Tim,

Per your request, attached is a map we put together depicting the relative locations of the existing town wells, Weymouth Woods parcels and the former Lee Paving site. Here are some guidelines on what we're looking for, don't have specific locations yet. Will need to verify with the public works folks the existing water system layout and nearest access to existing water system. This would typically be road frontage.

- 1) Wells require 1 acre and need to be 1000' apart. Not sure if there's a variance on the 1000'.
- 2) Well footprints are small. Small building (+\ - 20' X 20') with fence. Building can be aesthetically designed and constructed.
- 3) Will require access for installation and future maintenance.
- 4) Will require a water supply line to the main water system. I'm thinking options are in the vicinity of Well 6 or 7. Not sure where the municipal water system layout is precisely, will need to get that from the public works folks.

If you need additional info for the state parks folks please let me know.

Chris

Google Earth streams the world over wired and wireless networks enabling users to virtually go anywhere on the planet and see places in photographic detail. This is not like any map you have ever seen. This is a 3D model of the real world, based on real satellite images combined with maps, guides to restaurants, hotels, entertainment, businesses and more. You can zoom from space to street level instantly and then pan or jump from place to place, city to city, even country to country.

Get Google Earth. Put the world in perspective.
