Dear Mr. Vavra:

In response to comments received during our meeting on August 26, 1991, Paul C. Rizzo Associates, Inc. on behalf of Westinghouse Electric Corporation submits this addendum to clarify the Groundwater Treatability Study Work Plan (Work Plan) for the Hunterstown Road Site. The Work Plan was submitted for USEPA review on August 2, 1991.

Groundwater samples from pumping well PW-1 will be collected at 1, 6, 18, and 24 hours into the constant rate pumping test. These samples will be analyzed for volatile organic compounds using Contract Laboratory Procedures.

As stated in the Work Plan, water levels in all the Remedial Investigation monitoring wells will be measured approximately once each hour with electronic water level meters during the constant rate pumping test and recovery period. This monitoring program includes monitoring wells instrumented with the pressure transducers.

If you have questions or desire additional information please contact myself or Mr. Patrick F. O’Hara at (412) 856-9700.

Respectfully submitted,

William A. Baughman
Project Supervisor
