves its 30 billion-gallon-per-year sewage overflow problem, consistent with the requirements of the federal Clean Water Act. We support the 2012 CSO administrative consent order ("CSO Order") between New York City and the New York State Department of Environmental Conservation ("NYSDEC"), which commits the city to (i) implement specific "gray" infrastructure projects in particular drainage areas, (ii) meet targets for green infrastructure implementation citywide, and (iii) critically, to develop Long Term Control Plans ("LTCPs")

BROOKLYN ECONOMIC DEVELOPMENT CORPORATION

April 25, 2013

Christos Tsiamis
Project Manager
Central New York Remediation Section
U.S. Environmental Protection Agency
290 Broadway, 20th Floor
New York, New York 10007-1866

Dear Mr. Tsiamas:

On behalf of Brooklyn Economic Development Corporation (BEDC), I am writing to support the Gowanus Bay Terminal (GBX) proposal for dewatering, water purification, remediation, and beneficial reuse of the dredge removed from the Red Hook portion of Gowanus Canal.

When the determination of the Canal as a Superfund site was first promulgated, I had deep concerns on many levels. While I know and understand that the toxicity the Canal in its current form poses to the community, I also feared that the designation would halt any kind of redevelopment efforts for many years as the logistical questions of how to clean the canal and where to dump the dredge were negotiated. I know that there are few places left in the US that are permitted to accept contaminated dredge and I understand why; as communities all over the country try to clean up and reuse brownfield sites for purposes of job creation and community revitalization, who would want to *add* contaminants to the soil where they might leach and contaminate adjacent sites and aquifers?

The GBX Terminal solves this problem in a very elegant and prudent way! It eliminates truck trips transporting dredge from the site entirely – this benefits the community not only from a noise and congestion standpoint, but as a way to avoid truck exhaust that has led to asthma and other respiratory problems in the Red Hook community.

Secondly, the end result is a community amenity – a waterfront park that GBX seeks to build on the new upland that will further add to the livability of this community. As the Brooklyn Greenway project grows and expands in Brooklyn, this park will add another link to the green "necklace" that the Brooklyn waterfront can become.

Third, it helps preserve and create jobs and industry in a community that desperately needs them, and in a way that that compliments the neighborhood by use of waterborne commerce rather than truck dependence. So many "economic development" projects in Red Hook have had disappointing results – the Cruise Ship Terminal that created few jobs, the IKEA that created part-time retail jobs. Certainly, these projects have enhanced the Red Hook community, but their local economic impact has been muted.

The Gowanus Bay Terminal GBX has been a presence in Red Hook for many years. The product they provide is *essential* to the continued rebuilding of New York City. There are few places for small industrial businesses to relocate to if Red Hook completely de-industrializes, and that is not a desired outcome in the continuing redevelopment of Red Hook! The most vibrant communities in NYC

that build upon the gray and green projects specified in the AOC to identify *additional* CSO reduction projects necessary to achieve compliance with state water quality standards.

The CSO Order makes clear that the City's CSO reduction obligations in the Gowanus Canal are not limited to the specific projects identified in the CSO Order itself. Rather, under the CSO Order, the City, through the LTCP, must achieve any additional reductions necessary to meet not only existing water quality standards, which correspond to the canal's current "designated uses," but also any higher standards corresponding to the canal's "highest attainable use." We fully expect that, following the Superfund cleanup, more extensive recreational and ecological uses will be attainable in the canal than are reflected in the canal's current designated uses under state law. It is critical to ensure that ongoing CSO discharges do not preclude such uses or otherwise undermine the remedial goals of the Superfund cleanup.

EPA's Proposed Plan rightly concludes that the City's LTCP for the Gowanus Canal, which is due for submission to NYSDEC in June 2015, should be required to achieve CSO reductions at a level necessary to prevent recontamination of the Superfund site and to ensure the long-term integrity of the Superfund remedy. We applaud NYSDEC for concurring in this determination, and for committing to coordinate with EPA to ensure the Gowanus LTCP achieves this goal.

We also look forward to participating in the City's process of developing LTCPs for the Gowanus Canal and waterbodies throughout the city. We stand ready to support the City's efforts to identify the most cost-effective combinations of green and gray infrastructure to meet the requirements of both the CSO Order and the Gowanus Canal Superfund remedy.

Thank you for your consideration of these comments.

Sincerely,

Lawrence M. Levine
Senior Attorney

I support the Red Hook Option of the EPA Gowanus Canal Superfund cleanup.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.

IMPORTANT- MUST BE SUBMITTED BEFORE *APRIL 26th, 2013* *DEADLINE!*

support jobs and industries of many types. BEDC has been an advocate for industrial uses, *where appropriate,* in Brooklyn for our entire 34-year history. This is an appropriate use, and the EPA Gowanus Canal Superfund Red Hook Option will not only allow GBX to stay and grow, but benefit the community in terms of jobs and amenities. If this plan is implemented, the clean-up of the Gowanus Canal can begin sooner rather than later and the community can begin planning for a future without a toxic gash running through it. That dream has been a long time coming, and this project helps move it closer to reality.

I have been an advocate of community-based brownfield clean-ups for many years. I was part of the original statewide Pocantico Roundtable on Brownfields which advocated for better Brownfield clean-up regulations in New York State. I currently serve as Vice Chair of the Board of New Partners for Community Revitalization, a non-profit organization well known to your agency, which is in the forefront of environmental solutions to brownfield issues. [Note: I write as an individual and not on behalf of New Partners.] Certainly the Gowanus Canal rises to a higher threat level than a typical brownfield, but as governments across New York State avoid clean-ups because they know there are no easy solutions to where to put the waste and what to do with the remediated land, we in Brooklyn are not subject to that same dilemma. We have a sound clean-up solution and we have a community that is desirable and ready to react to the positive change that a cleaner Gowanus Canal can bring.

The people of Red Hook, the residents of Public Housing, who have stuck it out for many years amidst decay, crime, being ignored, marginalized and dumped on, support this project. They see its intrinsic value. They do not support it based on whether or not the value of their houses will go up or down – they understand that it is about the long-term, healthy and sustainable future for ALL Red Hook residents.

Based on the soundness of the science, the positive economic development impacts, and the faith of the long-term residents of Red Hook, BEDC endorses this project and urges you to move the Red Hook Option forward.

Sincerely,

Joan Bartolomeo
President, BEDC

ABOUT BEDC

Brooklyn Economic Development Corporation's mission is to seek to create and expand economic opportunity throughout Brooklyn by implementing business and neighborhood development and planning activities to support and create sustainable jobs, industries and communities.

Founded in 1979 to stimulate economic growth and neighborhood stability in Kings County, the Brooklyn Economic Development Corporation (BEDC) has evolved into a multi-service, business and community development organization serving over 1000 clients per year. Our expanding and enhanced services are structured to meet the unique challenges facing entrepreneurs in a constantly changing, dynamic urban economic environment. In thirty-four years of service to the business community, BEDC has provided training, technical assistance and counseling to over 20,000 established or potential business owners.

I support the Red Hook Option of the EPA Gowanus Canal Superfund cleanup.

The improvement to an active local maritime industrial business, the economic benefits it will bring, the jobs that it will create, are all important to me and what I believe is best for the majority of the community of Red Hook.

Further, I am confident that any necessary safeguards will be incorporated into the work, monitored and maintained, to ensure the workers and the community are without harm or risk of such.

Please approve the Red Hook option.
