Community update | November 2025

Waterline Construction

EPA began Phase 1 of the public drinking waterline construction in mid-October.

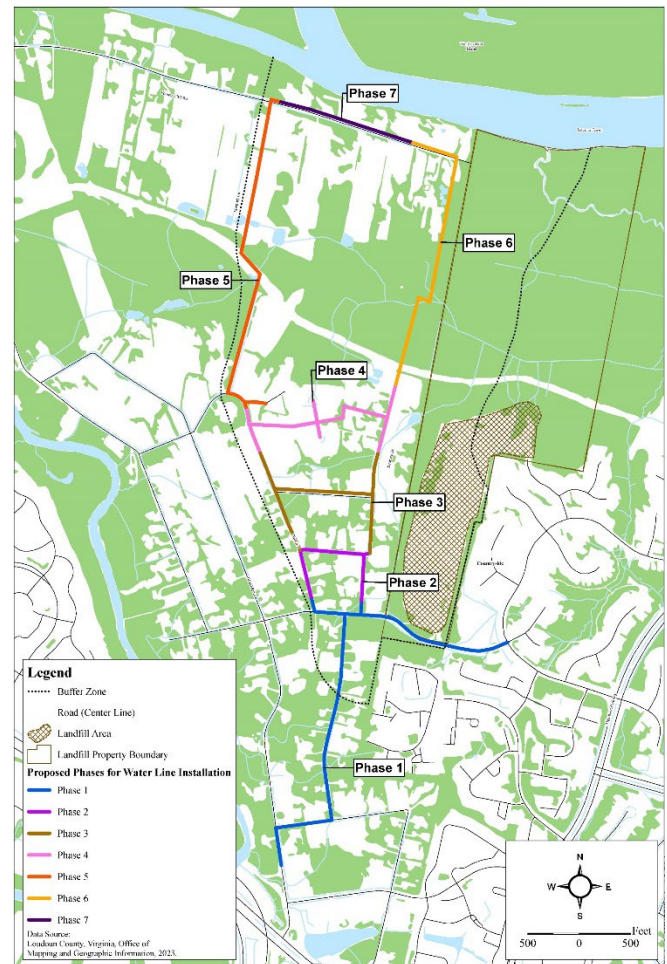

What to Expect

EPA is working to minimize disruptions during construction, which may include:

- Temporary road disruptions and closures.
- Construction activity with heavy equipment such as excavators and dump trucks.
- Tree clearing in wooded areas and near waterline infrastructure.
- Brief interruptions to potable water during lateral installation.

Work Schedule:

The construction team's regular workdays will be from 7 a.m. to 3:30 p.m. Monday through Friday.

Phases of Waterline Construction

Updated Construction Schedule Approximate Dates

The waterline construction will occur in seven phases over approximately two years, with completion anticipated by fall 2027. The waterline will extend nearly four miles, starting along Broad Run Drive just north of Route 7 and extending to Youngs Cliff Road, connecting 117 households to the public Loudoun Water utility. Each phase is expected to follow this general sequence:

1) Roadways

- Installation of water main, hydrants and meters

2) Residential Connections

- Installation of water service lateral to home plumbing (required to be completed within one day)
- Yard restoration
- Well abandonment and treatment system removal (as applicable)

EPA will notify property owners within 3 weeks of their scheduled lateral installation.
