Re: Malvern TCE Superfund Site (Chemclene Corporation), 258 N. Phoenixville Pike,
Chester County, Malvern, PA

Dear «Title». «LastName»:

This letter notifies you that you¹ may incur, or may have incurred, liability under Section 107(a) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended ("CERCLA"), 42 U.S.C. § 9607(a), with respect to the Malvern TCE Superfund Site ("the Site"). The Site is located at and adjacent to the Chemclene Corporation, Malvern, PA. This letter also notifies you of potential response activities at the Site, which you may be asked to perform or pay for at a later date if EPA performs them.

BACKGROUND

CERCLA, more commonly known as Superfund, was enacted in 1980, reauthorized and amended in 1986, and reauthorized again in 1990. CERCLA has several key objectives, including setting priorities for cleanup of the worst hazardous waste sites in the country, and determining the parties potentially responsible for investigating, cleaning up or paying the costs of cleaning up such hazardous sites. These parties are referred to as "potentially responsible parties" or "PRPs."

In September 1983 the United States Environmental Protection Agency ("EPA") included the Site on the National Priorities List ("NPL"), a list of the most serious uncontrolled or abandoned sites at which releases of hazardous substances have occurred or may occur. EPA has documented the release of various organic contaminants to the soil and groundwater at the Site and the drinking water supply of nearby residences has been impacted.

¹For the purposes of this letter, the term "you" shall refer to either an individual, a company, a partnership, a sole proprietorship, or a corporation, whichever is applicable.

AR000001

NOTICE OF YOUR POTENTIAL LIABILITY

Based on documents received from the Chemclene Corporation, EPA believes that you may be a PRP for this Site. These documents have been summarized in the "Draft Volumetric Ranking" list attached hereto as "Attachment 3." PRPs under CERCLA include: 1) current owners and operators of the Site; 2) owners and operators of the Site at the time hazardous substances were disposed; 3) persons who arranged for disposal or treatment of hazardous substances sent to the Site; and 4) persons who accepted hazardous substances for transport to the Site, and who selected the Site for disposal. These categories are set forth in Section 107 of CERCLA, 42 U.S.C. § 9607.

EPA has documented the release or threatened release of hazardous substances, pollutants or contaminants at or from the Site, as those terms are defined in Sections 101(14) and 101(33) of CERCLA, 42 U.S.C. §§ 9601(14) and (33). EPA has spent public funds on actions to investigate and control such releases or threatened releases at the Site. Unless EPA reaches an agreement under which a PRP or PRPs will properly perform or finance such actions, EPA may perform these actions pursuant to Section 104 of CERCLA, 42 U.S.C. § 9604, or require them to be performed by responsible parties under Section 106 of CERCLA, 42 U.S.C. § 9606.

EPA may order one or more PRPs to perform response actions deemed necessary by EPA to protect the public health and welfare, or the environment. Additionally, PRPs may be liable for all costs incurred by the government in responding to any release or threatened release at the Site, under Sections 104 and 107(a) of CERCLA, 42 U.S.C. §§ 9604 and 9607(a), and the Resource Conservation and Recovery Act ("RCRA"), as amended, 42 U.S.C. §§ 6901 et seq., and other laws. Such actions and costs may include, but are not limited to, expenditures for conducting a Remedial Investigation/Feasibility Study ("RI/FS"), conducting a Remedial Design/Remedial Action ("RD/RA"), and other investigation, planning, response, oversight, and enforcement activities related to the Site. In addition, potentially responsible parties may be required to pay for damages for injury to, destruction of, or loss of natural resources, including the cost of assessing the amount or extent of such damages related to a site.

You should also be aware that once a site is placed on the NPL pursuant to Section 105 of CERCLA, 42 U.S.C. § 9605, it cannot be deleted until after an RI/FS has been completed and the necessary remedial action has been conducted in accordance with EPA guidance and the National Contingency Plan ("NCP"), published at 40 C.F.R. Part 300.

EPA has completed approximately 75% of the Remedial Investigation/Feasibility Study (RI/FS) for the Site. Once the RI/FS is completed, EPA will issue a Proposed Plan to the public for review and comment. The Proposed Plan will contain EPA's preferred alternative for remediation at the Site. There is a 30 day public comment period, which may be extended for cause shown, following which EPA will issue a Record of Decision ("ROD") delineating the remedy selected for the Site. A ROD is a decision document, signed by the Regional Administrator of EPA Region III, which sets forth the remedy that EPA or the PRPs will implement at the Site.

By this letter, EPA notifies you of your potential liability with regard to this matter and encourages you to perform or to finance voluntarily those response activities that EPA determines to be necessary at the Site.

SITE RESPONSE ACTIVITIES

In accordance with CERCLA and other authorities, EPA has already undertaken certain actions and incurred certain costs in response to conditions at the Site. EPA has conducted sampling of onsite soil and groundwater; and offsite sampling of residential wells. EPA is currently completing the RI/FS. The RI/FS includes the following activities:

Remedial Investigation (RI) - Further investigations to define the nature and extent of soil, ground and surface water contamination at the Site, identification of the hydrogeological characteristics and an assessment of the impact on the biotic receptors at the Site; and

Feasibility Study (FS) - A study to evaluate potential remedial alternatives with emphasis on risk reduction through actions that utilize treatment to permanently and significantly reduce the toxicity, mobility, or volume of hazardous substances, pollutants, or contaminants.

At present, EPA is planning to issue a Proposed Plan in the winter of 1996 and a ROD in the spring of 1997.

EPA may expend additional funds for response activities at the Site under the authority of CERCLA and other laws.

SPECIAL NOTICE AND NEGOTIATION MORATORIUM

EPA anticipates that you will receive an additional notice from EPA in the future concerning this Site. The following four paragraphs are a detailed description of that future notice. You do not need to take any specific action regarding this future notice at this time. The description is provided to you here so that you can anticipate and understand the process.

The future notice will inform you whether or not EPA will use the CERCLA Section 122(e) special notice procedure to formally negotiate terms of a consent order or consent decree to conduct or to finance Site response activities. If EPA elects not to use the Section 122(e) special notice procedure, the notice will specify why special notice was not considered appropriate in this case.

Under Section 122(e) of CERCLA, 42 U.S.C. § 9622, EPA has discretionary authority to use the special notice procedure if EPA determines that such procedure would facilitate an agreement between EPA and the PRPs and would expedite response action at the Site. Use of this special notice procedure triggers a moratorium on certain EPA activities at the Site. The purpose of the moratorium is to provide a period of time when PRPs and EPA may enter into formal negotiations for PRP conduct or financing of the response activities at the Site.

During the moratorium period, EPA will not initiate response activities with regard to the RD/RA. This RD/RA moratorium lasts for 60 days after the RD/RA special notice. If EPA determines that a good faith offer is submitted by the PRPs within those 60 days, the statute provides a 60-day extension for further negotiations.

If EPA determines that a good faith offer has not been submitted within the first 60 days of the moratorium period, EPA may terminate the moratorium period pursuant to Section 122(e)(4) of CERCLA. EPA then may commence response activities or

enforcement actions as it deems appropriate. In the absence of an agreement with the parties to perform or to finance the necessary response activities, EPA may undertake these activities and pursue civil litigation against the parties for reimbursement of Site expenditures. Alternatively, EPA may issue a unilateral administrative order pursuant to Section 106(a) of CERCLA, 42 U.S.C. § 9606(a), to require PRPs to initiate response activities, and/or may commence civil litigation pursuant to Section 106(a) to obtain similar relief. Failure to comply with an administrative order issued pursuant to Section 106(a) of CERCLA may result in a fine of up to \$25,000 per day, pursuant to Section 106(b) of CERCLA, 42 U.S.C. § 9606(b), and/or imposition of treble damages, pursuant to Section 107(c)(3) of CERCLA, 42 U.S.C. § 9607(c)(3).

The preceding explanation of special notice and the negotiation moratorium procedure is for your general information about the Superfund process. It does not require any specific action on your part at this time. (But see PRP Response and EPA Contact sections, below.)

INFORMATION TO ASSIST RESPONSIBLE PARTIES

EPA encourages good faith negotiations between the PRPs and EPA, as well as among the PRPs. Therefore, EPA is providing, as "Attachment 4" to this letter, a list of the names and addresses of PRPs to whom this notification is being sent or who have previously been notified. This list represents EPA's preliminary findings on the identities of the PRPs for this Site. Inclusion on, or exclusion from, the list does not constitute a final determination by EPA concerning the liability of any party for the release or threat of release of hazardous substances at or from the Site.

EPA is enclosing various documents to assist you with negotiations among the PRPs. Those documents are listed below. If any one or more of these documents is missing from this information package, kindly call (215) 928-7918 and leave a message as to which document is missing and the name and address where the copy may be sent. A copy will be sent to you as soon as possible.

The following documents, included with this letter, are either generally applicable to the Site, or specific to you as a PRP at the Site.

Attachment 1: Site fact sheets;

Attachment 2: Copies of Invoices pertaining to you or your company;

Attachment 3: Draft Volumetric Ranking Summary;¹

Attachment 4: List of PRP names and addresses; and

Attachment 5: EPA guidance on De minimis settlements entitled Methodologies for Implementation of CERCLA Section 122(g)(1)(A) De Minimis Waste Contributor Settlements, December 20, 1989, OSWER Directive 9834.7-1B.²

¹ This information does not constitute a non-binding preliminary allocation of responsibility ("NBAR") under CERCLA Section 122(e)(3), 42 U.S.C. § 9622 (e)(3), and should not be construed as an allocation of responsibility or liability by EPA. The Draft Volumetric Ranking Summary is provided solely for your information. This list contains information on each PRP pertaining to volume only.

EPA has provided the above documentation in an effort to facilitate communication and negotiations between the PRPs. EPA considers this Site a good candidate for de minimis settlement discussions. Please refer to the EPA guidance on de minimis settlements for more information on how EPA may delineate de minimis and de maximus parties. You will find your percentage of "waste-in" in "Attachment 3," "Draft Volumetric Ranking."

If you wish to contest EPA's liability findings regarding the waste-in list, the volumetric ranking, or some other document, EPA invites you to call (215) 928-7918. Please leave a clear, concise message including your name and telephone number where you may be reached and an agency representative will call you as soon as possible. Please do not leave a detailed description of your challenge on the answering machine since it is preferable that you speak directly with the EPA employee(s) assigned to the Site. If your message is not returned within a 48-hour period, please leave another message. If you have information or documentation which would aid in your liability challenge, kindly present this to EPA within 15 days of receipt of this letter. The presentation of clear and convincing evidence may eliminate the need for EPA to send you any additional correspondence, including special notice, regarding this Site.

PRP STEERING COMMITTEE

EPA recommends that all PRPs meet to select a Steering Committee responsible for representing the group's interests. Establishing a manageable group is very important for successful negotiations with EPA.

EPA intends to hold an initial meeting on December 5, 1996, at 10:00 am for all interested parties. The meeting will be held at the Philadelphia Convention Center, 1101 Arch Street, Room 105AB. There is no onsite parking available at the Convention Center. Public Parking is available in the surrounding vicinity. At this meeting, you will have an opportunity to speak with EPA representatives regarding any Site-related issue, with the exception of remedy selection.³

ADMINISTRATIVE RECORD

Pursuant to CERCLA Section 113(k), 42 U.S.C. §9613(k), EPA establishes an administrative record that contains documents which form the basis for EPA's decision on the selection of each response action for a site. The administrative record will be available to the public for inspection and comment before any remedy is selected by EPA. A copy of the record is located in the Chester County Library, 400 Exton Square Parkway, Exton, PA 19341, and another copy is located at the EPA Region III office, 841 Chestnut Building, Philadelphia, PA 19107. The administrative record will be updated prior to issuance of the Proposed Plan. At the time of issuance, and as part of the Proposed Plan you will be notified of the contact person for comments on the administrative record.

²See also, Methodology for Early De Minimis Waste Contributor Settlements under CERCLA Section 122(g)(1)(A), June 2, 1992, OSWER Directive 9834.7-1C (supplement).

³It is anticipated that the ROD for this Site will be issued in early 1997. Any questions or comments regarding the remedy selection should be reserved until the public comment period following issuance of the Proposed Plan.

Upon completion of the public comment period and EPA's review of the comments, EPA will select the remedy for the Site. The selection of the remedy will be documented in a Record of Decision (ROD), which will also become part of the administrative record.

PRP RESPONSE AND EPA CONTACT

You are encouraged to contact EPA in writing by November 28, 1996, to express your willingness or unwillingness to participate in future negotiations concerning this Site. Your response will be considered by EPA in determining whether the special notice procedure should be used for this Site.

If you are already involved in discussions with State or local authorities, engaged in voluntary action, or involved in a lawsuit regarding this Site, you should not interpret this letter as advising or directing you to restrict or to discontinue any such activities. You should, however, report the status of those discussions or activities in your letter to EPA. Please provide EPA with a copy of your letter to any other party involved in those discussions.

Your response should be addressed to:

Linda Dietz, 3HW21
Remedial Project Manager
U.S. Environmental Protection Agency
Region III
841 Chestnut Building
Philadelphia, PA 19107

The factual and legal discussions contained in this letter are intended solely for notification and information purposes. They are not intended to be, and cannot be relied upon as a final EPA position on any matter set forth herein.

If you have any questions regarding the foregoing, please call (215) 928-7918. Depending on the nature of your call, one of several EPA employees will respond to your inquiry.

Sincerely,

Abraham Ferdas, Associate Division
Director for Superfund Programs
Hazardous Waste Management Division

Malvern TCE Superfund Site East Whiteland Township, Pennsylvania

ACTIVITIES UPDATE

EPA will hold an informational session for the public about the progress at the site at 7 p.m. Monday, July 31, at the East Whiteland Township Building, 209 Conestoga Road.

EPA is presently conducting a Remedial Investigation/Feasibility Study (RI/FS) at the site to identify and delineate contamination and to develop alternatives to remediate the site.

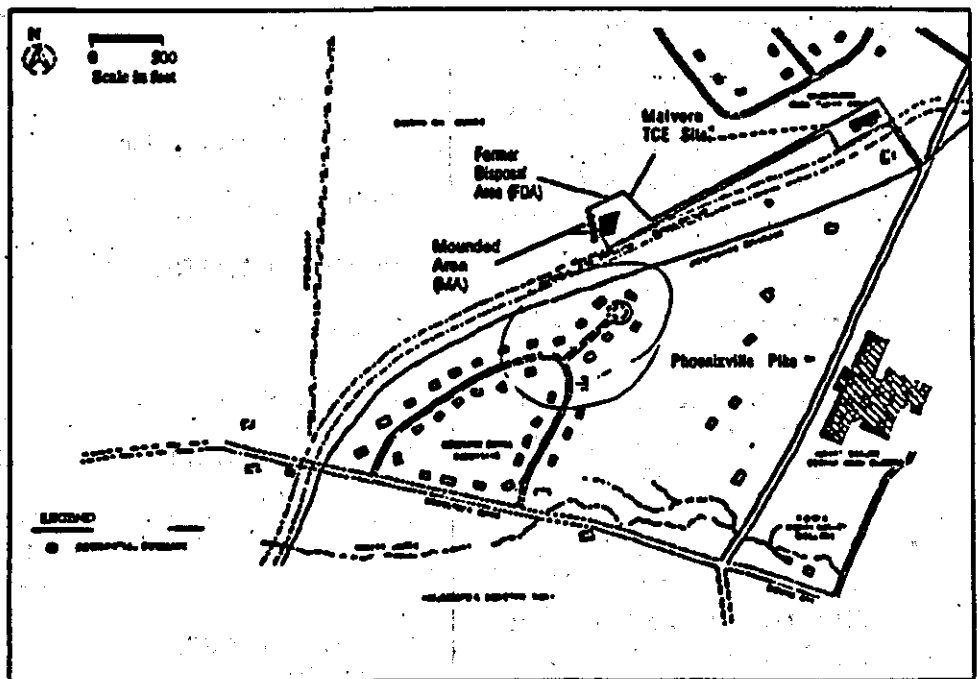

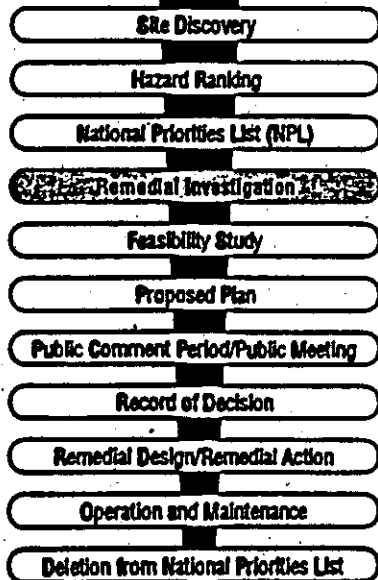

The RI/FS process is one of the early steps taken toward cleaning up a site.

Site Background

The Malvern TCE Superfund site is located on North Phoenixville Pike in East Whiteland Township, Chester County, Pennsylvania (see the map). At the site, impurities were removed from industrial cleaning solvents. Approximately 5 acres in size, the site lies on the southeast side of Bacton Hill. The distilled solvents, including trichloroethene (TCE); 1,1,1-trichloroethane (1,1,1-TCA); perchloroethylene (PCE); and methylene chloride (MEC) were recycled and sold.

Groundwater contamination associated with the site was first identified in 1980 in residential wells on Phoenixville Pike and in the Hillbrook Circle development. Samples of water from these wells contained elevated concentrations of TCE and related volatile organic compounds (VOCs). Sources of soil and groundwater contamination are associated with three areas of the site. The three areas are the main plant area, the former disposal area (FDA), and the mounded area (MA). The FDA and MA are located 1,900 feet southwest of the main plant.

Steps in the Superfund Process

Current Site Activities

EPA entered into an interagency agreement with the United States Geological Survey (USGS) in October 1994 to perform an expanded hydrogeologic investigation at the site. The field portion of the investigation began in November 1994 and is scheduled to be completed by fall 1995. A report will be submitted to EPA in January 1996. CH2M HILL, a contractor to EPA, has been helping EPA perform remedial investigation activities. A data summary report was prepared evaluating and interpreting site information that was first generated in 1980, when groundwater contamination was first detected, to 1993, when the office of Superfund assumed the lead for remedial activities.

As part of the RI/FS process, some field activities are continuing and others will begin this summer and fall. Local residents will be notified before the following field investigation tasks commence this summer and fall:

- **Residential Well Sampling and Carbon Filter Maintenance**— EPA has assumed responsibility for collecting groundwater samples from 52 residential wells in the Hillbrook Circle development and on Phoenixville Pike. In addition, EPA has assumed responsibility for the annual maintenance of carbon filters that were installed in 20 of the residences affected by site-related contaminants.
- **Exploratory Boreholes/Monitor Wells**— Monitor wells will be drilled in or near the main plant area, FDA, and MA. These wells also will be geophysically surveyed.

- **Groundwater Sampling**— To characterize the extent of contamination, groundwater samples will be collected from zones within the deep exploratory borings.
- **Aquifer Testing**— Three 24-hour pumping tests will be performed at three of the new deep monitor wells to evaluate aquifer hydraulic characteristics. Knowing these characteristics is essential to designing a system to remove and treat groundwater contamination. Nearby residential wells along with other onsite wells will be used as observation points during the pumping tests.
- **Regional Water Level Map**— To evaluate the direction and rate of groundwater flow and contaminant migration, USGS will generate a regional water level map

for the area around the Malvern TCE site. Local public water supply wells, domestic wells, and monitor wells will be incorporated into the map.

- **Water Level Survey**— Continuous monitoring will be performed over a 5-month period to determine temporal trends in water levels and to help further define the direction of groundwater flow.
- **Soil Borings at the Main Plant Area**— To identify the source of soil and groundwater contamination at the main plant area, approximately 20 soil borings will be installed in areas such as the former location of underground tanks, the loading areas, and an area where distillate from the recycling processes was discharged onto the ground.

Summary of Remedial Activities at Malvern TCE Site

Activity	Date	Responsible Party
Groundwater Investigation	1982	Site Owners
NPL Listing	1982	EPA
Drum Removal at FDA	1984	Site Owners
Consent Order	1987	Site Owners/EPA
RFI Workplan	1989	Site Owners w/EPA Oversight
Drum Removal at MA	1990	Site Owners w/EPA Oversight
Soil and Groundwater Investigations	Conducted 1990-1993, Not Completed	Site Owners w/EPA Oversight
Transfer from RCRA to Superfund	1993	EPA

AR000009

All existing monitor wells have been geophysically logged (October 1994) and surveyed with a borehole video camera to determine their condition and suitability for future monitoring.

Contamination Identified at the Site

Since 1980, 14 monitor wells have been installed at the Malvern TCE site to assess the extent of contamination. VOC contamination has been detected continuously in 12 of the 14 monitor wells. Monitor wells installed along the northeast boundary of the main plant area exhibit some of the highest concentrations of VOCs at the site.

Fifty-four residential wells exist southwest of the site in the Hillbrook Circle development and on Coenixville Pike. All of these wells have been sampled at least once since 1980. The most prevalent VOC compounds in the samples, such as TCE, PCE, and 1,1,1-TCA, are associated with the solvent recycling process at the Malvern TCE site.

Removal of the buried drums and contaminated soil from the FDA and MA appears to have affected time-related contaminant trends in the onsite monitor wells and offsite residential wells. Most of the monitor wells at the FDA and nearby residential wells have shown progressively decreasing VOC concentrations since 1990. In contrast, onsite monitor wells at the main plant area have shown increasing or stable concentrations with time. These time-related trends in

groundwater contamination indicate that the source of contamination at the FDA and MA has been removed.

The source of contamination at the main plant area is still under investigation.

If you would like your name added to the Malvern TCE mailing list, please complete this form and mail to:

Questions

If you have questions concerning the site or any of the ongoing investigations, please contact Linda Dietz, Remedial Project Manager, at (215) 597-6906, or Carolyn Szumal, Community Involvement Facilitator, at (215) 597-6911. EPA will be participating in or overseeing a considerable amount of activity at the site in the near future. Should you see work being done at the site that you have no knowledge of, please contact Linda or Carolyn.

AR000010

Glossary

FDA Former Disposal Area. This area is located 1,900 feet southwest of the main plant area along the Transcontinental Gas pipeline easement. Drums containing residual, or "still-bottom," sludges from the solvent recovery process were deposited in a large depression, which was originally excavated to provide fill material during construction of the pipeline.

MA Mounded Area. This area is located adjacent to the FDA and

consists of a former stormwater run drums containing still-bottom sludges from the site owner's distillation process. The drums were covered with soil, creating several elongated mounds.

NPL National Priority List. The NPL is a national ranking list for hazardous waste sites within the Superfund Program

Soil Borings Soil borings are exploration holes used to characterize geology and the distribution of soil contamination in the subsurface. Usually, a borehole is drilled to a tar-

get horizon such as the water table or top of bedrock. During the drilling, soil samples can be collected by a variety of methods. These samples are characterized in terms of color, grain size, and structure, and can be submitted to a laboratory for chemical analysis.

VOC Volatile Organic Compound. VOCs are organic compounds which, to some degree, vaporize upon contact with air. All compounds associated with activities at the Malvern TCE site are VOCs.

Malvern TCE Superfund Site

Activities Update

Malvern, Pennsylvania

October 1995

BACKGROUND

The Malvern TCE Superfund Site is located on North Phoenixville Pike in East Whiteland Township, Chester County, Pennsylvania. The Site lies on the southeast side of Bacton Hill. Distilled solvents, including trichloroethene (TCE), 1,1,1trichloroethane (1,1,1-TCA), perchloroethylene (PCE), and methylene chloride (MEC) were recycled and sold at the property. Groundwater contamination associated with the site was first identified in 1980 in residential wells on Phoenixville Pike and in the Hillbrook Circle development. Samples of water from these wells contained elevated levels of TCE and related volatile organic compounds.

GROUNDWATER INVESTIGATION

The United States Geological Survey (USGS) has subcontracted with Roland Rab & Son to perform drilling operations for installation of monitoring wells around the former disposal area (FDA) and the main plant area. Drilling began the week of October 16, 1995.

SOILS INVESTIGATION

EPA is currently planning the soils investigation of the main plant area and the former disposal area with its contractor, CH2M Hill. This investigation work is expected to take place before the end of the year. Once the fieldwork is completed the data will be evaluated to determine the most appropriate method for cleaning up the site.

At the conclusion of the investigation, EPA will hold a public meeting to present the data findings to the community.

RESIDENTIAL SAMPLING

In June and July 1995, EPA sampled fifty homes and contracted with a plumber to inspect the filter systems. This summer, five homes had complete filter replacements, two homes had the carbon in their filter replaced, and four homes had plumbing maintenance

performed. In October 1995, the carbon in the filters of the remaining homes will be replaced. Staff from CH2M-Hill will be contacting residents to schedule this filter maintenance.

QUESTIONS:

Contact Linda Dietz, Remedial Project Manager at (215) 597-6906 or Carolyn Szumal, Community Involvement Coordinator at (215) 597-6911.

Malvern TCE Superfund Site

AR000013

MALVERN TCE SUPERFUND SITE

East Whiteland Township, Malvern, Pennsylvania

Activities Update

March 1996

SAMPLING TO BEGIN AT THE SITE

As part of the on-going remedial investigation, EPA will test the soil and groundwater at the Malvern TCE Superfund Site. A variety of sampling methods will be used to gather information on the soil contamination at the site.

A drilling rig will collect soil samples by boring down into the soil to selected depths, allowing EPA to analyze the extent of soil contamination. Advanced Drilling, Inc. has been subcontracted by EPA's remedial contractor, CH2M Hill, to perform the soil boring at the site.

The information collected during this phase of sampling will allow EPA to characterize the extent and nature of the contamination from the site. It also will allow EPA to evaluate the health risk the contamination may pose to anyone coming in contact with the contamination. EPA anticipates that the analysis of the sampling data will be completed by the end of the summer.

EPA APPROVES SAMPLING PLAN

EPA approved the Sampling Plan for the Malvern TCE Site. The plan presents the methods Advanced Drilling, Inc. will use to complete the sampling activities described above. EPA will place a copy of the Sampling Plan in the Administrative Record, located in the reference area of the Chester County Library.

QUESTIONS?

If you have questions about the Malvern TCE Site or need additional information, please contact Carolyn Szumal, Community Involvement Coordinator, via telephone at 215-597-6911 or 1-800-553-2509 or via e-mail at szumal.carolyn@epamail.epa.gov. EPA will also post information about the site on the Internet at URL [http://www.epa.gov/reg3hwmd/super/npllist.htm?="+++Superfund++](http://www.epa.gov/reg3hwmd/super/npllist.htm?=).

IMPACT OF SAMPLING ON THE COMMUNITY

During the period of sampling, EPA will monitor the air and soil continuously to ensure that the health and safety of on-site workers and nearby residents is protected. *Because activities at the site will not include regrading of the soil, the drilling and sampling will have no impact on water wells, filtration systems, septic systems, or public water supplies.*

EPA CONDUCTS INTERVIEWS

EPA began the process of developing a Community Relations Plan by conducting interviews with residents of the Hillbrook Circle and Aston Woods areas. EPA talked with residents about their issues and concerns with the site, the types of information they want to receive, and how EPA can meet these information needs most effectively.

The Community Relations Plan will serve as a blueprint for EPA's community relations activities and will address the issues and concerns raised by residents during the interviews. Once the Community Relations Plan is completed, EPA will place a copy in the Administrative Record.

EPA PLANS RESIDENTIAL SAMPLING

EPA plans to conduct its next round of residential water sampling in June. EPA will mail the results of the sampling directly to residents.

MALVERN TCE SUPERFUND SITE

East Whiteland Township, Malvern, Pennsylvania

Information Meeting Announcement

April 1996

The United States Environmental Protection Agency is holding an information session to discuss the Malvern TCE Superfund Site. Community members concerned about the possible health affects of the contamination associated with the site, hydrogeology issues, or other issues regarding the Malvern TCE Superfund Site are encouraged to attend. EPA staff will be available to discuss both general and specific site concerns.

ATTENDING OFFICIALS

The following government officials from the United States Environmental Protection Agency (EPA) and the United States Geological Survey (USGS) will be at the meeting to answer any questions or concerns you might have.
