

CENTRAL CHEMICAL SUPERFUND SITE

COMMUNITY UPDATE

HAGERSTOWN, MD / REGION 3

December 2021

EPA Reviews Site Cleanup

The U.S. Environmental Protection Agency (EPA) is overseeing the cleanup of the Central Chemical Superfund Site, located in Hagerstown along Mitchell Avenue. Construction of the groundwater treatment plant began in 2021 and will be complete in 2022. The next phase of construction involves stabilizing the waste material in the lagoon, which will occur during 2022. Remediation of contaminated soil and the former waste lagoon is estimated to be completed by 2023/2024. EPA and Maryland Department of the Environment will oversee all the construction and cleanup work.

EPA is conducting interviews with residents and interested community members regarding the ongoing cleanup efforts. Your response would be beneficial in helping determine our future communication efforts as work at the site continues.
