- (i) Each community and non-transient surface water system which does not detect a contaminant listed in Rule [391-3-5-.18\(2\)\(b\)1](#) -21 may apply to the Division for a waiver from the requirements of paragraph (1)(e) after completing the initial monitoring. Composite samples from a maximum of five sampling points are allowed, provided that the detection limit of the method used for analysis is less than one-fifth of the MCL. Systems meeting this criteria must be determined by the Division to be non-vulnerable based on a vulnerability assessment during each compliance period. Each system receiving a waiver shall sample at the frequency specified by the Division (if any).
- (j) If a contaminant listed in Rule [391-3-5-.18\(2\)\(b\)2](#) -21 is detected at a level exceeding 0.0005 mg/L in any sample, then:
 1. The system must monitor quarterly at each sampling point which resulted in a detection.
 2. The Division may decrease the quarterly monitoring requirements specified in paragraph (1)(j)(1); provided it has determined that the system is reliably and consistently below the maximum contaminant level. In no case shall the Division make this determination unless a groundwater system takes a minimum of two quarterly samples and a surface water system takes a minimum of four quarterly samples.
 3. If the Division determines that the system is reliably and consistently below the MCL, the Division may allow the system to monitor annually. Systems

which monitor annually must monitor during the quarter(s) which previously yielded the highest analytical result.

4. Systems which have three consecutive annual samples with no detection of a contaminant may apply to the Division for a waiver as specified in paragraph (1)(g).
 5. Groundwater systems which have detected one or more of the following two-carbon organic compounds: trichloroethylene, tetrachloroethylene, 1,2-dichloroethane, 1,1,1-trichloroethane, cis-1,2-dichloroethylene, trans-1,2-dichloroethylene, or 1,1-dichloroethylene shall monitor quarterly for vinyl chloride. A vinyl chloride sample shall be taken at each sampling point at which one or more of the two-carbon organic compounds was detected. If the results of the first analysis do not detect vinyl chloride, the Division may reduce the quarterly monitoring frequency of vinyl chloride monitoring to one sample during each compliance period. Surface water systems are required to monitor for vinyl chloride as specified by the Division.
- (k) Systems which violate the requirements of Rule [391-3-5-.18\(2\)\(b\)1](#) -21 as determined by paragraph (1)(n) must monitor quarterly. After a minimum of four quarterly samples which show the system is in compliance as specified in paragraph (1)(n), and the Division determines that the system is reliably and consistently below the maximum contaminant level, the system may monitor at the frequency and time specified in paragraph (1)(j)3.
- (l) The Division may require a confirmation sample for positive or negative results. If a confirmation sample is required by the Division, the result must be averaged with the first sampling result and the average is used for the compliance determination as specified by paragraph (1)(n). The Division has the discretion to delete results of obvious sampling errors from this calculation.
- (m) The Division may reduce the total number of samples a system must analyze by allowing the use of compositing. Composite sampling and their analysis shall be in accordance with [40 CFR, Part 141.24\(f\)\(14\)](#).
- (n) Compliance with Rule [391-3-5-.18\(2\)\(b\)1](#) -21 shall be determined based on the analytical results obtained at each sampling point.
1. For systems which are conducting monitoring at a frequency greater than annual, compliance is determined by a running annual average of all samples taken at each sampling point. If the annual average of any sampling point is greater than the MCL, then the system is out of compliance. If the initial sample or a subsequent sample would cause the annual average to be exceeded, then the system is out of compliance immediately.

2. If monitoring is conducted annually, or less frequently, the system is out of compliance if the level of a contaminant at any sampling point is greater than the MCL. If a confirmation sample is required by the Division, the determination of compliance will be based on the average of two samples.
 3. If a public water system has a distribution system separable from other parts of the distribution system with no interconnections, the Division may allow the system to give public notice to only that area served by that portion of the system which is out of compliance.
 4. If a system fails to collect the required number of samples, compliance will be based on the total number of samples collected.
- (o) Analysis for the contaminants listed in Rule [391-3-5-.18\(2\)\(b\)1](#) -21 shall be conducted in accordance with [40 CFR, Part 141.24\(f\)\(17\)](#). These methods are contained in Methods for the Determination of Organic Compounds in Drinking Water, EPA/600/4-88/039, December 1988 and are available from the National Technical Information Service (NTIS) NTIS PB91-231480 and PB91-146027, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, Virginia 22161.
- (p) Analysis under paragraph (1) shall only be conducted by laboratories certified by the Division or laboratories certified by EPA in accordance with conditions listed in [40 CFR, Part 141.24\(f\)\(17\)](#).
- (q) The Division may allow the use of monitoring data collected after January 1, 1998 required under section 1445 of the Public Health Service Act, as amended by the Federal Safe Drinking Water Act, Public Law 93-523, for purposes of initial monitoring compliance. If the data are generally consistent with the other requirements in this rule, the Division may use these data (i.e., a single sample rather than four quarterly samples) to satisfy the initial monitoring requirement of paragraph (1)(d). Systems which use grandfathered samples and did not detect any contaminant listed in Rule [391-3-5-.18\(2\)\(b\)2](#) -21 shall begin monitoring annually in accordance with paragraph 1(e).
- (r) The Division may increase required monitoring where necessary to detect variations within the system.
- (s) Each certified laboratory must determine the method detection limit (MDL), as defined in 40 CFR, Part 136 appendix B, at which it is capable of detecting VOCs. The acceptable MDL is 0.0005 mg/L. This concentration is the detection concentration for purposes of paragraph (1).
- (t) Each public water system shall monitor at the time designated by the Division within each compliance period.

- (2) **Initial Organic Monitoring.** For systems in operation before January 1, 1993, for purposes of initial monitoring, analysis of the contaminants listed in Rule [391-3-5-.18\(2\)\(b\)1](#) -8 for purposes of determining compliance with the maximum contaminant levels shall be conducted as follows:
- (a) Ground-water systems shall sample at points of entry to the distribution system representative of each well after any application of treatment. Sampling must be conducted at the same location(s) or more representative location(s) every three months for one year except as provided in paragraph (2)(h).
 - (b) Surface water systems shall sample at points in the distribution system representative of each source or at entry points to the system after any application of treatment. Surface water systems must sample each source every three months except as provided in paragraph (2)(h). Sampling must be conducted at the same location or a more representative location each quarter.
 - (c) If the system draws water from more than one source and sources are combined before distribution, the system must sample at an entry point to the distribution system during periods of normal operating conditions.
 - (d) All community water systems and non-transient, non-community water systems serving more than 10,000 people shall analyze all distribution or entry-point samples, as appropriate, representing all source waters beginning no later than January 1, 1988. All community water systems and non-transient, non-community water systems serving from 3,300 to 10,000 people shall analyze all distribution or entry point samples, as required in this paragraph (2), representing source waters no later than January 1, 1989. All other community and non-transient, non-community water systems shall analyze distribution or entry-point samples as required in this paragraph (2), representing all source waters beginning no later than January 1, 1991.
 - (e) The Division may require confirmation samples for positive or negative results. If a confirmation sample(s) is required by the Division, then the sample result(s) should be averaged with the first sampling result and used for compliance determination in accordance with paragraph (2)(i). The Division has the discretion to delete results of obvious sampling errors from this calculation.
 - (f) Analysis for vinyl chloride is required only for ground water systems that have detected one or more of the following two-carbon organic compounds: Trichloroethylene, tetrachloroethylene, 1,2-dichloroethane, 1,1,1-trichloroethane, cis-1,2-dichloroethylene, trans-1,2-dichloroethylene, or 1,1-dichloroethylene. The analysis for vinyl chloride is required at each distribution or entry point at which one or more of the two-carbon organic compounds were found. If the first analysis does not detect vinyl chloride, the Division may reduce the frequency of vinyl chloride monitoring to once every three years for that sample location or other sample locations that are more representative of the same source. Surface water

systems may be required to analyze for vinyl chloride at the discretion of the Division.

- (g) The Division may allow compositing of up to five samples from one or more public water systems.
- (h) The Division may reduce the monitoring frequency specified in paragraphs (2)(a) and (b) as explained in this paragraph.
- (i) Compliance with Rule [391-3-5-.18\(2\)\(b\)](#) shall be determined based on the results of running annual average of quarterly sampling for each sampling location. If one location's average is greater than the MCL, then the system shall be deemed to be out of compliance. If a public water system has a distribution system separable from other parts of the distribution system with no interconnections, only that part of the system that exceeds any MCL as specified in Rule [391-3-5-.18\(2\)\(b\)](#) will be deemed out of compliance. The Division may reduce the public notice requirement to that portion of the system which is out of compliance. If any single sample result would cause the annual average to be exceeded, then the system shall be deemed to be out of compliance immediately. For systems that only take one sample per location because no VOCs were detected, compliance shall be based on that one sample.
- (j) Analysis under paragraph (2) shall only be conducted by laboratories certified by the Division or have been certified by the EPA.
- (k) The Division may allow the use of monitoring data collected after January 1, 1983, for purposes of monitoring compliance. If the data is consistent with other requirements of this rule, the Division may use that data to represent the initial monitoring if the system is determined by the Division not to be vulnerable under the requirements of paragraph (2). In addition, the result of EPA's Ground Water Supply Survey may be used in a similar manner for systems supplied by a single well.
- (l) The Division may increase required monitoring where necessary to detect variations within the system.
- (m) The Division may determine compliance or initiate enforcement action based on analytical results or other information compiled by their sanctioned representatives and agencies.
- (n) Each certified laboratory must determine the method detection limit (MDL), as defined in 40 CFR, Part 136 appendix B, at which it is capable of detecting VOCs. The acceptable MDL is 0.0005 mg/L. This concentration is the detection level for purposes of paragraphs (2)(e), (f), and (g).

- (3) **Ongoing Organic Monitoring.** Analysis of the contaminants listed in Rule [391-3-5-.18\(2\)\(a\)](#) for the purposes of determining compliance with the maximum contaminant level shall be conducted as follows:
- (a) Groundwater systems shall take a minimum of one sample at every entry point to the distribution system which is representative of each well after treatment (hereafter called a sampling point). Each sample must be taken at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant.
 - (b) Surface water systems shall take a minimum of one sample at points in the distribution system that are representative of each source or at each entry point to the distribution system after treatment (hereafter called a sampling point). Each sample must be taken at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant. [Note: For purposes of this paragraph, surface water systems include systems with a combination of surface and ground sources.]
 - (c) If the system draws water from more than one source and the sources are combined before distribution, the system must sample at an entry point to the distribution system during periods of normal operating conditions (i.e., when water representative of all sources is being used).
 - (d) Monitoring frequency:
 - 1. Each community and non-transient non-community water system shall take four consecutive quarterly samples for each contaminant listed in Rule [391-3-5-.18\(2\)\(a\)](#) during each compliance period beginning with the compliance period starting January 1, 1993.
 - 2. Systems serving more than 3,300 persons which do not detect a contaminant in the initial compliance period, may reduce the sampling frequency to a minimum of two quarterly samples in one year during each repeat compliance period.
 - 3. Systems serving less than or equal to 3,300 persons which do not detect a contaminant in the initial compliance period may reduce the sampling frequency to a minimum of one sample during each repeat compliance period.
 - (e) Each community and non-transient water system may apply to the Division for a waiver from the requirement of paragraph (3)(d). A system must reapply for a waiver for each compliance period.
 - (f) The Division may grant a waiver after evaluating the factors in accordance with [40 CFR, Part 141.24\(h\)\(6\)](#).

- (g) If an organic contaminant listed in Rule [391-3-5-.18\(2\)\(a\)](#) is detected (as defined by paragraph (3)(q)) in any sample, then:
1. Each system must monitor quarterly at each sampling point which resulted in a detection.
 2. The Division may decrease the quarterly monitoring requirement specified in paragraph (3)(g)1 provided it has determined that the system is reliably and consistently below the maximum contaminant level. In no case shall the Division make this determination unless a groundwater system takes a minimum of two quarterly samples and a surface water system takes a minimum of four quarterly samples.
 3. After the Division determines the system is reliably and consistently below the maximum contaminant level the Division may allow the system to monitor annually. Systems which monitor annually must monitor during the quarter that previously yielded the highest analytical result.
 4. Systems which have three (3) consecutive annual samples with no detection of a contaminant may apply to the Division for a waiver as specified in paragraph (3)(f).
 5. If monitoring results in detection of one or more of certain related contaminants (aldicarb, aldicarb sulfone, aldicarb sulfoxide and heptachlor, heptachlor epoxide), then subsequent monitoring shall analyze for all related contaminants.
- (h) Systems which violate the requirements of Rule [391-3-5-.18\(2\)\(a\)](#) as determined by paragraph (3)(k) must monitor quarterly. After a minimum of four quarterly samples show the system is in compliance and the Division determines the system is reliably and consistently below the MCL, as specified in paragraph (3)(k), the system shall monitor at the frequency specified in paragraph (3)(g)3.
- (i) The Division may require a confirmation sample for positive or negative results. If a confirmation sample is required by the Division, the result must be averaged with the first sampling result and the average used for the compliance determination as specified by paragraph (3)(k). The Division has the discretion to delete results of obvious sampling errors from this calculation.
- (j) The Division may reduce the total number of samples a system must analyze by allowing the use of compositing. Composite sampling and their analysis shall be in accordance with [40 CFR, Part 141.24\(h\)\(10\)](#).
- (k) Compliance with Rule [391-3-5-.18\(2\)\(a\)](#) shall be determined based on the analytical results obtained at each sampling point.

1. For systems which are conducting monitoring at a frequency greater than annual, compliance is determined by a running annual average of all samples taken at each sampling point. If the annual average of any sampling point is greater than the MCL, then the system is out of compliance. If the initial sample or a subsequent sample would cause the annual average to be exceeded, then the system is out of compliance immediately. Any samples below the detection limit shall be calculated as zero for purposes of determining the annual average.
 2. If monitoring is conducted annually, or less frequently, the system is out of compliance if the level of a contaminant at any sampling point is greater than the MCL. If a confirmation sample is required by the Division, the determination of compliance will be based on the average of two samples.
 3. If a public water system has a distribution system separable from other parts of the distribution system with no interconnections, the Division may allow the system to give public notice to only that portion of the system which is out of compliance.
 4. If a system fails to collect the required number of samples, compliance will be based on the total number of samples collected.
- (l) Analysis for the contaminants listed in Rule [391-3-5-.18\(2\)\(a\)](#) shall be conducted in accordance with [40 CFR, Part 141.24\(h\)](#) (12-13). These methods are contained in "Methods for the Determination of Organic Compounds in Drinking Water", ORD Publications, CERL, EPA/600/4-88/039, December 1988.
- (m) If monitoring data collected after January 1, 1990, are generally consistent with the requirements of Rule 391-3-5-.22(3), then the Division may allow systems to use that data to satisfy the monitoring requirement for the initial compliance period beginning January 1, 1993.
- (n) The Division may increase the required monitoring frequency, where necessary, to detect variations within the system (e.g., fluctuations in concentration due to seasonal use, changes in water source).
- (o) The Division has the authority to determine compliance or initiate enforcement action based upon analytical results and other information compiled by their sanctioned representatives and agencies.
- (p) Each public water system shall monitor at the time designated by the Division within each compliance period.
- (q) Detection limits for contaminants used in paragraph (3) shall be in accordance with [40 CFR, Part 141.24\(h\)\(18\)](#).

- (r) Analysis under paragraph (3) shall conform to paragraph (1) of Rule [391-3-5-29](#).
- (s) The best technology, treatment technique, or other means available for achieving compliance with the maximum contaminant level for organic contaminants in Rule [391-3-5-18\(2\)\(a\) and \(2\)\(b\)](#) shall be in accordance with [40 CFR, Part 141.61\(b\)](#).

Rule 391-3-5-23. Coliform Sampling.

(1) Routine Coliform Monitoring.

- (a) Public water systems must collect total coliform samples at sites which are representative of water throughout the distribution system according to a written sample siting plan. These plans are subject to Division review and revision.
- (b) The minimum residential population of a community water system shall be determined by a mathematical calculation of the total number of active residential service connections multiplied by Georgia's average population per household, as published in the most recent Federal Census Bureau Statistics. Multiple residential units served by a single connection (master meter) shall be included in the determination of population for a water system. The minimum monitoring frequency for total coliforms for community water systems is based on the population served by the system, as follows:

Population Served	Minimum Number of Samples per Month
25 to 1,000 ¹	1
1,001 to 2,500	2
2,501 to 3,300	3
3,301 to 4,100	4
4,101 to 4,900	5
4,901 to 5,800	6

5,801 to 6,700	7
6,701 to 7,600	8
7,601 to 8,500	9
8,501 to 12,900	10
12,901 to 17,200	15
17,201 to 21,500	20
21,501 to 25,000	25
25,001 to 33,000	30
33,001 to 41,000	40
41,001 to 50,000	50
50,001 to 59,000	60
59,001 to 70,000	70
70,001 to 83,000	80
83,001 to 96,000	90
96,001 to 130,000	100
130,001 to 220,000	120
220,001 to 320,000	150
320,001 to 450,000	180
450,001 to 600,000	210
600,001 to 780,000	240
780,001 to 970,000	270
970,001 to 1,230,000	300
1,230,001 to 1,520,000	330
1,520,001 to 1,850,000	360
1,850,001 to 2,270,000	390
2,270,001 to 3,020,000	420
3,020,001 to 3,960,000	450
3,960,001 or more	480

¹Includes public water systems which have at least 15 service connections, but serve fewer than 25 persons.

If a community water system serving 25 to 1,000 persons has no history of total coliform contamination in its current configuration and a sanitary survey conducted in the past five years shows that the system is supplied solely by a

protected ground water source and is free of sanitary defects, the Division may reduce the monitoring frequency specified above, except that in no case shall it be reduced to less than one sample per quarter.

- (c) The monitoring frequency for total coliform for non-community water systems is as follows:
 - 1. A non-community water system using only ground water (except ground water under the direct influence of surface water) and serving 1,000 persons or fewer must monitor each calendar quarter that the system provides water to the public, except that the Division may adjust this monitoring frequency in writing, if a sanitary survey shows that the system is free of sanitary defects.
 - 2. A non-community water system using only ground water (except ground water under the direct influence of surface water) and serving more than 1,000 persons during any month must monitor at the same frequency as a like-sized community water system, except that the Division may adjust this monitoring frequency, in writing for any month the system serves 1,000 persons or fewer.
 - 3. A non-community water system using surface water, in total or in part, must monitor at the same frequency as a like-sized community water system, regardless of the number of persons it serves.
 - 4. A non-community water system using ground water under the direct influence of surface water must monitor at the same frequency as a like-sized community water system. The system must begin monitoring at this frequency beginning six months after the Division determines that the ground water is under the direct influence of surface water.
- (d) The public water system must collect samples at regular time intervals throughout the month, except that a system which uses only ground water (except ground water under the direct influence of surface water), and serves 4,900 persons or fewer, may collect all required samples on a single day if they are taken from different sites.
- (e) Special purpose samples, such as those taken to determine whether disinfection practices are sufficient following pipe placement, replacement, or repair, shall not be used to determine compliance with the MCL for total coliforms. Repeat samples are not considered special purpose samples, and must be used to determine compliance with the MCL for total coliforms.

(2) Repeat Coliform Monitoring.

- (a) If a routine sample is total coliform-positive, the public water system must collect a set of repeat samples within 24 hours of being notified of the positive result. A system which collects more than one routine sample per month must collect no fewer than three repeat samples for each total coliform-positive sample found. A system which normally collects one routine sample per month or fewer must collect no fewer than four repeat samples for each total coliform-positive sample found. The Division may extend the 24- hour limit on a case-by-case basis if the system has a logistical problem in collecting the repeat samples within 24 hours that is beyond its control.
- (b) The system must collect at least one repeat sample from the sampling tap where the original total coliform-positive sample was taken, and at least one repeat sample at a tap within five service connections upstream and at least one repeat sample at a tap within five service connections downstream of the original sampling site. If a total coliform-positive sample is at the end of the distribution system, or one away from the end of the distribution system, the Division may waive the requirement to collect at least one repeat sample upstream or downstream of the original sampling site.
- (c) The system must collect all repeat samples on the same day, except that the Division may allow a system with a single service connection to collect the required set of repeat samples over a four-day period.
- (d) If one or more repeat samples in the set is total coliform-positive, the public water system must collect an additional set of repeat samples in the manner specified in paragraph (2). The additional samples must be collected within 24 hours of being notified of the positive result, unless the Division extends the limit as provided in paragraph (2). The system must repeat this process until either total coliforms are not detected in one complete set of repeat samples or the system determines that the MCL for total coliforms has been exceeded and notifies the Division.
- (e) If a system collecting fewer than five routine samples per month has one or more total coliform-positive samples and the Division does not invalidate the sample(s), it must collect at least five routine samples during the next month the system provides water to the public, except that the Division may waive this requirement if the conditions specified below are met. The Division cannot waive the requirement for a system to collect repeat samples.
 - 1. The Division may waive the requirement to collect five routine samples the next month the system provides water to the public if the Division, or an agent approved by the Division, performs a site visit before the end of the next month the system provides water to the public. Although a sanitary survey need not be performed, the site visit must be sufficiently detailed to allow the Division to determine whether additional monitoring and/or any corrective action is needed. The Division cannot approve an employee of the

system to perform this site visit, even if the employee is an agent approved by the Division to perform sanitary surveys.

2. The Division may waive the requirement to collect five routine samples the next month the system provides water to the public if the Division has determined why the sample was total coliform-positive and establishes that the system has corrected the problem or will correct the problem before the end of the next month the system serves water to the public. The Division cannot waive the requirement to collect five routine samples the next month the system provides water to the public solely on the grounds that all repeat samples are total coliform-negative. Under this paragraph, a system must still take at least one routine sample before the end of the next month it serves water to the public and use it to determine compliance with the MCL for total coliforms, unless the Division has determined that the system has corrected the contamination problem before the system took the set of repeat samples required above, and all repeat samples were total coliform-negative.

- (f) After a system collects a routine sample and before it learns the results of the analysis of that sample, if it collects another routine sample(s) from within five adjacent service connections of the initial sample, and the initial sample, after analysis, is found to contain total coliforms, then the system may count the subsequent sample(s) as a repeat sample instead of as a routine sample.
- (g) Results of all routine and repeat samples not invalidated by the Division must be included in determining compliance with the MCL for total coliforms.

(3) **Invalidation of Total Coliform Samples.** A total coliform-positive sample invalidated under this paragraph does not count towards meeting the minimum monitoring requirements of this Rule.

- (a) The Division may invalidate a total coliform-positive sample only if the conditions that follow below are met:
 1. The laboratory establishes that improper sample analysis caused the total coliform-positive result.
 2. The Division, on the basis of the results of repeat samples collected as required by this Rule, determines that the total coliform-positive sample resulted from a domestic or other non-distribution system plumbing problem. The Division cannot invalidate a sample on the basis of repeat sample results unless all repeat sample(s) collected at the same tap as the original total coliform-positive sample are also total coliform-positive, and all repeat samples collected within five service connections of the original tap are total coliform-negative (e.g., the Division cannot invalidate a total coliform-positive sample on the basis of repeat samples if all the repeat

samples are total coliform-negative, or if the public water system has only one service connection).

3. The Division has substantial grounds to believe that a total coliform-positive result is due to a circumstance or condition which does not reflect water quality in the distribution system. In this case, the system must still collect all repeat samples required under this Rule, and use them to determine compliance with the MCL for total coliforms. The Division may not invalidate a total coliform-positive sample solely on the grounds that all repeat samples are total coliform-negative.
- (b) A laboratory must invalidate a total coliform sample (unless total coliforms are detected) if the sample produces a turbid culture in the absence of gas production using an analytical method where gas formation is examined (e.g., the Multiple-Tube Fermentation Technique), produces a turbid culture in the absence of an acid reaction in the Presence-Absence (P-A) Coliform Test, or exhibits confluent growth or produces colonies too numerous to count with an analytical method using a membrane filter (e.g., Membrane Filter Technique). If a laboratory invalidates a sample because of such interference, the system must collect another sample from the same location as the original sample within 24 hours of being notified of the interference problem, and have it analyzed for the presence of total coliforms. The system must continue to re-sample within 24 hours and have the samples analyzed until it obtains a valid result. The Division may waive the 24-hour time limit on a case-by-case basis.

(4) Sanitary Surveys.

- (a) All ground water systems must undergo sanitary surveys no less frequently than every three years for community systems, except as provided in paragraph (4)(b), and no less frequently than every five years for non-community systems. The initial sanitary survey for each community ground water system must be conducted by December 31, 2012, unless the system meets requirements of paragraph (4)(b).
- (b) For community ground water systems determined by the Division to have outstanding performance based on prior sanitary surveys, or that provide at least 4-log (99.99%) treatment of viruses (using inactivation, removal, or a combination of the two) subsequent sanitary surveys may be conducted no less than every five years. The initial sanitary survey for community systems that meet these requirements and for each non-community system must be conducted by December 31, 2014.
- (c) All surface water systems (including ground water under the influence) must undergo sanitary surveys no less frequently than every three years for community systems and no less frequently than every five years for non-community systems.

For community systems determined by the Division to have outstanding performance based on prior sanitary surveys, subsequent sanitary surveys may be conducted no less than every five years.

- (d) Sanitary surveys must be performed by the Division or an agent approved by the Division. The system is responsible for ensuring the survey takes place.

(5) Fecal Coliforms - *Escherichia coli* (*E. coli*) Testing.

- (a) If any routine or repeat sample is total coliform-positive, the system must analyze that total coliform-positive culture medium to determine if fecal coliforms are present, except that the system may test for *E. coli* in lieu of fecal coliforms. If fecal coliforms or *E. coli* are present, the system must notify the Division by the end of the day when the system is notified of the test result, unless the system is notified of the result after the Division office is closed, in which case the system must notify the Division before the end of the next business day.
- (b) The Division has the discretion to allow a public water system, on a case-by-case basis, to forego fecal coliform or *E. coli* testing on a total coliform-positive sample if that system assumes that the total coliform-positive sample is fecal coliform-positive or *E. coli*-positive. Accordingly, the system must notify the Division as specified in this Rule and the MCL applies.

(6) Analytical Methodology.

- (a) The standard sample volume required for total coliform analysis, regardless of analytical method used, is 100 mL.
- (b) Public water systems need only determine the presence or absence of total coliforms; a determination of total coliform density is not required.
- (c) Public water systems must conduct total coliform analyses in accordance with [40 CFR § 141.21](#).
- (d) Public water systems must conduct fecal coliform analyses in accordance with [40 CFR § 141.21](#).

(7) Response to Violation.

- (a) A public water system which has exceeded the MCL for total coliforms must report the violation to the Division no later than the end of the next business day after it learns of the violation, and notify the public in accordance with this chapter.
- (b) A public water system which has failed to comply with a coliform monitoring requirement, including the sanitary survey requirement, must report the

monitoring violation to the Division within ten days after the system discovers the violation, and notify the public in accordance with this chapter.

- (8) The provisions of paragraphs (1) and (4) are applicable until March 31, 2016. The provisions of paragraphs (2), (3), (5), (6), and (7) are applicable until all required repeat monitoring under paragraph (2) and fecal coliform or *E. coli* testing under paragraph (5) that was initiated by a total coliform-positive sample taken before April 1, 2016 is completed, as well as analytical method, reporting, recordkeeping, public notification, and consumer confidence report requirements associated with that monitoring and testing. Beginning April 1, 2016, the provisions of Rule [391-3-5-.55](#) are applicable, with systems required to begin regular monitoring at the same frequency as the system-specific frequency required on March 31, 2016, except for seasonal systems which must monitor monthly beginning April 1, 2016.

Rule 391-3-5-.24. Disinfectant Residuals, Disinfection Byproducts, and Disinfection Byproduct Precursors Sampling, Analytical and Other Requirements.

- (1) **Purpose.** The purpose of this Rule is to provide for the procedures for establishing maximum contaminant levels, monitoring and other requirements for trihalomethanes, disinfectant residuals, disinfection byproducts, and disinfection byproduct precursors.
- (2) **Variations.** Variations from the maximum contaminant level for total trihalomethanes shall be conducted in accordance with [40 CFR § 142.60](#).
- (3) **Disinfectant Residuals, Disinfection Byproducts, and Disinfection Byproduct Precursors.**
 - (a) Community water systems and non-transient, non-community water systems which add a chemical disinfectant to the water in any part of the drinking water treatment process must modify their practices to meet MCLs and MRDLs

specified in subparagraph (7)(a) of Rule [391-3-5-.18](#), and must meet the treatment technique requirements for disinfection byproduct precursors specified in paragraph (10).

- (b) Transient non-community water systems that use chlorine dioxide as a disinfectant or oxidant must modify their practices to meet the MRDL for chlorine dioxide specified in subparagraph (7)(a) of Rule [391-3-5-.18](#).
- (c) Community Subpart H water systems and non-transient, non-community Subpart H water systems must comply with the requirements of this Rule, as specified in paragraphs (7)(b) and (7)(c) of Rule [391-3-5-.18](#), respectively.
- (d) Beginning January 1, 2002, transient non-community Subpart H water systems serving 10,000 or more persons and using chlorine dioxide as a disinfectant or oxidant must comply with the requirements for chlorine dioxide and chlorite in this Rule.
- (e) Beginning January 1, 2004, transient non-community Subpart H water systems serving fewer than 10,000 people and using chlorine dioxide as a disinfectant or oxidant and systems using only ground water not under the direct influence of surface water and using chlorine dioxide as a disinfectant or oxidant must comply with the requirements for chlorine dioxide and chlorite in this Rule.
- (f) Systems may increase residual disinfectant levels in the distribution system of chlorine or chloramines (but not chlorine dioxide) to a level and for a time necessary to protect public health, to address specific microbiological contamination problems caused by circumstances such as, but not limited to, distribution line breaks, storm run-off events, source water contamination events, or cross-connection events.
- (g) Systems must use the analytical method(s) specified in [40 CFR § 141.131](#) to demonstrate compliance with the requirements of this Rule. The analytical requirements specified in [40 CFR § 141.131](#), which is hereby incorporated by reference, are required to demonstrate compliance with the requirements of Subpart L (Disinfectant Residuals, Disinfection ByProducts, and Disinfection ByProduct Precursors), Subpart U (Initial Distribution System Evaluations), and Subpart V (Stage 2 Disinfection ByProducts Requirements) of 40 CFR Part 141.
- (h) Monitoring Requirements. [40 CFR § 141.132](#), in its entirety, is hereby incorporated by reference. For compliance with the requirements of this Rule, the water systems must monitor the applicable parameters included in this Rule at the frequency specified in [40 CFR § 141.132](#). Failure to monitor will be treated as a violation for the entire period covered by the annual average where compliance is based on a running annual average of monthly or quarterly samples or averages and the system's failure to monitor makes it impossible to determine compliance with MCLs or MRDLs.

1. Systems must take all samples during normal operating conditions.
 2. Systems may consider multiple wells drawing water from a single aquifer as one treatment plant for determining the minimum number of TTHM and HAA5 samples required, with the Division approval.
 3. Systems may use only data collected under the provisions of this Rule to qualify for reduced monitoring.
 4. Each system required to monitor under this Rule must develop and implement a monitoring plan. The plan must include at least the following elements: specific locations and schedules for collecting samples for any parameters included in this Rule; how the system will calculate compliance with MCLs, MRDLs, and treatment techniques; and if approved for monitoring as a consecutive system, or if providing water to a consecutive system, the sampling plan must reflect the entire distribution system.
 - (i) The system must maintain the plan and make it available for inspection by the Division and the general public no later than thirty (30) days following applicable compliance dates stated in paragraph (3)(c).
 - (ii) All Subpart H systems serving more than 3,300 people must submit a copy of the monitoring plan to the Division no later than the date of the first report required under [40 CFR § 141.134](#).
 - (iii) The Division may require a monitoring plan to be submitted by any other system. The Division may also require changes in any plan elements.
- (4) **Monitoring and Compliance for Disinfection Byproducts.** Monitoring for disinfection byproducts shall be conducted as specified in [40 CFR § 141.132\(b\)](#). Compliance with the disinfection byproducts requirements shall be determined in accordance with [40 CFR § 141.133\(b\)](#).
- (5) **Monitoring and Compliance for Disinfectant Residuals.**
- (a) Monitoring for disinfectant residuals shall be conducted as specified in [40 CFR § 141.132\(c\)](#). Compliance with the disinfectant residuals requirements shall be determined in accordance with [40 CFR § 141.133\(c\)](#).
 - (b) *Routine monitoring.* Until March 31, 2016, community and non-transient non-community water systems that use chlorine or chloramines must measure the residual disinfectant level in the distribution system at the same point in the distribution system and at the same time as total coliforms are sampled, as

specified in [40 CFR § 141.21](#). Beginning April 1, 2016, community and non-transient non-community water systems that use chlorine or chloramines must measure the residual disinfectant level in the distribution system at the same point in the distribution system and at the same time as total coliforms are sampled, as specified in Rule [391-3-5-.55\(4\) through \(8\)](#). 40 CFR Part 141 Subpart H systems may use the results of residual disinfectant concentration sampling conducted under [40 CFR § 141.74\(c\)\(3\)\(i\)](#) for systems which filter, in lieu of taking separate samples.

- (6) **Monitoring and Compliance for Disinfection Byproduct Precursors.** Monitoring for disinfection byproduct precursors shall be conducted as specified in [40 CFR § 141.132\(d\)](#). Compliance with the disinfection byproduct precursors requirements shall be determined in accordance with [40 CFR § 141.133\(c\)](#) and as specified by [40 CFR § 141.135\(b\)](#).
- (7) **Non-Compliance in First Monitoring Year.** If, during the first year of monitoring under [40 CFR § 141.132](#), any individual quarter's average will cause the running annual average of that system to exceed the MCL, the system shall be considered out of compliance at the end of that quarter.
- (8) **Samples for Compliance Determination.** All samples taken and analyzed under the provisions of this Rule must be included in determining compliance, even if that number is greater than the minimum required. Compliance requirements specified in [40 CFR Part 141, Subpart L § 141.133](#) is hereby incorporated by reference.
- (9) **Treatment Techniques.** Treatment techniques for control of disinfection byproduct precursors requirements specified in [40 CFR Part 141, Subpart L § 141.135](#) is hereby incorporated by reference.
 - (a) Subpart H systems using conventional filtration treatment (as defined in § 141.2) must operate with enhanced coagulation or enhanced softening to achieve the TOC percent removal levels specified in [40 CFR § 141.135\(b\)](#) unless the system meets at least one of the alternative compliance criteria specified in [40 CFR §§ 141.135\(a\)\(2\) or \(a\)\(3\)](#).
 - (b) Alternative compliance criteria for enhanced coagulation and enhanced softening systems: [40 CFR Part 141, Subpart L § 141.135\(a\)\(2\)](#) is hereby incorporated by reference.
 - (c) Additional alternative compliance criteria for softening systems: [40 CFR Part 141, Subpart L, § 141.135\(a\)\(3\)](#) is hereby incorporated by reference.
 - (d) Enhanced coagulation and enhanced softening performance requirements: [40 CFR Part 141, Subpart L § 141.135\(b\)](#) is hereby incorporated by reference.

- (e) Compliance calculations: [40 CFR Part 141, Subpart L § 141.135\(c\)](#) is hereby incorporated by reference.
- (f) Treatment technique requirements for disinfection byproduct precursors: [40 CFR Part 141, Subpart L § 141.135\(d\)](#) is hereby incorporated by reference.
- (g) Required additional health information: [40 CFR § 141.154](#) is hereby incorporated by reference.

Rule 391-3-5-.25. Treatment Techniques, Lead and Copper Requirements.

(1) General Requirements.

- (a) These requirements constitute the primary drinking water rules for lead and copper. Unless otherwise indicated, each of these provisions applies to community water systems and non-transient, non-community water systems (hereinafter referred to as "water systems" or "systems").
- (b) These rules establish a treatment technique that includes requirements for corrosion control treatment, source water treatment, lead service line replacement, and public education. These requirements are triggered, in some cases, by lead and copper action levels measured in samples collected at consumers' taps.
- (c) Lead and copper action levels:

1. The lead action level is exceeded if the concentration of lead in more than 10 percent of tap water samples collected during any monitoring period conducted in accordance with paragraph (7) is greater than 0.015 mg/L.
 2. The copper action level is exceeded if the concentration of copper in more than 10 percent of tap water samples collected during any monitoring period conducted in accordance with paragraph (7) is greater than 1.3 mg/L.
 3. Calculation of the lead and copper action levels shall be based on the "90th percentile" rule in accordance with [40 CFR, Part 141.80\(c\)\(3\)](#).
- (d) Corrosion control treatment requirements:
1. All water systems shall install and operate optimal corrosion control treatment as defined in Rule [391-3-5-.02\(73\)](#).
 2. Any water system that complies with the applicable corrosion control treatment requirements specified by the Division under paragraphs (2) and (3) shall be deemed in compliance with the treatment requirement contained in paragraph (d)(1).
- (e) Source water treatment requirements; Any system exceeding the lead or copper action level shall implement all applicable source water treatment requirements specified by the "Division" under paragraph (4).
- (f) Lead service line replacement requirements; Any system exceeding the lead action level after implementation of applicable corrosion control and source water treatment requirements shall complete the lead service replacement requirements contained in paragraph (5).
- (g) Public education requirements; Pursuant to [40 CFR, Part 141.85](#), all water systems must provide a consumer notice of lead tap water monitoring results to persons served at the sites/taps that are tested. Any system exceeding the lead action level shall implement the public education requirements contained in paragraph (6).
- (h) Monitoring and analytical requirements; Tap water monitoring for lead and copper, monitoring for water quality parameters, source water monitoring for lead and copper, and analyses of the monitoring results under this subpart shall be completed in compliance with paragraphs (7) - (10).
- (i) Reporting requirements; Systems shall report to the Division any information required by the treatment provisions of this subpart and Rule [391-3-5-.30\(7\)](#).
- (j) Record keeping requirements; Systems shall maintain records in accordance with Rule [391-3-5-.15](#).

- (k) Violation of national primary drinking water regulations; Failure to comply with the applicable requirements of paragraphs (1) - (10), including requirements established by the Division pursuant to the provisions, shall constitute a violation of the national primary drinking water regulations for lead and/or copper.
- (l) The maximum contaminant level goals (MCLGs) for lead and copper are as follows:

Contaminant	MCLG (mg/L)
Copper	1.3
Lead	0 (zero)

(2) Applicability of Corrosion Control Treatment Steps to Small, Medium and Large Water Systems.

- (a) Systems shall complete the applicable corrosion control treatment requirements described in paragraph (3) by the deadlines established in this paragraph.
 1. A large system (serving more than 50,000 persons) shall complete the corrosion control treatment steps specified in paragraph (2)(d), unless it is deemed to have optimized corrosion control under paragraphs (2)(b)2. or (2)(b)3..
 2. A small system (serving less than 3,301 persons) and a medium-size system (serving more than 3,300 and less than 50,001 persons) shall complete the corrosion control treatment steps specified in paragraph (2)(d), unless it is deemed to have optimized corrosion control under paragraphs (2)(b)1., (2)(b)2., or (2)(b)3..
- (b) A system is deemed to have optimized corrosion control and is not required to complete the applicable control treatment steps identified in this section if the system satisfies one of the criteria specified in paragraphs (2)(b)1. through (2)(b)3.. Any such system deemed to have optimized corrosion control under this paragraph, and which has treatment in place, shall continue to operate and maintain optimal corrosion control treatment and meet any requirements that the State determines appropriate to ensure optimal corrosion control treatment is maintained.
 1. A small or medium-size water system is deemed to have optimized corrosion control if the system meets the lead and copper action levels during each of two consecutive six-month monitoring periods conducted in accordance with paragraph (7).
 2. Any water system may be deemed by the Division to have optimized corrosion control treatment if the system demonstrates to the satisfaction of the Division that it has conducted activities equivalent to the corrosion

control steps applicable to such system under this rule. If the Division makes this determination, it shall provide the system with written notice explaining the basis for its decision and shall specify the water quality control parameters representing optimal corrosion control in accordance with paragraph (3). Water systems deemed to have optimized corrosion control under this paragraph shall operate in compliance with the Division designated optimal water quality control parameters in accordance with paragraph (3) and continue to conduct lead and copper tap water quality parameter sampling in accordance with paragraphs (7)(d) 3. and (8)(d). A system shall provide the Division with the following information in order to support a determination under this paragraph.

- (i) the results of all test samples collected for each of the water quality parameters in paragraph (3).
 - (ii) a report explaining the test methods used by the water system to evaluate the corrosion control treatments listed in paragraph (3), the results of all tests conducted, and the basis for the system's selection of optimal corrosion control treatment.
 - (iii) a report explaining how corrosion control has been installed and how it is being maintained to insure minimal lead and copper concentrations at consumers' taps.
 - (iv) the results of tap water samples collected in accordance with paragraph (7) at least once every six months for one year after corrosion control has been installed.
3. Any water system is deemed to have optimized corrosion control if it submits results of tap water monitoring conducted in accordance with paragraph (7) and source water monitoring conducted in accordance with paragraph (9) that demonstrates for two consecutive six-month monitoring periods that the difference between the 90th percentile tap water lead level computed under paragraph (1)(c) 3., and the highest source water lead concentration, is less than the Practical Quantitation Level for lead specified in paragraph (10).
- (i) Those systems whose highest source water lead level is below the Method Detection Limit may also be deemed to have optimized corrosion control under this paragraph if the 90th percentile tap water lead levels is less than or equal to the Practical Quantitation Level for the lead for two consecutive 6-month monitoring periods.
 - (ii) Any water system deemed to have optimized corrosion control in accordance with this paragraph shall continue monitoring for lead

and copper at the tap no less frequently than once every three calendar years using the reduced number of sites specified in Rule 391-3-5-.25(7)(c) and collecting samples at times and locations specified in Rule 391-3-5-.25(7)(d) 4.

- (iii) Any water system deemed to have optimized corrosion control pursuant to this paragraph shall notify the Division in writing pursuant to Rule 391-3-5-.25(11) of any upcoming long-term change in treatment or addition of a new source. The Division must review and approve the addition of a new source or long-term change in water treatment before it is implemented by the water system. The Division may require any system to conduct additional monitoring or to take other action the Division deems appropriate to ensure that such systems maintain minimal levels of corrosion in the distribution system.
 - (iv) As of July 12, 2001, a system is not deemed to have optimized corrosion control under this paragraph, and shall implement corrosion control treatment pursuant to paragraph (2)(b)3.(v) unless it meets the copper action level.
 - (v) Any system triggered into corrosion control because it is no longer deemed to have optimized corrosion control under this paragraph shall implement corrosion control treatment in accordance with the deadlines in paragraph (2)(d). Any such large system shall adhere to schedule specified in that paragraph for medium-size systems, with the time periods for completing each step being triggered by the date the system is no longer deemed to have optimized corrosion control under this paragraph.
- (c) Any small or medium-size water system that is required to complete the corrosion control steps due to its exceedance of the lead or copper action level may request approval from the Division to cease completing the treatment steps if the system meets both lead and copper action levels during each of two consecutive monitoring periods conducted pursuant to paragraph (7) and submits the results to the Division. If approval is granted, any such water system thereafter exceeds the lead or copper action level during any monitoring period, the system (or the Division, as the case may be) shall recommence completion of the applicable treatment steps, beginning with the first treatment step which was not previously completed in its entirety. The Division may require a system to repeat treatment steps previously completed by the system where the Division determines that this is necessary to implement properly the treatment requirements of this rule. The Division shall notify the water system in writing of such a determination and explain the basis for its decision. The requirement for any small- or medium-size

water system to implement corrosion control treatment steps in accordance with paragraph (2)(d) (including, water systems deemed to have optimized corrosion control under paragraph (2)(b)1.) is triggered whenever any small- or medium-size water system exceeds the lead or copper action level.

- (d) Treatment steps and deadlines for all systems affected by this rule shall be in accordance with [40 CFR, Part 141.81\(d\) and \(e\)](#).
- (3) **Description of Corrosion Control Treatment Requirements.** Each system shall complete the corrosion control treatment requirements as described and in accordance with [40 CFR Part 141.82](#) and as approved by the Division.
- (4) **Source Water Treatment Requirements.** Systems shall complete the applicable source water monitoring and treatment requirements, described in the referenced portions of paragraph (4)(b), and in paragraphs (7) and (9) by the following deadlines.
- (a) Deadlines for Completing Source Water Treatment Steps.
 1. Step 1: A system exceeding the lead or copper action level shall complete lead and copper source water monitoring (paragraph (9)(b)) and make a treatment recommendation to the Division (paragraph (4)(b) 1.) no later than 180 days after the end of the monitoring period in which the lead or copper action level was exceeded.
 2. Step 2: The Division shall make a determination regarding source water treatment (paragraph (4)(b) 2.) within 6 months after submission of monitoring results under Step 1.
 3. Step 3: If the Division requires installation of source water treatment, the system shall install the treatment (paragraph (4)(b) 3.) within 24 months after completion of Step 2.
 4. Step 4: The system shall complete follow-up tap water monitoring for lead and copper (paragraph (7)(d) 2.) and source water monitoring for lead and copper (paragraph (9)(c)) within 36 months after completion of Step 2.
 5. Step 5: The Division shall review the system's installation and operation of source water treatment and specify maximum permissible source water levels (paragraph (4)(b) 4.) within 6 months after completion of Step 4.
 6. Step 6: The system shall operate in compliance with the Division specified maximum permissible lead and copper source water levels (paragraph (4)(b) 4.) and continue source water monitoring for lead and copper (paragraph (9)(d)).
 - (b) Description of Source Water Treatment Requirements:

1. System treatment recommendation. Any system which exceeds the lead or copper action level shall recommend in writing to the Division the installation and operation of one of the source water treatments listed in paragraph (4)(b)2.. A system may recommend that no treatment be installed based upon a demonstration that source water treatment is not necessary to minimize lead and copper levels at users' taps.
2. Division determination regarding source water treatment. The Division shall complete an evaluation of the results of all source water samples submitted by the water system to determine whether source water treatment is necessary to minimize lead or copper levels in water delivered to users' taps. If the Division determines that treatment is needed, the Division shall either require installation and operation of the source water treatment recommended by the system (if any) or require the installation and operation of another source water treatment such as: ion exchange, reverse osmosis, lime softening or coagulation/filtration. If the Division requests additional information to aid in its review, the water system shall provide the information by the date specified by the Division in its request. The Division shall notify the system in writing of its determination and set forth the basis for its decision.
3. Installation of source water treatment. Each system shall properly install and operate the source water treatment designated by the Division under paragraph (4)(b)2..
4. Division review of source water treatment and specification of maximum permissible source water levels. The Division shall review the source water samples taken by the water system both before and after the system installs source water treatment, and determine whether the system has properly installed and operated the source water treatment designated by the Division. Based upon its review, the Division shall designate the maximum permissible lead and copper concentrations for finished water entering the distribution system. Such levels shall reflect the contaminant removal capability of the treatment properly operated and maintained. The Division shall notify the system in writing and explain the basis for its decision.
5. Continued operation and maintenance. Each water system shall maintain lead and copper levels below the maximum permissible concentrations designated by the Division at each sampling point monitored in accordance with paragraph (9). The system is out of compliance with this paragraph if the level of lead and/or copper at any sampling point is greater than the maximum permissible concentration designated by the Division.
6. Modification of Division treatment decisions. Upon its own initiative or in response to a request by a water system or other interested party, the

Division may modify its determination of the source water treatment under paragraph (2), or maximum permissible lead and copper concentrations for finished water entering the distribution system under paragraph (4). A request for modification by a system or other interested party shall be in writing, explain why the modification is appropriate, and provide supporting documentation. The Division may modify its determination where it concludes that such change is necessary to ensure that the system continues to minimize lead and copper concentrations in source water. A revised determination shall be made in writing, set forth the new treatment requirements, explain the basis for the Division's decision, and provide an implementation schedule for completing the treatment modifications.

7. EPA may review treatment determinations made by the Division and issue federal treatment determinations as outlined in [40 CFR, Part 141.83\(b\)\(7\)](#).
- (5) **Lead Service Line Replacement Requirements.** Systems may be required to replace lead service lines in accordance with [40 CFR Parts 141.84](#) and [141.90\(e\)](#) when they fail to meet the lead action level in tap samples. [40 CFR Part 141.84](#) describes the conditions that will require lead service line replacement.
- (6) **Public Educational and Supplemental Monitoring Requirements.** All water systems must deliver a consumer notice of lead tap water monitoring results to persons served by the water system at the sites/taps that are tested. A water system that exceeds the lead action level based on tap water samples collected in accordance with paragraph (7) shall carry out a public education program as described in [40 CFR, Part 141.85](#).
- (7) **Monitoring Requirements for Lead and Copper in Tap Water.**
 - (a) Sample site location.
 1. By the applicable date for commencement of monitoring under paragraph (7)(d)1., each water system shall complete a materials evaluation of its distribution system. In order to identify a pool of targeted sampling sites that meets the requirements of this rule, and which is sufficiently large to ensure that the water system can collect the number of lead and copper tap samples required in paragraph (7)(c). All sites from which first draw samples are collected shall be selected from this pool of targeted sampling sites. Sampling sites may not include faucets that have point-of-use or point-of-entry treatment devices.
 2. A water system shall use the information on lead, copper, and galvanized steel that it is required to collect under Rule [391-3-5-.26\(4\)](#) of this part [special monitoring for corrosivity characteristics] when conducting a materials evaluation. When an evaluation of the information collected pursuant to Rule [391-3-5-.26\(4\)](#) is insufficient to locate the requisite number

of lead and copper sampling sites that meet the targeting criteria in paragraph (7)(a)1., the water system shall review the sources of information listed below in order to identify a sufficient number of sampling sites. In addition, the system shall seek to collect such information where possible in the course of its normal operations (e.g., checking service line materials when reading water meters or performing maintenance activities):

- (i) all plumbing codes, permits, and records in the files of the building department(s) which indicate the plumbing materials that are installed within publicly and privately owned structures connected to the distribution system;
 - (ii) all inspections and records of the distribution system that indicate the material composition of the service connections that connect a structure to the distribution system; and
 - (iii) all existing water quality information, which includes the results of all prior analyses of the system or individual structures connected to the system, indicating locations that may be particularly susceptible to high lead or copper concentrations.
3. The sampling sites selected for a community water system's sampling pool ("tier 1 sampling sites") shall consist of single family structures that:
- (i) contain copper pipes with lead solder installed after 1982 or contain lead pipes; and/or
 - (ii) are served by a lead service line. When multiple-family residences comprise at least 20 percent of the structures served by a water system, the system may include these types of structures in its sampling pool.
4. Any community water system with insufficient tier 1 sampling sites shall complete its sampling pool with "tier 2 sampling sites", consisting of buildings, including multiple-family residences that:
- (i) contain copper pipes with lead solder installed after 1982 or contain lead pipes; and/or
 - (ii) are served by a lead service line.
5. Any community water system with insufficient tier 1 and tier 2 sampling sites shall complete its sampling pool with "tier 3 sampling sites", consisting of single family structures that contain copper pipes with lead solder installed before 1983. A community water system with insufficient tier 1,

tier 2, and tier 3 sampling sites shall complete its sampling pool with representative sites throughout the distribution system. For the purpose of this paragraph, a representative site is a site in which the plumbing materials used at that site would be commonly found at other sites served by the water system.

6. The sampling sites selected for a non-transient non-community water system ("tier 1 sampling sites") shall consist of buildings that:
 - (i) contain copper pipes with lead solder installed after 1982 or contain lead pipes; and/or
 - (ii) are served by a lead service line.
7. A non-transient non-community water system with insufficient tier 1 sites that meet the targeting criteria in paragraph (7)(a)6 shall complete its sampling pool with sampling sites that contain copper pipes with lead solder installed before 1983. If additional sites are needed to complete the sampling pool, the nontransient non-community water system shall use representative sites throughout the distribution system. For the purpose of this paragraph, a representative site is a site in which the plumbing materials used at that site would be commonly found at other sites served by the water system.
8. Any water system whose sampling pool does not consist exclusively of tier 1 sites shall demonstrate to the Division under paragraph (11) why a review of the information listed in paragraph (7)(a)2. was inadequate to locate a sufficient number of tier 1 sites. Any community water system which includes tier 3 or other representative sampling sites in its sampling pool shall demonstrate why it was unable to locate a sufficient number of tier 1 and tier 2 sampling sites.
9. Any water system whose distribution system contains lead service lines shall draw 50 percent of the samples it collects during each monitoring period from sites that contain lead pipes, or copper pipes with lead solder, and 50 percent of those samples from sites served by a lead service line. A water system that cannot identify a sufficient number of sampling sites served by lead service line shall collect first draw samples from all of the sites identified as being served by such lines.

(b) Sample collection methods.

1. All tap samples for lead and copper collected in accordance with this subpart, with the exception of lead service line samples collected under paragraph (5), shall be first draw samples.

2. Each first-draw tap sample for lead and copper shall be one liter in volume and must have stood motionless in the plumbing system of each sampling site for at least six hours. First draw samples from residential housing shall be collected from the cold-water kitchen or bathroom sink tap. First-draw samples from a non-residential building shall be one liter in volume and shall be collected at an interior tap from which is typically drawn for consumption. First draw samples may be collected by the system or the system may allow residents to collect first draw samples after instructing the residents of the sampling procedures specified in this paragraph. To avoid problems of residents handling nitric acid, acidification of first-draw samples may be done up to fourteen (14) days after the sample is collected. After acidification to resolubilize the metals, the sample must stand in the original container for the time specified in the approved EPA method before the sample can be analyzed. If a system allows residents to perform sampling, the system may not challenge, based on alleged errors in sample collection, the accuracy of sampling results.
3. Each service line sample shall be one liter in volume and have stood motionless in the lead service line for at least six hours. Lead service line samples shall be collected in one of the following three ways:
 - (i) at the tap after flushing the volume of water between the tap and the lead service line. The volume of water shall be calculated based on the interior diameter and length of the pipe between the tap and the lead service line;
 - (ii) tapping directly into the lead service line; or
 - (iii) if the sampling site is a building constructed as a single-family residence, allowing the water to run until there is a significant change in temperature which would be indicative of water that has been standing in the lead service line.
4. A water system shall collect each first draw tap sample from the same sampling site from which it collected a previous sample. If, for any reason, the water system cannot gain entry to a sampling site in order to collect a follow-up tap sample or a particular site is no longer available, the system may collect the follow-up tap sample from another sampling site in its sampling pool as long as the new site meets the same targeting criteria, and is within reasonable proximity of the original site.
5. A non-transient non-community water system, or a community water system that meets the criteria of Rule 391-3-5-.25(7)(a) 3. -7. that does not have enough taps that can supply first-draw samples, as defined in Rule 391-3-5-.25(7)(b) 2., must collect multiple samples from available

sites/taps, provided the samples are collected at different times and/or on different days in order to meet the "first-draw"/6-hour minimum non-use time criteria.

(c) Number of samples.

Water systems shall collect at least one sample during each monitoring period specified in paragraph (7)(d) from the number of sites listed in the first column below ("# of Sites Standard Monitoring") of the table in this paragraph. A system conducting reduced monitoring under paragraph (7)(d)4. shall collect at least one sample from the number of sites specified in the second column ("# of Sites Reduced Monitoring") of the table in this paragraph during each monitoring period specified in paragraph (7)(d)4.. Such reduced monitoring sites shall be representative of the sites required for standard monitoring. States may specify sampling locations when a system is conducting reduced monitoring. The table is as follows:

System Size Population Served	Number of Sites Standard Monitoring	Number of Sites Reduced Monitoring
100,001 or more	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
100 or fewer	5	5

(d) Timing of monitoring.

1. Initial tap sampling: Two consecutive six-month periods, between January-June and between July-December.
 - (i) All large systems shall monitor at the required number of standard monitoring sites during two consecutive six-month periods.
 - (ii) All small and medium-size systems shall monitor at the required number of standard monitoring sites during each six-month monitoring period until:
 - (I) the system exceeds the lead or copper action level and is therefore required to implement the corrosion control treatment requirements under paragraph (2), in which case the

system shall continue monitoring in accordance with paragraph (7)(d)2., or

- (II) the system meets the lead or copper action levels during two consecutive six-month monitoring periods, in which case the system may reduce monitoring in accordance with paragraph (7)(d)4..

2. Monitoring after installation of corrosion control and source water treatment.

- (i) Any large system which installs optimal corrosion control treatment pursuant to paragraph (2)(d) shall monitor during two consecutive six-month monitoring periods by the date specified in paragraph (2)(d).
- (ii) Any small or medium-size system which installs optimal corrosion control treatment pursuant to paragraph (2) shall monitor during two consecutive six-month monitoring periods by the date specified in paragraph (2)(d).
- (iii) Any system which installs source water treatment pursuant to paragraph (4)(a) 3. shall monitor during two consecutive six-month monitoring periods by the date specified in paragraph (4)(a) 4.

3. Monitoring after Division specifies water quality parameter values for optimal corrosion control. After the Division specifies the value for water quality control parameters under paragraph (3), the system shall monitor during each subsequent six-month monitoring period, with the first monitoring period to begin on the date the Division specifies the optimal values under paragraph (3).

4. Reduced monitoring.

- (i) A small or medium-size water system that meets the lead and copper action levels during each of two consecutive six-month monitoring periods may reduce the number of samples in accordance with paragraph (7)(c), and reduce the frequency of sampling to once per year between the months of June and September of the calendar year immediately following the end of the second consecutive six-month monitoring period.

- (ii) Any water system that meets the lead and copper action levels and maintains the range of values for the water quality control parameters reflecting optimal corrosion control treatment specified by the Division under paragraph (3) during each of two consecutive six-month monitoring periods may reduce the frequency of monitoring to once per year between the months of June and September and reduce the number of lead and copper samples in accordance with paragraph (7)(c) if it receives written approval from the division. This sampling shall begin during the calendar year immediately following the end of the second consecutive six-month monitoring period. The Division shall review monitoring, treatment, and other relevant information submitted by the water system in accordance with paragraph (11) and shall notify the water system in writing when the Division determines the water system is eligible to commence reduced monitoring to once every three (3) years pursuant to this paragraph. The Division shall review, and where appropriate, revise its determination when the system submits new monitoring or treatment data, or when other data relevant to the number and frequency of tap sampling becomes available.

- (iii) A small or medium-size water system that meets the lead and copper action levels during three consecutive years of monitoring may reduce the frequency of monitoring for lead and copper from annually to once every three years. Sampling must still occur between the months of June and September of the year in which monitoring is required. Any water system that meets the lead and copper action levels and maintains the range of values for the water quality control parameters reflecting optimal corrosion control treatment specified by the Division under paragraph (3) during three consecutive years of monitoring may reduce the frequency from annually to once every three years if it receives written approval from the Division. Samples collected once every three years must be collected no later than every third calendar year. The Division shall review monitoring, treatment, and other relevant information submitted by the water system in accordance with paragraph (11) and shall notify the system in writing when it determines the system is eligible to reduce the frequency of monitoring to once every three years. The Division shall review, and where appropriate, revise its determination when the system submits new monitoring or treatment data, or when other data relevant to the number and frequency of tap sampling becomes available.

- (iv) A water system that reduces the number and frequency of sampling shall collect these samples from representative sites included in the original pool of targeted sampling sites identified in paragraph (7)(a)1. Systems sampling annually or less frequently shall conduct the lead and copper tap sampling during the months of June, July, August or September unless the Division has approved a different sampling period in accordance with paragraph (7)(d)4.(iv)(1).
 - (I) The Division, at its discretion, may approve a different period for conducting the lead and copper tap sampling for systems collecting a reduced number of samples. Such a period shall be no longer than four consecutive months and must represent a time of normal operation where the highest levels of lead are most likely to occur. For non-transient non-community water system that does not operate during the months of June, through September, and for which the period of normal operation where the highest levels of lead are most likely to occur is not known, the Division shall designate a period that represents a time of normal operation for the system. Any alternate reduced monitoring must meet criteria set forth in [40 CFR, part 141.86\(d\)\(4\)\(iv\)\(A\)](#).
 - (II) Systems monitoring annually, that have been collecting samples during the months of June through September and that receive Division approval to alter their sample collection period under paragraph (7)(d)4.(iv)(I), must collect their next round of samples during a time period that ends no later than 21 months after the previous round of sampling. Systems monitoring triennially that have been collecting samples during the months of June through September, and receive Division approval to alter the sampling collection period per paragraph (7)(d)4.(iv)(I), must collect their next round of samples during a time period that ends no later than 45 months after the previous round of sampling. Subsequent rounds of sampling must be collected annually or triennially, as requested by this rule. Small systems with waivers, granted pursuant to paragraph (7)(g), that have been collecting samples during the months of June through September and receive Division approval to alter their sample collection period under paragraph (7)(d)4.(iv)(I) must collect their next round of samples before the end of the 9-year period.

- (v) Any water system that demonstrates for two consecutive 6- month monitoring periods that the tap water lead level computed under paragraph (1)(c) 3. is less than or equal to 0.005 mg/L and the tap water copper level computed under paragraph (1)(c) 3. is less than or equal to 0.65 mg/L may reduce the number in accordance with paragraph (3) and reduce the frequency of sampling to once every three calendar years.

- (vi)
 - (I) A small or medium-size water system subject to reduced monitoring that exceeds the lead or copper action level shall resume sampling in accordance with paragraph (7)(d)3. and collect the number of samples for standard monitoring under paragraph (7)(c). Such a system shall also conduct water quality parameter monitoring in accordance with [40 CFR, Part 141.87\(b\), \(c\) or \(d\)](#) (as appropriate) during the monitoring period in which it exceeded the action level. Any such system may resume annual monitoring for lead and copper at the tap at the reduced number of sites specified in paragraph (7)(c) after it has completed two consecutive six-month rounds of monitoring with no action level exceeded.

 - (II) Any water system subject to the reduced monitoring frequency that fails to meet the lead or copper action level during any four-month monitoring period or that fails to operate at or above the minimum value or within the range of values for the water quality parameters specified by the Division for more than nine days in any six-month monitoring period shall conduct tap water sampling for lead and copper at the frequency specified in paragraph (7)(d)3., collect the number of samples specified for standard monitoring under paragraph (c), and shall resume monitoring for water quality parameters within the distribution system in accordance with [40 CFR, Part 141.87\(d\)](#). This standard tap water sampling shall begin no later than the six-month period beginning January 1 of the calendar year following the lead or copper action level exceedance or water quality parameter excursion. Such a system may resume reduced monitoring for lead and copper at the tap and for water quality parameters within the distribution system under the following conditions:
 - I. The system may resume annual monitoring for lead and copper at the tap at the reduced number of sites

specified in paragraph (7)(c) after it has completed two consecutive six-month rounds of monitoring that meet both lead and copper action levels and the system has received written approval from the Division that it is appropriate to resume reduced monitoring on an annual frequency. This sampling shall begin during the calendar year immediately following the end of the second consecutive six-month monitoring period.

- II. The system may resume triennial monitoring for lead and copper at the tap at the reduced number of sites after it demonstrates through subsequent rounds of monitoring that it meets the action level criteria for lead and copper and has received approval from the Division that it is appropriate to resume triennial monitoring.
 - III. The system may reduce the number of water quality parameter tap water samples required and the frequency with which it collects such samples in accordance with [40 CFR, Part 141.87\(e\)\(1\) and \(2\)](#). Such a system may not resume triennial monitoring for water quality parameters at the tap until it demonstrates that it has re-qualified for triennial monitoring, in accordance with [40 CFR, Part 141.87\(e\)\(2\)](#).
- (vii) Any water system subject to a reduced monitoring frequency under paragraph (7)(d)(4) shall notify the Division in writing of any upcoming long-term change in treatment or addition of a new source as described in [40 CFR, Part 141.90\(a\)\(3\)](#). The Division must review and approve the addition of a new source or long-term change in water treatment before it is implemented by the water system. The Division may require the system to resume sampling in accordance with paragraph (7)(d)3. and collect the number of samples specified for standard monitoring under paragraph (7)(c) or take other appropriate steps such as increased water quality parameter monitoring or re-evaluation of its corrosion control treatment given the potentially different water quality considerations.

- (e) Additional monitoring by systems. The results of any monitoring conducted in addition to the minimum requirements of this section shall be considered by the system and the Division in making any determinations (i.e., calculating the 90th percentile lead or copper level) under this subpart or [40 CFR Part 141.82](#).
- (f) Invalidation of lead or copper tap water samples. A sample invalidated under this paragraph does not count toward determining lead or copper 90th percentile levels under paragraph (1)(c) or toward meeting the minimum monitoring requirements of paragraph (7)(c).
 1. The Division may invalidate a lead or copper tap water sample if at least one of the following conditions is met.
 - (i) The laboratory establishes that improper sample analysis caused erroneous results.
 - (ii) The Division determines that the sample was taken from a site that did not meet the site selection criteria of this rule.
 - (iii) The sample container was damaged in transit.
 - (iv) There is substantial reason to believe that the sample was subject to tampering.
 2. The system must report the results of all samples to the Division and all supporting documentation for samples the system believes should be invalidated.
 3. To invalidate a sample under paragraph (7)(f)1., the decision and the rationale for the decision must be documented in writing. The Division may not invalidate a sample solely on the grounds that a follow-up sample result is higher or lower than that of the original sample.
 4. The water system must collect replacement samples for any samples invalidated under this section if, after the invalidation of one or more samples, the system has too few samples to meet the minimum requirements of paragraph (7)(c). Any such replacement samples must be taken as soon as possible, but no later than 20 days after the date the Division invalidates the sample or by the end of the applicable monitoring period, whichever occurs later. Replacement samples taken after the end of the applicable monitoring period shall not be used to meet the monitoring requirements of a subsequent monitoring period. The replacement samples shall be taken at the same locations as the invalidated samples or, if that is not possible, at locations other than those already used for sampling during the monitoring period.

(g) Monitoring waivers for small systems. Any small system that meets the criteria of [40 CFR, Section 141.86\(g\)](#) may apply to the Division to reduce the frequency of monitoring for lead and copper in accordance with the requirements of [40 CFR Section 141.86\(g\)](#).

(8) **Monitoring Requirements for Water Quality Parameters.** All large water systems and all small and medium-size systems that exceed the lead or copper action level shall monitor water quality parameters in addition to lead and copper in accordance with this paragraph. The requirements of this paragraph are summarized in a table at the end of [40 CFR, Part 141.87](#).

(a) Systems will have to monitor water quality parameters at different locations.

1. Representative taps throughout the distribution system (system can use total coliform sample sites). The system should take into account the number of persons served, the different sources of water, the different treatment methods employed by the system, and seasonal variability.
2. Samples are to be collected of the treated water from each source before entry point to the distribution system. If the system draws water from more than one source and the sources are combined before distribution, the system must sample at an entry point to the distribution system during periods of normal operating conditions (i.e., when water is representative of all sources being used).
3. Number of samples.
 - (i) Systems shall collect two tap samples for applicable water quality parameters during each monitoring period as described in paragraphs (8)(b) thru (8)(e). The following number of sites is required:

Distribution System Tap Sampling Requirements for Water Quality Parameters. (Other Than Lead and Copper)

System Size Population Served	Number of Distribution Sampling Sites Base Monitoring
100,001 or more	25
10,001 to 100,000	10
3,301 to 10,000	3
501 to 3,300	2
101 to 500	1
100 or fewer	1

- (ii) Except as provided in paragraph (8)(c), systems shall collect two samples for each water quality parameter at each entry point to the distribution system during each monitoring period as described in paragraph (8)(b). During each monitoring period specified in paragraphs (8)(c)-(8)(e), systems shall collect one sample for each applicable water quality parameter at each entry point to the distribution system.

- (b) Initial Sampling - All large water systems shall measure the water quality parameters listed below at distribution system taps and at each entry point to the distribution system during each six-month monitoring period (specified in paragraph (7)(d) 1.).
 - 1. pH;
 - 2. alkalinity;
 - 3. calcium;
 - 4. conductivity;
 - 5. orthophosphate, when an inhibitor containing phosphate is used;
 - 6. silica, when an inhibitor containing silica is used;
 - 7. Water temperature.

- (c) Monitoring after installation of corrosion control. All large systems which install optimal corrosion control treatment according to paragraph (7)(d) 2.(i) shall measure water quality parameters at the locations and frequencies listed below during each six month monitoring period. All small or medium size systems which install optimal corrosion treatment shall conduct such monitoring during each six-month monitoring period specified in paragraph (7)(d) 2.(ii) only when the system exceeds the lead and copper action level.
 - 1. At the required number of distribution system sites/taps, two samples every six months for:
 - (i) pH;
 - (ii) alkalinity;
 - (iii) orthophosphate, when an inhibitor containing phosphate is used;
 - (iv) silica, when an inhibitor containing silica is used;

- (v) calcium;
2. At each entry point to the distribution system, one sample every two weeks for:
- (i) pH;
 - (ii) when alkalinity is adjusted as part of optimal corrosion control, a reading of the dosage rate of the chemical used to adjust alkalinity, and the alkalinity concentration.
 - (iii) when a corrosion inhibitor is used as part of optimal corrosion control, a reading of the dosage rate of the inhibitor used, and the concentration of orthophosphate or silica.
- (d) Monitoring after the Division specifies water quality parameter values for optimal corrosion control will be as follows. The Division will specify the values for applicable water quality control parameters reflecting optimal corrosion control treatment in accordance with 40 CFR Part, 141.82(f). All large systems shall measure the applicable water quality parameters in accordance with paragraph (8)(c) and determine compliance with the requirements of paragraph (7)(d) 3. every six months with the first six-month period to begin on January 1 or July 1, whichever comes first, after the Division specifies optimal values under [40 CFR, Part 141.82\(f\)](#). Any small or medium-size system shall conduct such monitoring during each six-month period specified in this paragraph in which the system exceeds the lead and/or copper action level(s). For any such small and medium-size system that is subject to a reduced monitoring frequency pursuant to 391-3-5-.25(7)(d) 4. at the time of the action level exceedance, the start of the applicable six-month period under this paragraph shall coincide with the start of the applicable monitoring period under paragraph (7)(d) 4. Compliance with the division-designated optimal water quality parameter values shall be determined as specified under paragraph (7)(d) 3.
- (e) Reduced monitoring for water quality parameters.
- 1. Any water system that maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment during each of two consecutive six-month monitoring periods under paragraph (8)(d) shall continue monitoring at the entry point(s) to the distribution system as specified in paragraph (8)(c)2.. Such system may collect two tap samples for applicable water quality parameters from the following reduced number of sites during each six-month monitoring period.

System Size Population Served	Number of Distribution Sampling Sites Reduced Monitoring
100,001 or more	10
10,001 to 100,000	7
3,301 to 10,000	3
501 to 3,300	2
101 to 500	1
100 or fewer	1

- 2.
- (i) Any water system that maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment specified by the Division during three consecutive years of monitoring may reduce the frequency with which it collects the number of tap samples for applicable water quality parameters specified in paragraph (8)(e)1. from every six months to annually. This sampling begins during the calendar year immediately following the end of the monitoring period in which the third consecutive year of six-month monitoring occurs. Any water system that maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment specified by the Division under [40 CFR Part 141.82\(f\)](#) or Rule 391-3-5-.25(3) during three consecutive years of annual monitoring under this paragraph may reduce the frequency with which it collects the number of tap samples for applicable water quality parameters from annually to every three years. This sampling begins no later than the third calendar year following the end of the monitoring period in which the third consecutive year of monitoring occurs.
 - (ii) A water system may reduce the frequency with which it collects tap samples for applicable water quality parameters specified in paragraph (8)(e)1. to every three years if it demonstrates during two consecutive monitoring periods that its tap water lead level at the 90th percentile is less than or equal to the practical quantitation limit (PQL) for lead specified in paragraph (10), that its tap water copper level is less than or equal to 0.65 mg/L for copper in paragraph (2)(c), and that it also has maintained the range of values for the water quality parameters reflecting optimal corrosion control treatment specified by the division under paragraph (2)(d). Monitoring conducted every three years must be done no later than every third calendar year.

3. A water system that conducts sampling annually shall collect these samples evenly throughout the year so as to reflect seasonal variability.
4. Any water system subject to reduced monitoring frequency that fails to operate at or above the minimum value within the range of values for the water quality parameters specified by the Division under paragraph (3) shall resume distribution system tap water sampling in accordance with the number and frequency requirements in paragraph (8)(d). Such a water system may resume annual monitoring for water quality parameters at the tap at the reduced number of sites specified under paragraph (8)(e) 1. after it has completed two subsequent consecutive six-month rounds of monitoring that meet the criteria of that paragraph or may resume triennial monitoring for water quality parameters at the tap at the reduced number of sites after the water system demonstrates through subsequent rounds of monitoring that the water system meets the criteria of either paragraphs (8)(e)2.(i) or (e)2.(ii) or both.

(f) Additional monitoring by systems must be approved by the Division.

(9) Monitoring Requirements for Lead and Copper in Source Water.

- (a) Sample location, collection methods, and number of samples.
 1. A water system that fails to meet the lead or copper action level on the basis of routine tap samples collected in accordance with paragraph (7) shall collect lead and copper source water samples in accordance with the requirements regarding sample location, number of samples, and collection methods specified in [40 CFR, Part 141.88\(a\)\(1\)\(i\)-\(iv\) and \(A\)-\(B\)](#).
 2. Where the results of sampling indicate an exceedance of maximum permissible source water levels established under paragraph (4)(b) 4., the Division may require that one additional sample be collected as soon as possible after the initial sample was taken (but not to exceed two weeks) at the same sampling point. If a Division-required confirmation sample is taken for lead or copper, then the results of the initial and confirmation sample shall be averaged in determining compliance with the Division-specified maximum permissible levels. Any sample value below the detection limit shall be considered to be zero. Any value above the detection limit but below the PQL shall either be considered as the measured value or be considered one-half the PQL.
- (b) Monitoring frequency after system exceeds tap water action level. Any system that exceeds the lead or copper action level during routine tap water monitoring shall collect one source water sample from each entry point to the distribution system no later than six months after the end of the monitoring period during which the

action level was exceeded. For monitoring periods that are annual or less frequent, the end of the monitoring period is September 30 of the calendar year in which sampling occurs, or if the Division has established an alternate monitoring period, the last day of that period.

- (c) Monitoring frequency after installation of source water treatment. Any system which installs source water treatment pursuant to paragraph (4)(a) 2. shall collect an additional source water sample from each entry point to the distribution system during two consecutive six-month monitoring periods by the deadline specified in paragraph (4)(a) 4.
- (d) Monitoring frequency after Division specifies maximum permissible source water levels or determines that source water treatment is not needed.
 - 1. A system shall monitor at the frequency specified below in cases where the Division specifies maximum permissible source water levels under paragraph (4)(b) 4. or determines that the system is not required to install source water treatment under paragraph (4)(b) 2.
 - (i) A water system using only groundwater shall collect samples once during the three-year compliance period (as that term is defined in Rule [391-3-5-.02](#)) in effect when the applicable Division determination under paragraph (9)(d)1. is made. Such systems shall collect samples once during each subsequent compliance period. Triennial samples shall be collected every third year.
 - (ii) A water system using surface water (or a combination of surface and groundwater) shall collect samples once during each year, the first annual monitoring period to begin during the year in which the applicable Division determination is made under paragraph (9)(d)1. of this.
 - 2. A system is not required to conduct source water sampling for lead and/or copper if the system meets the action level for the specific contaminant in tap water samples during the entire source water sampling period applicable to the system under paragraphs (9)(d)1.(i) or (ii).
- (e) Reduced monitoring frequency.
 - 1. A water system using only ground water may reduce the monitoring frequency for lead and copper in source water to once during each nine-year compliance cycle, as is defined in [40 CFR, Part 141.2](#), provided the samples are collected no later than every ninth calendar year and if the system meets one of the following:

- (i) The system demonstrates that finished drinking water entering the distribution system has been maintained below the maximum permissible lead and copper concentrations specified by the Division under Rule 391-3-5-.25(1)(c) during at least three consecutive compliance periods under paragraph (9)(d)1.; or
 - (ii) The Division has determined that source water treatment is not needed and the system demonstrates that, at least three consecutive compliance periods in which sampling was conducted under paragraph (9)(d)1., the concentration of lead in source water was less than or equal to 0.005 mg/L and the concentration of copper in source water was less than or equal to 0.65 mg/L.
 - 2. A water system using surface water or a combination of surface and groundwater may reduce the monitoring frequency in paragraph (9)(d)1. to once during each nine-year compliance cycle, as is defined in [40 CFR, Part 141.2](#), provided the samples are collected no later than every ninth calendar year and if the system meets one of the following:
 - (i) The system demonstrates that finished drinking water entering the distribution system has been maintained below the maximum permissible lead and copper concentrations specified by the Division under paragraph (1)(c) during at least three consecutive years; or
 - (ii) The Division has determined that source water treatment is not needed and the system demonstrates that, for at least three consecutive years, the concentration of lead in source water was less than or equal to 0.005 mg/L and the concentration of copper in source water was less than or equal to 0.65 mg/L.
 - 3. A water system that uses a new source of water is not eligible for reduced monitoring for lead and/or copper until concentrations in samples collected from the new source during three consecutive monitoring periods are below the maximum permissible lead and copper concentrations specified in paragraph (4)(a) 5.
- (10) **Analytical Methods.** Analyses for lead, copper, pH, conductivity, calcium, alkalinity, orthophosphate, silica, and temperature shall be conducted in accordance with [40 CFR, Part 141.89](#).
- (11) **Reporting Requirements.** All water systems shall report all information to the Division in accordance with [40 CFR, Part 141.90](#).

- (12) **Record Keeping Requirements.** All systems subject to the requirements of this rule shall retain on its premises original records of all sampling data and analyses, reports, surveys, letters, evaluations, schedules, Division determinations, and any other information required in accordance with [40 CFR, Part 141.91](#).
- (13) **Treatment Techniques.**
- (a) These regulations establish treatment techniques in lieu of maximum contaminant levels for acrylamide and epichlorohydrin.
 - (b) Each public water system must certify annually in writing to the Division (using third party or manufacturer's certification) that when acrylamide and epichlorohydrin are used in drinking water systems, the combination (or product) of dose and monomer level does not exceed the levels specified as follows:
 - 1. Acrylamide = 0.05% dosed at 1 ppm (or equivalent);
 - 2. Epichlorohydrin = 0.01% dosed at 20 ppm (or equivalent); certifications can rely on manufacturers or third parties, as approved by the Division.

Rule 391-3-5-.26. Unregulated Contaminants Sampling and Analytical Requirements.

(1) Contaminant Monitoring.

Monitoring of the contaminants listed below in this section shall be conducted as follows:

- (a) All community and non-transient, non-community water systems shall monitor for the contaminants listed in paragraphs (e) and (f) of this section by the date specified in Table 1. Systems serving 10,000 or fewer persons are not required to monitor for the contaminants in this section after December 31, 1998.

TABLE 1 - MONITORING SCHEDULE BY SYSTEM SIZE

Population Served	Monitoring to Begin No Later Than
Over 10,000	January 1, 1993
3,300 to 10,000	January 1, 1994
Less than 3,300	January 1, 1996

- (b) Surface water systems shall sample at points in the distribution system representative of each water source or at entry points to the distribution system after application of treatment. The minimum number of samples is one year of quarterly samples per water source.
- (c) Ground water systems shall sample at points of entry to the distribution system representative of each well after any application of treatment. The minimum number of samples is one sample per entry point to the distribution system.
- (d) The Division may require confirmation samples for positive or negative results.
- (e) Group III Unregulated Volatile Organic Contaminants.

Group III Unregulated Volatile Organic Contaminants
Chloroform
Bromodichloromethane
Chlorodibromomethane
Bromoform
Dibromomethane
m-Dichlorobenzene
1,1-Dichloropropene
1,1-Dichloroethane
1,1,2,2-Tetrachloroethane
1,3-Dichloropropane
Chloromethane
Bromomethane
1,2,3-Trichloropropane
1,1,1,2-Tetrachloroethane

Chloroethane
2,2-Dichloropropane
o-Chlorotoluene
p-Chlorotoluene
Bromobenzene
1,3-Dichloropropene

(f) Group IV Unregulated Volatile Organic Contaminants.

Group IV Unregulated Volatile Organic Contaminants
1,2,4-Trimethylbenzene
1,2,3-Trichlorobenzene
n-Propylbenzene
n-Butylbenzene
Naphthalene
Hexachlorobutadiene
1,3,5-Trimethylbenzene
p-Isopropyltoluene
Isopropylbenzene
Tert-butylbenzene
Sec-butylbenzene
Fluorotrichloromethane
Dichlorofluoromethane
Bromochloromethane

- (g) Instead of performing the monitoring required by this section, a community water system or non-transient non-community water system serving fewer than 150 service connections may send a letter to the Division stating that the system is available for sampling. This letter must be sent to the Division by January 1, 1994. The system shall not send such samples to the Division, unless requested to do so by the Division.
- (h) All community and non-transient, non-community water systems shall repeat the monitoring required in Section 391-3-5-.26(1) no less than every five (5) years from the dates specified in Section 391-3-5-.26(1)(a).
- (i) The Division may allow the public water system to composite up to five samples when monitoring for substances listed in Section 391-3-5-.26(1)(e) and (f).

- (j) Analysis under this section shall only be conducted by laboratories certified by the Division in accordance with Section [391-3-5-29](#).

(2) Unregulated Contaminant Monitoring.

Monitoring of the contaminants listed in paragraphs (2)(k) and (2)(l) shall be conducted as follows:

- (a) Each community and non-transient, non-community water system shall take four consecutive quarterly samples at each sampling point for each contaminant listed in paragraph (2)(k) of this section and report the results to the Division. Monitoring must be completed by December 31, 1995.
- (b) Each community and non-transient non-community water system shall take one sample at each sampling point for each contaminant listed in paragraph (2)(l) of this section and report the results to the Division. Monitoring must be completed by December 31, 1995.
- (c) Each community and non-transient non-community water system may apply to the Division for a waiver from the requirements of paragraph (2)(a) and (b) of this section.
- (d) The Division may grant a waiver for the requirement of paragraph (2)(a) of this section based on the criteria specified in Section [391-3-5-22\(3\)\(f\)](#). The Division may grant a waiver from the requirement of paragraph (2)(b) of this section if previous analytical results indicate contamination would not occur, provided this data was collected after January 1, 1990.
- (e) Groundwater systems shall take a minimum of one sample at every entry point to the distribution system which is representative of each well after treatment (hereafter called a sampling point). Each sample must be taken at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant.
- (f) Surface water systems shall take a minimum of one sample at points in the distribution system that are representative of each source or at each entry point to the distribution system after treatment (hereafter called a sampling point.) Each sample must be taken at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant. [Note: For purposes of this paragraph, surface water systems include systems with a combination of surface and ground sources.]
- (g) If the system draws water from more than one source and the sources are combined before distribution, the system must sample at an entry point to the

distribution system during periods of normal operating conditions (i.e., when water representative of all sources is being used).

- (h) The Division may require a confirmation sample for positive or negative results.
- (i) The Division may reduce the total number of samples a system must analyze by allowing the use of compositing. Composite samples from a maximum of five sampling points are allowed. Compositing of samples must be done in the laboratory and the composite sample must be analyzed within 14 days of collection. If the population served by the system is greater than 3,300 persons, then compositing may only be permitted by the Division at sampling points within a single system. In systems serving fewer than or equal to 3,300 persons, the Division may permit compositing among different systems provided the 5-sample limit is maintained.
- (j) Instead of performing the monitoring required by this section, a community water system or non-transient non-community water system serving fewer than 150 service connections may send a letter to the Division stating that the system is available for sampling. This letter must be sent to the Division by January 1, 1994. The system shall not send such samples to the Division, unless requested to do so by the Division.
- (k) Listed below are the unregulated organic contaminants. The analytical method shall be in accordance with [40 CFR, Part 141.40](#).

Unregulated Organic Contaminants
Aldrin
Butachlor
Carbaryl
Dicamba
Dieldrin
3-Hydroxycarbofuran
Methomyl
Metolachlor
Metribuzin
Propachlor

- (l) Listed below are the unregulated inorganic contaminants. The analytical method shall be in accordance with [40 CFR, Part 141.40](#):

- (m)

Unregulated Inorganic Contaminants
Sulfate

- (n) Analysis under this section shall only be conducted by laboratories certified by the Division.

(3) Special Monitoring for Sodium.

- (a) Suppliers of water for community public water systems shall collect and analyze one sample per plant at the entry point of the distribution system for the determination of sodium concentration levels; samples must be collected and analyzed annually for systems utilizing surface water sources in whole or in part, and at least every three years for systems utilizing solely ground water sources. The minimum number of samples required to be taken by the system shall be based on the number of treatment plants used by the system, except that multiple wells drawing raw water from a single aquifer may, with the Division approval, be considered one treatment plant for determining the minimum number of samples. The supplier of water may be required by the Division to collect and analyze water samples for sodium more frequently in locations where the sodium content is variable.
- (b) The supplier of water shall report to the Division the results of the analyses for sodium within the first 10 days of the month following the month in which the sample results were received or within the first 10 days following the end of the required monitoring period as stipulated by the Division, whichever of these is first, unless such analysis is performed by the Division. If more than annual sampling is required the supplier shall report the average sodium concentration within 10 days of the month following the month in which the analytical results of the last sample used for the annual average was received.
- (c) The supplier of water shall notify appropriate local and state public health officials of the sodium levels by written notice by direct mail within three months. A copy of each notice required to be provided by this paragraph shall be sent to the Division within 10 days of its issuance. The supplier of water is not required to notify appropriate local and state public health officials of the sodium levels where the Division provides such notices in lieu of the supplier.
- (d) Analyses for sodium shall be performed in accordance with the Federal Regulations [40 CFR, Part 141.41\(d\)](#) procedures.
- (e) Initial analyses for sodium for new community public water systems shall be completed within one year from the effective date of the permit to operate.

(4) Special Monitoring for Corrosivity Characteristics.

- (a) Suppliers of water for community public water systems when required by the Division shall collect samples from a representative entry point to the water distribution system for the purpose of analysis to determine the corrosivity characteristics of the water.

1. The supplier shall collect two samples per plant for analysis for each plant using surface water sources wholly or in part or more if required by the Division one during mid-winter and one during midsummer. The supplier of the water shall collect one sample per plant for analysis for each plant using ground water sources or more if required by the Division. The minimum number of samples required to be taken by the system shall be based on the number of treatment plants used by the system, except that multiple wells drawing raw water from a single aquifer may, with the Division approval, be considered one treatment plant for determining the minimum number of samples.
 2. Determination of the corrosivity characteristics of the water shall include measurement of pH, calcium, hardness, alkalinity, temperature, total dissolved solids (total filterable residue), and calculation of the Langelier Index in accordance with subparagraph (c) below. The determination of corrosivity characteristics shall only include one round of sampling (two samples per plant for surface water and one sample per plant for ground water sources). However, the Division has the discretion to require monitoring for additional parameters which may indicate corrosivity characteristics, such as sulfates and chlorides. In certain cases, the Aggressive Index, as described in subparagraph (c), can be used instead of the Langelier Index; the supplier shall request in writing to the Division and the Division will make this determination.
- (b) The supplier of water shall report to the Division the results of the analyses for the corrosivity characteristics within the first 10 days of the month following the month in which the sample results were received, unless the analysis is conducted by the Division. If more frequent sampling is required by the Division, the supplier can accumulate the data and shall report each value within 10 days of the month following the month in which the analytical results of the last sample was received.
 - (c) Analyses conducted to determine the corrosivity of the water shall be made in accordance with [40 CFR Part 141.42\(c\)](#).
 - (d) When required by the Division, the supplier of water for community and non-transient, non-community public water systems shall implement a corrosion control program satisfactory to the Division to insure that the drinking water is not unduly corrosive.

Amended: F. June 8, 2001; eff. June 28, 2001.

Rule 391-3-5-.27. Monitoring Frequency and Analytical Methods for Radioactivity in Community Water Systems.

(1) Monitoring Requirements for Gross Alpha Particle Activity, Radium-226, Radium-228, and Uranium.

- (a) Compliance with Rule [391-3-5-.18\(5\)](#) shall be based on the analysis of an annual composite of four consecutive quarterly samples or the average of the analyses of four samples obtained at quarterly intervals.
 1. A gross alpha particle activity measurement may be substituted for the required Radium-226 and Radium-228 analysis provided that the measured gross alpha particle activity does not exceed 5 pCi/L, at a confidence level of 95 percent (1.65 [LOWER CASE SIGMA], where [LOWER CASE SIGMA] [sigma] is the standard deviation of the net counting rate of the sample). In localities where Radium-228 may be present in drinking water, Radium-226 and/or Radium-228 analyses are required when the gross alpha particle activity exceeds 2 pCi/L.
 2. When the gross alpha particle activity exceeds 5 pCi/L, the same or an equivalent sample shall be analyzed for Radium-226. If the concentration of Radium-226 exceeds 3 pCi/L the same or an equivalent sample shall be analyzed for Radium-228.
- (b) The initial analysis required by subparagraph (1)(a) for new water systems shall be completed within two years from the effective date of the permit to operate.
- (c) Suppliers of water shall monitor at least once every four years following the procedure required by subparagraph (1)(a). At the discretion of the Director when an annual record taken in conformance with subparagraph (1)(a) has established that the average annual concentration is less than half the maximum contaminant levels established by Rule [391-3-5-.18\(6\)](#), analysis of a single sample may be substituted for the quarterly sampling procedure required by subparagraph (1)(a).
 1. More frequent monitoring shall be conducted when ordered by the Director in the vicinity of mining or other operations which may contribute alpha particle radioactivity to either surface or ground water sources of drinking water.

2. A supplier of water shall monitor in conformance with subparagraph (1)(a) within one year of the introduction of a new water source for a community water system. More frequent monitoring shall be conducted when ordered by the Director in the event of possible contamination or when changes in the distribution system or treatment process occur which may increase the concentration of radioactivity in drinking water.
 3. A community water system using two or more sources having different concentrations of radioactivity shall monitor each source of water, in addition to water from a free flowing drinking water tap, when ordered by the Director.
 4. Monitoring for compliance with Rule [391-3-5-.18\(5\)](#) after the initial period need not include Radium-228 except when required by the Director provided, that the average annual concentration of Radium-228 has been assayed at least once using the quarterly sampling procedure required by subparagraph (1)(a).
 5. Suppliers of water shall, as ordered by the Director, conduct annual monitoring of any community water system in which the Radium-228 concentration exceeds 3 pCi/L.
- (d) If the MCL for gross alpha particle activity or total radium as set forth in Rule [391-3-5-.18\(5\)](#) is exceeded, the supplier of a community water system shall give notice to the Division pursuant to Rule [391-3-5-.30](#) and notify the public pursuant to Rule [391-3-5-.32](#). Monitoring at quarterly intervals shall be continued until the annual average concentration no longer exceeds the maximum contaminant level or until a monitoring schedule as a condition to a permit, variance, exemption or enforcement action shall become effective.
- (e) The Division may require more frequent monitoring than specified in this section, or may require confirmation samples at its discretion. The results of the initial and confirmation samples will be averaged for use in compliance determinations.
- (f) Compliance with Rule [391-3-5-.18\(5\)](#) will be determined based on the analytical result(s) obtained at each sampling point. If one sampling point is in violation of an MCL, the system is in violation of the MCL. Systems must include all samples taken and analyzed under the provisions of this section in determining compliance, even if that number is greater than the minimum required.
- (2) **Monitoring Requirements for Man-made Radioactivity in Community Water Systems.**
- (a) Within two years following June 24, 1977 systems using surface water sources and serving more than 100,000 persons and such other community water systems

as are designated by the Division shall be monitored for compliance with Rule [391-3-5-.18\(5\)](#) by analysis of a composite of four consecutive quarterly samples or analysis of four quarterly samples. Compliance with Rule [391-3-5-.18\(5\)](#) may be assumed without further analysis if the average annual concentrations of tritium and strontium-90 are less than those listed in Table A, provided, that in no case shall the sum of their annual dose equivalents to bone marrow exceed 4 milligrams per year.

1. If the gross beta particle activity exceeds 50 pCi/L, an analysis of the sample must be performed to identify the major radioactive constituents present and the appropriate organ and total body doses shall be calculated to determine compliance with Rule [391-3-5-.18\(5\)](#).
 2. Suppliers of water shall conduct additional monitoring, as ordered by the Director, to determine the concentration of man-made radioactivity in principal watersheds designated by the Division.
 3. At the discretion of the Director suppliers of water utilizing only ground waters may be required to monitor for man-made radioactivity.
- (b) After the initial analysis required by subparagraph (2)(a) suppliers of water shall monitor at least every four years following the procedure given in subparagraph (2)(a).
- (c) Within two years of June 24, 1977 the supplier of any community water system designated by the Division as utilizing waters contaminated by effluents from nuclear facilities shall initiate quarterly monitoring for gross beta particle and iodine-131 radioactivity and annual monitoring for strontium-90 and tritium.
1. Quarterly monitoring for gross beta particle activity shall be based on the analysis of monthly samples or the analysis of a composite of three monthly samples. The former is recommended. If the gross beta particle activity in a sample exceeds 15 pCi/L, the same or an equivalent sample shall be analyzed for strontium-89 and cesium-134. If the gross beta particle activity exceeds 50 pCi/L, an analysis of the sample must be performed to identify the major radioactive constituents present and the appropriate organ and total body doses shall be calculated to determine compliance with Rule [391-3-5-.18\(5\)](#).
 2. For iodine-131, a composite of five consecutive daily samples shall be analyzed once each quarter. As ordered by the Director, more frequent monitoring shall be conducted when iodine-131 is identified in the drinking water.

3. Annual monitoring for strontium-90 and tritium shall be conducted by means of the analysis of a composite of four consecutive quarterly samples or analysis of four quarterly samples. The latter procedure is recommended.
 4. The Division may allow the substitution of environmental surveillance data taken in conjunction with a nuclear facility for direct monitoring of man-made radioactivity by the supplier of water where the Division determines such data is applicable to a particular community water system.
- (d) If the average annual maximum contaminant level for manmade radioactivity set forth in Rule [391-3-5-.18\(5\)](#) is exceeded, the operator of a community water system shall give notice to the Division pursuant to Rule [391-3-5-.30](#) and to the public as required by Rule [391-3-5-.32](#). Monitoring at monthly intervals shall be continued until the concentration no longer exceeds the maximum contaminant level or until a monitoring schedule as a condition to a permit, variance, exemption or enforcement action shall become effective.
- (3) **Sample Collection and Analysis.** Upon written direction of the Director, the supplier shall collect and submit drinking water samples for analysis in accordance with the schedule furnished. The Division shall have the discretion to delete results of obvious sampling or analytic errors. CWSs must conduct more frequent monitoring when ordered by the State in the event of possible contamination or when changes in the distribution system or treatment processes occur which may increase the concentration of radioactivity in finished water.
 - (4) **Analytical Methods.** Analytical methods for measurements, detection limits and determining compliance with maximum contaminant levels listed in Rule [391-3-5-.18](#) for radioactivity shall be in accordance with [40 CFR, Part 141.25](#).
 - (5) **Monitoring Requirements Effective December 7, 2003.** All existing community water systems (CWSs) must conduct initial monitoring to determine compliance with this rule between December 7, 2003 and December 31, 2007. CWSs must sample each entry point to the distribution system for four consecutive quarters. All existing CWSs using ground water, surface water or systems using both ground and surface water systems must sample at every entry point to the distribution system that is representative of all sources being used under normal operating conditions. The system must take each sample at the same sampling point unless conditions make another sampling point more representative of each source or the Division has designated a distribution system location, in accordance with [40 CFR § 141.26\(a\)\(2\)\(ii\)\(C\)](#).
 - (6) **New Sources.** All new CWSs or CWSs that use a new source of water shall begin to conduct initial monitoring within the first quarter after initiating use of the source.
 - (7) **Initial Monitoring Waiver.** For gross alpha particle activity, uranium, radium-226, and radium-228 monitoring, the Division may waive the final two quarters of initial

monitoring for a sampling point if the results of the samples from the previous two quarters are below the detection limit.

- (8) **Initial Monitoring Above MCL.** If the average of the initial monitoring results for a sampling point is above the MCL, the system must collect and analyze quarterly samples at the sampling point until the system has results from four consecutive quarters that are at or below the MCL, unless the system enters into another schedule as part of a formal compliance agreement with the Division.
- (9) **Reduced Monitoring.** The Division may allow community water systems to reduce the future frequency of monitoring from once every three years to once every six or nine years at each sampling point, based on the following criteria:
 - (a) If the average of the initial monitoring results for each contaminant (i.e., gross alpha particle activity, uranium, radium-226, or radium-228) is below the detection limit specified in Table B, in Sec. 141.25(c)(1), the system must collect and analyze for that contaminant using at least one sample at the sampling point every nine years.
 - (b) For gross alpha particle activity and uranium, if the average of the initial monitoring results for each contaminant is at or above the detection limit but at or below half (1/2) the MCL, the system must collect and analyze for that contaminant using at least one sample at that sampling point every six years. For combined radium-226 and radium-228, the analytical results must be combined. If the average of the combined initial monitoring results for radium-226 and radium-228 is at or above the detection limit but at or below half (1/2) the MCL, the system must collect and analyze for that contaminant using at least one sample at that sampling point every six years.
 - (c) For gross alpha particle activity and uranium, if the average of the initial monitoring results for each contaminant is above half (1/2) the MCL but at or below the MCL, the system must collect and analyze at least one sample at that sampling point every three years. For combined radium-226 and radium-228, the analytical results must be combined. If the average of the combined initial monitoring results for radium-226 and radium-228 is above half (1/2) the MCL but at or below the MCL, the system must collect and analyze at least one sample at that sampling point every three years.
 - (d) Systems must use the samples collected during the reduced monitoring period to determine the monitoring frequency for subsequent monitoring periods, (e.g., if a system's sampling point is on a nine year monitoring period, and the sample result is above half (1/2) MCL, then the next monitoring period for that sampling point is three years).
 - (e) If a system has a monitoring result that exceeds the MCL while on reduced monitoring, the system must collect and analyze quarterly samples at that sampling point until the system has results from four consecutive quarters that are

below the MCL, unless the system enters into another schedule as part of a formal compliance agreement with the Division.

- (10) **Compositing.** To fulfill quarterly monitoring requirements for gross alpha particle activity, radium-226, radium-228, or uranium, a system may composite up to four consecutive quarterly samples from a single entry point if analysis is done within a year of the first sample. The Division will treat analytical results from the composited as the average analytical result to determine compliance with the MCLs and the future monitoring frequency. If the analytical result from the composited sample is greater than half (1/2) MCL, the Division may direct the system to take additional quarterly samples before allowing the system to sample under a reduced monitoring schedule.
- (11) **Gross Alpha Particle Activity.** A gross alpha particle activity measurement may be substituted for the required radium-226 measurement provided that the measured gross alpha particle activity does not exceed 5 pCi/L. A gross alpha particle activity measurement may be substituted for the required uranium measurement provided that the measured gross alpha particle activity does not exceed 15 pCi/L. The gross alpha measurement shall have a confidence interval of 95% (1.65 [LOWER CASE SIGMA], where [LOWER CASE SIGMA] is the standard deviation of the net counting rate of the sample) for radium-226 and uranium. When a system uses a gross alpha particle activity measurement in lieu of a radium-226 and/or uranium measurement, the gross alpha particle activity analytical result will be used to determine the future monitoring frequency for radium-226 and/or uranium. If the gross alpha particle activity result is less than detection, the detection limit will be used to determine compliance and the future monitoring frequency.
- (12) **Monitoring and Compliance Requirements for Beta Particle and Photon Radioactivity.** To determine compliance with the maximum contaminant levels in [40 CFR Sec. 141.66\(d\)](#) for beta particle and photon radioactivity, a system must monitor at a frequency as follows:
 - (a) Community water systems (both surface and ground water) designated by the Division as vulnerable must sample for beta particle and photon radioactivity. Systems must collect quarterly samples for both beta emitters and annual samples for tritium and strontium-90 at each entry point to the distribution system (hereafter called a sampling point), beginning within one quarter after being notified by the Division. Systems already designated by the Division must continue to sample until the Division reviews and either reaffirms or removes the designation.
 1. If the gross beta particle activity minus the naturally occurring potassium-40 beta particle activity at a sampling point has a running annual average (computed quarterly) less than or equal to 50 pCi/L (screening level), the Division may reduce the frequency of monitoring at that sampling point to

once every 3 years. Systems must collect all samples required in paragraph 12(a) during the reduced monitoring period.

2. For systems in the vicinity of a nuclear facility, the Division may allow the CWS to utilize environmental surveillance data collected by the nuclear facility in lieu of monitoring at the system's entry point(s), where the Division determines if such data is applicable to a particular water system. In the event that there is a release from a nuclear facility, systems which are using surveillance data must begin monitoring at the community water system's entry point(s) in accordance with paragraph 12(a) of this rule.
- (b) Community water systems (both surface and ground water) designated by the Division as utilizing waters contaminated by effluents from nuclear facilities must sample for beta particle and photon radioactivity. Systems must collect quarterly samples for beta emitters and iodine-131 and annual samples for tritium and strontium-90 at each entry point to the distribution system (hereafter called a sampling point), beginning within one quarter after being notified by the Division. Systems already designated by the Division as systems using waters contaminated by effluents from nuclear facilities must continue to sample until the Division reviews and either reaffirms or removes the designation.
1. Quarterly monitoring for gross beta particle activity shall be based on the analysis of monthly samples or the analysis of a composite of three monthly samples. The former is recommended.
 2. For iodine-131, a composite of five consecutive daily samples shall be analyzed once each quarter. As ordered by the Division, more frequent monitoring shall be conducted when iodine-131 is identified in the finished water.
 3. Annual monitoring for strontium-90 and tritium shall be conducted by means of the analysis of a composite of four consecutive quarterly samples or analysis of four quarterly samples. The latter procedure is recommended.
 4. If the gross beta particle activity beta minus the naturally occurring potassium-40 beta particle activity at a sampling point has a running annual average (computed quarterly) less than or equal to 15 pCi/L, the Division may reduce the frequency of monitoring at that sampling point to every 3 years. Systems must collect the same type of samples required in paragraph 12(b) during the reduced monitoring period.
 5. For systems in the vicinity of a nuclear facility, the Division may allow the CWS to utilize environmental surveillance data collected by the nuclear facility in lieu of monitoring at the system's entry point(s), where the

Division determines if such data is applicable to a particular water system. In the event that there is a release from a nuclear facility, systems which are using surveillance data must begin monitoring at the community water system's entry point(s) in accordance with paragraph 12(b).

- (c) Community water systems designated by the Division to monitor for beta particle activity and photon radioactivity cannot apply to the Division for a waiver from the monitoring frequencies specified in paragraphs 12(a) or 12(b).
 - (d) Community water systems may analyze for naturally occurring potassium-40 beta particle activity from the same or equivalent sample used for the gross beta particle activity analysis. Systems are allowed to subtract the potassium-40 beta particle activity value from the total gross beta particle activity value to determine if the screening level is exceeded. The potassium-40 beta particle activity must be calculated by multiplying elemental potassium concentrations (in mg/L) by a factor of 0.82.
 - (e) If the gross beta particle activity minus the naturally occurring potassium-40 beta particle activity exceeds the screening level, an analysis of the sample must be performed to identify the major radioactive constituents present in the sample and the appropriate doses must be calculated and summed to determine compliance with [40 CFR Sec. 141.66\(d\)\(1\)](#), using the formula in [40 CFR Sec. 141.66\(d\)\(2\)](#). Doses must also be calculated and combined for measured levels of tritium and strontium to determine compliance.
- (13) **Monthly Sampling.** Systems must monitor monthly at the sampling point(s) which exceed the maximum contaminant level in [40 CFR Sec. 141.66\(d\)](#) beginning the month after the exceedance occurs. Systems must continue monthly monitoring until the system has established, by a rolling average of 3 monthly samples, that the MCL is being met. Systems who establish that the MCL is being met must return to quarterly monitoring until they meet the requirements set forth in paragraphs (12)(a)(1) or 12(b)(4).
- (14) **Running Annual Average.** For systems monitoring more than once per year, compliance with the MCL is determined by a running annual average at each sampling point. If the average of any sampling point is greater than the MCL, then the system is out of compliance with the MCL.
- (15) **Exceeding MCL.** For systems monitoring more than once per year, if any sample result will cause the running average to exceed the MCL at any sample point, the system is out of compliance with the MCL immediately.
- (16) **Running Annual Average Calculation.** If a system does not collect all required samples when compliance is based on a running annual average of quarterly samples, compliance will be based on the running average of the samples collected.

- (17) **Detection Limit and Running Annual Average Calculation.** If a sample result is less than the detection limit, zero will be used to calculate the annual average, unless a gross alpha particle activity is being used in lieu of radium-226 and/or uranium. If the gross alpha particle activity result is less than detection, half (1/2) the detection limit will be used to calculate the annual average.
- (18) **MCLGs.** The Maximum Contaminant Level Goal (MCLG) for Combined radium-226 and radium-228, Gross alpha particle activity, Beta particle and photon radioactivity, and uranium is zero.
- (19) **MCLs.** The Maximum Contaminant Level (MCL) for radioactive particles is as follows:
- (a) MCL for combined radium-226 and radium-228. The maximum contaminant level for combined radium-226 and radium-228 is 5 pCi/L. The combined radium-226 and radium-228 value is determined by the addition of the results of the analysis for radium-226 and the analysis for radium-228.
 - (b) MCL for gross alpha particle activity (excluding radon and uranium). The maximum contaminant level for gross alpha particle activity (including radium-226 but excluding radon and uranium) is 15 pCi/L.
 - (c) MCL for beta particle and photon radioactivity. The average annual concentration of beta particle and photon radioactivity from man-made radionuclides in drinking water must not produce an annual dose equivalent to the total body or any internal organ greater than four millirem per year (4 mrem/yr).
 - (d) MCL for uranium. The maximum contaminant level for uranium is 30 µg/L.
- (20) **Best available technology.** [40 CFR Parts 141.66\(g\)](#) and [141.66\(h\)](#) are incorporated by reference.

Rule 391-3-5-.28. Alternative Analytical Techniques.

With the written permission of the Director, concurred in by the administrator of the U.S. Environmental Protection Agency, an alternative analytical technique may be employed. An alternative technique shall be acceptable only if its accuracy as it relates to the determination of compliance with any maximum contaminant level. The use of the alternative analytical techniques shall not decrease the frequency of monitoring required by these rules, in accordance with [40 CFR, Part 141.27](#).

Rule 391-3-5-.29. Certified Laboratories.

- (1) **Laboratories Approved by the Division.** For the purpose of determining compliance with Rules [391-3-5-18](#), .19, .20, .21, .22, .23, .24, .25, .26, .27, .28, .52, .53, .54 and .55, samples may be considered only if they have been analyzed by a laboratory approved by the Division or by EPA, in accordance with [40 CFR Part 141.28](#), except that measurements for turbidity, disinfectant residual, fluoride residual, temperature, pH, conductivity, calcium, alkalinity, orthophosphate, and silica may be performed by any person acceptable to the Division. Fluoride analysis for determining compliance with MCL must be conducted by a laboratory approved by the Division or by EPA.
- (2) **Laboratory Personnel Changes.** All drinking water analysis laboratories certified by the Division must notify the Division of personnel changes within thirty (30) days from the time of the change.
- (3) **Division-Collected Samples.** Nothing in this Chapter shall be construed to preclude the Division or any duly designated representative of the Division from taking samples or from using the results from such samples to determine compliance by a supplier of water with the applicable requirements of this Chapter.

Rule 391-3-5-.30. Reporting Requirements.

- (1) **Reporting Period.** Except where a shorter period is specified by the Director, the supplier of water shall report to the Division the results of any test measurement or analysis required by this Chapter within:
 - (a) the first ten days following the month in which the results are received; or
 - (b) the first ten days following the end of the required monitoring period as stipulated by the Division, whichever of these is shortest. Note: Test measurements and results should be reported on the Division's reporting forms. Copies of these forms can be found on the Division web page.
- (2) **Violation.** Failure to comply with paragraphs (1)(a) and (b) of Rule 391-3-5-.30 will result in a monitoring/reporting violation.
- (3) **Analysis by Division Laboratory.** The supplier of water is not required to report analytical results to the Division in cases where the Division's laboratory performs the analysis and reports the results to the Division's office which would normally receive such notification from the supplier.
- (4) **Analysis by Non-Division Laboratory.** The supplier of water is not required to report analytical results to the Division in cases where the Division's laboratory performs the analysis and reports the results to the Division's office, which would normally receive such notification from the supplier. When the Division's laboratory does not perform the analysis, and the supplier chooses to use a laboratory certified by the Division, analytical results shall be reported to the Division's office in a manner that is specified by the Division.
- (5) **Records Maintained by Public Water System.** The water supply system shall submit to the Division within the time stated in the request copies of any records required to be maintained under Rule [391-3-5-.15](#) hereof or copies of any documents then in existence which the Division is entitled to inspect pursuant to the authority of the Act.
- (6) **Failure to Comply with National Primary Drinking Water Regulation.** Each system, upon discovering that an exceedance of any National Primary Drinking Water Regulation has occurred, must report that occurrence to the Division by telephone within forty-eight (48) hours or before the end of the next business day, whichever is earlier, followed by a written report, except where a different reporting period is specified in federal regulations.

- (7) **Lead and Copper Information.** All water systems shall report all lead and copper information in accordance with [40 CFR Part 141.90](#) when applicable. Separate reports are required for each of the following:
1. tap water monitoring for lead and copper, and other water quality monitoring;
 2. source water monitoring;
 3. corrosion control treatment;
 4. source water treatment;
 5. lead service line replacement;
 6. public education programs.
- (8) **Reserved.**
- (9) **Disinfection Byproducts Information.** Systems monitoring for disinfection by products (TTHM, HAA5, chlorite, bromate) under the requirements of [40 CFR § 141.132\(b\)](#) must report the information specified in section [40 CFR § 141.134\(b\)](#).
- (10) **Disinfectants Information.** Systems monitoring for disinfectants (chlorine, chloramines, chlorine dioxide) under the requirements of [40 CFR § 141.132\(c\)](#) must report the information specified in Section [40 CFR § 141.134\(c\)](#).
- (11) **Disinfection Byproduct Precursors Information.** Systems monitoring for disinfection byproduct precursors (TOC) under the requirements of [40 CFR § 141.132\(d\)](#) and required to meet the enhanced coagulation or enhanced softening requirements in 141.135(b)(2) or (3) or meeting one or more of the alternative compliance criteria in 141.135(a)(2) or (3) must report the information specified in section [40 CFR § 141.134\(d\)](#).
- (12) **Conventional or Direct Filtration Information for Systems Serving At Least 10,000 Persons.** Beginning January 1, 2002, in addition to the requirement in this Chapter, the Subpart H water systems serving at least 10,000 people and providing conventional filtration treatment or direct filtration must report monthly to the Division the information specified in [40 CFR § 141.175\(a\) and \(b\)](#). Those systems using filtration technologies other than conventional filtration treatment, direct filtration, slow sand filtration, or diatomaceous earth filtration must report monthly to the Division the information in [40 CFR § 141.175\(a\)](#) in lieu of reporting in (b)(1).
- (13) **Content of Consumer Confidence Reports.** [40 CFR § 141.153](#) is hereby incorporated by reference.
- (14) **Filtration Information for Systems Serving Less Than 10,000 Persons.** In addition to the requirements in this Chapter, the Subpart H water systems serving fewer than 10,000

people must report the required items at the frequency described in [40 CFR Subpart T § 141.570](#).

- (15) **Filter Backwash Information.** All subpart H systems that employ conventional filtration or direct filtration treatment and that recycle spent filter backwash water, thickener supernatant, or liquids from dewatering processes must report the information specified in [40 CFR § 141.76\(b\)\(1\) and \(2\)](#) to the Division no later than December 8, 2003.
- (16) **Waterborne Disease Outbreak.** Each system, upon discovering that a waterborne disease outbreak potentially attributable to that water system has occurred, must report that occurrence to the Division by telephone within forty-eight (48) hours or before the end of the next business day, whichever is earlier, followed by a written report.

Rule 391-3-5-.31. Monitoring of Consecutive Public Water Systems.

Purchased water systems may be monitored as consecutive systems with the consent of the system involved and the approval of the Director. Monitoring schedules and reporting procedures for consecutive water systems must be in the form and manner as specified by the Division.

Repealed: New Rule, same title, adopted. F. Jun. 25, 1992; eff. July 15, 1992.

Amended: New title "Monitoring of Consecutive Public Water Systems. Amended." F. Jan. 8, 2014; eff. Jan. 28, 2014.

Rule 391-3-5-.32. Public Notification.

- (1) **Public Notification Requirements.** [40 CFR, Part 141, Subpart Q §§ 141.201](#) through [141.210](#), including Appendices A, B and C to subpart Q of Part 141, is hereby incorporated by reference. Any amendments to any part of the appendices in 40 CFR, Subpart Q are hereby incorporated by reference. If a community or non-community water system fails to comply with an applicable primary maximum contaminant level or maximum residual disinfectant level established in Rule [391-3-5-.18](#); fails to comply when applicable with the secondary maximum contaminant level for fluoride established in Rule [391-3-5-.19](#); fails to comply with an applicable testing procedure established in Rules [391-3-5-.20](#), .21, .22, .23, .24, .25, .27, .52, .53, .54, or .55; is granted a variance or an exemption from an applicable maximum contaminant level; fails to comply with the requirements of any schedule prescribed pursuant to a variance or exemption; or fails to comply with any treatment technique requirement specified by the Director; or fails to perform any monitoring or reporting required pursuant to Rules [391-3-5-.20](#), .21, .22, .23, .24, .25, .26, .27, .30, .52, .53, .54, and .55; the supplier of water shall notify persons (including the mandatory health effects language) served by the system as required in 40 CFR, Part 141, Subpart Q. Other situations that require public notification include: occurrence of waterborne disease outbreak or other waterborne emergency; availability of unregulated contaminant monitoring data; detection of *E. Coli* in source water samples collected under Rule [391-3-5-.54\(3\)](#); exceedance of the nitrate MCL by non-community water systems, where granted permission by the Division in accordance with Rule [391-3-5-.18\(1\)\(b\)](#); and other situations not already listed and determined by EPD to require a public notice. The public water system, within ten (10) days of completing the public notification requirements under 40 CFR, Parts 141, Subpart Q for the initial public notice and any repeat notices, must submit to the Division a certification that it has fully complied with the public notification regulations. The public water system must include with this certification a representative copy of each type of notice distributed, published, posted, and made available to the persons served by the system and to the media.
- (2) **Public Notification of Lead Contamination.** The owner or operator of each community water system and each non-transient, non-community water system shall issue notice, in accordance with [40 CFR, Part 141.34](#), to persons served by the system that may be affected by lead contamination of their drinking water. The owner or operator shall provide notice under this rule even if there is no violation of the national primary drinking water regulation for lead.
- (3) **Provide Notice Prior to New Service.** The owner or operator of a community or non-community water system must deliver a copy of the most recent public notice for any outstanding violation of any maximum contaminant level, any maximum residual disinfectant level, any treatment technique requirement, any monitoring or reporting requirement, any variance or exemption schedule and other situations requiring public notice to all new consumers at the time service begins. The owner or operator of a non-community water system shall continuously post such public notice in conspicuous locations to inform new consumers for as long as the situation persists.
- (4) **Cryptosporidium Public Notice.** Special public notice for repeated failure to conduct monitoring of the source water for *Cryptosporidium* and for failure to determine bin

classification or mean *Cryptosporidium* level: 40 CFR, Subpart Q § 141.211, in its entirety, including Appendix A, is hereby incorporated by reference. The specified mandatory language must be included in the special notice.

- (5) **Non-Applicability.** Any reference to public notification requirements in [40 CFR 141.32](#) is not applicable.

Rule 391-3-5-.33. Variances and Exemptions.

- (1) Variances and exemptions from certain provisions of these regulations may be granted by the Director pursuant to O.C.G.A. Sec. [12-5-178](#) and [40 CFR § 141.4](#) and in the case of arsenic, [40 CFR § 142.20\(b\)](#).
- (2) Variances or exemptions from the MCLs for total coliforms and *E. coli* and variances from any of the treatment technique requirements of Subpart H systems may not be granted. As provided in [40 CFR § 142.304\(a\)](#), small systems variances are not available for rules addressing microbial contaminants, which would include 40 CFR Part 141 Subparts H, P, S, T, W, and Y.
- (3) The Division has stayed the effective date relating to the total coliform MCL of Rule [391-3-5-.18\(4\)\(a\)](#) for systems that demonstrate to the Division that the violation of the total coliform MCL is due to a persistent growth of total coliforms in the distribution system rather than fecal or pathogenic contamination, a treatment lapse or deficiency, or a problem in the operation or maintenance of the distribution system. This is stayed until March 31, 2016, at which time the total coliform MCL is no longer effective.

Rule 391-3-5-.34. Emergencies.

Whenever the Director finds that an emergency exist, presenting an imminent hazard to the public health, safety or welfare, requiring immediate action to protect the public health and to insure that the need for safe drinking water is met, he may, without notice or hearing, issue such order or orders as he deems necessary and appropriate to meet to emergency. Any such order shall cite the existence of an emergency and shall contain a brief statement of the reasons for his finding that an emergency exists. Such orders shall be immediately effective and any person affected thereby shall comply therewith immediately. Such orders shall, however, contain a notice of the time and place of a hearing scheduled within twenty (20) days from the issuance of such order before a Hearing Officer, appointed by the Department. Based upon the findings, of the Hearing Officer, the order shall be modified, revoked, or continued as the Hearing Officer deems appropriate.

Rule 391-3-5-.35. Inspections and Investigations.

- (1) **Access for Inspection or Investigation.** The Director, or his appointed agent, shall be permitted access in or upon any private or public property at all reasonable times for the purpose of inspecting or investigating conditions, processes, equipment, methods, treatment, facilities, or records relating to or associated with the operation of any water system, to determine applicability of and compliance with the Act and these rules, to investigate any apparent violation of the Act, and to make such other investigations as he deems advisable and necessary for the protection of the public health or welfare pursuant to the Act.
- (2) **Issue Orders for Compliance.** Based on the Director's findings in any such inspection or investigation, or upon denial of entry pursuant to the above paragraph, the Director may issue such orders as are necessary to insure compliance with the Act and these rules.

Amended: F. Jan. 8, 2014; eff. Jan. 28, 2014.

Rule 391-3-5-.37. State Primacy Maintenance.

- (1) Notwithstanding any other section, the requirements of these Safe Drinking Water Rules shall in any event be the same as the requirements of the National Primary Drinking Water Regulations in 40 CFR, Part 141 promulgated pursuant to Section 1412 of the Federal Act ([42 U.S.C. 300g-1](#)).
- (2) The Director may prescribed more stringent requirements than those specified by any other section of these Safe Drinking Water Rules when necessary to:
 - (a) meet any requirements of the Federal Act and Regulations; or
 - (b) safeguard the public health, safety and welfare.

Rule 391-3-5-.39. Public Water System Classification.

(1) **Purpose.** In accordance with Section 10 of the Certification of Water and Wastewater Treatment Plant Operators and Laboratory Analysts Act (O.C.G.A. Section [43-51-1](#)) the following classifications shall be considered as minimum levels, and the Division may classify any system or plant at a higher level if the complexity of the system or plant warrants such higher classification in the judgment of the Division. Any system or plant not fitting any of the following standard descriptions shall be classified individually according to the judgment of the Division. Where water is supplied to a distribution system from two or more sources, the classification may be set by the Division.

(2) **Minimum Classifications.** The following classifications shall be considered as minimum levels:

Public Water System Classification for Community and Non-transient Non-community Systems¹

System Type	Class I	Class II	Class III	Class IV
Surface water with conventional treatment plant	5.0 MGD or greater	4.99 MGD or less	n/a	n/a
Surface water with package or non-conventional treatment plant	1.0 MGD or greater	0.99 MGD or less	n/a	n/a
Surface water with approved high-rate filtration	3.0 gpm/sq.ft. or greater	Less than 3.0 gpm/sq.ft.	n/a	n/a
Groundwater under the direct influence of surface water	1.0 MGD or greater	Greater than 0.1 MGD to 0.99 MGD	0.1 MGD or less	n/a
Ground-water	50,000 or greater population	10,000 to 49,999 population	1,000 to 9,999 population	25 to 999 population
Distribution systems	Certification is required for the operator of public water distribution systems.			

Note: ¹ MGD is million gallons per day; gpm/sq.ft. is gallons per minute per square-foot filter surface area; n/a is not applicable.

(3) **Groundwater Transient Non-community Water Systems.** All Transient Non-community water systems with groundwater sources must have at least a Class IV operator certification.

- (4) **Surface Water Transient Non-community Water Systems.** Certification of Transient Non-community water systems with surface water will be specified in their permit to operate a public water system.
- (5) **Higher Classification.** When the complexity of water treatment warrants it, a higher classification may be required and specified in the permit to operate a public water system.

Rule 391-3-5-.40. Wellhead Protection.

- (1) **Purpose.** The following rule for wellhead protection serve to help protect wells and springs used as sources of water supply for community public water systems owned by and/or serving municipalities, counties, and authorities from nearby pollution sources.
- (2) **Development of Wellhead Protection Plan.** The Division shall develop a Wellhead Protection Plan for every well, well field or spring which is used as a source for a community public water supply owned by and/or serving a municipality, county, or an authority.
- (3) **Components of Wellhead Protection Plans.** Wellhead Protection Plans shall consist of five parts; namely:
 - (a) an identification and location of a Control Zone for each well or spring;
 - (b) an identification and location of each required Management Zone for each well or spring;
 - (c) an inventory of potential pollution sources in the designated wellhead protection areas;
 - (d) a management plan for potential pollution sources identified in the inventory; and
 - (e) if available, a contingency plan submitted by the supplier to the Division describing how alternate water supplies will be provided in case the well(s) in question become polluted. The Division shall develop all individual Wellhead Protection Plans consistent with the rules.

- (4) **Wellhead Protection Zones.** Every Wellhead Protection Area shall consist of two zones, as follows:
- (a) The Control Zone: Within this zone, the owner shall control all activities so that there are minimal sources of potential pollution in the immediate vicinity of the well bore.
 - (b) The Management Zone: Within this zone, certain potential pollution sources are prohibited or certain activities must be performed in accordance with the rules listed below. The size and shape of the management zone will vary according to aquifer type, aquifer hydraulic conductivity, pumpage rate, hydrologic province, and proximity to recharge.
- (5) **Control Zone.** All wells used as a source of public water supply for community public water systems owned by and/or serving municipalities, counties, or authorities shall have a control zone.
- (6) **Delineation of Management Zone.** The Division shall delineate the size and shape of the management zone of a wellhead protection area as defined below:
- (a) wells determined by the Division as drawing water only from confined aquifers shall have an inner management zone extending outward from the center of the borehole for a radius of 100 feet. No outer management zone is required for such wells.
 - (b) wells drawing water from unconfined aquifers as determined by the Division and springs, except those determined by the Division to lie in areas of karst, shall have an inner management zone extending outward from the center of the borehole or spring head for a radius of 250 feet.
 - (c) wells drawing water from unconfined aquifers as determined by the Division and springs, which the Division has identified as being in areas of karst, shall have an inner management zone extending outward from the center of the borehole or spring head for a radius of 500 feet.
 - (d) unconfined wells which the Division has determined utilize fractured crystalline rock aquifers shall have an outer management zone determined according to the "Health Method Curve" contained in the EPA approved Georgia Wellhead Protection Plan.
 - (e) unconfined aquifer wells determined by the Division as lying in karst regions and all springs shall have an outer management zone determined by hydrogeologic mapping or other method acceptable to the Division.
 - (f) Other wells not meeting the above criteria shall have their outer management zones determined by time of travel calculations (a minimum of a 5-year time of travel) or by volumetric calculations as appropriate.

- (7) **Inventory of Potential Pollution Sources.** The Division shall carry out an inventory of potential pollution sources within the control zone and management zones. Inventories shall be permanently maintained by the Division in computer data base format. Minimum information shall be the name and address of the owner of the well or spring, location of the well or spring, applicable permit data, the size and shape of the control and management zones, and the types of potential pollution sources. Inventories shall be carried out by the Division every ten (10) years.
- (8) **Inner and Outer Management Zones.** Within the inner and outer management zones of existing wells and springs, the following shall apply:
- (a) The Division shall not issue any new permits for municipal solid waste landfills, industrial waste landfills or construction/demolition waste landfills.
 - (b) The Division shall not issue any new permits for the land disposal of hazardous wastes.
 - (c) The Division shall require all new facilities permitted to handle, treat, store or dispose of hazardous waste or hazardous materials to perform such operations on an impermeable pad having a spill and leak collection system.
 - (d) The Division shall require all new agricultural waste impoundments to have an impermeable synthetic liner.
 - (e) The Division shall not issue any new permits for land application of wastewater or sludge.
 - (f) Deleted.
 - (g) The Division shall not issue permits for any new quarries or underground mines unless a hydrogeological investigation carried out by the applicant clearly demonstrates that operation of the quarry or mine will not pollute the well or spring or cause a reduction of ground water flow to the well or spring. Such investigation shall be performed by a professional engineer or professional geologist.
 - (h) The Division shall require that all new underground storage tanks installed shall meet the highest standards applicable under the Underground Storage Tank Act. All preexisting underground storage tanks shall be required to have ground water or vapor monitoring. All abandoned underground storage tanks shall meet the requirements of Section [391-3-15-.11](#) of the Rules for Underground Storage Tanks.
 - (i) The Division shall require all new wastewater treatment basins to have an impermeable synthetic liner.

- (9) **New Sources that are Wells or Springs.** For new wells or springs that are to be used as a source of water supply for a community public water system owned by and/or serving a municipality, county, or authority the following shall apply:
- (a) The Division shall not issue any permit for the addition of a new well or spring until the Division has delineated an appropriate wellhead protection area and carried out an inventory of potential pollution sources in the wellhead protection area of the proposed well or spring. The Division shall make provision for emergency situations.
 - (b) Once the owner and/or supplier requests the Divisions approval for the construction and/or development of a new well, well field, or spring, the Division shall require the Owner and/or supplier to provide the Division with the exact location, intended aquifer, projected depth and expected production of the planned well(s) or springs.
 - (c) The Division shall not issue approval for the construction and/ or development of well or spring where the following potential pollution sources are known to be present within the inner management zone:
 - 1. underground storage tanks;
 - 2. non-domestic septic tanks with drain fields;
 - 3. animal feedlots, poultry enclosures, or animal enclosures (this rule shall not be construed to apply to family pets);
 - 4. Environmental facilities permitted by the Division or other potential pollution sources identified in the inventory unless the Division has determined that there will be no releases to the ground or that such releases, if they occur, will not be a threat to public health and safety. Domestic septic systems that are identified within the inner management zone shall be excluded from the requirements of this section, provided they are located in accordance with the criteria specified in Rule [391-3-5-.07](#) of this Chapter.
- (10) **Notification.** The Division shall notify the owner of any regulated or unregulated chemicals which the Division believes, based on the potential pollution source inventory, may be present in the control zone or management zones of new or existing individual wells, well fields, or springs.
- (11) **Underground Injection Wells.** Within the inner management zone of existing wells and springs, the Division shall not issue any new permits for underground injection wells, with the exception of remediation wells.

Rule 391-3-5-41. Consumer Confidence Reports.

- (1) **Purpose and Applicability:** 40 CFR Part 141, Subpart O§141.151 is hereby incorporated by reference.
- (2) **Effective Dates.**
 - (a) Each existing community water system must deliver to all its customers its first report by October 19, 1999, its second report by July 1, 2000, and subsequent reports by July 1 annually thereafter. The first report must contain data collected during, or prior to, calendar year 1998 as prescribed in 40 CFR Part 141, Subpart O§141.153(d)(3). Each report thereafter must contain data collected during, or prior to, the previous calendar year.
 - (b) A new community water system must deliver to all its customers its first report by July 1 of the year after its first full calendar year in operation and annually thereafter.
 - (c) A community water system that sells water to another community water system must deliver the applicable information required in 40 CFR Part 141, Subpart O§141.153 to the buyer system:
 1. No later than April 19, 1999, by April 1, 2000, and by April 1 annually thereafter or
 2. On a date mutually agreed upon by the seller and the purchaser, and specifically included in a contract between the parties.
- (3) **Content of the reports:** 40 CFR Part 141, Subpart O§141.153 is hereby incorporated by reference.
- (4) **Required additional health information:** 40 CFR Part 141, Subpart O§141.154 is hereby incorporated by reference.
- (5) **Report delivery and recordkeeping:** 40 CFR Part 141, Subpart O§141.155 is hereby incorporated by reference.

(6) Appendix A to Subpart O of 40 CFR Part 141 - Regulated Contaminants is hereby incorporated by reference.

(7) **Electronic Delivery.**

(a) Community water systems may provide Consumer Confidence Reports electronically provided that:

1. The manner of the electronic delivery is a direct communication link, without use of an intermediary service;
2. There is an explanatory notice that accompanies the direct communication link;
3. The entire content of the Consumer Confidence Report is accessible;
4. The community water system shall provide the Consumer Confidence Report through another method should the community water system become aware of a customer's inability to receive the Consumer Confidence Report by the chosen electronic delivery method.

Rule 391-3-5-.42. Source Water Assessment.

(1) **Purpose.** The following Rule for Source Water Assessment serves to help protect the source waters of public water systems of the State.

(2) **Requirement to Develop a Source Water Assessment Plan.** By May 2003, each public water system of the State shall develop a Source Water Assessment Plan (SWAP) for every well and surface water intake used by the water system. SWAPs will be developed in accordance with the Division's *Source Water Assessment and Protection Implementation Plan for Public Drinking Water Sources*. Large surface water systems, which supply water (directly or through wholesale) to a population of 50,000 or more, will be delegated the responsibility of developing and implementing a Source Water Assessment Plan. Surface water systems which supply water (directly or through wholesale) to a population less than 50,000 will have the assessment done by the

Division. The Division encourages both large and small surface water systems to create partnerships with each other and the Division in order to conduct assessment of common regional watersheds.

- (3) **Components of a Source Water Assessment Plan.** A SWAP shall consist of four parts:
- (a) The delineation of the area in proximity to the water well(s) or surface water intake(s) shall consist of:
 - 1. At a minimum, a zone equivalent to the outer management zone of a wellhead protection area for water wells.
 - 2. At a minimum, the upstream surface drinking water intake catchment area portions of the watershed as defined in the SWAP Implementation Plan.
 - (b) The water system shall inventory the potential pollution sources of natural and manmade origin within the area delineated in (a) above. The inventory will include the potential pollution sources as defined in the SWAP Implementation Plan.
 - (c) The water system shall carry out an assessment of the potential pollution sources' impact within the areas described by (a) above, on the raw water that may reach the water well(s) or surface water intake(s). Assessments for surface water intakes are to follow the guidance published in the SWAP Implementation Plan.
 - (d) The water system shall prepare a comprehensive SWAP report describing items (a), (b) and (c) above and submit the report to the Division for review and approval. The water system will make this report available to the public.
 - (1) **Use of Wellhead Protection Plans.** Public groundwater systems may use their prepared Wellhead Protection Plans and Vulnerability Assessments to satisfy the Source Water Assessment requirements.

Rule 391-3-5-.52. Long Term 2 Enhanced Surface Water Treatment Rule (LT2ESWTR).

- (1) **Purpose.** The purpose of the Long Term 2 Enhanced Surface Water Treatment Rule (LT2ESWTR) is to reduce illness linked with the contaminant *Cryptosporidium* and other disease-causing microorganisms in drinking water. The rule supplements existing regulations by targeting additional *Cryptosporidium* treatment requirements to higher risk systems. This rule also contains provisions to reduce risks from uncovered finished water reservoirs and to ensure that systems maintain microbial protection when they take steps to decrease the formation of disinfection byproducts that result from chemical water treatment.
- (2) **Applicability.** This regulation applies to all public water systems that use surface water or ground water under the direct influence (GWUDI) of surface water.
- (3) **Enhanced Treatment for *Cryptosporidium*.**
 - (a) General requirements. The requirements of 40 CFR Part 141 Subpart W are national primary drinking water regulations. The regulations in this subpart establish or extend treatment technique requirements in lieu of maximum contaminant levels for *Cryptosporidium*. These requirements are in addition to requirements for filtration and disinfection in Subparts H, P, and T of 40 CFR Part 141.

- (b) Applicability. The requirements of 40 CFR Part 141 Subpart W apply to all public water systems supplied by a surface water source and public water systems supplied by a ground water source under the direct influence of surface water.
1. Wholesale systems, as defined in [40 CFR § 141.2](#), must comply with the requirements of 40 CFR Part 141 Subpart W based on the population of the largest system in the combined distribution system.
 2. The requirements of 40 CFR Part 141 Subpart W for filtered systems apply to systems required by National Primary Drinking Water Regulations to provide filtration treatment, whether or not the system is currently operating a filtration system.
 3. The requirements of 40 CFR Part 141 Subpart W for unfiltered systems apply only to unfiltered systems that timely met and continue to meet the filtration avoidance criteria in Subparts H, P, and T of 40 CFR Part 141, as applicable.
- (c) Requirements. Systems subject to 40 CFR Part 141 Subpart W must comply with the following requirements:
1. Systems must conduct an initial and a second round of source water monitoring for each plant that treats a surface water or GWUDI source. This monitoring may include sampling for *Cryptosporidium*, *E. coli*, and turbidity as described in [40 CFR § 141.701](#) through [141.706](#), to determine what level, if any, of additional *Cryptosporidium* treatment they must provide.
 2. Systems that plan to make a significant change to their disinfection practice must develop disinfection profiles and calculate disinfection benchmarks, as described in [40 CFR §§ 141.708](#) through [141.709](#).
 3. Filtered systems must determine their *Cryptosporidium* treatment bin classification as described in [40 CFR § 141.710](#) and provide additional treatment for *Cryptosporidium*, if required, as described in [40 CFR § 141.711](#). All unfiltered systems must provide treatment for *Cryptosporidium* as described in [40 CFR § 141.712](#). Filtered and unfiltered systems must implement *Cryptosporidium* treatment according to the schedule in [40 CFR § 141.713](#).
 4. Systems with uncovered finished water storage facilities must comply with the requirements to cover the facility or treat the discharge from the facility as described in [40 CFR § 141.714](#).

5. Systems required to provide additional treatment for *Cryptosporidium* must implement microbial toolbox options that are designed and operated as described in [40 CFR § 141.715](#) through [141.720](#).
 6. Systems must comply with the applicable recordkeeping and reporting requirements described in [40 CFR § 141.721](#) through [141.722](#).
 7. Systems must address significant deficiencies identified in sanitary surveys performed by EPA or Division as described in [40 CFR § 141.723](#).
- (4) **Source Water Monitoring.** [40 CFR, Subpart W § 141.701\(a\) through \(h\)](#), in its entirety, is hereby incorporated by reference. Systems are required to conduct source water monitoring for *Cryptosporidium*, *E. coli*, and turbidity in accordance with the monitoring schedule specified in this section.
 - (5) **Sampling Schedules.** [40 CFR, Subpart W § 141.702\(a\) through \(c\)](#), in its entirety, is hereby incorporated by reference. Systems required to conduct source water monitoring under [40 CFR § 141.701](#) must submit a sampling schedule that specifies the calendar dates when the system will collect each required sample.
 - (6) **Sampling Locations.** [40 CFR, Subpart W § 141.703\(a\) through \(f\)](#), in its entirety, is hereby incorporated by reference. Systems required to conduct source water monitoring under [40 CFR § 141.701](#) must collect samples for each plant that treats a surface water or GWUDI source. Where multiple plants draw water from the same influent, such as the same pipe or intake, the Division may approve one set of monitoring results to be used to satisfy the requirements of [40 CFR § 141.701](#) for all plants. Systems must collect source water samples prior to chemical treatment, such as coagulants, oxidants and disinfectants, unless the Division determines that collecting a sample prior to chemical treatment is not feasible for the system and that the chemical treatment is unlikely to have a significant adverse effect on the analysis of the sample.
 - (7) **Analytical Methods.** [40 CFR, Subpart W § 141.704\(a\) through \(c\)](#), in its entirety, is hereby incorporated by reference.
 - (8) **Approved Laboratories.** [40 CFR, Subpart W § 141.705\(a\) through \(c\)](#), in its entirety, is hereby incorporated by reference.
 - (9) **Reporting Source Water Monitoring Results.** [40 CFR, Subpart W § 141.706\(a\) through \(e\)](#), in its entirety, is hereby incorporated by reference.
 - (10) **Grandfathering Previously Collected Data.** [40 CFR, Subpart W § 141.707\(a\) through \(h\)](#), in its entirety, is hereby incorporated by reference. Systems may comply with the initial source water monitoring requirements of [40 CFR § 141.701\(a\)](#) by grandfathering sample results collected before the system is required to begin monitoring (i.e.,

previously collected data). To be grandfathered, the sample results and analysis must meet the criteria in this section and the Division must approve.

- (11) **Requirements when Making a Significant Change in Disinfection Practice.** [40 CFR, Subpart W § 141.708\(a\) through \(b\)](#), in its entirety, is hereby incorporated by reference. Following the completion of initial source water monitoring under [40 CFR § 141.701\(a\)](#), a system that plans to make a significant change to its disinfection practice, as defined in this section, must calculate disinfection benchmarks for *Giardia lamblia* and viruses as described in [40 CFR § 141.709](#). Prior to changing the disinfection practice, the system must notify the Division and must include in this notice the information outlined in this section. Significant changes to disinfection practice are defined as follows:
- (a) Changes to the point of disinfection;
 - (b) Changes to the disinfectant(s) used in the treatment plant;
 - (c) Changes to the disinfection process; or
 - (d) Any other modification identified by the State as a significant change to disinfection practice.
- (12) **Developing the Disinfection Profile and Benchmark.** 40 CFR, Subpart W § 141.709(a) through (e), in its entirety, is hereby incorporated by reference. Systems required to develop disinfection profiles under [40 CFR § 141.708](#) must follow the requirements of this section. Systems must monitor at least weekly for a period of 12 consecutive months to determine the total log inactivation for *Giardia lamblia* and viruses. The disinfection benchmark is the lowest monthly mean value (for systems with one year of profiling data) or the mean of the lowest monthly mean values (for systems with more than one year of profiling data) of *Giardia lamblia* and virus log inactivation in each year of profiling data.
- (13) **Bin Classification for Filtered Systems.** [40 CFR, Subpart W § 141.710\(a\) through \(f\)](#), in its entirety, is hereby incorporated by reference. Following completion of the initial round of source water monitoring required under [40 CFR § 141.701\(a\)](#), filtered systems must calculate an initial *Cryptosporidium* bin concentration for each plant for which monitoring was required. Calculation of the bin concentration must use the *Cryptosporidium* results reported under [40 CFR § 141.701\(a\)](#) and must follow the procedures outlined in this section.
- (a) Filtered systems must determine their initial bin classification from the table in [40 CFR 141.710\(c\)](#) and using the *Cryptosporidium* bin concentration calculated under paragraphs (a)-(b) of this section ([40 CFR, Subpart W § 141.710](#)).
 - (b) Following completion of the second round of source water monitoring required under [40 CFR § 141.701\(b\)](#), filtered systems must recalculate their *Cryptosporidium* bin concentration using the *Cryptosporidium* results reported under [40 CFR § 141.701\(b\)](#) and following the procedures in paragraphs (b)(1)

through (4) of [40 CFR § 141.710](#). Systems must then redetermine their bin classification using this bin concentration and the table in paragraph (c) of [40 CFR § 141.710](#).

(14) **Filtered System Additional *Cryptosporidium* Treatment Requirements.** 40 CFR, Subpart W § 141.711(a) through (d), in its entirety, is hereby incorporated by reference. Filtered systems must provide the level of additional treatment for *Cryptosporidium* specified in paragraph (a) of [40 CFR § 141.711](#) based on their bin classification as determined under [40 CFR § 141.710](#) and according to the schedule in [40 CFR § 141.713](#).

- (a) Filtered systems must use one or more of the treatment and management options listed in [40 CFR § 141.715](#), termed the microbial toolbox, to comply with the additional *Cryptosporidium* treatment required in paragraph (a) of [40 CFR § 141.711](#).
- (b) Systems classified in Bin 3 and Bin 4 must achieve at least 1-log of the additional *Cryptosporidium* treatment required under paragraph (a) of [40 CFR § 141.711](#) using either one or a combination of the following: bag filters, bank filtration, cartridge filters, chlorine dioxide, membranes, ozone, or UV, as described in [40 CFR §§ 141.716](#) through [141.720](#).
- (c) Failure by a system in any month to achieve treatment credit by meeting criteria in §§ 141.716 through 141.720 for microbial toolbox options that is at least equal to the level of treatment required in paragraph (a) of [40 CFR § 141.711](#) is a violation of the treatment technique requirement.

(15) **Unfiltered System *Cryptosporidium* Treatment Requirements.** All systems that are using surface water sources or groundwater sources that are determined to be under the direct influence of surface water supplies are required to provide filtration and disinfection treatments, in addition to that other treatments that are required by the Division, in order to comply with the drinking water standards, regulations and operating permit conditions, required by the Rules for Safe Drinking Water, Chapter 391-3-5. In order to provide regulatory information on the *Cryptosporidium* treatment requirements for unfiltered water systems, [40 CFR, Subpart W § 141.712\(a\) through \(d\)](#) is hereby incorporated by reference.

(16) **Schedule for Compliance with *Cryptosporidium* Treatment Requirements.**

- (a) Following initial bin classification under [40 CFR § 141.710\(c\)](#), filtered systems must provide the level of treatment for *Cryptosporidium* required under [40 CFR § 141.711](#) according to the schedule in paragraph (16)(c).
- (b) Following initial determination of the mean *Cryptosporidium* level under [40 CFR § 141.712\(a\)\(1\)](#), unfiltered systems must provide the level of treatment for

Cryptosporidium required under [40 CFR § 141.712](#) according to the schedule in paragraph (16)(c).

- (c) *Cryptosporidium* treatment compliance dates.

CRYPTOSPORIDIUM TREATMENT COMPLIANCE DATES TABLE	
Systems that serve ...	Must comply with <i>Cryptosporidium</i> treatment requirements no later than ... ⁽¹⁾
At least 100,000 people.	April 1, 2012
From 50,000 to 99,999 people.	October 1, 2012
From 10,000 to 49,999 people.	October 1, 2013
Fewer than 10,000 people.	October 1, 2014

Note: ⁽¹⁾ States may allow up to an additional two years for complying with the treatment requirement for systems making capital improvements.

- (d) If the bin classification for a filtered system changes following the second round of source water monitoring, as determined under [40 CFR § 141.710\(d\)](#), the system must provide the level of treatment for *Cryptosporidium* required under [40 CFR § 141.711](#) on a schedule the Division approves.
- (e) If the mean *Cryptosporidium* level for an unfiltered system changes following the second round of monitoring, as determined under [40 CFR § 141.712\(a\)\(2\)](#), and if the system must provide a different level of *Cryptosporidium* treatment under [40 CFR § 141.712](#) due to this change, the system must meet this treatment requirement on a schedule the Division approves.
- (17) **Requirements for Uncovered Finished Water Storage Facilities.** All finished water storage facilities must be provided with a permanent cover, in accordance with Rule [391-3-5-.11](#). In order to provide regulatory information on the requirements for uncovered finished water storage facilities, [40 CFR, Subpart W § 141.714\(a\) through \(d\)](#) is hereby incorporated by reference.
- (18) **Microbial Toolbox Options for Meeting *Cryptosporidium* Treatment Requirements.** [40 CFR, Subpart W § 141.715\(a\) through \(b\)](#) is hereby incorporated by reference.
- (a) Source toolbox components. [40 CFR, Subpart W § 141.716\(a\) through \(b\)](#) is hereby incorporated by reference.
- (b) Pre-filtration treatment toolbox components. [40 CFR, Subpart W § 141.717\(a\) through \(c\)](#) is hereby incorporated by reference.

- (c) Treatment performance toolbox components. [40 CFR, Subpart W § 141.718\(a\) through \(c\)](#) is hereby incorporated by reference.
 - (d) Additional filtration toolbox components. [40 CFR, Subpart W § 141.719\(a\) through \(d\)](#) is hereby incorporated by reference.
 - (e) Inactivation toolbox components. [40 CFR, Subpart W § 141.720\(a\) through \(d\)](#) is hereby incorporated by reference.
- (19) **Reporting Requirements.** [40 CFR, Subpart W § 141.721\(a\) through \(f\)](#) is hereby incorporated by reference.
- (20) **Recordkeeping Requirements.** [40 CFR, Subpart W § 141.722\(a\) through \(c\)](#) is hereby incorporated by reference.
- (21) **Requirements to Respond to Significant Deficiencies Identified in Sanitary Surveys Performed by EPA or Division.** [40 CFR, Subpart W § 141.723\(a\) through \(d\)](#) is hereby incorporated by reference. Systems must respond in writing to significant deficiencies identified in sanitary survey reports no later than forty-five (45) days after receipt of the report, indicating how and on what schedule the system will address significant deficiencies noted in the survey. Systems must correct significant deficiencies identified in sanitary survey reports according to the approved schedule, or if there is no approved schedule, according to the schedule submitted by the system if such deficiencies are within the control of the system.
- (22) **Division Recordkeeping.** The records kept by the Division shall be in accordance with [40 CFR § 142.14](#).
- (23) **Division Reporting.** The reporting by the Division shall be performed as required by [40 CFR § 142.15](#).

Rule 391-3-5-.53. Stage 2 Disinfection Byproducts Rule (Stage 2 DBPR).

Purpose. The Stage 2 Disinfection Byproducts Rule (DBPR) (40 CFR, Subpart V § 141) builds on existing regulations by requiring water systems to meet disinfection byproduct (DBP) maximum contaminant levels (MCLs) at each monitoring site in the distribution system to better protect public health. The Stage 2 DBPR includes a provision requiring all community water systems (CWS) and only non-transient non-community water systems (NTNCWS) serving more

than 10,000 people to conduct an initial distribution system evaluation (IDSE) (40 CFR, Subpart U § 141). NTNCWS serving less than 10,000 are exempted from IDSE requirements, but will need to comply with the Stage 2 DBPR compliance monitoring requirements. The goal of the IDSE is to characterize the distribution system and identify monitoring sites where customers may be exposed to high levels of total trihalomethanes (TTHM) and haloacetic acids (HAA5).

(1) Initial Distribution System Evaluations.

- (a) General requirements: The requirements of 40 CFR Part 141 Subpart U constitute national primary drinking water regulations. The regulations in 40 CFR Part 141 Subpart U establish monitoring and other requirements for identifying 40 CFR Part 141 Subpart V compliance monitoring locations for determining compliance with maximum contaminant levels for total trihalomethanes (TTHM) and haloacetic acids (five) (HAA5). A system must use an Initial Distribution System Evaluation (IDSE) to determine locations with representative high TTHM and HAA5 concentrations throughout its distribution system. IDSEs are used in conjunction with, but separate from, compliance monitoring per 40 CFR Part 141 Subpart L, to identify and select compliance monitoring locations per 40 CFR Part 141 Subpart V.
- (b) Applicability: Public water systems are subject to these requirements if the water system is a community water system that uses a primary or residual disinfectant other than ultraviolet light or delivers water that has been treated with a primary or residual disinfectant other than ultraviolet light; or if the water system is a non-transient non-community water system that serves at least 10,000 people and uses a primary or residual disinfectant other than ultraviolet light or delivers water that has been treated with a primary or residual disinfectant other than ultraviolet light.
- (c) Schedule: [40 CFR Subpart U § 141.600\(c\)](#), in its entirety, is hereby incorporated by reference. Systems required to comply with Initial Distribution System Evaluations - Subpart U, must comply with the schedule specified in the table [40 CFR § 141.600\(c\)\(1\)](#). A wholesale system or a consecutive system must comply with the specified schedule at the same time as the system with the earliest compliance date in the combined distribution system.
- (d) [40 CFR Subpart U § 141.600\(d\) through \(f\)](#), in its entirety, is hereby incorporated by reference.
- (e) Standard Monitoring: 40 CFR Subpart U [§ 141.601](#) is hereby incorporated by reference.
 - 1. Standard monitoring plan: [40 CFR Subpart U § 141.601\(a\) through \(c\)](#), in its entirety, is hereby incorporated by reference.
 - 2. System specific studies: [40 CFR Subpart U § 141.602\(a\) through \(b\)](#), in its entirety, is hereby incorporated by reference.

3. 40/30 Certification: [40 CFR Subpart U § 141.603\(a\) through \(b\)](#), in its entirety, is hereby incorporated by reference.
 4. Very small system waivers: 40 CFR Subpart U § 141.604(a) through (b), in its entirety, is hereby incorporated by reference.
- (f) 40 CFR Part 141 Subpart V Compliance Monitoring Location Recommendations: [40 CFR Subpart U § 141.605\(a\) through \(e\)](#), in its entirety, is hereby incorporated by reference. Water system's IDSE report must include the recommendations and justification for where and during what month(s) TTHM and HAA5 monitoring for Subpart V of part 141 should be conducted. Water system must base its recommendations on the criteria in paragraphs (b) through (e) of this section.

(2) Stage 2 Disinfection Byproducts Requirements.

- (a) General Requirements: The requirements of 40 CFR Part 141 Subpart V constitute national primary drinking water regulations. The regulations establish monitoring and other requirements for achieving compliance with maximum contaminant levels based on locational running annual averages (LRAA) for total trihalomethanes (TTHM) and haloacetic acids (five) (HAA5), and for achieving compliance with maximum residual disinfectant residuals for chlorine and chloramine for certain consecutive systems.
- (b) Applicability: Public water systems are subject to these requirements if the system is a community water system or a non-transient non-community water system that uses a primary or residual disinfectant other than ultraviolet light or delivers water that has been treated with a primary or residual disinfectant other than ultraviolet light.
- (c) Schedule: 40 CFR Subpart V § 141.620(c), in its entirety, is hereby incorporated by reference. Systems required to comply with Stage 2 Disinfection Byproducts Requirements - Subpart V, must comply with the schedule specified in the table [40 CFR § 141.620\(c\)](#). A wholesale system or a consecutive system must comply with the specified schedule at the same time as the system with the earliest compliance date in the combined distribution system.
 1. Systems serving 100,000 or more people: April 1, 2012
 2. Systems serving 50,000-99,999 people: October 1, 2012
 3. Systems serving 10,000-49,999 people: October 1, 2013
 4. Systems serving fewer than 10,000 people: October 1, 2013 if no *Cryptosporidium* monitoring is required under [40 CFR § 141.701\(a\)\(4\)](#) OR

October 1, 2014 if *Cryptosporidium* monitoring is required under [40 CFR § 141.701\(a\)\(4\) or \(a\)\(6\)](#).

- (d) Monitoring frequency must be in accordance with [40 CFR Subpart V § 141.621\(a\)\(2\)](#).
1. If a water system is required to conduct quarterly monitoring, it must begin monitoring in the first full calendar quarter that includes the compliance date in the table in paragraph [40 CFR § 141.620\(c\)](#).
 2. If a water system is required to conduct monitoring at a frequency that is less than quarterly, it must begin monitoring in the calendar month recommended in the IDSE report prepared under [40 CFR § 141.601](#) or [40 CFR § 141.602](#) or the calendar month identified in the Subpart V monitoring plan developed under [40 CFR § 141.622](#) no later than twelve (12) months after the compliance date in paragraph [40 CFR § 141.620\(c\)](#).
 3. If a water system is required to conduct quarterly monitoring, it must make compliance calculations at the end of the fourth calendar quarter that follows the compliance date and at the end of each subsequent quarter (or earlier if the LRAA calculated based on fewer than four quarters of data would cause the MCL to be exceeded regardless of the monitoring results of subsequent quarters). If a water system is required to conduct monitoring at a frequency that is less than quarterly, it must make compliance calculations beginning with the first compliance sample taken after the compliance date.
 4. For the purpose of the schedule in paragraph [40 CFR § 141.620\(c\)](#), the Division may determine that the combined distribution system does not include certain consecutive systems based on factors such as receiving water from a wholesale system only on an emergency basis or receiving only a small percentage and small volume of water from a wholesale system. The Division may also determine that the combined distribution system does not include certain wholesale systems based on factors such as delivering water to a consecutive system only on an emergency basis or delivering only a small percentage and small volume of water to a consecutive system.
- (e) Monitoring and Compliance.
1. Systems required to monitor quarterly. To comply with Subpart V MCLs in [40 CFR § 141.64\(b\)\(2\)](#), water systems must calculate LRAAs for TTHM and HAA5 using monitoring results collected under this Subpart and determine that each LRAA does not exceed the MCL. If a water system fails to complete four consecutive quarters of monitoring, it must calculate compliance with the MCL based on the average of the available data from the most recent four quarters. If a water system takes more than one sample

per quarter at a monitoring location, it must average all samples taken in the quarter at that location to determine the quarterly average to be used in the LRAA calculation.

2. Systems required to monitor yearly or less frequently. To determine compliance with Subpart V MCLs in [40 CFR § 141.64\(b\)\(2\)](#), water systems must determine that each sample taken is less than the MCL. If any sample exceeds the MCL, the water system must comply with the requirements of [40 CFR § 141.625](#). If no sample exceeds the MCL, the sample result for each monitoring location is considered the LRAA for that monitoring location.
- (f) Violations: A water system is in violation of the monitoring requirements for each quarter that a monitoring result would be used in calculating an LRAA if it fails to monitor.
- (g) Routine Monitoring: If a water system submitted an IDSE report, it must begin monitoring at the locations and months it has recommended in its IDSE report submitted under [40 CFR § 141.605](#) following the schedule in [40 CFR § 141.620\(c\)](#), unless the Division requires other locations or additional locations after its review. If a water system submitted a 40/30 certification under [40 CFR § 141.603](#) or it qualified for a very small system waiver under [40 CFR § 141.604](#) or it is a non-transient non-community water system serving less than 10,000, it must monitor at the location(s) and dates identified in its monitoring plan in [40 CFR § 141.132\(f\)](#), updated as required by [40 CFR § 141.622](#).
- (h) Water systems must monitor at no fewer than the number of locations identified in this paragraph:

Source Water Type	Population Served	Monitoring Frequency ⁽¹⁾	Distribution System Monitoring Locations Total per Monitoring Period ⁽²⁾
Subpart H	Fewer than 500	per year	2
	500-3,300	per quarter	2
	3,301-9,999	per quarter	2
	10,000-49,999	per quarter	4
	50,000-249,999	per quarter	8
	250,000-999,999	per quarter	12

	1,00,000-4,999,999	per quarter per quarter	16
	5,000, 000 or more		20
Ground Water	Fewer than 500	per year	2
	500-9,999	per year	2
	10,000-99,999	per quarter	4
	100,000-499,999	per quarter	6
	500,000 or more	per quarter	8

NOTES:

- (1) All systems must monitor during the highest month of DBP concentrations.
 - (2) Systems on quarterly monitoring must take dual sample sets every 90 days at each monitoring location, except for Subpart H systems serving 500-3,300 persons. Systems on annual monitoring and Subpart H systems serving 500-3,300 persons are required to take individual TTHM and HAA5 samples (instead of a dual sample set) at the locations with the highest TTHM and HAA5 concentrations, respectively. Only one location with a dual sample set per monitoring period is needed if highest TTHM and HAA5 concentrations occur at the same location (and month, if monitored annually).
 - (i) If a water system is an undisinfected system that begins using a disinfectant other than UV light after the dates in 40 CFR Part 141 Subpart U for complying with the Initial Distribution System Evaluation requirements, it must consult with the Division to identify compliance monitoring locations for 40 CFR Part 141 Subpart V. The water system must then develop a monitoring plan under [40 CFR § 141.622](#) that includes those monitoring locations.
 - (j) Analytical Methods: The water system must use an approved method listed in [40 CFR § 141.131](#), as stated in Rule [391-3-5-.24\(4\)\(g\)](#) for TTHM and HAA5 analyses. Analyses must be conducted by laboratories that have received certification by EPA or the Division.
- (3) **Monitoring Plans for Stage 2 Disinfection Byproducts Requirements.**

- (a) Water systems must develop and implement a monitoring plan to be kept on file for Division and public review. The monitoring plan must contain the following elements and be complete no later than the date it conducts its initial monitoring under 40 CFR Part 141 Subpart V.
1. Monitoring locations;
 2. Monitoring dates;
 3. Compliance calculation procedures; and
 4. Monitoring plans for any other systems in the combined distribution system.
- (b) If a water system was not required to submit an IDSE report under either [40 CFR § 141.601](#) or [§ 141.602](#), and it does not have sufficient 40 CFR Part 141 Subpart L (Stage 1 DBPR) monitoring locations to identify the required number of 40 CFR Part 141 Subpart V (Stage 2 DBPR) compliance monitoring locations indicated in [40 CFR § 141.605\(b\)](#), it must identify additional locations by alternating selection of locations representing high TTHM levels and high HAA5 levels until the required number of compliance monitoring locations have been identified. It must also provide the rationale for identifying the locations as having high levels of TTHM or HAA5. If it has more Subpart L monitoring locations than required for Subpart V compliance monitoring in [40 CFR § 141.605\(b\)](#), it must identify which locations it will use for Subpart V compliance monitoring by alternating selection of locations representing high TTHM levels and high HAA5 levels until the required number of Subpart V compliance monitoring locations have been identified.
- (c) A Subpart H water system serving over 3,300 people must submit a copy of its monitoring plan to the Division prior to the date it conducts its initial monitoring under this Subpart, unless its IDSE report submitted under Subpart U of this part contains all the information required by this section.
- (d) A water system may revise its monitoring plan to reflect changes in treatment, distribution system operations and layout (including new service areas), or other factors that may affect TTHM or HAA5 formation, or for Division-approved reasons, after consultation with the Division regarding the need for changes and the appropriateness of changes. If a water system changes monitoring locations, it must replace existing compliance monitoring locations with the lowest LRAA with new locations that reflect the current distribution system locations with expected high TTHM or HAA5 levels. The Division may also require modifications in water system's monitoring plan. A Subpart H system serving over 3,300 people must submit a copy of its modified monitoring plan to the Division prior to the date it is required to comply with the revised monitoring plan.

(4) Reduced Monitoring.

- (a) The water system may reduce monitoring to the level specified in table [40 CFR § 141.623\(a\)](#) any time the LRAA is less than or equal to (\leq) 0.040 mg/L for TTHM and less than or equal to (\leq) 0.030 mg/L for HAA5 at all monitoring locations. It may only use data collected under the provisions of this Subpart or Subpart L of this part to qualify for reduced monitoring. In addition, the source water annual average TOC level, before any treatment, must be less than or equal to (\leq) 4.0 mg/L at each treatment plant treating surface water or ground water under the direct influence of surface water, based on monitoring conducted under either [40 CFR § 141.132\(b\)\(1\)\(iii\)](#) or § [141.132\(d\)](#).
 - (b) The water system may remain on reduced monitoring as long as the TTHM LRAA less than or equal to (\leq) 0.040 mg/L and the HAA5 LRAA less than or equal to (\leq) 0.030 mg/L at each monitoring location (for systems with quarterly reduced monitoring) or each TTHM sample less than or equal to (\leq) 0.060 mg/L and each HAA5 sample less than or equal to (\leq) 0.045 mg/L (for systems with annual or less frequent monitoring). In addition, the source water annual average TOC level, before any treatment, must be less than or equal to (\leq) 4.0 mg/L at each treatment plant treating surface water or ground water under the direct influence of surface water, based on monitoring conducted under either [40 CFR § 141.132\(b\)\(1\)\(iii\)](#) or § [141.132\(d\)](#).
 - (c) If the LRAA based on quarterly monitoring at any monitoring location exceeds either 0.040 mg/L for TTHM or 0.030 mg/L for HAA5 or if the annual (or less frequent) sample at any location exceeds either 0.060 mg/L for TTHM or 0.045 mg/L for HAA5, or if the source water annual average TOC level, before any treatment, is greater than () 4.0 mg/L at any treatment plant treating surface water or ground water under the direct influence of surface water, the water system must resume routine monitoring under [40 CFR § 141.621](#) or begin increased monitoring if [40 CFR § 141.625](#) applies.
 - (d) The Division may return the water system to routine monitoring at its discretion.
- (5) **Additional Requirements for Consecutive Systems.** A consecutive system that does not add a disinfectant but delivers water that has been treated with a primary or residual disinfectant other than ultraviolet light must comply with analytical and monitoring requirements for chlorine and chloramines in [40 CFR § 141.131\(c\)](#) and § [141.132\(c\)\(1\)](#) and the compliance requirements in [40 CFR § 141.133\(c\)\(1\)](#) beginning April 1, 2009, unless required earlier by the Division, and report monitoring results under [40 CFR § 141.134\(c\)](#).
- (6) **Conditions Requiring Increased Monitoring.**
- (a) A water system that is required to monitor at a particular location annually or less frequently than annually under [40 CFR § 141.621](#) or § [141.623](#) must increase monitoring to dual sample sets once per quarter (taken every 90 days) at all

locations if a TTHM sample is >0.080 mg/L or a HAA5 sample is >0.060 mg/L at any location.

- (b) A water system is in violation of the MCL when the LRAA exceeds the Subpart V MCLs in [40 CFR § 141.64\(b\)\(2\)](#), calculated based on four consecutive quarters of monitoring (or the LRAA calculated based on fewer than four quarters of data if the MCL would be exceeded regardless of the monitoring results of subsequent quarters). The water system is in violation of the monitoring requirements for each quarter that a monitoring result would be used in calculating an LRAA if it fails to monitor.
- (c) A water system may return to routine monitoring once it has conducted increased monitoring for at least four consecutive quarters and the LRAA for every monitoring location is ≤ 0.060 mg/L for TTHM and ≤ 0.045 mg/L for HAA5.

(7) Operational Evaluation Levels.

- (a) The water system has exceeded the operational evaluation level at any monitoring location where the sum of the two previous quarters' TTHM results plus twice the current quarter's TTHM result, divided by 4 to determine an average, exceeds 0.080 mg/L, or where the sum of the two previous quarters' HAA5 results plus twice the current quarter's HAA5 result, divided by 4 to determine an average, exceeds 0.060 mg/L.
 - 1. If a water system exceeds the operational evaluation level, it must conduct an operational evaluation and submit a written report of the evaluation to the Division no later than 90 days after being notified of the analytical result that causes it to exceed the operational evaluation level. The written report must be made available to the public upon request.
 - 2. The operational evaluation must include an examination of system treatment and distribution operational practices, including storage tank operations, excess storage capacity, distribution system flushing, changes in sources or source water quality, and treatment changes or problems that may contribute to TTHM and HAA5 formation and what steps could be considered to minimize future exceedences.
 - (i) The water system may request and the Division may allow limiting the scope of the water system's evaluation if it is able to identify the cause of the operational evaluation level exceedance.
 - (ii) The water system's request to limit the scope of the evaluation does not extend the schedule in paragraph (7)(a)1. for submitting the written report. The Division must approve this limited scope of evaluation in writing and the water system must keep that approval with the completed report.

- (8) **Requirements for Remaining on Reduced TTHM and HAA5 Monitoring Based on Subpart L Results.** [40 CFR Subpart V § 141.627](#) is hereby incorporated by reference.
- (9) **Requirements for Remaining on Increased TTHM and HAA5 Monitoring Based on Subpart L Results.** [40 CFR Subpart V § 141.628](#) is hereby incorporated by reference.
- (10) **Reporting and Recordkeeping Requirements.** [40 CFR Subpart V § 141.629](#) is hereby incorporated by reference.
- (11) **Division Recordkeeping.** The records kept by the Division shall be in accordance with [40 CFR § 142.14](#).

Authority: O.C.G.A. § [12-5-170](#)*et seq.*

History. Original Rule entitled "Stage 2 Disinfection Byproducts Rule (Stage 2 DBPR)" adopted. F. May 27, 2009; eff. June 16, 2009.

Amended: F. Jan. 8, 2014; eff. Jan. 28, 2014.

Amended: F. Apr. 22, 2021; eff. May 12, 2021.

Rule 391-3-5-.54. Ground Water Rule.

Purpose. The United States Environmental Protection Agency established the Ground Water Rule, which the Division has adopted, to provide increased protection against microbial pathogens in public water systems that use ground water as the source of drinking water.

- (1) **General Requirements and Applicability.** [40 CFR Part 141, Subpart S § 141.400](#) is hereby incorporated by reference.
 - (a) This Rule applies to the following:
 1. Systems relying totally on ground water; purchased water systems or consecutive systems receiving ground water;
 2. Mixed surface and ground water systems where ground water is added directly to the distribution system or to the treated surface water prior to entry into the distribution system.
 - (b) Hydrogeologic Sensitivity Assessments.
 1. Hydrogeologically sensitive settings include Karst (carbonate rock, i.e. limestone and dolostone), fractured bedrock and gravel.
 2. Drinking water produced by water systems from aquifers consisting of the above geologic materials require hydrogeologic sensitivity assessments prepared by the Division.

3. The information that the Division requires to prepare a hydrogeologic sensitivity assessment may be requested by the Division from the water source's owner and/or found in one or all of three regulatory reports approved by the EPA:
 - (i) A water source's Well Head Protection Plan,
 - (ii) The Source Water Assessment, and/or
 - (iii) The Individual Source Vulnerability Assessment.
 4. A water source Well Head Protection Plan consists of the information outlined in Rule [391-3-5-.40\(3\) through \(7\)](#).
 5. A water source, Source Water Assessment consists of the information outlined in Rules [391-3-5-.06\(4\)](#) and [391-3-5-.42\(3\) and \(4\)](#).
 6. A water source Individual Source Vulnerability Assessment consists of the information outlined in Rule [391-3-5-.22\(g\) through \(i\)](#).
 7. The water source rating developed for Individual Source Vulnerability Assessments is to be used to determine if a source is at high, medium, or low risk to microbiological contamination.
- (c) Ground water systems must comply with the requirements of this Rule beginning December 1, 2009.
- (2) **Sanitary Surveys for Ground Water Systems.** 40 CFR Part 141, Subpart S § 141.401 is hereby incorporated by reference.
- (a) Ground water systems must provide the Division, at the Division's request, any existing information that will enable the Division to conduct a sanitary survey.
 - (b) A sanitary survey conducted by the Division includes an onsite review of the water source(s), facilities, equipment, operation, maintenance, and monitoring compliance of a public water system to evaluate the adequacy of the system, its sources and operations and the distribution of safe drinking water.
 - (c) The sanitary survey includes an evaluation of the applicable components listed below:
 1. Source,
 2. Treatment,
 3. Distribution system,

4. Finished water storage,
5. Pumps, pump facilities, and controls,
6. Monitoring, reporting, and data verification,
7. System management and operation, and
8. Operator compliance with Division requirements.

(3) **Ground Water Source Microbial Monitoring and Analytical Methods.** [40 CFR Part 141, Subpart S § 141.402](#) is hereby incorporated by reference with the exceptions that the Division only allows E. Coli as a fecal indicator for compliance under this rule and the Division does not allow triggered source water samples collected under paragraph (3)(a) to also serve as repeat samples collected under Rule [391-3-5-.55\(8\)\(a\)](#).

(a) Triggered source water monitoring.

1. *General requirements.* A ground water system must conduct triggered source water monitoring in accordance with [40 CFR § 141.402\(a\)](#) if the conditions identified in paragraphs (3)(a)1.(i) and either (3)(a)1.(ii) or (3)(a)1.(iii) exist.
 - (i) The system does not provide at least 4-log treatment of viruses (using inactivation, removal, or a Division-approved combination of 4-log virus inactivation and removal) before or at the first customer for each ground water source; and either
 - (ii) The system is notified that a sample collected under Rule [391-3-5-.23\(1\)](#) is total coliform-positive and the sample is not invalidated under Rule [391-3-5-.23\(3\)](#) until March 31, 2016, or
 - (iii) The system is notified that a sample collected under Rule [391-3-5-.55\(4\) through \(7\)](#) is total coliform-positive and the sample is not invalidated under Rule [391-3-5-.55\(3\)\(c\)](#) beginning April 1, 2016.
2. *Sampling requirements.* A ground water system must collect, within 24 hours of notification of the total coliform-positive sample, at least one ground water source sample from each ground water source in use at the time the total coliform-positive sample was collected under Rule [391-3-5-.23\(1\)](#) until March 31, 2016, or collected under Rule [391-3-5-.55\(4\) through \(7\)](#) beginning April 1, 2016, except as provided in paragraph (3)(a)2.(ii).
 - (i) The Division may extend the 24-hour time limit on a case-by-case basis if the system cannot collect the ground water source water

sample within 24 hours due to circumstances beyond its control. In the case of an extension, the Division must specify how much time the system has to collect the sample.

- (ii) If approved by the Division, systems with more than one ground water source may meet the requirements of paragraph (3)(a)2. by sampling a representative ground water source or sources. If directed by the Division, systems must submit for Division approval a triggered source water monitoring plan that identifies one or more ground water sources that are representative of each monitoring site in the system's sample siting plan under Rule [391-3-5-.23\(1\)](#) until March 31, 2016, or under Rule [391-3-5-.55\(3\)](#) beginning April 1, 2016, and that the system intends to use for representative sampling under this paragraph.
3. *Additional requirements.* If the Division does not require corrective action under paragraph (4)(a)2 for an *E. coli* positive source water sample collected under paragraph (3)(a)2. that is not invalidated under paragraph (3)(d), the system must collect five additional source water samples from the same source within 24 hours of being notified of the *E. coli*-positive sample.
4. *Consecutive and wholesale systems.*
- (i) In addition to the other requirements of paragraph (3)(a), a consecutive ground water system that has a total coliform-positive sample collected under Rule [391-3-5-.23\(1\)](#) until March 31, 2016, or under Rule [391-3-5-.55\(4\) through \(7\)](#) beginning April 1, 2016, must notify the wholesale system(s) within 24 hours of being notified of the total coliform-positive sample.
 - (ii) In addition to the other requirements of paragraph (3)(a), a wholesale ground water system must comply with paragraphs (3)(a)4.(ii)(I) and (3)(a)4.(ii)(II).
 - (I) A wholesale ground water system that receives notice from a consecutive system it serves that a sample collected under Rule [391-3-5-.23\(1\)](#) until March 31, 2016, or collected under Rule [391-3-5-.55\(4\) through \(7\)](#) beginning April 1, 2016, is total coliform-positive must, within 24 hours of being notified, collect a sample from its ground water source(s) under paragraph (3)(a)(2) and analyze it for *E. Coli* under paragraph (3)(c).

- (II) If the sample collected under paragraph (3)(a)4.(ii)(I) is *E. Coli*-positive, the wholesale ground water system must notify all consecutive systems served by that ground water source of the *E. Coli* source water positive within 24 hours of being notified of the ground water source sample monitoring result and must meet the requirements of paragraph (3)(a)3.

5. *Exceptions to the triggered source water monitoring requirements.* A ground water system is not required to comply with the source water monitoring requirements of paragraph (3)(a) if either of the following conditions exists:

- (i) The Division determines, and documents in writing, that the total coliform-positive sample collected under Rule [391-3-5-.23\(1\)](#) until March 31, 2016, or under Rule [391-3-5-.55\(4\) through \(7\)](#) beginning April 1, 2016, is caused by a distribution system deficiency; or
- (ii) The total coliform-positive sample collected under Rule [391-3-5-.23\(1\)](#) until March 31, 2016, or under Rule [391-3-5-.55\(4\) through \(7\)](#) beginning April 1, 2016, is collected at a location that meets Division criteria for distribution system conditions that will cause total coliform-positive samples.

(b) **Assessment Source Water Monitoring.** If directed by the Division, ground water systems must conduct assessment source water monitoring that meets Division-determined requirements for such monitoring. A ground water system conducting assessment source water monitoring may use a triggered source water sample collected under [40 CFR § 141.402\(a\)\(2\)](#) to meet the requirements of this paragraph. Division-determined assessment source water monitoring requirements may include:

1. Collection of a total of 12 ground water source samples that represent each month the system provides ground water to the public,
2. Collection of samples from each well unless the system obtains written Division approval to conduct monitoring at one or more wells within the ground water system that are representative of multiple wells used by that system and that draw water from the same hydrogeological setting,
3. Collection of a standard sample volume of at least 100 mL for *E. coli* analysis,

4. Analysis of all ground water source samples using one of the analytical methods listed in [40 CFR § 141.402\(c\)\(2\)](#) for the presence of *E. coli*,
5. Collection of ground water source samples at a location prior to any treatment of the ground water source unless the Division approves a sampling location after treatment, and
6. Collection of ground water source samples at the well itself unless the system's configuration does not allow for sampling at the well itself and the Division approves an alternate sampling location that is representative of the water quality of that well.

(c) Analytical Methods.

1. A ground water system subject to the source water monitoring requirements of paragraph (3)(a) must collect a standard sample volume of at least 100 mL for *E. coli* analysis.
2. A ground water system must analyze all ground water source samples collected under paragraph (3)(a) using one of the analytical methods listed in the following table in [40 CFR § 141.402\(c\)\(2\)](#) or one of the alternative methods listed in Appendix A to Subpart C of 40 CFR Part 141 (Alternative Testing Methods Approved for Analyses Under the Safe Drinking Water Act) for the presence of *E. coli*.

(d) Invalidation of a Fecal Indicator-Positive Ground Water Source Sample.

1. A ground water system may obtain Division invalidation of an *E. coli* - positive ground water source sample collected under paragraph (3)(a) only under the conditions specified in paragraphs (3)(d)1.(i) and (ii).
 - (i) The system provides the Division with written notice from the laboratory that improper sample analysis occurred; or
 - (ii) The Division determines and documents in writing that there is substantial evidence that an *E. coli*-positive ground water source sample is not related to source water quality.
2. If the Division invalidates an *E. coli*-positive ground water source sample, the ground water system must collect another source water sample under paragraph (3)(a) within 24 hours of being notified by the Division of its invalidation decision and have it analyzed using the analytical methods in paragraph (3)(c). The Division may extend the 24-hour time limit on a case-by-case basis if the system cannot collect the source water sample within 24 hours due to circumstances beyond its control. In the case of an extension,

the Division must specify how much time the system has to collect the sample.

- (e) Sampling Location.
 - 1. Any ground water source sample required under [40 CFR § 141.402\(a\)](#) must be collected at a location prior to any treatment of the ground water source unless the Division approves a sampling location after treatment.
 - 2. If the system's configuration does not allow for sampling at the well itself, the system may collect a sample at a Division-approved location to meet the requirements of paragraph (3)(a) if the sample is representative of the water quality of that well.
 - (f) New Sources. If directed by the Division, a ground water system that places a new ground water source into service after November 30, 2009, must conduct assessment source water monitoring under paragraph (3)(b). If directed by the Division, the system must begin monitoring before the ground water source is used to provide water to the public.
 - (g) Public Notification. A ground water system with a ground water source sample collected under [40 CFR § 141.402\(a\) or \(b\)](#) that is *E. Coli*-positive and that is not invalidated under [40 CFR § 141.402\(d\)](#), including consecutive systems served by the ground water source, must conduct public notification under [40 CFR § 141.202](#).
 - (h) Monitoring Violations. Failure to meet the requirements of paragraphs (3)(a) through (3)(f) is a monitoring violation and requires the ground water system to provide public notification under [40 CFR § 141.204](#).
- (4) **Treatment Technique Requirements for Ground Water Systems.** [40 CFR Part 141, Subpart S § 141.403](#) is hereby incorporated by reference.
- (a) The treatment technique requirements of this paragraph must be met by ground water systems with significant deficiencies or source water fecal contamination:
 - 1. When a significant deficiency is identified or when a groundwater source sample collected under [40 CFR § 141.402\(a\)\(3\)](#) is fecal positive.
 - 2. When directed by the Division, if a ground water system with a ground water source sample collected under [40 CFR § 141.402\(a\)\(2\)](#), [§ 141.402\(a\)\(4\)](#), or [§ 141.402\(b\)](#) is fecal positive.
 - 3. When a significant deficiency is identified at a 40 CFR Part 141 Subpart H public water system that uses both ground water and surface water or

ground water under the direct influence of surface water, the system must comply with paragraph (4) except in cases where the Division determines that the significant deficiency is in a portion of the distribution system that is served solely by surface water or ground water under the direct influence of surface water.

4. Unless directed by the Division to implement a specific corrective action, the ground water system must consult with the Division regarding the appropriate corrective action within thirty (30) days of receiving written notice from the Division of a significant deficiency, written notice from a laboratory that a ground water source sample collected under [40 CFR § 141.402\(a\)\(3\)](#) was found to be fecal positive, or direction from the Division that a fecal positive collected under [40 CFR § 141.402\(a\)\(2\)](#), § [141.402\(a\)\(4\)](#), or § [141.402\(b\)](#) requires corrective action. For purposes of this section, significant deficiencies include, but are not limited to, defects in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage, or distribution system that the Division determines to be causing, or have the potential for causing, the introduction of contamination into the water delivered to consumers.

5. Within 120 days (or earlier if directed by the Division) of receiving written notification from the Division of a significant deficiency, written notice from a laboratory that a ground water source sample collected under [40 CFR § 141.402\(a\)\(3\)](#) was found to be fecal positive, or direction from the Division that a fecal positive collected under [40 CFR § 141.402\(a\)\(2\)](#), § [141.402\(a\)\(4\)](#), or § [141.402\(b\)](#) requires corrective action, the ground water system must either:
 - (i) Have completed corrective action in accordance with a Division approved corrective action plan.
 - (ii) Be in compliance with a Division approved corrective action plan and schedule subject to the following conditions.
 - (I) The Division must approve any modifications to the corrective action plan and schedule.
 - (II) The system must comply with any interim measures specified by the Division for the protection of the public health pending Division approval of the corrective action plan and schedule or pending completion of the corrective action.

6. Ground water systems that meet the conditions of paragraphs (4)(a)1. or (4)(a)2. must implement one or more of the following corrective action alternatives:
 - (i) Correct all significant deficiencies;
 - (ii) Provide an alternate source of water;
 - (iii) Eliminate the source of contamination; or
 - (iv) Provide treatment that reliably achieves at least 4-log treatment of viruses (using inactivation, removal, or a Division-approved combination of both) before or at the first customer for the ground water source.

7. Special Notice to the public of significant deficiencies or source water fecal contamination.
 - (i) In addition to the applicable public notification requirements of 40 CFR § 141.4202, a community ground water system that receives notice from the Division of a significant deficiency or notification of a fecal positive ground water source sample that is not invalidated by the Division under [40 CFR § 141.402\(d\)](#) must inform the public served by the water system under [40 CFR § 141.153\(h\)\(6\)](#) of the fecal positive source sample or of any significant deficiency that has not been corrected. The system must continue to inform the public annually until the significant deficiency is corrected or the fecal contamination in the groundwater source is determined by the Division to be corrected under paragraph (4)(a)5.
 - (ii) In addition to the applicable public notification requirements of 40 CFR § 141.4202, a non-community ground water system that receives notice from the Division of a significant deficiency must inform the public served by the water system in a manner approved by the Division of any significant deficiency that has not been corrected within twelve (12) months of being notified, or earlier if directed by the Division. The system must continue to inform the public annually until the significant deficiency is corrected. The information must include:
 - (I) The nature of the significant deficiency and the date the significant deficiency was identified by the Division;

- (II) The Division approved plan and schedule for correction of the significant deficiency, including interim measures, progress to date, and any interim measures completed; and
 - (III) For systems with a large portion of non-English speaking consumers, as determined by the Division, information in the appropriate language regarding the importance of the notice or a telephone number or address where consumers may contact the system to obtain a translated copy of the notice or assistance in the appropriate language.
- (iii) If directed by the Division, a non-community water system with significant deficiencies that have been corrected must inform its customers of the significant deficiencies, how the deficiencies were corrected, and the dates of correction.

(b) Compliance Monitoring.

1. A ground water system that is not required to meet the source water monitoring requirements in this Rule because it provides at least 4-log treatment of viruses for any ground water source must notify the Division in writing that it is providing at least 4-log treatment of viruses and begin compliance monitoring in accordance with paragraph (4)(b) by December 1, 2009.
2. A ground water system that places a ground water source in service after November 30, 2009, and provides at least 4-log treatment of viruses before or at the first customer is not required to meet the source water monitoring requirements in this Rule. Such system must notify the Division in accordance with [40 CFR § 141.403\(b\)\(2\)\(i\), \(b\)\(2\)\(ii\) and \(b\)\(2\)\(iii\)](#) and conduct compliance monitoring as required under [40 CFR § 141.403\(b\)\(3\)](#) within thirty days of placing the source in service.
3. If the system subsequently discontinues 4-log treatment of viruses before or at the first customer for a ground water source, the system must conduct ground water source monitoring as required under [40 CFR § 141.402](#).
4. A ground water system serving greater than 3,300 people that is required to conduct compliance monitoring must continuously monitor the residual disinfectant concentration using analytical methods specified in [40 CFR § 141.74\(a\)\(2\)](#) at a location approved by the Division and must record the lowest residual disinfectant concentration each day that water from the ground water source is served to the public. The ground water system must

maintain the Division-determined residual disinfectant concentration every day the ground water system serves water from the ground water source to the public. If there is a failure in the continuous monitoring equipment, the ground water system must conduct grab sampling every four hours until the continuous monitoring equipment is returned to service. The system must resume continuous residual disinfectant monitoring within 14 days.

5. A ground water system serving 3,300 or fewer people that is required to conduct compliance monitoring must monitor the residual disinfectant concentration using analytical methods specified in [40 CFR § 141.74\(a\)\(2\)](#) at a location approved by the Division and record the residual disinfectant concentration each day that water from the ground water source is served to the public. The ground water system must maintain the Division-determined residual disinfectant concentration every day the ground water system serves water from the ground water source to the public. The ground water system must take a daily grab sample during the hour of peak flow or at another time specified by the Division. If any daily grab sample measurement falls below the Division-determined residual disinfectant concentration, the ground water system must take follow-up samples every four hours until the residual disinfectant concentration is restored to the Division-determined level. Alternatively, a ground water system that serves 3,300 or fewer people may monitor continuously and meet the requirements of [40 CFR § 141.403\(b\)\(3\)\(i\)\(A\)](#).
6. Membrane Filtration. A ground water system that uses membrane filtration to meet the requirements of this section must monitor the membrane filtration process in accordance with all Division-specified monitoring requirements and must operate the membrane filtration in accordance with all Division-specified compliance requirements. A ground water system that uses membrane filtration is in compliance with the requirement to achieve at least 4-log removal of viruses when:
 - (i) The membrane has an absolute molecular weight cut-off (MWCO), or an alternate parameter that describes the exclusion characteristics of the membrane, that can reliably achieve at least 4-log removal of viruses;
 - (ii) The membrane process is operated in accordance with Division-specified compliance requirements; and
 - (iii) The integrity of the membrane is intact.
7. Alternative treatment. A ground water system that uses a Division-approved alternative treatment to meet the requirements of this subpart by providing at least 4-log treatment of viruses (using inactivation, removal, or a

Division-approved combination of 4-log virus inactivation and removal) before or at the first customer must:

- (i) Monitor the alternative treatment in accordance with all Division-specified monitoring requirements; and
- (ii) Operate the alternative treatment in accordance with all compliance requirements that the Division determines to be necessary to achieve at least 4-log treatment of viruses.

8. A ground water system may discontinue 4-log treatment of viruses if the Division determines and documents in writing that 4-log treatment of viruses is no longer necessary for that groundwater source. A system that discontinues 4-log treatment of viruses is subject to the source water monitoring and analytical methods requirements of [40 CFR Part 141 Subpart S, § 141.402](#).
9. Failure to meet the monitoring requirements of paragraph (4)(b) is a monitoring violation and requires the ground water system to provide public notification under [40 CFR Part 141 Subpart Q, § 141.204](#).
10. A ground water system conducting compliance monitoring under [40 CFR § 141.403\(b\)](#) must notify the Division any time the system fails to meet any Division-specified requirements including, but not limited to, minimum residual disinfectant concentration, membrane operating criteria or membrane integrity, and alternative treatment operating criteria, if operation in accordance with the criteria or requirements is not restored within four hours. The ground water system must notify the Division as soon as possible, but in no case later than the end of the next business day.

(5) **Treatment Technique Violations for Ground Water Systems.** [40 CFR, Subpart S, § 141.404](#) is hereby incorporated by reference.

- (a) A ground water system with a significant deficiency is in violation of the treatment technique requirement if, within 120 days (or earlier if directed by the Division) of receiving written notice from the Division of the significant deficiency, the system:
 1. Does not complete corrective action in accordance with any applicable Division plan review processes including interim actions and measures specified by the Division, or
 2. Is not in compliance with a Division approved corrective action plan and schedule.

- (b) Unless the Division invalidates a fecal positive ground water source sample under [40 CFR § 141.402\(d\)](#), a ground water system is in violation of the treatment technique requirement if, within 120 days (or earlier if directed by the Division) of meeting the conditions of [40 CFR § 141.403\(a\)\(1\)](#) or [§ 141.403\(a\)\(2\)](#), the system:
 - 1. Does not complete corrective action in accordance with any applicable Division plan review processes including interim actions and measures specified by the Division, or
 - 2. Is not in compliance with a Division approved corrective action plan and schedule.
 - (c) A ground water system subject to the requirements of [40 CFR § 141.403\(b\)\(3\)](#) that fails to maintain at least 4-log treatment of viruses (using inactivation, removal, or a Division-approved combination of both) is in violation of the treatment technique requirement if the failure is not corrected within four hours of determining the system is not maintaining at least 4-log treatment of viruses before or at the first customer.
 - (d) Ground water systems must give public notification under [40 CFR § 141.203](#) for the treatment technique violations specified in paragraphs (5)(a), (5)(b) and (5)(c).
- (6) **Reporting and Recordkeeping for Ground Water Systems.** 40 CFR Part 141, Subpart S, § 141.405 is hereby incorporated by reference.
- (a) In addition to the requirements of [40 CFR § 141.31](#), a groundwater system regulated under 40 CFR Part 141 Subpart S must provide the following information to the Division:
 - 1. A ground water system conducting compliance monitoring under [40 CFR § 141.403\(b\)](#) must notify the Division any time the systems fails to meet any Division-specified requirements including, but not limited to, minimum residual disinfectant concentration, membrane operating criteria or integrity, and alternative treatment operating criteria, if operation in accordance with the criteria or requirements is not restored within four (4) hours. The ground water system must notify the Division as soon as possible, but in no case later than the end of the next business day.
 - 2. After completing any corrective action under [40 CFR § 141.403\(a\)](#), a ground water system must notify the Division within thirty (30) days of completion of the corrective action.
 - 3. If a ground water system that is subject to the requirements of [40 CFR § 141.402\(a\)](#) does not conduct source water monitoring under [40 CFR § 141.402\(a\)\(5\)\(ii\)](#), the system must provide documentation to the Division

within thirty (30) days of the total coliform positive sample that it met the Division criteria.

- (b) In addition to the requirements of [40 CFR § 141.33](#), a groundwater system regulated under 40 CFR Part 141 Subpart S must maintain the following information in its records:
1. Documentation of corrective actions. Documentation shall be kept for a period of not less than ten years.
 2. Documentation of notice to the public as required under [40 CFR § 141.403\(a\)\(7\)](#). Documentation shall be kept for a period not less than three years.
 3. Records of decisions under [40 CFR § 141.402\(a\)\(5\)\(ii\)](#) and records of invalidation of fecal indicator-positive ground water samples under [40 CFR § 141.402\(d\)](#). Documentation shall be kept for a period of not less than five years.
 4. For consecutive systems, documentation of notification to the wholesale system(s) of total coliform-positive samples that are not invalidated under Rule [391-3-5-.23\(3\)](#) until March 31, 2016, or under Rule [391-3-5-.55\(3\)](#) beginning April 1, 2016. Documentation shall be kept for a period of not less than five years.
 5. For systems, including wholesale systems, that are required to perform compliance monitoring under [40 CFR § 141.403\(b\)](#):
 - (i) Records of the Division-specified minimum disinfectant residual. Documentation shall be kept for a period of not less than ten years.
 - (ii) Records of lowest daily residual disinfectant concentration and records of the date and duration of any failure to maintain the Division-prescribed minimum residual disinfectant concentration for a period of more than four hours. Documentation shall be kept for a period of not less than five years.
 - (iii) Records of Division-specified compliance requirements for membrane filtration and of parameters specified by the Division for Division-approved alternative treatment and records of the date and duration of any failure to meet the membrane operating, membrane integrity, or alternative treatment operating requirements for more than four hours. Documentation shall be kept for a period of not less than five years.

- (7) **Division Recordkeeping.** The records kept by the Division shall be in accordance with [40 CFR § 142.14](#).
- (8) **Division Reporting.** The reporting by the Division shall be performed as required by [40 CFR § 142.15](#).

Authority: O.C.G.A. § [12-5-170](#) *et seq.*

History. Original Rule entitled "Ground Water Rule" adopted. F. May 27, 2009; eff. June 16, 2009.

Amended: F. Jan. 8, 2014; eff. Jan. 28, 2014.

Amended: F. Feb. 29, 2016; eff. Mar. 20, 2016.

Amended: F. Apr. 22, 2021; eff. May 12, 2021.

Rule 391-3-5-.55. Revised Total Coliform Rule.

(1) **General.**

- (a) *General.* The provisions of this Rule include both maximum contaminant level and treatment technique requirements.
- (b) *Applicability.* The provisions of this Rule apply to all public water systems.
- (c) *Compliance date.* Systems must comply with the provisions of this Rule beginning April 1, 2016, unless otherwise specified in this Rule.
- (d) *Violations of national primary drinking water regulations.* Failure to comply with the applicable requirements of this Rule, including requirements established by the Division pursuant to these provisions, is a violation of the national primary drinking water regulations.

(2) **Analytical Methods and Laboratory Certification**

- (a) *Analytical Methodology.*
 1. The standard sample volume required for analysis, regardless of analytical method used, is 100 ml.
 2. Systems need only determine the presence or absence of total coliforms and *E. coli*; a determination of density is not required.
 3. The time from sample collection to initiation of test medium incubation may not exceed 30 hours. Systems are encouraged but not required to hold samples below 10 deg. C during transit.
 4. If water having residual chlorine (measured as free, combined, or total chlorine) is to be analyzed, sufficient sodium thiosulfate (Na₂S₂O₃) must be

added to the sample bottle before sterilization to neutralize any residual chlorine in the water sample. Dechlorination procedures are addressed in Section 9060A.2 of *Standard Methods for the Examination of Water and Wastewater* (20th and 21st editions).

5. Systems must conduct total coliform and *E. coli* analyses in accordance with one of the analytical methods in [40 CFR § 141.852\(a\)\(5\)](#) or one of the alternative methods listed in Appendix A to Subpart C of 40 CFR Part 141.
- (b) *Laboratory certification.* Systems must have all compliance samples required under this Rule analyzed by a laboratory certified by the Division or by EPA to analyze drinking water samples. The laboratory used by the system must be certified for each method (and associated contaminant(s)) used for compliance monitoring analyses under this Rule.
- (c) *Incorporation by reference.* The standards required in paragraph (2) of this Rule are incorporated by reference under [40 CFR § 141.852\(c\)](#).

(3) **General Monitoring Requirements for all Public Water Systems**

(a) Sample Site Plans.

1. Systems must develop a written sample siting plan that identifies sampling sites and a sample collection schedule that are representative of water throughout the distribution system not later than March 31, 2016. These plans are subject to Division review and revision. Systems must collect total coliform samples according to the written sample siting plan. Monitoring required by paragraphs (4) through (8) of this Rule may take place at a customer's premise, dedicated sampling station, or other designated compliance sampling location. Routine and repeat sample sites and any sampling points necessary to meet the requirements of Rule [391-3-5-.54](#) must be reflected in the sampling plan.
2. Systems must collect samples at regular time intervals throughout the month, except that systems that use only groundwater and serve 4,900 or fewer people may collect all required samples on a single day if they are taken from different sites.
3. Systems must take at least the minimum number of required samples even if the system has had an *E. coli* MCL violation or has exceeded the coliform treatment technique triggers in paragraph (9)(a).
4. A system may conduct more compliance monitoring than is required by this Rule to investigate potential problems in the distribution system and use monitoring as a tool to assist in uncovering problems. A system may take

more than the minimum number of required routine samples and must include the results in calculating whether the coliform treatment technique trigger in paragraphs (9)(a)1.(i) and (ii) has been exceeded only if the samples are taken in accordance with the existing sample siting plan and are representative of water throughout the distribution system.

5. Systems must identify repeat monitoring locations in the sample siting plan. Unless the provisions of paragraph (3)(a)5.(i) are met, the system must collect at least one repeat sample from the sampling tap where the original total coliform-positive sample was taken, and at least one repeat sample at a tap within five service connections upstream and at least one repeat sample at a tap within five service connections downstream of the original sampling site. If a total coliform-positive sample is at the end of the distribution system, or one service connection away from the end of the distribution system, the system must still take all required repeat samples. However, the Division may allow an alternative sampling location in lieu of the requirement to collect at least one repeat sample upstream or downstream of the original sampling site. Systems required to conduct triggered source water monitoring under [391-3-5-.54\(3\)\(a\)](#) must take ground water source sample(s) in addition to repeat samples required under this Rule.
 - (i) Systems may propose repeat monitoring locations to the Division that the system believes to be representative of a pathway for contamination of the distribution system. A system may elect to specify either alternative fixed locations or criteria for selecting repeat sampling sites on a situational basis in a standard operating procedure (SOP) in its sample siting plan. The system must design its SOP to focus the repeat samples at locations that best verify and determine the extent of potential contamination of the distribution system area based on specific situations. The Division may modify the SOP or require alternative monitoring locations as needed.
6. The Division may review, revise, and approve, as appropriate, repeat sampling proposed by systems under paragraph (3)(a)5.(i). The system must demonstrate that the sample siting plan remains representative of the water quality in the distribution system. The Division may determine that monitoring at the entry point to the distribution system (especially for undisinfected ground water systems) is effective to differentiate between potential source water and distribution system problems.
 - (b) *Special purpose samples.* Special purpose samples, such as those taken to determine whether disinfection practices are sufficient following pipe placement, replacement, or repair, must not be used to determine whether the coliform treatment technique trigger has been exceeded. Repeat samples taken pursuant to

paragraph (8) are not considered special purpose samples, and must be used to determine whether the coliform treatment technique trigger has been exceeded.

- (c) *Invalidation of total coliform samples.* A total coliform-positive sample invalidated under this paragraph does not count toward meeting the minimum monitoring requirements of this Rule.
1. The Division may invalidate a total coliform-positive sample only if any of the following conditions are met:
 - (i) The laboratory establishes that improper sample analysis caused the total coliform-positive result.
 - (ii) The Division, on the basis of the results of repeat samples collected as required under paragraph (8)(a), determines that the total coliform-positive sample resulted from a domestic or other non-distribution system plumbing problem. The Division cannot invalidate a sample on the basis of repeat sample results unless all repeat sample(s) collected at the same tap as the original total coliform-positive sample are also total coliform-positive, and all repeat samples collected at a location other than the original tap are total coliform-negative (e.g., the Division cannot invalidate a total coliform-positive sample on the basis of repeat samples if all the repeat samples are total coliform-negative, or if the system has only one service connection).
 - (iii) The Division has substantial grounds to believe that a total coliform-positive result is due to a circumstance or condition that does not reflect water quality in the distribution system. In this case, the system must still collect all repeat samples required under paragraph (8)(a), and use them to determine whether a coliform treatment technique trigger in paragraph (9) has been exceeded. To invalidate a total coliform-positive sample under this paragraph, the decision and supporting rationale must be documented in writing, and approved and signed by the supervisor of the Division official who recommended the decision. The Division must make this document available to EPA and the public. The written documentation must state the specific cause of the total coliform-positive sample, and what action the system has taken, or will take, to correct this problem. The Division may not invalidate a total coliform-positive sample solely on the grounds that all repeat samples are total coliform-negative.
 2. A laboratory must invalidate a total coliform sample (unless total coliforms are detected) if the sample produces a turbid culture in the absence of gas production using an analytical method where gas formation is examined

(e.g., the Multiple-Tube Fermentation Technique), produces a turbid culture in the absence of an acid reaction in the Presence-Absence (P-A) Coliform Test, or exhibits confluent growth or produces colonies too numerous to count with an analytical method using a membrane filter (e.g., Membrane Filter Technique). If a laboratory invalidates a sample because of such interference, the system must collect another sample from the same location as the original sample within 24 hours of being notified of the interference problem, and have it analyzed for the presence of total coliforms. The system must continue to re-sample within 24 hours and have the samples analyzed until it obtains a valid result. The Division may waive the 24-hour time limit on a case-by-case basis. Alternatively, the Division may implement criteria for waiving the 24-hour sampling time limit to use in lieu of case-by-case extensions.

(4) Routine Monitoring Requirements for Non-Community Water Systems Serving 1,000 or Fewer People Using Only Ground Water

(a) General.

1. The provisions of this paragraph (4) apply to non-community water systems using only ground water (except ground water under the direct influence of surface water, as defined in Rule [391-3-5-.02\(64\)](#)) and serving 1,000 or fewer people.
2. Following any total coliform-positive sample taken under the provisions of paragraph (4), systems must comply with the repeat monitoring requirements and *E. coli* analytical requirements in paragraph (8).
3. Once all monitoring required by paragraphs (4) and (8) for a calendar month has been completed, systems must determine whether any coliform treatment technique triggers specified in paragraph (9) have been exceeded. If any trigger has been exceeded, systems must complete assessments as required by paragraph (9).
4. For the purpose of determining eligibility for remaining on or qualifying for quarterly monitoring under the provisions of paragraphs (4)(d)4. and (4)(e)2., respectively, for transient non-community water systems, the Division may elect to not count monitoring violations under paragraph (10)(c)1. if the missed sample is collected no later than the end of the monitoring period following the monitoring period in which the sample was missed. The system must collect the make-up sample in a different week than the routine sample for that monitoring period and should collect the sample as soon as possible during the monitoring period. This authority does not affect the provisions of paragraphs (10)(c)1. and (11)(a)4.

(b) *Monitoring frequency for total coliforms.* Systems must monitor each calendar quarter that the system provides water to the public, except for seasonal systems or as provided under paragraphs (4)(c) through (4)(e) and (4)(g). Seasonal systems must meet the monitoring requirements of paragraph (4)(f).

(c) *Transition to Rule 391-3-5-.55.*

1. Systems, excluding seasonal systems, must continue to monitor according to the total coliform monitoring schedules under Rule [391-3-5-.23](#) that were in effect on March 31, 2016, unless any of the conditions for increased monitoring in paragraph (4)(d) are triggered on or after April 1, 2016, or unless otherwise directed by the Division. Seasonal Systems must comply with paragraph (4)(f) as of April 1, 2016.
2. Beginning April 1, 2016, the Division must perform a special monitoring evaluation during each sanitary survey to review the status of the system, including the distribution system, to determine whether the system is on an appropriate monitoring schedule. After the Division has performed the special monitoring evaluation during each sanitary survey, the Division may modify the system's monitoring schedule, as necessary, or it may allow the system to stay on its existing monitoring schedule, consistent with the provisions of paragraph (4). The Division may not allow systems to begin less frequent monitoring under the special monitoring evaluation unless the system has already met the applicable criteria for less frequent monitoring in paragraph (4).

(d) *Increased monitoring requirements for systems on quarterly monitoring.* A system on quarterly monitoring that experiences any of the events identified in paragraphs (4)(d)1. through (4)(d)4. must begin monthly monitoring the month following the event. The system must continue monthly monitoring until the requirements in paragraph (4)(e) for quarterly monitoring are met. A system on monthly monitoring for reasons other than those identified in paragraphs (4)(d)1. through (4)(d)4. is not considered to be on increased monitoring for the purposes of paragraph (4)(e).

1. The system triggers a Level 2 assessment or two Level 1 assessments under the provisions of paragraph (9) in a rolling 12-month period.
2. The system has an *E. coli* MCL violation.
3. The system has a coliform treatment technique violation.
4. The system has two monitoring violations under Rule 391-3-5-.55 or one monitoring violation under Rule 391-3-5-.55 and one Level 1 assessment under the provisions of paragraph (9) in a rolling 12-month period.

(e) *Requirements for returning to quarterly monitoring.* The Division may reduce the monitoring frequency for a system on monthly monitoring triggered under paragraph (4)(d) to quarterly monitoring if the system meets the following criteria:

1. Within the last 12 months, the system must have a completed sanitary survey or a site visit by the Division or a voluntary Level 2 assessment by a party approved by the Division, be free of sanitary defects, and have a protected water source; and
2. The system must have a clean compliance history for a minimum of 12 months.

(f) *Seasonal systems.*

1. Beginning April 1, 2016, all seasonal systems must demonstrate completion of a Division-approved start-up procedure, which includes a requirement for startup sampling prior to serving water to the public.
2. A seasonal system must monitor every month that it is in operation.
3. The Division may exempt any seasonal system from some or all of the requirements for seasonal systems if the entire distribution system remains pressurized during the entire period that the system is not operating.

(g) *Additional routine monitoring the month following a total coliform-positive sample.* Systems collecting samples on a quarterly frequency must conduct additional routine monitoring the month following one or more total coliform-positive samples (with or without a Level 1 treatment technique trigger). Systems must collect at least three routine samples during the next month, except that the Division may waive this requirement if the conditions of paragraph (4)(g)1., 2., or 3. are met. Systems may either collect samples at regular time intervals throughout the month or may collect all required routine samples on a single day if samples are taken from different sites. Systems must use the results of additional routine samples in coliform treatment technique trigger calculations under paragraph (9)(a).

1. The Division may waive the requirement to collect three routine samples the next month in which the system provides water to the public if the Division, or an agent approved by the Division, performs a site visit before the end of the next month in which the system provides water to the public. Although a sanitary survey need not be performed, the site visit must be sufficiently detailed to allow the Division to determine whether additional monitoring and/or any corrective action is needed. The Division cannot approve an employee of the system to perform this site visit, even if the employee is an agent approved by the Division to perform sanitary surveys.

2. The Division may waive the requirement to collect three routine samples the next month in which the system provides water to the public if the Division has determined why the sample was total coliform-positive and has established that the system has corrected the problem or will correct the problem before the end of the next month in which the system serves water to the public. In this case, the Division must document this decision to waive the following month's additional monitoring requirement in writing, have it approved and signed by the supervisor of the Division official who recommends such a decision, and make this document available to the EPA and public. The written documentation must describe the specific cause of the total coliform-positive sample and what action the system has taken and/or will take to correct this problem.
3. The Division may not waive the requirement to collect three additional routine samples the next month in which the system provides water to the public solely on the grounds that all repeat samples are total coliform-negative. If the Division determines that the system has corrected the contamination problem before the system takes the set of repeat samples required in paragraph (8), and all repeat samples were total coliform-negative, the Division may waive the requirement for additional routine monitoring the next month.

(5) Routine Monitoring Requirements for Community Water Systems Serving 1,000 or Fewer People Using Only Ground Water.

(a) General.

1. The provisions of paragraph (5) apply to community water systems using only ground water (except ground water under the direct influence of surface water, as defined in [391-3-5-.02\(64\)](#)) and serving 1,000 or fewer people.
2. Following any total coliform-positive sample taken under the provisions of paragraph (5), systems must comply with the repeat monitoring requirements and *E. coli* analytical requirements in paragraph (8).
3. Once all monitoring required by paragraphs (5) and (8) for a calendar month has been completed, systems must determine whether any coliform treatment technique triggers specified in paragraph (9) have been exceeded. If any trigger has been exceeded, systems must complete assessments as required by paragraph (9).

(b) Monitoring frequency for total coliforms. The monitoring frequency for total coliforms is one sample/month, except as provided below:

1. All systems must continue to monitor according to the total coliform monitoring schedules under Rule [391-3-5-.23](#) that were in effect on March 31, 2016, unless otherwise directed by the Division.
2. Beginning April 1, 2016, the Division must perform a special monitoring evaluation during each sanitary survey to review the status of the system, including the distribution system, to determine whether the system is on an appropriate monitoring schedule. After the Division has performed the special monitoring evaluation during each sanitary survey, the Division may modify the system's monitoring schedule, as necessary, or it may allow the system to stay on its existing monitoring schedule, consistent with the provisions of paragraph (5).

(6) Routine Monitoring Requirements for 40 CFR Part 141 Subpart H Public Water Systems Serving 1,000 or Fewer People.

(a) General.

1. The provisions of paragraph (6) apply to 40 CFR Part 141 Subpart H public water systems serving 1,000 or fewer people.
2. Following any total coliform-positive sample taken under the provisions of paragraph (6), systems must comply with the repeat monitoring requirements and *E. coli* analytical requirements in paragraph (8).
3. Once all monitoring required by paragraphs (6) and (8) for a calendar month has been completed, systems must determine whether any coliform treatment technique triggers specified in paragraph (9) have been exceeded. If any trigger has been exceeded, systems must complete assessments as required by paragraph (9).
4. Seasonal systems.
 - (i) Beginning April 1, 2016, all seasonal systems must demonstrate completion of a Division-approved start-up procedure, which may include a requirement for start-up sampling prior to serving water to the public.
 - (ii) The Division may exempt any seasonal system from some or all of the requirements for seasonal systems if the entire distribution system remains pressurized during the entire period that the system is not operating.

- (b) *Routine monitoring frequency for total coliforms.* 40 CFR Part 141 Subpart H systems (including consecutive systems) must monitor monthly. Systems may not reduce monitoring.

(7) Routine Monitoring Requirements for Public Water Systems Serving More than 1,000 People.

(a) *General.*

1. The provisions of paragraph (7) apply to public water systems serving more than 1,000 persons.
2. Following any total coliform-positive sample taken under the provisions of paragraph (7), systems must comply with the repeat monitoring requirements and *E. coli* analytical requirements in paragraph (8).
3. Once all monitoring required by paragraphs (7) and (8) for a calendar month has been completed, systems must determine whether any coliform treatment technique triggers specified in paragraph (9) have been exceeded. If any trigger has been exceeded, systems must complete assessments as required by paragraph (9).
4. Seasonal systems.
 - (i) Beginning April 1, 2016, all seasonal systems must demonstrate completion of a Division-approved start-up procedure, which may include a requirement for start-up sampling prior to serving water to the public.
 - (ii) The Division may exempt any seasonal system from some or all of the requirements for seasonal systems if the entire distribution system remains pressurized during the entire period that the system is not operating.

- (b) *Monitoring frequency for total coliforms.* The monitoring frequency for total coliforms is based on the population served by the system, as follows:

Total Coliform Monitoring Frequency for Public Water Systems Serving More Than 1,000 People

Population Served	Minimum number of samples per month
1,001 to 2,500	2
2,501 to 3,300	3
3,301 to 4,100	4

4,101 to 4,900	5
4,901 to 5,800	6
5,801 to 6,700	7
6,701 to 7,600	8
7,601 to 8,500	9
8,501 to 12,900	10
12,901 to 17,200	15
17,201 to 21,500	20
21,501 to 25,000	25
25,001 to 33,000	30
33,001 to 41,000	40
41,001 to 50,000	50
50,001 to 59,000	60
59,001 to 70,000	70
70,001 to 83,000	80
83,001 to 96,000	90
96,001 to 130,000	100
130,001 to 220,000	120
220,001 to 320,000	150
320,001 to 450,000	180
450,001 to 600,000	210
600,001 to 780,000	240
780,001 to 970,000	270
970,001 to 1,230,000	300
1,230,001 to 1,520,000	330
1,520,001 to 1,850,000	360
1,850,001 to 2,270,000	390
2,270,001 to 3,020,000	420
3,020,001 to 3,960,000	450
3,960,001 or more	480

(8) Repeat Monitoring and *E. Coli* Requirements.

(a) *Repeat Monitoring.*

1. If a sample taken under paragraphs (4) through (7) of this Rule is total coliform-positive, the system must collect a set of repeat samples within 24 hours of being notified of the positive result. The system must collect no fewer than three repeat samples for each total coliform-positive sample found. The Division may extend the 24-hour limit on a case-by-case basis if the system has a logistical problem in collecting the repeat samples within 24 hours that is beyond its control. Alternatively, the Division may implement criteria for the system to use in lieu of case-by-case extensions. In the case of an extension, the Division must specify how much time the system has to collect the repeat samples. The Division cannot waive the requirement for a system to collect repeat samples in paragraphs (8)(a)1. through (8)(a)3.
2. The system must collect all repeat samples on the same day, except that the Division may allow a system with a single service connection to collect the required set of repeat samples over a three-day period or to collect a larger volume repeat sample(s) in one or more sample containers of any size, as long as the total volume collected is at least 300 ml.
3. The system must collect an additional set of repeat samples in the manner specified in paragraphs (8)(a)1. through (8)(a)3. if one or more repeat samples in the current set of repeat samples is total coliform-positive. The system must collect the additional set of repeat samples within 24 hours of being notified of the positive result, unless the Division extends the limit as provided in paragraph (8)(a)1. The system must continue to collect additional sets of repeat samples until either total coliforms are not detected in one complete set of repeat samples or the system determines that a coliform treatment technique trigger specified in paragraph (9)(a) has been exceeded as a result of a repeat sample being total coliform-positive and notifies the Division. If a trigger identified in paragraph (9) is exceeded as a result of a routine sample being total coliform-positive, systems are required to conduct only one round of repeat monitoring for each total coliform-positive routine sample.
4. After a system collects a routine sample and before it learns the results of the analysis of that sample, if it collects another routine sample(s) from within five adjacent service connections of the initial sample, and the initial sample, after analysis, is found to contain total coliforms, then the system may count the subsequent sample(s) as a repeat sample instead of as a routine sample.
5. Results of all routine and repeat samples taken under paragraphs (4) through (8) of this Rule not invalidated by the Division must be used to determine

whether a coliform treatment technique trigger specified in paragraph (9) has been exceeded.

(b) *Escherichia coli* (*E. coli*) testing.

1. If any routine or repeat sample is total coliform-positive, the system must analyze that total coliform-positive culture medium to determine if *E. coli* are present. If *E. coli* are present, the system must notify the Division by the end of the day when the system is notified of the test result, unless the system is notified of the result after the Division office is closed and the Division does not have either an after-hours phone line or an alternative notification procedure, in which case the system must notify the Division before the end of the next business day.
2. The Division has the discretion to allow a system, on a case-by-case basis, to forgo *E. coli* testing on a total coliform-positive sample if that system assumes that the total coliform-positive sample is *E. coli*-positive. Accordingly, the system must notify the Division as specified in paragraph (8)(b)1. and the provisions of Rule [391-3-5-.18\(4\)\(c\)](#) apply.

(9) **Coliform Treatment Technique Triggers and Assessment Requirements for Protection Against Potential Fecal Contamination.**

(a) *Treatment technique triggers.* Systems must conduct assessments in accordance with paragraph (9)(b) after exceeding treatment technique triggers in paragraphs (9)(a)1. and (9)(a)2.

1. Level 1 treatment technique triggers.
 - (i) For systems taking 40 or more samples per month, the system exceeds 5.0% total coliform-positive samples for the month.
 - (ii) For systems taking fewer than 40 samples per month, the system has two or more total coliform-positive samples in the same month.
 - (iii) The system fails to take every required repeat sample after any single total coliform-positive sample.
2. Level 2 treatment technique triggers.
 - (i) An *E. coli* MCL violation, as specified in paragraph (10)(a).
 - (ii) A second Level 1 trigger as defined in paragraph (9)(a)1., within a rolling 12-month period, unless the Division has determined a likely reason that the samples that caused the first Level 1 treatment

technique trigger were total coliform-positive and has established that the system has corrected the problem.

(b) *Requirements for assessments.*

1. Systems must ensure that Level 1 and 2 assessments are conducted in order to identify the possible presence of sanitary defects and defects in distribution system coliform monitoring practices. Level 2 assessments must be conducted by parties approved by the Division.
2. When conducting assessments, systems must ensure that the assessor evaluates minimum elements that include review and identification of inadequacies in sample sites; sampling protocol; sample processing; atypical events that could affect distributed water quality or indicate that distributed water quality was impaired; changes in distribution system maintenance and operation that could affect distributed water quality (including water storage); source and treatment considerations that bear on distributed water quality, where appropriate (e.g., small ground water systems); and existing water quality monitoring data. The system must conduct the assessment consistent with any Division directives that tailor specific assessment elements with respect to the size and type of the system and the size, type, and characteristics of the distribution system.
3. Level 1 assessments. A system must conduct a Level 1 assessment consistent with Division requirements if the system exceeds one of the treatment technique triggers in paragraph (9)(a)1.
 - (i) The system must complete a Level 1 assessment as soon as practical after any trigger in paragraph (9)(a)1. In the completed assessment form, the system must describe sanitary defects detected, corrective actions completed, and a proposed timetable for any corrective actions not already completed. The assessment form may also note that no sanitary defects were identified. The system must submit the completed Level 1 assessment form to the Division within 30 days after the system learns that it has exceeded a trigger.
 - (ii) If the Division reviews the completed Level 1 assessment and determines that the assessment is not sufficient (including any proposed timetable for any corrective actions not already completed), the Division must consult with the system. If the Division requires revisions after consultation, the system must submit a revised assessment form to the Division on an agreed-upon schedule not to exceed 30 days from the date of the consultation.

- (iii) Upon completion and submission of the assessment form by the system, the Division must determine if the system has identified a likely cause for the Level 1 trigger and, if so, establish that the system has corrected the problem, or has included a schedule acceptable to the Division for correcting the problem.
- 4. Level 2 assessments. A system must ensure that a Level 2 assessment consistent with Division requirements is conducted if the system exceeds one of the treatment technique triggers in paragraph (9)(a)2. The system must comply with any expedited actions or additional actions required by the Division in the case of an *E. coli* MCL violation.
 - (i) The system must ensure that a Level 2 assessment is completed by the Division or by a party approved by the Division as soon as practical after any trigger in paragraph (9)(a)2. The system must submit a completed Level 2 assessment form to the Division within 30 days after the system learns that it has exceeded a trigger. The assessment form must describe sanitary defects detected, corrective actions completed, and a proposed timetable for any corrective actions not already completed. The assessment form may also note that no sanitary defects were identified.
 - (ii) The system may conduct Level 2 assessments if the system has staff or management with the certification or qualifications specified by the Division unless otherwise directed by the Division.
 - (iii) If the Division reviews the completed Level 2 assessment and determines that the assessment is not sufficient (including any proposed timetable for any corrective actions not already completed), the Division must consult with the system. If the Division requires revisions after consultation, the system must submit a revised assessment form to the Division on an agreed-upon schedule not to exceed 30 days.
 - (iv) Upon completion and submission of the assessment form by the system, the Division must determine if the system has identified a likely cause for the Level 2 trigger and determine whether the system has corrected the problem, or has included a schedule acceptable to the Division for correcting the problem.
- (c) *Corrective action.* Systems must correct sanitary defects found through either Level 1 or 2 assessments conducted under paragraph (9)(b). For corrections not completed by the time of submission of the assessment form, the system must complete the corrective action(s) in compliance with a timetable approved by the

Division in consultation with the system. The system must notify the Division when each scheduled corrective action is completed.

- (d) *Consultation*. At any time during the assessment or corrective action phase, either the water system or the Division may request a consultation with the other party to determine the appropriate actions to be taken. The system may consult with the Division on all relevant information that may impact on its ability to comply with a requirement of this Rule, including the method of accomplishment, an appropriate timeframe, and other relevant information.

(10) Violations.

- (a) *E. coli MCL Violation*. A system is in violation of the MCL for *E. coli* when any of the following conditions occur:

1. The system has an *E. coli*-positive repeat sample following a total coliform-positive routine sample.
2. The system has a total coliform-positive repeat sample following an *E. coli*-positive routine sample.
3. The system fails to take all required repeat samples following an *E. coli*-positive routine sample.
4. The system fails to test for *E. coli* when any repeat sample tests positive for total coliform.

- (b) *Treatment technique violation*.

1. A treatment technique violation occurs when a system exceeds a treatment technique trigger specified in paragraph (9)(a) and then fails to conduct the required assessment or corrective actions within the timeframe specified in paragraphs (9)(b) and (9)(c).
2. A treatment technique violation occurs when a seasonal system fails to complete a Division-approved start-up procedure prior to serving water to the public.

- (c) *Monitoring violations*.

1. Failure to take every required routine or additional routine sample in a compliance period is a monitoring violation.
2. Failure to analyze for *E. coli* following a total coliform-positive routine sample is a monitoring violation.

- (d) *Reporting violations*.

1. Failure to submit a monitoring report or completed assessment form after a system properly conducts monitoring or assessment in a timely manner is a reporting violation.
2. Failure to notify the Division following an *E. coli*-positive sample as required by paragraph (8)(b)1. in a timely manner is a reporting violation.
3. Failure to submit certification of completion of Division-approved start-up procedure by a seasonal system is a reporting violation.

(11) Reporting and Recordkeeping.

(a) Reporting.

1. *E. coli.*
 - (i) A system must notify the Division by the end of the day when the system learns of an *E. coli* MCL violation, unless the system learns of the violation after the Division office is closed and the Division does not have either an after-hours phone line or an alternative notification procedure, in which case the system must notify the Division before the end of the next business day, and notify the public in accordance with Rule [391-3-5-.32](#).
 - (ii) A system must notify the Division by the end of the day when the system is notified of an *E. coli*-positive routine sample, unless the system is notified of the result after the Division office is closed and the Division does not have either an after-hours phone line or an alternative notification procedure, in which case the system must notify the Division before the end of the next business day.
2. A system that has violated the treatment technique for coliforms in paragraph (9) must report the violation to the Division no later than the end of the next business day after it learns of the violation, and notify the public in accordance with Rule [391-3-5-.32](#).
3. A system required to conduct an assessment under the provisions of paragraph (9) must submit the assessment report within 30 days. The system must notify the Division in accordance with paragraph (9)(c) when each scheduled corrective action is completed for corrections not completed by the time of submission of the assessment form.
4. A system that has failed to comply with a coliform monitoring requirement must report the monitoring violation to the Division within 10 days after

the system discovers the violation, and notify the public in accordance with Rule [391-3-5-32](#).

5. A seasonal system must certify, prior to serving water to the public, that it has complied with the Division-approved start-up procedure.

(b) *Recordkeeping.*

1. The system must maintain any assessment form, regardless of who conducts the assessment, and documentation of corrective actions completed as a result of those assessments, or other available summary documentation of the sanitary defects and corrective actions taken under paragraph (9) for Division review. This record must be maintained by the system for a period not less than five years after completion of the assessment or corrective action.
2. The system must maintain a record of any repeat sample taken that meets Division criteria for an extension of the 24-hour period for collecting repeat samples as provided for under paragraph (8)(a)1.

Authority: O.C.G.A. § [12-5-170](#)*et seq.*

History: Original Rule entitled "Revised Total Coliform Rule" adopted. F. Feb. 29, 2016; eff. Mar. 20, 2016.

Amended: F. Apr. 22, 2021; eff. May 12, 2021.

Subject 391-3-6. WATER QUALITY CONTROL.

Rule 391-3-6-.01. Organization and Administration.

- (1) **Purpose.** The purpose of Rule 391-3-6-.01 is to established the organizational and administrative procedures to be followed in the administration and enforcement of the Georgia Water Quality Control Act, as amended, and to carry out the purposes and requirements of said Act and of the Federal Water Pollution Control Act Amendments of 1972, as amended
- (2) **Definitions.** All terms used in this Paragraph shall be interpreted in accordance with the definitions as set forth in the Georgia Water Quality Control Act, as amended, unless otherwise defined in this Paragraph or in any other Paragraph of these rules:
 - (a) "Act" means the Georgia Water Quality Control Act, as amended;
 - (b) "Board" means the Board of Natural Resources of the State of Georgia;

- (c) "Department" means the Department of Natural Resources of the State of Georgia;
 - (d) "Director" means the Director of the Division of Environmental Protection of the Department of Natural Resources, State of Georgia;
 - (e) "Division" means the Division of Environmental Protection of the Department of Natural Resources, State of Georgia;
 - (f) "E.P.A." means the United States Environmental Protection Agency;
 - (g) "Federal Act" means the Federal Water Pollution Control Act Amendments of 1972, as amended;
 - (h) "Final Stabilization" means paved areas or areas covered by permanent structures or for unpaved areas and areas not covered by permanent structures, 100% of the soil surface is uniformly covered in permanent vegetation with a density of 70% or greater, or equivalent permanent stabilization measures (such as the use of rip rap, gabions, permanent mulches or geotextiles) have been used. Permanent vegetation shall consist of: planted trees, shrubs, perennial vines; a crop of perennial vegetation appropriate for the region. For infrastructure construction projects on land used for agricultural or silvicultural purposes, final stabilization may be accomplished by stabilizing the disturbed land for its agricultural or silvicultural use.
 - (i) "National Pollutant Discharge Elimination System" (NPDES) means the national system for the issuance of permits under Section 402 of the Federal Water Pollution Control Act Amendments of 1972;
 - (j) "Regional Administrator" means the Regional Administrator for the EPA region which includes the State of Georgia.
 - (k) "Primary Permittee" means the owner or the operator of a tract of land for a project covered by the State General Permit.
 - (l) "State General Permit" means the National Pollution Discharge Elimination System general permit or permits for storm-water runoff from construction activities as is now in effect or as may be amended or reissued in the future pursuant to the state's authority to implement the same through federal delegation under the Federal Water Pollution Control Act, as amended, [33 U.S.C. Section 1251](#), *et seq.*, and subsection (f) of Code Section [12-5-30](#).
- (3) **Organization.** The Division of Environmental Protection of the Department of Natural Resources is responsible for enforcing those environmental protection laws of the State of Georgia as specified in the Executive Reorganization Act of 1972, as amended. Requests for information and submission of materials should be made to the Division office.

(4) Administrative Hearings.

(a) Hearings may be held in accordance with the Act in connection with the following matters:

1. To determine whether or not an alleged pollution is contrary to the public interest;
2. In connection with the securing, within the time specified by order or permit of the Director, of such operating results as are reasonable and practicable of attainment toward the control, abatement or prevention of pollution of the waters of the State and preservation of the necessary quality for the reasonable use thereof;
3. In connection with notice to the holder of a permit of intent to revoke, suspend, or modify the permit;
4. In connection with the refusal of any person to cooperate with the efforts of the Division to reduce pollution, and upon the issuance of an order by the Director, to bring about the reduction or elimination of pollution within a reasonable time;
5. Any person who is aggrieved or adversely affected by an order or action of the Director and who petitions the Director for a hearing within thirty (30) days of the issuance of such order or notice of such action. Such person shall be granted a hearing before a hearing officer appointed by the Board of Natural Resources. The initial hearing any administrative review thereof shall be conducted in accordance with Section 17(a) of the Executive Reorganization Act of 1972, as amended.
6. Any person against whom an emergency order is directed, provided such person petitions the Director for a hearing within the thirty (30) days of the issuance of such order. Such person shall be afforded a hearing as soon as possible.
7. In connection with public hearings required pursuant to Section 402(b)(3) of the Federal Act and Federal Regulations, 40 C.F.R. 124.36.
8. In connection with public hearings or public participation required pursuant to Section 101(e) of the Federal Act.

(b) Insofar as applicable to the administrative procedures required pursuant to the Georgia Water Quality Act, as amended, Sections 14, 15, 16, 17, and 18 of the Georgia Administrative Procedure Act, as amended, and Section 17(a) of the Executive Reorganization Act of 1972, as amended, shall apply.

(5) **Public Participation Notice:**

- (a) Notice of all hearings provided for above shall be issued in accordance with Section 14 of the Georgia Administrative Procedure Act, as amended, and Federal Regulations, 40 C.F.R. 124.37.
 - (b) Interested persons shall have the right to participate in the enforcement of the Georgia Water Quality Control Act and rules promulgated thereunder pursuant to the applicable provisions of the Georgia Water Quality Control Act, § O.C.G.A. [12-5-20](#), *et seq.*; § O.C.G.A. [50-13-1](#), *et seq.*; the Georgia Civil Practices Act, § O.C.G.A. [9-11-1](#), *et seq.*; or any other applicable provision of Georgia law.
- (6) Notice to File Plan of Correction or Improvement.
- (a) In order to carry out a comprehensive plan to prevent and control pollution, the Division, as required by Section 5 of the Act and Section 303 of the Federal Act, may conduct studies and perform evaluations to determine waste load allocations in order to specify the degree of treatment and/or technology necessary to achieve the established effluent limitations; the maintenance of existing wastewater treatment technology, supplementary treatment or other specific measures necessary to attain and maintain applicable water quality standards, and protect the downstream users; or such other measures to prevent further pollution or reduce existing pollution. Upon the establishment of the necessary corrective action, the discharger will be required to file a plan and schedule of improvement with the Division. The Director may issue a notice to any person to submit within a specified time a plan of improvement and schedule for compliance with the specified requirements.
 - (b) The Director is authorized to approve plans, specifications, and related material, and to issue permits on behalf of the Division to persons who apply for such permits in accordance with Section 10 of the Act and such rules as are adopted and promulgated pursuant to same.
- (7) **Director of the Environmental Protection Division; Conflicts of Interest.** The Director of the Environmental Protection Division shall fully meet and qualify as to the conflict of interest requirements provided for in the Federal Water Pollution Control act, as amended, [33 U.S.C. § 1314\(i\)](#). (D), and the rules and regulations thereunder, particularly Federal Regulations, [40 C.F.R. 123.25\(c\)](#).
- (8) Effective Date. This Rule shall become effective twenty days after filing with the Secretary of State's office.

Amended: F. May 22, 1998; eff. June 11, 1998.

Amended: F. Nov. 5, 2003; eff. Nov. 25, 2003.

Rule 391-3-6-.02. Preparation and Submission of Engineering Reports, Plans Specifications, and Environmental Information Documents.

- (1) **Purpose.** The purpose of Rule 391-3-6-.02 is to establish procedures to:
 - (a) Be followed by persons submitting to the Division engineering reports, plans and specifications, and related materials for the construction of any system for the disposal or treatment of pollutants;
 - (b) Provide for environmental assessment and public participation for all proposed publicly owned wastewater treatment facility construction, including construction, upgrading, or expansion of new or existing facilities.

- (2) **Definitions.** All terms used in this Paragraph shall be interpreted in accordance with the definitions as set forth in the Act, unless otherwise defined in this Paragraph or in any other Paragraph of these Rules:
 - (a) "Professional Engineer." As used in this chapter, the term means the same as the definition contained in O.C.G.A. Section [43-15-2\(10\)](#).
 - (b) "Owner." Any person owning or operating any system for the disposal or treatment of pollutants.
 - (c) "Sewerage System" means any system for the treatment or disposal of pollutants, including treatment works, pipe lines or conduits, pumping stations and force mains, and all other constructions, devices, and appliances appurtenant thereto, used for conducting pollutants to the point of ultimate disposal.
 - (d) "Wastewater Treatment Facilities" means any device or system (including recycling and reclamation) used in the treatment of sewage or other waterborne waste or pollutants.
 - (e) "Environmental Information Document" means an assessment of environmental impact of any proposed construction, upgrading or expansion of a wastewater treatment facility. This evaluation may include, but is not limited to, the impact of the proposed construction, upgrading or expansion on air quality, flood plains, wetlands, noise pollution, water quality, cultural resources, and endangered or threatened species.
 - (f) "Public Participation" means providing information to the public potentially affected by the proposed project and providing for public input prior to construction.

(3) General Provisions.

- (a) Any person who desires to erect, modify, or alter a sewerage system shall obtain approval of any plans, specification and related materials for such system from the Division prior to commencement of construction. The review of certain types of sewer system extensions may be delegated to local governments that have demonstrated the capability for such reviews. This delegation shall be by written agreement.
- (b) Engineering material submitted to the Division shall be prepared by or under the direct supervision or review and bear the seal of a Professional Engineer competent in the design of sewerage systems and wastewater treatment facilities. At no time shall this requirement be in conflict with O.C.G.A. Section 43-15 governing the practice of professional engineering and surveying.
- (c) During the early stages of planning for the construction of a sewerage system, and prior to the formal submission of an application and accompanying materials for any permit required pursuant to the Act, or materials for any permit required pursuant to the Act, or materials submitted for Division approval pursuant to these rules, a conference between the project owner or his representative and representatives of the Division shall be held at the request of either the Director or the project owner, in order to reach a clear understanding of the proposal to be formally submitted to the Division at a later time. Such conference shall be granted within sixty (60) days after a written request to the Division by the project owner or his representative. If a conference is not granted within such period, then such permit application or other materials shall be filed and acted upon by the Division after the expiration of such period.
- (d) Sufficient copies of completed reports, plans and specifications, and related materials shall be submitted to the Division to cover necessary distribution when approved. Such material, accompanied by a letter to transmittal, shall be submitted by the project owner or his representative well in advance of any critical date involved, in order that time will be available for review, discussion, and revision when necessary. The submittal of such material shall be complete, accurate, distinct, legible, and relevant in respect to the project to which it applies. Permit applications shall be processed as provided in Paragraph [391-3-6-.06](#).
- (e) Plans for a sewerage system submitted to the Division will be considered for approval by the Division only when designated so as to minimize the passage of rainwater from roofs, streets or other areas and all groundwater, other than unavoidable infiltration, through such sewerage system.
- (f) All proposed lift stations must be approved by the Division.
- (g) All projects for the construction, upgrading or expansion of publicly owned wastewater treatment facilities within the State shall be required to prepare an

Environmental Information Document (EID). The Division will perform a review of the EID in accordance with procedures developed by the Director.

1. The party or parties responsible for the project will consult with Federal and State agencies as appropriate for information required in preparing the EID.
2. For municipal facilities, the party or parties responsible for the project will conduct at least one public meeting during the planning process. The public will be allowed to submit written comments at any point during the facilities planning process.

- (4) **Engineering Reports.** Engineering reports submitted to the Division shall contain a comprehensive description of the proposed project and shall include the following:
- (a) Pertinent information regarding the existing sewerage system, if applicable;
 - (b) Characteristics of existing pollutants and existing or proposed treatment of such pollutants;
 - (c) Demonstration of the need for the proposed sewerage system;
 - (d) Evaluation of alternatives to define the most cost effective method for meeting established effluent limitations, water quality goals, and treatment requirements;
 - (e) Results to be expected from treatment process;
 - (f) Sufficient maps, charts, tables, calculations, basis of design data and graphs to make the report readily understandable;
 - (g) An operation and maintenance program description;
 - (h) Such other pertinent engineering information as the Division may require.
- (5) **Plans and Specification.** Plans and specifications submitted to the Division for a sewerage system shall include the following:
- (a) A map showing the area to be served by the sewerage system;
 - (b) Profiles of proposed sewers;
 - (c) Construction details of manholes and other special sewer structures;
 - (d) General and detailed plans for the treatment facility;
 - (e) Specifications for the construction of the sewerage system;
 - (f) Such other plans and specifications as the Division may require.

(6) **General Map Plans.** General map plans submitted to the Division for a sewerage system shall include the following:

- (a) A map plan that shows the entire area to be served, drawn to a scale of from 100 to 300 feet per inch. The map plan may be divided into sections, provided the sheets are bound together and indexed to show the area covered by each sheet.
- (b) All existing and proposed streets in the area to be served; surface elevations at all street intersections; the location of all existing sewers, separate or combined; the location of the treatment facility; the location of the existing and proposed sewer outlets or overflows; the elevation of the highest known stream water level at the outlets and the treatment facility; and clear identification of any areas from which sewage is to be pumped.
- (c) Clear designation on the plan by suitable symbols of all sewer appurtenances, including, but not limited to, manholes, siphons and pumps.
- (d) Such other information as the Division may require.

(7) **Sewer Plans and Profiles.** Sewer plans and profiles submitted to the Division for a sewerage system shall include the following:

- (a) Sewers and force mains, drawn at a scale that shows the profile for all manholes, siphons, railroad crossings, street or stream crossings, elevations of stream beds, normal stream water levels, and sizes and grades of sewers show surface elevations and sewer invert elevations.
- (b) Detailed drawings of all sewer appurtenances, including, but not limited to, manholes, inspection chambers, siphons, lift stations, and any special structures to accompany the sewer plans, Detailed drawings shall be to a scale suitable to clearly show the design details.

(8) **Treatment Facilities Plans.** Plans for treatment facilities submitted to the Division shall include the following:

- (a) A general plan the that clearly identifies the exact location of the facilities, areas reserved for future expansion, access roads to the various units, and the point at which the access roads connect with existing road or street systems. It shall also show sufficient detail of the units, pipelines or any other features so as to make the proposed treatment process clearly and easily understood. The elevation of all units and water surfaces shall be shown.
- (b) Detailed plans which show longitudinal and transverse sections sufficient to explain the construction of each treatment unit.
- (c) Flow measuring devices at appropriate points in the plan. Sampling and recording devices may be required by the Division when deemed necessary.

- (d) Such other information as the Division may require.
- (9) **Approval of Plans and Specifications.** Approval of the plans and specifications by the Division does not include or imply approval of the structural, electrical, or mechanical integrity of the sewerage system, treatment facilities, units or equipment.
- (10) **Deviation from Approval Plans and Specifications.** No deviations from approved plans and specifications shall be made during construction unless documentation showing proposed changes has been submitted to and approved by the Division.
- (11) **Effective Date.** This Rule shall become effective twenty days after filing with the Secretary of State's Office.

Rule 391-3-6-.03. Designated Uses and Water Quality Standards.

- (1) **Purpose.** The establishment of water quality standards.
- (2) **Water Quality Enhancement:**
- (a) The purposes and intent of the State in establishing Water Quality Standards are to provide enhancement of water quality and prevention of pollution; to protect the public health or welfare in accordance with the public interest for drinking water supplies, conservation of fish, wildlife and other beneficial aquatic life, and agricultural, industrial, recreational, and other reasonable and necessary uses and to maintain and improve the biological integrity of the waters of the State.
- (b) The following paragraphs describe the three tiers of the State's waters.
- (i) Tier 1 - Existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.
- (ii) Tier 2 - Where the quality of the waters exceed levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the

water, that quality shall be maintained and protected unless the division finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the division's continuing planning process, that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located. In allowing such degradation or lower water quality, the division shall assure water quality adequate to protect existing uses fully. Further, the division shall assure that there shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control.

1. The division may identify waters for Tier 2 protections on a parameter-by-parameter basis or on a water body-by-water body basis in accordance with [40 CFR 131.12\(a\)\(2\)\(i\)](#).
2. Before allowing any lowering of high quality water the division shall find, after an analysis of alternatives, that such a lowering is necessary to accommodate important economic or social development in the area in which the waters are located. The analysis of alternatives shall evaluate a range of practicable alternatives that would prevent or lessen the degradation associated with the proposed activity. When the analysis of alternatives identifies one or more practicable alternatives, the division shall only find that a lowering is necessary if one such alternative is selected for implementation.

(iii) Tier 3 - Outstanding National Resource Waters (ONRW). This designation will be considered for an outstanding national resource waters, such as waters of National or State parks and wildlife refuges and waters of exceptional aesthetic, historic, recreational, or ecological significance. For waters designated as ONRW, existing water quality shall be maintained and protected. The following waters below are designated as ONRWs:

Conasauga River within the Cohutta Wilderness Area of the Chattahoochee National Forest (headwaters to Forest Service Road 17).

1. No new point source discharges or increases in the discharge of pollutants above permitted level from existing point source discharges to ONRW shall be allowed.

2. Existing point source discharges to ONRW shall be allowed, provided they are treated or controlled in accordance with applicable laws and regulations.
 3. New point source discharges or expansions of existing point source discharges to waters upstream of, or tributary to, ONRW shall be regulated in accordance with applicable laws and regulations, including compliance with water quality criteria for the designated use applicable to the particular water. However, no new point source discharge or expansion of an existing point source discharge to waters upstream of, or tributary to, ONRW shall be allowed if such discharge would not maintain and protect water quality within the ONRW.
 4. Activities that result in short-term, temporary, and limited changes to water quality may be allowed if authorized by the Division and the water quality is returned or restored to conditions equal to or better than those existing prior to the activities.
- (c) In applying these policies and requirements, the Division will recognize and protect the interest of the Federal Government in interstate and intrastate (including coastal and estuarine) waters. Toward this end the Division will consult and cooperate with the Environmental Protection Agency on all matters affecting the Federal interest.
- (d) In those cases where potential water quality impairment associated with a thermal discharge is involved, the division's actions shall be consistent with Section 316 of the Federal Clean Water Act.
- (e) Variance. Variances are a temporary modification to the designated use and associated criteria. Variances may be written for a specific geographic area, pollutant, or source. The State may issue variances that can provide relief to a permittee while they upgrade their facility to meet the standard. Variances are based on a use attainability demonstration, which requires a scientific assessment of factors affecting the attainment of a standard. Variances target achievement of the highest attainable water quality standard, must be reviewed every three years, and do not allow for a reduction in treatment efforts. Before a variance to a water quality standard is applied to a permitted discharger or to a waterbody, it must be demonstrated that one of the following factors has been satisfied:
- (i) Naturally occurring pollutant concentrations prevent the attainment of the use; or

- (ii) Natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating Georgia's water conservation requirements to enable uses to be met; or
 - (iii) Human caused conditions or sources of pollution prevent the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place, or
 - (iv) Dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use; or
 - (v) Physical conditions related to the natural features of the water body such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses; or
 - (vi) Controls more stringent than those required by sections 301(b) and 306 of the Clean Water Act would result in substantial and widespread economic and social impact.
- (f) **Removal of a Designated Use.** The State may remove a designated use which is not an existing use, as defined in [40 CFR 131.3](#), or establish sub-categories of a use if the State can demonstrate that attaining the designated use is not feasible. This is done through a use attainability analysis. The use attainability analysis is a scientific assessment of factors affecting the attainment of a use and may include physical, chemical, biological and/or economic factors. A detailed analysis is required demonstrating that certain conditions are met indicating that the designated use cannot be met and should be removed. The use attainability analysis should be conducted in accordance with the US EPA Technical Support Manual: *Waterbody Surveys and Assessments for Conducting Use Attainability Analyses* and /or any State guidance documents. The factors that can be used are as follows:
- (i) Naturally occurring pollutant concentrations prevent the attainment of the use; or
 - (ii) Natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating Georgia's water conservation requirements to enable uses to be met; or

- (iii) Human caused conditions or sources of pollution prevent the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place, or
 - (iv) Dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use; or
 - (v) Physical conditions related to the natural features of the water body such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses; or
 - (vi) Controls more stringent than those required by sections 301(b) and 306 of the Clean Water Act would result in substantial and widespread economic and social impact.
- (g) Schedules of Compliance. The division may allow the use of schedules of compliance for water quality based effluent limits in NPDES permits in accordance with [40 CFR 131.15](#). Such schedules of compliance shall be implemented in accordance with [391-3-6-.06\(10\)](#).
- (3) **Definitions.** All terms used in this paragraph shall be interpreted in accordance with definitions as set forth in the Act and as otherwise herein defined:
- (a) "Acute criteria" corresponds to EPA's definition for Criteria Maximum Concentration which is defined in [40 CFR 131.36](#) as the highest concentration of a pollutant to which aquatic life can be exposed for a short period of time (1-hour average) without deleterious effects.
 - (b) "Biological integrity" is functionally defined as the condition of the aquatic community inhabiting least impaired waterbodies of a specified habitat measured by community structure and function.
 - (c) "Chronic criteria" corresponds to EPA's definition for Criteria Continuous Concentration which is defined in [40 CFR 131.36](#) as the highest concentration of a pollutant to which aquatic life can be exposed for an extended period of time (4 days) without deleterious effects.
 - (d) "Coastal waters" are those littoral recreational waters on the ocean side of the Georgia coast.
 - (e) "Estuarine waters" are areas where salt, fresh and brackish waters mix. Those areas on the coast of Georgia have a salinity of 0.5 parts per thousand and greater.

This includes all of the creeks, rivers, and sounds of the coastal area of Georgia and portions of the Savannah, Ogeechee, Altamaha, Satilla, and St. Marys Rivers where those rivers flow into coastal sounds. Mixing areas are generally maintained by seawater transported through the sounds by tide and wind which is mixed with fresh water supplied by land runoff, subsurface water and river flow. Mixing areas have moving boundaries based upon but not limited to river stage, rainfall, moon phase and water use. (For the purposes of this rule salinity shall be analyzed by in situ measurement using a properly calibrated multi-parametric probe connected by hard line to a deck display or by measuring electrical conductivity according to one of the methods specified in Title 40, Code of Federal Regulations, Part 136 and applying the guidance for conversion to salinity in the same volume. Collection of salinity samples must consider river flow, precipitation, tidal influences and other variables of the estuarine environment and must conform to the National Coastal Assessment-Quality Assurance Project Plan 2001-2004 (EPA/620/R-01/002). Measurements at each sampling location must be made in a distribution in the water column according to the Quality Assurance Project Plan, with the minimum observations at each station including surface, mid-depth and near-bottom readings. In situ salinity analysis must comply with the Quality Assurance Project Plan and the manufacturer's guidance for the specific instrument used).

- (f) "Existing instream water uses" include water uses actually attained in the waterbody on or after November 28, 1975.
- (g) "Intake temperature" is the natural or background temperature of a particular waterbody unaffected by any man-made discharge or thermal input.
- (h) "Critical conditions" are the collection of conditions for a particular waterbody used to develop Total Maximum Daily Loads (TMDLs), determine NPDES permit limits, or assess the protection of water quality standards. The Division considers appropriate critical conditions to represent the event that would occur once in ten years on the average or less often, unless otherwise stated.
- (i) "Natural conditions" are the collection of conditions for a particular waterbody used to develop numeric criteria for water quality standards which are based on natural conditions. This is commonly the case for temperature, pH, and natural dissolved oxygen standards. For this purpose the Division defines "natural conditions" as those that would remain after removal of all point sources and water intakes, would remain after removal of man made or induced nonpoint sources of pollution, but may include irretrievable effects of man's activities, unless otherwise stated. Natural conditions shall be developed by an examination of historic data, comparisons to reference watersheds, application of mathematical models, or any other procedure deemed appropriate by the Director.

- (j) "Naturally variable parameters." It is recognized that certain parameters including dissolved oxygen, pH, bacteria, turbidity and water temperature, vary through a given period of time (such as daily or seasonally) due to natural conditions. Assessment of State waters may allow for a 10% excursion frequency for these parameters.
 - (k) "Practicable alternatives" are alternatives that are technologically possible, able to be put into practice, and economically viable.
 - (l) "Primary contact recreation" is full immersion contact with water where there is significant risk of ingestion that includes, but is not limited to, swimming, diving, whitewater boating (Class III and above), water skiing, and surfing.
 - (m) "Reasonable and necessary uses" means drinking water supplies, conservation, protection, and propagation of fish, shellfish, wildlife and other beneficial aquatic life, agricultural, industrial, recreational, and other legitimate uses.
 - (n) "Secondary contact recreation" is incidental contact with the water not involving a significant risk of water ingestion such as canoeing, fishing, kayaking, motor boating, rowing, tubing, splashing, wading, and occasional swimming.
 - (o) "Shellfish" refers to clams, oysters, scallops, mussels, and other bivalve mollusks.
 - (p) "Significant Figures." The number of "significant figures" represented in numeric criteria are the number of figures or digits that have meaning as estimated from the accuracy and precision with which the quantity was measured and the data were rounded off. Technical guidance on significant figures, including rules for rounding off following mathematical operations, is provided in the publication entitled *Standard Methods for the Examination of Water and Wastewater*, in "Part 1050 Expression of Results, B. Significant Figures" (American Public Health Association (APHA), American Water Works Association (AWWA), and Water Environment Federation (WEF); 18th, 19th, 20th, or subsequent Editions).
 - (q) "Water" or "waters of the State" means any and all rivers, streams, creeks, branches, lakes, reservoirs, ponds, drainage systems, springs, wells, wetlands, and all other bodies of surface or subsurface water, natural or artificial, lying within or forming a part of the boundaries of the State which are not entirely confined and retained completely upon the property of a single individual, partnership, or corporation.
- (4) **Designated Uses.** Designated uses for which the criteria of this Paragraph are applicable are as follows:
- (a) Drinking Water Supplies
 - (b) Recreation

- (c) Fishing, Propagation of Fish, Shellfish, Game and Other Aquatic Life
 - (d) Wild River
 - (e) Scenic River
 - (f) Coastal Fishing
- (5) **General Criteria for All Waters.** The following criteria are deemed to be necessary and applicable to all waters of the State:
- (a) All waters shall be free from materials associated with municipal or domestic sewage, industrial waste or any other waste which will settle to form sludge deposits that become putrescent, unsightly or otherwise objectionable.
 - (b) All waters shall be free from oil, scum and floating debris associated with municipal or domestic sewage, industrial waste or other discharges in amounts sufficient to be unsightly or to interfere with the designated use of the water body.
 - (c) All waters shall be free from material related to municipal, industrial or other discharges which produce turbidity, color, odor or other objectionable conditions which interfere with the designated use of the water body.
 - (d) Turbidity. The following standard is in addition to the narrative turbidity standard in Paragraph 391-3-6-.03(5)(c) above: All waters shall be free from turbidity which results in a substantial visual contrast in a water body due to a man-made activity. The upstream appearance of a body of water shall be as observed at a point immediately upstream of a turbidity-causing man-made activity. That upstream appearance shall be compared to a point which is located sufficiently downstream from the activity so as to provide an appropriate mixing zone. For land disturbing activities, proper design, installation, and maintenance of best management practices and compliance with issued permits shall constitute compliance with Paragraph 391-3-6-.03(5)(d).
 - (e) All waters shall be free from toxic, corrosive, acidic and caustic substances discharged from municipalities, industries or other sources, such as nonpoint sources, in amounts, concentrations or combinations which are harmful to humans, animals or aquatic life.
 - (i) Instream concentrations of the following chemical constituents which are considered to be other toxic pollutants of concern in the State of Georgia shall not exceed the criteria indicated below under 7-day, 10-year minimum flow (7Q10) or higher stream flow conditions except within established mixing zones:

1. 2,4-Dichlorophenoxyacetic acid (2,4-D)	70 µg/L
2. Methoxychlor	0.03 µg/L*

3. 2,4,5-Trichlorophenoxy propionic acid (TP Silvex) 50 µg/L

- (ii) Instream concentrations of the following chemical constituents listed by the U.S. Environmental Protection Agency as toxic priority pollutants pursuant to Section 307(a)(1) of the Federal Clean Water Act (as amended) shall not exceed the acute criteria indicated below under 1-day, 10-year minimum flow (1Q10) or higher stream flow conditions and shall not exceed the chronic criteria indicated below under 7-day, 10-year minimum flow (7Q10) or higher stream flow conditions except within established mixing zones or in accordance with site specific effluent limitations developed in accordance with procedures presented in [391-3-6-06](#). Unless otherwise specified, the criteria below are listed in their total recoverable form. Because most of the numeric criteria for the metals below are listed as the dissolved form, total recoverable concentrations of metals that are measured instream will need to be translated to the dissolved form in order to compare the instream data with the numeric criteria. This translation will be performed using guidance found in "Guidance Document of Dynamic Modeling and Translators August 1993" found in Appendix J of EPA's Water Quality Standards Handbook: Second Edition, EPA-823-B-94-005a or by using other appropriate guidance from EPA.

Acute	Chronic	
1.	Arsenic	
(a) Freshwater	340 µg/L ¹	150 µg/L ₁
(b) Coastal and Estuarine Waters	69 µg/L ¹	36 µg/L ₁
2.	Cadmium	
(a) Freshwater	0.94 µg/L ^{1,3}	0.43 µg/L ^{1,3}
(b) Coastal and Estuarine Waters	33 µg/L ¹	7.9 µg/L ₁
3.	Chromium III	
(a) Freshwater	320 µg/L ^{1,3}	42 µg/L _{1,3}
(b) Coastal and Estuarine Waters	-	-
4.	Chromium VI

(b) Coastal and Estuarine Waters	4.8 µg/L ^{1,2}	3.1 µg/L _{1,2}
6.	Lead	
(a) Freshwater	30 µg/L ^{1,3}	1.2 µg/L _{1,2*,3}
(b) Coastal and Estuarine Waters	210 µg/L ¹	8.1 µg/L ₁
7.	Mercury	
(a) Freshwater	1.4 µg/L	0.012 µg/L ²
(b) Coastal and Estuarine Waters	1.8 µg/L	0.025 µg/L ²
8.	Nickel	
(a) Freshwater	260 µg/L ^{1,3}	29 µg/L _{1,3}
(b) Coastal and Estuarine Waters	74 µg/L ¹	8.2 µg/L ₁
9.	Selenium	
(a) Freshwater	-	5.0 µg/L
(b) Coastal and Estuarine Waters	290 µg/L ¹	71 µg/L ₁
10.	Silver	- ⁴ - ₄
11.	Zinc	
(a) Freshwater	65 µg/L ^{1,3}	65 µg/L _{1,3}
(b) Coastal and Estuarine Waters	90 µg/L ¹	81 µg/L ¹
12.	Lindane [Hexachlorocyclohexane (g-BHC-Gamma)]	
(a) Freshwater	0.95 µg/L	

¹ The in-stream criterion is expressed in terms of the dissolved fraction in the water column. Conversion factors used to calculate dissolved criteria

are found in the EPA document - National Recommended Water Quality Criteria - EPA 2006.

² The in-stream criterion is lower than the EPD laboratory detection limits (A "*" indicates that the criterion may be higher than or lower than EPD laboratory detection limits depending upon the hardness of the water).

³ The freshwater aquatic life criteria for these metals are expressed as a function of total hardness (mg/L) in a water body and a water effect ratio (WER). Values in the table above assume a hardness of 50 mg/L CaCO₃ and a WER of 1. For other hardness values, the following equations from the EPA document - National Recommended Water Quality Criteria - EPA 2006 should be used. For site-specific criteria with WER values other than 1, see 391-3-6-.03(18)(b).

⁴ This pollutant is addressed in [391-3-6-.06](#).

⁵ For applicable site-specific criteria, see 391-3-6-.03(18)(a).

Cadmium

acute criteria = $WER * (e^{(0.9789[\ln(\text{hardness})] - 3.866)})(1.136672 - [(\ln \text{hardness})(0.041838)]) \mu\text{g/L}$

chronic criteria = $WER * (e^{(0.7977[\ln(\text{hardness})] - 3.909)})(1.101672 - [(\ln \text{hardness})(0.041838)]) \mu\text{g/L}$

Chromium III

acute criteria = $WER * (e^{(0.8190[\ln(\text{hardness})] + 3.7256)})(0.316) \mu\text{g/L}$

chronic criteria = $WER * (e^{(0.8190[\ln(\text{hardness})] + 0.6848)})(0.860) \mu\text{g/L}$

Copper

acute criteria = $WER * (e^{(0.9422[\ln(\text{hardness})] - 1.700)})(0.96) \mu\text{g/L}$

chronic criteria = $WER * (e^{(0.8545[\ln(\text{hardness})] - 1.702)})(0.96) \mu\text{g/L}$

Lead

acute criteria = $WER * (e^{(1.273[\ln(\text{hardness})] - 1.460)})(1.46203 - [(\ln \text{hardness})(0.145712)]) \mu\text{g/L}$

chronic criteria = WER * (e^{(1.273[ln(hardness) - 4.705])})(1.46203 - [(ln hardness)(0.145712)]) μg/L

Nickel

acute criteria = WER * (e^{(0.8460[ln(hardness)] + 2.255)})(0.998) μg/L

chronic criteria = WER * (e^{(0.8460[ln(hardness)] + 0.0584)})(0.997) μg/L

Zinc

acute criteria = WER * (e^{(0.8473[ln(hardness)] + 0.884)})(0.978) μg/L

chronic criteria = WER * (e^{(0.8473[ln(hardness)] + 0.884)})(0.986) μg/L

- (iii) Instream concentrations of the following chemical constituents listed by the U.S. Environmental Protection Agency as toxic priority pollutants pursuant to Section 307(a)(1) of the Federal Clean Water Act (as amended) shall not exceed criteria indicated below under 7-day, 10-year minimum flow (7Q10) or higher stream flow conditions except within established mixing zones or in accordance with site specific effluent limitations developed in accordance with procedures presented in [391-3-6-.06](#).

1.	Acrolein (CAS RN ¹ 107-02-8)
(a) Freshwater	3.0 μg/L*
2.	Carbaryl (CAS RN ¹ 63-25-2)
(a) Freshwater	2.1 μg/L*
(b) Coastal and Estuarine Waters	1.6 μg/L*
3.	Chlordane (CAS RN ¹ 57749)
(a) Freshwater	0.0043 μg/L*
(b) Coastal and Estuarine Waters	0.004 μg/L*
4.	Cyanide (CAS RN ¹ 57125)
(a) Freshwater	5.2 μg/L*
(b) Coastal and Estuarine Waters	1.0 μg/L*
5.	Dieldrin (CAS RN ¹ 60571)
(a) Freshwater	0.056 μg/L*
(b) Coastal and Estuarine Waters	0.0019 μg/L*

(b) Coastal and Estuarine Waters	7.9 μg/L*	
13.	PCBs	
(a) Freshwater	0.014 μg/L*	
(b) Coastal and Estuarine Waters	0.03 μg/L*	
14.	Phenol (CAS RN ¹ 108952)	300 μg/L
15.	Toxaphene (CAS RN ¹ 8001352)	0.0002 μg/L*

¹ "CAS RN" or the Chemical Abstract Service (CAS) Registry Number is a unique numerical identifier assigned to each chemical and some chemical mixtures.

² The instream freshwater criterion for pentachlorophenol is a function of pH, determined by the formula ($e^{(1.005(\text{pH}) - 5.134)}$). At a pH equal to 7.8 standard units the criterion is 15 µg/L.

* The in-stream criterion is lower than the EPD laboratory detection limits.

(iv) Instream concentrations of the following chemical constituents listed by the U. S. Environmental Protection Agency as toxic priority pollutants pursuant to Section 307(a)(1) of the Federal Clean Water Act (as amended) shall not exceed criteria indicated below under annual average or higher stream flow conditions:

1.	Acenaphthene (CAS RN ¹ 83329)	990 µg/L
2.	Acenaphthylene (CAS RN ¹ 208968)	**

93.	Trichloroethylene (CAS RN ¹ 79016)	30 µg/L
94.	2,4,6-Trichlorophenol (CAS RN ¹ 88062)	2.4 µg/L
95.	1,2,4-Trichlorobenzene (CAS RN ¹ 120821)	70 µg/L
96.	Vinyl Chloride (CAS RN ¹ 75014)	2.4 µg/L

¹ "CAS RN" or the Chemical Abstract Service (CAS) Registry Number is a unique numerical identifier assigned to each chemical and some chemical mixtures.

** These pollutants are addressed in [391-3-6-.06](#).

- (v) Site specific criteria for the following chemical constituents will be developed on an as needed basis through toxic pollutant monitoring efforts at new or existing discharges that are suspected to be a source of the pollutant at levels sufficient to interfere with designated uses:
 1. Asbestos
- (vi) Instream concentrations of 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) must not exceed 0.000000051 µg/L under long-term average stream flow conditions.
- (vii) Mercury: For the protection of human health, total mercury concentrations bioaccumulating in a waterbody, in a representative population of fish, shellfish and/or other seafood representing different trophic levels, shall not exceed a total mercury concentration in edible tissues of 0.3 mg/kg wet weight. This standard is in accord with the USEPA *Water Quality Criterion for the Protection of Human Health*:

Methylmercury, (January 2001, EPA-823-R-01-001), and because nearly 100% of the mercury in fish tissue is methylmercury, adoption of the standard as total mercury is an additional conservative measure. The representative fish tissue total mercury concentration for a waterbody is determined by calculating a Trophic-Weighted Residue Value, as described by the Georgia EPD Protocol (October 19, 2001).

- (f) Applicable State and Federal requirements and regulations for the discharge of radioactive substances shall be met at all times.
 - (g) The dissolved oxygen criteria as specified in individual designated uses shall be applicable at a depth of one meter below the water surface; in those instances where depth is less than two meters, the dissolved oxygen criterion shall be applied at a mid-depth. On a case specific basis, alternative depths may be specified.
- (6) **Specific Criteria for Specific Designated Uses.** In addition to the general criteria, the following criteria are deemed necessary and shall be required for the specific designated uses:
- (a) **Drinking Water Supplies:** Those waters approved as a source for public drinking water systems permitted or to be permitted by the Environmental Protection Division. Waters classified for drinking water supplies will also support the fishing use and any other use requiring water of a lower quality.
 - (i) **Bacteria:**
 1. For the months of May through October, when primary water contact recreation activities are expected to occur, culturable *E. coli* not to exceed a geometric mean of 126 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten percent excursion frequency of an *E. coli* statistical threshold value (STV) of 410 counts per 100 mL in the same 30-day interval.
 2. For the months of November through April, culturable *E. coli* not to exceed a geometric mean of 265 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten percent excursion frequency of an *E. coli* statistical threshold value (STV) of 861 counts per 100 mL in the same 30-day interval.

3. The State does not encourage swimming in these surface waters since a number of factors which are beyond the control of any State regulatory agency contribute to elevated levels of bacteria.
 - (ii) Dissolved oxygen: A daily average of 6.0 mg/L and no less than 5.0 mg/L at all times for waters designated as trout streams by the Wildlife Resources Division. A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times for water supporting warm water species of fish.
 - (iii) pH: Within the range of 6.0 - 8.5.
 - (iv) No material or substance in such concentration that, after treatment by the public water treatment system, exceeds the maximum contaminant level established for that substance by the Environmental Protection Division pursuant to the Georgia Rules for Safe Drinking Water.
 - (v) Temperature: Not to exceed 90°F. At no time is the temperature of the receiving waters to be increased more than 5°F above intake temperature except that in estuarine waters the increase will not be more than 1.5°F. In streams designated as primary trout or smallmouth bass waters by the Wildlife Resources Division, there shall be no elevation of natural stream temperatures. In streams designated as secondary trout waters, there shall be no elevation exceeding 2°F of natural stream temperatures.
- (b) Recreation: Primary contact recreational activities that occur year round such as swimming, diving, whitewater boating (class III and above), water skiing, and surfing, or for any other use requiring water of a lower quality, such as recreational fishing. These criteria are not to be interpreted as encouraging water contact sports in proximity to sewage or industrial waste discharges regardless of treatment requirements:
 - (i) Bacteria:
 1. Coastal and estuarine waters: Culturable enterococci not to exceed a geometric mean of 35 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten percent excursion frequency of an enterococci statistical threshold value (STV) of 130 counts per 100 mL in the same 30-day interval.
 2. All other recreational waters: Culturable E. coli not to exceed a geometric mean of 126 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten

percent excursion frequency of an E. coli statistical threshold value (STV) of 410 counts per 100 mL in the same 30-day interval.

- (ii) Dissolved Oxygen: A daily average of 6.0 mg/L and no less than 5.0 mg/L at all times for waters designated as trout streams by the Wildlife Resources Division. A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times for waters supporting warm water species of fish.
 - (iii) pH: Within the range of 6.0 - 8.5.
 - (iv) Temperature: Not to exceed 90°F. At no time is the temperature of the receiving waters to be increased more than 5°F above intake temperature except that in estuarine waters the increase will not be more than 1.5°F. In streams designated as primary trout or smallmouth bass waters by the Wildlife Resources Division, there shall be no elevation of natural stream temperatures. In streams designated as secondary trout waters, there shall be no elevation exceeding 2°F natural stream temperatures.
- (c) Fishing: Propagation of Fish, Shellfish, Game and Other Aquatic Life; primary contact recreation in and on the water for the months of May - October, secondary contact recreation in and on the water for the months of November - April; or for any other use requiring water of a lower quality.

(i) Bacteria:

1. Estuarine waters:

For the months of May through October, when primary water contact recreation activities are expected to occur, culturable enterococci not to exceed a geometric mean of 35 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten percent excursion frequency of an enterococci statistical threshold value (STV) of 130 counts per 100 mL the same 30-day interval.

For the months of November through April, culturable enterococci not to exceed a geometric mean of 74 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten percent excursion frequency of an enterococci statistical threshold value (STV) of 273 counts per 100 mL in the same 30-day interval.

2. All other fishing waters:

For the months of May through October, when primary water contact recreation activities are expected to occur, culturable E. coli not to exceed a geometric mean of 126 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten percent excursion frequency of an E. coli statistical threshold value (STV) of 410 counts per 100 mL in the same 30-day interval.

For the months of November through April, culturable E. coli not to exceed a geometric mean of 265 counts per 100 mL based on at least four samples collected from a given sampling site over a 30-day period at intervals not less than 24 hours. There shall be no greater than a ten percent excursion frequency of an E. coli statistical threshold value (STV) of 861 counts per 100 mL in the same 30-day interval.

3. The State does not encourage swimming in these surface waters since a number of factors which are beyond the control of any State regulatory agency contribute to elevated levels of bacteria.
4. For waters designated as shellfish growing areas by the Georgia DNR Coastal Resources Division, the requirements will be consistent with those established by the State and Federal agencies responsible for the National Shellfish Sanitation Program. The requirements are found in National Shellfish Sanitation Program Guide for the Control of Molluscan Shellfish, 2007 Revision (or most recent version), Interstate Shellfish Sanitation Conference, U.S. Food and Drug Administration.

- (ii) Dissolved Oxygen: A daily average of 6.0 mg/L and no less than 5.0 mg/L at all times for water designated as trout streams by the Wildlife Resources Division. A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times for waters supporting warm water species of fish.
- (iii) pH: Within the range of 6.0 - 8.5.
- (iv) Temperature: Not to exceed 90°F. At no time is the temperature of the receiving waters to be increased more than 5°F above intake temperature except that in estuarine waters the increase will not be more than 1.5°F. In streams designated as primary trout or smallmouth bass waters by the Wildlife Resources Division, there shall be no elevation of natural stream

temperatures. In streams designated as secondary trout waters, there shall be no elevation exceeding 2°F natural stream temperatures.

- (d) Wild River: For all waters designated in 391-3-6-.03(14) as "Wild River," there shall be no alteration of natural water quality from any source.
 - (e) Scenic River: For all waters designated in 391-3-6-.03(14) as "Scenic River," there shall be no alteration of natural water quality from any source.
 - (f) Coastal Fishing: For waters designated in 391-3-6-.03(14) as "Coastal Fishing," site specific criteria for dissolved oxygen will be assigned. All other criteria and uses for the fishing designated use will apply for coastal fishing.
 - (i) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times. If it is determined that the "natural condition" in the waterbody is less than the values stated above, then the criteria will revert to the "natural condition" and the water quality standard will allow for a 0.1 mg/L deficit from the "natural" dissolved oxygen value. Up to a 10% deficit will be allowed if it is demonstrated that resident aquatic species shall not be adversely affected.
- (7) **Natural Water Quality.** It is recognized that certain natural waters of the State may have a quality that will not be within the general or specific requirements contained herein. These circumstances do not constitute violations of water quality standards. This is especially the case for the criteria for dissolved oxygen, temperature, pH and bacteria. NPDES permits and best management practices will be the primary mechanisms for ensuring that discharges will not create a harmful situation.
- (8) **Treatment Requirements.** Notwithstanding the above criteria, the requirements of the State relating to secondary or equivalent treatment of all waste shall prevail. The adoption of these criteria shall in no way preempt the treatment requirements.
- (9) **Streamflows.** Specific criteria or standards set for the various parameters apply to all flows on regulated streams. On unregulated streams, they shall apply to all streamflows equal to or exceeding the 7-day, 10-year minimum flow (7Q10) and/or the 1-day, 10-year minimum flow (1Q10). All references to 7-day, 10-year minimum flow (7Q10) and 1-day, 10-year minimum flow (1Q10) also apply to all flows on regulated streams. All references to annual average stream flow also apply to long-term average stream flow conditions. Numeric criteria exceedences that occur under streamflows lower than 7Q10 or 1Q10, whichever applies, do not constitute violations of water quality standards as long as all current permit conditions are met.
- (10) **Mixing Zone.** Effluents released to streams or impounded waters shall be fully and homogeneously dispersed and mixed insofar as practical with the main flow or water body by appropriate methods at the discharge point. Use of a reasonable and limited

mixing zone may be permitted on receipt of satisfactory evidence that such a zone is necessary and that it will not create an objectionable or damaging pollution condition. Protection from acute toxicity shall be provided within any EPD designated mixing zone to ensure a zone of safe passage for aquatic organisms. The procedure is as described in paragraph [391-3-6-.06\(4\)\(d\)\(5\)\(vi\)](#), except that the numerical pass/fail criteria applies to the end-of-pipe without the benefit of dilution provided by the receiving stream.

- (11) **Toxic Pollutant Monitoring.** The Division will monitor waters of the State for the presence or impact of Section 307 (a)(1) Federal Clean Water Act toxic pollutants, and other priority pollutants. The monitoring shall consist of the collection and assessment of chemical and/or biological data as appropriate from the water column, from stream bed sediments, and/or from fish tissue. Specific stream segments and chemical constituents for monitoring shall be determined by the Director on the basis of the potential for water quality impacts from toxic pollutants from point or nonpoint waste sources. Singularly or in combination, these constituents may cause an adverse effect on fish propagation at levels lower than the criteria. Instream concentrations will be as described in 391-3-6-.03(5)(e). Additional toxic substances and priority pollutants will be monitored on a case specific basis using Section 304(a) Federal Clean Water Act guidelines or other scientifically appropriate documents.
- (12) **Bacteria Criteria.** The criteria for bacteria provide the regulatory framework to support the USEPA requirement that States protect all waters for recreational use. The bacterial indicators for primary and secondary contact recreational waters are E. coli and enterococci.
 - (a) Fecal coliform, E. coli and enterococci bacteria live in the intestinal tract of warm blooded animals including man. These organisms are excreted in extremely high numbers. Pathogenic bacteria also originate in the fecal material of diseased persons. Therefore, waters with high levels of bacteria represent potential problem areas for swimming. Scientific studies indicate there is a positive correlation between E. coli and enterococci counts and gastrointestinal illness. However, there is no positive scientific evidence correlating elevated fecal coliform counts with transmission of enteric diseases. In addition, these bacteria can originate from any warm blooded animal or from the soil.
 - (b) Monitoring programs have documented bacterial levels in excess of the criteria in many streams and rivers in urban areas, agricultural areas, and even in areas not extensively impacted by man such as national forest areas. This is not a unique situation to Georgia as similar levels of bacteria have been documented in streams across the nation.
- (13) **Acceptance of Data.** Sampling methods for water quality samples collected and reported by any person(s), (including volunteer groups), to the Division for its use in listing or delisting impaired waters pursuant to the State's responsibilities under Sections 303(d) and 305(b) of the Federal Act shall conform to the guidance in the *Water Protection Branch Quality Assurance Manual* (June, 1999), or most current version,

Georgia Department of Natural Resources, Environmental Protection Division, Watershed Protection Branch, Atlanta, GA 30354. Analytical standards for these samples must comply with the requirements of *Title 40, Code of Federal Regulations*, Part 136. Sample analyses shall be performed by an analyst certified in compliance with the *Georgia State Board of Examiners for Certification of Water and Wastewater Treatment Plant Operators and Laboratory Analysts Act*, as amended, or by a laboratory facility accredited in compliance with the *Georgia Rules for Commercial Environmental Laboratory Accreditation* (O.C.G.A. [12-2-9](#)). A site-specific sampling and quality assurance plan is required if the data is to be considered and Division concurrence must be obtained prior to monitoring. Laboratories operated by Federal and State government agencies and laboratories at academic institutions with active or current contracts with the Division are exempt from these provisions. The Division may use water quality data for screening purposes if it was collected by any person(s), (including volunteer groups), without an approved sampling and quality assurance plan.

- (14) **Specific Designated Uses.** Beneficial water uses assigned by the State to all surface waters. These designations are scientifically determined to be the best utilization of the surface water from an environmental and economic standpoint. Streams and stream reaches not specifically listed are classified as Fishing. The specific designated uses are as follows:

<u>ALTAMAHA RIVER BASIN</u>	<u>DESIGNATED USE</u>	
Altamaha River	Doctors Creek to Butler River	Recreation
Altamaha and Doboy Sounds	All littoral waters including the waters on the ocean side of Sapelo and Little St. Simons Islands	Recreation
Buttermilk Sound	Reimolds Pasture	Recreation
<u>CHATTAHOOCHEE RIVER BASIN</u>	<u>DESIGNATED USE</u>	
Alexander Creek	Headwaters to confluence with Cedar Creek	Drinking Water
Bear Creek	Headwaters to confluence with Chattahoochee River	Drinking Water
Big Creek	Foe Killer Creek to Chattahoochee River	Drinking Water
Blue Creek	Headwaters to Yellowjacket Creek	Drinking Water
Camp Creek	Headwaters to confluence with Hazel Creek	Drinking Water
Cedar Creek	Headwaters to Alexander Creek	Drinking Water
Centralhatchee Creek	Little Taylor Creek to Chattahoochee River	Drinking Water

Chattahoochee River	Headwaters to confluence with Soque River	Recreation
Chattahoochee River	Soque River to White Creek	Recreation and Drinking Water
Chattahoochee River	White Creek to Mud Creek	Recreation
Chattahoochee River/Lake Lanier	Mud Creek to Buford Dam	Recreation and Drinking Water
Chattahoochee River	Buford Dam to Atlanta (Peachtree Creek)	Recreation and Drinking Water
Chattahoochee River	Snake Creek to Yellowdirt Creek	Recreation
Chattahoochee River	Pink Creek to Harris Creek	Drinking Water
Chattahoochee River/West Point Lake	New River to West Point Dam	Recreation and Drinking Water
Chattahoochee River	West Point Dam to Long Cane Creek	Drinking Water
Chattahoochee River	House Creek to North Highland Dam (including Lakes Harding, Goat Rock, Oliver, and North Highlands)	Recreation and Drinking Water
Chattahoochee River	Cowikey Creek to Lake Walter F. George Dam	Recreation
Chattahoochee River/Lake Seminole	Georgia Hwy. 91 to Jim Woodruff Dam	Recreation
Dog River	Mobley Creek to Chattahoochee River	Drinking Water
Flat Creek	Turkey Creek to confluence with Yellowjacket Creek	Drinking Water
Hazel Creek	Law Creek to Camp Creek	Drinking Water
Headwaters of Unnamed Tributary to Bethlehem Creek	Lake Franklin, F.D. Roosevelt State Park Beaches	Recreation
Hillabahatchee Creek	Tolieson Branch to Chattahoochee River	Drinking Water
Little Kolomoki Creek	Lake Kolomoki, Kolomoki Mounds State Park Beach	Recreation

Sandy Creek	Headwaters to Golden Creek	Drinking Water
Smith Creek	Unicoi Lake, Unicoi State Park Beach	Recreation
Snake Creek	Crews Creek to Chattahoochee River	Drinking Water
Soque River	Deep Creek to Sutton Mill Creek	Drinking Water
Sweetwater Creek	Olley Creek to Chattahoochee River	Drinking Water
Turner Creek	Headwaters to confluence with Tesnatee Creek	Drinking Water
Upatoi Creek	Heriot Creek to Armory Creek	Drinking Water
Yahoola Creek	Bryant Creek to confluence with Chestatee River	Drinking Water
<u>COOSA RIVER BASIN</u>	<u>DESIGNATED USE</u>	
Beech Creek	Headwaters to Dry Creek (including Possum Trot Reservoir)	Drinking Water
Blackwell Creek	Headwaters to Cox Lake Dam	Drinking Water
Cartecay River	Clear Creek to confluence with Ellijay River	Drinking Water
Chestnut Cove Creek	Headwaters to and including Lake Tamarack	Drinking Water
Coahulla Creek	Bates Branch to Mill Creek	Drinking Water
Conasauga River	Waters Within the Cohutta Wilderness Area	Wild and Scenic
Conasauga River	Sugar Creek to Spring Creek	Drinking Water
Coosa River	At the Alabama State Line	Recreation
Coosawattee River/Carters Lake	Confluence with Mountaintown Creek to Carters Dam	Recreation and Drinking Water
Coosawattee River	Mineral Springs Branch to confluence with Conasauga River	Drinking Water
Dry Creek	Headwaters to confluence with Duck Creek	Drinking Water
Duck Creek	Confluence with Dry Creek to Dickson Creek	Drinking Water

Ellijay River	Briar Creek to confluence with Cartecay River	Drinking Water
Etowah River	Headwaters to Montgomery Creek	Drinking Water
Etowah River	Lily Creek to Mill Creek	Drinking Water
Etowah River	Long Swamp Creek to Canton Creek	Drinking Water
Etowah River/Lake Allatoona	Georgia Hwy. 20 to Allatoona Dam	Recreation and Drinking Water
Etowah River	Allatoona Dam to Ward Creek	Drinking Water
Etowah River	Dykes Creek to Silver Creek	Drinking Water
Euharlee Creek	Parham Springs Creek to Fish Creek	Drinking Water
Headwaters of Gold Mine Branch	Fort Mountain Lake, Fort Mountain State Park Beach	Recreation
Holly Creek	Dill Creek to Chicken Creek	Drinking Water
Jacks Creek	Waters Within the Cohutta Wilderness Area	Wild and Scenic
Long Swamp Creek	Lake Tamarack Dam to Cox Creek	Drinking Water
Mill Creek	Hurricane Creek to confluence with Conasauga River	Drinking Water
Oostanaula River	Confluence of Conasauga and Coosawattee Rivers to Oothkalooga Creek	Drinking Water
Oostanaula River	Confluence with Woodward Creek to Coosa River	Drinking Water
Pettit Creek	Headwaters to confluence with Disharoon Creek (including Lake Pettit)	Drinking Water
Raccoon Creek	Headwaters to confluence with Chattooga River	Drinking Water
Tributaries to Heath Creek	Rocky Mountain Public Fishing Lakes, Rocky Mountain Public Fishing Area	Recreation
Tributary of Dakwa Lake	Headwaters to confluence with Turniptown Creek (including Dakwa Lake)	Drinking Water

Woodward Creek	Headwaters to confluence with Oostanaula River	Drinking Water
<u>FLINT RIVER BASIN</u>		
<u>DESIGNATED USE</u>		
Elkins Creek	Headwaters to Powder Creek	Drinking Water
Flat Creek	Headwaters to confluence with Line Creek (including Lake Kedron and Lake Peachtree)	Drinking Water
Flint River	Swamp Creek to Horton Creek	Drinking Water
Flint River	Birch Creek to Red Oak Creek	Drinking Water
Flint River	Georgia Hwy. 27 to Georgia Power Dam at Lake Worth, Albany including Lakes Blackshear, Chehaw, and Worth	Recreation
Flint River	Bainbridge, U.S. Hwy. 84 Bridge to Jim Woodruff Dam, Lake Seminole	Recreation
Heads Creek	Headwaters to Shoal Creek (including Heads Creek Reservoir)	Drinking Water
Horton Creek	Headwaters to Flint River (including Horton Creek Reservoir)	Drinking Water
Keg Creek	Headwaters to Line Creek (including Hutchins Lake)	Drinking Water
Lazer Creek	Rocky Branch to Gin Creek	Drinking Water
Line Creek	Persimmon Creek to Flat Creek (including Lake McIntosh)	Drinking Water
Potato Creek	Fivemile Creek to Hoyle Branch	Drinking Water
Pound Creek	Headwaters to confluence with Cane Creek (including Lake Meriwether)	Drinking Water
Rush Creek	Headwaters to confluence with Lazer Creek (including Rush Creek Reservoir)	Drinking Water
Shoal Creek	Headwaters to Flint River (including Shoal Creek Reservoir)	Drinking Water
Still Branch	Headwaters to confluence with Flint River (including Still Branch Reservoir)	Drinking Water
White Oak Creek	Headwaters to Chandlers Creek	Drinking Water
Whitewater Creek	Tar Creek to Haddock Creek	Drinking Water

<u>OCMULGEE RIVER BASIN</u>	<u>DESIGNATED USE</u>	
Alcovy River	Maple Creek to Cornish Creek (including John T. Briscoe Reservoir)	Drinking Water
Beaverdam Creek	Headwaters to confluence with Alcovy River	Drinking Water
Big Cotton Indian Creek	Coker Branch to Rocky Branch	Drinking Water
Big Haynes Creek	Georgia Highway 78 to confluence with Yellow River	Drinking Water
Big Sandy Creek	Chief McIntosh Lake, Indian Springs State Park Beaches	Recreation
Big Towaliga Creek	Headwaters to confluence with Edie Creek	Drinking Water
Brown Branch	Headwaters to Wolf Creek	Drinking Water
Cornish Creek	Headwaters to confluence with Alcovy River (including Lake Varner)	Drinking Water
Edie Creek	Headwaters to confluence with Big Towaliga Creek	Drinking Water
Indian Creek	Headwaters to confluence with Towaliga River	Drinking Water
Jackson Lake	From South River at Georgia Hwy. 36; from Yellow River at Georgia Hwy. 36; from Alcovy River at Newton Factory Road Bridge to Lloyd Shoals Dam	Recreation
Little Cotton Indian Creek	Confluence of Reeves and Rum Creeks to confluence with Big Cotton Indian Creek	Drinking Water
Headwaters of Little Ocmulgee River	Little Ocmulgee Lake, Little Ocmulgee State Park Beach	Recreation
Little Towaliga River	Confluence of Edie and Big Towaliga Creeks to confluence with Towaliga River	Drinking Water
Long Branch	Headwaters to confluence with Towaliga River	Drinking Water
Ocmulgee River	Jackson Lake Dam to Wise Creek	Drinking Water
Ocmulgee River	Pratts Creek to Walnut Creek	Drinking Water
Pates Creek	Headwaters to confluence with Little Cotton Indian Creek (including Blalock Reservoir)	Drinking Water

Rocky Creek	Headwaters to Towaliga River	Drinking Water
South River	Honey Creek (Henry County) to Lake Jackson at Georgia Hwy. 36	Recreation
Towaliga River	Thompson Creek to Georgia Hwy. 36	Drinking Water
Towaliga River	Georgia Hwy. 36 to High Falls Lake Dam	Recreation
Towaliga River	High Falls Lake, High Falls State Park Beaches	Recreation
Tobesofkee Creek	Reeves Creek to Rock Branch	Drinking Water
Tobesofkee Creek	Georgia Hwy. 74 to Lake Tobesofkee Dam	Recreation
Town Creek	Headwaters to Ocmulgee River	Drinking Water
Tributary to Dried Creek	Headwaters to confluence with Dried Indian Creek (including Covington Reservoir)	Drinking Water
Tussahaw Creek	Headwaters to Baker Branch	Drinking Water
Walnut Creek	Headwaters to Camp Creek (including Walnut Creek Reservoir)	Drinking Water
Yellow River	Georgia Hwy. 124 to Porterdale Water Intake	Drinking Water
<u>OCONEE RIVER BASIN DESIGNATED USE</u>		
Apalachee River	Shoal Creek to Freeman Creek	Drinking Water
Barber Creek	Headwaters to Parker Branch	Drinking Water
Bear Creek	Headwaters to confluence with Middle Oconee River (including Bear Creek Reservoir)	Drinking Water
Cedar Creek (Hall Co.)	Headwaters to confluence with North Oconee River	Drinking Water
Curry Creek	Headwaters to confluence with Little Curry Creek	Drinking Water
Fort Creek	Headwaters to confluence with Sikes Creek upstream of Lake Sinclair	Drinking Water
Hard Labor Creek	Headwaters to Lake Brantley Dam	Drinking Water
Hard Labor Creek	Lake Rutledge, Hard Labor Creek State Park Beaches	Recreation

Hard Labor Creek	Lake Rutledge Dam to Mile Branch	Drinking Water
Jacks Creek	Headwaters to Grubby Creek	Drinking Water
Lake Oconee	Lake Oconee to Lake Oconee Dam (Wallace Dam)	Recreation and Drinking Water
Lake Sinclair	Lake Oconee Dam downstream to Sinclair Dam	Recreation and Drinking Water
Little River	Big Indian Creek to Glady Creek	Drinking Water
Lowry Branch	Headwaters to confluence with Pearson Creek	Drinking Water
Marbury Creek	Fort Yargo Lake, Fort Yargo State Park Beaches	Recreation
Middle Oconee River	Beech Creek to McNutt Creek	Drinking Water
Mulberry River	Little Mulberry Creek to Barbers Creek	Drinking Water
North Oconee River	Cedar Creek to Gravelly Creek	Drinking Water
North Oconee River	Shankles Creek to Trail Creek	Drinking Water
Oconee River	Sinclair Dam to Fishing Creek	Drinking Water
Oconee River	Oochee Creek to Flat Creek	Recreation and Drinking Water
Oconee River	Flat Creek to Long Branch	Drinking Water
Parks Creek	Headwaters to confluence with North Oconee River	Drinking Water
Popes Branch	Headwaters to confluence with Pearson Creek	Drinking Water
<u>OGEECHEE RIVER BASIN</u>		
<u>DESIGNATED USE</u>		
Julinton River	Contentment Bluff Sandbar and Dallas Bluff Sandbar	Recreation

Little Ogeechee River	South end of White Bluff Road near Carmelite Monastery to open sea and littoral waters of Skidaway Island	Recreation
Ogeechee River	U.S. Hwy. 17 Bridge to open sea	Recreation
Ossabaw Sound	All littoral waters including the waters on the ocean side of Wassaw and Ossabaw Islands	Recreation
Rocky Comfort Creek	Headwaters to confluence with Whetstone Creek	Drinking Water
Sapelo Sound	All littoral waters including the waters on the ocean side of St. Catherines and Sapelo Islands	Recreation
Skidaway River	Skidaway Narrows in Chatham County	Recreation
St. Catherines Sound	All littoral waters including the waters on the ocean side of Ossabaw and St. Catherines Islands	Recreation
Wassaw Sound	All littoral waters including the waters on the ocean side of Little Tybee and Wassaw Islands	Recreation
<u>SATILLA RIVER BASIN</u> <u>DESIGNATED USE</u>		
Big Creek	Lake Laura S. Walker, Laura Walker State Park Beach	Recreation
Satilla River	Alabaha River to Woodbine Boat Ramp at Hwy. 17	Recreation
South Brunswick River	Blythe Island Sandbar	Recreation
St. Andrews Sound	All littoral waters including the waters on the ocean side of Jekyll and Cumberland Islands	Recreation
St. Simons Sound	The littoral waters on the ocean side of Sea Island, and all littoral waters including the waters on the ocean side of St. Simons and Jekyll Islands	Recreation
<u>SAVANNAH RIVER BASIN</u> <u>DESIGNATED USE</u>		
Abercorn Creek	Confluence with Little Abercorn Creek to Savannah River	Drinking Water
Beaverdam Creek	Confluence with Little Beaverdam Creek to Carters Creek	Drinking Water
Beaverdam Creek (Lake Boline)	Headwaters to confluence with Little Beaverdam Creek (including Lake Boline)	Drinking Water

Brier Creek	Walnut Branch to Fitz Creek	Drinking Water
Broad River	Comer Carlton Rd. (Athens Hwy) to Mill Branch	Recreation
Broad River	Wildcat Bridge Rd. to Scull Shoal Creek	Recreation
Chattooga River	Georgia-North Carolina State Line to confluence with West Fork Chattooga River	Wild and Scenic
Chattooga River	Confluence with West Fork Chattooga River to Tugaloo Reservoir	Recreation and Wild and Scenic
Chattooga River/Tugaloo Reservoir	Tugaloo Reservoir to confluence with Tallulah River	Recreation
Cedar Creek	Headwaters to confluence with Little Toccoa Creek (including Toccoa Reservoir)	Drinking Water
Grove Creek	Headwaters to confluence with Hickory Level Creek	Drinking Water
Unnamed Tributary to Lick Creek	Lake Liberty, A.H. Stephens State Park Beach	Recreation
Little Beaverdam Creek	Headwaters to confluence with Beaverdam Creek	Drinking Water
Mountain Creek	Headwaters to Little Nails Creek	Drinking Water
North Fork Broad River	Confluence with Double Branch to confluence with Middle Fork Broad River	Drinking Water
Savannah River/Lake Russell and Clarks Hill Lake	GA Highway 368/SC Highway 184 to Clarks Hill Dam (Mile 238)	Recreation and Drinking Water
Savannah River	Clarks Hill Dam (Mile 238) to Horse Creek including Stevens Creek Reservoir and Augusta Canal	Drinking Water
Savannah River	US Hwy. 301 Bridge (Mile 129) to Seaboard Coastline RR Bridge (Mile 27.4)	Drinking Water
Savannah River	Seaboard Coastline RR Bridge (Mile 27.4) to Fort Pulaski (Mile 0)	Coastal Fishing
Savannah River	Fort Pulaski (Mile 0) to open sea and all littoral waters including those on the ocean side of Tybee Island	Recreation

Sherrills Creek	Headwaters to confluence with South Fork Little River (including Sherrills Reservoir)	Drinking Water
Sweetwater Creek	Headwaters to confluence with Brier Creek (including Usry Lake)	Drinking Water
Tallulah River	Headwaters, including Lakes Burton and Seed, to confluence with Flat Creek	Recreation
Tallulah River/ Lake Rabun	Confluence of Flat Creek, including Lake Rabun, to Rabun Dam	Recreation and Drinking Water
Tallulah River	Lake Rabun Dam to confluence with Chattooga River	Recreation
Town Creek (Tributary to Long Creek)	Headwaters to confluence with Brooks Creek	Drinking Water
Tributary to Crawford Creek	Headwaters to confluence with Crawford Creek (including Water Works Reservoir)	Drinking Water
Tugaloo River	Confluence of Tallulah and Chattooga Rivers to Yonah Lake Dam	Recreation and Drinking Water
Tugaloo River/Lake Hartwell	Confluence with Prather Creek (near GA SR 184) to Lake Hartwell Dam	Recreation and Drinking Water
West Fork Chattooga	Confluence of Overflow Creek and Clear Creek to confluence with Chattooga River (7.3 mi.)	Wild and Scenic
<u>ST. MARYS RIVER BASIN</u>	<u>DESIGNATED USE</u>	
St. Marys River	All littoral waters including the waters on the ocean side of Cumberland Island	Recreation
St. Marys River	Deep Creek to Boone Creek	Recreation
St. Marys River	Prospect Landing Rd. to Little St. Marys River	Recreation
<u>SUWANNEE RIVER BASIN</u>	<u>DESIGNATED USE</u>	
Alapaha River	Willacoochee River to Dampier Branch	Recreation
Alapaha River	Cherry Creek to State Line	Recreation
Little River	Reed Bingham State Park Lake, Reed Bingham State Park Lake Beach	Recreation
Withlacoochee River	Tiger Creek to State Line	Recreation
<u>TALLAPOOSA RIVER BASIN</u>	<u>DESIGNATED USE</u>	

Astin Creek	Headwaters to Little Tallapoosa River including unnamed tributary to Cowans Lake	Drinking Water
Beach Creek	Headwaters to Bush Creek	Drinking Water
Bush Creek	Headwaters to Beach Creek	Drinking Water
Indian Creek	Confluence with Turkey Creek to Indian Branch	Drinking Water
Little Tallapoosa River	Headwaters of Lake Paradise to confluence with Astin Creek	Drinking Water
Little Tallapoosa River	Sharpe Creek to Buck Creek	Drinking Water
Tallapoosa River	Beach Creek to Mann Creek	Drinking Water
Turkey Creek	Jump In Creek to Indian Creek	Drinking Water
<u>TENNESSEE RIVER BASIN</u>	<u>DESIGNATED USE</u>	
Black's Creek	Headwaters to confluence with Little Tennessee River	Drinking Water
Hiawassee River	Headwaters to Lake Chatuge	Recreation
Hiawassee River/ Lake Chatuge	Lake Chatuge to Georgia - North Carolina State Line	Recreation and Drinking Water
Lookout Creek	Confluence with Turner Branch to confluence with Sitton Gulch Creek	Drinking Water
Mud Creek	Headwaters to confluence with Little Tennessee River	Drinking Water
Nottely River	Headwaters to confluence with Fortenberry Creek	Recreation
Nottely River/Lake Nottely	Confluence with Fortenberry Creek to Lake Nottely Dam	Recreation and Drinking Water
Nottely River	Lake Nottely Dam to Georgia - North Carolina State Line	Recreation
South Chickamauga Creek	Confluence of Tiger Creek with East Chickamauga Creek to confluence with Little Chickamauga Creek	Drinking Water
Toccoa River/Lake Blue Ridge	Headwaters to Lake Blue Ridge Dam	Recreation

Toccoa River	Lake Blue Ridge Dam to Georgia - Tennessee State Line	Recreation and Drinking Water
Tributary to Crawfish Spring Lake	Headwaters to confluence with Coke Oven Branch (including Crawfish Spring Lake) to West Chickamauga Creek	Drinking Water
Wolf Creek	Lake Trahlyta, Vogel State Park Beach	Recreation

(15) **Trout Streams.** Streams designated as Primary Trout Waters are waters supporting a self-sustaining population of Rainbow, Brown or Brook Trout. Streams designated as Secondary Trout Streams are those with no evidence of natural trout reproduction, but are capable of supporting trout throughout the year. Trout streams are classified in accordance with the designations and criteria as follows:

(a) **Criteria.**

- (i) There shall be no elevation of natural stream temperatures for Primary Trout Waters; 2, °F or less elevation for Secondary Trout Waters.
- (ii) No person shall construct an impoundment on Primary Trout Waters, except on streams with drainage basins less than 50 acres upstream of the impoundment. Impoundments on streams with drainage basins less than 50 acres must be approved by the Division.
- (iii) No person shall construct an impoundment on Secondary Trout Waters without the approval of the Division.

(b) **Designations by County.**

BARTOW COUNTY

Primary:

None.

Secondary:

1. Boston Creek watershed upstream from Georgia Hwy. 20.
2. Connesena Creek watershed.
3. Dykes Creek watershed.
4. Pine Log Creek watershed.

5. Pyle Creek watershed.
6. Salacoa Creek watershed.
7. Spring Creek watershed.
8. Stamp Creek watershed upstream from Bartow County Road 269.
9. Toms Creek watershed upstream from Bartow County Road 82.
10. Two Run Creek watershed.
11. Ward Creek watershed.

CARROLL COUNTY

Primary:

None.

Secondary:

1. Brooks Creek watershed.
2. Mud Creek watershed.
3. Tallapoosa River.

CATOOSA COUNTY

Primary:

None.

Secondary:

1. Dry Creek watershed upstream from Catoosa County Road 257 (East Chickamauga Creek Watershed).
2. Hurricane Creek watershed upstream from Peters Branch.
3. Little Chickamauga Creek watershed upstream from Catoosa County Road 387.
4. Tiger Creek watershed upstream from Georgia Hwy. 2.

CHATTOOGA COUNTY

Primary:

None.

Secondary:

1. Allgood Branch watershed upstream from Southern Railroad.
2. Chappel Creek watershed.
3. Chelsea Creek watershed.
4. East Fork Little River watershed.
5. Hinton Creek watershed.
6. Kings Creek watershed.
7. Little Armuchee Creek watershed upstream from Chattooga County Road 326.
8. Middle Fork Little River watershed.
9. Mt. Hope Creek watershed.
10. Perennial Spring watershed.
11. Raccoon Creek watershed upstream from Georgia Hwy. 48.
12. Ruff Creek watershed.
13. Storey Mill Creek watershed.
14. Taliaferro Creek watershed.

CHEROKEE COUNTY

Primary:

None.

Secondary:

1. Bluff Creek watershed upstream from Cherokee County Road 114.
2. Boston Creek watershed.
3. Murphy Creek watershed.
4. Pine Log Creek watershed.
5. Salacoa Creek watershed.
6. Soap Creek watershed upstream from Cherokee County Road 116.
7. Stamp Creek watershed.
8. Wiley Creek watershed.

COBB COUNTY

Primary:

None.

Secondary:

1. Chattahoochee River upstream from I-285 West Bridge.

DADE COUNTY

Primary:

None.

Secondary:

1. Allison Creek watershed.
2. East Fork Little River watershed.
3. Lookout Creek watershed upstream from Dade County Road 197.
4. Rock Creek watershed.
5. West Fork Little River watershed.

DAWSON COUNTY

Primary:

1. Amicalola Creek watershed upstream from Dawson County Road 192 (Devil's Elbow Road).
2. Anderson Creek watershed.
3. Long Swamp Creek watershed.
4. Nimblewill Creek watershed.
5. Sweetwater Creek watershed.

Secondary:

1. Amicalola Creek watershed from Georgia Hwy. 53 upstream to Dawson County Road 192 (Devil's Elbow Road).
2. Shoal Creek watershed upstream from the mouth of Burt Creek.

ELBERT COUNTY

Primary:

None.

Secondary:

1. Savannah River for the ten-mile reach downstream from Hartwell Dam.

FANNIN COUNTY

Primary:

1. Conasauga River - Jacks River watershed.
2. Ellijay River watershed.
3. Etowah River watershed.
4. Fightingtown Creek watershed.

5. Owenby Creek watershed.
6. Persimmon Creek watershed.
7. South Fork Rapiar Mill Creek watershed.
8. Toccoa River watershed upstream to Blue Ridge Reservoir dam.
9. Toccoa River watershed upstream from the backwater of Blue Ridge Reservoir.
10. Tumbling Creek watershed.
11. Wilscot Creek watershed.

Secondary:

All streams or stream sections not classified as primary in the above list.

FLOYD COUNTY

Primary:

None.

Secondary:

1. Dykes Creek watershed.
2. Johns Creek watershed upstream from Floyd County Road 212.
3. Kings Creek watershed.
4. Lavender Creek watershed upstream from Floyd County Road 893.
5. Little Cedar Creek watershed.
6. Mt. Hope Creek watershed.
7. Silver Creek watershed upstream from Georgia Highway 1E.
8. Spring Creek watershed (flows into State of Alabama).
9. Spring Creek water shed (flows into Etowah River).
10. Toms Creek watershed.

FORSYTH COUNTY

Primary:

None.

Secondary:

1. Chattahoochee River.

FULTON COUNTY

Primary:

None.

Secondary:

1. Chattahoochee River upstream from I-285 West Bridge.

GILMER COUNTY

Primary:

1. Cartecay River watershed upstream from the mouth of Clear Creek.
2. Clear Creek watershed upstream from Gilmer County Road 92.
3. Conasauga River watershed - including Jacks River watershed.
4. Ellijay River watershed upstream from the mouth of Kells Creek.
5. Harris Creek watershed.
6. Johnson Creek watershed.
7. Mountaintown Creek watershed upstream from U.S. Highway 76.
8. Tails Creek watershed upstream from Georgia Hwy. 282.
9. Toccoa River watershed - including Fightingtown Creek watershed.

Secondary:

1. All streams or sections thereof except the Coosawattee River downstream from Ga. Hwy. 5 Bridge, and Talking Rock Creek (not including tributaries) and those classified as primary.
2. Ball Creek watershed.
3. Sevenmile Creek watershed.
4. Town Creek watershed.
5. Wildcat Creek watershed.

GORDON COUNTY

Primary:

None.

Secondary:

1. Johns Creek watershed.
2. Long Branch watershed.
3. Pine Log Creek watershed upstream from Georgia Hwy. 53.
4. Pin Hook Creek watershed upstream from Gordon County Road 275.
5. Rocky Creek watershed upstream from Gordon County Road 210.
6. Salacoa Creek watershed upstream from U.S. Hwy. 411.
7. Snake Creek watershed.

GWINNETT COUNTY

Primary:

None.

Secondary:

1. Chattahoochee River.

HABERSHAM COUNTY

Primary:

1. Chattahoochee River watershed upstream from Georgia Hwy. 255 Bridge.
2. Middle Fork Broad River watershed upstream from USFS Route 92-B.
3. Panther Creek watershed.
4. Soque River watershed upstream from King's Bridge (bridge on Georgia Hwy. 197 just below the mouth of Shoal Creek).

Secondary:

1. Chattahoochee River watershed upstream from Georgia Hwy. 115 to the Georgia Hwy. 255 Bridge.
2. Davidson Creek watershed.
3. Middle Fork Broad River tributaries entering below USFS Route 92-B.
4. Nancytown Creek watershed upstream from Nancytown Lake.
5. North Fork Broad River watershed.
6. Soque River watershed upstream from the mouth of Deep Creek to King's Bridge (Georgia Hwy. 197).
7. Toccoa Creek watershed.

HARALSON COUNTY

Primary:

None.

Secondary:

1. Beach Creek watershed upstream from Haralson County Road 34.
2. Flatwood Creek watershed.
3. Lassetter Creek watershed.

4. Mann Creek watershed upstream from Haralson County Road 162.
5. Mountain Creek watershed.
6. Tallapoosa River watershed upstream from Haralson County Road 222.
7. Tallapoosa Creek watershed.

HART COUNTY

Primary:

None.

Secondary:

1. Savannah River.

LUMPKIN COUNTY

Primary:

1. Amicalola Creek watershed.
2. Camp Creek watershed.
3. Cane Creek watershed upstream from Cane Creek Falls.
4. Cavender Creek watershed.
5. Chestatee River watershed upstream from Lumpkin County Road 52-S976 (Lumpkin County Road 190).
6. Clay Creek watershed.
7. Etowah River watershed upstream from the Georgia Hwy. 52 Bridge.
8. Hurricane Creek watershed upstream from Lumpkin County Road 202.
9. Mooney Branch watershed.
10. Tobacco Pouch Branch watershed.

Secondary:

1. Cane Creek watershed upstream from Georgia Hwy. 52 Bridge to Cane Creek Falls.
2. Chestatee River watershed upstream from the mouth of Tesnatee Creek to Lumpkin County Road 52-S976 (Lumpkin County Road 190).
3. Etowah River watershed upstream from Castleberry Bridge to Georgia Hwy. 52 except those classified as primary above.
4. Shoal Creek watershed.
5. Yahoola Creek watershed upstream from Georgia Hwy. 52.

MURRAY COUNTY

Primary:

1. Conasauga River watershed, including - Jacks River watershed, upstream from Georgia-Tennessee state line.
2. Holly Creek watershed upstream from Murray County Rd. SR826 (U.S. Forest Service line).
3. Rock Creek watershed upstream from Murray County Rd. 4 (Dennis).

Secondary:

1. All tributaries to Carters Reservoir.
2. Holly Creek watershed (including Emory Creek watershed) upstream from Emory Creek to Murray County Road SR826 (U.S. Forest Service line).
3. Mill Creek watershed upstream from Murray County Road 27.
4. Mill Creek (Hassler Mill Creek) watershed within the Holly Creek watershed.
5. North Prong Sumac Creek watershed.
6. Sugar Creek watershed upstream from Murray County Road 4.
7. Sumac Creek watershed upstream from Coffey Lake.
8. Rock Creek watershed upstream of Murray County Road 301.

PAULDING COUNTY

Primary:

None.

Secondary:

1. Possum Creek watershed upstream from Paulding County Road 64.
2. Powder Creek (Powder Springs Creek) watershed.
3. Pumpkinvine Creek watershed upstream from Paulding County Road 231.
4. Pyle Creek watershed.
5. Raccoon Creek watershed upstream from Road SR2299 (Paulding County Road 471).
6. Tallapoosa River watershed.
7. Simpson Creek watershed.
8. Thompson Creek watershed.
9. Ward Creek watershed.

PICKENS COUNTY

Primary:

1. Cartecay River watershed.
2. Talking Rock Creek watershed upstream from Route S1011 (GA Highway 136).

Secondary:

1. Amicalola Creek watershed.
2. Ball Creek watershed.
3. Bluff Creek watershed.
4. East Branch watershed (including Darnell Creek watershed).

5. Fisher Creek watershed (upstream from the confluence of Talona Creek and Fisher Creek).
6. Fourmile Creek watershed.
7. Hobson Creek watershed.
8. Little Scarecorn Creek watershed.
9. Long Branch watershed.
10. Long Swamp Creek watershed upstream from Pickens County Road 294.
11. Mud Creek watershed.
12. Pin Hook Creek watershed.
13. Polecat Creek watershed.
14. Rock Creek watershed.
15. Salacoa Creek watershed.
16. Scarecorn Creek watershed upstream from Georgia Hwy. 53.
17. Sevenmile Creek watershed.
18. Soap Creek watershed.
19. Town Creek watershed.
20. Wildcat Creek watershed.

POLK COUNTY

Primary:

None.

Secondary:

1. Cedar Creek watershed upstream from Polk County Road 121.
2. Fish Creek watershed upstream of Plantation Pipeline.
3. Lassetter Creek watershed.

4. Little Cedar Creek watershed.
5. Pumpkinpile Creek watershed upstream from Road SR1032.
6. Silver Creek watershed.
7. Simpson Creek watershed upstream of Lake Dorene.
8. Spring Creek watershed.
9. Swinney Branch watershed.
10. Thomasson Creek watershed.
11. Thompson Creek watershed upstream of Polk County Road 441.

RABUN COUNTY

Primary:

1. Chattooga River - all tributaries classified as primary.
2. Little Tennessee River - entire stream and tributaries classified as primary except all streams or sections thereof classified as secondary.
3. Tallulah River - entire stream and tributaries classified as primary except the Tallulah River downstream from Lake Rabun Dam to headwaters of Tugaloo Lake.

Secondary:

1. Little Tennessee River downstream from U.S. Hwy. 441 Bridge.
2. Mud Creek downstream from Sky Valley Ski Resort Lake to the Little Tennessee River.

STEPHENS COUNTY

Primary:

1. Middle Fork Broad River watershed upstream from USFS Route 92-B.
2. Panther Creek watershed upstream from the mouth of Davidson Creek.

Secondary:

1. Davidson Creek watershed.
2. Leatherwood Creek watershed upstream from Georgia Hwy. 184 Bridge.
3. Little Toccoa Creek watershed.
4. Middle Fork Broad River watershed upstream from SCS flood control structure #44 to USFS Route 92-B.
5. North Fork Broad River watershed upstream from SCS flood control structure #1.
6. Panther Creek watershed downstream from the mouth of Davidson Creek.
7. Toccoa Creek upstream from Toccoa Falls.

TOWNS COUNTY

Primary:

1. Brasstown Creek watershed.
2. Chattahoochee River watershed.
3. Gumlog Creek watershed.
4. Hiwassee River watershed - entire stream and all tributaries classified as primary except all streams or sections thereof classified as secondary.
5. Tallulah River watershed.
6. Winchester Creek watershed.

Secondary:

1. Hightower Creek downstream from the mouth of Little Hightower Creek.

UNION COUNTY

Primary:

1. Arkaqua Creek watershed.
2. Brasstown Creek watershed.
3. Chattahoochee River watershed.

4. Conley Creek watershed upstream from Road S2325 (Union County Rd 237).
5. Coosa Creek watershed upstream from mouth of Anderson Creek.
6. Dooley Creek watershed.
7. East Fork Wolf Creek watershed upstream from Lake Trahlyta.
8. Gumlog Creek watershed.
9. Ivylog Creek watershed upstream from USDA Forest Service property line.
10. Nottely River watershed upstream from the mouth of Town Creek.
11. Toccoa River watershed.
12. Town Creek watershed.
13. West Fork Wolf Creek watershed.
14. Youngcane Creek watershed upstream from the mouth of Jones Creek.

Secondary:

1. All streams or sections thereof except the Butternut Creek watershed and the Nottely River downstream of Nottely Dam and those classified as primary.

WALKER COUNTY

Primary:

1. Furnace Creek watershed.
2. Harrisburg Creek watershed (including Dougherty Creek and Allen Creek) upstream from Dougherty Creek.

Secondary:

1. Chappel Creek watershed.
2. Chattanooga Creek watershed upstream of Walker County Road 235.
3. Concord Creek watershed.

4. Dry Creek watershed (tributary to East Armuchee Creek).
5. Duck Creek watershed.
6. East Armuchee Creek watershed upstream from Georgia Hwy. 136.
7. East Fork Little River watershed (flows into Dade County).
8. East Fork Little River watershed (flows into Chattooga County; includes Gilreath Creek).
9. Gulf Creek watershed.
10. Johns Creek watershed.
11. Left Fork Coulter Branch watershed.
12. Little Chickamauga Creek watershed.
13. Middle Fork Little River watershed (includes Cannon Branch and Hale Branch).
14. Rock Creek watershed (including Sawmill Branch) upstream from Sawmill Branch.
15. Ruff Creek watershed.
16. Snake Creek watershed.
17. West Armuchee Creek watershed.
18. West Chickamauga Creek watershed upstream from Walker County Road 107.
19. West Fork Little River watershed.

WHITE COUNTY

Primary:

1. Cathey Creek watershed upstream from the Arrowhead Campground Lake at the mouth of Tom White Branch.
2. Chattahoochee River watershed upstream from Georgia Hwy. 255 Bridge.
3. Town Creek watershed upstream from the mouth of Jenny Creek.

Secondary:

1. Chattahoochee River watershed upstream from Georgia Hwy. 115 to the Georgia Hwy. 255 Bridge.
2. Little Tesnatee Creek watershed upstream from the mouth of Turner Creek.
3. Turner Creek watershed except as listed under primary above (Turner Creek nearest to Cleveland city limits).

WHITFIELD COUNTY

Primary:

None.

Secondary:

1. Coahulla Creek watershed upstream from Whitfield County Road 183.
2. Dry Creek watershed.
3. Snake Creek watershed.
4. Spring Creek watershed.
5. Swamp Creek watershed upstream from Whitfield County Road 9.
6. Tiger Creek watershed

- (16) **Waters Generally Supporting Shellfish.** The waters listed below are either productive shellfish waters or have the potential to support shellfish. However, it may not be lawful to harvest shellfish from all of the waters listed below. Shellfish may only be harvested from waters approved for harvest by the Georgia DNR Coastal Resources Division. For a current list of approved waters for harvesting, contact the Coastal Resources Division.

CHATHAM COUNTY

1. Savannah River South Channel at Fort Pulaski to confluence with Lazaretto Creek.
2. Tybee River at confluence with Bates Creek and eastward, including Bates Creek.

3. Wilmington River at confluence with Herb River and eastward.
4. Herb River at confluence with Wilmington River to County Road 890.
5. All waters surrounding Skidaway Island including Moon River North to Skidaway Island Road.
6. Vernon River at Vernonburg and eastward.
7. Little Ogeechee River from Rose Dhu Island and eastward excluding Harvey Creek on Harvey's Island.
8. Ogeechee River below Shad Island and eastward (north of center line).
9. All waters surrounding Ossabaw Island and Wassaw Island to the center line of the intracoastal waterway.

BRYAN COUNTY

1. Ogeechee River below Shad Island and eastward (south of center line).
2. Redbird Creek at Cottonham and eastward.
3. All waters west of main channel center line of intracoastal waterway to confluence of Medway River.
4. Medway River at south confluence of Sunbury Channel and East Channel and eastward (north of center line).

LIBERTY COUNTY

1. Medway River at south confluence of Sunbury Channel and East Channel and eastward (south of center line).
2. Dickinson Creek at Latitude 31,,° 44.2' to confluence with Medway River.
3. Johns Creek at end of County Road 3 and eastward to confluence with Medway River.
4. All other waters east and north of Colonels Island.
5. North Newport River System at confluence with Carrs Neck Creek and eastward, including Cross Tide Creek.
6. South Newport River System north of center line and eastward from confluence with South Hampton Creek.

MCINTOSH COUNTY

1. South Newport River System south of centerline and eastward from confluence with South Hampton Creek.
2. Julienton River at Latitude 31,,° 36.8' and eastward to confluence with Sapelo River, including Broad River near Shellman Bluff.
3. Sapelo River from end of County Road 127 eastward excluding White Chimney River and Savannah Cut.
4. All waters surrounding Creighton Island.
5. Atwood Creek at Latitude 31,,° 28.3' and eastward.
6. Hudson Creek at Latitude 31,,° 27.2' and eastward.
7. Carnigan River at Latitude 31,,° 26.2' and eastward.
8. All waters surrounding Sapelo Island to the center line of Sapelo Sound, including New Teakettle Creek, Old Teakettle Creek and Dark Creek.
9. Dead River at Longitude 81,,° 21.5' to confluence with Folly River.
10. Folly River at Longitude 81,,° 21.2' to confluence with intracoastal waterways including Fox Creek tributary.
11. North River from confluence with Old Darien River to confluence with intracoastal waterway, including Old Darien River.
12. Darien River from confluence with Three Mile Cut to intracoastal waterway.
13. Rockdedundy River from confluence with Darien River to intracoastal waterway.
14. All waters surrounding Doboy Island, Commodore Island, Wolf Island, and Rockdedundy Island.
15. South River at confluence of intracoastal waterway to Doboy Sound.
16. Altamaha River from confluence with Three Mile Cut and Mackay River and eastward, including Buttermilk Sound, but excluding South Altamaha River.
17. Dog Hammock to confluence with Sapelo River.
18. Eagle Creek to confluence with Mud River.

GLYNN COUNTY

1. Mackay River water system from confluence with South Altamaha River to confluence with Brunswick River, excluding Wally's Leg.
2. All waters surrounding St. Simons Island and Little St. Simons Island.
3. All waters surrounding Andrews Island excluding Academy Creek.
4. Turtle River from confluence with Buffalo River to confluence with South Brunswick River, excluding Cowpen Creek, Yellow Bluff Creek, and Gibson Creek.
5. South Brunswick River and drainage system to confluence of Brunswick River.
6. Fancy Bluff Creek from confluence with South Brunswick River to the Little Satilla River.
7. Brunswick River from confluence of Turtle River and South Brunswick River to St. Simons Sound.
8. Little Satilla River from confluence with Fancy Bluff Creek to St. Andrews Sound (north of center line).
9. All waters surrounding Jekyll Island, Jointer Island, and Colonels Island.

CAMDEN COUNTY

1. Little Satilla River from confluence with Fancy Bluff Creek to St. Andrews Sound (south of center line), excluding Maiden Creek.
2. Umbrella Creek from confluence with Dover Creek below Dover Bluff.
3. Dover Creek from confluence with Umbrella Creek to confluence with Satilla River.
4. Satilla River near Floyd Basin and unnamed cut over to Dover Creek to St. Andrews Sound.
5. Floyd Basin at confluence with Todd Creek to confluence with Satilla River.
6. Floyd Basin at confluence with Todd Creek to confluence with Cumberland River.
7. Black Point Creek south of Latitude 30,,° 52.0' south to Crooked River.

8. Crooked River from Crooked River State Park to Cumberland River.
 9. Cumberland River from confluence of St. Andrews Sound to confluence with St. Marys River (north of center line).
 10. North River from County Road 75 to confluence with St. Marys River.
 11. All waters surrounding Cumberland Island.
 12. St. Marys River (north of center line) from end of State Road 40 to Cumberland Sound.
- (17) **Specific Criteria for Lakes and Major Lake Tributaries.** In addition to the general criteria, the following lake specific criteria are required:
- (a) **West Point Lake:** Those waters impounded by West Point Dam and downstream of U.S. 27 at Franklin.
 - (i) Chlorophyll *a*: For the months of April through October, the average of monthly photic zone composite samples shall not exceed the chlorophyll *a* concentrations at the locations listed below more than once in a five-year period.
 1. Upstream from the Dam in the Forebay: 22 µg/L
 2. LaGrange Water Intake: 24 µg/L
 - (ii) pH: Within the range of 6.0 - 9.5.
 - (iii) Total Nitrogen: Not to exceed 4.0 mg/L as Nitrogen in the photic zone.
 - (iv) Total Phosphorous: Total lake loading shall not exceed 2.4 pounds per acre foot of lake volume per year.
 - (v) Bacteria:
 1. U.S. 27 at Franklin to New River: Bacteria shall not exceed the Fishing criterion as presented in 391-3-6-.03(6)(c)(iii).
 2. New River to West Point Dam: E. coli shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).
 - (vi) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).
 - (vii) Temperature:

1. U.S. 27 at Franklin to New River: Water temperature shall not exceed the Fishing criterion as presented in 391-3-6-.03(6)(c)(iv).
 2. New River to West Point Dam: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).
- (viii) Major Lake Tributaries: For the following tributaries, the annual total phosphorus loading to West Point Lake shall not exceed the following:
1. Yellow Jacket Creek at Hammet Road: 11,000 pounds
 2. New River at Hwy 100: 14,000 pounds
 3. Chattahoochee River at U.S. 27: 1,400,000 pounds
- (b) **Lake Walter F. George:** Those waters impounded by Walter F. George Dam and upstream to Georgia Highway 39 near Omaha.
- (i) Chlorophyll *a*: For the months of April through October, the average of monthly photic zone composite samples shall not exceed 18 µg/L at mid-river at U.S. Highway 82 or 15 µg/L at mid-river in the dam forebay more than once in a five-year period.
 - (ii) pH: Within the range of 6.0-9.5 standard units.
 - (iii) Total Nitrogen: Not to exceed 3.0 mg/L as nitrogen in the photic zone.
 - (iv) Total Phosphorous: Total lake loading shall not exceed 2.4 pounds per acre-foot of lake volume per year.
 - (v) Bacteria:
 1. Georgia Highway 39 to Cowikee Creek: Bacteria shall not exceed the Fishing criterion as presented in 391-3-6-.03(6)(c)(iii).
 2. Cowikee Creek to Walter F. George Dam: E. coli shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).
 - (vi) Dissolved Oxygen: A daily average of no less than 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).
 - (vii) Temperature:
 1. Georgia Highway 39 to Cowikee Creek: Water temperature shall not exceed the Fishing criterion as presented in 391-3-6-.03(6)(c)(iv).

2. Cowikey Creek to Walter F. George Dam: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).

(viii) Major Lake Tributary: The annual total phosphorous loading to Lake Walter F. George, monitored at the Chattahoochee River at Georgia Highway 39, shall not exceed 2,000,000 pounds.

(c) **Lake Jackson:** Those waters impounded by Lloyd Shoals Dam and upstream to Georgia Highway 36 on the South and Yellow Rivers, upstream to Newton Factory Bridge Road on the Alcovy River and upstream to Georgia Highway 36 on Tussahaw Creek.

(i) Chlorophyll *a*: For the months of April through October, the average of monthly mid-channel photic zone composite samples shall not exceed 20 µg/L at a location approximately 2 miles downstream of the confluence of the South and Yellow Rivers at the junction of Butts, Newton and Jasper Counties more than once in a five-year period.

(ii) pH: Within the range of 6.0-9.5 standard units.

(iii) Total Nitrogen: Not to exceed 4.0 mg/L as nitrogen in the photic zone.

(iv) Total Phosphorous: Total lake loading shall not exceed 5.5 pounds per acre-foot of lake volume per year.

(v) Bacteria: *E. coli* shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).

(vi) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).

(vii) Temperature: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).

(viii) Major Lake Tributaries: For the following major tributaries, the annual total phosphorous loading to Lake Jackson shall not exceed the following:

- | | |
|--|----------------|
| 1. South River at Island Shoals: | 179,000 pounds |
| 2. Yellow River at Georgia Highway 212: | 116,000 pounds |
| 3. Alcovy River at Newton Factory Bridge Road: | 55,000 pounds |
| 4. Tussahaw Creek at Fincherville Road: | 7,000 pounds |

(d) **Lake Allatoona:** Those waters impounded by Allatoona Dam and upstream to State Highway 5 on the Etowah River, State Highway 5 on Little River, the Lake Acworth Dam, and the confluence of Little Allatoona Creek and Allatoona Creek. Other impounded tributaries to an elevation of 840 feet mean sea level corresponding to the normal pool elevation of Lake Allatoona.

(i) Chlorophyll *a*: For the months of April through October, the average of monthly mid-channel photic zone composite samples shall not exceed the chlorophyll *a* concentrations at the locations listed below more than once in a five-year period:

1. Upstream from the Dam: 10 µg/L
2. Allatoona Creek upstream from I-75: 12 µg/L
3. Mid-Lake downstream from Kellogg Creek: 10 µg/L
4. Little River upstream from Highway 205: 15 µg/L
5. Etowah River upstream from Sweetwater Creek: 14 µg/L

(ii) pH: Within the range of 6.0-9.5 standard units

(iii) Total Nitrogen: Not to exceed a growing season average of 4 mg/L as nitrogen in the photic zone.

(vi) Total Phosphorous: Total lake loading shall not exceed 1.3 pounds per acre-foot of lake volume per year.

(v) Bacteria:

1. Etowah River, State Highway 5 to State Highway 20: Bacteria shall not exceed the Fishing Criterion as presented in 391-3-6-.03(6)(c)(iii).
2. Etowah River, State Highway 20 to Allatoona Dam: E. coli shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).

(vi) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).

(vii) Temperature:

1. Etowah River, State Highway 5 to State Highway 20: Water temperature shall not exceed the Fishing criterion as presented in 391-3-6-.03(6)(c)(iv).

2. Etowah River, State Highway 20 to Allatoona Dam: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).

(viii) Major Lake Tributaries: For the following major tributaries, the annual total phosphorous loading to Lake Allatoona shall not exceed the following:

- | | |
|--|----------------|
| 1. Etowah River at State Highway 5 spur and 140, at the USGS gage: | 340,000 lbs/yr |
| 2. Little River at State Highway 5 (Highway 754): | 42,000 lbs/yr |
| 3. Noonday Creek at North Rope Mill Road: | 38,000 lbs/yr |
| 4. Shoal Creek at State Highway 108 (Fincher Road): | 12,500 lbs/yr |

(e) **Lake Sidney Lanier:** Those waters impounded by Buford Dam and upstream to Belton Bridge Road on the Chattahoochee River, 0.6 miles downstream from State Road 400 on the Chestatee River, as well as other impounded tributaries to an elevation of 1070 feet mean sea level corresponding to the normal pool elevation of Lake Sidney Lanier.

(i) Chlorophyll *a*: For the months of April through October, the average of monthly mid-channel photic zone composite samples shall not exceed the chlorophyll *a* concentrations at the locations listed below more than once in a five-year period:

- | | |
|---|---------|
| 1. Upstream from the Buford Dam forebay: | 5 µg/L |
| 2. Upstream from the Flowery Branch confluence: | 6 µg/L |
| 3. At Browns Bridge Road (State Road 369): | 7 µg/L |
| 4. At Bolling Bridge (State Road 53) on Chestatee River: | 10 µg/L |
| 5. At Lanier Bridge (State Road 53) on Chattahoochee River: | 10 µg/L |

(ii) pH: Within the range of 6.0-9.5 standard units.

(iii) Total Nitrogen: Not to exceed 4 mg/L as nitrogen in the photic zone.

(iv) Total Phosphorous: Total lake loading shall not exceed 0.25 pounds per acre-foot of lake volume per year.

(v) Bacteria: *E. coli* shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).

- (vi) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).
 - (vii) Temperature: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).
 - (viii) Major Lake Tributaries: For the following major tributaries, the annual total phosphorous loading to Lake Sidney Lanier shall not exceed the following:
 1. Chattahoochee River at Belton Bridge Road: 178,000 pounds
 2. Chestatee River at Georgia Highway 400: 118,000 pounds
 3. Flat Creek at McEver Road: 14,400 pounds
- (f) **Carters Lake:** Those waters impounded by Carters Dam and upstream on the Coosawattee River as well as other impounded tributaries to an elevation of 1072 feet mean sea level corresponding to the normal pool elevation of Carters Lake.
- (i) Chlorophyll *a*: For the months of April through October, the average of monthly mid-channel photic zone composite samples shall not exceed the chlorophyll *a* concentrations at the locations listed below more than once in a five-year period:
 1. Carters Lake upstream from Woodring Branch: 10 µg/L
 2. Carters Lake at Coosawattee River embayment mouth: 10 µg/L
 - (ii) pH: within the range of 6.0 - 9.5 standard units.
 - (iii) Total Nitrogen: Not to exceed 4.0 mg/L as nitrogen in the photic zone.
 - (iv) Total Phosphorous: Total lake loading shall not exceed 172,500 pounds or 0.46 pounds per acre-foot of lake volume per year.
 - (v) Bacteria: *E. coli* shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).
 - (vi) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).
 - (vii) Temperature: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).
 - (viii) Major Lake Tributaries: For the following major tributaries, the annual total phosphorous loading at the compliance monitoring location shall not exceed the following:
 1. Coosawattee River at Old Highway: 151,500 pounds

2. Mountaintown Creek at U.S. Highway 76: 16,000 pounds

(g) **Lake Oconee:** Those waters impounded by Wallace Dam and upstream on the Oconee River as well as other impounded tributaries to an elevation of 436 feet mean sea level corresponding to the normal pool elevation of Lake Oconee.

(i) Chlorophyll *a*: For the months of April through October, the average of monthly mid-channel photic zone composite samples shall not exceed the chlorophyll *a* concentrations at the locations listed below more than once in a five-year period:

1. Oconee Arm at Highway 44: 26 µg/L
2. Richland Creek Arm: 15 µg/L
3. Upstream from the Wallace Dam Forebay: 18 µg/L

(ii) pH: within the range of 6.0 - 9.0 standard units.

(iii) Bacteria: *E. coli* shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).

(iv) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).

(v) Temperature: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).

(h) **Lake Sinclair:** Those waters impounded by Sinclair Dam and upstream on the Oconee River as well as other impounded tributaries to an elevation of 340 feet mean sea level corresponding to the normal pool elevation of Lake Sinclair.

(i) Chlorophyll *a*: For the months of April through October, the average of monthly mid-channel photic zone composite samples shall not exceed the chlorophyll *a* concentrations at the locations listed below more than once in a five-year period:

1. Oconee River Arm Midlake: 14 µg/L
2. Little River and Murder Creek Arm Upstream from Highway 441: 14 µg/L
3. Upstream from the Sinclair Dam Forebay: 10 µg/L

(ii) pH: within the range of 6.0 - 9.0 standard units.

- (iii) Bacteria: E. coli shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(i).
- (iv) Dissolved Oxygen: A daily average of 5.0 mg/L and no less than 4.0 mg/L at all times at the depth specified in 391-3-6-.03(5)(g).
- (v) Temperature: Water temperature shall not exceed the Recreation criterion as presented in 391-3-6-.03(6)(b)(iv).

(18) Site Specific Metal Criteria based on Biotic Ligand Models and Water Effect Ratio

- (a) The Biotic Ligand Model (BLM) is a metal bioavailability model that uses receiving water body characteristics and monitoring data to develop site-specific water quality criteria. A study plan and findings shall be submitted and approved that conforms to the requirements outlined in the *2007 Aquatic Life Ambient Freshwater Quality Criteria-Copper 2007 Revision EPA-822-R-07-001*.

- (i) Site-specific Copper criteria developed using the BLM:

Buffalo Creek (Richards Lake Dam to confluence with Little Tallapoosa River):

Acute Copper criteria

$$= 4.9X10^8 e^{\left(-0.5\left(\frac{(\ln(pH)-2.816)}{-0.1816}\right)^2 + \left(\frac{(\ln(DOC)-82.18)}{-5.458}\right)^2\right)}$$

Chronic Copper criteria

$$= 3.043X10^8 e^{\left(-0.5\left(\frac{(\ln(pH)-2.816)}{-0.1816}\right)^2 + \left(\frac{(\ln(DOC)-82.18)}{-5.458}\right)^2\right)}$$

- (b) A Water Effect Ratio (WER) is site specific and is the ratio of the toxicity of a metal in site water to the toxicity of the same metal in standard laboratory. A study plan and findings shall be submitted and approved that conforms to the requirements outlined in the *1994 Interim Guidance on Determination and Use of Water Effect Ratios for Metals EPA-823-B-94-001*. If the WER is for Copper, the *Interim Guidance* may be complemented with the *2001 Streamline Water Effect Ratio Procedure for Discharges of Copper EPA-822-R-01-005*.

Rule 391-3-6-.04. Marine Sanitation Devices.

- (1) **Purpose.** The purpose of Rule 391-3-6-.04 is to prescribe procedures pertaining to construction, installation and operation of marine sanitation devices, facilities or methods of sewage disposal.
- (2) **Definitions.** All terms used in the Paragraph shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise herein defined in this Paragraph or in any other Paragraph of these Rules.
 - (a) "Boat" means any vessel or watercraft whether moved by oars, paddles, sails, or other power mechanism, inboard or outboard, or any other vessel or structure floating upon the waters of this State whether or not capable of self locomotion, including, but not limited to, cabin cruisers, houseboats, barges and similar floating objects.
 - (b) "Marine Toilet" means any toilet on or within any boat.
 - (c) "Other Disposal Unit" means any device on or within any boat, other than marine toilet, which is intended for use in the disposal of human body wastes or sewage.

- (d) "Blender" means any mechanical device capable of reducing sewage solids into a finely divided state such that a liquid disinfecting agent may be effectively dispersed throughout the blended sewage.
- (e) "Marine Sanitation Devices" mean any equipment of installation on a boat which is designed to receive, retain, treat or discharge sewage or any process to treat such sewage.
- (f) "Sewage," for the purposes of this Paragraph only, means water carried wastes, which are generated by human beings or their activities.

(3) General Provisions.

- (a) Any marine toilet or other disposal unit located on or within any boat operated on waters of this State shall have securely affixed to the interior discharge toilet or unit a suitable marine sanitation device designed, constructed, and operated in accordance with requirements prescribed herein. All sewage passing into or through the marine toilet or other disposal unit shall discharge solely to the marine sanitation device.
- (b) This Paragraph shall not apply to ocean going vessels of 20 tons displacement or more.

(4) Waste Treatment Devices and Equipment.

- (a) All discharges from marine sanitation devices into or upon the waters of this State shall be in compliance with the Federal standards of performance and regulations for marine sanitation devices promulgated pursuant to Section 312 of the Federal Act.
- (b) For vessels on the lakes listed in the Official Code of Georgia Annotated Section [12-5-29\(c\)](#) as amended, it shall be unlawful for any person to operate or float a vessel having a marine toilet unless such marine toilet only discharges into a holding tank located on the vessel. It is further required that:
 1. Such holding tank be constructed so as to prevent removal of the sewage held therein except by pumping;
 2. The holding tank be properly vented to the outside air in such fashion as not to foul the interior of the boat structure;
 3. Only those chemicals approved by the Division can be added to the holding tank; and
 4. The contents of the holding tank must be disposed of only through onshore facilities approved by the Division.

- (c) For vessels on the lakes referenced in paragraph (4)(b) of this section constructed on or before January 1, 1978, an extension shall be granted until December 31, 1991 for compliance with paragraph (4)(b) of this section. The Burden of Proof regarding the construction date of the vessel is the responsibility of the vessel owner. During the extension period those vessels found in violations of the provisions of the law will be issued a warning which will serve to notify each boater of the requirements to comply with paragraph (4)(b) of this section.
- (5) **Right to Entry.** Personnel of the Division or other duly authorized agents of the Department shall have access to any boat at reasonable times for the purposes of the determining whether or not there is compliance with the provisions of the Act and the rules of the Division.
- (6) **Effective Date.** This paragraph shall become effective twenty days after filing with the Secretary of State's Office.

Authority: Ga. L. 1964, p. 416, as amended; O.C.G.A. Sec. [12-5-20](#).

History. Original Rule entitled "Marine Sanitation Devices" was filed on June 10, 1974; effective June 30, 1974.

Amended: F. Apr. 3, 1990; eff. Apr. 23, 1990.

Amended: F. Jul. 6, 1990; eff. July 26, 1990.

Amended: ER 391-3-6-0.24-.04 was f. May 1, 1992; eff. April 29, 1992, the date of adoption, to remain in effect for a period of 120 days or until the effective date of a permanent Rule covering the same subject matter superseding this ER, as specified by the Agency.

Amended: ER 391-3-6-0.24 has been repealed and a permanent Rule, same title, adopted. F. Aug. 19, 1992; eff. Sept. 8, 1992.

Repealed: ER. 391-3-6-0.32-.04, of the same title, adopted. F. May 1, 1996; eff. April 25, 1996, the date of adoption, to remain in effect for the period of 120 days or until the effective date of a permanent Rule covering the same subject matter superseding this ER is adopted, as specified by the Agency.

Amended: Permanent Rule of same title adopted. F. Jul. 10, 1996; eff. July 30, 1996.

Rule 391-3-6-.05. Emergency Actions.

- (1) **Purpose.** The purpose of Paragraph 391-3-6-.05 is to provide procedures to handle any emergency which endangers the waters of the State.
- (2) **Definitions.** All terms used in this Paragraph shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Paragraph of these Rules.
- (a) "Spill" means any discharge of raw sewage by a Publicly Owned Treatment Works (POTW) to the waters of the State.
- (b) "Major Spill"; means:

1. The discharge of pollutants into the waters of the State by a POTW that exceeds the weekly average permitted effluent limit for biochemical oxygen demand (5-day) or total suspended solids by 50 percent or greater for any one day, provided that the effluent discharge concentration is equal to or greater than 25 mg/L for biochemical oxygen demand or total suspended solids.
2. Any discharge of raw sewage that (1) is in excess of 10,000 gallons or (2) results in water quality violations in the waters of the State.

(c) "Consistently exceeding an effluent limitation" means a POTW exceeding the 30 day average limit for biochemical oxygen demand or total suspended solids for at least five days out of each seven day period during a total period of 180 consecutive days.

(3) **Notice Concerning Endangering Waters of the State.** Whenever, because of an accident or otherwise, any toxic or taste and color producing substance, or any other substance which would endanger downstream users of the waters of the State or would damage property, is discharged into such waters, or is so placed that it might flow, be washed, or fall into them, it shall be the duty of the person in charge of such substances at the time to forthwith notify the Division in person or by telephone of the location and nature of the danger, and it shall be such person's further duty to immediately take all reasonable and necessary steps to prevent injury to property and downstream users of said water. The following specific requirements shall apply to POTWS:

- (a) The owner of a POTW shall immediately notify the Division, in person or by telephone, when a spill or a major spill occurs in the system. Within five (5) days of the incident, the owner of the POTW shall submit a written report to the Division which includes, at a minimum, the information required in (3)(e) below. The spill notification and report may be submitted electronically, as approved or required by the Division.
- (b) The owner of a POTW responsible for a major spill shall publish a notice of the major spill in the legal organ of the County where the incident occurred. The notice shall be published within seven days after the date of the major spill. The notice at a minimum shall include the following:
 1. Date of the major spill;
 2. Location and cause of major spill;
 3. Estimated volume discharged and name of receiving waters;
 4. Corrective action taken to mitigate or reduce the adverse effects of the major spill.

(c) The owner of a POTW shall immediately establish a monitoring program of the waters affected by a major spill or by consistently exceeding an effluent limit, with such monitoring being at the expense of the POTW for at least one year. The monitoring program shall include an upstream sampling point as well as sufficient downstream locations to accurately characterize the impact of the major spill or the consistent exceedance of effluent limitations as described in (2)(c) above. At a minimum the following parameters shall be monitored in the receiving stream:

1. Dissolved Oxygen;
2. Fecal Coliform Bacteria;
3. pH;
4. Temperature.

The monitoring and reporting frequency as well as the need to monitor additional parameters will be determined by the Division. The results of the monitoring will be provided by the POTW owner to the Division and all downstream public agencies using the affected waters as a source of a public water supply.

(d) The Division and the owner of a POTW will provide notice of a major spill within 24- hours of becoming aware of the major spill to every county, municipality or other public agency whose public water supply is within a distance of 20 miles downstream and to any others which could potentially be affected by the major spill.

(e) The owner of a POTW responsible for a spill or a major spill shall report the incident to the local media (television, radio and print media) within 24 hours of becoming aware of the incident. The report shall include at a minimum the following:

1. Date of the spill or major spill;
2. Location and cause of spill or major spill;
3. Estimated volume discharged and name of receiving waters;
4. Corrective action taken to mitigate or reduce the adverse effects of the spill or major spill.

(f) The owner of a POTW responsible for a spill or a major spill shall immediately report the incident to the local health department(s) for the area affected by the incident. The report shall include at a minimum the same information required in (3)(e) above.

- (g) The owner of a POTW responsible for a spill or a major spill shall immediately post a notice as close as possible to where the spill or major spill occurred and where the spill or major spill entered State waters. The notice shall include at a minimum the same information required in (3)(e) above. The intent of this requirement is for the POTW to notify citizens, who may come into contact with the affected water, that the spill or the major spill has occurred. The owner shall also post additional notices of the spill or major spill along the portions of the waterway affected by the incident (i.e. at bridge crossings, trails, boat ramps, recreational areas, and other points of public access to the affected waterway). These notices shall remain in place for a minimum of seven days after the spill or major spill has ceased.
- (4) **Noncompliance Notification.** If, for any reason, the permittee does not comply with, or will be unable to comply with any effluent limitations specified in the permittee's NPDES permit, the permittee shall provide the Division with an oral report within 24 hours from the time the permittee becomes aware of the circumstances followed by a written report within five (5) days of becoming aware of such condition. The written submission shall contain the following information:
- (a) A description of the noncompliance and its cause; and
 - (b) The period of noncompliance, including exact dates and times; or, if not corrected, the anticipated time the noncompliance is expected to continue, and steps being taken to reduce, eliminate, and prevent recurrence of the noncomplying discharge.
 - (c) The noncompliance notification and report may be submitted electronically, as approved or required by the Division.
- (5) **Emergency Orders.** The Director shall have the authority to issue an emergency order pursuant to Section 20 of the Act, and Section 17(a) of the Executive Reorganization Act of 1972, as amended.
- (6) **Effective Date.** This Rule shall become effective twenty days after filing with the Secretary of State's Office.

Rule 391-3-6-.06. Waste Treatment and Permit Requirements.

- (1) **Purpose.** The purpose of Rule 391-3-6-.06 is to provide for the degree of waste treatment required and the uniform procedures and practices to be followed relating to the application for issuance, modification, revocation and reissuance, and termination of permits for the discharge of any pollutant into the waters of the State. Requirements applicable to general NPDES permits are provided in Rules [391-3-6-.15](#) and [391-3-6-.16](#).
- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Rules of this Chapter:
 - (a) "Annual average stream flow" means that flow measured daily at the nearest listed U.S. Geologic Survey stream gauge, averaged for the entire period of record, and adjusted by comparison to the size of the drainage area in which the discharge is located.
 - (b) "Aquaculture project" means any point source which meets the criteria set forth in the Federal Regulations, [40 C.F.R. 122.25](#);
 - (c) "Concentrated animal feeding operation" means any point source which meets the criteria set forth in the Federal Regulations, [40 C.F.R. 122.23](#);
 - (d) "Concentrated aquatic animal production facility" means any point source which meets the criteria set forth in the Federal Regulations, [40 C.F.R. 122.24](#);
 - (e) "Construction" means any placement, assembly, or installation of facilities or equipment (including contractual obligations to purchase such facilities or equipment) at the premises where such equipment will be used, including preparation work at such premises;
 - (f) "Dilution factor" means a numerical representation of the dilution of the permitted effluent from the wastewater treatment facility in the receiving stream. It shall be used to calculate instream concentrations of priority pollutants when the effluent concentration is known and to calculate effluent limitations from the instream criteria concentration listed in [391-3-6-.03\(5\)\(e\)](#).
 1. For constituents and their criteria listed in [391-3-6-.03\(5\)\(e\)\(i\) and \(iii\)](#) and for constituents and their chronic criteria in [391-3-6-.03\(5\)\(e\)\(ii\)](#), the dilution factor equals:
$$\frac{[7\text{-day, 10-year minimum stream flow (7Q10) + discharger design flow}]}{\text{discharger design flow}}$$

For constituents and their acute criteria listed in [391-3-6-.03\(5\)\(e\)\(ii\)](#), the dilution factor for the calculation of effluent limitations equals:

$$\frac{[1\text{-day, 10-year minimum stream flow (1Q10) + discharger design flow}]}{\text{discharger design flow}}$$

For constituents listed in [391-3-6-.03\(5\)\(e\)\(iv\)](#), the dilution factor equals:

$$\frac{[\text{Annual or long-term average stream flow} + \text{Discharger design flow}]}{\text{discharger design flow}}$$

2. The dilution factor equations assume a relatively rapid and complex mix. In situations where this does not occur, the Permittee or EPD may perform field studies to document and describe the mixing zone. The dilution factor in such situations, for the purpose of calculating effluent limitations for chemical constituents, will be determined based on the studies. If a mixing zone is granted, all criteria and requirements of subsection [391-3-6-.03\(10\)](#) must also be met.
 3. In situations where the dilution factor equations do not appropriately describe the dilution capacity of receiving waters, such as for discharges to impounded waters or to tidal estuaries, the dilution factor will be determined through field studies or appropriate analytical procedures.
- (g) "Effluent Limitation" means any restriction or prohibition established under the Act on quantities, rates, or concentrations, or a combination thereof, of chemical, physical, biological, or other constituents which are discharged from point sources into the waters of the State, including, but not limited to, schedules of compliance and whole effluent biological monitoring requirements;
- (h) "EPD" means the Environmental Protection Division of the Georgia Department of Natural Resources;
- (i) "Indirect discharger" means a non-domestic discharger introducing pollutants to a publicly owned treatment works;
- (j) "Major discharger" as defined in EPA annual operating guidance for the EPA Regional Offices and the States and specifically listed in the annual State program plan;
- (k) "New discharger" means any point source that meets the criteria set forth in the Federal Regulations, [40 C.F.R. 122.29](#);
- (l) "New Source" means any point source that meets the criteria set forth in the Federal Regulations, [40 C.F.R. 122.29](#);

- (m) "NPDES Permit Application" means the application filed by any person with the Director for an NPDES Permit;
- (n) "NPDES Permit" means the permit issued by the Division to regulate the discharge of pollutants from any point source into the waters of the State;
- (o) "Segment" means a portion of a water quality planning area, the surface waters of which have common hydrologic characteristics (or flow regulation patterns); common natural physical, chemical and biological characteristics and processes; and common reactions to external stresses, such as the discharge of pollutants. Segments will be classified as either a water quality segment or an effluent limitation segment as follows:
 1. Water quality segment. Any segment where it is known that water quality does not meet applicable water quality standards and/ or is not expected to meet applicable water quality standards even after the application of the effluent limitations required by sections 301(b)(1)(B) and 301(b)(2)(A) of the Act;
 2. Effluent limitation segment. Any segment where it is known that water quality is meeting and will continue to meet applicable water quality standards or where there is adequate demonstration that water quality will meet applicable water quality standards after the application of the effluent limitations required by sections 301(b)(1)(B) and 301(b)(2)(A) of the Act.
- (p) "Separate storm sewer" means any point source which meets the criteria set forth in the Federal Regulations, [40 C.F.R. 122.26](#).
- (q) "Silvicultural point source" means any point source which meets the criteria set forth in the Federal Regulations, [40 C.F.R. 122.27](#);

(3) Permit Requirement.

- (a) Any person discharging or proposing to discharge into the waters of the State any pollutant from a point source including those defined in Paragraph 391-3-6-.06(2) above, under any of the circumstances described in O.C.G.A. Section [12-5-30\(a\)](#), shall obtain a permit from the EPD to make such discharge.
- (b) Any person discharging or proposing to discharge any pollutant from a non-point source into the waters of the State, under the circumstances described in O.C.G.A. Section [12-5-30\(b\)](#), shall obtain written approval from the EPD and shall be required to use best management practices to minimize to the extent feasible as determined by the EPD the introduction of the pollutant into the waters of the State. The best management practices shall be included in a permit, if the Director has issued one to the same person for a point source discharge.

- (c) Any person owning or operating a treatment works, from which a discharge into the waters of the State could possibly occur, excluding discharges which could result from Acts of God, shall apply to the EPD for a permit.

(4) Degree of Waste Treatment Required.

- (a) All pollutants shall receive such treatment or corrective action so as to ensure compliance with the terms and conditions of the issued permit and with the following, whenever applicable:
 1. Effluent limitations established by EPA pursuant to Sections 301, 302, 303 and 316 of the Federal Act;
 2. Standards of performance for new sources established by the EPA pursuant to Section 306 of the Federal Act;
 3. Effluent limitations and prohibitions and pretreatment standards established by the EPA pursuant to Section 307 of the Federal Act;
 4. Criteria for the issuance of permits to aquaculture projects, as defined in this Paragraph, established by EPA pursuant to Section 318 of the Federal Act;
 5. Criteria and standards for Best Management Practices established by EPA pursuant to Section 304(e) of the Federal Act;
 6. Criteria and standards for imposing conditions for the disposal of sewage sludge established by EPA pursuant to Section 405 of the Federal Act;
 7. Ensure consistency with the requirements of a Water Quality Management plan approved by EPA pursuant to Section 208(b) of the Federal Act;
 8. Criteria for ocean discharges established by EPA pursuant to Section 403(c) of the Federal Act;
 9. Incorporate alternative effluent limitations or standards where warranted by "fundamentally different factors" established by EPA; in accordance with Federal Regulations, [40 C.F.R. 124.62\(e\)](#);
 10. Notwithstanding the above, more stringent effluent limitations may be required as deemed necessary by the EPD (a) to meet any other existing Federal laws or regulations, or (b) to ensure compliance with any applicable State water quality standards, effluent limitations, treatment standards, or schedules of compliance;

11. With regard to any non-point source required to obtain a permit, such best management practices as are required to ensure compliance with applicable State water quality standards.
- (b) Calculations and specification of effluent limits and standards shall be made in accordance with the provisions of Federal Regulations, [40 C.F.R. 122.44](#) and [122.45](#).
 - (c) The foregoing requirements shall be applied in considering all applications made pursuant to O.C.G.A. Section [12-5-30](#), and no such application will be approved unless the waste treatment facilities contemplated thereby will achieve such limitations and standards upon completion thereof or within such reasonable time thereafter as the EPD may provide, consistent with subparagraph 391-3-6-.06(10).
 - (d) Until such time as such criteria, standards, limitations, and prohibitions are promulgated pursuant to Sections 301, 302, 303, 304(e), 306, 307 and 405 of the Federal Act, the EPD shall apply such standards, limitations and prohibitions necessary to achieve the purposes of said sections of the Federal Act. With respect to individual point sources, such limitations, standards, or prohibitions shall be based upon an assessment of technology and processes, to wit:
 1. To existing point sources, other than publicly owned treatment works, effluent limitations based on application of the best practicable control technology currently available;
 2. To publicly owned treatment works, effluent limitations based upon the application of secondary treatment or treatment equivalent to secondary treatment in accordance with Federal Regulations, [40 C.F.R. 133.102](#) and 105;
 3. To any point source, other than publicly owned treatment works, whose construction commences after the initial effective date of this Rule, and for which there are not new source performance standards, effluent limitations which reflect the greatest degree of effluent reduction which the EPD determines to be achievable through application of the best available demonstrated control technology, processes, operating methods, or other alternatives, including, where practicable, a standard permitting no discharge of pollutants, consistent with [40 C.F.R. 125.3\(c\)\(2\)](#).
 4. To any point source, as appropriate, effluent limitations or prohibitions designed to prohibit the discharge of toxic pollutants in toxic amounts or to require pretreatment of pollutants which interfere with, pass through, or otherwise are incompatible with the operation of publicly owned treatment works; and

5. To any point source, as appropriate, more stringent effluent limitations as are required to ensure compliance with applicable State water quality standards, including those to prohibit the discharge of toxic pollutants in toxic amounts. Where necessary, NPDES Permits issued or reissued after the adoption of this paragraph shall include numeric criteria based upon the following procedures to ensure that toxic substances and other priority pollutants are not discharged to surface waters in harmful amounts:
 - (i) The EPD will review available data for reported concentrations of any of the following chemical constituents detected at levels based upon analytical methods described in Federal Regulations 40 C.F.R. 136, or that have EPA concurrence, which establishes guidelines on test procedures for the analysis of pollutants.

CHEMICAL CONSTITUENT

1. Methoxychlor
2. 2,4-Dichlorophenoxyacetic acid (2, 4-D)
3. 2,4,5-Trichlorophenoxy propionic acid (TP Silvex)
4. Antimony
5. Arsenic
6. Beryllium
7. Cadmium
8. Chromium (III)
9. Chromium (VI)
10. Copper
11. Lead
12. Mercury
13. Nickel
14. Selenium
15. Silver

16. Thallium
17. Zinc
18. Cyanide
19. Acrolein
20. Acrylonitrile
21. Benzene
22. Bromoform (Tribromomethane)
23. Carbon Tetrachloride
24. Chlorobenzene
25. Chlorodibromomethane
26. Chloroethane
27. 2-Chloroethylvinyl Ether
28. Chloroform (Trichloromethane)
29. Dichlorobromomethane
30. 1,1-Dichloroethane
31. 1,2-Dichloroethane
32. 1,1-Dichloroethylene
33. 1,2-Dichloropropane
34. 1,3-Dichloropropylene
35. Ethylbenzene
36. Methyl Bromide (Bromomethane)
37. Methylene Chloride
38. Methyl Chloride (Chloromethane)

39. 1,1,2,2-Tetrachloroethane
40. Tetrachloroethylene
41. Toluene
42. 1,2-Trans- Dichloroethylene
43. 1,1,1-Trichloroethane
44. 1,1,2-Trichloroethane
45. Trichloroethylene
46. Vinyl Chloride
47. 2-Chlorophenol
48. 2,4-Dichlorophenol
49. 2,4-Dimethylphenol
50. 2-Methyl-4,6- Dinitrophenol
51. 2,4-Dinitrophenol
52. 2-Nitrophenol
53. 4-Nitrophenol
54. 3-Methyl-4-Chlorophenol
55. Pentachlorophenol
56. Phenol
57. 2,4,6-Trichlorophenol
58. Acenaphthene
59. Acenaphthylene
60. Anthracene
61. Benzidine

62. Benzo(a)Anthracene
63. Benzo(a)Pyrene
64. 3,4-Benzofluoranthene
65. Benzo(ghi)Perylene
66. Benzo(k)Fluoranthene
67. Bis(2-Chloroethoxy)Methane
68. Bis(2-Chloroethyl)Ether
69. Bis(2-Chloroisopropyl) Ether
70. Bis(2-Ethylhexyl) Phthalate
71. 4-Bromophenyl Phenyl Ether
72. Butylbenzyl Phthalate
73. 2-Chloronaphthalene
74. 4-Chlorophenyl Phenyl Ether
75. Chrysene
76. Dibenzo(a,h)Anthracene
77. 1,2-Dichlorobenzene
78. 1,3-Dichlorobenzene
79. 1,4-Dichlorobenzene
80. 3,3'-Dichlorobenzidine
81. Diethyl Phthalate
82. Dimethyl Phthalate
83. Di-n-Butyl Phthalate
84. 2,4-Dinitrotoluene

85. 2,6-Dinitrotoluene
86. Di-n-Octyl Phthalate
87. 1,2-Diphenylhydrazine
88. Fluoranthene
89. Fluorene
90. Hexachlorobenzene
91. Hexachlorobutadiene
92. Hexachloro- cyclopentadiene
93. Hexachloroethane
94. Indeno(1,2,3-cd) Pyrene
95. Isophorone
96. Naphthalene
97. Nitrobenzene
98. N-Nitrosodimethylamine
99. N-Nitrosodi-n- Propylamine
100. N-Nitrosodiphenylamine
101. Phenanthrene
102. Pyrene
103. 1,2,4-Trichlorobenzene
104. Aldrin
105. a-BHC-Alpha
106. b-BHC-Beta
107. Lindane [Hexachlorocyclohexane (g-BHC-Gamma)]

108. d-BHC-Delta
109. Chlordane
110. 4,4'-DDT
111. 4,4'-DDE
112. 4,4'-DDD
113. Dieldrin
114. a-Endosulfan
115. b-Endosulfan
116. Endosulfan Sulfate
117. Endrin
118. Endrin Aldehyde
119. Heptachlor
120. Heptachlor Epoxide
121. PCBs
122. Toxaphene

- (ii) For the chemical constituents identified after completion of (i) above, and/or if other site specific information available to the EPD indicates the presence of one or more of the above chemical constituents at levels of concern to EPD, the EPD will control the chemical constituent with a monitoring provision or with effluent limitations in the NPDES permit.
 - (a) If there are less than 10 data points available at the time of evaluation, and if the instream concentration, which is measured or calculated by dividing the effluent concentration by appropriate dilution factor from 391-3-6-.06(2)(f), is greater than or equal to fifty percent of the criteria concentration(s), then the permittee will be required to monitor that constituent for at least ten months. If there is

more than one data point at the time of evaluation, then the data will be averaged together in calculating the instream concentration as described above. An exception to this is if the stream concentration is to be compared against an acute criterion. If this is the case, then instead of using the average of the data, the highest data point in the set will be used to calculate the instream concentration. This number will then be compared against 50% of the acute criterion.

(b) The EPD will review the monitoring results after the permittee has monitored the chemical constituents for at least ten months.

(1) In the case of chemical constituents with acute criteria, if the instream concentration (calculated using the highest concentration of at least ten monthly samples and the formula(s) in 391-3-6-.06(2)(f) is greater than the acute criterion then an effluent limit(s) for that constituent will be required at permit issuance. If the instream concentration is less than or equal to the acute criterion, then the EPD may terminate or lessen the monitoring requirement for that constituent. In the case of all other chemical constituents with numeric criteria, if the average of at least ten monthly samples indicates that a chemical constituent's instream concentration is less than fifty percent of the instream criteria, based on the formula(s) in 391-3-6-.06(2)(f), then the EPD may terminate or lessen the monitoring requirement for that constituent. If the average is fifty percent or more of the instream criteria, an effluent limit(s) for that constituent will be required at permit issuance.

(2) If it is determined that an effluent limit(s) is required as described above, then the permit shall be reissued or modified to include an effluent limit(s) for the chemical constituent calculated as follows:

Effluent limit = criteria concentration X dilution factor X translation factor (if necessary).

The translation factor will be used to convert dissolved criteria concentrations into total recoverable permit limits using methods discussed in [391-3-6-.03\(5\)\(e\)\(ii\)](#). Where a constituent has both an acute and chronic aquatic life criteria, the acute criteria will be used to calculate a daily maximum effluent limitation while the chronic criteria will be used to calculate a monthly average effluent limitation.

- (c) If the permit is issued or modified as in (ii)(b)(2) above for a chemical constituent listed in [391-3-6-.03\(5\)\(e\)](#), the limit shall become effective upon issuance or modification of the permit.
- (d) At the request of the permittee, a schedule to allow for development of a site-specific effluent limit may be established by the EPD. This schedule would be contained in the permit or in an accompanying Consent Order and include the following:
 - (1) A requirement for monthly monitoring for all chemical constituents that are limited.
 - (2) A requirement that the permittee perform site-specific studies, consisting of whole effluent biomonitoring, water-effect ratio tests, stream studies, or other appropriate studies or calculations. The methodology for these tests will be determined by the EPD on a case-by-case basis. Water-effect ratio studies are to be conducted using the EPA guidance document "Interim Guidance on Determination and Use of Water-Effect Ratios for Metals, EPA-823-B-94-001" or "Stream Lined Water-Effect Ratio Procedure for Discharges of Copper, EPA-822-R-01-005" or the most recent EPA guidance document.
 - (3) A requirement that all data obtained in (2) and (3) be submitted to the EPD for review.
 - (4) No more than two years following initiation of monitoring under (ii)(a), the EPD will use the data to calculate site-specific limitations for each chemical

constituent, and will initiate the process to incorporate the limitation(s) into the permit along with requirements for a minimum of annual whole effluent biomonitoring. At any time during the two year period the EPD may, upon its initiative or that of the permittee, review the data that have been submitted and may determine that limits and monitoring requirements for one or more chemical constituents may be terminated. All modifications of limits and monitoring requirements will comply with anti-backsliding requirements contained in Section 402(o) of the Clean Water Act. Conversely, should the EPD determine that adequate data are available before the two year interim monitoring period, it may develop site-specific limitations for the constituent(s) without additional monitoring.

- (e) Any permit modifications or revocation/reissuances pursuant to (ii)(b)(2) or (ii)(d) will be performed in accordance with procedures described in 391-3-6-.06(7), including public participation requirements.
 - (f) For any metals monitored during any portion of the limits determination process, measurement will be by the most appropriate analytical technique approved by the U.S. EPA which provides a measurement of the portion of the metal present which may cause toxicity to aquatic life in the receiving stream.
- (iii) For other 307(a) chemical constituents, including priority pollutants not identified in [391-3-6-.03\(5\)\(e\)\(i\)-\(vi\)](#) whole effluent biomonitoring will be used to develop either a site-specific criteria concentration or a whole effluent toxicity limit, with such limits to be incorporated into permits. This paragraph applies to the following chemical constituents:
- (a) Chloroethane
 - (b) 1,1-Dichloroethane
 - (c) 1,1,1-Trichloroethane

- (d) 2-Nitrophenol
 - (e) 4-Nitrophenol
 - (f) Bis(2-Chloroethoxy) Methane
 - (g) 4-Bromophenyl Phenyl Ether
 - (h) 4-Chlorophenyl Phenyl Ether
 - (i) 2,6-Dinitrotoluene
 - (j) Di-n-Octyl Phthalate
 - (k) Naphthalene
 - (l) d-BHC-Delta
 - (m) Silver
 - (n) Beryllium
 - (o) 2-Chloro ethyl vinyl ether
 - (p) Methyl chloride (chloromethane)
 - (q) 3-Methyl-4-Chlorophenol
 - (r) Acenaphthylene
 - (s) Benzo (ghi) perylene
 - (t) Phenanthrene
- (iv) The criteria concentration may be more stringent under either one of the following situations:
- (a) If the chemical constituent exists in the upstream reaches of the receiving stream at any level greater than zero due to the presence of other direct dischargers. For this situation, the criteria concentration for computation of the effluent limit will be the net value after subtracting out this initial concentration. Unless actual water quality studies and monitoring or calculations indicate otherwise, it will be

assumed that the upstream levels of each constituent are zero; or

- (b) If the EPD determines that more stringent limitations should be imposed in order to reserve some assimilative capacity for future discharges.
- (v) The effluent limit determined in (ii)(b)(2) above may be adjusted as follows, to determine the actual effluent limit to be used in the permit:
- (a) If the limit is more stringent than the analytical laboratory detection limit using analytical methods described in Federal Regulations 40 C.F.R. 136 or methods that have EPA concurrence, then the limit will include an accompanying statement in the permit that a reading of not detected using the analytical methods specified in the permit will be considered as being in compliance with the limit;
 - (b) If water quality studies and monitoring indicate that the chemical constituent is present in the water supply or in the upstream reaches of the receiving stream at a concentration equal to or exceeding the daily limit for the specific chemical constituent, and the presence of such cannot be attributed to direct point source dischargers, or nonpoint sources that can be reasonably controlled with best management practices, the limit will be set equal to the natural ambient concentration of the chemical constituent;
 - (c) For industrial point source dischargers, if the specific chemical constituent is regulated by a technology-based effluent guideline limit, the guideline limit will be compared to the calculated limit. The limit will be the more stringent of the two values;
 - (d) For complex effluents, where several chemical constituents exist, the EPD will assign a limit for each specific chemical constituent and may require a whole effluent biomonitoring limit where there is a reasonable potential that the narrative criteria for whole effluent toxicity will be exceeded. Such whole effluent biomonitoring limitation will consist of a series of bioassays of the wastewater treatment plant effluent, and, if appropriate, toxicity source identification evaluations,

and implementation steps to reduce the chronic toxicity. This approach shall not be applied to those chemical constituents considered potential or known carcinogens or to the chemical constituents identified in [391-3-6-.03\(5\)\(d\)\(iii\)](#).

- (vi) NPDES permits issued or reissued after the adoption of this paragraph shall include biological monitoring provisions and, where determined by the State to be necessary, a water quality-based whole effluent provision utilizing numerical pass/fail criteria to manage the effluent for the additive effects of all Section 307(a)(1) Federal Clean Water Act toxic pollutants and other unknown toxic substances or priority pollutants. The water quality-based whole effluent approach will help to ensure that the wastewater treatment plant effluent does not contain unknown sources of acute and chronic toxicity that may interfere with the designated water quality use classifications of the receiving stream. The whole effluent acute biological toxicity monitoring provision ensures protection from acute toxicity within any designated mixing zone and helps to define alternate criteria to allow for the safe passage of aquatic organisms through streams with 7-day, 10-year minimum flows approaching zero. The numerical pass/fail criteria is also a screening technique for use by the EPD to determine priority toxicity reduction needs.
- (vii) Permits issued or reissued after the adoption of this paragraph may include site specific temporary exceptions to the applicable water quality standards under subparagraph [391-3-6-.03\(5\)\(e\)](#) when the requirements of this paragraph are met and the temporary exception is specifically authorized herein. Where a discharger cannot meet applicable limits for whole effluent toxicity because of a water quality based whole effluent toxicity criteria, site-specific temporary exceptions may be allowed on effluent dominated receiving streams under 7-day, 10-year minimum stream flow (7Q10) conditions provided that it has been demonstrated that the permitted discharge will comply with all chemical specific and other applicable water quality criteria, that the receiving stream will support a balanced indigenous population of aquatic life, and that controls more stringent than those required by Section 301(b) and 306 of the Federal Act for achieving whole effluent toxicity criteria would result in substantial and widespread adverse economic and social impacts to the affected communities. These site-specific exceptions shall be applicable only to the wastewater discharge as

permitted at the time the exception is authorized with no changes in process or wastewater characteristics that would adversely affect water quality in the receiving stream or adversely affect the ability of potential new pollution abatement technologies to attain compliance with the whole effluent toxicity criteria. These site-specific exceptions shall be reviewed consistent with [40 CFR 131.20](#) at least once in every 3-year period. If it is determined that feasible new pollution abatement technologies or alternatives have become available to allow compliance with whole effluent toxicity criteria, these site-specific exceptions may be revoked and the NPDES permits modified to require implementation of such pollution abatement technologies or alternatives as soon as reasonably practicable. Along with this permit modification will be a requirement for the permittee to comply with the water quality based whole effluent toxicity criteria after installation of these technologies.

- (e) To all new dischargers or new sources the following shall apply:
1. Except as provided in subparagraph (e)2. any new discharger on which construction commenced after October 18, 1972, or any new source, which meets the applicable promulgated new source performance standards before the commencement of discharge, shall not be subject to any more stringent new source performance standards, or to any more stringent technology-based standards under section 301(b)(2) of the Federal Act for the shortest of the following periods:
 - (i) Ten years from the date that construction is completed;
 - (ii) Ten years from the date the source begins to discharge process or other nonconstruction related wastewater; or
 - (iii) The period of depreciation or amortization of the facility for the purposes of Section 167 or 169 (or both) of the Internal Revenue Code of 1986.

Comment: The provisions of this subparagraph do not apply to existing sources which modify their pollution control facilities or construct new pollution control facilities and achieve performance standards, but which are neither new sources nor new dischargers or otherwise do not meet the requirements of this subparagraph.

2. The protection of more stringent standards of performance afforded by subparagraph (e)1. of this section does not apply to:

- (i) Additional or more stringent permit conditions which are not technology based, e.g., conditions based on water quality standards, or effluent standards or prohibitions under Section 307(a) of the Federal Act; and
 - (ii) Additional permit conditions controlling pollutants listed as toxic under Section 307(a) of the Federal Act or as hazardous substances under Section 311 of the Federal Act and which are not controlled by new source performance standards. This includes permit conditions controlling pollutants other than those identified as toxic or hazardous where control of those other pollutants has been specifically identified as the method to control the toxic or hazardous pollutant.
- 3. Where an NPDES permit issued to a source enjoying a "protection period" under subparagraph (e)1. will expire on or before the expiration of the protection period, such permit shall require the owner or operator of the source to be in compliance with the requirements of Section 301 of the Federal Act and any other applicable requirements of the Federal Act immediately upon the expiration of the protection period. No additional period for achieving compliance with these requirements shall be allowed.
- 4. The owner or operator of a new source, a new discharger, a source recommencing discharge after terminating operations, or a source which has been an indirect discharger which commences discharging into navigable waters shall install and have in operating condition, and shall "startup" all pollution control equipment required to meet the terms and conditions of its permits before beginning to discharge. Within the shortest feasible time (not to exceed 90 days), the owner or operator must meet all permit terms and conditions.
- 5. After the effective date of new source performance standards, in accordance with Section 306(e) of the Federal Act, it shall be unlawful for any owner or operator of any new source to operate such source in violation of those standards, applicable to such source.

(5) Application for Permit.

- (a) Applications for permits under the Act shall be on forms as may be prescribed and furnished from time to time by the EPD. Applications shall be accompanied by all pertinent information as the EPD may require in order to establish effluent limitations in accordance with paragraph 391-3-6-.06(4), including, but not limited to, complete engineering reports, schedule of progress, plans, specifications, maps, measurements, quantitative and qualitative determinations, records, and all related

materials. In addition, applications will comply with the information requirements specified in the Federal Regulations, [40 C.F.R. 122.21\(g\)\(7\) and \(j\)\(4\)](#).

- (b) Engineering reports, plans, specifications, and other material submitted to the EPD shall be prepared by or under the direct supervision or review of, and bear the seal of, a Professional Engineer competent in the field of sewage and industrial waste treatment. At no time shall this requirement be in conflict with O.C.G.A. Section 43-15 governing the practices of professional engineering and surveying.
- (c) Material submitted shall be complete and accurate.
- (d) Any State or NPDES Permit Application form submitted to the EPD shall be signed as follows in accordance with the Federal Regulations, [40 C.F.R. 122.22](#):
 - 1. For a corporation, by a responsible corporate officer. For this subparagraph a responsible corporate officer means:
 - (i) a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision making functions for the corporation, or
 - (ii) the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
 - 2. For a partnership or sole proprietorship, by a general partner or the proprietor, respectively; or
 - 3. For a municipality, State, Federal, or other public facility, by either a principal executive officer or ranking elected official.
- (e) All other reports or requests for information required by the permit issuing authority shall be signed by a person designated in (d) above or a duly authorized representative of such person, if:
 - 1. The representative so authorized is responsible for the overall operation of the facility from which the discharge originates, e.g., a plant manager, superintendent or person of equivalent responsibility;
 - 2. The authorization is made in writing by the person designated under (d) above; and
 - 3. The written authorization is submitted to the Director.

- (f) Any changes in written authorization submitted to the permitting authority under (e) above which occur after the issuance of a permit shall be reported to the permitting authority by submitting a copy of a new written authorization which meets the requirements of (e)1. and 2. above.
- (g) Any person signing any document under (d) or (e) above shall make the following certification: I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
- (h) All municipal discharges with permitted flows equal to or greater than one million gallons per day, or with an approved pretreatment program, or that are required to develop a pretreatment program, must submit with the application results of valid whole effluent toxicity testing.
 - 1. This testing must be conducted using EPA's methods or other established protocols which are scientifically defensible and sufficiently sensitive to detect aquatic toxicity. Such testing must have been conducted since the last NPDES permit reissuance or major modification.
 - 2. In addition to the dischargers listed above, the Director may require other municipal dischargers to submit the results of toxicity tests with their permit applications, based on considerations which the Director determines could cause or contribute to adverse water quality impacts.

Comment: The permit application will be revised to incorporate the statement in 391-3-6-.06(5)(g) above. Where a permit program document does not contain the statement, the certification must accompany the appropriate document.

(6) Receipt and Use of Application and Data.

- (a) Applications for permits will be reviewed together with such other information as may be necessary to ascertain the effect of the discharge of any such pollutant upon the waters into which such pollutant will be discharged.
- (b) Copies of the complete NPDES Permit Application received by the EPD shall be transmitted to the Regional Administrator for any comment in such manner as the Director and the Regional Administrator shall agree.

- (c) The EPD shall receive any relevant data collected by the Regional Administrator prior to the EPD's participation in the NPDES in such manner as the Director and the Regional Administrator shall agree.
- (7) **Notice and Public Participation.** The provisions of Rule 391-3-6-.26 shall apply to public notice of complete permit applications, draft permits and fact sheets or statements of basis. The public notice for permits with an approved Sludge Management Plan will also include publication in one or more newspapers of general circulation in the area affected by the discharge.
- (8) **Terms and Conditions of Permits.**
- (a) Terms and conditions under which the discharge will be permitted will be specified on the permit issued.
 - (b) No NPDES Permit shall be issued authorizing any of the following discharges:
 1. The discharge of any radiological, chemical, or biological warfare agent or high-level radioactive waste into navigable waters;
 2. Any discharge which in the judgment of the Secretary of the Army would substantially impair anchorage and navigation in or on any of the waters of the United States;
 3. Any discharge to which the Regional Administrator has objected in writing in accordance with Federal regulations, [40 C.F.R. 123.44](#), pursuant to any right to object provided the Administrator of EPA under Section 401(d) of the Federal al Act;
 4. Any discharge from a point source which is in conflict with a plan or amendment thereto approved pursuant to Section 208(b) of the Federal Act;
 5. Any discharge to the territorial sea, the waters of the contiguous zone, or the oceans in the following circumstances:
 - (i) Prior to the promulgation of the guidelines under section 403(c) of the Act, unless the Director determines permit issuance to be in the public interest; or
 - (ii) After promulgation of guidelines under section 403(c) of the Act, where insufficient information exists to make a reasonable judgment as to whether the discharge complies with any such guidelines.
 6. To a facility which is a new source or a new discharger, if the discharge from the construction or operation of the facility will cause or contribute to

the violation of water quality standards, except as in accordance with Federal Regulations, [40 C.F.R. 122.4\(i\)](#).

- (c) The terms and conditions specified on the permit issued shall be in accordance with Federal Regulations, [40 C.F.R. 122.41](#), [122.42](#) and [122.44](#) and applicable State laws and regulations promulgated thereunder.
- (d) The issuance of a permit does not:
 - 1. Convey any property rights of any sort, or any exclusive privileges;
 - 2. Authorize any injury to private property or invasion of private rights, or any infringement of Federal, State, or local laws or regulations.

(9) Publicly Owned Treatment Works.

- (a) If the permit is for a discharge from a publicly owned treatment works, notice shall be required from the applicant to the Director of the following:
 - 1. Any new introduction of pollutants into such treatment works from an indirect discharger which would be subject to Section 306 of the Federal Act if it were directly discharging those pollutants;
 - 2. Any new introduction of pollutants into such a treatment works from an indirect discharger subject to Section 301 of the Federal Act if it were directly discharging those pollutants;
 - 3. Any substantial change in volume or character of pollutants being introduced into such treatment works by a source introducing pollutants into such works at the time of issuance of the permit;
- (b) If the permit is for a discharge from a publicly owned treatment works, the permittee shall require any indirect discharger to such treatment works to comply with the requirements of Sections 204(b), 307, and 308 of the Federal Act, including any requirement established under 40 C.F.R. 403. As a means of ensuring compliance with Section 307 of the Federal Act, the permittee shall require each indirect discharger subject to the requirements of said Section 307 to forward to the Director periodic notice of progress (over intervals not to exceed 9 months) toward full compliance with Section 307 requirements.
- (c) If the permit is for a discharge from a publicly owned treatment works, the permittee shall identify, in terms of character and volume of pollutant, any significant indirect dischargers into such treatment works subject to pretreatment standards under Section 307(b) of the Federal Act and 40 C.F.R. 403.

(10) Schedules of Compliance.

- (a) Any person who obtains an NPDES Permit or other discharge permit pursuant to the Act but who is not in compliance with applicable effluent standards and limitations or other requirements contained in such permit at the time same is issued, shall be required to achieve compliance with such standards and limitations or other requirements in accordance with a schedule of compliance as set forth in such permit, or Order by the Director, or in the absence of a schedule of compliance, by the date set forth in such permit which the Director has determined to be in the shortest reasonable period of time necessary to achieve such compliance, but in no case later than an applicable statutory deadline.
- (b) In any case where the period of time for compliance specified in subparagraph 391-3-6-.06(10)(a) of these Rules exceeds 9 months, a schedule of compliance shall be specified which will set forth interim requirements and the dates for their achievement. In no event shall more than 9 months elapse between interim dates, and, to the extent practicable, the interim dates shall fall on the last day of the months of March, June, September, and December.
- (c) Within fourteen (14) days after an interim date of compliance or the final date of compliance, the permittee shall provide the Director with written notice of its compliance or non-compliance with the requirements or conditions specified to be completed by such date. Failure to submit the written notice is just cause for the EPD to pursue enforcement action pursuant to the Act.
- (d) On the last working day of February, May, August, and November the Director shall submit to EPA information concerning noncompliance with NPDES Permit requirements by major dischargers in the State.
- (e) Any discharger who fails or refuses to comply with an interim or final date of compliance specified in a permit may be deemed by the Director to be in violation of the permit and may be subject to enforcement action pursuant to the Act.

(11) Monitoring, Recording and Reporting Requirements.

Any discharge authorized by a permit issued pursuant to the Act may be subject to such monitoring, recording and reporting requirements as may be reasonably required by the Director including the installation, use and maintenance of monitoring equipment or methods; specific requirements for recording of monitoring activities and results; and periodic reporting of monitoring results. The monitoring, recording and reporting requirements shall be specified in a permit when issued, provided, however, the Director may require additional monitoring, recording and reporting by written notification to the permittee.

- (a) The monitoring requirements of any discharge authorized by any such permit shall be consistent with Federal Regulations, [40 C.F.R. 122.41](#), [122.42](#), and [122.44](#) and applicable State laws.
- (b) Any permit which requires monitoring of the authorized discharge shall comply with the recording requirement specified by Federal Regulations, [40 C.F.R. 122.41](#) and applicable State laws. The permittee shall be required to retain any records of monitoring activities and results for a minimum of three (3) years, unless otherwise required or extended by the Director upon written notification.
- (c) Any holder of a permit which requires monitoring of the authorized discharge shall report periodically to the EPD the results of all required monitoring activities on appropriate forms supplied by the EPD. The Director shall notify the permittee of the frequency of reporting but in no case shall the reporting frequency be less than once per year.

(12) Modification, Revocation and Reissuance, and Termination of Permits.

- (a) The Director may revise or modify the schedule of compliance set forth in an issued permit if the permittee requests such modification or revision in writing and such modification or revision will not cause an interim date in the compliance schedule to be extended more than one hundred twenty (120) days or affect the final date in the compliance schedule. The Director may grant requests in accordance with this subparagraph if he determines after documented showing by the permittee that good and valid cause (including Acts of God, strikes, floods, material shortages or other events over which the permittee has little or no control) exists for such revision.
- (b) The Director in accordance with the provisions of Federal Regulations, [40 C.F.R. 122.61](#), [122.62](#), [122.63](#), [122.64](#), and [124.5](#), may modify, revoke and reissue, or terminate an issued permit in whole or in part during its term for cause, including, but not limited to, the causes listed in Federal Regulations, [40 C.F.R. 122.62](#) and [122.64](#), or the cause listed in the Act or regulations promulgated pursuant thereto. Prior to any such modification, revocation and reissuance, or termination of an issued permit by the Director (other than modification or revision of a compliance schedule pursuant to subparagraph (a) above, or modification in accordance with the provisions of [40 C.F.R. 122.63](#)), the Director will give public notice in accordance with the procedures set forth in subparagraph 391-3-6-.06(7)(b) and an opportunity for public hearing in accordance with the procedures set forth in subparagraph 391-3-6-.06(7)(c).
- (c) In the case of a POTW which has received a grant under Section 202(a)(3) of the Federal Act to fund 100% of the costs to modify or replace facilities construction with a grant for innovative and alternative wastewater technology under Section 202(a)(2), the schedule of compliance may be modified to reflect the amount of time lost during construction of the innovative or alternative facility. In no case

shall the compliance schedule be modified or extend beyond an applicable statutory deadline for compliance.

- (d) New sources, new dischargers, sources which recommence discharging after terminating operations and those sources which had been indirect dischargers which commence discharging directly into navigable waters do not qualify for compliance schedules under this paragraph and are subject of Federal Regulations, [40 C.F.R. 122.29\(d\)\(4\)](#).
- (13) **Non-governmentally Owned Sewerage Systems.** In cases involving nongovernmentally owned sewerage systems, a trust indenture or other legal contract or agreement, approved by the EPD, assuring continuity of operation of the system, may be required to be filed with the application for a permit. This provision shall not be applicable to systems discharging only industrial waste.
- (14) **Control of Disposal of Pollutants into Wells.** If the permit proposes to discharge to a well or subsurface water, the Director shall specify additional terms and conditions which shall (a) prohibit the proposed disposal, or (b) control the proposed disposal in order to prevent pollution of ground and surface water resources and to protect the public health and welfare. Any permit issued for the disposal of pollutants into wells shall comply with Federal Regulations, and applicable State laws.
- (15) **Duration, Continuation and Transferability of Permits.**
- (a) Any permit issued under the Act shall have a fixed term not to exceed five (5) years. Upon expiration of such permit, a new permit may be issued by the Director in accordance with the Act and Federal Regulations 40 C.R.R. 122.9 and 122.64 provided that an application for such new permit is filed with the Director at least 180 days prior to the expiration date of the existing permit. The issuance of such new permit shall likewise have a fixed term not to exceed five (5) years.
 - (b) A permit may be transferred to another person by a permittee in accordance with [40 C.F.R. 122.61](#) if:
 1. The permittee notifies the Director of the proposed transfer:
 2. A written agreement containing a specific date for transfer of permit responsibility and coverage between the current and new permittees (including acknowledgement that the existing permittee is liable for violations up to that date, and that the new permittee is liable for violations from that date on) is submitted to the Director; and
 3. The Director within thirty (30) days does not notify the current permittee and the new permittee of the EPD's intent to modify, revoke and reissue, or terminate the permit and to require that a new application be filed rather than agreeing to the transfer of the permit.

Comment: A new application will be required where the change of ownership is accompanied by a change or proposed change in process or wastewater characteristics or a change or potential change in any circumstances that the Director believes will affect the conditions or restrictions in the permit.

- (c) When the permittee has submitted a timely and sufficient application for a new NPDES permit and the Director is unable, through no fault of the permittee, to issue the new permit before the expiration date of the existing permit, then the Director shall extend the existing permit until a new permit is issued.
 - (d) For those industrial categories for which EPA will establish effluent limitations based on best available technology, permits will be issued to ensure compliance with the effluent limit by the statutory deadline. This will be accomplished by utilizing short-term permits and/or reopener clauses that will allow the permit to be modified, revoked, reissued to comply with limitations promulgated pursuant to the Act and subsequent regulations.
 - (e) Notwithstanding subparagraph (a) above, if a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under Section 307(a) of the Act for a toxic pollutant which is present in a discharge and such standard prohibition is more stringent than any limitation for such pollutant in a permit, the permit shall be revised or modified in accordance with the toxic effluent standard or prohibition and the permittee so notified.
- (16) **Enforcement.** Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule or compliance or other requirements contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.
- (17) **Outfall Identification.**
- (a) In order to provide the public with information as to the location of permitted outfalls in State waters and to provide the public with a way to contact appropriate persons regarding questions and concerns about these outfalls, the following persons or entities are required to identify their permitted outfall(s) to the waters of the State:
 1. any person or entity that has been issued an NPDES permit by the Division for a point source discharge of treated process wastewater or treated domestic sewage to waters of the State; or

2. any person or entity that has an NPDES permit for the discharge of cooling water and that discharges one million gallons or more of cooling water per day.
- (b) The outfalls are to be identified by attaching a sign to the outfall or by posting a sign adjacent to the outfall in such a way that the sign shall be visible from the receiving water. Should the outfall be submerged, then the sign shall be posted on the bank as close to the outfall as possible. The sign shall be made of materials that are durable to typical weather conditions. At a minimum, the sign shall be 15 inches square.
- (c) For facilities that discharge sanitary wastewater, the sign shall include the following information:
1. the words "Treated Wastewater"
 2. the facility name including the name of the government body if owned by a local government
 3. the words "Permit #" followed by the last five digits of the facility's NPDES Permit number
 4. the words "Outfall Number" followed by the actual outfall number
 5. the words "Owner Phone" followed by the facility's phone number
 6. EPD's name and phone number.
- (d) For facilities that discharge treated process wastewater or cooling water, the sign shall include the following information:
1. the words "Treated Industrial Water" or "Cooling Water"
 2. the words "Permit #" followed by the last five digits of the facility's NPDES Permit Number
 3. the words "Outfall Number" followed by the actual outfall number
 4. EPD's name and phone number.
- (e) In the case of permittees who have been issued a general permit instead of an individual permit, EPD will provide the permittee with a unique 5 digit number to use as a permit number on the sign.
- (f) The sign is to be posted no later than 12 months after the effective date of this rule and it is to be properly maintained from that point forward. Provided that a

good faith effort is made and documented by the person or entity to maintain such sign, the person or entity shall be deemed in compliance with this Rule and the Georgia Water Quality Control Act.

(g) The requirement to identify an outfall will not apply if any of the following conditions apply:

1. If the posting of the sign would be inconsistent with any other State or Federal Statute; or
2. If the outfall to the receiving water is located on private property which is restricted to the public through fencing, patrolling, or posting. If the property access restriction is accomplished by the posting of signs, then in order to qualify under exemption number 2 above the posted signs restricting access must be no more than 100 feet apart along the periphery of the property.

(18) **NPDES Electronic Reporting.** The federal NPDES Electronic Reporting rule, 40 CFR Part 127 and associated amendments, became effective on December 21, 2015. The requirements of this rule relating to the submission of applications, reports, and compliance notices may include the electronic submission of such items and electronic signature for such items, as applicable and approved by the EPD. The use of the terms "in writing" or "written" in the rule may include such electronic submissions.

(19) **Effective date.** This Rule shall become effective twenty days after filing with the Secretary of State's office.

Rule 391-3-6-.07. Surface Water Withdrawals. Amended.

- (1) **Purpose.** This chapter establishes procedures to be followed in obtaining a permit to withdraw, divert or impound surface waters of the State. It sets forth the types of information to be supplied on a permit application. It also outlines the procedures for granting, denying, revoking and modifying such permits.
- (2) **Definitions.** Whenever a term appears in this Chapter which has been defined in the Georgia Water Quality control Act (O.C.G.A. § [12-5-31](#), *et seq.*) such definition shall apply. Whenever a term appears in this Chapter that is defined below, such definition shall apply, so long as such definitions is not inconsistent with any definition in the Georgia Water Control Act.
 - (a) "Withdrawal" shall mean the taking away of surface water from its natural course.
 - (b) "Diversion" shall mean a turning aside or altering of the natural course of surface water.
 - (c) "Impoundment" shall mean the storing or retaining of surface water by whatever method or means.
 - (d) "Watershed" means that area of land draining into any given point of a basin.
 - (e) "Surface water(s) of the State" or "surface water(s)" shall mean any and all rivers, streams, creeks, branches, lakes, reservoirs, ponds, drainage systems, springs producing in excess of 100,000 gallons per day, and all other bodies of surface water, natural or artificial, lying within or forming a part of the boundaries of the State which are not entirely confined and retained completely upon the property of a single individual, partnership or corporation.
 - (f) "Director" shall mean the Director of the Environmental Protection Division of the Department of Natural Resources, State of Georgia, or his designee.
 - (g) "Farm uses" shall mean irrigation of any land used for general farming, forage, aquaculture, pasture, turf production, orchards, or tree and ornamental nurseries; provisions of water supply for farm animals, poultry farming, or any other activity conducted in the source of farming operation. Farm uses shall also include the processing or perishable agricultural products and their irrigation of recreational turf, except in the Chattahoochee River watershed upstream from the Peach tree Creek confluence, where irrigation of recreational turf shall not be considered a farm use.

- (h) "Domestic and personal uses" shall mean uses for drinking, cooking, washing, sanitary purposes, and all health related activities.
- (i) "Instream flow" shall mean that minimum continuous flow reserved to the Surface Waters of the State at or immediately downstream of the point of withdrawal, diversion, or impoundment.
- (j) "7Q10 Flow" shall mean that lowest average stream flow expected to occur for seven consecutive days with an average frequency of once in ten years.
- (k) "Non-Depletable Flow" shall mean that instream flow consisting of the 7Q10 flow plus an additional flow needed to ensure the availability of water to downstream users. Non-depletable flow is normally calculated by adding the 7Q10 flow to the pro rata share of the down stream withdrawal, using the drainage area ratio method.
- (l) "Basin" shall mean that the area within one of the fourteen river drainages listed below comprising the sum of the watershed within that basin.
 - 1. Altamaha
 - 2. Chattahoochee
 - 3. Coosa
 - 4. Flint
 - 5. Ochlockonee
 - 6. Ocmulgee
 - 7. Oconee
 - 8. Ogeechee
 - 9. St. Marys
 - 10. Satilla
 - 11. Savannah
 - 12. Suwannee
 - 13. Tallapoosa
 - 14. Tennessee

- (m) "Interbasin Transfer" shall mean a withdrawal or diversion of water from one river basin, followed by use and/or return of some or all of that water to a second river basin. The river basin from which the withdrawal or diversion occurs is termed the 'donor' basin, and the river basin to which all or a portion of the water is diverted and returned is termed the 'receiving' basin.
- (n) "Unaccounted for Water" (UAW) means the difference between the total amount of water pumped into the water system from the source(s) and the amount of metered water use by the customers of the water system expressed as a percentage of the total water pumped into the system. UAW generally includes system leakage and unmetered uses such as fire fighting, flushing, broken water mains, etc.
- (o) "Made inflow to a reservoir" shall mean water that flows into a reservoir (1) after having been released from a storage project upstream of the reservoir as part of a plan approved by the Director; or (2) after having been discharged from a wastewater reclamation plant as part of a plan approved by the Director to increase flows into the reservoir.

(3) Permit Required.

- (a) Any person who, on a monthly average, withdrawals more than 100,000 gallons of surface water per day; diverts surface water so as to reduce the flow by more than 100,000 gallons per day at the point where the watercourse, prior to diversion, leaves the property on which the diversion occurs; or constructs an impoundment which reduces the flow of surface water by more than 100,000 gallons per day downstream of the impoundment, must obtain a permit from the Director prior to any withdrawal, diversion or impoundment subject to the following exceptions:
 - 1. Exceptions - No permit shall be required for the following:
 - (i) Any diversion accomplished as part of construction for transportation purposes which does not reduce the flow of surface waters in the diverted watercourse by more than 150,000 gallons per day on a monthly average.
 - (ii) Any reduction of flow of surface waters during the period of construction of an impoundment, including the initial filling of the impoundment;
 - (iii) Any farm pond or farm impoundment constructed and managed for the sole purpose of fish, wildlife, recreation or other farm uses.
- (b) In evaluating a permit application for a new interbasin transfer, the Director should consider the factors specified in DNR Rule 391-3-6-.07(14) as well as the following:

1. Donor Basin Considerations.

- (i) The quantity of the proposed withdrawal and the stream flow of the donor basin, with special consideration for dry years and low flow conditions;
- (ii) The current and reasonably foreseeable future water needs of the donor basin, with special consideration for dry years and low flow conditions;
- (iii) Protection of water quality in the donor basin, with special consideration for dry years and low flow conditions;
- (iv) Any offsetting increases in flow in the donor basin that may be arranged through permit conditions;
- (v) The number of downstream river miles from which water will be diverted as a result of the transfer.
- (vi) The connection between surface water and groundwater in the donor basin, and the effect of the proposed transfer on either or both.

2. Receiving Basin Considerations.

- (i) Determination of whether or not the applicant's proposed use is reasonable, including consideration of whether the applicant has implemented water conservation practices and achieved reasonable water conservation goals;
- (ii) Assessment of the wastewater treatment capacity of the receiving basin;
- (iii) The supply of water presently available to the receiving basin, as well as the estimates of over all current water demand and the reasonable foreseeable future water needs of the receiving basin;
- (iv) The beneficial impact of any proposed transfer, and the demonstrated capability of the applicant to effectively implement its responsibilities under the requested permit;
- (v) The impact of the proposed transfer on water conservation;
- (vi) The applicant's efforts to explore all reasonable options for use of reclaimed water and recycling of available sources to meet the needs of the receiving basin;

- (vii) Assessment of the adequacy of treatment capacity and current water quality conditions.

3. Considerations Affecting Both Basins.

- (i) The economic feasibility, cost effectiveness, and environmental impacts of the proposed transfer in relation to alternative sources of water supply;
- (ii) The cumulative impacts of the current and proposed interbasin transfers in the basin;
- (iii) The requirements of the state and federal agencies with authority related to water resources;
- (iv) The availability of water for responding to emergencies, including drought, in the donorbasin and the receiving basin;
- (v) The impact, whether beneficial or detrimental, on off stream and instream uses;
- (vi) The quantity, quality, location, and timing of water returned to the donor basin, receiving basin, and basins downstream;
- (vii) Impact on interstate water use;
- (viii) The cumulative effect on the donor basin and the receiving basin of any water transfer or consumptive use that is authorized or forecasted;
- (ix) Such other factors as are reasonably necessary to carry out the purposes of Georgia law.

4. Interbasin transfers of water as might occur in connection with mining, conveying, processing, sale, or shipment of minerals (e.g., as in the kaolin industry), or other products transported for further processing or sale shall be exempt from the requirements of 391-3-6-.07(3)(b).

(4) Permit Application: Non-Farm Uses.

- (a) All applications shall be on forms furnished by the Division.
- (b) The applications shall include:
 - 1. Name and address of applicant;

2. Date of filing.
3. Source of water supply.
4. Quality applied for, both maximum day and monthly average. Maximum day withdrawal, diversion or impoundment shall be computed as the highest annual use by a water source or system in a 24-hour period, expressed in gallons per day. Monthly average withdrawal diversion or impoundment shall be computed as the highest total amount of water used by a water source or water system in any one month divided by the number of days in that month, expressed in gallons per day.
5. Use to be made, and documentation of need for water within five (5) years after date of filing.
6. Place of use.
7. Location withdrawal, diversion or impoundment plotted on a U.S. Geological Survey, 7 1/2 minute quadrangle map or latest county highway map; and the latitude and longitude of the withdrawal expressed in degrees, minutes and seconds.
8. In the preparation of a permit application for a new permit or modification of an existing permit which includes an increase in the permitted water use (except for a farm use permit application), the applicant must submit to the Director for approval a water conservation plan prepared in accordance with the following guidelines. The plan must address the following items (or contain a statement why the item is not an appropriate part of the plan):
 - (i) System management;
 - (I) Within the most recent 24 month period, a minimum of twelve consecutive months of UAW data;
 - (II) A description of any current or planned programs to reduce UAW such as those listed below (include proposed schedules for planned activities);
 - I. Leak detection and elimination;
 - II. Availability of accurate maps of the water systems;
 - III. Meter maintenance, testing, replacement, calibration, etc.;
 - IV. Prevention of tank overflows;

- V. Flushing programs without degradation of water quality;
 - VI. Prevention of unauthorized water use - fire hydrants, fire lines, etc.;
 - VII. A list of unmetered service connections including publicly owned facilities, churches, etc.;
 - VIII. Other;
- (III) A list of inter-connections with other water systems and a description of any contractual agreements, type (emergency back-up wholesale sale or purchase) and purchase amounts;
 - (IV) Any additional current or planned activities pertaining to system management that will contribute to water conservation.
- (ii) Treatment plant management:
 - (I) The condition, calibration frequency, type, etc. of raw and finished water metering;
 - (II) An analysis of in-plant water use for filter back washing, over-flows, laboratory use, etc. as a percentage of total plant production. Also, the plan must outline any ongoing or planned plant improvements (including schedules for planned improvements) and/or revised operational procedures to reduce in-plant use;
 - (III) A description of any recycling or reuse of filter backwash water.
- (iii) Rate making policies;
 - (I) A list of non-billed service connections. Also, if available, a breakdown by number of meters or % of total production for each class of customer, e.g., residential, commercial, industrial, wholesale;
 - (II) A copy of the water rate structure currently in use including any surcharges, demand charges, etc., which may apply to

certain customers and a description of the effects of this rate structure on water conservation:

- (III) A description of any system policies concerning second meters for landscape irrigation and may use of sewer meters for billing;
- (IV) A statement in response to the following questions:
 - I. Is the water system financially self-supporting?
 - II. Are water system expenditures subsidized by non-water/sewer system revenues?
- (iv) Plumbing ordinances and/or codes;
 - (I) A description of compliance with State Water Conservation Law which requires the use of ultra-low plumbing fixtures. The applicant may include copies of adopted ordinances if applicable;
 - (II) Ordinances/codes or other special requirements pertaining to outside water use such as landscape irrigation systems, commercial car washes etc.;
- (v) Recycle - reuse; A description or accounting of any recycling or reuse of treated wastewater.
- (vi) A description of current and planned education programs for the promotion of water conservation.
- (vii) Progress report; Five years after issuance of a new or modified Surface Water Withdrawal Permit, the permittee must submit to the Director a progress report that outlines actions and/or improvements made to conserve water and reduce water loss, e.g. leakdetection/repair, meter installation, calibration, or replacement, summer and/or peak use surcharges, enforcement of ultra-low flow plumbing fixture requirements, etc. Permittees with a total permitted withdrawal less than one million gallons per day on a monthly average may use as implied reporting format supplied by the Division.
- (viii) Water use data:

- (I) Permittees must submit to the Director an annual water use data report that includes information on unaccounted for water for the past 12 months. This report will be submitted in conjunction with the annual water use report that is required pursuant to subsection 391-3-6-.07(15).

- (ix) Long range planning.

All permittees must incorporate water conservation into long term water demand and supply planning. Permittees must develop water demand projections covering a 20 year time period using a method or methods approved by the Director. The demand projections must reflect the effects (demand reductions) inherent in the implementations of new or enhanced water conservation programs.

- (x) A description of any additional water conservation activities.

- 9. A drought contingency plan submitted for approval by the Director and prepared in accordance with the following guidelines. The plan should include alternative system and resource management strategies to be implemented under drought conditions that may severely reduce the availability of the resource. The plan shall be consistent with Chapter 391-3-30 with respect to restrictions on outdoor water use. If there are conflicts between this plan and Chapter 391-3-30 with respect to restrictions on outdoor water use, Chapter 391-3-30 shall prevail. The applicant or permittee must provide the following items in the plan (or a statement as to why the item is not an appropriate part of the plan):

- (i) Drought condition indicators;

- (I) The applicant or permittee must develop a system for determining drought severity based on some approved indicator, e.g.:

- I. Streamflow levels;
- II. Ground water levels;
- III. Reservoir storage or levels;
- IV. Other.

- (ii) Potable water use priorities program;

- (I) The following order of potable water use priorities is generally recommended but may be modified as needed based on local conditions:
 - I. Emergency facilities for essential life support measures;
 - II. Domestic and personal uses, including drinking, cooking, washing, sanitary and health related;
 - III. Farm uses;
 - IV. Industrial uses (including those industries on public water systems);
 - V. Other uses such as lawn sprinkling, non-commercial car washing, garden watering, etc.;
 - VI. Outdoor recreational uses.

- (II) Conditions or events that put priority use system into effect;
- (III) Adopted priority use system for service during periods of water shortages;
- (IV) Restrictions on lower priority uses (including enforcement procedures);
- (V) Rationing and/or other emergency procedures.

- (iii) Low flow protection;
 - (I) For applications for new or modified permits to withdraw, impound or divert surface water: No permit will be issued by the Director which authorizes the depletion of the instream flow established for the withdrawal, diversion or impoundment of surface water, except for periods of Emergency Water Shortage as described in Subsection 391-3-6-.07(12);
 - (II) For applications for new or modified permits, the applicant will be required to pass instream flow at or immediately downstream of the point of withdrawal, diversion or impoundment so long as it is available from upstream. When upstream flows drop below the required instream

flow at the point of withdrawal, diversion or impoundment, the applicant will be required to pass that upstream flow. The Instream Flow required for new or modified permits in this subsection shall be:

- I. The 7Q10 flow, if no unreasonable adverse effects to the stream or other water users will occur from the withdrawal, diversion or impoundment; or
 - II. The Non-Depletable Flow, as established by the Director, if probable impacts of the withdrawal, diversion or impoundment would occur to other water users; or
 - III. Other appropriate instream flow limit, as established by the Director;
- (III) Low-flow monitoring plan that outlines applicant's procedure to monitor and protectin stream flow below the point of withdrawal. Where applicable, the applicant must develop a plan for monitoring stream flow so that the instream flow limit can be protected. The monitoring plan must determine stream flow based on one of the following:
- I. U.S.G.S. staff gage or continuous recording station;
 - II. Other staff gage as approved by the Director;
 - III. Weir;
 - IV. Other.
- (iv) Water storage available to ensure availability of raw water to applicant through a critical drought period. Examples of suitable critical drought periods include but are not limited to: 50-year recurrence interval; 1954-1956 drought; 1984-1988 drought. The definition of available storage should include:
- (I) Yield vs. drought return period;
 - (II) Storage type, e.g., main stream or off-stream supplemental;

(III) Any available alternate sources of finished and raw water such as ground water, interconnections, contractual agreements.

10. Consumptive loss of water withdrawn, diverted or impounded.
11. Permitted capacities of applicant's water treatment and wastewater treatment plants, existing or planned, that will treat water and wastewater to be generated by new or increased use.
12. Any other information deemed necessary; provided, however, any information already provided to the Director in connection with prior dealings with Division may be incorporated into the application by specific and detailed reference and a statement that the information is still valid and correct.

(5) Permit Applications: Farm Uses.

- (a) **Prior Uses.** A permit for the withdrawal or diversion of surface waters for farm uses shall be issued by the Director to any person when the applicant submits an application which provides reasonable proof that the applicant's farm use of surface waters occurred prior to July 1, 1991. If submitted prior to July 1, 1991, an application for a permit to be issued based upon farm uses of surface waters occurred prior to July 1, 1988, shall be granted for the withdrawal or diversion of surface waters at a rate of withdrawal or diversion equal to the greater of the operating capacity in place for withdrawal or diversion on July 1, 1988, or, when measured in gallons per day on a monthly average for a calendar year, the greatest withdrawal or diversion capacity during the five-year period immediately preceding July 1, 1988.
- (b) **New Uses.** If submitted after July 1, 1991, or regardless of when submitted, if it is based upon a withdrawal or diversion of surface waters for farm use occurring or proposed to occur on or after July 1, 1988, an application shall be subject to evaluation and classification pursuant to subsection 391-3-6-.07(4), -.07(6) and -.07(7) of these Rules; but a permit based upon such evaluation and classification shall be issued to ensure the applicant's right to a reasonable use of such surface waters.
- (c) **Permittees shall submit application for withdrawal or diversion of water for farm use to the Division on forms to be supplied by the Division. One application will be required for each water source. Applications will include the following information:**

1. Applicant's full name;
2. Mailing address;
3. County in which water source is located;
4. Purpose of withdrawal;
5. Source pond, lake, reservoir, stream, river or sinkhole, with name;
6. Number of pumps with drawing/diverting surface water from above source;
7. Design pumping capacity (total) of pumps withdrawing water from this source for this farm (gallons per minute);
8. Month and year this capacity was installed;
9. Number of acres irrigated from this water source, and average number of inches of water applied per year;
10. Whether or not chemicals, fertilizers, fungicides, herbicides, insecticides or nematicides are injected into the irrigation water; and
11. County map supplied by the Division (or equivalent) showing the location of the water source.

(6) Combination Uses.

A combination of farm and non-farm surface use shall be considered a non-farm surface use, unless the director determines that the predominant use to which the water is put is farm use.

(7) System of Classification for Competing Permit Applications.

- (a) In situations involving competing uses, existing or proposed, for a supply of available surface water, the Division shall consider:
 1. The number of persons using the particular water source and the object, extent and necessity of their respective withdrawals or uses;
 2. Nature and size of water source;
 3. Low flows during droughts of record;
 4. Any water quality of the water source which would adversely affect its availability or fitness for use;

5. The probable severity and duration of low flows, poor water quality or other impairments of the water source which would adversely affect its availability or fitness for use;
6. The injury to public health, safety or welfare which would result if such impairment were not prevented or abated;
7. The kinds of businesses or activities to which the various uses are related and the economic consequences;
8. The importance and necessity of the uses, including farm uses, claimed by permit applicants and the extent of any injury or detriment caused or expected to be caused to other water uses;
9. Diversion from or reduction of flows in other watercourses;
10. The prior investments of any person in lands, and plans for the farm usage of water in connection with such lands, which plans have been submitted to the Director within a reasonable time after July 1, 1988; provided that the granting of such a permit shall not have unreasonably adverse effects upon other water uses in the area, including potential as well as present use;
11. The varying circumstances of each use.

(8) Priorities for Competing Applications.

- (a) When there are competing applications for water from the same source, and the source is insufficient to supply all applicants, the following order of priorities shall prevail:
 1. Emergency facilities for essential life support measures.
 2. Domestic and personal uses, including drinking, cooking, washing, sanitary purposes and all health related activities.
 3. Farm uses as defined herein.
 4. Industrial uses (including those industries on public water systems).
 5. Other uses such as lawn sprinkling, noncommercial car washing, garden watering, etc.
 6. Outdoor recreational uses.
- (b) Competing applicants or users within the above categories shall be assigned a priority rating based upon a consideration of the facts set forth in subsection 391-

3-6-.07(6) of these Rules. In the event two or more competing applicants or users qualify equally under the priority rating, the Director will grant permits to such competing applicants, or modify the existing permits of the users, for use of specified quantities of surface water on a prorated or other reasonable basis in those situations where such action is feasible, provided, however, that the Director will give preference to an existing use over an initial application.

- (c) The Division shall take into consideration the extent to which such withdrawals, diversions or impoundments are reasonably necessary in the judgment of the Director to meet the applicant's reasonable needs; including the needs of any third party to whom the permit applicant was furnishing water for the processing of perishable agricultural products which require minimum quantities of water to comply with State or federal laws or regulations, and shall grant a permit which shall meet those reasonable needs; provided, however, that the granting of such permit shall not have unreasonable adverse affect upon other water uses in the area including but not limited to public use, farm use, and potential as well as present use, and provide, further, however, notwithstanding the above, that the Director shall grant a permit to any permit applicant who on the effective date of this Act has outstanding indebtedness in the form of revenue certificates or general obligation bonds which are being amortized through the sale of surface water, the permitted quantity of such shall be at least in a amount consistent with the quantity for which the revenue certificates or general obligation bonds were issued.

(9) Duration of Permits.

- (a) Any permit granted for the withdrawal, diversion or impoundment of surface waters shall be for a period of time not less than ten (10) years (unless the applicant requests a shorter period of time) nor more than twenty (20) years, except that farm use permits shall have no term and maybe transferred or assigned to subsequent owners of the land which are the subject of such permit. Provided, however, that the Division shall be notified in writing by the permittee of such transfer or assignment. The Director may authorize a permit of duration of up to fifty (50) years in the case of a municipality or other governmental body where such period is required to provide for the retirement of bonds for the construction of water works or waste disposal facilities;
- (b) If requested by the applicant, the Director may issue a temporary permit for less than ten (10) years, or letter of concurrence for transient uses lasting less than 180 days. Applicant's concurrence with a draft permit whose duration is less than ten (10) years shall serve as a request for a temporary permit.

(10) Renewal of Permits.

All permittees desiring to renew a permit shall submit an application for renewal to the Director within six (6) months prior to its expiration. All renewals will be treated in the same manner as the initial permit.

(11) Revocation, Suspension or Modification of Permits.

- (a) Any permit granted for the withdrawal, diversion or impoundment of surface waters may be revoked, in whole or in part, permanently or temporarily, for the following reasons:
 - 1. Any material false statement in an application for a permit or in any report required to be made;
 - 2. Any willful violation of a condition of a permit;
 - 3. Non use of the water supply (or a significant portion thereof) allowed by a permit for a period of two (2) consecutive years or more, unless the permittee can reasonably demonstrate that his nonuse was due to extreme hardship caused by factors beyond his control; except that this paragraph will not apply to farm use permits issued after initial use has commenced;
 - 4. With the written consent of the permittee.
- (b) Any such permit may be revoked, in whole or in part, for a period not to exceed one (1) year for violation of any provision of Section [12-5-31](#), *et seq.* of the Georgia Water Quality Control Act;
- (c) Any such permit may be suspended or modified if the Director should determine that the quantity of water allowed under the permit is greater than that needed by the permittee for the particular use upon which the application for permit was based, or would prevent other applications from reasonable use of surface waters, including farm use;
- (d) The director may suspend or modify a farm use permit if he should determine through inspection, investigation, or otherwise that the quantity of water allowed under the permit would prevent other applicants from reasonable use of surface waters for farm use;(e) Consistent with the consideration set forth in Chapter 391-3-6-.07(7), any such permit maybe revoked, suspended or modified for any other good cause consistent with the health and safety of the citizens of this State and within the provisions of this Act;
- (f) In the event of modification, suspension or revocation of permit, the Director shall serve written notice of such action on the permit holder and give the reason for such action.

(12) Emergency Water Shortage.

- (a) Any permit may be suspended, restricted or otherwise modified by emergency order of the Director when an emergency period of water shortage exists. Prior to any such action, it must clearly appear to the Director from specific facts shown by affidavits of residents of the affected area of this State that an emergency period of water shortage exists within such area, so as to place in jeopardy the health or safety of the citizens of such area or to threaten serious harm to the water resources of the area. Any permittee has five (5) days from the date of mailing of the notice of the proposed change in the permit to appear in opposition to the proposed action. Except as to farm uses, any change, suspension or restriction in the permit is effective immediately upon receipt of such order by the permittee, his agent for service of process, or any agent of employee of the permittee who receives the notification at the permittee's principal place of business in the State. Any permittee, other than a farm use permittee, to whom such order is directed shall comply therewith immediately;
- (b) Upon application, the permittee, including a farm use permittee, shall be afforded a hearing before a hearing officer appointed by the Department of Natural Resources within twenty (20) days of receipt of said application by the hearing officer. Farm use permittees may continue to make use of water to their permitted capacity during the appeal process, but failure to timely request a hearing in accordance with Subsection (c) of Code Section [12-2-2](#) shall waive such right;
- (c) In the event of dire emergency, only water for domestic and personal uses, for drinking, cooking, washing, sanitary purposes and all health related activities will be permitted. Farm uses will be given second priority; however, all other usages will be established by the Director based on the priorities established in subsection 391-3-6-.07(7). The importance and necessity of water for industrial purposes are in no way modified or diminished by this subsection;
- (d) Upon expiration of the emergency period of water shortage, the permittee will be notified in writing of such expiration and the said permittee may then operate under the permit as issued prior to the emergency.

(13) Request for Modification of Unexpired Permit.

A permittee may seek modification of any of terms of an issued permit. The Director may modify such permit providing the permittee establishes at least one of the following:

- (a) a change in conditions has resulted in a need by the permittee of more water than is allowed under the existing permit;

- (b) The proposed modification would result in a more efficient use of water than is allowed under the existing permit; or
- (c) A proposed change in conditions would result in a need by the permittee of more than is allowed under the existing permit. Any such modification shall be consistent with the health and safety of the citizens of this State and with provisions of this Act.

(14) New Interbasin Transfers.

- (a) In the consideration of applications for permits which if granted would authorize a new interbasin transfer as defined in paragraph 391-3-6-.07(2)(m), the Director shall be bound by the following requirements:

1. The Director shall give due consideration to competing existing uses and applications for permits which would not involve interbasin transfer of surface water and, subject to subsection 391-3-6-.07(7), shall endeavor to allocate a reasonable supply of surface waters to such users and applicants.

- (b) Public Notification.

1. A notice of the draft permit which would authorize a new interbasin transfer of surface water shall be circulated by at least one of the following means: publication in one or more newspapers of general circulation in the area which would be affected by such issuance; posting on website(s); or distribution to interested parties by email or other mechanisms.
2. The Director shall provide a public comment period of 30 days following the date of the notice of the draft permit.
3. If the Director determines sufficient public interest exists, he shall hold a hearing some where within the area affected prior to the issuance of the permit. The Director shall provide reasonable notice of such meeting.

(15) Records.

Except for farm use permits issued pursuant to subsection 391-3-6-.07(5), whenever required to carry out the objectives of Section [12-5-31](#) *et seq.* of the Georgia Water Quality Control Act, the Director may by order, permit or otherwise, in writing, require any person holding a permit or any other person who the Director reasonably believes in unlawfully withdrawing, diverting or impounding surface waters to:

- (a) Establish and maintain records;
- (b) Make reports;

- (c) Install, use and maintain monitoring equipment or methods;
- (d) Submit other information as required; provided any information already furnished to the Director in connection with prior dealing with the Division may be incorporated into the records or reports by specific and detailed reference and a statement that the information is still valid and correct;
- (e) Except for farm uses, permittees shall submit annually to the Division a report of water use for the previous calendar year, to include monthly average and maximum day use for each month. Such reports shall be on forms provided by the Division and shall be submitted to the Division by January 31 of the current year for water use in the previous calendar year.

(16) Storage Rights

- (a) When a user has contracted for the right to utilize storage space within a reservoir that is owned or operated by an agency of the federal government, the Director shall retain authority to allocate any State water rights subject to regulation under O.C.G.A. § [12-5-31](#), including the right to withdraw State waters from the project as well as the right to impound made inflow to there servoir. When the Director allocates to a specific user made inflows to a reservoir, pursuant to the permitting authority and procedure provided by O.C.G.A. § [12-5-31](#), that user will have the right to impound such flows in the storage space for which it has contracted, to the extent storage space is available.
- (b) The intent of subparagraph (a) is to retain and exercise to the fullest extent the State's sovereign authority to control the use and storage of surface waters within its boundaries. In the event a court of competent jurisdiction determines that the Director's exercise of authority pursuant to this subsection is preempted by federal law, the Director's allocation shall be given effect to the maximum extent permissible.
- (c) The following factors shall be considered by the Director when allocating made inflows to areservoir pursuant to paragraph (a):
 1. The criteria set forth in 391-3-6-.07(7).
 2. Whether the water to be stored will be utilized in a manner consistent with the Georgia Comprehensive State-wide Water Management Plan and any plans prepared by the applicable Regional Water Planning Council or the Metropolitan North Georgia Water Planning District.
 3. Such other physical and equitable factors as the Director may deem appropriate.

(17) Enforcement.

The administration and enforcement of these Rules shall be in accordance with the Georgia Water Quality Control Act and the Georgia Administrative Procedure Act.

(18) **Effective Date.**

This Rule shall become effective twenty days after filing with the Secretary of State's office.

Rule 391-3-6-.08. Pretreatment and Permit Requirements.

- (1) **Purpose.** The purpose of Rule 391-3-6-.08 is to provide for the degree of wastewater pretreatment required and the uniform procedures and practices to be followed relating to the application for and the issuance or revocation of pretreatment permits for the discharge of any pollutant into a publicly owned treatment works and then into the waters of the State.
- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Rules of this Chapter.
 - (a) "Act" or "O.C.G.A." means the Official Code of Georgia Annotated, Title 12, Article 2.
 - (b) "Approval Authority" means the Director of the Environmental Protection Division of the Georgia Department of Natural Resources.
 - (c) "Approved pretreatment program," "POTW pretreatment program," or "program" means a program administered by a POTW that meets the criteria established in this Rule and Rule [391-3-6-.09](#), and which has been approved by the Approval Authority in accordance with Rule [391-3-6-.09](#).

- (d) "Best management practices" or "BMPs" means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to implement the prohibitions listed in [40 CFR 403.5\(a\)\(1\) and \(b\)](#). BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw materials storage.
- (e) "Control Authority" means:
1. The POTW if the POTW's pretreatment program submission has been approved by the Approval Authority in accordance with Rule [391-3-6-.09](#); or
 2. The Approval Authority if the submission has not been approved; or
 3. In cases where categorical or significant non-categorical industrial users discharge to POTWs that are not included in an approved pretreatment program, the Approval Authority shall function as the Control Authority until an approved pretreatment program has been established by the POTW.
- (f) "EPD" means the Environmental Protection Division of the Georgia Department of Natural Resources.
- (g) "Federal Act" means the Federal Water Pollution Control Act, also known as the Clean Water Act, as amended, [33 U.S.C. 1251](#), et seq.
- (h) "Indirect discharge" or "discharge" means the introduction of pollutants into a POTW from any non-domestic source regulated under Section 307(b), (c) or (d) of the Federal Act.
- (i) "Industrial user" means any person that is a source of an indirect discharge or proposed indirect discharge.
- (j) "Interference" or "interfere" means a discharge which, alone or in conjunction with a discharge or discharges from other sources, inhibits or disrupts a POTW's sewer system, treatment processes or operations or its sludge processes, including use of disposal thereof; and such discharge is a cause of a violation of any requirement of the POTW's NPDES Permit (including an increase in the magnitude or duration of a violation). The terms include prevention of sewage sludge use or disposal in accordance with Section 405 of the Federal Act, or any criteria, guidelines, or regulations developed pursuant to State or Federal laws.
- (k) "Limitation" means any restriction or prohibition established under the Act on quantities, rates, or concentration, or a combination thereof, of chemical, physical, biological, or other constituents which are discharged from industrial users into a

publicly owned treatment works and then into the waters of the State, including but not limited to schedules of compliance.

(l) "National pretreatment standard", "pretreatment standard" or "standard" means any regulation containing pollutant discharge limits promulgated by the U.S. Environmental Protection Agency (EPA) in accordance with Section 307(b) and (c) of the Federal Act, which applies to industrial users. This term includes prohibited discharge limits established pursuant to [40 CFR Part 403.5](#).

(m) "New source" means:

1. Any building, structure, facility or installation from which there is or may be a discharge of pollutants, the construction of which commenced after publication of proposed pretreatment standards under Section 307(c) of the Federal Act which will be applicable to such source if such standards are thereafter promulgated in accordance with that section provided that:
 - (i) the building, structure, facility or installation is constructed at a site at which no other source is located; or
 - (ii) the building, structure, facility or installation totally replaces the process or reduction equipment that causes the discharge of pollutant at an existing source; or
 - (iii) the production or wastewater generating processes of the building, structure, facility or installation are substantially independent of an existing source at the same site. In determining whether these are substantially independent, factors such as the extent to which the new facility is integrated with the existing plant and the extent to which the new facility is engaged in the same general type or activity as the existing source should be considered.
2. Construction on a site at which an existing source is located results in a modification rather than a new source if the construction does not create a new building, structure, facility or installation meeting the criteria of Subparagraphs 391-3-6-.08(2)(m) 1. (ii) or (iii) but otherwise alters, replaces, or adds to existing process or production equipment.
3. Construction of a new source as defined under this Paragraph has commenced if the owner or operator has:
 - (i) begun, or caused to begin as part of a continuous on-site construction program:
 - (I) any placement, assembly, or installation of facilities or equipment; or

- (II) significant site preparation work including clearing, excavation, or removal of existing buildings, structures, or facilities which is necessary for the placement, assembly, or installation of new source facilities or equipment; or
 - (ii) entered into a binding contractual obligation for the purchase of facilities or equipment which are intended to be used in its operation within a reasonable time. Options to purchase, or contracts which can be terminated or modified without substantial loss, and contracts for feasibility, engineering, and design studies do not constitute a contractual obligation under this Paragraph.

- (n) "Pass through" means a discharge which exits the POTW into waters of the State in quantities or concentration which alone or in conjunction with a discharge or discharges from other sources is a cause of a violation of any requirement of the POTW's NPDES Permit (including an increase in the magnitude or duration of a violation).

- (o) "Person" means any individual, corporation, company, association, partnership, county, municipality, State agency, Federal agency or facility or other entity.

- (p) "Pretreatment" means the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a POTW. The reduction or alteration may be obtained by physical, chemical, or biological processes, process changes or by other means, except as prohibited by [40 CFR Part 403.6\(d\)](#). Appropriate pretreatment technology includes control equipment, such as equalization tanks or facilities, for protection against surges or slug loadings that might interfere with or otherwise be incompatible with the POTW. However, where wastewater from a regulated process is mixed in an equalization facility with unregulated wastewater or with wastewater from another regulated process, the effluent from the equalization facility must meet an adjusted pretreatment limit calculated in accordance with [40 CFR Part 403.6\(e\)](#).

- (q) "Pretreatment permit" means any permit issued by the Control Authority to regulate the discharge of pollutants from any industrial user into a publicly owned treatment works and the waters of the State.

- (r) "Pretreatment permit application" means an application filed by any person with the Control Authority for a pretreatment permit.

- (s) "Pretreatment requirements" means any substantive or procedural requirement related to pretreatment, other than a national pretreatment standard, imposed on an industrial user.
- (t) "Publicly owned treatment works" or "POTW," as applied in Rules 391-3-6-.08 and [391-3-6-.09](#), means a treatment works as defined by section 212 of the Federal Act, which is owned by the State or a municipality (as defined by section 502(4) of the Federal Act). This definition includes any devices and systems used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes, and other conveyances only if they convey wastewater to a POTW treatment plant. The term also means the municipality, as defined in section 502(4) of the Federal Act, which has jurisdiction over the indirect discharges to, and the discharges from, such a treatment works
- (u) "Significant Industrial User"
 - 1. Except as provided in Subparagraphs (u) 2. and 3. below, the term Significant Industrial User means:
 - (i) All industrial users subject to categorical pretreatment standards under [40 CFR 403.6](#) and 40 CFR chapter I, subchapter N; and
 - (ii) Any other industrial user that: discharges an average of 25,000 gallons per day or more of process wastewater to the POTW (excluding sanitary, noncontact cooling and boiler blowdown wastewater); contributes a process wastestream which makes up 5 percent or more of the average dry weather hydraulic or organic capacity of the POTW treatment plant; or is designated as such by the Control Authority on the basis that the industrial user has a reasonable potential for adversely affecting the POTW's operation or for violating any pretreatment standard or requirement (in accordance with [40 CFR 403.8\(f\)\(6\)](#)).
 - 2. The Control Authority may determine that an industrial user subject to categorical pretreatment standards under [40 CFR 403.6](#) and 40 CFR chapter I, subchapter N is a Non-Significant Categorical Industrial User rather than a Significant Industrial User on a finding that the industrial user never discharges more than 100 gallons per day (gpd) of total categorical wastewater (excluding sanitary, non-contact cooling and boiler blowdown wastewater, unless specifically included in the pretreatment standard) and the following conditions are met:
 - (i) the industrial user, prior to the Control Authority's finding, has consistently complied with all applicable categorical pretreatment standards and requirements;

- (ii) the industrial user annually submits the certification statement required in [40 CFR 403.12\(q\)](#) together with any additional information necessary to support the certification statement; and
 - (iii) the industrial user never discharges any untreated concentrated wastewater.
 - 3. Upon a finding by the Control Authority that an industrial user meeting the criteria in Subparagraph (u)1.(ii) above has no reasonable potential for adversely affecting the POTW's operation or for violating any pretreatment standard or requirement, the Control Authority may at any time, on its own initiative or in response to a petition received from an industrial user or from a POTW pretreatment program and in accordance with Subparagraph [391-3-6-.09\(7\)\(d\)](#), determine that such industrial user is not a Significant Industrial User.
- (v) "Significant noncompliance" for an industrial user means that its violation meets one or more of the following criteria:
- 1. Chronic violations of wastewater discharge limits, defined here as those in which 66 percent or more of all of the measurements taken for the same pollutant parameter during a six month period exceed (by any magnitude) a numeric pretreatment standard or requirement, including instantaneous limits, as defined by [40 CFR 403.3\(l\)](#);
 - 2. Technical Review Criteria (TRC) violations, defined here as those in which 33 percent or more of all of the measurements for the same pollutant parameter taken during a six month period equal or exceed the product of the numeric pretreatment standard or requirement, including instantaneous limits, as defined by [40 CFR 403.3\(l\)](#) multiplied by the applicable TRC (TRC = 1.4 for BOD, TSS, fats, oil, and grease, and 1.2 for all other pollutants except pH);
 - 3. Any other violation of a pretreatment standard or requirement as defined by [40 CFR 403.3\(l\)](#) (daily maximum, long-term average, instantaneous limit, or narrative standard) that the Control Authority determines has caused, alone or in combination with other discharges, interference or pass through (including endangering the health of POTW personnel or the general public);
 - 4. Any discharge of a pollutant that has caused imminent endangerment to human health, welfare or to the environment or has resulted in the Control Authority's exercise of its emergency authority to halt or prevent such a discharge;

5. Failure to meet, within ninety (90) days after the schedule date, a compliance schedule milestone contained in a control mechanism or enforcement order for starting construction, completing construction or attaining final compliance;
6. Failure to provide, within forty-five (45) days after the due date, required reports such as baseline monitoring reports, 90-day compliance reports, periodic self-monitoring reports, and reports on compliance with compliance schedules;
7. Failure to accurately report noncompliance; or
8. Any other violations or group of violations which may include a violation of BMPs, which the Control Authority determines will adversely affect POTW operations or violate applicable NPDES Permit effluent limitations and requirements.

(3) Pretreatment Permit Requirements.

- (a) Any industrial user discharging or proposing to discharge any pollutant into a publicly owned treatment works and then into the waters of the State, under any of the circumstances described in O.C.G.A. Section [12-5-30](#), shall be considered for a pretreatment permit by the Control Authority. In addition to other pretreatment permit requirements described in this Paragraph, the permit must contain the following conditions:
 1. Statement of non-transferability without, at a minimum, prior notification to the Control Authority and provision of a copy of the existing control mechanism to the new owner or operator;
 2. Effluent limits based on national pretreatment standards for prohibited discharges as specified in [40 CFR 403.5\(a\) and \(b\)](#), national pretreatment standards for categorical discharges as specified in [40 CFR 403.6](#) and 40 CFR Chapter 1, Subchapter N, Parts 405-471, and local limits and/or BMPs as specified in [40 CFR 403.5\(c\)](#);
 3. Statement of applicable civil and criminal penalties for violation of pretreatment standards and requirements, and any applicable compliance schedule;
 4. Conditions and limits to ensure that concentration and mass limits requirements under [40 CFR 403.6\(c\)\(1\)-\(9\)](#), dilution prohibition requirements under [40 CFR 403.6\(d\)](#) and combined wastestream formula requirements under [40 CFR 403.6\(e\)\(1\)-\(4\)](#) are complied with.

5. Requirements to control slug discharges as defined in [40 CFR 403.8\(f\)\(2\)\(vi\)](#), if determined by the Control Authority to be necessary.

(4) Degree of Pretreatment Required.

- (a) All pollutants discharged from an industrial user to a publicly owned treatment works shall receive such pretreatment or corrective action so as to ensure compliance with the terms and conditions of the issued pretreatment permit and with the following whenever applicable:
 1. Limitations, prohibitions and pretreatment standards and requirements promulgated by the U.S. EPA pursuant to Section 307 of the Federal Act and as described in Subparagraph 391-3-6.08(3) 2.
 2. Until such time as such limitations, prohibitions and pretreatment standards and requirements are formally promulgated pursuant to Section 307 of the Federal Act, the Control Authority shall apply such limitations, prohibitions and pretreatment standards necessary to achieve the purpose of said Section of the Federal Act. With respect to industrial users, such limitations, prohibitions or pretreatment standards shall be based upon an assessment of technology and processes, to wit:
 - (i) to existing industrial users limitations or pretreatment standards and requirements based on application of the best demonstrated control technology currently available;
 - (ii) to any industrial user whose construction commences after the effective date of this Rule, pretreatment standards and requirements which reflect the greatest degree of effluent reduction which the Control Authority determines to be achievable through the application of best demonstrated control technology currently available, or changes in processes or operating methods or other alternatives including where practical, a standard permitting no discharge of pollutants.
 3. Notwithstanding the above, more stringent pretreatment may be required as deemed necessary by the Control Authority to meet:
 - (i) any other existing Federal laws or regulations;
 - (ii) to ensure compliance with any applicable State water quality standards, POTW effluent limitations, local discharge limitations, national pretreatment standards for prohibited discharges as specified in [40 CFR 403.5](#), dilution prohibition as specified in [40 CFR](#)

[403.6\(d\)](#), pretreatment standards and requirements, or schedules of compliance;

(iii) to ensure there is no interference with the operation of a POTW or pass through of pollutants untreated.

4. To any industrial user, as appropriate, pretreatment standards and requirements designed to prohibit the discharge of toxic pollutant in toxic amounts which interfere with, pass through, prevents the use or disposal of sewage sludge, or otherwise interferes with operation of publicly owned treatment works.
5. The foregoing requirements shall be applied in considering all applications for pretreatment permits made pursuant to O.C.G.A. Section [12-5-30](#) and no such application shall be approved unless the pretreatment facilities will achieve such pretreatment standards and requirements within such reasonable time thereafter as the Control Authority may require.

(5) Application for Pretreatment Permit.

- (a) Applications for pretreatment permits under O.C.G.A. Section [12-5-30](#) shall be on forms as may be prescribed and furnished from time to time by the Control Authority. Applications shall be accompanied by all pertinent information as the Control Authority may require in order to establish pretreatment standards and requirements in accordance with Paragraph 391-3-6-.08(4), including but not limited to complete engineering reports, schedule of progress, plans, specification, maps, measurements, quantitative and qualitative determinations, records and all related materials. For industrial users subject to national pretreatment standards for categorical discharges, the application for a pretreatment permit shall contain information for a baseline report as required by [40 CFR 403.12\(b\)\(1\)-\(7\)](#).
- (b) Engineering reports, plans, specifications and other materials submitted to the Control Authority in support of a pretreatment permit application shall be prepared by or under the direct supervision or review of, and bear the seal of a Professional Engineer, competent in the field of sewage and industrial waste treatment. At no time shall this requirement be in conflict with O.C.G.A. Section 43-15 governing the practice of professional engineering and surveying.
- (c) Materials submitted shall be complete and accurate.
- (d) Any pretreatment permit application forms or any other forms submitted to the Control Authority shall be signed as follows:

1. By a responsible corporate officer, if the industrial user submitting the reports is a corporation. For this subparagraph a responsible corporate officer means:
 - (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or
 - (ii) the manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiate and direct other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; can ensure that the necessary systems are established or actions taken to gather complete and accurate information for control mechanism requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. By a general partner or proprietor if the industrial user submitting the reports is a partnership or sole proprietorship respectively; or
3. By a duly authorized representative of the individual designated in subparagraphs (5)(d)1. and (5)(d)2. of this section if:
 - (i) The authorization is made in writing by the individual described in subparagraph (5)(d)1. or (5)(d)2.;
 - (ii) The authorization specifies either an individual or position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company; and
 - (iii) The written authorization is submitted to the Control Authority.
4. If an authorization under subparagraph (5)(d)3. of this section is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, or overall responsibility for environmental matters for the company, a new authorization satisfying the requirements of subparagraph (5)(d)3. of this section must be submitted to the Control

Authority prior to or together with any reports to be signed by the authorized representative.

5. For a municipality, State, Federal, or the public facility, by either a principal executive officer, ranking elected official, or other duly authorized employee. The duly authorized employee must be an individual or position having responsibility for the overall operation of the facility or the pretreatment program. This authorization must be made in writing by the principal executive officer or ranking elected official, and submitted to the Control Authority prior to or together with the report being submitted.

(6) Receipt and Use of Pretreatment Permit Application Forms and Data.

- (a) Applications for pretreatment permits will be reviewed together with such other information as may be necessary to ascertain the effect of the discharge of any pollutant into a publicly owned treatment works and then the waters of the State.
- (b) The Control Authority shall receive any data it finds relevant which is intended to clarify or support the pretreatment permit application.
- (c) Any information submitted in a pretreatment permit application form, together with reports, records or plans that are considered confidential by the applicant for a pretreatment permit should be clearly labeled "Confidential" and be supported by a statement as to the reasons that such information should be considered confidential. If the Control Authority determines that such information is entitled confidential protection, it shall label and handle the same accordingly. However, all submitted effluent data shall be available to the public without restriction.

(7) Notice and Public Participation.

Where the Approval Authority is acting as the Control Authority, the notice and public participation procedures of Rule 391-3-6-.26 shall apply. Public notice of every approvable pretreatment permit application will be prepared by the EPD and circulated in a manner designed to inform interested and potentially interested persons of the proposed discharge and of the proposed determination to issue a permit for the proposed discharge by an industrial user into a publicly owned treatment works and then into the waters of the State. The procedures for circulation of the public notice, as specified in Rule 391-3-6-.26, shall include providing a copy of the public notice to the pretreatment permit applicant and the owner or operator of the publicly owned treatment works that is to receive the discharge from the industrial user.

(8) Terms and Conditions of Pretreatment Permits.

- (a) Terms and conditions under which the discharge will be permitted will be specified on the permit issued for the industrial user to discharge into a publicly owned treatment works and then into the waters of the State.
- (b) No pretreatment permit shall be issued authorizing the discharge into a publicly owned treatment works and then into the waters of the State of any radiological, chemical or biological warfare agent or high-level radioactive waste.
- (c) Schedule of compliance:
 - 1. Any person who obtains a pretreatment permit pursuant to the Act but who is not in compliance with applicable pretreatment standards and limitations or other requirements contained in such permit at the time same is issued, shall be required to achieve compliance with such pretreatment standards and limitations or other requirements in accordance with the schedule of compliance as set forth in such permit, or in the absence of a schedule of compliance, by the date set forth in such permit which the Control Authority has determined to be the shortest, reasonable period of time necessary to achieve compliance. Such compliance schedules may not extend the compliance date beyond applicable Federal deadlines. The schedule shall contain increments of progress in the form of dates for the commencement and completion of major events leading to the construction and operation of additional pretreatment required for the industrial user to meet the applicable pretreatment standards and limitations. No increment referred to in this Subparagraph shall exceed nine months.
 - 2. Within fourteen (14) days of an interim date of compliance or the final date of compliance specified for an industrial user, the industrial user shall provide the Control Authority with written notice of its compliance, or non-compliance with the requirements and conditions specified to be completed by such date. Failure to submit the written notice is just cause for the Control Authority to pursue enforcement action pursuant to its legal authority.
 - 3. An industrial user who fails or refuses to comply with an interim or final date of compliance specified in a pretreatment permit may be deemed by the Control Authority to be in violation of the permit and may be subject to enforcement action by the Control Authority.
 - 4. Within ninety (90) days following the date for final compliance with applicable pretreatment standards or in the case of a new source following commencement of the introduction of wastewater to the POTW, industrial users subject to categorical standards shall submit to the Control Authority a report containing information described in [40 CFR 403.12\(b\)\(4\)-\(6\)](#).
- (d) Monitoring, recording and reporting requirements:

1. Any industrial user authorized by a pretreatment permit issued pursuant to the Act may be subject to such monitoring, recording and reporting requirements as may be reasonably required by the Control Authority including the installation, use and maintenance of monitoring equipment or methods; specific requirements for recording of monitoring activities and result; and periodic reporting of monitoring results. The monitoring, record keeping, sampling, notification and reporting requirements including an identification of the pollutants to be monitored, sampling location, sampling frequency, and sample type, based on national pretreatment standards, including those in [40 CFR 403.12](#) as applicable, and applicable local limits and requirements shall be specified in a permit when issued, provided however the Control Authority may modify or require additional monitoring, recording and reporting by written notification to the industrial user.
2. The industrial user shall be required, in the pretreatment permit, to retain any records of monitoring activities and results for a minimum of three (3) years, unless otherwise extended by the Control Authority upon written notification. The period of retention shall be extended during the course of any unresolved litigation regarding the industrial user or POTW.
3. Any holder of a permit, which requires monitoring of the authorized discharge into a publicly owned treatment works and then into the waters of the State, shall report periodically to the Control Authority results of all required monitoring activities on appropriate forms supplied by the Control Authority. The Control Authority shall notify the industrial user of the frequency of reporting. All periodic reporting shall be in accordance with the requirements described in [40 CFR 403.12\(e\)-\(h\)](#).
4. The effluent limitations specified in the pretreatment permit will be based on an allowable POTW headworks loading methodology for deriving the value of the limiting pollutant for inclusion in the permit after consideration of State water quality standards, sludge disposal requirements, final determination of NPDES Permit limits, POTW inhibition, and any other applicable criteria. The limiting factor selected will then be compared to appropriate national pretreatment standards for categorical discharges if applicable, and the most stringent will then be incorporated into the permit. In instances where the potable water sources or other incoming water sources have values that exceed limits based on water quality standards, then an alternate limit may be derived on a case-by-case basis after the evaluation of sampling conducted on the water sources by the Control Authority. These alternate effluent limitations will be considered local limits and will be enforced to comply with [40 CFR 403.5\(c\) and \(d\)](#) requirements.

(9) Modification, Suspension and Revocation of Pretreatment Permits:

Where the Approval Authority is acting as the Control Authority, the following procedures shall apply:

- (a) The Approval Authority may revise or modify the schedule of compliance set forth in an issued pretreatment permit if the industrial user requests such modification or revision in writing and such modification or revision will not cause an interim date in the compliance schedule to be extended more than one hundred and twenty (120) days or affect the final date in the compliance schedule. If the industrial user requests in writing the modification or revision of a schedule of compliance set forth in an issued pretreatment permit which, if granted, would cause an interim date in the compliance schedule to be extended more than one hundred and twenty (120) days or affect the final date in compliance schedule, the Approval Authority may revise or modify such schedule of compliance provided it is in accordance with promulgated Federal regulations. The Approval Authority may grant a request in accordance with this Subparagraph if it determines after documented showing by the industrial user that good and valid cause, including acts of God, strikes, floods, material shortages or other events over which the industrial user has little or no control, exist for such revision.
- (b) The Approval Authority may modify, suspend or revoke an issued pretreatment permit in whole or in part during its term for cause, including but not limited to, failure or refusal of the industrial user to carry out the requirements of the Act or regulations promulgated pursuant thereto and/or promulgated Federal regulations, if within thirty (30) days following receipt of such proposed modifications, suspension or revocation from the Approval Authority, there is no objection by the industrial user in writing. In addition prior to any such modifications, suspension or revocation of an issued pretreatment permit by the Approval Authority (other than modification or revision of compliance schedule pursuant to Subparagraph 391-3-6-.08(9)(a) above or modification of the monitoring, recording and reporting requirements), the Approval Authority will provide public notice in accordance with the procedures set forth in Subparagraph 391-3-6-.08(7)(b). Where the Approval Authority is acting as the Control Authority, the procedures set forth in Chapter 391-1-2 shall apply to any person who is "aggrieved or adversely affected" as provided for in Title 12 of the Official Code of Georgia Annotated.

(10) Duration of Pretreatment Permits.

Any pretreatment permit issued by a Control Authority shall have a fixed term not to exceed five (5) years. When the Approval Authority is acting as the Control Authority, a new pretreatment permit may be issued by the Authority, provided that an application for such new pretreatment permit is filed with the Approval Authority at least one hundred and eighty (180) days prior to the expiration date of the existing permit. The

issuance of such new pretreatment permit shall likewise have a fixed term not to exceed five (5) years.

(11) **Enforcement.**

Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition schedule or compliance or other requirement contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.

- (12) **NPDES Electronic Reporting.** The federal NPDES Electronic Reporting rule, 40 CFR Part 127 and associated amendments, became effective on December 21, 2015. The requirements of this rule relating to the submission of applications, reports and compliance notices may include the electronic submission of such items and electronic signature for such items, as applicable and approved by the EPD or the Control Authority. The use of the terms "in writing" or "written" in the rule may include such electronic submissions.

Rule 391-3-6-.09. Requirements for Approval and Implementation of Publicly Owned Treatment Works Pretreatment Programs and Administration of the EPD Pretreatment Program.

- (1) **Purpose.** The purpose of Rule 391-3-6-.09 is to provide uniform procedures and practices to be followed for the development and submission of POTW pretreatment programs for EPD review and approval or denial, and the public notification methods to be used.
- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Rules of this Chapter:
- (a) "Submission" means a request to the Approval Authority for approval of a POTW pretreatment program by a POTW.

(3) Required POTW Pretreatment Programs.

- (a) Any POTW or combination of POTWs operated by the same authority with a total design flow greater than 5 million gallons per day (MGD) and receiving from industrial users pollutants which may pass through untreated or interfere with the operation of the POTW or are otherwise subjects to Section 307(b) or 307(c) of the Federal Act will be required to establish a POTW pretreatment program.
- (b) The Approval Authority may require in writing that a POTW with a design flow of 5 mgd or less develop a POTW pretreatment program if it finds that the nature or volume of the industrial effluent, treatment process upsets, violations of POTW effluent limitations, contamination of municipal sludge or other circumstances warrant a POTW pretreatment program in order to prevent interference with the POTW or pass through of untreated pollutants.
- (c) Any POTW described in Subparagraphs 391-3-6-.09(3)(a) and (b) must obtain approval of its POTW pretreatment program no later than three (3) years after the reissuance or modification of its existing NPDES permit, but in no case later than July 1, 1983. POTWs whose NPDES permits are modified under Section 301(h) of the Federal Act shall have a pretreatment program within less than three (3) years as provided by 40 CFR Part 125, Subpart G. POTWs identified after July 1, 1983 as being required to develop a POTW pretreatment program under Subparagraph 391-3-6-.09(3)(a) and (b) shall develop and submit such a program for approval as soon as possible to the Approval Authority but in no case later than one (1) year after written notification from the Approval Authority of such identification.
- (d) The POTW pretreatment program shall meet the criteria set forth in [40 CFR 403.8\(f\)](#) and shall be capable of being administered by the POTW to ensure compliance by the industrial users with applicable State and Federal pretreatment standards and requirements in order to be approved by the Approval Authority.
- (e) The Approval Authority may hold a public hearing in the geographical area served by any POTW which fails to comply with the Approval Authority's finding and written directive that a POTW pretreatment program is required and a draft submission must be developed and submitted to the Approval Authority within sixty (60) days. The public hearing will be held to advise the public, the industrial users and other concerned parties that the EPD will establish and operate the pretreatment program necessary to meet the Federal requirements as a result of the failure of the POTW to carry out its legal responsibility. The appropriate POTW, city or municipal officials will be requested at the public hearing to explain the reasons why they failed to comply with the Approval Authority's finding and directive. For any public hearing held pursuant to this Subparagraph a public notice shall be provided at least forty-five (45) days in advance of the hearing date and shall be published and circulated in accordance with Subparagraph 391-3-6-.09(5)(a).

- (f) A POTW requesting approval of a POTW pretreatment program shall develop a program submission which includes the information set forth in [40 CFR 403.9\(b\)](#) and [403.8\(f\)](#). Any other pertinent information requested by the Director as being necessary to clarify, support or supplement the program description must also be submitted.

(4) POTW Pretreatment Program Approval or Denial.

- (a) Any POTW requesting POTW pretreatment program approval shall submit to the EPD three copies of the submission described in [40 CFR 403.9\(b\)](#). Within 60 days after receiving the submission, the EPD shall make a preliminary determination of whether the submission meets the requirements of [403.9\(b\)](#) and whether the submission meets the requirements as may be described by the EPD. When the EPD is satisfied that a POTW pretreatment program meets the requirements of [40 CFR 403.8\(f\)](#), [403.9\(b\)](#) and such other requirements as may be prescribed by the Approval Authority, the EPD shall notify the POTW that the submission has been received and is under review and commence public notice and evaluation activities set forth in Subparagraph 391-3-6-.09(5).
- (b) When the EPD determines that the POTW pretreatment program does not meet the requirements of Subparagraph 391-3-6-.09(4)(a), the EPD shall notify the POTW in writing as appropriate and each person who has requested individual notice. This notification shall identify any defects in the submission and advise the POTW and each person who has requested individual notice of the means by which the POTW can comply with the applicable requirements of Subparagraph 391-3-6-.09(4)(a). Unless the necessary revisions and modifications are made within the time period specified in the notification of denial, not to exceed the one year period specified in Subparagraph 391-3-6-.09(3)(c), the EPD will proceed to develop and implement a pretreatment program for the area served by the POTW in accordance with Rules [391-3-6-.08](#) and 391-3-6-.09.

(5) Notice and Public Participation.

- (a) Tentative Determination for POTW Pretreatment Program Approval.
 - 1. Within 20 work days after the EPD has made a determination that a POTW pretreatment program submission meets the requirements of [40 CFR 403.9\(b\)](#), a public notice will be issued by the EPD and the city or municipality requesting approval to advise the public that a request has been made for approval of the submission. This public notice shall be published and circulated in a manner designed to inform interested and potentially interested persons of the submission. Procedures for circulation of the public notice shall include the following:
 - (i) notice to adjoining State whose waters may be affected;

- (ii) notice to section 208 Designated Planning Agencies; Federal and State fish, shellfish and wildlife resources agencies and, upon request, to other appropriate government agencies;
 - (iii) publication in a newspaper(s) of general circulation within the city or municipality in which the POTW pretreatment program has been established;
 - (iv) notice to the chief elected official of the city or municipality requesting approval of the POTW pretreatment program submission;
 - (v) a copy will be available at the EPD office in Atlanta, posted to the EPD website, and an electronic mailing (e-mail) notification of the public notice will be provided to those persons or groups included on the electronic mailing list to receive such notices. The EPD shall maintain an electronic mailing list for distribution of public notices. Any person or group may request that their e-mail address be added to the electronic mailing list or they may sign-up through the EPD website;
 - (vi) the EPD shall provide a period of not less than forty-five (45) days following the date of the public notice during which interested persons may submit their written views on the submission. All written comments submitted during the forty-five day period will be retained by the EPD and considered in the decision on whether or not to approve the submission. The comment period may be extended at the discretion of the Approval Authority; and
 - (vii) the contents of the public notice will be in accordance with appropriate Federal requirements and applicable State laws.
2. The Approval Authority shall provide an opportunity for the applicant, any affected State, any interested State or Federal agency, person or group of persons to request a public hearing with respect to the submission. Any such request for a public hearing shall be filed within the forty-five (45) day comment period described in Subparagraph 391-3-6-.09(5)(a) 1.(vi) and shall indicate the interest of the person filing such request and the reason why a hearing is warranted. The Approval Authority shall hold the hearing if it determines that there is sufficient public interest in holding such hearing or if the POTW requests a hearing.
- (i) any public hearing held pursuant to this Subparagraph shall be held in the geographical area of the applicable submission or other appropriate location at the discretion of the Approval Authority. The

Approval Authority may hold one public hearing on related groups of submissions in the same geographical area;

- (ii) public notice of any hearing held pursuant to this Subparagraph shall be provided at least forty-five (45) days advance of the hearing date and shall be circulated in accordance with Subparagraph 391-3-6-.09(5)(a) 1.

(b) Final Determination for POTW Pretreatment Program Approval or Denial.

1. Deadline for review of submission. The Approval Authority shall have 90 days from the date of public notice of any submission complying with the requirements of § 403.9(b) to review the submission. The Approval Authority shall review the submission to determine compliance with the requirements of [40 CFR 403.8\(b\) and \(f\)](#). The Approval Authority may have up to an additional 90 days to complete the evaluation of the submission if the public comment period provided for in Subparagraph 391-3-6-.09(5)(a) 1.(vi) is extended beyond 45 days or if a public hearing is held as provided for in Subparagraph 391-3-6-.09(5)(a) 2. In no event, however, shall the time for evaluation of the submission exceed a total of 180 days from the date of public notice of a submission meeting the requirements of § 403.9(b).
2. At the conclusion of the public notice comment period or the public comment period allowed following a public hearing or the extension if warranted per Subparagraph 391-3-6-.09(5)(b) 1. above, the Approval Authority shall make a determination to approve the POTW pretreatment program or deny any approval to the program based on the requirements of Subparagraph 391-3-6-.09(4) and taking into consideration the comments submitted during the comment period and the record of the public hearing, if held. When the Approval Authority has made a determination to deny approval to the program the POTW shall be notified in writing in accordance with Subparagraph 391-3-6-.09(4)(b) and each person who has requested individual notice. The Approval Authority shall also notify these persons who submitted comments and participated in the public hearing, if held, of the approval or disapproval of the submission.
3. U.S. EPA's objection to Approval Authority's decision. No POTW pretreatment program shall be approved by the Approval Authority if, following the 45 day (or extended) evaluation period provided for in Subparagraph 391-3-6-.09(5)(a) 1.(vi) and any hearing held pursuant to Subparagraph 391-3-6-.09(5)(a) 2 of this section, the Regional Administrator of U.S. Environmental Protection Agency Region 4 (Regional Administrator) sets forth in writing objections to the approval of

such submission and the reasons for such objections. A copy of the Regional Administrator's objections shall be provided to the applicant, and each person who has requested individual notice. The Regional Administrator shall provide an opportunity for written comments and may convene a public hearing on his or her objections. Unless retracted, the Regional Administrator's objections shall constitute a final ruling to deny approval of a POTW pretreatment program 90 days after the date the objections are issued.

4. When the EPD has made a determination to approve the submission, a public notice shall be issued to advise of the decision. This public notice shall be published and circulated in a manner designed to inform interested and potentially interested persons of the decision. Procedures for circulation of the public notice shall include the following:
 - (i) publication in the same newspaper as the original notice of request for approval of the submission was published;
 - (ii) providing notice to those persons who submitted comments and participated in the hearing for approval or disapproval of the submission;
 - (iii) the Approval Authority shall ensure that the submission and any comments upon said submission are available to the public for inspection and copying at the EPD offices in Atlanta during normal business hours;
 - (iv) providing notice to adjoining State whose waters may be affected; and
 - (v) providing notice to section 208 Designated Planning Agencies; Federal and State fish, shellfish and wildlife resource agencies and, upon request, to other appropriate government agencies.

(c) Public Access to Information.

1. A copy of the program submission, and other forms related thereto, including written public comments and comments of all governmental agencies thereon and other reports, files and information not involving methods or processes entitled to protection as trade secrets, may be available online and will be available for public inspection and copying during normal business hours at the EPD office in Atlanta. Effluent data shall not be considered as information entitled to protection. Public access to NPDES information shall be in accordance with Federal Regulations, [40 C.F.R. 122.7](#);

2. Any information submitted with reports, records or plans that is considered confidential by the POTW, and that is not specifically excluded in subparagraph (c)1. above, should be clearly labeled "Confidential" and be supported by a statement as to the reason that such information should be considered confidential. If the Director, with the concurrence of the Regional Administrator, determines that such information is entitled to confidential protection, he shall label and handle same accordingly;
3. Any information accorded confidential status whether or not contained in a program submission shall be made available, upon written request, to the Regional Administrator or his authorized representative who shall maintain the information as confidential.

(6) Notification of POTW Pretreatment Program Approval.

- (a) Notification of any final approval of a POTW pretreatment program will be forwarded to the POTW in writing including any conditions or special requirements for compliance schedules, monitoring and reporting both for the POTW and the industrial user in accordance with [40 CFR 403.12](#).
- (b) When the POTW accepts the approval and any specific conditions or requirements that are a part of the approval notification by the Approval Authority, procedures will be started to revise, modify and reissue the POTW's discharge permit to include compliance with Rules [391-3-6-.08](#) and 391-3-6-.09, and the approved POTW pretreatment program as enforceable conditions of the POTW's permit. The modification of a POTW's discharge permit for the purposes of incorporating a POTW pretreatment program approved by the Approval Authority in accordance with [40 CFR 403.11](#) and this Rule shall be deemed a minor permit modification subject to the procedures in [40 CFR 122.63](#).

(7) Modification of POTW Pretreatment Program.

- (a) Either the EPD or a POTW with an approved POTW pretreatment program may initiate program modification at any time to reflect exchanging conditions at the POTW. Program modification is necessary whenever there is a significant change in the operation of the POTW pretreatment program that differs from the information in the POTW submission as approved by the Approval Authority. Any approved POTW pretreatment program identified by the EPD that needs to modify its program to incorporate requirements that have resulted from revision to Rule [391-3-6-.08](#) through [391-3-6-.10](#) or any other applicable rule revision shall develop and submit to the EPD for approval such program modification no later than one (1) year after written notification from the EPD to modify the program.
- (b) POTW pretreatment program modifications shall be accomplished as follows:

1. For substantial modifications as defined in Subparagraph 391-3-6-.09(7)(c):
 - (i) the POTW shall submit to the EPD a statement of the basis for the desired modification, a modified program description or such other documents the Approval Authority determines to be necessary under the circumstances;
 - (ii) the Approval Authority shall approve or disapprove the modifications based on the requirements of [40 CFR 403.8\(f\)](#), following the procedures in Subparagraph 391-3-6-.09(4) -(6);
 - (iii) the modification shall be incorporated into the POTW discharge permit after approval. The POTW's discharge permit will be modified to incorporate the approved modification in accordance with [40 CFR 122.63\(g\)](#);
 - (iv) the modification shall become effective upon approval by the Approval Authority. Notice of approval shall be published in the same newspaper as the notice of original request for approval of the modification under Subparagraph 391-3-6-.09(5)(a) 1.(iii).
2. The POTW shall notify the EPD of any other (i.e., non-substantial) modifications to its pretreatment program at least thirty (30) days prior to when they are to be implemented by the POTW, in a statement similar to that provided for in Subparagraph 391-3-6-.09(7)(b) 1.(i). Such non-substantial program modification shall be deemed to be approved by the Approval Authority, unless the EPD determines that a modification submitted is in fact a substantial modification thirty (30) days after the submission of the POTW's statement. Following such approval by the Approval Authority, such modifications shall be incorporated into the POTW's discharge permit in accordance with [40 CFR 122.63\(g\)](#). If the EPD determines that a modification reported by a POTW in its statement is in fact a substantial modification, the EPD shall notify the POTW and initiate the procedures in Subparagraph 391-3-6-.09(7)(b) 1.

(c) Substantial modifications.

1. The following are substantial modifications for purposes of this Subparagraph:
 - (i) changes to the POTW's legal authorities;
 - (ii) changes to local limits;

- (iii) changes to the POTW's control mechanism as described in [40 CFR 403.8\(f\)\(1\)\(iii\)](#);
 - (iv) changes to the POTW's method for implementing categorical pretreatment standards;
 - (v) a decrease in the frequency of self-monitoring or reporting required of industrial users;
 - (vi) a decrease in the frequency of industrial user inspection or sampling by the POTW;
 - (vii) changes to the POTW's confidentiality procedures;
 - (viii) significant reduction in the POTW's pretreatment program resources (including personnel commitments, equipment, and funding levels); or
 - (ix) changes in the POTW's sludge disposal and management practices.
2. The Approval Authority may designate other specific modifications in addition to those listed in Subparagraph 391-3-6-.09(7)(c) 1. as substantial modifications.
3. A modification that is not included in Subparagraph 391-3-6-.09(7)(c) 1. is none the less a substantial modification for purposes of this Subparagraph if the modification:
- (i) would have a significant impact on the operation of the POTW's pretreatment program;
 - (ii) would result in an increase in pollutant loadings at the POTW's or
 - (iii) would result in less stringent requirements being imposed on industrial users of the POTW.
- (d) The POTW shall prepare a list of its industrial users meeting the criteria in Subparagraphs [391-3-6-.08\(2\)\(u\) 1.\(i\)](#) and 2. applicable to each industrial user and, for industrial users meeting the criteria in Subparagraphs [391-3-6-.08\(2\)\(u\) 1.\(ii\)](#) shall also indicate whether the POTW has made a determination pursuant to Subparagraph [391-3-6-.08\(2\)\(u\)](#) that such industrial user should be considered a significant industrial user. This list, and any subsequent modification thereto, shall be submitted to the EPD as a nonsubstantial program modification pursuant to Subparagraph 391-3-6-.09(7)(b) 2. Discretionary designations or de-designations by the POTW pretreatment program shall be deemed to be approved by the EPD

ninety (90) days after submission of the list or modifications thereto, unless EPD determines that a modification is in fact a substantial modification.

(8) Compliance Monitoring and Reporting Requirements for POTW Pretreatment Programs and the EPD Pretreatment Program.

(a) Both the EPD and each POTW pretreatment program shall develop and implement procedures to ensure compliance with the requirements of a pretreatment program. At a minimum, these procedures shall enable the Control Authority to:

1. Identify and locate all possible industrial users which might be subject to the pretreatment program;
2. Identify the character and volume of pollutants contributed to the POTW by the industrial users identified under Subparagraph 391-3-6-.09(8)(a) 1.;
3. Notify industrial users identified under Subparagraph 391-3-6-.09(8)(a) 1. of applicable pretreatment standards and applicable pretreatment requirements under Sections 204(b) and 405 of the Federal Act and Subtitles C and D of the Resource Conservation and Recovery Act. Within 30 days of approval pursuant to [40 CFR 403.8\(f\)\(6\)](#), of a list of significant industrial users, notify each significant industrial user of its status as such and all requirements applicable to it as a result of such status;
4. Receive and analyze self-monitoring reports and other notices submitted by industrial users in accordance with the self-monitoring requirements in [40 CFR 403.12](#);
5. Randomly sample and analyze the effluent from industrial users and conduct surveillance activities in order to identify, independent of information supplied by industrial users, occasional and continuing noncompliance with pretreatment standards. Inspect and sample the effluent from each significant industrial user at least once a year except as otherwise specified below:
 - (i) Where the Control Authority has authorized the industrial user subject to a categorical pretreatment standard to forego sampling of a pollutant regulated by a categorical pretreatment standard in accordance with [40 CFR 403.12\(e\)\(3\)](#), the Control Authority must sample for the waived pollutant(s) at least once during the term of the categorical industrial user's control mechanism. In the event that the Control Authority subsequently determines that a waived pollutant is present or is expected to be present in the industrial user's wastewater based on changes that occur in the industrial user's operations, the Control Authority must immediately begin at least annual effluent monitoring of the industrial user's discharge and inspection.

- (ii) Where the Control Authority has determined that an industrial user meets the criteria for classification as a Non-Significant Categorical Industrial User, the Control Authority must evaluate, at least once per year, whether an industrial user continues to meet the criteria in [40 CFR 403.3\(v\)\(2\)](#).
 - (iii) In the case of industrial users subject to reduced reporting requirements under [40 CFR 403.12\(e\)\(3\)](#), the Control Authority must randomly sample and analyze the effluent from industrial users and conduct inspections at least once every two years. If the industrial user no longer meets the conditions for reduced reporting in [40 CFR 403.12\(e\)\(3\)](#), the Control Authority must immediately begin sampling and inspecting the industrial user at least once a year.
6. Evaluate, within one year whether each such significant industrial user needs a plan or other action to control slug discharges. Additional significant industrial users must be evaluated within 1 year of being designated a significant industrial user. If the Control Authority decides that a slug control plan is needed, the plan shall be based on the requirements in [40 CFR 403.8\(f\)\(2\)\(vi\)](#).
 7. Investigate instances of noncompliance with pretreatment standards and requirements, as indicated in the reports and notices required under [40 CFR 403.12](#) or indicated by analysis, inspection, and surveillance activities described in Subparagraph 391-3-6-.09(8)(a) 5. Sample taking and analysis and the collection of other information shall be performed using appropriate procedures to produce evidence admissible in enforcement proceedings or in judicial actions;
 8. Comply with the public participation requirement of 40 CFR Parts 25 in the enforcement of national pretreatment standards. These procedures shall include provision for at least annual public notification, in a newspaper(s) of general circulation that provides meaningful public notice within the jurisdiction(s) served by the POTW of industrial users which, at any time during the previous 12 months, were in significant noncompliance with applicable pretreatment requirement as defined under Subparagraph [391-3-6-.08\(2\)\(v\)](#); and
 9. Deny or condition new increased contributions of pollutants, to the POTW by industrial users where such contributions do not meet applicable pretreatment standards and requirements or where such contribution would cause the POTW to violate its NPDES Permit.

- (b) Both the EPD pretreatment program and each POTW pretreatment program shall require the following industrial user reports and notification for their regulated industrial users:
1. Notice of potential problems including slug loading as described in [40 CFR 403.12\(f\)](#);
 2. Report on the monitoring and analysis to demonstrate continued compliance as described in [40 CFR 403.12\(g\)\(1\)-\(6\)](#);
 3. Reports for industrial users not subject to categorical pretreatment standards as described in [40 CFR 403.12\(h\)](#);
 4. Notification of changed discharge as described under [40 CFR 403.12\(j\)](#);
 5. Notification of discharge of hazardous waste as described in [403.12\(p\)\(1\)-\(4\)](#).
 6. Baseline reports as described in [40 CFR 403.12\(b\)\(1\)-\(7\)](#);
 7. Compliance scheduling and progress reports as described in [40 CFR 403.12\(c\)\(1\)-\(3\)](#);
 8. Report on compliance with categorical pretreatment standards deadlines as described in [40 CFR 403.12\(d\)](#);
 9. Periodic reports on continued compliance as described in [40 CFR 403.12\(e\)\(1\)-\(5\)](#); and
 10. Annual certification by Non-Significant Categorical Industrial Users (as defined in Subparagraph [391-3-6-.08\(2\)\(r\)\(2\)](#)) as required in [40 CFR 403.12\(q\)](#).
- (c) Signatory requirements for industrial user reports and POTW pretreatment program reports shall comply with requirements described in [40 CFR 403.12\(l\) and \(m\)](#), respectively.
- (d) Records keeping for industrial users and POTW pretreatment programs shall comply with the requirements described in [40 CFR 403.12\(o\)](#).
- (e) The EPD may require a POTW pretreatment program to sample and analyze the POTW influent, effluent and/or sludge for the toxic priority pollutants as listed under Subparagraphs [391-3-6-.03\(5\)\(e\)\(i\)\(ii\) and \(iii\)](#) and any other identified pollutants at a frequency that adequately characterizes pollutant loading at the POTW. In addition, the POTW pretreatment program may be required to conduct biomonitoring of the POTW effluent.

- (f) The federal NPDES Electronic Reporting rule, 40 CFR Part 127 and associated amendments (including amendments to [40 CFR 403.12](#)), became effective on December 21, 2015. The requirements of this paragraph may include electronic reporting, as applicable and approved by EPD or the Control Authority. A Control Authority that receives electronic documents must satisfy the requirements of 40 CFR Part 3 (Electronic Reporting) and the NPDES Electronic Reporting rule.

(9) Legal Authority Requirements for Control Authorities.

- (a) Each Control Authority shall operate pursuant to a legal authority enforceable in Federal, State or local courts, which authorizes or enables the Control Authority to apply and to enforce the requirements of sections 307(b) and (c), and 402(b)(8) of the Federal Act and any regulations implementing those sections. Such authority may be contained in a statute, ordinance, or series of contracts or joint powers agreement, which the Control Authority is authorized to enact, enter into or implement and which are authorized by the Act or State law. At a minimum, this legal authority shall enable the Control Authority to:
1. Require compliance with applicable pretreatment standards and requirements by industrial users.
 2. Deny or condition new or increased contributions of pollutants, or changes in the nature of pollutants, to the POTW by industrial users where such contributions do not meet applicable pretreatment standards and requirements or where such contributions would cause the POTW to violate its NPDES permit.
 3. Control through permit, order, or similar means, the contribution to the POTW by each industrial user to ensure compliance with applicable pretreatment standards and requirements. In case of industrial users identified as significant under Subparagraph [391-3-6-.08\(2\)\(u\)](#), this control shall be achieved through individual permits or equivalent individual control mechanism issued to each such user except as follows.
 - (i) At the discretion of the Control Authority, this control may include use of general control mechanisms if the following conditions are met. All of the facilities to be covered must:
 - (I) Involve the same or substantially similar types of operations;
 - (II) Discharge the same types of wastes;
 - (III) Require the same effluent limitations;
 - (IV) Require the same or similar monitoring; and

- (V) In the opinion of the Control Authority, are more appropriately controlled under a general control mechanism than under individual control mechanisms.
- (ii) To be covered by the general control mechanism, a significant industrial user must file a written request for coverage that identifies its contact information, production processes, the types of wastes generated, the location for monitoring all wastes covered by the general control mechanism, any requests in accordance with [40 CFR 403.12\(e\)\(2\)](#) for a monitoring waiver for a pollutant neither present nor expected to be present in the discharge, and any other information the Control Authority deems appropriate. A monitoring waiver for a pollutant neither present nor expected to be present in the discharge is not effective in the general control mechanism until after the Control Authority has provided written notice to the significant industrial user that such a waiver request has been granted in accordance with [40 CFR 403.12\(e\)\(2\)](#). The Control Authority must retain a copy of the general control mechanism, documentation to support the Control Authority's determination that a specific significant industrial user meets the criteria in [40 CFR 403.8\(f\)\(1\)\(iii\)\(A\)\(1\) through \(f\)\(1\)\(iii\)\(A\)\(5\)](#), and a copy of the significant industrial user's written request for coverage for 3 years after the expiration of the general control mechanism. A Control Authority may not control a significant industrial user through a general control mechanism where the facility is subject to production-based categorical pretreatment standards or categorical pretreatment standards expressed as mass of pollutant discharged per day, or for industrial users whose limits are based on the combined wastestream formula in [40 CFR 403.6\(e\)](#). Both individual and general control mechanisms must, be enforceable and contain the minimum conditions described in [40 CFR 403.8\(f\)\(1\)\(iii\)\(B\)\(1\)-\(6\)](#). Each pretreatment permit will include, where appropriate, conditions and limits which ensure that concentration and mass limit requirements under [40 CFR 403.6\(c\)\(1\)-\(9\)](#), dilution prohibition requirements under [40 CFR 403.6\(d\)](#) and combined wastestream formula requirements under [40 CFR 403.6\(e\)\(1\)-\(4\)](#) are complied with;
4. Require the development of a compliance schedule by each industrial user for the installation of technology required to meet applicable pretreatment standards and requirements and the submission of all notices and self-monitoring reports from industrial users with pretreatment standards and

requirements, including, but not limited to the reports required in [40 CFR 403.12](#);

5. Carry out all inspection, surveillance and monitoring procedures necessary to determine, independent of information supplied by industrial users, compliance or noncompliance with applicable pretreatment standards and requirements by industrial users. Representatives of the POTW shall be authorized to enter any premises of any industrial user in which a discharge source or treatment system is located or in which records are required to be kept under [40 CFR 403.12\(o\)](#) to assure compliance with pretreatment standards. Such authority shall be at least as extensive as the authority provided under Section 308 of the Federal Act;
 6. Obtain remedies for noncompliance by any industrial user with any pretreatment standard and requirement. All POTW's shall be able to seek injunctive relief for noncompliance by industrial users with pretreatment standards and requirements. All POTW's shall also have authority to seek or assess civil or criminal penalties in at least the amount of \$1,000 a day for each violation by industrial users of pretreatment standards and requirements. Pretreatment requirements which will be enforced through the remedies set forth in this Subparagraph will include but not be limited to, the duty to allow or carry out inspections, entry, or monitoring activities; any rules, regulations or orders issued by the POTW; any requirements set forth in control mechanisms issued by the POTW; or any reporting requirements imposed by the POTW; or any reporting requirements imposed by the POTW or these regulations. The POTW shall have authority and procedures (after informal notice to the discharger) to immediately and effectively halt or prevent any discharge of pollutants to the POTW which reasonably appears to present an imminent endangerment to the health or welfare of persons. The POTW shall also have authority and procedures (which shall include notice to the affected industrial users and an opportunity to respond) to halt or prevent an endangerment to the environment or which threatens to interfere with the operation of the POTW. The EPD shall have the authority to take additional enforcement action when the EPD determines that the Control Authority's enforcement response to noncompliance by an industrial user is insufficient;
 7. Comply with the confidentiality requirements set forth in [40 CFR 403.14](#).
- (b) The Control Authority shall develop and implement an enforcement response plan which contains detailed procedures indicating how a POTW will investigate and respond to instances of industrial user noncompliance. The plan shall be developed in accordance with requirements described in [40 CFR 403.8\(f\)\(5\)](#).

- (c) Control Authority shall ensure that industrial users comply with the deadline for compliance with categorical standards as described in [40 CFR 403.6\(b\)](#) or take appropriate enforcement actions to address noncompliance with [40 CFR 403.6\(b\)](#) through the enforcement response plan under subparagraph 391-3-6-.09(9)(b).
- (d) Control Authority shall ensure that proper legal authority exists to require industrial user compliance with the general prohibitions under [40 CFR 403.5\(a\)\(1\)](#), the specific prohibitions under [40 CFR 403.5\(b\)\(1\)-\(8\)](#) and local limits under [40 CFR 403.5\(c\) and \(d\)](#). The Control Authority shall develop and enforce specific limits as described under [40 CFR 403.5\(c\) and \(d\)](#) to implement the prohibitions listed in [40 CFR 403.5\(a\)\(1\)](#) and [40 CFR 403.5\(b\)\(1\)-\(8\)](#). The Control Authority shall continue to develop these limits as necessary and effectively enforce such limits.

(10) POTW Pretreatment Program Annual Report.

Each POTW pretreatment program shall provide the Approval Authority with a report that describes POTW program activities including activities of all participating agencies if more than one jurisdiction is involved in the local program. The report required by this paragraph shall be submitted no later than one year after approval of the POTW's pretreatment program and at least annually thereafter and shall include, at a minimum, the information required in [40 CFR 403.12\(i\)](#). The federal NPDES Electronic Reporting rule, 40 CFR Part 127 and associated amendments, includes requirements under [40 CFR 403.12\(i\)](#) for the electronic submission of annual reports on or after December 21, 2020.

(11) Approval Authority Oversight of POTW Pretreatment Programs.

The Approval Authority retains the authority to enforce all pretreatment standards (including categorical standards, prohibited discharge standards, and local limits as described in 40 CFR 403) in cases where the Approval Authority determines that insufficient enforcement action has been taken by the POTW pretreatment program against industrial users. The Approval Authority also has the legal authority to review self-monitoring reports submitted by the industrial users described in [40 CFR 403.10\(f\)\(1\)\(ii\)](#) and to carry out inspection surveillance, and monitoring procedures as described in [40 CFR 403.10\(f\)\(1\)\(iii\)](#). The Approval Authority also has the legal authority to obtain remedies for noncompliance as described in [40 CFR 403.8\(f\)\(1\)\(vi\)](#).

(12) Enforcement.

Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule or compliance or other requirements contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act. Any reports submitted to the Control Authority or Approval Authority are also subject to the conditions of [40 CFR 403.12\(n\)](#) and applicable Georgia laws.

Authority: O.C.G.A. § [12-5-20](#)*et seq.*

History. Original Rule entitled "Publicly Owned Treatment Works Pretreatment Programs" was filed on August 24, 1979; effective September 13, 1979.

Amended: Rule retitled "Requirements for Approval and Implementation of Publicly Owned Treatment Works Pretreatment Programs and Administration of the EPD Pretreatment Program." F. Apr. 8, 1993; eff. Apr. 28, 1993.

Amended: F. Aug. 30, 1995; eff. Sept. 19, 1995.

Repealed: ER. 391-3-6-0.32-.09, of the same title, adopted. F. May 1, 1996; eff. April 25, 1996, the date of adoption, to remain in effect for a period of 120 days or until the effective date of a permanent Rule covering the same subject matter superseding this ER is adopted, as specified by the Agency.

Amended: Permanent Rule of same title adopted. F. Jul. 10, 1996; eff. July 30, 1996.

Amended: F. Feb. 2, 2011; eff. Feb. 22, 2011.

Amended: F. Oct. 13, 2017; eff. Nov. 2, 2017

Amended: F. May 13, 2020; eff. June 2, 2020.

Rule 391-3-6-.10. Determinations of Categorization of Industrial Users and Requests for Fundamentally Different Factor.

- (1) **Purpose.** The purpose of Rule 391-3-6-.10 is to provide for uniform procedures and practices to be followed for the determination of categorization of industrial users and requests for variances for fundamentally different factors. Such determinations will be applicable to the approved local POTW pretreatment programs and the pretreatment programs supervised and operated by the EPD.
- (2) **Definitions.** All terms used in this paragraph shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in the Paragraph or in any other Paragraph of these Rules.
- (3) Determinations on Categorization of Industrial Users.
 - (a) Within thirty (30) days after the effective date of a pretreatment standard for a sub-category under which an industrial user believes itself to be included, the industrial user or POTW may request that the Director provide written certification to the effect that the industrial user does or does not fall within the particular category. If an existing industrial user adds or changes a process or operation which may be included in a sub-category, the existing industrial user must request this certification prior to commencing discharge from the added or changed process or operation. A new source must request this certification prior to commencing discharge. Where a request for certification is submitted by a POTW, that POTW shall notify any affected industrial user of such submission. The industrial user may provide written comments on the POTW submission to the EPD within thirty (30) days of notification. Each request shall contain a statement:
 1. Describing which sub-categories might be applicable;
 2. Citing evidence and reasons why a particular sub-category is applicable and why others are not applicable. Each statement shall contain a certification

stating that the facts contained therein are true on the basis of the applicant's personal knowledge or to the best of his information and belief. The certification shall be attested to by a notary public and be specifically as written in [40 CFR 403.6\(a\)\(2\)\(ii\)](#).

- (b) The Director will act only on written requests for determinations that contain all of the information required. Persons who have made incomplete submissions will be notified by the Director that their requests are deficient and unless the time period is extended they will be given thirty (30) days to correct the deficiency. If the deficiency is not corrected within thirty (30) days or within an extended period allowed by the Director the request for a determination shall be denied.
 - (c) When the Director determines that all of the information required by this Subparagraph, any additional evidence that may have been requested and any other available information relevant to the request has been submitted, he will make a written determination of the applicable sub-category and state the reasons for his determination. The Director shall forward the written determination described in this Subparagraph to the Regional Administrator of EPA in accordance with [40 CFR 124.62\(e\)\(1\)](#) who may make a final determination. If the Regional Administrator does not modify the Director's decision within sixty (60) days after receipt thereof, the Director's decision is final.
 - (d) The Director shall send a copy of his determination to the affected industrial user and POTW. When the final determination is made by the Regional Administrator of EPA, he shall send a copy of his determination to the Director and the Director will forward it to the affected industrial user and POTW.
 - (e) If an industrial users fails to seek the certification referred to in Subparagraph 391-3-6-.10(3) within the prescribed thirty (30) day period or to contest a negative determination through administrative channels provided, they will be bound by a subsequent determination made by the Director as to the sub-category under which an industrial user should be included.
- (4) Fundamentally Different Factors Variances.
- (a) Requests for a variance from categorical pretreatment standards for fundamentally different factors and supporting evidence must be submitted in writing to the Director within ninety (90) days after promulgation by the EPA of the categorical pretreatment standards.
 1. Written submissions for variance requests submitted to the Director must include:
 - (i) the name and address of the person making the request;

- (ii) identification of the interest of the requestor which is affected by the categorical pretreatment standard for which the variance is requested;
 - (iii) identification of the POTW currently receiving the waste from the industrial user for which alternative discharge limits are requested;
 - (iv) identification of the categorical pretreatment standards which are applicable to the industrial user;
 - (v) a list of each pollutant or pollutant parameter for which an alternative discharge limit is sought;
 - (vi) the alternative discharge limits proposed by the requestor for each pollutant or pollutant parameter identified in Subparagraph 391-3-6-.10(4)(a)1.(v);
 - (vii) a description of the industrial user's existing water pollution control facilities;
 - (viii) a schematic flow representation of the industrial user's water system including water supply processed wastewater systems, and point of discharge; and
 - (ix) a statement of facts clearly establishing why the variance requests should be approved, including detailed support data, documentation, and evidence necessary to fully evaluate the merits of the request, including technical and economic data collected by the EPA and used in developing each pollutant discharge limit in the pretreatment standard.
- (b) The Director will only act on written requests for variances that contain all of the information required. Persons who have made incomplete submissions will be notified by the Director that their requests are deficient and unless the time period is extended, will be given thirty (30) days to correct the deficiency. If the deficiency is not corrected within the thirty (30) days or within an extended period allowed by the Director, the request for variance shall be denied.
- (c) When the Director receives a submittal from a person making a request, he will, after determining that it contains all of the information required by Subparagraph 391-3-6-.10(4)(a), consider the submission, any additional evidence that may have been requested, and any other available information relevant to the request. The Director will then make a written finding indicating whether or not there are factors which are fundamentally different for that industrial user, from those

factors considered in the development of the appropriate categorical pretreatment standards. This preliminary finding will include the reasons as to whether or not the variance should be granted.

- (d) When the Director finds that fundamentally different factors do not exist, he may deny the request and notify the requestor and the industrial user, where they are not the same, of the denial.
 - (e) When the Director finds that fundamentally different factors do exist, he shall forward the request and a written recommendation that the request be approved to the Regional Administrator of EPA. If upon review of the recommended approval submitted by the Director, the Regional Administrator of EPA finds that fundamentally different factors do exist and that a partial or full variance is justified, he will approve the variance.
 - (f) A request for a variance based upon fundamentally different factors shall be approved only if the applicable criteria are met as described in [40 CFR 403.13\(c\)](#). A review of each request shall be made based upon factors considered fundamentally different as described in [40 CFR 403.13\(d\)](#) and factors which will not be considered fundamentally different as described in [40 CFR 403.13\(e\)](#).
- (5) **Enforcement.** Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule or compliance or other requirements contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.

History. Original Rule entitled "Determinations and Categorization of Industrial Users and Requests for Fundamentally Different Factors Variances" was filed on August 24, 1979; effective September 13, 1979.

Amended: F. Apr. 8, 1993; eff. Apr. 28, 1993.

Repealed: ER. 391-3-6-0.32-.10, of the same title, adopted. F. May 1, 1996; eff. April 25, 1996, the date of adoption, to remain in effect for a period of 120 days or until the effective date of a permanent Rule covering the same subject matter superseding this ER is adopted, as specified by the Agency.

Amended: Permanent Rule of same title adopted. F. Jul. 10, 1996; eff. July 30, 1996.

Rule 391-3-6-.11. Land Disposal and Permit Requirements.

- (1) **Purpose.** The purpose of Rule 391-3-6-.11 is to provide for the degree of pollutant treatment required and the uniform procedures and practices to be followed relating to the application for and the issuance or revocation or permits for the discharge of pollutants into land disposal or land treatment systems and then into the waters of the State.

- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Rules of this Chapter:
- (a) "Act" means the Georgia Water Quality Control Act, as amended;
 - (b) "Land disposal system" means any method of disposing of pollutants in which the pollutants are applied to the surface or beneath the surface of a parcel of land and which results in the pollutants percolating, infiltrating, or being absorbed into the soil and then into the waters of the State. Land disposal systems exclude landfills and sanitary landfills but include ponds, basins, or lagoons used for disposal of wastes or wastewaters, where evaporation and/or percolation of the wastes or wastewaters are used or intended to be used to prevent point discharge of pollutants into waters of the State. Septic tank systems, as defined in Rule 270-5-25-.01 and as approved by appropriate County Boards of Public Health, are not considered land disposal systems for purposes of Rule 391-3-6-.11.
 - (c) "Land treatment system" means any land disposal system in which vegetation on the site is used to remove some of the pollutants applied;
 - (d) "Treatment requirement" means any restriction or prohibition established under the Act on quantities, rates, or concentrations, or a combination thereof, of chemical, physical, biological, or other constituents which are discharged into a land disposal or land treatment system and then into the waters of the State, including but not limited to schedules of compliance;
 - (e) "Land disposal system permit application" means an application filed by any persons with the Director for a land disposal system permit;
 - (f) "Land disposal system permit" means any permit issued by the Division to regulate the discharge of any pollutant into a land disposal or land treatment system;
 - (g) "Hydraulic loading rate" is the rate at which wastes or wastewaters are discharged to a land disposal or land treatment system, expressed in volume per unit area per unit time or depth of water per unit area per unit.
- (3) **Land Disposal System Permit Requirement.** Any person discharging or proposing to discharge domestic, municipal, commercial, or industrial wastes or wastewaters into a land disposal or land treatment system and then into the waters of the State, under the Act, shall obtain a permit from the Division to make such a discharge. Owners of land disposal or land treatment systems which employ overland flow, subsurface drain fields, or other techniques which result in one or more point discharges into surface waters of the State, must obtain an NPDES permit and will not be issued a land disposal system permit. The provisions of Section [391-3-6-.08](#) regarding pretreatment apply to publicly owned treatment works which employ land disposal or land treatment systems.
- (4) **Degree of Pollutant Treatment Required.**

- (a) All pollutants discharged into land disposal or land treatment system shall receive such treatment or corrective action so as to ensure compliance with the terms and conditions of the issued land disposal system permit. The Division has the authority to establish the degree of treatment required before the pollutant is discharged to a land disposal or a land treatment system and then into waters of the State.
 - (b) Any pollutants which are being discharged or are intended to be discharged to a land disposal or land treatment system in amounts or concentrations which could be toxic or otherwise harmful to humans or biota if those pollutants mingle with waters of the State, or in amounts or concentrations which could reduce or impair the usefulness or operation of the land disposal or land treatment system, must receive such treatment as the Division may specify prior to being discharged to the land disposal or land treatment system.
 - (c) The hydraulic loading rate for any land disposal or land treatment system shall be determined based upon a technical analysis of soils and vegetation in the system area, climatic data characteristics of the wastes to be disposed or treated, and previous experience with similar systems. Hydraulic loading rates may not exceed those established in guidelines issued by the Division unless such technical analysis proves to the satisfaction of the Division that higher rates can be used.
 - (d) No land disposal system permit shall be issued authorizing the discharge of any radiological, chemical, or biological warfare agent or high-level radioactive waste into a land disposal or land treatment system.
 - (e) The groundwater leaving the land disposal systems boundaries must not exceed maximum contaminant levels for drinking water in accordance with Chapter 391-3-5 and subsequent amendments.
- (5) Application for a Land Disposal System Permit.
- (a) Applications for a land disposal system permit under the Act shall be on forms as may be prescribed and furnished from time to time by the Division. Applications shall be accomplished by all pertinent information as the Division may require in order to establish pollutant treatment requirements in accordance with paragraph 391-3-6-.11(4), including but not limited to complete engineering reports, schedule of progress, plans, specifications, maps, measurements, quantitative and qualitative determinations, records, and all related materials.
 - (b) Engineering reports, plans, and specifications submitted to the Division in support of a land disposal system permit application shall be prepared by a professional engineer, competent in the field of sewage and industrial waste treatment. Other materials in support of engineering reports, plans, specifications, and permit applications may be prepared by other persons competent in the field of land disposal or land treatment system technology.

- (c) Materials submitted shall be complete and accurate.
- (d) Any land disposal system permit application form or any other form submitted to the Division shall be signed as follows in accordance with the Federal Regulations [40 CFR 122.22](#):
 - 1. For a corporation, by a responsible corporate officer. For this subparagraph a responsible corporate officer means:
 - (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or
 - (ii) the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
 - 2. For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;

or
 - 3. For a municipality, State, Federal, or other public facility, by either a principal executive officer or ranking elected official.
- (e) All other reports or requests for information required by the permit issuing authority shall be signed by a person designated in (d) above or a duly authorized representative of such person; if:
 - 1. The representative so authorized is responsible for the overall operation of the facility from which the discharge originates, e.g., a plant manager, superintendent or person of equivalent responsibility;
 - 2. The authorization is made in writing by the person designated under (d) above: and
 - 3. The written authorization is submitted to the Director.
- (f) Any changes in the written authorization submitted to the permitting authority under (e) above which occur after the issuance of a permit shall be reported to the permitting authority by submitting a copy of a new written authorization which meets the requirements of (e)1. and 2. above.

- (g) Any person signing any document under (d) or (e) above shall make the following certification: "I certify under penalty of law that this document and all attachments were prepared under direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Comment: The permit application will be revised to incorporate this statement. Where a permit program document does not contain the statement, the certification must accompany the appropriate document.

- (6) Notice and Public Participation. The notice and public participation procedures of Rule 391-3-6-.26 shall apply. The public notice for permits with an approved Sludge Management Plan will also include publication in one or more newspapers of general circulation in the area affected by the discharge.
- (7) Schedule of Compliance.
- (a) Any person who obtains a land disposal system permit pursuant to the Act but who is not in compliance with applicable pollutant treatment requirements and limitations or other requirements contained in such permit at the time same is issued, shall be required to achieve compliance with such pollutant treatment requirements and limitations or other requirements in accordance with the schedule of compliance as set forth in such permit, or in the absence of a schedule of compliance, by the date set forth in such permit which the Director has determined to be the shortest reasonable period of time necessary to achieve compliance;
- (b) Within 14 days after an interim date of compliance or the final date of compliance specified in a land disposal system permits, the permittee shall provide the Director with written notice of his compliance or non-compliance with requirements and conditions specified to be completed by such date. Failure to submit the written notice is just cause for the Division to pursue enforcement action pursuant to the Act;
- (c) A permittee who fails or refuses to comply with an interim or final date of compliance specified in a land disposal system permit may be deemed by the Director to be in violation of the permit and may be subject to enforcement action pursuant to the act.
- (8) Monitoring, Recording and Reporting Requirements.

- (a) Any pollutant discharge into a land disposal or land treatment system and then into the waters of the State authorized by a land disposal system permit issued pursuant to the Act may be subject to such monitoring, recording and reporting requirements as may be reasonably required by the Director including the installation, use and maintenance of monitoring equipment or methods, including monitoring wells; specific requirements for recording of monitoring activities and results; and periodic reporting of monitoring results. The monitoring, recording and reporting requirements shall be specified in a permit when issued, provided, however, the Director may modify or require additional monitoring, recording and reporting by written notification to the permittee.
 - (b) The permittee shall be required to retain any records of monitoring activities and results for a minimum of three (3) years, unless otherwise required or extended by the Director upon written notification.
 - (c) Any holder of a permit which requires monitoring of the authorized pollutant discharge into a land disposal or land treatment system and then into the waters of the State shall report periodically to the Division results of all required monitoring activities on appropriate forms supplied by the Division. The Division shall notify the permittee of the frequency of reporting but in no case shall the reporting frequency be less than once per year.
- (9) Modification, Suspension and Termination of Land Disposal System Permits.
- (a) The Director may revise or modify the schedule of compliance set forth in an issued land disposal system permit if the permittee requests such modification or revision in writing. The Director may grant requests in accordance with this subparagraph if he determines after a documented showing by the permittee that good and valid cause (including acts of God, strikes, floods, material shortages or other events over which the permittee has little or no control) exists for such revision.
 - (b) The Director may modify, suspend or terminate an issued land disposal system permit in whole or in part during its term for cause, including, but not limited to, failure or refusal of the permittee to carry out the requirements of the Act or regulations promulgated pursuant thereto, and if within 30 days following receipt of such notice of such proposed modification, suspension or termination from the Director there is no objection by the permittee in writing. Prior to any such modification, suspension or termination of an issued land disposal system permit by the Director (other than modification or revision of compliance schedule pursuant to subparagraph (a) above or modification of the monitoring, recording or reporting requirements), the Director will provide public notice in accordance with procedures set forth in subparagraph 391-3-6-.11(6)(b) and an opportunity for public hearing in accordance with the procedures set forth in subparagraph 391-3-6-.11(6)(c)

- (10) Non-governmentally Owned Sewerage Systems. In cases involving nongovernmentally owned sewerage systems, a trust indenture or other legal contract or agreement, approved by the Division, assuring continuity of operation of the system, may be required to be filed with the application for a permit. This provision shall not be applicable to systems treating or disposing only industrial waste.
- (11) Duration and Transferability of Land Disposal System Permits.
- (a) Any land disposal system permit issued under the Act shall have a fixed term not to exceed five years. Upon expiration of such permit a new permit may be issued by the Director, provided that an application for renewal is filed with the Director at least 180 days prior to the expiration date of the existing permit. The issuance of such new permit shall likewise have a fixed term not to exceed five years.
- (b) A permit may be transferred to another person by a permittee if:
1. The permittee notifies the Director of the proposed transfer;
 2. A written agreement containing a specific date for transfer of permit responsibility and coverage between the current and new permittees (including acknowledgement that the existing permittee is liable for violations up to that date, and that the new permittee is liable for violations from that date on) is submitted to the Director; and
 3. The Director within thirty (30) days does not notify the current permittee and the new permittee of the Division's intent to modify, revoke and reissue, or terminate the permit and to require that new application be filed rather than agreeing to the transfer of the permit. A new application will be required when the change of ownership is accompanied by a change or proposed change in process or wastewater characteristics or a change or a potential change in any circumstances that the Director believes will affect the conditions or restrictions in the permit.
- (12) **Enforcement.** Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule of compliance or other requirement contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.

History. Original Rule entitled "Land Disposal and Permit Requirements" was filed on June 24, 1980; effective July 14, 1980.

Amended: F. Aug. 30, 1995; eff. Sept. 19, 1995.

Repealed: ER. 391-3-6-0.32-.11, of the same title, adopted. F. May 1, 1996; eff. April 25, 1996, the date of adoption, to remain in effect for a period of 120 days or until the effective date of a permanent Rule covering the same subject matter superseding this ER is adopted, as specified by the Agency.

Amended: Permanent Rule of same title adopted. F. Jul. 10, 1996; eff. July 30, 1996.

Amended: F. May 13, 2020; eff. June 2, 2020.

Rule 391-3-6-.12. Wastewater Treatment Plant Classification.

The following wastewater treatment plant classifications are established as minimum levels. Any plants which do not fit one of these classifications will be classified on a case-by-case basis by the Division. The Division may classify any plant at a higher level based on the complexity or location of the plant or critical uses of the receiving waters.

PLANT TYPE	PERMITTED FLOW (MGD)	CLASSIFICATION (RESPONSIBLE CHARGE OPERATOR)
Biological [suspended growth (i.e., activated sludge), fixed film (i.e., trickling filter) or land application]. See note 1	> 3.0	Class I
Biological [suspended growth (i.e., activated sludge), fixed film (i.e., trickling filter) or land application]. See note 1	> 1.0 to 3.0	Class II
Biological [suspended growth (i.e., activated sludge), fixed film (i.e., trickling filter) or land application]. See note 1	1.0	Class III
Biological, waste stabilization ponds and constructed Wetlands. See Note 1	Any	Class IV
Industrial	Any	Class Industrial or Biological Class I, II, or III

Note 1. This does not apply to industrial or industrial pretreatment facilities. It applies to municipal and private wastewater treatment plants treating domestic or primarily domestic wastewaters. However, if the industrial treatment system is a biological system, it is recommended that the operator obtain a biological certification. Those industries who have a physical/chemical treatment system should have their operators obtain a Class Industrial certification.

Rule 391-3-6-.13. Underground Injection Control.

- (1) **Purpose.** The purpose of this rule, 391-3-6-.13 is to establish classes of injection wells, prohibitions, criteria and standards applicable to injection wells.
- (2) **Definitions.** All terms used in this rule shall be interpreted in accordance with the definitions as set forth in the Act, unless otherwise defined in this Paragraph or in any other Rule of this Chapter. All federal regulations adopted by reference are those in effect as of January 1, 2000.
 - (a) "Abandoned well" means a well whose use has been permanently discontinued or which is in a state of disrepair such that it cannot be used for its intended purpose or for observation purposes.
 - (b) "Aquifer" means a geological formation, group of formations, or part of a formation that is capable of yielding water to a well or spring.
 - (c) "Area of review" means the area surrounding an injection well or field where migration of the injection and/or formation fluid into an underground source of drinking water may occur.
 - (d) "Casting" means a pipe or tubing of appropriate material of varying diameter and weight, lowered into a borehole during or after drilling in order to support the sides of the hole and thus prevent the walls from caving, to prevent loss of drilling mud into porous ground or to prevent water, gas or other fluid from entering or leaving the hole.
 - (e) "Catastrophic collapse" means the sudden and utter failure of overlying strata caused by the removal of underlying materials.
 - (f) "Cementing" means the operation whereby a cement slurry is pumped into a drilled hole and/or forced behind the casing.
 - (g) "Cesspool" means a "drywell" that receives untreated sanitary waste containing human excreta, and which sometimes has an open bottom and/or perforated sides.
 - (h) "Class V septic system" means a "septic system" that handles sanitary and/or other wastes and has the capacity to serve 20 or more persons a day.
 - (i) "Confining bed" means a body of impermeable or distinctly less permeable material stratigraphically adjacent to one or more aquifers.

- (j) "Confining zone" means a geological formation, group of formations, or part of a formation that is capable of limiting fluid movement above or below an injection zone.
- (k) "Contaminant" means any physical, chemical, biological or radiological substance or matter in water.
- (l) "Conventional mine" means an open pit or underground excavation for the production of minerals.
- (m) "Disposal well" means a well used for the disposal of waste into a subsurface stratum.
- (n) "Drainage well" means a well used to drain surface water into a shallow aquifer. An induced recharge well which drains ground water from a shallow aquifer into a deeper aquifer is not a drainage well.
- (o) "Drywell" means a well, other than an improved sinkhole or subsurface fluid distribution system, completed above the water table so that its bottom and sides are typically dry except when receiving fluids.
- (p) "Exempted aquifer" means an aquifer or its portion that meets the criteria in the definition of underground source of drinking water but which has been exempted according to the procedures in Paragraph 391-3-6-.13(4).
- (q) "Facility, operations or activity" means any injection well or system.
- (r) "Fluid" means any material or substance which flows or moves whether in a semisolid, liquid, sludge, gas, or any other form or state.
- (s) "Formation" means a body of consolidated or unconsolidated rock characterized by a degree of lithologic homogeneity which is prevailingly, but not necessarily, tabular and is mappable on the earth's surface or traceable in the subsurface.
- (t) "Formation fluid" means fluid present in a formation under natural conditions as opposed to introduced fluids, such as drilling mud.
- (u) "Generator" means any person, by site location, whose act or process produces hazardous waste identified or listed in Federal Regulations, 40 C.F.R. Part 261.
- (v) "Groundwater" means water below the land surface in the zone of saturation.
- (w) "Grout" means a mixture of not more than six gallons of clear water to one 95-pound bag of Portland cement or a mixture of clear water and bentonite adequate to create an impervious seal. The mixture may contain additives in proper

amounts as necessary to reduce shrinkage and increase compatibility of the grout to injection and formation fluids.

- (x) "Hazardous waste" means a hazardous waste as defined by the Georgia Hazardous Waste Management Act, Georgia Laws 1979, p. 1127, et seq., and the rules adopted pursuant to the Act.
- (y) "Hazardous waste management facility" means all contiguous land and structures, other appurtenances and improvements on the land used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units.
- (z) "Improved sinkhole" means a naturally occurring karst depression or other natural crevice found in other geologic settings which has been modified by man for the purpose of directing and emplacing fluids into the subsurface.
- (aa) "Injection" means the subsurface emplacement of fluids.
- (bb) "Injection well" means a well into which fluids are being or intended to be, injected.
- (cc) "Injection zone" means a geological formation, group of formations, or part of a formation receiving fluids, through a well.
- (dd) "Packer" means a device lowered into a well to produce a fluid-tight seal.
- (ee) "Person" means any individual, corporation, association, partnership, county, municipality, State agency, Federal agency or facility or other entity.
- (ff) "Plugging" means the act or process of stopping the flow of all fluids, including water, oil or gas into or out of a formation through a borehole or well penetrating that formation.
- (gg) "Point of injection" means the last accessible sampling point prior to waste fluids being released into the subsurface environment through an injection well. For example, the point of injection of a Class V septic system might be the distribution box - the last accessible sampling point before the waste fluids drain into the underlying soils. For a drywell, it is likely to be the well bore itself.
- (hh) "Radioactive waste" means any waste which contains radioactive material.
- (ii) "Sanitary waste" means liquid or solid wastes originating solely from humans and human activities, such as wastes collected from toilets, showers, wash basins, sinks used for cleaning domestic areas, sinks used for food preparation, clothes washing operations, and sinks or washing machines where food and beverage serving dishes, glasses, and utensils are cleaned. Sources of these wastes may

include single or multiple residences, hotels and motels, restaurants, bunkhouses, schools, ranger stations, crew quarters, guard stations, campgrounds, picnic grounds, day-use recreation areas, other commercial facilities, and industrial facilities provided the waste is not mixed with industrial waste.

- (jj) "Septic system" means a "well" that is used to emplace sanitary waste below the surface and is typically comprised of a septic tank and subsurface fluid distribution system or disposal system.
- (kk) "Site" means the land or water area where any facility, operation or activity is physically located or conducted, including adjacent land used in connection with the facility, operation or activity.
- (ll) "Stratum (plural strata)" means a single sedimentary bed or layer, regardless of thickness, that consists of generally the same kind of rock material.
- (mm) "Subsidence" means the lowering of the natural land surface in response to: earth movements; lowering of fluid pressure; removal of underlying supporting material by mining or solution of solids, either artificially or from natural causes; compaction due to wetting (hydrocompaction); oxidation of organic matter in soils; or added load on the land surface.
- (nn) "Subsurface fluid distribution system" means an assemblage of perforated pipes, drain tiles, or similar mechanisms intended to distribute fluids below the surface of the ground.
- (oo) "Underground source of drinking water" means all aquifers or portions of aquifers which are not exempted aquifers.
- (pp) "Waters or Waters of the State" includes any and all rivers, streams, creeks, branches, reservoirs, ponds, drainage systems, springs, wells, and all other bodies of surface or subsurface water, natural or artificial, lying within or forming a part of the boundaries of the State which are not entirely confined and retained completely upon the property of a single individual, partnership, or corporation.
- (qq) "Well" means an open bored, drilled or driven shaft, whose depth is greater than the largest surface dimension; or an open dug hole whose depth is greater than the largest surface dimension; or, an improved sinkhole; or a subsurface fluid distribution system. Ditches and drains, open or filled, are not wells.
- (rr) "Well head protection area" means that land area delineated in accordance with Rule [391-3-5-.40](#).
- (ss) "Well injection" means the subsurface emplacement of fluids through a well.

- (tt) All other technical terms shall be defined in accordance to the definitions provided in Driscoll, F.G., 1996, Groundwater and wells, Johnson Division, St. Paul MN 55112.

(3) Classification of Injection Wells.

- (a) Class I Wells. This class consists of industrial and municipal disposal wells that inject fluids other than hazardous waste or radioactive waste below the lowermost formation containing, within two (2) miles of the well bore (or greater distance if determined by the Director), an underground source of drinking water.

- (b) Class II Wells.

- 1. This class consists of wells which inject fluids:

- (i) which are brought to the surface in connection with conventional oil or natural gas production and which may be commingled with wastewaters from gas plants which are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection;
- (ii) for enhanced recovery of oil or natural gas; and
- (iii) for storage of hydrocarbons which are liquid at standard temperature and pressure.

- (c) Class III Wells.

- 1. This class consists of wells which inject fluids for the extraction of minerals including:

- (i) mining of sulfur by the Frasch method;
- (ii) in situ production of uranium or other metals; this category includes only in situ production from ore bodies which have not been conventionally mined. Solution mining of conventional mines such as stops leaching is included in Class V; and
- (iii) solution mining of minerals, such as salt or potash.

- (d) Class IV Wells.

- 1. This class consists of injection wells used by generators of hazardous waste or of radioactive waste, by owners or operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste into the subsurface or ground water.

2. Any septic tank, well or cesspool used by generators of hazardous or radioactive waste, or by owners or operators of hazardous or radioactive waste management facilities, to dispose of fluids containing hazardous or radioactive wastes into the subsurface or ground water.
 3. The subsurface emplacement of hazardous waste or radioactive waste by well injection into the subsurface or waters of the State is hereby prohibited. No permit authorizing or establishing an effluent limitation inconsistent with the foregoing shall be issued.
- (e) Class V wells consists of all injection wells not included in Classes I, II, III, or IV. Typically, Class V wells are shallow wells used to place a variety of fluids directly below the land surface. However, if the fluids placed in the ground qualify as a hazardous waste under the Resource Conservation and Recovery Act (RCRA), the well is a Class IV well, not a Class V well. Class V wells include, but are not limited to:
1. Air conditioning return flow wells or any other open-loop system used to return to the supply aquifer or any aquifer the water used for heating or cooling in a heat pump;
 2. Large-capacity cesspools including multiple dwelling, community or regional cesspools, or other devices that receive sanitary wastes, containing human excreta, which have an open bottom and sometimes have perforated sides. These requirements do not apply to single family residential cesspools nor to nonresidential cesspools which receive solely sanitary waste and have the capacity to serve fewer that 20 persons a day;
 3. Cooling water return flow wells used to inject water previously used for cooling;
 4. Drainage wells used to drain surface fluid, primarily storm runoff, into a subsurface formation;
 5. Drywells used for the injection of wastes into a subsurface formation;
 6. Recharge wells used to replenish or store water in an aquifer;
 7. Remediation wells used to inject water, air, oxygen, nutrients, or partly clean water to remediate sites contaminated with hydrocarbons or chemicals;
 8. Salt water intrusion barrier wells used to inject water into a fresh water aquifer to prevent the intrusion of salt water into the fresh water;

9. Sand backfill and other backfill wells used to inject a mixture of water and sand, mill tailings or other solids into mined out-ports of subsurface mines whether what is injected is a radioactive waste or not;
10. Septic system wells used to inject the waste or effluent from a multiple dwelling business establishment, community or regional business establishment septic system. These rules do not apply to single family residential septic system wells, nor to non-residential septic system wells that are used solely for the disposal of sanitary waste and have the capacity to serve fewer than 20 persons a day.

(4) Identification of Underground Sources of Drinking Water and Exempted Aquifers.

- (a) The Director may identify by narrative description, illustrations, maps, or other means, and shall protect, except where exempted under subparagraph (b) of this paragraph, as an underground source of drinking water, all aquifers or parts of aquifers which meet the definition of an "underground source of drinking water" for the purposes of these rules. Unless specifically exempted by the Director under subparagraph (b) of this paragraph, all aquifers shall be considered, for the purposes of these rules, as underground sources of drinking water.
- (b) The Director may identify by narrative description, illustrations, maps, or other means, all aquifers or parts of aquifers which the Director proposes to designate as an exempted aquifer, for the purposes of these rules, if it meets the following criteria:
 1. It does not currently serve as a source of drinking water;
 2. The total dissolved solids (TDS) is greater than 3,000 milligrams per liter;
 3. Injection into the aquifer will not cause salt water to move into and contaminate underground sources of drinking water; and
 4. It cannot now and will not in the future serve as a source of drinking water because;
 - (i) it is mineral, hydrocarbon or geothermal energy producing or can be demonstrated by a permit applicant for a Class II or III operation to contain minerals or hydrocarbons, that considering their quantity and location, are expected to be commercially producible based on available information; or
 - (ii) it is situated at a depth or location which makes recovery of water for drinking water purposes economically or technologically impractical; or

- (iii) it is so contaminated that it would be economically or technologically impractical to render the water fit for human consumption; or
 - (iv) it is located over a Class III mining area subject to subsidence or catastrophic collapse.
 - (c) For Class III wells, the Director shall require an applicant for a permit which necessitates an aquifer exemption to furnish the data necessary to demonstrate that the aquifer is expected to be mineral or hydrocarbon producing. Information contained in the mining plan for the proposed project, such as a map and general description of the mining zone, general information on the mineralogy and geochemistry of the mining zone, analysis of the amenability of the mining zone to the proposed mining method and a timetable of planned development of the mining zone shall be considered by the Director in addition to the information required by Rule 391-3-6-.13(6). Approval of the aquifer exemption shall be treated as a program revision under this paragraph.
 - (d) For Class II wells, a demonstration of commercial productibility shall be made as follows:
 - 1. For a class II well to be used for enhanced oil recovery processes in a field or project containing aquifers from which hydrocarbons were previously produced, commercial productibility shall be presumed by the Director upon a demonstration by the applicant of historical production having occurred in the project area or field.
 - 2. For Class II wells, not located in a field or project containing aquifers from which hydrocarbons were previously produced, information such as logs, core data, formation description, formation depth, formation thickness and formation parameters such as permeability and porosity shall be considered by the Director, to the extent such information is available.
 - (e) No designation of an exempted aquifer, for the purposes of these rules, shall be final until the Director has provided public notice and opportunity for a public hearing on the proposed designation and the designation has been approved by the Administrator.
- (5) Prohibition of Movement of Fluid into Underground Sources of Drinking Water.
- (a) No owner or operator shall construct, operate, maintain, convert, plug, abandon, or conduct any other injection activity in a manner that allows the movement of fluid containing any contaminant into underground sources of drinking water, if the presence of that contaminant may cause a violation of any primary drinking water

regulation under Georgia's Rules for Safe Drinking Water, Chapter 391-3-5, or may otherwise adversely affect the health of persons. The applicant for a permit shall have the burden of showing that the requirements of this paragraph are met.

- (b) Except for remediation wells, injection of fluids shall be prohibited in the inner management zone of any wellhead protection area defined by Rule [391-3-5-40](#).
- (6) Permit Application for Class I, II and III Wells.
- (a) No person shall, in accordance with the Act, construct or operate a Class I, II, or III injection well without first having applied for, and obtained, an injection well permit from the Director. The requirements for Class II wells do not include permits for exploration, drilling and well construction for oil and/or gas production.
 - (b) The subsurface emplacement of hazardous waste or radioactive waste by well injection into the subsurface or waters of the State is hereby prohibited. No permit authorizing or establishing an effluent limitation inconsistent with the foregoing shall be issued.
 - (c) Applications for injection well permits for Class I, II or III injection wells shall be in accordance with Federal Regulations, [40 C.F.R. 144.11](#), [144.21](#), and [144.31](#). Applications shall be on forms as may be prescribed and furnished from time to time by the Division and shall be accompanied by all pertinent information as the Division may request including, but not limited to, the information the Director must consider for authorizing Class I, II or III wells as set forth in the Federal Regulations, [40 C.F.R. 146.14](#), [146.24](#) and [146.34](#).
 - (d) All permit applications and reports for Class I, II, or III injection wells shall be signed in accordance with the Federal Regulations, [40 C.F.R. 144.32](#), [146.12](#) and [146.22](#).
 - (e) When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit.
- (7) Notice and Public Participation for Class I, II and III Wells.
- (a) When the Division is satisfied that the application is complete, a tentative determination will be made to issue or deny the permit. If the tentative determination is to issue the permit, a draft permit will be prepared in accordance with Federal Regulations, [40 C.F.R. 124.6](#) and applicable State laws prior to the issuance of a public notice. The notice and public participation procedures of Rule 391-3-6-.26 shall apply for Class I, II and III Wells.
- (8) Terms and Conditions of Permits for Class I, II, or III Wells.

- (a) Terms and conditions under which an Injection Well will be permitted will be specified on the permit issued and shall be in accordance with Federal Regulations, [40 C.F.R. 144.4](#), [40 C.F.R. 144.51](#) and [40 C.F.R. 144.52](#), Paragraph 391-3-6-.13(9) of this Rule and as may be additionally required by the Director.
- (b) No Injection Well Permit shall be issued authorizing the movement of fluid containing any contaminant into underground sources of drinking water if the presence of that contaminant may cause a violation of any primary drinking water regulation set forth in Georgia Rules for Safe Drinking Water, Chapter 391-3-5, or may otherwise adversely affect the health of persons. The applicant for a permit shall have the burden of showing that the requirement of this paragraph is met.
- (c) When the corrective action plan as required in Paragraph 391-3-6-.13(9) is adequate, the Director shall incorporate it into the permit as a condition. Where the Director's review of an application indicates that the permittee's plan is inadequate (based on the factors in Federal Regulations, 40 C.F.R. 146.07), the Director shall require the applicant to revise the plan, prescribe a plan for corrective action as a condition of the permit under paragraph (b) of this section, or deny the application.
1. No owner or operator of a new injection well may begin injection until all required corrective action has been taken.
 2. The Director may require as a permit condition that injection pressure be so limited that pressure in the injection zone does not exceed hydrostatic pressure at the site of any improperly completed or abandoned well within the area of review. This pressure limitation shall satisfy the corrective action requirement. Alternatively, such injection pressure limitation can be part of a compliance schedule and last until all other required corrective action has been taken.
 3. When setting corrective action requirements for Class III wells the Director shall consider the overall effect of the project on the hydraulic gradient in potentially affected underground sources of drinking water, and the corresponding changes in potentiometric surface(s) and flow direction(s) rather than the discrete effect of each well. If a decision is made that corrective action is not necessary based on the determinations above, the monitoring program required in Federal Regulations, [40 C.F.R. 146.33\(b\)](#) shall be designed to verify the validity of such determination.
- (d) The permittee shall report any monitoring or other information which indicates any contaminant that may cause an endangerment of an underground source of drinking water, any noncompliance that may endanger health or the environment, or any noncompliance with a permit condition or malfunction of the injection system which may cause fluid migration into or between fresh water zones or underground sources of drinking water. Any noncompliance with a permit condition or malfunction of the injection information shall be reported by

telephone to the Director within twenty-four (24) hours from the time the permittee becomes aware of the noncompliance and a written submission within five (5) days of the oral notification. The written submission shall contain a description of the noncompliance and its cause, the period of noncompliance including exact dates and times, the corrective action taken to reduce or eliminate the noncompliance, and the steps planned to prevent a recurrence of the noncompliance.

- (e) The permittee is required to maintain financial responsibility and resources to close, plug and abandon the underground injection operation in a manner prescribed by the Director. The permittee must show evidence of financial responsibility to the Director by the submission of surety bond, or other adequate assurance, such as financial statements or other materials acceptable to the Director.
- (f) The permittee shall operate the well so as not to exceed maximum injection volumes and pressures as necessary to assure that fractures are not initiated in the confining zone; that injected fluids do not migrate into fresh water zones or underground sources of drinking water; or that formation fluids are not displaced into underground sources of drinking water. The Director shall establish such volumes and pressure limits as permit conditions.
- (g) Injection may not commence until construction is complete and written approval to commence has been given by the Director. The permittee shall submit notice of completion of construction to the Director including:
 - 1. All available logging and testing program data on the well;
 - 2. A demonstration of the mechanical integrity of the well;
 - 3. The anticipated maximum pressure and flow rate at which the permittee will operate;
 - 4. The results of the formation testing program;
 - 5. The actual injection procedure;
 - 6. The compatibility of injected waste with the fluids in the injection zone; and
 - 7. The status of corrective action on defective wells in the area of review to prevent fluid movement into underground sources of drinking water.
- (h) The permittee shall notify the Director in writing of any proposal to abandon an injection well and that the plugging and abandonment plan approved as part of the permit will be followed.

- (i) A permit shall be issued for a period not to exceed five (5) years from the date of issuance. On expiration of the permit the permit shall become invalid and the injection prohibited unless application is made at least ninety (90) days prior to the expiration date for a reissuance of the permit. When a permittee has submitted a timely and sufficient application for a new Injection Well Permit and the Director is unable, through no fault of the permittee, to issue the new permit before the expiration date of the existing permit, then the Director shall extend the existing permit until a new permit is issued.
- (j) A permit may be transferred to any person provided the permittee notifies the Director in writing at least 30 days in advance of the proposed transfer date and the transfer is approved by the Director.
- (k) The permit does not convey any property rights of any sort or any exclusive privilege.
- (l) The permit may be modified, revoked and reissued, or terminated for cause, or minor modifications may be made in accordance with Federal Regulations, [40 C.F.R. 124.5](#), [144.39](#) and [144.41](#). The permittee shall furnish the Director any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing or terminating permit or to determine compliance with the permit.
- (m) The Director may terminate a permit during its term or deny a permit renewal for the following causes:
 - 1. Noncompliance by the permittee with any conditions of the permit;
 - 2. The permittee's failure in the application or during the permit issuance process to disclose fully all relevant facts, or the permittee's misrepresentation of any relevant facts at any time;
 - 3. A determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification or termination; or
 - 4. A failure by the permittee to demonstrate that continuation of the operation under the permit will not result in degradation of the water quality.
- (n) For Class I, II and III Wells, if any water quality monitoring of an underground source of drinking water indicates the movement of any contaminant into the underground source of drinking water, the Director shall prescribe such additional requirements for construction, corrective action, operation, monitoring or reporting (including closure of the injection well) as are necessary to prevent such movement.

- (o) Notwithstanding any other provisions of this rule the Director may issue a temporary permit for a specific injection in accordance with the Federal Regulations, [40 C.F.R. 144.34](#)

(9) Corrective Action.

- (a) Applicants for Class I, II, or III injection well permits shall identify the location of all known wells within the injection well's area of review which penetrate the injection zone, or in the case of Class II wells operating over the fracture pressure of the injection formation, all known wells within the area of review penetrating formations affected by the increase in pressure. For such wells which are improperly sealed, completed, or abandoned, the applicant shall also submit a plan consisting of such steps or modifications as are necessary to prevent movement of fluid into underground sources of drinking water (corrective action). Where the plan is adequate, the Director shall incorporate it into the permit as a condition. Where the Director's review of an application indicates that the permittee's plan is inadequate (based on the factors in subparagraph 391-3-6-.13(8)(c)), the Director shall require the applicant to revise the plan, prescribe a plan for corrective action as a condition of the permit under subparagraph (b) of this paragraph or deny the application.
- (b) In determining the adequacy of corrective action proposed by the applicant under this paragraph and in determining the additional steps needed to prevent fluid movement into underground sources of drinking water, the following criteria and factors shall be considered by the Director;
 1. Nature and volume of injected fluid;
 2. Nature of native fluids or by-products of injection;
 3. Potentially affected population;
 4. Geology;
 5. Hydrology;
 6. History of the injection operation;
 7. Completion and plugging records;
 8. Abandonment procedures in effect at the time the well was abandoned; and
 9. Hydraulic connections with underground sources of drinking water.

(10) Criteria and Standards Applicable to Class I, II, and III Injection Wells.

- (a) Each permittee shall comply with the criteria and standards for underground injection control for Class I, II and III injection wells as set forth in the Federal Regulations, [40 C.F.R. 146.12](#), [146.22](#) and [146.32](#) and as may be additionally prescribed by the Director.
 - (b) All Class I wells shall be sited in such a fashion that they inject into a formation which is beneath the lowermost formation containing, within a two (2) mile radius of the well bore or greater if determined by the Director, an underground source of drinking water.
 - (c) All Class II wells shall be sited in such a fashion that they inject into a formation which is separated from an underground source of drinking water by a confining zone that is free of known open faults or fractures within the area of review.
 - (d) Operating, monitoring and reporting requirements shall be in accordance with Federal Regulations, [40 C.F.R. 146.13](#), [40 C.F.R. 146.23](#) and [40 C.F.R. 146.33](#) and as may be additionally prescribed by the Director.
- (11) Permit Application for Class V Wells.
- (a) Except as identified in subparagraph 1. below, no person shall, after the effective date of this rule, construct or operate a Class V injection well for the injection of contaminants or fluids unless authorized by a permit issued by the Director.
 - 1. In accordance with O.C.G.A. [12-5-30\(f\)](#), the use of a Class V septic system that handles only sanitary wastes shall be permitted under a General Permit issued by the Director. The General Permit and a list of all Class V septic systems shall be maintained in the offices of the Division.
 - (b) After the effective date of this rule, use of a new or existing Class V septic system that handles sanitary and/or other wastes shall be permitted by the Director provided that a written hydrogeologic determination has been made by a professional geologist or professional engineer registered in the State of Georgia in accordance with Chapter 19 or Chapter 15, respectively, of Title 43 that such a system does not endanger an underground source of drinking water nor is such a system within the inner management zone of any existing well head protection area. For those Class V septic systems that will be covered under the general land application system permit for large community systems, the Director will accept a hydrogeologic determination by a professional geologist or professional engineer or a written soil report prepared by a qualified soil scientist. The soil scientist will have qualifications meeting the requirements of O.C.G.A. [12-2-10\(b\)](#) and must be certified by the Georgia Department of Human Resources to conduct soil investigations for on-site sewage management systems.
 - (c) The use of a Class V remediation well that is used as part of a Division-approved plan to remediate a site having contaminated soil and/or ground water shall be

permitted by the Director provided that such an approved plan has been prepared and signed and sealed by a professional geologist or professional engineer registered in the State of Georgia in accordance with Chapter 19 or Chapter 15, respectively, of Title 43.

- (d) Class V wells apply to all injection wells not included in Classes I, II, III or IV. Class V wells are defined in subparagraph 391-3-6-.13(3)(e).
- (e) Exclusive of the authorizations indicated in subparagraphs (a)1. above of this paragraph, any person desiring to construct a Class V well shall apply in writing to the Director for an injection well permit. Any persons owning or operating any unpermitted well meeting the definitions of a Class V well, exclusive of the authorizations described in subparagraph (a)1. above of this paragraph, prior to the effective date of this rule shall submit an application and information to the Director no later than July 1, 2001. The application shall include, but need not be limited to, the following information:
 - 1. Name, mailing address, telephone number, latitude and longitude and location of the facility;
 - 2. Name and address of the owner and operator, telephone number, if different than the facility;
 - 3. A map showing the location of each existing or proposed injection well at the facility;
 - 4. A diagram showing the details of the construction existing injection well(s) and the proposed construction of any proposed injection well(s).
 - 5. Proposed or existing injection rate and injection pressure or gravity flow;
 - 6. The chemical, physical and radioactive, characteristics of the fluid injected or to be injected; and
 - 7. Signature of the applicant.
- (f) Upon receipt of the application, the Director shall:
 - 1. Determine if the facility is a Class V well.
 - 2. Determine if additional information is required to evaluate the facility.
 - 3. Assess the potential adverse effect upon the underground source of drinking water.
 - 4. Determine any construction and operating requirements to protect the underground drinking water source.

- (g) After an evaluation of the application, the Director shall:
 - 1. Issue a permit in the form of a letter containing any special permit conditions as may be necessary such as well construction, operation, monitoring and reporting. The permit shall be for a period not to exceed ten (10) years.
 - 2. If the Director determines that the facility is not a Class V well, he shall require the applicant to submit a permit application in accordance with Paragraph 391-3-6-.13(6) of this Rule. The application processing and permit issuance shall be in accordance with Paragraphs 391-3-6-.13(7) and 391-3-6-.13(8).
 - 3. Deny the issuance of a permit.
- (h) No person shall be issued a permit to operate a Class V well where the movement of fluid, in the judgment of the Director, may cause a violation of any primary drinking water rule under the Georgia Rules for Safe Drinking Water, Chapter 391-3-5, or which may adversely affect the health of persons.
 - 1. If at any time the Director learns that a permitted Class V well may cause a violation under this rule, the Director shall:
 - (i) order the injector to take such actions as may be necessary to prevent the violation, including where required closure of the injection well; or
 - (ii) take enforcement action.
 - 2. Notwithstanding any other provisions of this rule, the Director may take emergency action upon receipt of information that a contaminant which is present in, or is likely to enter a public water system, may present an imminent and substantial endangerment to the health of persons.
- (i) Any persons operating an existing unpermitted Class V well and injecting fluids after the effective date of this rule shall be authorized to continue the operation under conditions of permits or other authorization in effect prior to the effective date of this rule, provided an application is submitted within twelve months after the effective date of this rule. An exception to this rule is that any person injecting fluids that may endanger an underground source of drinking water shall notify the Director within thirty (30) days of the effective date of this rule.

(12) Standards and Criteria Applicable to Class V Wells.

- (a) Except as identified in subparagraph 391-3-6-.13(11)(a)1. above, no person shall construct a Class V well without first having applied for and obtained a permit from the Director.
- (b) Class V wells shall be sited so that the injection fluid does not contaminate an underground source of drinking water.
- (c) Except for remediation wells, the injected fluid, upon reaching any underground source of drinking water, shall not contain any chemical constituents that exceed any Maximum Contaminant Levels (MCL) identified in Rule [391-3-5-.18](#). For Class V septic systems, the fluid leaving the subsurface distribution system may exceed any maximum contaminant levels (MCLs) identified in Rule [391-3-5-.18](#) provided that the MCL is not exceeded upon the fluid reaching any underground source of drinking water.
- (d) With the exception of remediation wells, no Class V well shall be located within the inner management zone of any wellhead protection area after the effective date of this rule.
- (e) Class V well construction. Subsections 1., 2. and 3. below shall not apply to Class V septic systems as identified in subparagraphs 391-3-6-.13(11)(a)1. and (b) above:
 - 1. The person constructing the well shall be a licensed water well contractor in the State of Georgia in accordance with the provisions of Chapter 5 of title 12.
 - 2. Casing shall extend at least five (5) feet into the injection zone unless otherwise specified by the Director.
 - 3. The annular space around the entire length of the casing shall be grouted and sealed to prevent pollution by surface waters, other formation fluids or pollutants into the formation above the injection zone.
 - 4. Special construction requirements may be specified by the Director or the permit to prevent contamination of an underground source of drinking water.
 - 5. Septic systems shall be constructed in accordance with the Georgia Department of Human Resources requirements in 290-5-26.
- (f) An injection permit may be transferred to any person provided the permittee notifies the Director in writing at least 30 days in advance of the proposed transfer date and the transfer is approved by the Director.

- (g) A permit issued by the Director may include permit conditions for the monitoring, testing and reporting of the injection facility.
 - (h) Plugging and Abandonment. Except for septic systems identified in subparagraphs 391-3-6-.13(11)(a)1. and 2. above, the following shall apply:
 - 1. The Director may order a Class V well plugged and abandoned by the owner when it no longer performs its intended purpose, or when it is determined to endanger underground sources of drinking water.
 - 2. It shall be the owner's responsibility to have any injection well plugged and abandoned by the water well contractor before removing the drilling equipment from the site if the well is not completed for its intended purpose.
 - 3. It shall be the owner's responsibility to have any exploratory and/or test well(s) constructed for the purpose of obtaining information on an injection well site, plugged and abandoned by the water well contractor.
 - 4. The entire depth of the well shall be completely filled with cement grout, which shall be introduced into the well by a pipe which extends to the bottom of the well and is raised as well is filled, unless otherwise approved by the Director.
- (13) Mechanical Integrity. Except for septic systems as identified in subparagraphs 391-3-6-.13(11)(a)1. and 2. above, the following shall apply:
- (a) An injection well has mechanical integrity if:
 - 1. There is no detectable leak in the casing, tubing or packer; and
 - 2. There is no detectable fluid movement into an underground source of drinking water through vertical channels adjacent to the injection well bore.
 - (b) One of the following methods must be used to evaluate the absence of detectable leaks under subparagraph 391-3-6-.13(13)(a)1.:
 - 1. Monitoring of annulus pressure; or
 - 2. Pressure test with liquid or gas.
 - (c) The methods used to determine the absence of detectable fluid movement into an underground source of drinking water shall be the results of a temperature or sonic log.

- (d) In conducting and evaluating the tests for mechanical integrity, the owner or operator and the Director shall apply methods and standards generally accepted in the industry. When the owner or operator reports the results of mechanical integrity tests to the Director, the report shall include a description of the test(s) and method(s) used. The Director, in making an evaluation shall review monitoring and other test data submitted since the previous evaluation.
 - (e) The Director may waive mechanical integrity testing of remediation wells in shallow unconfined aquifers.
- (14) Plugging and Abandoning Class I, II and III Wells.
- (a) The permittee shall inform the Director in writing of the permittee's intent to abandon an injection well at least forty-five (45) working days prior to the abandonment.
 - (b) The permittee shall be responsible for the plugging of any injection well that is abandoned. Such plugging shall be in accordance with the criteria identified in Chapter 5 (120-138) of Title 12.
 - (c) Wells shall be plugged with cement in a manner which will not allow the movement of fluids either into or between underground sources of drinking water.
 - (d) The placement of the cement shall be accomplished under pressure from bottom to top.
 - (e) The well to be cemented shall be in a state of static equilibrium with the mud weight equalized top to bottom, either by circulating the mud in the well at least once or by a comparable method prescribed by the Director, such as the use of a packer, prior to the placement of the cement plugs.
 - (f) The Director may require ground water monitoring after well abandonment if contamination of an underground source of drinking water is suspected.
 - (g) The permittee shall certify to the Director within thirty (30) days of plugging that the injection well was plugged according to permitted procedures.
- (15) Emergency Action. If at any time the Director learns that an injection well may cause or has caused the movements of any fluids containing contaminants into an underground source of drinking water or otherwise adversely affect the water quality or adversely affect the public health, the Director shall:
- (a) Order the injector to cease the operation and take such actions as may be necessary to prevent the violation;

- (b) Order the injector to take such actions as may be necessary to correct the violation;
 - (c) Take enforcement action; or
 - (d) Take emergency action upon receipt of information that a contaminant is likely to enter a public water system and present an imminent and substantial endangerment to the health of the public.
- (16) Prohibited Wells. The following types of wells are specifically prohibited Statewide.
- (a) All Class IV wells that are used to emplace hazardous waste or radioactive waste into the subsurface.
 - (b) New drainage wells, except where such wells have been permitted and designed by a professional geologist or professional engineer registered in the State of Georgia in accordance with Chapter 19 or Chapter 15, respectively, of Title 43 and the injected fluid does not contain any chemical constituent that exceeds any Maximum Contaminant Level (MCL) identified in Rule [391-3-5-.18](#).
 - (c) New large-capacity cesspools are prohibited. A large-capacity cesspool receives sanitary waste from multiple dwellings and community or regional establishments serving more than 20 persons a day. Existing large-capacity cesspools shall be closed by April 5, 2005. Such closure shall include a 30-day notification prior to closure. Well closure shall include removal of contaminated materials, disinfection, and plugging with an impervious bentonite-cement mixture. Closure shall be in accordance with criteria identified in Chapter 5 (120-138) of Title 12.
 - (d) Open loop heat pump systems where return water is discharged into a well.
 - (e) Motor vehicle waste disposal wells.

[Rule 391-3-6-.14. State Revolving Fund.](#)

- (1) **Purpose.** The purpose of Rule 391-3-6-.14 is to provide for the administration and operation of the State Revolving Loan Fund.
- (2) **Definitions.** All terms used in this Paragraph shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Paragraph of these Rules.
 - (a) "State Revolving Loan Fund" means the loan program developed pursuant to the Federal Clean Water Act of 1987.
 - (b) "Intended Use Plan" means the annual plan developed to describe that year's operation and procedures for the Revolving Loan Fund.
- (3) **General Provisions.**
 - (a) The manner of administration of the State Revolving Loan Fund shall be determined pursuant to a contract between the Director and any other State agency, authority, board, or commission and such administration shall comply with all applicable requirements of the Federal Clean Water Act of 1987. In the event that the Director determines that the financial administration is to be handled by the Division, the manner of administration shall be included in the annual Intended Use Plan and shall likewise comply with all applicable requirements of the Federal Clean Water Act of 1987.
 - (b) The forms of assistance to be provided by the State Revolving Loan Fund shall be in accordance with the annual Intended Use Plan, to be developed by the Director.
- (4) **Environmental Review.** All projects; defined in the Clean Water Act Section 212 (2) (A) as any devices and systems used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature, including intercepting sewers, outfall sewers, sewage collection systems, pumping, power, and other equipment, and their appurtenances; extensions, improvements, remodeling, additions, and alterations thereof; receiving assistance from the State Revolving Loan Fund shall first undergo a review of environmental impacts and considerations. This review shall be in accordance with procedures developed by the Director and approved by the U. S. Environmental Protection Agency.
 - (a) The loan applicant will be required to prepare an Environmental Information Document (EID), which describes the environmental impacts of the feasible alternatives, including a no-action alternative. The applicant will consult with federal and State agencies as appropriate for information required in preparing the EID. The applicant will conduct at least one public meeting during the planning process. The public will be allowed open discussion in the facilities planning process.
 - (b) The State will perform an environmental review prior to issuing a Notice of No Significant Impact. The Director will prepare a detailed procedure for loan

applicants to prepare the EID and for the State review process. Documents concerning the impact of the project on the environment shall be issued by the Director or his designated representative as necessary.

- (c) All final determinations made by the Director pursuant to the environmental review process shall constitute actions of the Director pursuant to O.C.G.A. Section [12-2-2\(c\)\(2\)](#).

- (5) **Application of State Programs.** Actions consistent with Title VI of the Federal Clean Water Act of 1987 (P.L. 100-4) shall be taken with regard to the State Revolving Loan Fund.

Rule 391-3-6-.15. Non-Storm Water General Permit Requirements.

- (1) **Purpose.** The purpose of this Rule 391-3-6-.15 is to provide for the degree of waste treatment required and the uniform procedures and practices to be followed relating to the application for issuance, modification, revocation and reissuance, and termination of general permits for the discharge of any pollutant into the waters of the State. Unless specifically adopted by reference herein, no other part of this Chapter 391-3-6 shall govern the issuance of any general permit.
- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Rules of this Chapter:
- (a) "General Permit Application" means any application filed by any person with the Director for a general permit.
- (b) A "General Permit" means an NPDES permit issued under Title 40 of the Code of Federal Regulations (40 CFR), Part 122.28 authorizing a category of discharges under the Federal Clean Water Act (Federal Act) within a geographical area.

- (c) "Notice of Intent" (NOI) means a form used by potential permittee to notify the Division, within a specified time, that they intend to comply with a general permit.
- (d) "Notice of Termination" (NOT) means a form used by a permittee to notify the Division that they wish to cease coverage under a general permit.

(3) General Permit Requirements.

- (a) Coverage. The Director may issue a general permit in accordance with the following:
 - 1. Area. The general permit shall be written to cover a category of discharges described in the permit under subparagraph (3)(a)2 of this section, except those covered by individual permits, within a geographic area. The area shall correspond to existing geographic or political boundaries, such as:
 - (i) Designated planning areas under Sections 208 and 303 of the Federal Act;
 - (ii) Sewer districts or sewer authorities;
 - (iii) City, County, or State political boundaries;
 - (iv) State highway systems;
 - (v) Standard metropolitan statistical areas as defined by the Office of Management and Budget;
 - (vi) Urbanized areas as designated by the Bureau of the Census; or
 - (vii) Any other appropriate division or combination of boundaries.
 - 2. Sources. The general permit may be written to regulate, within the area described in subparagraph 1. of this section, a category of point sources other than storm water point sources if the sources all:
 - (i) Involve the same or substantially similar types of operations;
 - (ii) Discharge the same types of wastes;
 - (iii) Require the same effluent limitations or operating conditions;
 - (iv) Require the same or similar monitoring; and
 - (v) In the opinion of the Director, are more appropriately controlled under a general permit than under individual permits.

(b) Administration.

1. General permits may be issued, modified, revoked and reissued, or terminated in accordance with applicable requirements of Rule 391-3-6-.15. Public notice and public participation for issuance, modification, revocation and reissuance, and termination of general permits shall be in accordance with Paragraph 391-3-6-.15(7).
2. Authorization to discharge.
 - (i) Except as provided for in [40 C.F.R 122.28\(b\)\(2\)\(v\) and \(b\)\(2\)\(vi\)](#), discharges seeking coverage under a general permit shall submit to the Director a written notice of intent to be covered by the general permit. A discharger who fails to submit a notice of intent in accordance with the terms of the general permit is not authorized to discharge under the terms of the general permit. A complete and timely notice of intent to be covered in accordance with the general permit requirements, fulfills the requirements for permit applications for purposes of [40 C.F.R. 122.6](#), [122.21](#) and [122.26](#).
 - (ii) The contents of the notice of intent shall be specified in the general permit and shall conform to the requirements specified in [40 C.F.R. 122.28](#). The notice of intent shall be signed in accordance with subparagraph 391-3-6-.15(5)(d).
 - (iii) General permits shall specify the deadline for submitting notices of intent to be covered and the date(s) when a discharge is authorized under the permit.
 - (iv) General permits shall specify whether a discharge that has submitted a timely notice of intent to be covered in accordance with a general permit and that is eligible for coverage under the general permit, is authorized to discharge in accordance with the general permit either upon receipt of the notice of intent by the Director, after a waiting period specified in the general permit, on a date specified in the general permit, or upon receipt of notification of inclusion by the Director. Coverage may be revoked in accordance with subparagraph 391-3-6-.15(3)(b) 3.
3. Requiring an individual permit.
 - (i) The Director may require any person authorized by a general permit to apply for and obtain an individual NPDES permit. Any interested person may petition the Director to take action under this rule. Cases where an individual NPDES permit may be required include the following:

- (I) The discharge(s) is a significant contributor of pollution as determined by the Director. In making this determination, the Director may consider the following factors:
 - I. The location of the discharge with respect to the waters of the State;
 - II. The size of the discharge;
 - III. The quantity and nature of the pollutants discharged to waters of the State; and
 - IV. Other relevant factors.
 - (II) The discharger is not in compliance with the conditions of the general permit;
 - (III) A change has occurred in the availability of demonstrated technology or practices for the control or abatement or pollutants applicable of the point source;
 - (IV) Effluent limitation guidelines are promulgated for point sources covered by the general permit;
 - (V) A Water Quality Management plan containing requirements applicable to such point sources is approved;
 - (VI) The requirements of subparagraph (3)(a) of this section are not met; or
 - (VII) Circumstances have changed since the time of the request to be covered so that the discharger is no longer appropriately controlled under the general permit, or either a temporary or permanent reduction or elimination of the authorized discharge is necessary.
- (ii) Any owner or operator authorized by a general permit may request to be excluded from the coverage of the general permit by applying for an individual NPDES permit. The owner or operator shall submit an application under paragraph [391-3-6-.06\(5\)](#), with reasons supporting the request, to the Director.
 - (iii) When an individual NPDES permit is issued to an owner or operator otherwise subject to a general permit, the applicability of

the general permit to the individual NPDES permittee is automatically terminated on the effective date of the individual NPDES permit.

- (iv) A source excluded from a general permit solely because it already has an individual NPDES permit may request that the individual NPDES permit be revoked, and that it be covered by the general permit. Upon revocation of the individual NPDES permit, the general permit shall apply to the source.
- (v) Whenever the Director decides an individual NPDES permit is required, the Director shall notify the discharger in writing of the decision and the reasons for it, and shall send an application form with the notice. The discharger must apply for a permit under paragraph [391-3-6-.06\(5\)](#) and [40 C.F.R. 122.21](#) within sixty (60) days of notice unless a later date is granted by the Director. Public notice and public participation shall be in accordance with paragraph [391-3-6-.06\(7\)](#).

(4) **Degree of Waste Treatment Required.** All pollutants shall receive such treatment or corrective action so as to ensure compliance with the terms and conditions of the issued permit and with the following, whenever applicable:

- (a) Effluent limitations established by the EPA pursuant to Sections 301, 302, 303, 306, 307, 308, 318, and 405 of the Federal Act;
- (b) Criteria and standards for Best Management Practices established by EPA pursuant to Section 304(e) of the Federal Act;
- (c) Notwithstanding the above, more stringent effluent limitations may be required as deemed necessary by the Division (a) to meet any other existing Federal laws or regulations, or (b) to ensure compliance with any applicable State water quality standards, effluent limitations, treatment standards, or schedules of compliance;
- (d) Calculations and specification of effluent limits and standards shall be made in accordance with the provisions of Federal Regulations, [40 CFR 122.45](#).

(5) **Notice of Intent (NOI).**

- (a) A NOI shall be on forms as may be prescribed and furnished from time to time by the Division. A NOI shall be accompanied by all pertinent information as the Division may require in order to establish, where applicable, effluent limitations in accordance with paragraph [391-3-6-.06\(4\)](#), which may include but is not limited to, complete engineering reports, schedule of progress, plans, specifications, maps,

measurements, quantitative and qualitative determinations, records, and all related materials.

- (b) Engineering reports, plans, specifications, and other similar material submitted to the Division shall be prepared by or under the direct supervision or review of, and bear the seal of, a Professional Engineer competent in the field of storm water, sewage, or industrial waste treatment, consistent with the type of wastewater involved. At no time shall this requirement be in conflict with O.C.G.A. Section 43-15 governing the practices of professional engineering and surveying.
- (c) Material submitted shall be complete and accurate.
- (d) Any NOI form, NOT form, and permit application submitted to the Division shall be signed as follows in accordance with the Federal Regulations, [40 C.F.R. 122.22](#):
 - 1. For a corporation, by a responsible corporate officer. For this subparagraph a responsible corporate officer means:
 - (a) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or
 - (b) the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;
 - 2. For a partnership or sole proprietorship, by a general partner or the proprietor, respectively; or
 - 3. For a municipality, State, Federal, or other public facility, by either a principal executive officer or ranking elected official.
- (e) All other reports, engineering reports, plans, specifications, similar materials, or requests for information required by the permit issuing authority shall be signed by a person designated in (d) above or a duly authorized representative of such person, if:
 - 1. The representative so authorized is responsible for the overall operation of the facility from which the discharge originates, e.g., a plant manager, superintendent or person of equivalent responsibility;

2. The authorization is made in writing by the person designated under (d) above; and
 3. The written authorization is submitted to the Director.
- (f) Any changes in the written authorization submitted to the permitting authority under (e) above which occur after the issuance of a permit shall be reported to the permitting authority by submitting a copy a new written authorization which meets the requirements of (e)1. and (e)2. above.
- (g) Any person signing any document under (d) or (e) above shall make the following certification: "I certify under penalty of law that this document and all attachments were prepared under direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."
- (6) **Receipt and Use of Application and Data** shall be in accordance with paragraph [391-3-6-06\(6\)](#) of this Chapter. Notice of intent forms shall not be required to be transmitted to the Regional Administrator for comments unless requested to do so by the Regional Administrator.
- (7) **Notice and Public Participation.** The notice and public participation procedures of Rule 391-3-6-.26 shall apply.
- (8) **Prohibitions.**
- (a) No permit shall be issued authorizing any of the following discharges:
 1. The discharge of any radiological, chemical, or biological warfare agent or high-level radioactive waste into navigable waters;
 2. Any discharge which in the judgement of the Secretary of the Army would substantially impair anchorage and navigation in or on any of the waters of the United States;
 3. Any discharge to which the Regional Administrator has objected in writing in accordance with Federal Regulations, [40 C.F.R. 123.44](#), pursuant to any right to object provided the Administrator of EPA under Section 402(d) of the Federal Act;

4. Any discharge from a point source is in conflict with a plan or amendment thereto approved pursuant to Section 208(b) of the Federal Act;
 5. Any discharge to the territorial sea, the waters of the contiguous zone, or the oceans in the following circumstances:
 - (i) Prior to the promulgation of the guidelines under section 403(c) of the Act, unless the Director determines permit issuance to be in the public interest; or
 - (ii) After promulgation of guidelines under section 403(c) of the Act, where insufficient information exists to make a reasonable judgement as to whether the discharge complies with any such guidelines.
 6. To a facility which is a new source or a new discharge, if the discharge from the construction or operation of the facility will cause or contribute to the violation of water quality standards, except as in accordance with Federal Regulations, [40 C.F.R. 122.4\(i\)](#).
- (b) The issuance of a permit does not:
1. Convey any property rights of any sort, or any exclusive privileges;
 2. Authorize any injury to private property or invasion of private rights, or any infringement of Federal, State, or local laws or regulations;
 3. Release the permittee of any responsibility or requirement under other environmental statutes or regulations.
- (9) **Monitoring, Recording, and Reporting Requirements.**
- (a) Monitoring, recording and reporting requirements shall be in accordance with those outlined in paragraph [391-3-6-.06\(11\)](#) of this Chapter.
 - (b) General permits that do not require submittal of monitoring reports at least annually shall report to the Director in writing all instances of noncompliance at least annually. These annual reports are due the first working day of each January unless otherwise specified in a permit.
- (10) **Control of Disposal of Pollutants into Wells** shall be in accordance with paragraph [391-3-6-.06\(14\)](#).
- (11) **Modification, Revocation and Reissuance, and Termination of Permits.**

The Director in accordance with the provisions of Federal Regulations, [40 C.F.R. 122.61](#), [122.62](#), [122.63](#), [122.64](#), and [124.5](#), may modify, revoke and reissue, or terminate an issued permit in whole or in part during its term for cause, including, but not limited to, the causes listed in Federal Regulations, [40 CFR 122.62](#) and [122.64](#), or the cause listed in the Act or regulations promulgated pursuant thereto. Prior to any such modification, revocation and reissuance, or termination of an issued permit by the Director (other than modification in accordance with the provision of [40 CFR 122.63](#)), the Director will give public notice in accordance with the procedures set forth in subparagraph 391-3-6-.15(7)(b) and an opportunity for public hearing in accordance with the procedures set forth in subparagraph 391-3-6-.15(7)(c).

(12) Duration, Continuation, and Transferability of Permits.

- (a) Any permit issued under O.C.G.A. Section [12-5-30](#) shall have a fixed term not to exceed five (5) years. Upon expiration of such permit, a new permit may be issued by the Director in accordance with O.C.G.A. Section [12-5-30](#) and [40 C.F.R. 122.6](#), [122.28](#), [122.46](#), and [122.61](#). The issuance of such new permit shall likewise have a fixed term not to exceed five (5) years.
- (b) Any owner or operator authorized by a general permit may request that coverage under the general permit be terminated by submitting a written Notice of Termination. The contents of the Notice of Termination shall be specified in the general permit and shall be signed in accordance with subparagraph 391-3-6-.15(5)(d).
- (c) When the permittee has submitted a timely and sufficient application for a new individual NPDES permit or a Notice of Intent for a general permit and the Director is unable, through no fault of the permittee, to issue the new permit before the expiration date of the existing permit, then the Director shall extend the existing permit until a new permit is issued.
- (d) For those industrial categories for which EPA will establish effluent limitations based on best available technology, permits will be issued to ensure compliance with the effluent limits by the statutory deadline. This will be accomplished by utilizing short-term permits and/or reopener clauses that will allow the permit to be modified, revoked, reissued to comply with limitations promulgated pursuant to the Act and subsequent regulations.
- (e) Notwithstanding subparagraph (a) above, if a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under Section 307(a) of the Act for a toxic pollutant which is present in a discharge and such standard prohibition is more stringent than any limitation for such pollutant in a permit, the permit shall be revised or modified in accordance with the toxic effluent standard or prohibition and the permittee so notified.

- (13) **Enforcement.** Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule of compliance or other requirement contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.
- (14) **NPDES Electronic Reporting.** The federal NPDES Electronic Reporting rule, 40 CFR Part 127 and associated amendments, became effective on December 21, 2015. The requirements of this rule relating to the submission of Notices of Intent, Notices of Termination and reports may include the electronic submission of such items and electronic signature for such items, as applicable and approved by EPD. The use of the terms "in writing" or "written" in the rule may include such electronic submissions.
- (15) **Effective Date.** This Rule shall become effective twenty days after filing with the Secretary of State's Office.

Rule 391-3-6-.16. Storm Water Permit Requirements.

- (1) **Purpose.** The purpose of this Rule 391-3-6-.16 is to provide for the uniform procedures and practices to be followed relating to the application for issuance, modification, revocation and reissuance, and termination of permits for the discharge of any storm water into the waters of the State. Unless specifically adopted by reference herein, no other part of this Chapter 391-3-6 shall govern the issuance of any storm water permit.
- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act and in [40 C.F.R. 122.26\(b\)](#) unless otherwise defined in this Paragraph or in any other Rules of this Chapter:
 - (a) "Area Wide Permit" means either an individual or a general permit issued to a municipality or a group of municipalities.
 - (b) "Associated with Industrial Activity" means any industrial activity or industrial facility identified in [40 C.F.R. 122.26\(b\)\(14\)](#).

- (c) "Storm Water Point Source" means a conveyance or system of conveyances (including pipes, conduits, ditches, and channels or sheet flow which is later conveyed) primarily used for collecting and conveying storm water runoff excluding conveyances that discharge storm water runoff combined with municipal sewage.
- (d) "Associated with Small Construction Activity" means any construction activity identified in [40 C.F.R. 122.26\(b\)\(15\)](#).
- (e) "Small Municipal Storm Sewer System" means all separate storm sewers identified in [40 C.F.R. 122.26\(b\)\(16\)](#).

(3) Permit Requirements.

- (a) Authorization to Discharge. Storm water point sources, as defined in this Rule, are point sources subject to the NPDES permit program. The Director may issue an NPDES permit or permits for discharges into waters of the State from a storm water source covering all conveyances which are part of that storm water point source. Where there is more than one owner or operator of a storm water point source, any or all discharges into that storm water point source may be identified in the application submitted by the owner or operator of the portion of the storm water point source that discharges directly into waters of the State. Any such application shall include all information regarding discharges into the storm water point source that would be required if the dischargers submitted separate applications. Dischargers so identified shall not require a separate permit unless the Director specifies otherwise. Any permit covering more than one owner or operator shall identify the effluent limitations, if any, which apply to each owner or operator. Where there is more than one owner or operator, no discharger into the storm water point source may be subject to a permit condition for discharges into the storm water source other than its own discharges into that system without his consent. All dischargers into a storm water point source must either be covered by an individual permit, an area wide permit or a general permit issued to the owner or operator of that portion of the system that directly discharges into waters of the State.
- (b) Applicability. The following discharges composed entirely of storm water are required to obtain an NPDES permit for the storm water discharge:
 1. Associated with industrial activity;
 2. Large municipal separate storm sewer systems;
 3. Medium municipal separate storm sewer systems; and
 4. Any storm water point source that the Director determines to contribute to a violation of a water quality standard or is a significant contributor of

pollutants to the waters of the State as provided in [40 C.F.R. 122.26](#). In making this determination the Director shall consider the following factors:

- (i) The location of the storm water point source with respect to waters of the State;
- (ii) The size of the storm water point source;
- (iii) The quantity and nature of the pollutants reaching waters of the State; and
- (iv) Other relevant factors.

5. Case-by-case designation of storm water point sources. The Director may designate a conveyance or system of conveyances primarily used for collecting and conveying storm water runoff as a storm water point source. This designation may be made to the extent allowed or required by effluent limitations guidelines for point sources in the storm water discharge category or when a Water Quality Management Plan under Section 208 of the Federal CWA Act which contains requirements applicable to such point sources is approved.
6. Associated with Small Construction Activity.
7. Small Municipal Separate Storm Sewer Systems which are required to be regulated pursuant to [40 C.F.R. 122.32](#).
8. Any storm water point source for which the Director determines that storm water controls are needed based on wasteload allocations that are part of total maximum daily loads that address the pollutant(s) of concern.
9. Any municipal separate storm sewer system that the Director determines based on a petition pursuant to [40 C.F.R. 122.26\(f\)](#).
10. The Director may allow certain industrial activities to receive a conditional exclusion for "no exposure" of industrial activities and materials to storm water based on [40 C.F.R. 122.26\(g\)](#).

(c) General provisions.

1. General and area wide permits may be issued, modified, revoked and reissued, or terminated in accordance with applicable requirements of Rule 391-3-6-.16. Public notice and public participation for issuance, modification, revocation and reissuance, and termination of general permits shall be in accordance with paragraph 391-3-6-.16(7).

2. The contents of the notice of intent shall be specified in the general permit and shall conform to the requirements specified in [40 C.F.R. 122.28](#). The notice of intent shall be signed in accordance with subparagraph 391-3-6-.16(5)(a) 6.
3. General permits shall specify the deadline for submitting notices of intent to be covered and the date(s) when a discharge is authorized under the permit.
4. General permits shall specify whether a discharger that has submitted a timely notice of intent to be covered in accordance with a general permit and that is eligible for coverage under the general permit, is authorized to discharge in accordance with the general permit either upon receipt of the notice of intent by the Director, after a waiting period specified in the general permit, on a date specified in the general permit, or upon receipt of notification of inclusion by the Director. Coverage may be revoked in accordance with subparagraph 391-3-6-.16(3)(c)(5).
5. Requiring an individual permit for storm water discharges.
 - (i) The Director may require any person authorized by a general permit for storm water discharges to apply for and obtain an individual NPDES permit. Any interested person may petition the Director to take action under this paragraph. Cases where an individual NPDES permit may be required include the following:
 - (I) The discharge(s) is a significant contributor of pollution as determined by the Director. In making this determination, the Director may consider the following factors:
 - (1) The location of the discharge with respect to the waters of the State;
 - (2) The size of the discharge;
 - (3) The quantity and nature of the pollutants discharged to waters of the State; and
 - (4) Other relevant factors.
 - (II) The discharger is not in compliance with the conditions of the general permit;
 - (III) A change has occurred in the availability of demonstrated technology or practices for the control or abatement of pollutants applicable to the point source;

- (IV) Effluent limitation guidelines are promulgated for point sources covered by the general permit;
 - (V) A total maximum daily load containing additional requirements applicable to such point sources is approved; or
 - (VI) Circumstances have changed since the time of the request to be covered so that the discharger is no longer appropriately controlled under the general permit, or either a temporary or permanent reduction or elimination of the authorized discharge is necessary.
- (ii) Any owner or operator authorized by a general permit may request to be excluded from the coverage of the general permit by applying for an individual NPDES permit. The owner or operator shall submit an application under paragraph [391-3-6-.06\(5\)](#), with reasons supporting the request, to the Director.
 - (iii) When an individual NPDES permit is issued to an owner or operator otherwise subject to a general permit, the applicability of the general permit to the individual NPDES permittee is automatically terminated on the effective date of the individual NPDES permit.
 - (iv) A source excluded from a general permit solely because it already has an individual NPDES permit may request that the individual NPDES permit be revoked, and that it be covered by the general permit. Upon revocation of the individual NPDES permit, the general permit shall apply to the source.
 - (v) Whenever the Director decides an individual NPDES permit is required, the Director shall notify the discharger in writing of the decision and the reasons for it, and shall send an application form with the notice. The discharger must apply for a permit under paragraph [391-3-6-.06\(5\)](#) and [40 C.F.R. 122.21](#) within sixty (60) days of notice unless a later date is granted by the Director. Public notice and public participation shall be in accordance with paragraph [391-3-6-.06\(7\)](#).
- (4) **Degree of Waste Treatment Required.** All pollutants shall receive such treatment or corrective action so as to ensure compliance with the terms and conditions of the issued permit and with the following, whenever applicable:

- (a) Effluent limitations established by the EPA pursuant to Sections 301, 302, 303, 306, 307, 308, 318, and 405 of the Federal Act;
- (b) Criteria and standards for Best Management Practices established by EPA pursuant to Section 304(e) of the Federal Act;
- (c) Notwithstanding the above, more stringent effluent limitations may be required as deemed necessary by the Division (a) to meet any other existing Federal laws or regulations, or (b) to ensure compliance with any applicable State water quality standards, effluent limitations, treatment standards, or schedules of compliance; and
- (d) Calculations and specifications of effluent limits and standards shall be made in accordance with the provisions of Federal Regulations, [40 CFR 122.44\(k\)](#) and [122.45](#); provided, however, that in regard to [40 CFR 122.44\(k\)\(2\)](#), the feasibility of establishing numeric effluent limitations shall be made by the Director based upon best professional judgment.

(5) Applications.

- (a) Application Requirements.
 - 1. Large and medium municipal separate storm sewer systems shall submit an application in accordance with the requirements specified in [40 C.F.R. 122.26\(d\)](#) and [40 C.F.R. 122.26\(g\)](#) unless otherwise modified by the Director.
 - 2. Small municipal separate storm sewer systems shall submit an application in accordance with the requirements specified in [40 C.F.R. 122.33](#) unless otherwise modified by the Director.
 - 3. Discharges associated with industrial activity and discharges associated with small construction activity shall either submit an application for an individual NPDES permit in accordance with Rule [391-3-6-.06](#) or apply for coverage under a general permit in accordance with Rule 391-3-6-.16. Application for an individual NPDES permit shall be made in accordance with Rule [391-3-6-.06](#) and [40 C.F.R. 122.26\(c\)](#) and [40 C.F.R. 122.26\(g\)](#). A discharger who fails to submit a notice of intent in accordance with the terms of the general permit is not authorized to discharge under the terms of the general permit. A complete and timely notice of intent to be covered in accordance with the general permit requirements, fulfills the requirements for permit applications for purposes of [40 C.F.R. 122.6](#), [122.21](#) and [122.26](#).
 - 4. Notice of Intent (NOI). A NOI shall be on forms as may be prescribed and furnished from time to time by the Division. A NOI shall be accompanied by all pertinent information as the Division may require in order to

establish, where applicable, effluent limitations in accordance with paragraph [391-3-6-.06\(4\)](#), which may include but is not limited to, complete engineering reports, schedule of progress, plans, specifications, maps, measurements, quantitative and qualitative determinations, records, and all related materials.

5. Engineering reports, plans, specifications, and other similar material submitted to the Division shall be prepared by or under the direct supervision or review of, and bear the seal of, a Professional Engineer competent in the field of storm water, sewage, or industrial waste treatment, consistent with the type of wastewater involved. At no time shall this requirement be in conflict with O.C.G.A. Section 43-15 governing the practices of professional engineering and surveying. Storm water pollution prevention plans, erosion and sediment control plans, best management plans and similar reports shall be prepared in accordance with the applicable storm water permit.
6. Material submitted shall be complete and accurate.
7. Any NOI form, NOT form, and permit application submitted to the Division shall be signed as follows in accordance with the Federal Regulations, [40 C.F.R. 122.22](#):
 - (i) For a corporation, by a responsible corporate officer. For this subparagraph a responsible corporate officer means:
 - (a) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or
 - (b) the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
 - (ii) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively; or
 - (iii) For a municipality, State, Federal, or other public facility, by either a principal executive officer or ranking elected official.

8. All other reports, engineering reports, plans, specifications, similar materials, or requests for information required by the permit issuing authority shall be signed by a person designated in 6. above or a duly authorized representative of such person, if:
 - (i) The representative so authorized is responsible for the overall operation of the facility from which the discharge originates, e.g., a plant manager, superintendent or person of equivalent responsibility;
 - (ii) The authorization is made in writing by the person designated under 6. above; and
 - (iii) The written authorization is submitted to the Director.
9. Any changes in the written authorization submitted to the permitting authority under 7. above which occur after the issuance of a permit shall be reported to the permitting authority by submitting a copy of a new written authorization which meets the requirements of 7.(i) and 7.(ii) above.
10. Any person signing any document under 6. or 7. above shall make the following certification: "I certify under penalty of law that this document and all attachments were prepared under direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

(b) Application Deadlines.

1. Application for an individual NPDES permit for storm water discharges associated with industrial activity shall be submitted at least 180 days before the day that the facility commences industrial activity which may result in a discharge of storm water associated with industrial activity, unless permission for a later date is granted by the Director.
2. Facilities with storm water discharges associated with industrial activity that are applying for coverage under a general permit shall comply with the Notice of Intent submittal requirements specified in the general permit.

3. Facilities with stormwater discharges associated with small construction activity that are applying for coverage under a general permit shall comply with the Notice of Intent requirements specified in the general permit.
 4. In municipalities with a population of less than 100,000, municipality owned or operated facilities with storm water discharges associated with industrial activity shall submit an application in accordance with [40 C.F.R. 122.26\(e\)\(1\)](#) except for airports, power plants, uncontrolled sanitary landfills, and those designated by the Director, which shall follow the application deadlines designated under (1.) above.
 5. Large municipal separate storm sewer systems shall submit an application to the Director in accordance with [40 C.F.R. 122.26\(e\)\(3\)](#).
 6. Medium municipal separate storm sewer systems shall submit an application to the Director in accordance with [40 C.F.R. 122.26\(e\)\(4\)](#).
 7. Facilities identified in subparagraph 391-3-6-.16(3)(b) 4., 5. or 6. shall submit an application to the Director within 180 days of notice, unless permission is granted for a later date.
 8. Small municipal separate storm sewer systems shall submit an application to the Director in accordance with [40 C.F.R. 122.26\(e\)\(9\)](#).
 9. Small construction shall apply in accordance with [40 C.F.R. 122.26\(e\)\(8\)](#).
- (6) **Receipt and Use of Application and Data** shall be in accordance with paragraph [391-3-6-.06\(6\)](#) of this Chapter. Notice of Intent and Notice of Termination forms shall not be required to be transmitted to the Regional Administrator for comments unless requested to do so by the Regional Administrator.
- (7) **Notice and Public Participation.** The notice and public participation procedures of Rule 391-3-6-.26 shall apply to the tentative determination to issue individual or general permits.
- (8) **Prohibitions.**
- (a) No permit shall be issued authorizing any of the following discharges:
 1. The discharge of any radiological, chemical, or biological warfare agent or high-level radioactive waste into navigable waters;
 2. Any discharge which in the judgment of the Secretary of the Army would substantially impair anchorage and navigation in or on any of the waters of the United States;

3. Any discharge to which the Regional Administrator has objected in writing in accordance with Federal Regulations, [40 C.F.R. 123.44](#), pursuant to any right to object provided the Administrator of EPA under Section 402(d) of the Federal Act;
 4. Any discharge from a point source which is in conflict with a plan or amendment thereto approved pursuant to Section 208(b) of the Federal Act;
 5. Any discharge to the territorial sea, the waters of the contiguous zone, or the oceans in the following circumstances:
 - (i) Prior to the promulgation of the guidelines under section 403(c) of the Act, unless the Director determines permit issuance to be in the public interest; or
 - (ii) After promulgation of guidelines under section 403(c) of the Act, where insufficient information exists to make a reasonable judgment as to whether the discharge complies with any such guidelines.
 6. To a facility which is a new source or a new discharger, if the discharge from the construction or operation of the facility will cause or contribute to the violation of water quality standards, except as in accordance with Federal Regulations, [40 C.F.R. 122.4\(i\)](#).
- (b) The issuance of a permit does not:
1. Convey any property rights of any sort, or any exclusive privileges;
 2. Authorize any injury to private property or invasion of private rights, or any infringement of Federal, State, or local laws or regulations.
 3. Release the permittee of any responsibility or requirement under other environmental statutes or regulations.
- (9) **Schedules of Compliance.** Any person who obtains a permit who is not in compliance with the applicable standards shall be required to achieve compliance with the standards in accordance with a schedule of compliance as set forth in subparagraphs [391-3-6-.06\(10\)\(a\), \(b\), \(c\), and \(e\)](#) of this Chapter. This provision is not applicable to general permits.
- (10) **Monitoring, Recording, and Reporting Requirements.**

Except as provided below, monitoring, recording, and reporting requirements shall be in accordance with those outlined in paragraph [391-3-6-.06\(11\)](#) of this Chapter.

- (a) Inspection, monitoring, recording, and reporting requirements for general permits for storm water discharges associated with industrial activity, which do not contain numeric effluent limitations, shall, at the discretion of the Director, be established for each general permit on a case-by-case basis with a frequency dependent on the nature and effect of the discharge. At a minimum, the permit must require:
 - 1. an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity and evaluate whether measures to reduce pollutant loadings identified in a storm water pollution prevention plan are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed;
 - 2. maintaining for a period of three years a record summarizing the results of the inspections and a certification that the facility is in compliance with the storm water pollution prevention plan and the permit, and identifying any incidents of non-compliance;
 - 3. reports and certifications be signed in accordance with [40 CFR 122.22](#); and
 - 4. where annual inspections are impracticable at inactive mining operations, a certification once every three years by a Georgia Registered Professional Engineer that the facility is in compliance with the permit.
 - (b) Requirements for area wide permits for storm water discharges from municipal separate storm water sewer systems shall be established for each permit on a case-by-case basis.
 - (c) General permits that do not require submittal of monitoring reports at least annually shall report to the Director in writing all instances of noncompliance at least annually. These annual reports are due the first working day of each January unless otherwise specified in a permit.
- (11) **Control of Disposal of Pollutants into Wells** shall be in accordance with paragraph [391-3-6-.06\(14\)](#).
- (12) **Modification, Revocation and Reissuance, and Termination of Permits.**
- (a) The Director may revise or modify the schedule of compliance set forth in an issued permit if the permittee requests such modification or revision in writing and such modification or revision will not cause an interim date in the compliance schedule to be extended more than one hundred twenty (120) days or affect the final date in the compliance schedule. The Director may grant requests in accordance with this subparagraph if he determines after documented showing by the permittee that good and valid cause (including Acts of God, strikes,

floods, material shortages or other events over which the permittee has little or no control) exists for such revision. This provision is not applicable to general permits.

- (b) The Director in accordance with the provisions of Federal Regulations, [40 CFR 122.61](#), [122.62](#), [122.63](#), [122.64](#), and [124.5](#), may modify, revoke and reissue, or terminate an issued permit in whole or in part during its term for cause, including, but not limited to, the causes listed in Federal Regulations, [40 CFR 122.62](#) and [122.64](#), or the cause listed in the Act or regulations promulgated pursuant thereto. Prior to any such modification, revocation and reissuance, or termination of an issued permit by the Director (other than modification or revision of a compliance schedule pursuant to subparagraph (a) above, or modification in accordance with the provisions of [40 CFR 122.63](#)), the Director will give public notice in accordance with the procedures set forth in subparagraph 391-3-6-.16(7)(b) and an opportunity for public hearing in accordance with the procedures set forth in subparagraph 391-3-6-.16(7)(c).

(13) Duration, Continuation, and Transferability of Permits.

- (a) Any permit issued under O.C.G.A. Section [12-5-30](#) shall have a fixed term not to exceed five (5) years. Upon expiration of such permit, a new permit may be issued by the Director in accordance with O.C.G.A. Section [12-5-30](#) and [40 C.F.R. 122.6](#), [122.28](#), [122.46](#), and [122.61](#). The issuance of such new permit shall likewise have a fixed term not to exceed five (5) years.
- (b) Any owner or operator authorized by a general permit may request that coverage under the general permit be terminated by submitting a written Notice of Termination. The contents of the Notice of Termination shall be specified in the general permit and shall be signed in accordance with subparagraph 391-3-6-.16(5)(a) 6.
- (c) A general permit may not be transferred to another party. The new owner or operator must submit a new Notice of Intent in accordance with paragraph 391-3-6-.16(5).
- (d) Any owner or operator authorized by an individual permit for a storm water discharge may request the permit be transferred to another party in accordance with subparagraph [391-3-6-.06\(15\)\(b\)](#).
- (e) When the permittee has submitted a timely and sufficient application for a new individual NPDES permit or a Notice of Intent for a general permit and the Director is unable, through no fault of the permittee, to issue the new permit before the expiration date of the existing permit, then the Director shall extend the existing permit until a new permit is issued.

- (f) For those industrial categories for which EPA will establish effluent limitations based on best available technology, permits will be issued to ensure compliance with the effluent limits by the statutory deadline. This will be accomplished by utilizing short-term permits and/or reopener clauses that will allow the permit to be modified, revoked, reissued to comply with limitations promulgated pursuant to the Act and subsequent regulations.
 - (g) Notwithstanding subparagraph (a) above, if a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under Section 307(a) of the Act for a toxic pollutant which is present in a discharge and such standard prohibition is more stringent than any limitation for such pollutant in a permit, the permit shall be revised or modified in accordance with the toxic effluent standard or prohibition and the permittee so notified.
- (14) **Enforcement.** Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule of compliance or other requirement contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.
- (15) **NPDES Electronic Reporting.** The federal NPDES Electronic Reporting rule, 40 CFR Part 127 and associated amendments, became effective on December 21, 2015. The requirements of this rule relating to the submission of applications, Notices of Intent, Notices of Termination and reports may include the electronic submission of such items and electronic signature for such items, as applicable and approved by EPD. The use of the terms "in writing" or "written" in the rule may include such electronic submissions.
- (16) **Effective Date.** This Rule shall become effective twenty days after filing with the Secretary of State's Office.

Amended: F. May 13, 2020; eff. June 2, 2020.

Rule 391-3-6-.17. Sewage Sludge (Biosolids) Requirements.

- (1) **Purpose.** The purpose of Rule [391-3-6-.17](#) is to establish requirements for the beneficial use of sewage sludge through land application. This rule includes general requirements,

pollutant limits, pathogen and vector attraction reduction requirements, operational standards, management practices, monitoring, record keeping reporting, and permitting requirements.

- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this Paragraph or in any other Rules of this Chapter:
- (a) "Aerobic digestion" is the biochemical decomposition of organic matter in sewage sludge into carbon dioxide and water by microorganisms in the presence of air.
 - (b) "Agricultural land" is land on which a food crop, feed crop, or a fiber crop is grown. This includes land used as pasture.
 - (c) "Agronomic rate" is the sludge application rate based on a dry weight basis determined:
 - 1. to provide the amount of nitrogen needed by the food crop, feed crop, fiber crop, cover crop or vegetation grown on the land; and
 - 2. to minimize the amount of nitrogen in the sewage sludge that passes below the root zone of the crop or vegetation grown on the land to the groundwater.
 - (d) "Anaerobic digestion" is the biochemical decomposition of organic matter in sewage sludge into methane gas and carbon dioxide by microorganisms in the absence of air.
 - (e) "Annual pollutant loading rate" is the maximum amount of a pollutant that may be applied to a unit area of land during a 365-day period.
 - (f) "Annual sludge application rate" is the maximum amount of sewage sludge (dry weight basis) that may be applied to a unit area of land during a 365-day period.
 - (g) "Applier" is the person who applies bulk sewage sludge to the land.
 - (h) "Biosolids" means any sewage sludge, as defined in [391-3-6-.17\(2\)\(gg\)](#), that fulfills all requirements under this chapter, and is used in a beneficial manner.
 - (i) "Bulk sewage sludge" or "bulk biosolids" is sewage sludge that is not sold or given away in a bag or other container for application to the land.
 - (j) "Cover crop" is a temporary crop, such as winter rye or clover, planted to protect the soil from erosion and to provide humus or nitrogen when plowed under.
 - (k) "Cumulative pollutant loading rate" is the maximum amount of an inorganic pollutant that may be applied to an area of land.

- (l) "Density of microorganisms" is the number of microorganisms per unit mass of total solids (dry weight) in the sewage sludge.
- (m) "Domestic sewage" is water waste and wastewater from humans or from household operations that are discharged to or that otherwise enter a treatment works.
- (n) "Dry weight basis" means calculated on the basis of having been dried at 105 degrees Celsius until reaching a constant mass (i.e., essentially 100 percent solids content).
- (o) "Exceptional quality sludge" is sewage sludge that meets the pollutant concentrations in [391-3-6-.17\(5\)](#) Table 3, one of the Class A pathogen requirements in [391-3-6-.17\(7\)\(a\)](#) and one of the vector attraction reduction requirements in [391-3-6-.17\(8\)\(a\) through \(h\)](#).
- (p) "Facility" means any NPDES point source or any other system or activity that may be regulated by the Water Protection Branch of the EPD, including land application systems regulated under [391-3-6-.11](#), and industrial pretreatment systems regulated under [391-3-6-.08](#).
- (q) "Feed crops" are crops produced primarily for consumption by animals.
- (r) "Fiber crops" are crops such as flax and cotton.
- (s) "Food crops" are crops consumed by humans. These include, but are not limited to, fruits, vegetables, and tobacco.
- (t) "Forest" is a tract of land thick with trees and underbrush.
- (u) "Land application" or "applied to the land" means the spraying or spreading of sewage sludge on the land surface; the injection of sewage sludge below the land surface; or the incorporation of sewage sludge into the soil at agronomic rates for the purpose of soil conditioning or fertilization of crops or vegetation grown in the soil.
- (v) "Land with a high potential for public exposure" is land that is frequently used by the public. This includes but is not limited to public parks, ball fields, cemeteries, plant nurseries, turf farms, and golf courses.
- (w) "Land with a low potential for public exposure" is land that the public uses infrequently. This includes, but is not limited to, agricultural land, forest, and a reclamation site located in an unpopulated area.
- (x) "Monthly average" is the arithmetic mean of all measurements taken during the month.

- (y) "Other container" is either an open or closed receptacle. This includes, but is not limited to, a bucket, a box, a carton, and a vehicle or trailer with a load capacity of 2,200 pounds or less.
- (z) "Pasture" means land on which animals feed directly on feed crops such as legumes, grasses, grain stubble, or stover.
- (aa) "Pathogenic organisms" are disease-causing organisms. These include, but are not limited to, certain bacteria, protozoa, viruses, and viable helminth ova.
- (bb) "pH" means the logarithm of the periodical of the hydrogen ion concentration.
- (cc) "Pollutant" is an organic substance, an inorganic substance, a combination of organic and inorganic substances, or a pathogenic organism that after discharge and upon exposure, ingestion, inhalation, or assimilation into an organism either directly from the environment or indirectly by ingestion through the food chain, could, on the basis of information available to the Administrator of EPA, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunction in reproduction), or physical deformations in either organisms or offspring of the organisms.
- (dd) "Pollutant limit" is a numerical value that describes the amount of a pollutant allowed per unit amount of sewage sludge (e.g., milligrams per kilograms of total solids); the amount of a pollutant that can be applied to a unit area of land (e.g., pounds per acre); or the volume of a material that can be applied to a unit area of land (e.g., gallons per acre).
- (ee) "Preparer" is either the person who generates sewage sludge during the treatment of domestic sewage or a combination of domestic sewage and industrial wastewater in a treatment works or the person who derives a material from sewage sludge.
- (ff) "Reclamation site" means drastically disturbed land that is reclaimed using sewage sludge or product derived from sewage sludge. This includes, but is not limited to, strip mines and construction sites.
- (gg) "Sewage sludge" means solid, semi-solid, or liquid residue generated during the treatment of domestic sewage or a combination of domestic sewage and industrial wastewater in a treatment works. Sewage sludge includes, but is not limited to scum or solids removed in primary, secondary, or advanced wastewater treatment processes. Sewage sludge does not include ash generated during the firing of sewage sludge incinerator, grit and screenings generated during preliminary treatment of domestic sewage in a treatment works, treated effluent, or materials excluded from definition of "sewage sludge" by O.C.G.A. § [12-5-30-.3\(a\)\(1\)](#).

- (hh) "Sludge management plan" means a detailed plan of operation for land application of sewage sludge, or any other method of sewage sludge disposal other than co-disposal in a permitted sanitary landfill. The plan shall, at a minimum, comply with the regulations and any additional requirements established by the EPD pursuant to the Federal Act Section 405(d), the Resource Conservation and Recovery Act (RCRA), and 40 CFR 503.
- (ii) "Specific oxygen uptake rate (SOUR)" is the mass of oxygen consumed per unit time per unit mass of total solids (dry weight basis) in the sewage sludge.
- (jj) "Stockpile" means to place sewage sludge on land in piles or in any other manner that does not constitute application to the land as defined in [391-3-6-.17\(2\)\(u\)](#).
- (kk) "Total solids" are the materials in sewage sludge that remain as residue when the sewage sludge is dried at 103 to 105 degrees Celsius.
- (ll) "Treat or treatment of sewage sludge" is the preparation of sewage sludge for final use or disposal. This includes, but is not limited to, thickening, stabilization, dewatering of sewage sludge.
- (mm) "Treatment works" is either a Federally owned, publicly owned, or privately owned device or system used to treat, recycle or reclaim either domestic sewage or combination of domestic sewage and industrial wastewater.
- (nn) "Unstabilized solids" are organic materials in sewage sludge that have not been treated in either an aerobic or anaerobic treatment process.
- (oo) "Vector attraction" is the characteristic of sewage sludge that attracts rodents, flies, mosquitos, or other organisms capable of transporting infectious agents.
- (pp) "Volatile solids" is the amount of the total solids in sewage sludge lost when the sewage sludge is combusted at 550 degrees Celsius in the presence of excess air.
- (qq) "Wetlands" means those areas that are inundated or saturated by surface water or ground water at a frequency and duration to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

(3) Coverage.

- (a) This rule applies to any person who prepares sewage sludge for land application or who applies sewage sludge to the land, to any sewage sludge applied to the land, and to the land on which sewage sludge is applied.
- (b) This rule does not apply to:

1. Processes used to treat sewage or processes used to treat sewage sludge before final use or disposal, except as provided in [391-3-6-.17\(7\)](#) and [391-3-6-.17\(8\)](#).
2. Sewage sludge determined to be hazardous in accordance with [40 CFR 261](#).
3. Grit and screenings generated during preliminary treatment of domestic sewage or a combination of domestic sewage and industrial wastewater in a treatment works.
4. Sludge generated during treatment of process wastewater at an industrial facility. A facility operated by the federal government is an industrial facility for the purpose of this rule if it treats any wastewater generated by an industrial process.
5. Disposal of sewage sludge by means other than land application at agronomic rates with the exception of sewage sludge applied to reclamation sites.
6. Domestic, commercial, or industrial septage, or any mixture thereof.
7. Sludge generated during treatment of drinking water.
8. Sewage sludge with a concentration of polychlorinated biphenyls (PCBs) equal to or greater than 50 milligrams per kilogram of total solids (dry weight basis).
9. The incineration of sewage sludge.
10. Ash generated during the firing of sewage sludge in a sewage sludge incinerator.

(c) Other exclusions:

1. The operator of any treatment Processes to Further Reduce Pathogens as described in 40 CFR 503 Appendix B, or any treatment process determined by the EPD to be equivalent to a Process to Further Reduce Pathogens which results in the derivation of compost from sewage sludge shall obtain a Solid Waste Handling Permit from EPD according to 391-3-4, unless the composting operation is part of a treatment works already regulated by an NPDES, LAS or other permit from EPD, in which case that permit will be modified in accordance with this rule to incorporate any necessary requirements for regulating the composting operation. Compost derived from any Processes to Significantly Reduce Pathogens as described in 40

CFR 503 Appendix B shall comply with the requirements contained in this rule.

2. The operator of any treatment process which consists of heat drying or incinerating sewage sludge shall obtain an Air Quality Permit from EPD in accordance with 391-3-1 and a processing permit by rule in accordance with [391-3-4-.06\(3\)\(d\)](#).
3. If sewage sludge is ultimately disposed of by land application or surface disposal, and is not beneficially used as a recovered material, the owner or operator of the site shall obtain a Solid Waste Handling Permit from the EPD in accordance with 391-3-4.

(4) **Permits Required.** The requirements in this Rule shall be implemented through a permit:

- (a) All facilities in Georgia which generate sewage sludge from the treatment of domestic (or industrial) sewage shall obtain either an NPDES permit as described in [391-3-6-.06](#), a land application system (LAS) permit as described in [391-3-6-.11](#), or a local or State pretreatment permit as described in [391-3-6-.08](#) through [.10](#), regardless of their method of handling sewage sludge.
- (b) Facilities in Georgia which handle sewage sludge by one or more of the following requirements, as applicable:
 1. If a facility intends to utilize land application or intends to sell or give sludge away as a means of sludge handling, the facility shall submit a Sludge Management Plan to the EPD for approval. The Sludge Management Plan shall, at a minimum, comply with the requirements contained in [391-3-6-.17](#) as well as any additional requirements as determined by the EPD. Upon approval by the EPD, the plan will become part of the facility's NPDES or LAS permit.
 2. If bulk sewage sludge from more than one permittee will be land applied to the same site or sites, or if both bulk sewage sludge from a permittee and an industrial sludge will be land applied on the same site or sites, the owner or operator of the site shall obtain an LAS permit in accordance with [391-3-6-.11](#).
- (c) If the sewage sludge is generated outside of the State of Georgia but will be transported to a site in Georgia for land application, the owner or operator of the site shall obtain an LAS permit in accordance with [391-3-6-.11](#).
- (d) Any person who prepares sewage sludge shall ensure that the applicable requirements in this part are met when the sewage sludge is land applied, fired in a

sewage sludge incinerator, or disposed of by any means other than landfilling in an approved municipal solid waste landfill.

- (e) Any person who uses or disposes of sewage sludge through any practice for which requirements are established in this Rule shall comply with these requirements.

(5) Pollutant Limits.

- (a) Bulk sewage sludge and sewage sludge sold or given away in a bag or other container shall comply with the pollutant ceiling concentration limits in Table 1 as well as the following requirements:
 1. Bulk sewage sludge applied to agricultural land, forests, public contact sites, or reclamation sites shall comply with either the pollutant concentration limits in Table 3 or, in the event that the pollutant concentration limits in Table 3 cannot be met, with the cumulative pollutant loading rates in Table 2.
 2. Bulk sewage sludge applied to lawns and home gardens shall comply with the pollutant concentration limits in Table 3.
 3. Sewage sludge sold or given way in bags and containers as defined in [391-3-6-.17\(2\)\(y\)](#) shall with the pollutant concentration limits in Table 3 or the annual sewage sludge application rates which are based on the annual pollutant loading rates in Table 4. Annual sewage sludge application rates shall be calculated in accordance with EPD requirements.

Table 1 -- Ceiling Concentration Limits

Pollutant	Ceiling Concentration (mg/kg)*
Arsenic	75
Cadmium	85
Copper	4300
Lead	840
Mercury	57
Molybdenum	75
Nickel	420
Selenium	100
Zinc	7500

Zinc	125

(6) Operational Standards -- Pathogens and Vector Attraction Reduction.

- (a) The Class A pathogen requirements contained in [391-3-6-.17\(7\)\(a\)](#) shall be met when bulk sewage sludge is applied to a lawn or home garden or when sewage sludge is sold or given away in a bag or other container for application to the land.
- (b) The Class A pathogen requirements contained in [391-3-6-.17\(7\)\(a\)](#) or the Class B pathogen requirements contained in [391-3-6-.16\(7\)\(b\)](#) and the site restrictions described in [391-3-6-.17\(7\)\(c\)](#) shall be met when bulk sewage sludge is applied to agricultural land, forests, public contact sites, or reclamation sites.
- (c) Sewage sludge that is applied to the land shall meet one of the vector attraction reduction requirements contained in [391-3-6-.17\(8\)\(a\) through \(h\)](#) except that bulk sewage sludge that is applied to agricultural land, forests, public contact sites, or reclamation sites may instead meet the vector attraction reduction requirements contained in [391-3-6-.17\(8\)\(i\) or \(j\)](#).

(7) Pathogen Requirements. This paragraph contains the requirements for a sewage sludge to be classified as either Class A or Class B with respect to pathogens as well as specific site restrictions for land application of a Class B sewage sludge.

- (a) Class A Sewage Sludge. To be classified as Class A with respect to pathogens the sewage sludge shall meet the requirements in [391-3-6-.17\(7\)\(a\)1.](#) as well as the requirements of one of the six alternatives described in [391-3-6-.17\(7\)\(a\)2. through \(a\)7.](#) The Class A pathogen requirements shall be met either before or at the same time the vector attraction reduction requirements are met, with the exception of the vector attraction reduction requirements in [391-3-6-.17\(8\)\(f\) through \(h\).](#)
 - 1. Either the density of fecal coliform in the sewage sludge shall be less than 1000 Most Probable Number per gram of total solids (dry weight basis), or the density of Salmonella sp. bacteria in the sewage sludge shall be less than three Most Probable Number per four grams of total solids (dry weight basis) at the time the sewage sludge is land applied or is prepared for sale or given away in a bag or other container for application of the land.
 - 2. Alternative 1. The temperature of the sewage sludge shall be maintained at a specific value for a period of time.
 - (i) When the percent solids of the sewage sludge is seven percent or higher, the temperature of the sewage sludge shall be 50 degrees Celsius or higher; the time period shall be 20 minutes or longer; and the temperature and time period shall be determined using equation (3), except when small particles of sewage sludge are heated by either warmed gases or an immiscible liquid.

$$(3) D = \frac{131,700,000}{10^{0.1400t}}$$

Where,

D = time in days.

t = temperature in degrees Celsius.

- (ii) When the percent solids of the sewage sludge is seven percent or higher and small particles of sewage sludge are heated by either warmer gases or an immiscible liquid, the temperature of the sewage sludge shall be 50 degrees Celsius or higher, the time period shall be 15 seconds or longer, and the temperature and time period shall be determined using equation (3).
- (iii) When the percent solids of the sewage sludge is less than seven percent and the time period is at least 15 seconds, but less than 30 minutes, the temperature and time period shall be determined using equation (3).
- (iv) When the percent solids of the sewage sludge is less than seven percent; the temperature of the sewage sludge is 50 degrees Celsius or higher; and the time period is 30 minutes or longer, the temperature and time period shall be determined using equation (4).

$$(4) D = \frac{50,070,000}{10^{0.1400t}}$$

Where,

D = time in days.

t = temperature in degrees Celsius.

- 3. Alternative 2. The sewage sludge pH shall be raised to above 12 standard units and shall remain above 12 standard units for 72 hours. At the end of the 72 hour period, the sewage sludge shall be air dried to achieve greater than 50 percent solids. The temperature of the sewage sludge shall be maintained above 52 degrees Celsius for at least 12 hours while the sewage sludge pH is above 12 standard units.
- 4. Alternative 3. The sewage sludge shall be analyzed before pathogen treatment to determine whether the sewage sludge contains enteric viruses.

- (i) If the density of enteric viruses is less than one Plaque-forming Unit per four grams of total solids (dry weight basis), the sewage sludge shall be considered Class A until the next monitoring episode.
 - (ii) If the density of enteric viruses is equal to or greater than one Plaque-forming Unit per four grams of total solids (dry weight basis), the sewage sludge shall be analyzed for enteric viruses after pathogen treatment. The sewage sludge shall be considered Class A if the density of enteric viruses after pathogen treatment is less than one Plaque-forming Unit per four grams of total solids and the values or range of values for the pathogen treatment process operating parameters are documented. Once the enteric virus reduction is demonstrated for the pathogen treatment process, the sewage sludge shall be considered Class A as long as the pathogen treatment operating parameters are consistent with the documented values or ranges of values.
5. Alternative 4. The sewage sludge shall be analyzed before pathogen treatment to determine if the sewage sludge contains viable helminth ova.
- (i) If the density of viable helminth ova is less than one per four grams of total solids (dry weight basis), the sewage sludge shall be considered Class A until the next monitoring episode.
 - (ii) If the density of viable helminth ova is equal to or greater than one per four grams of total solids (dry weight basis), the sewage sludge shall be analyzed for viable helminth ova after pathogen treatment. The sewage sludge shall be considered Class A if the density of viable helminth ova after pathogen treatment is less than one per four grams of total solids and the values or range of values for the pathogen treatment process operating parameters are documented. Once the viable helminth ova reduction is demonstrated for the pathogen treatment process, the sewage sludge shall be considered Class A as long as the pathogen treatment operating parameters are consistent with the documented values of ranges of values.
6. Alternative 5. The density of enteric viruses in the sewage sludge shall be less than one Plaque-forming Unit per four grams of total solids (dry weight basis) or the density viable helminth ova in the sewage sludge shall be less than one per four grams of total solids (dry weight basis) at the time the sewage sludge is either land applied, prepared for sale, or given away in a bag or other container for application to the land.

7. Alternative 6. The sewage sludge shall be treated in one of the Processes to Further Reduce Pathogens as described in 40 CFR 503. Appendix B or treated in a process determined by the EPD to be equivalent to a Process to Further Reduce Pathogens.
- (b) Class B Sewage Sludge. To be classified as Class B with respect to pathogens the sewage sludge shall meet one of the following alternatives.
1. Alternative 1. Seven samples of the sewage sludge shall be collected at the time of land application. The geometric mean of the density of fecal coliform in the samples shall be less than either 2,000,000 Most Probable Number per gram of total solids or 2,000,000 Colony Forming Units per gram of total solids.
 2. Alternative 2. Sewage sludge that is to be land applied shall be treated in one of the Processes to Significantly Reduce Pathogens as described in 40 CFR 503 Appendix B or treated in a process that is equivalent to a Process to Significantly Reduce Pathogens, as determined by the EPD.
- (c) Restrictions for Land Application Sites Receiving Class B Sewage Sludge.
1. Food crops with harvested parts that touch the sewage sludge/soil mixture and are totally above the land surface shall not be harvested for 14 months after application of sewage sludge.
 2. Food crops with harvested parts below the surface of the land shall not be harvested for 20 months after application of sewage sludge when the sewage sludge remains on the land surface for four months or longer before incorporation, or for 38 months after application when the sewage sludge remains on the land surface for less than four months before incorporation.
 3. All other crops, as well as feed crops, and fiber crops shall not be harvested for 30 days after application of sewage sludge.
 4. Animals shall not be allowed to graze on the land for 30 days after application of sewage sludge.
 5. Turf grown on land where sewage sludge is applied shall not be harvested for one year after application of the sewage sludge when the harvested turf is placed on either land with a high potential for public exposure or a lawn, unless otherwise specified by the EPD.
 6. Public access to land with a high potential for public exposure shall be restricted for one year after application of sewage sludge.

7. Public access to land with a low potential for public exposure shall be restricted for 30 days after application of sewage sludge.
8. Additional restrictions as may be determined by the EPD.

(8) **Vector Attraction Reduction.** Sewage sludge that is land applied, including sewage sludge sold or given away in a bag or other container for application to the land, shall meet one of the vector attraction reduction requirements contained in [391-3-6-.17\(8\)\(a\) through \(8\)\(h\)](#) except that bulk sewage sludge that is applied to agricultural land, forests, public contact sites, or reclamation sites may instead meet the vector attraction reduction requirements contained in [391-3-6-.17\(8\)\(i\) or \(8\)\(j\)](#).

- (a) The mass of volatile solids in the sewage sludge shall be reduced by at least 38 percent.
- (b) If the mass of volatile solids in an anaerobically digested sewage sludge cannot be reduced by at least 38 percent, vector attraction reduction can be demonstrated by anaerobically digesting a portion of the previously digested sewage sludge in the laboratory in a bench-scale unit for 40 additional days at a temperature between 30 and 37 degrees Celsius. The volatile solids shall be measured at the beginning and end of the forty day test period. Vector attraction reduction is achieved when the volatile solids in the sewage sludge are reduced by less than 17 percent over the test period.
- (c) If the mass of the volatile solids in an aerobically digested sewage sludge cannot be reduced by at least 38 percent, vector attraction reduction can be demonstrated by aerobically digesting a portion of the previously digested sewage sludge that has a maximum of 2 percent solids in the laboratory in a bench-scale unit for thirty additional days at 20 degrees Celsius. The volatile solids shall be measured at the beginning and end of the thirty day test period. Vector attraction reduction is achieved when the volatile solids in the sewage sludge are reduced by less than 15 percent over the test period.
- (d) The specific oxygen uptake rate (SOUR) for sewage sludge treated in an aerobic process shall be equal to or less than 1.5 milligrams of oxygen per hour per gram of total solids (dry weight basis) at 20 degrees Celsius.
- (e) Sewage sludge shall be treated in an aerobic process for at least fourteen days. During that time, the temperature of the sewage sludge shall be maintained above 40 degrees Celsius with the average temperature above 45 degrees Celsius.
- (f) The sewage sludge pH shall be raised to 12 standard units or higher by addition of alkaline material and shall remain at 12 standard units or higher for two hours and then 11.5 standard units or higher for an additional 22 hours without the addition or more alkaline material.

- (g) If sewage sludge does not contain unstabilized solids generated in a primary wastewater treatment process, the percent solids shall be equal to or greater than 75 percent based on the moisture content and total solids before mixing with other materials.
- (h) If sewage sludge contains unstabilized solids generated in a primary wastewater treatment process, the percent solids shall be equal to or greater than 90 percent based on the moisture content and total solids before mixing with other materials.
- (i) Injection of Sewage Sludge.
 - 1. Sewage sludge shall be injected below the surface of the land.
 - 2. No significant amount of the sewage sludge shall be percent on the land surface within one hour after the sewage sludge is injected.
 - 3. Class A sewage sludge shall be injected below the land surface within eight hours after being discharged from the pathogen treatment process.
- (j) Incorporation of Sewage Sludge.
 - 1. Sewage sludge shall be incorporated into the soil within six hours after land application.
 - 2. Class A sewage sludge that is to be incorporated into the soil shall be applied to the land within eight hours after being discharged from the pathogen treatment process.

(9) General Requirements.

- (a) No person shall land apply sewage sludge except in accordance with the requirements in this rule and the permit as well as any additional requirements as determined by the EPD.
- (b) No person shall land apply bulk sewage sludge subject to the cumulative pollutant loading rates in [391-3-6-.17\(5\)](#) Table 2 to a site on which any of the cumulative pollutant loading rates in [391-3-6-.17\(5\)](#) Table 2 have been reached.
- (c) No person shall land apply bulk sewage sludge to a site on which the nitrogen requirements have been met for the calendar year.
- (d) The preparer shall provide the person who land applies bulk sewage sludge written notification of the analytical results obtained in accordance with [391-3-6-.17\(11\)](#) and [391-3-6-.17\(13\)](#).
- (e) The person who land applies sewage sludge shall obtain information needed to comply with the requirements in this subpart.

1. Before bulk sewage sludge subject to the cumulative pollutant loading rates in [391-3-6-.17\(5\)](#) Table 2 is applied to the land, the applier shall contact the EPD to determine if bulk sewage sludge subject to cumulative pollutant loading rates has been previously applied to the site.
 - (i) If bulk sewage sludge has been applied to the site and the cumulative amount of each pollutant applied to the site is known, that amount shall be subtracted from the cumulative pollutant loading rate for each pollutant in [391-3-6-.17\(5\)](#) Table 2 to determine the additional amount of each pollutant that can be applied to the site. For arsenic, mercury, and selenium, the cumulative amount of each pollutant applied to the site since July 20, 1993 shall be utilized for the calculations. For copper, lead, zinc, nickel, and cadmium the cumulative amount of each pollutant applied to the site since the first bulk sewage sludge application shall be utilized for the calculations.
 - (ii) If bulk sewage sludge subject to the cumulative pollutant loading rates in [391-3-6-.17\(5\)](#) Table 2 has been applied to the site and the cumulative amounts of pollutants applied to the site are unknown, no additional amount of each pollutant shall be applied to the site.
 2. Before bulk sewage sludge is land applied, the applier shall contact the EPD to determine whether bulk sewage sludge has been previously applied to the site. If bulk sewage sludge has been previously applied to the site, the amount of mineralized nitrogen from previous sewage sludge applications that is available for crop uptake, as well as the amount of nitrogen from other sources that is available for crop uptake, shall be taken into account in determining the agronomic loading rate.
- (f) When a preparer provides bulk sewage sludge to an applier, the preparer shall provide the applier notice and necessary information to comply with the requirements in this subparagraph.
 - (g) When a preparer provides sewage sludge to another preparer, the person who provides the sewage sludge shall provide the person who receives the sewage sludge notice and necessary information to comply with the requirements in this subparagraph.
 - (h) The applier shall provide the owner or lease holder of the land application site notice and necessary information to comply with the requirements in this subparagraph.
 - (i) Any person who land applies bulk sewage sludge subject to the cumulative pollutant loading rates in [391-3-6-.17\(5\)](#) Table 2 shall provide written notice to the

EPD before the initial application to a site, and the EPD shall retain the notice and provide access to it. The notice shall include:

1. The location, by either street address or latitude and longitude, of the land application site.
2. The name, address, telephone number, and permit number (if appropriate) of the person who will apply the bulk sewage sludge.

(10) Management Practices.

- (a) Bulk sewage sludge shall not be applied to the land if it is likely to adversely affect a threatened or endangered species listed under section 4 of the Federal Endangered Species Act ([16 U.S.C. §§ 1531- 1544](#)) or its designated critical habitat.
- (b) Bulk sewage sludge shall not be applied to an agriculture land, forest, a public contact site, or a reclamation site that is flooded, frozen, or snow covered so that the bulk sewage sludge enters a wetland or others waters of the State of Georgia except as provided in a permit issued pursuant to the Georgia Water Quality Control Act and [391-3-6-.06](#).
- (c) Site restrictions, buffer areas, and any additional EPD requirements shall apply to the land application of bulk sewage sludge. Class B sewage sludge shall also be subject to the site restrictions in [391-3-6-.17\(17\)\(c\)](#). Reduction of buffer areas on sites where exceptional quality sludge is land applied will be considered by the EPD upon written request. However, in no case shall bulk sewage sludge be applied to areas located 35 feet or less from waters of the State of Georgia.
- (d) Bulk sewage sludge shall not land applied at greater than agronomic rates except on reclamation sites. Agronomic rates shall be calculated using the sludge application rate determination procedures as determined by the EPD. The application rate for sewage sludge on reclamation sites shall be determined on a case-by-case basis.
- (e) Sewage sludge that is sold or given away in a bag or other container for land application shall have a label affixed to the bag or other container or an information sheet shall be provided to the person who receives the sewage sludge. The label or information sheet shall contain the following information.
 1. The name and address of the person who prepared the sewage sludge.
 2. A statement that application of the sewage sludge to the land is prohibited except in accordance with the instructions on the label or information sheet.

3. The annual sludge application rate that does not cause any of the annual pollutant loading rates in [391-3-6-.17\(5\)](#) Table 4 to be exceeded.

(f) Under no conditions may sewage sludge be stockpiled at a land application site.

(11) **Monitoring.**

(a) The pollutants listed in [391-3-6-.17\(5\)](#), the pathogen density requirements listed in [391-3-6-.17\(7\)](#) and the vector attraction reduction requirements listed in [391-3-6-.17\(8\)\(a\) through \(8\)\(h\)](#), and any additional parameters contained in the permit, shall be monitored at the frequency listed in Table 5.

Table 5 -- Monitoring Frequency

Amount of Sewage Sludge (dry tons/year)*	Frequency
0 - 300	once/year
300 - 1600	once/quarter
1600 - 16000	once/two months
16000 or greater	once/month

*The "amount of sewage sludge" refers to either the amount of bulk sewage sludge (dry weight) applied to the land or the amount of sewage sludge (dry weight) received by a preparer that sells or otherwise distributes sewage sludge in a bag or other container for application to the land.

(b) After the sewage sludge has been monitored at the frequency in Table 5 for two years, the EPD may reduce the monitoring frequency for the pollutants listed in [391-3-6-.17\(5\)](#). In no case shall the monitoring frequency be less than once per year.

(12) **Analytical Methods.** Representative sewage sludge samples shall be analyzed in accordance with the methods contained in [40 CFR 503.8](#). Test methods used to determine toxicity, such as the Toxicity Characteristic Leachate Procedure, may be used to determine whether sewage sludge is hazardous, but shall not be used for the purpose of determining compliance with any of the inorganic pollutant requirements contained in this rule.

(13) **Recordkeeping.**

(a) Persons who prepare bulk sewage sludge for land application or who sell or give away sewage sludge in a bag or other container, shall develop the following information and retain it for five years:

1. The concentration of each pollutant listed in [391-3-6-.17\(5\)](#), and any additional parameters required by the permit.
2. One of the following certification statements.
 - (i) Certification statement of persons preparing bulk sewage sludge for land application: "I certify, under penalty of law, that the Class (insert "A" or "B") pathogen requirement in [391-3-6-.17\(7\)](#) and the vector attraction reduction requirements in [391-3-6-.17\(8\)](#) has been met. This determination has been made under my direction and supervision in accordance with the system designed to ensure that qualified personnel properly gather and evaluate the information used to determine that the pathogen requirements and the vector attraction reduction requirements have been met. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment."
 - (ii) Certification statement for persons preparing sewage sludge that is sold or given away in a bag or other container: "I certify, under penalty of law, that the management practice in [391-3-6-.17\(10\)\(e\)](#); the Class A pathogen requirement in [391-3-6-.17\(7\)\(a\)](#), and the vector attraction reduction requirement in (insert one of the vector attraction reduction requirements in [391-3-6-.17\(8\)\(a\) through \(h\)](#) have been met. This determination has been made under my direction and supervision in accordance with the system designed to ensure that qualified personnel properly gather and evaluate the information used to determine that the management practice, pathogen requirements, and vector attraction reduction requirements have been met. I am aware that there are significant penalties for false certification including the possibility of the fine and imprisonment."
3. A description of how either Class A or Class B pathogen requirements are met.
4. A description of how the vector attraction reduction requirement is met.
5. The annual sludge application rate that does not cause the annual pollutant loading rates in [391-3-6-.17\(5\)](#) Table 4 to be exceeded shall also be retained by the preparer when the sewage sludge is sold or given away in a bag or other container.
6. All other information required as described in the permit.

(b) The person who land applies bulk sewage sludge shall develop the following information. The information in [391-3-6-.17\(13\)\(b\)1. through 5.](#) shall be retained indefinitely. The information in [391-3-6-.17\(13\)\(b\)6. through 10.](#) shall be retained for five years.

1. The location, by either street address or latitude and longitude, of each site on which the sewage sludge is applied.
2. The number of acres on which sewage sludge is applied for each site.
3. The date and time of each application of sewage sludge for each site.
4. For bulk sewage sludge subject to the cumulative pollutant loading rates in [391-3-6-.17\(5\)](#) Table 2, the cumulative amount of each pollutant listed in [391-3-6-.17\(5\)](#) in pounds per acre for each site.
5. The amount of sewage sludge, in dry tons, applied to each site.
6. The following certification statement: "I certify, under penalty of law, that the management practices in [391-3-6-.17\(10\)](#), the site restrictions in (insert [391-3-6-.17\(7\)\(c\)](#) only if the sewage sludge is classified as Class B), the vector attraction requirements in (insert [391-3-6-.17\(8\)\(i\) or \(8\)\(j\)](#), if one of those requirements is met), and additional requirements set forth by the EPD, have been met for each site on which bulk sewage sludge is applied. This determination has been made under my direction and supervision in accordance with the system designed to ensure that qualified personnel properly gather and evaluate the information used to determine that the management practices and site restrictions (and the vector attraction reduction requirements if applicable) have been met. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment."
7. A description of how the management practices in [391-3-6-.17\(10\)](#) and any additional management requirements set forth by the EPD, or if applicable, contained in the permit, are met for each land application site.
8. A description of how the vector attraction reduction requirements in either [391-3-6-.17\(8\)\(i\) or \(j\)](#) are met, if applicable, for each land application site.
9. A description of how the site restrictions are met for each land application site.
10. On sites where the sewage sludge is subject to the cumulative pollutant loading rates in [391-3-6-.17\(5\)](#) Table 2, the following certification statement and description shall be developed:

- (i) "I certify, under penalty of law, that the requirements to obtain information in [391-3-6-.17\(9\)\(e\)](#) have been met for each land application site. This determination has been made under my direction and supervision in accordance with the system designed to ensure that qualified personnel properly gather and evaluate the information used to determine that the requirements to obtain information have been met. I am aware that there are significant penalties for false certification including fine and imprisonment."
- (ii) A description of how the requirements to obtain information in [391-3-6-.17\(9\)\(e\)](#) are met.

(14) **Reporting.**

- (a) Each facility or person that is permitted under this Rule shall submit to the EPD an annual report containing the information required in [391-3-6-.17\(13\)](#) pertaining to the most recent calendar year. The report shall be submitted to the EPD no later than February 19 of the following year.
- (b) Any facility permitted under this Rule that generates sewage sludge shall submit to the EPD a monthly report of the volume and concentration, or weight in dry pounds, of solids removed from the facility during that month. This report may be included with the monthly Discharge Monitoring Report described in [391-3-6-.06\(11\)](#) but in any case must be submitted to the EPD no later than the 15th day of the following month.
- (c) The federal NPDES Electronic Reporting rule, 40 CFR Part 127 and associated amendments, became effective on December 21, 2015. The monthly and annual reporting requirements noted above may include the electronic submission of such items, as applicable and approved by EPD.

(15) **Compliance Period.** Compliance with the standards for land application of sewage sludge shall be achieved in accordance with the dates contained in [40 CFR 503.2](#).

(16) **Addition of More Stringent Requirements.** On a case-by-case basis, the EPD may impose additional or more stringent requirements when necessary to protect public health and the environment.

(17) **Right to Monitor and Assess Fees.**

- (a) The local governing authority in which a land application site is located may assess the generator of the sewage sludge and the owner of the land application site reasonable fees for environmental monitoring of the site and may hire persons to monitor the site. The assessed fee shall be limited to charges incurred

for monitoring those parameters contained in the approved sludge management plan and the permit. Payment of the assessed fee shall be made prior to the application of sewage sludge. Failure to pay such fees, if assessed, shall be grounds for the local governing authority to seek an injunction to stop the land application of sewage sludge.

(18) Application for a Permit.

(a) Any facility with a Georgia NPDES permit that generate sewage sludge for land application, either as bulk sewage sludge or for sale or given away in a bag or other container, or for disposal by any means other than disposal in an approved municipal landfill, shall submit the following information with a NPDES permit application at least 180 days prior to the expiration date of the existing permit.

1. The information required in [391-3-6-.06\(5\)](#).

(b) Any facility with an NPDES permit that proposes to land apply bulk sewage sludge or that currently land applies sewage sludge but does not have an approved sludge management plan, shall submit the following additional information:

1. Description of the proposed land application site(s):

(i) Location map(s) with the site(s) clearly denoted.

(ii) Topographic map(s) with the following features identified and labelled:

I. Site boundaries (including buffer areas);

II. onsite access roads;

III. portions of the 100-year flood plain;

IV. location of any soil borings;

V. location of houses;

VI. location of wells;

VII. surface water, including ditches and intermittent streams.

(iii) Soil survey map(s) with application site(s) clearly denoted.

(iv) An aerial photograph of the site(s), if available.

2. Soil series descriptions for each series represented, as described in the U.S. Department of Agriculture and University of Georgia, College of Agriculture soil survey(s) for the county(ies) in which each site is located.
 3. Soil analysis performed within the last six months, conducted in accordance with the requirements set forth by the EPD.
 4. Analysis of the sewage sludge performed within the last six months to include the parameters listed in [391-3-6-.17](#) as well as any additional parameters required by the EPD.
 5. The name of the facility generating the sewage sludge.
 6. The amount of sewage sludge to be applied per year. If some of the sewage sludge will be dewatered and some will be liquid, state the amount of each type.
 7. Whether the sewage sludge is to be dewatered, liquid, or both and the percent solids.
 8. The proposed method for meeting the pathogen reduction requirements in [391-3-6-.17\(7\)](#) and vector attraction reduction requirements in [391-3-6-.17\(8\)](#).
 9. The site use, crops to be grown on site and whether site will be used for grazing.
 10. The proposed method of application to the land and a description of operational procedures.
 11. A letter of agreement between the permittee and the owner of the site, if the owner is not the permittee.
 12. The proposed method for transporting the sludge to the application site.
 13. Any other information that the EPD may require.
- (c) Any facility with a LAS permit that generates sewage sludge for land application and has an approved sludge management plan, or generates sewage sludge for disposal by any means other than disposal in an approved municipal landfill shall submit the following information with a LAS permit application at least 180 days prior to the expiration date of the existing permit:
1. The information required in [391-3-6-.11\(5\)](#).

- (d) Any facility with a LAS permit proposing to land apply sewage sludge, or that currently land applies sewage sludge but does not have an approved sludge management plan, shall submit the information listed in [391-3-6-.17\(18\)\(b\)1. through \(b\)13.](#)
- (e) Any person owning or operating a land application site or sites where bulk sewage sludge from more than one permittee is land applied, or where both bulk sewage sludge from a permittee and an industrial sludge are applied shall submit the following information with a land application system permit application:
 - 1. The information in [391-3-6-.11\(5\).](#)
 - 2. The information in [391-6-.17\(18\)\(b\)1. through \(b\)13.](#)
- (f) Any person owning or operating a land application site on which bulk sewage sludge, generated outside the State of Georgia, is currently land applied, or is proposed to be land applied, shall submit the following information with a land application system permit application:
 - 1. The information in [391-2-6-.11\(5\).](#)
 - 2. The information in [391-3-6-.17\(18\)\(b\)1. through \(b\)13.](#)

(19) **Notice and Public Participation.**

- (a) Notice must be provided for any planned significant changes to the permittee's sewage sludge use or disposal practices or sites.
- (b) Notice will be made in accordance with the provisions of Rule [391-3-6-.26.](#) The public notice for permits with an approved Sludge Management Plan will also include publication in one or more newspapers of general circulation in the area affected by the discharge.

(20) **Terms and Conditions of Permits.** All permits, issued under Rule [391-3-6-.17](#) shall contain the terms and conditions required to comply with one or more of the following: [391-3-6-.06](#) and [391-3-6-.11.](#)

(21) **Schedules for Compliance.** Notwithstanding any requirements contained in Paragraph [391-3-6-.17\(20\),](#) should a schedule for compliance with any requirement of [391-3-6-.17](#) exceed one year, the milestone dates in the schedule shall not be more than six months apart.

(22) **Modification, Revocation, Reissuance, and Termination of Permits.** Modification, revocation, reissuance, or termination of any permit issued pursuant to this Rule shall comply with one or more of the Rules listed in [391-3-6-.17\(20\)](#) above.

- (23) **Duration, Continuation and Transferability.** Any permit issued under this Rule will comply with the requirements of one of more of the following: [391-3-6-.06\(15\)](#), [391-3-6-.11\(11\)](#).
- (24) **Enforcement.** Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule or other requirements contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.

Rule 391-3-6-.19. General Permit - Land Application System Requirements.

- (1) **Purpose.** The purpose of Rule 391-3-6-.19 is to provide for the degree of waste treatment required and the uniform procedures and practices to be followed relating to the application for issuance, modification, revocation and reissuance, and termination of general Land Application System (LAS) permits for the discharge of any pollutant to a LAS and then into the waters of the State.
- (2) **Definitions.** All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this paragraph or in any other Rules of this Chapter:

- (a) "Land Application System" (LAS) means any method of disposing of pollutants in which the pollutants are applied to the surface or beneath the surface of the parcel of land and which results in the pollutants percolating, infiltrating, or being absorbed into the soil and then into the waters of the State.
 - (b) "General LAS Permit Application" means any application filed by any person with the Director for a general LAS permit.
 - (c) A "General of LAS Permit" means a LAS permit issued under this Rule within a geographical area.
 - (d) "Notice of Intent" (NOI) means a form used by a potential permittee to notify the Division, within a specified time, that they intend to comply with a general LAS permit.
 - (e) "Notice of Termination" (NOT) means a form used by a permittee to notify the Division that they wish to cease coverage under a general LAS permit.
- (3) General Permit - LAS Requirements.
- (a) Coverage. The Director may issue a general LAS permit in accordance with the following:
 - 1. Area. The general LAS permit shall be written to cover a category of LAS facilities described in the permit under subparagraph (3)(a)2. of this section, except those covered by individual permits, within a geographic area. The area shall correspond to existing geographic or political boundaries.
 - 2. Sources. The general LAS permit may be written to regulate, within the area described in subparagraph 1. of this section, a category of LAS facilities if the LAS facilities all:
 - (i) Involve the same or substantially similar types of operations;
 - (ii) Land apply the same types of wastes; conditions;
 - (iii) Require the same treatment requirements or operating conditions;
 - (iv) Require the same or similar monitoring; and
 - (v) In the opinion of the Director, are more appropriately controlled under a general LAS permit than under individual permits.
 - (b) Administration.
 - 1. General LAS permits may be issued, modified, revoked and reissued, or terminated in accordance with applicable requirements of Rules [391-3-6-.11](#)

and 391-3-6-.19. Public notice for issuance, modification, revocation and reissuance, and termination of general LAS permits shall be in accordance with paragraph [391-3-6-.11\(6\)](#).

2. Authorization to discharge.

- (i) Any person seeking coverage under a general LAS permit shall submit to the Director a written notice of intent to be covered by the general LAS permit. Any person who fails to submit a notice of intent in accordance with the terms of the general LAS permit is not authorized to land apply under the terms of the general LAS permit. A complete and timely notice of intent to be covered in accordance with the general LAS permit requirements, fulfills the requirements for the permit applications.
- (ii) The contents of the notice of intent shall be specified in the general LAS permit. The notice of intent shall be signed in accordance with subparagraph 391-3-6-.19(5)(d).
- (iii) General LAS permits shall specify the deadline for submitting notices of intent to be covered and the date(s) when land application is authorized under the permit.
- (iv) General LAS permits shall specify whether a person that has submitted a timely notice of intent to be covered in accordance with a general LAS permit and that is eligible for coverage under the general LAS permit, is authorized to land apply in accordance with the general LAS permit either upon receipt of the notice of intent by the Director, after a waiting period specified in the general LAS permit, on a date specified in the general LAS permit, or upon receipt of notification of inclusion by the Director. Coverage may be revoked in accordance with subparagraph 391-3-6-.19(3)(b)(3).

3. Requiring an individual permit.

- (i) The director may require any person authorized by a general LAS permit to apply for and obtain an individual LAS permit. Any interested person may petition the Director to take action under this rule.
- (ii) Any owner or operator authorized by a general LAS permit may request to be excluded from the coverage of the general LAS permit by applying for an individual LAS permit. The owner or operator shall submit an application under paragraph [391-3-6-.11\(5\)](#), with reasons supporting the request, to the Director.

- (iii) When an individual LAS permit is issued to an owner or operator otherwise subject to a general LAS permit, the applicability of the general LAS permit to the individual LAS permittee is automatically terminated on the effective date of the individual LAS permit.
- (iv) A source excluded from a general LAS permit solely because it already has an individual LAS permit may request that the individual LAS permit be revoked, and that it be covered by the General LAS permit. Upon revocation of the individual LAS permit, the general LAS permit shall apply to the source.
- (v) Whenever the Director decides an individual LAS permit is required, the Director shall notify the permittee in writing of the decision and the reasons for it, and shall send an application form with the notice. The permittee must apply for a permit under paragraph [391-3-6-.11\(5\)](#) within sixty (60) days of notice unless a later date is granted by the Director. Public notice and public participation shall be in accordance with paragraph [391-3-6-.11\(6\)](#).

(4) Degree of Waste Treatment Required.

- (a) All pollutants shall receive such treatment so as to ensure compliance with the terms and conditions of the issued permit and with the following, whenever applicable:
 - 1. The requirements established in paragraph [391-3-6-.11\(4\)](#).
 - 2. Notwithstanding the above, more stringent effluent limitations may be required as deemed necessary by the Division (a) to meet any applicable Federal laws or regulations, or (b) to ensure compliance with any applicable State water quality standards, treatment standards, or schedules of compliance.

(5) Notice of Intent (NOI).

- (a) A NOI shall be on forms as may be prescribed and furnished from time to time by the Division. A NOI shall be accompanied by all pertinent information as the Division may require in order to establish permit limitations in accordance with paragraph [391-3-6-.11\(4\)](#), which may include but is not limited to, complete engineering reports, schedule of progress, plans, specifications, maps, measurements, quantitative and qualitative determinations, records and all related materials.

- (b) Engineering reports, plans, specifications, and other similar material submitted to the Division shall be prepared by or under the direct supervision or review of, and bear the seal of, a Professional Engineer competent in the field of storm water, sewage and industrial waste treatment. At no time shall this requirement be in conflict with O.C.G.A. Section 43-15 governing the practices of professional engineering and surveying. Storm water pollution prevention plans, erosion and sediment control plans, best management plans and similar reports shall not be subject to this requirement.
 - (c) Material submitted shall be complete and accurate.
 - (d) Any NOI form, NOT form, and permit application submitted to the Division shall be signed in accordance with the requirements contained in [391-3-6-.11\(5\)\(d\) 1. - 3.](#)
 - (e) All other reports or request for information required by the permit issuing authority shall be signed by in accordance with the requirements contained in [391-3-6-.11\(5\)\(e\).](#)
 - (f) Any changes in the written authorization submitted to the permitting authority under (e) above which occur after the issuance of a permit shall be reported to the permitting authority by submitting a copy of a new written authorization which meets the requirement of [391-3-6-.11\(5\)\(e\) 1. -2.](#) above.
 - (g) Any person signing any document under (d) or (e) above shall make the following certification: "I certify under the penalty of law that I have personally examined and am familiar with the information submitted in the attached document; and based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."
- (6) Notice and Public Participation. The notice and public participation procedures of Rule 391-3-6-.26 shall apply to the tentative determination to issue a general LAS permit.
- (7) Schedules of Compliance. Any person who obtains a General LAS Permit and who is not in compliance with the permit shall be required to achieve compliance in accordance with a schedule as set forth in paragraph [391-3-6-.11\(7\).](#)
- (8) Monitoring, Recording, and Reporting Requirements.
- (a) Monitoring, recording, and reporting requirements shall be in accordance with those outlined in paragraph [391-3-6-.11\(8\)](#) of this Chapter.

- (b) General LAS permits that do not require submittal of monitoring reports at least annually shall report to the Director in writing all instances on noncompliance at least annually.
- (9) Duration, Continuation, and Transferability of Permits.
- (a) Any general LAS permit under O.C.G.A. Section [12-5-30](#) shall have a fixed term not to exceed five (5) years. Upon expiration of such permit, a new permit may be issued by the Director in accordance with O.C.G.A. Section [12-5-30](#). The issuance of such new permit shall likewise have a fixed term not to exceed five (5) years.
 - (b) Any owner or operator authorized by a general LAS permit may request that coverage under the general LAS permit be terminated by submitting a written Notice of Termination. The contents of the Notice of Termination shall be specified in the general LAS permit and shall be signed in accordance with subparagraph 391-3-6-.115(d). Subparagraph [391-3-6-.11\(11\)\(b\)](#) is not applicable to general LAS permits.
 - (c) When the permittee has submitted a timely and sufficient application for a new individual LAS permit or a notice of intent for a general LAS permit and the Director is unable, through no fault of the permittee, to issue the new permit before the expiration date of the existing permit, then the Director shall extend the existing permit until a new permit is issued.
- (10) **Enforcement.** Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule of compliance or other requirement contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.
- (11) **Effective Date.** This rule shall become effective twenty days after filing with the Secretary of State's office.

Rule 391-3-6-.20. Swine Feeding Operation Permit Requirements For Operations With More Than 3000 Animal Units.

(1) **Purpose.**

The purpose of this paragraph 391-3-6-.20 is to provide for the uniform procedures and practices to be followed relating to the application for and the issuance or revocation of permits for swine feeding operations with more than 3000 Animal Units. Nothing in this paragraph shall be construed to preclude the modification of any requirement of this paragraph when the Division determines that the requirement is not protective of the environment.

(2) **Definitions.**

All terms used in this paragraph shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this paragraph or in any other paragraph of these Rules:

- (a) "Act" means the Georgia Water Quality Control Act, as amended;
- (b) "Swine feeding operation" or "operation" means a lot or facility where swine have been, are, or will be stabled or confined or fed or maintained for a total of at least 45 days in any 12-month period, and the confinement areas do not sustain crops, vegetation, forage growth, or post-harvest residues in the normal growing season.
- (c) "Animal Unit" (AU) is a unit of measurement for any swine feeding operation calculated by the number of swine weighing over 25 kilograms (approximately 55 pounds) multiplied by 0.4.
- (d) "Barn" means a structure where confinement feeding (feeding in limited quarters under a roof) occurs. Structures where confinement feeding does not occur are not considered "barns" for the purposes of this rule.
- (e) "Certified operator" means any person who has been trained and certified by the Georgia Department of Agriculture and has direct general charge of the day-to-day field operation of a swine feeding operation waste storage and disposal system, and who is responsible for the quality of the treated waste.
- (f) "Closure plan" means the plan approved by the Division for clean up and closure of the swine feeding operation and associated waste storage and disposal facilities.
- (g) "Concentrated Animal Feeding Operation," or "CAFO," means a swine feeding operation which is defined as a Large CAFO or Medium CAFO by [40 CFR 122.23\(4\) and \(6\)](#), or that is designated as a CAFO.
- (h) "Existing" applies to that which existed prior to the effective date of this rule. "Existing operation" means a swine feeding operation that was in operation prior to September 15, 2003.

- (i) "Freeboard" is the extra depth added to a waste storage lagoon or structure as a safety factor between the designed full depth and the overflow depth. This is the vertical distance below the lowest point of the lagoon or structure berm above which the liquid level must never rise except in the case of a storm event exceeding the design maximum precipitation event.
- (j) "Natural Resources Conservation Services" (NRCS) is an agency within the United States Department of Agriculture.
- (k) "New" applies to that which existed on or after September 15, 2003. "New or expanding operation" or "new swine feeding operation" means a swine feeding operation the construction or expansion of which is commenced on or after September 15, 2003.
- (l) "NRCS guidance" means the latest editions of the Natural Resources Conservation Service (NRCS) Agricultural Waste Management Field Handbook, Part 651, Field Office Technical Guidance Section IV Georgia, and other applicable publications of the NRCS. A certified specialist or trained person may use NRCS guidance to develop or modify a NMP.
- (m) "Nutrient Management Plan" (NMP) is a plan which identifies actions or priorities that will be followed to meet clearly defined nutrient management goals at an agricultural operation. Defining nutrient management goals and identifying measures and schedules for attaining the goals are critical to reducing threats to water quality and public health. The NMP should address activities related to compliance with effluent limitations and other permit requirements, including manure handling and storage, land application of manure and wastewater, site management, record keeping, and management of other utilization options. For a swine feeding operation with a liquid manure handling system, the NMP must be developed or modified by a "certified specialist" as defined by the Division. The Division will specify the requirements for certification. For a swine feeding operation that handles dry manure, the NMP must be developed by a person trained in the subject by an academic or trade organization; it should include emergency response planning and a closure plan for abandonment of any facility used for the treatment or storage of animal waste. The requirements for submittal and approval of the NMP are specified in the following paragraphs.
- (n) "Owner" means any person owning any system for waste treatment and disposal at a swine feeding operation. "Owner or operator" means any person who owns, leases, controls, or supervises a swine feeding operation. For the purpose of paragraph 391-3-6-.20(4) of these rules, if a person intends to operate a swine feeding operation with another entity that owns the swine, directs the manner in which the swine will be housed, or controls the inputs or the other material aspects of the operation, this person shall be the operator and the owner shall be the entity

that owns the swine, directs the manner in which the swine will be housed, or controls the inputs or the other material aspects of the operation.

- (o) "Permit" means a permit applied for and issued in accordance with the terms and conditions for paragraphs [391-3-6-.06](#), Waste Treatment and Permit Requirements (individual NPDES permits), or [391-3-6-.11](#), Land Disposal and Permit Requirements (non-NPDES individual land application system or "LAS" permit), or [391-3-6-.15](#), Non-Storm Water General Permit Requirements (general NPDES permit), or [391-3-6-.19](#), General Permit - Land Application System Requirements (non-NPDES general LAS permit), of this Chapter.
- (p) "Removed from service" means:
 - 1. The waste storage and disposal facilities no longer receive swine wastes and the facilities are not being serviced or maintained; or
 - 2. The owner or operator informs the Division that the swine feeding operation has been closed and removed from service; or
 - 3. The Division has ordered the facilities closed; or
 - 4. An order has been issued by a court to cease operation and close the facilities.
- (q) "Wetted area" or "disposal area" is the land area where swine waste is sprayed, spread, incorporated, or injected so that the waste can either condition the soil or fertilize crops or vegetation grown in the soil.
- (r) "100-year, 24-hour storm event" is the maximum 24-hour precipitation event expressed in inches with a probable recurrence interval of once in 100 years, as defined by the National Weather Service of the United States Department of Commerce in Technical Paper Number 40, "Rainfall Frequency Atlas of the United States," May 1961, and subsequent amendments.
- (s) "100-year flood plain" is the land inundated from a flood whose peak magnitude would be experienced on an average of once every 100 years. The 100-year flood has a 1% probability of occurring in one given year.
- (t) "3000 AU" means three thousand animal units. Paragraph 391-3-6-.20(2)(c) notwithstanding, the numbers of animals in any of the following categories are equivalent to 3000 AU:
 - 1. 7,500 swine each weighing 55 pounds or more,
 - 2. 30,000 swine each weighing less than 55 pounds (immature swine or nursery pigs).

(3) Basic Permit Requirement.

- (a) Any person who owns or operates a swine feeding operation with greater than 3000 AU shall obtain a permit from the Division in accordance with the following:
1. Any person who is the owner of a swine feeding operation with more than 3000 AU and uses liquid manure handling must apply for an LAS permit from the Division, unless an NPDES permit is required by 391-3-6-.20(3)(a)(2).
 2. Any person who is the owner of a swine feeding operation with more than 3000 AU and uses liquid manure handling is required to obtain an NPDES permit per 40 CFR 122 if there are discharge(s) to a water of the State excluding subsurface water (groundwater).
- (b) Two or more swine feeding operations under common ownership are considered to be a single operation subject to this paragraph if they adjoin each other (are contiguous) or if they use a common area system for the disposal of wastes.
- (c) Discharges from a CAFO include discharges of manure, litter, or process wastewater from land application areas under the control of the CAFO that are not exempt as "agricultural storm water discharges." Precipitation-related discharges qualifying as agricultural storm water discharges are not subject to these permit requirements. For discharges from the land application area to qualify as agricultural storm water, manure and wastewater must be applied in accordance with site-specific practices that ensure appropriate agricultural utilization of nutrients [under [40 CFR 122.23\(e\)](#)].
- (d) The Division will notify the public of a proposal to grant coverage under a general NPDES permit or a proposed individual NPDES permit and make available for public review and comment the permit application, the notice of intent, the NMP, and the draft terms of the NMP to be incorporated into the permit.
- (e) The sale, lease, or other transfer of ownership or operating control of any swine feeding operation with greater than 3000 AU to any other corporate or partnership entity or to any individual person or persons unrelated by blood, marriage, or adoption to the existing operator shall require that a new permit be applied for, in accordance with the applicable paragraph or paragraphs of this rule.
- (f) Exclusions from all permit requirements of this paragraph are made for the following facilities unless they are defined as a concentrated animal feeding operation per 40 CFR 122, or the Division has made a case-by-case designation as a concentrated animal feeding operation, and they discharge, in which cases NPDES permitting is required by [40 CFR 122.23](#):
1. A livestock market, sale barn, stockyard, or auction house where animals are assembled from at least two sources to be publicly auctioned or privately

sold on a commission basis and that is under state or federal supervision. However, these facilities are defined as swine feeding operations if they meet the definition of a swine feeding operation in 391-3-6-20(2)(b).

- (g) Any person who removes and transports animal waste from its point of origin shall conform to the animal manure handler rules of the Georgia Department of Agriculture.

(4) Permit for Swine Feeding Operations with more than 3000 AU.

- (a) New swine feeding operations with more than 3000 AU, or existing operations that are expanding production so that they will have more than 3000 AU, which propose to commence operation after September 15, 2003 must obtain an individual permit in accordance with this paragraph prior to commencing construction for the operation. Permit applications should be submitted 180 days in advance. Any existing swine feeding operation which proposes to expand to more than 3000 AU must obtain an individual permit and comply with the requirements of this paragraph prior to any such expansion or operation of such an expanded facility.
- (b) There shall be no discharge of pollutants from the operation into the surface waters of the State, as defined in the Act, §O.C.G.A. [12-5-22\(13\)](#). There shall be no discharge of pollutants into ground water which would cause ground water quality not to comply with the maximum contaminant levels established in Georgia's Rules for Safe Drinking Water 391-3-5.
- (c) The permit applicant shall have waste storage and disposal systems designed by a professional engineer registered in Georgia, at least as stringently as NRCS guidance, and shall implement an NMP approved by the Division prior to startup. The permittee shall not start feeding any swine at the permitted operation before obtaining written approval from the Division for startup, subsequent to a final construction inspection by the Division.
- (d) The operation must have a certified operator prior to startup. The operator must be trained and certified in accordance with 391-3-6-.20(9).
- (e) The owner or operator shall, after completing a site evaluation and before any site preparation or construction commences, notify all adjoining property owners and all property owners who own property located within one mile of any boundary of the swine feeding operation of that person's intent to construct the swine feeding operation. This notice shall be by certified mail sent to the address on record at the property tax office in the county in which the land is located. The written notice shall include all of the following:

1. The name and address of the person intending to construct a swine feeding operation.
2. The type of swine feeding operation and the design capacity (in number of swine) of the proposed swine waste management system.
3. The name and address of the technical specialist preparing the waste management plan.
4. The address of the local Soil and Water Conservation District office.
5. A statement informing the adjoining property owners and the property owners who own property located within one mile of the proposed swine feeding operation that they may submit written comments or questions to the Division.

In addition, the owner or operator must conduct a minimum of one public meeting to present to the public the proposed project, its purpose, design, and environmental impacts. The meeting date and time must be advertised at least 30 days in advance in local newspapers with circulation covering all areas impacted by the project. Provisions to receive written comments should also be made. Evidence of notification of adjoining property owners, minutes of the public meeting, proof of advertisement, and opinions derived from the meeting must be submitted to the Division. Prior to making a decision on whether to issue a permit, the Division will require the permit applicant to run a notice in the largest newspaper of general circulation in the affected county and will provide a 30-day public comment period. Furthermore, the Division may conduct a public hearing on the application prior to making any final decision.

- (f) The system must be designed to handle the runoff from a 100-year, 24-hour storm event without an overflow from the waste storage lagoon or structure or storm water runoff from the disposal fields.
- (g) Any waste storage lagoon or structure shall be provided with a synthetic liner such that the vertical hydraulic conductivity does not exceed 5×10^{-7} cm/sec. Individual waste storage lagoons or structures shall not exceed 100 acre-feet in volume.
- (h) It is required that a minimum of 2 feet of freeboard be maintained in the waste storage lagoons or structures at all times.
- (i) Barns, waste storage lagoons or structures, and wastewater disposal systems shall not be located within a 100-year flood plain.
- (j) The following buffers shall be maintained:

1. 750 feet between disposal area and any residence or places of public assembly under separate ownership,
 2. 200 feet between disposal area and property lines,
 3. 200 feet between disposal area and water wells,
 4. 150 feet between disposal area and drainage ditches, surface water bodies, or wetlands,
 5. 1,750 feet between waste storage lagoons, structures, or barns and any occupied residence,
 6. 1,750 feet between waste storage lagoons, structures, or barns and any public use area, church, picnic area, playground, school, hospital, outdoor recreational facility, national park, state park, historic property or child care center,
 7. 1,750 feet between waste storage lagoons, structures, or barns and any property boundary,
 8. 1,750 feet between waste storage lagoons, structures, or barns and any wells that supply water to a public water system, or any other well that supplies water for human consumption, and
 9. 2,640 feet between waste storage lagoons, structures, or barns and waters of the State (not including ephemeral and intermittent streams).
- (k) At least one up-gradient and at least two down-gradient ground water monitoring wells shall be installed for each drainage basin intersected by the disposal field and for each waste storage lagoon or structure. The number, location, design, and construction specifications of the monitoring wells shall be reviewed and approved by the Division prior to permit issuance. The wells must be properly installed prior to the beginning of feeding of swine.
- (l) The permit will contain specific requirements for monitoring the effluent and ground water monitoring wells. This will usually consist of quarterly monitoring of the effluent for BOD₅, TSS, TKN, NH₃, NO₃ and pH, as well as quarterly monitoring of the wells for specific conductivity, NO₃, pH and depth to ground water. Monitoring will also be required to determine soil phosphorus adsorption, sodium adsorption ratio, cation exchange capacity, and cumulative loading of copper and zinc.
- (m) The permit may require periodic monitoring of any wet weather ditches or perennial streams which are in close proximity to disposal fields.

- (n) The permittee must submit an annual report to the Division. The annual report must include the items specified in the permit.
- (o) The owner or operator shall provide the evidence of financial responsibility in accordance with paragraph 391-3-6-.20(7) prior to permit issuance. A closure plan in accordance with paragraph 391-3-6-.20(8) shall be provided with the permit application. The sum of the following costs must also be included in the evidence of financial responsibility:
 - 1. Ten percent of the initial capital costs for construction of the entire hog-growing facility swine feeding operation (barns, pens, feed storage, waste management, etc.)
 - 2. \$100,000 to cover the costs of any fines that may be imposed by the Division for violations of the laws, rules, regulations, and permits associated with the facility.
- (p) These operations are prohibited from using open lagoons or structures. Lagoons and waste storage facilities must be provided with airtight covers. Air pollution control devices using best available technology must be installed on all lagoon or structure cover vents and openings to remove ammonia, hydrogen sulfide, methane, formaldehyde, and any other organic and inorganic air pollutants which may be required by the Division. Such air pollution control devices must meet all requirements of the Division and Georgia's Rules for Air Quality Control (391-3-1), and no swine feeding operation permit for new or expanding operations with more than 3000 AU shall be issued by the Division unless an appropriate air quality control permit can be issued simultaneously.
- (q) These operations are prohibited from using spray irrigation of lagoon or structure effluent. Lagoon effluent must be incorporated into the disposal fields using subsurface injection at a depth not less than 6 inches.
- (r) These operations shall be assessed penalties for failure to comply with the terms of this paragraph, the Act, or the individual permit according to the following schedule:
 - 1. Lagoon or structure breach or loss of containment, \$50,000 for the first day and \$100,000 per day for each day within a 12 month period thereafter during which a release occurs.
 - 2. Land disposal field runoff, \$25,000 per day.
 - 3. Discharge to ground water on site causing ground water to exceed any maximum contaminant limits in Georgia's Rules for Safe Drinking Water, \$5,000 per day.

4. Discharge to ground water causing increases of pollutant concentrations at the property line above ambient levels, \$5,000 per day and immediate cessation of land disposal.
 5. Second occurrence of any of the failures to comply specified above in paragraph 391-3-6-.20(4)(r)(1), (2), (3), or (4), immediate revocation of the individual permit and assessment of the appropriate penalty.
- (s) These operations shall submit a compliance history and other information with the permit application in accordance with paragraph (6) of this rule.

(5) Degree of Pollutant Treatment Required and Alternative Technology.

- (a) The owner or operator of any swine feeding operation covered by rule 391-3-6-.20 shall ensure that all wastes from a swine feeding operation shall receive such treatment or corrective action so as to ensure compliance with the terms and conditions of the permit.
- (b) If retrofitting the waste handling storage and disposal system of any swine feeding operation covered by 391-3-6-.20 with alternative technology becomes economically achievable, the Director may require any swine feeding operation to eliminate lagoons or structures or spray fields. Alternative technologies may include, but are not limited to:
 1. Drying/dewatering in greenhouse - type facilities,
 2. Composting by in-vessel method,
 3. Mechanical separation,
 4. Biogas production,
 5. Soil incorporation, and
 6. Soil injection.

(6) Refusal to Grant Certain Permits in accordance with §O.C.G.A. [12-5-23\(d\), \(e\), \(f\), and \(g\)](#).

- (a) An applicant for a permit for a new or expanding swine feeding operation with more than 3000 AU shall submit the following information to the Director as it pertains to the applicant and, in the case of a corporation or partnership, to the corporation, partnership, officer, director, manager, partner, and each shareholder of five percent or more of the stock or financial interest in the corporation or partnership:

1. The name, social security number, taxpayer identification number, and business address.
2. Background information and a three-year environmental compliance history of any facility associated with any of the above individuals in any state. The information and compliance history shall be sufficient to address the following:
 - (i) intentionally misrepresented or concealed any material fact in permit application submitted;
 - (ii) obtained or attempted to obtain another permit by misrepresentation or concealment;
 - (iii) pleaded guilty or been convicted by final judgment, and all appeals have been exhausted, in this state or any other state or federal court of any felony involving moral turpitude;
 - (iv) pleaded guilty or been convicted by final judgment and all appeals have been exhausted to a third or subsequent material violation of any federal environmental law or any environmental law of this state or of any other state that presented a substantial endangerment to human health or the environment;
 - (v) adjudicated in contempt of any court order enforcing any federal environmental laws or any environmental laws of this state or of any other state;
 - (vi) the holder of any permit required for the discharge of pollutants as defined by this article, under the laws of this state, any other state, or the Federal Water Pollution Control Act Amendments of 1972, as amended, which permit has been revoked for reasons of noncompliance;
 - (vii) denied for reasons of noncompliance the issue of any permit required for the discharge of pollutants, as defined by this article, under the laws of this state, any other state, or the Federal Water Pollution Control Act Amendments of 1972, as amended, which permit has been revoked for reasons of noncompliance;
 - (viii) fish kills caused by any facility;
 - (ix) facility compliance status for the past three years including all violations of environmental permits, rules or statutes; and

(x) other information determined by the Director.

(b) The Director shall deny a permit application for a new or expanding swine feeding operation if the applicant or any person identified in (a) above:

1. intentionally misrepresented or concealed any material fact in the application submitted to the Director or an environmental permit application in any other state;
2. has obtained or attempted to obtain another permit from the Director or from any other state by misrepresentation or concealment;
3. has pleaded guilty or been convicted by final judgment and all appeals have been exhausted, in this state or any other state or federal court of any felony involving moral turpitude within the three years preceding the date of the application for such permit;
4. has pleaded guilty or been convicted by final judgment and all appeals have been exhausted to a third or subsequent material violation of any federal environmental law or any environmental law of this state or of any other state that presented a substantial endangerment to human health or the environment within three years preceding the date of the application for such a permit;
5. has been adjudicated in contempt of any court order enforcing any federal environmental laws or any environmental laws of this state or of any other state within three years preceding the date of the application for such permit;
6. was the holder of any permit required for the discharge of pollutants, as defined by this article, under the laws of this state, any other state, or the Federal Water Pollution Control Act Amendments of 1972, as amended, which permit has been revoked for reasons of noncompliance within three years preceding the date of the application for a permit under this article; and
7. was denied for reasons of noncompliance the issuance of any permit required for the discharge of pollutants, as defined by this article, under the laws of this state, any other state, or the Federal Water Pollution Control Act Amendments of 1972, as amended, within three years preceding the date of the application for a permit.

(c) The Director shall deny a permit application for a new or expanding swine feeding operation if a facility operated by or associated with any person identified in (a)

above has failed to operate in full compliance with applicable environmental permits, rules, or statutes for less than eighty percent of the time during the three-year period preceding the date of the application for a permit or if the facility caused more than one fish kill during that period.

- (d) The Director shall not deny a permit as stated in (b) above, if the Director finds that affirmative actions taken by the applicant mitigate the impact of any such material misrepresentations, concealment, convictions, adjudication, or violations. Such affirmative actions to be considered by the Director as mitigating factors shall include, but not be limited to, information or documentation related to the following:
1. Implementation by the applicant of formal policies, training programs, or other management controls to minimize the occurrence of future unlawful activities;
 2. Installation by the applicant of environmental auditing or compliance programs; and
 3. The discharge from employment of any individual who was convicted of a crime associated with environmental violations.

(7) Financial Requirements

Owners of new swine feeding operations with more than 3000 AU at any one time shall establish and maintain evidence of financial responsibility to provide for the closure of their waste treatment facilities and the proper disposal of their contents after closure of the facility.

- (a) The owner must have a detailed written estimate, in current dollars, of the cost of hiring a third party to clean up and close the swine feeding operation. The owner must obtain a letter from the Division stating its concurrence that the owner's estimate of clean up and closure costs is reasonable. The owner must notify the Director that the estimate has been placed in the operating record.
1. During the active life of the facility, the owner must annually adjust the closure cost estimate for inflation.
 2. The owner must increase the closure cost estimate and the amount of financial assurance provided under paragraph (b) of this section if changes to the closure plan increase the maximum cost of closure at any time during the remaining active life.
 3. The owner may reduce the closure cost estimate and the amount of financial assurance provided under paragraph (b) of this section if the cost estimate

exceeds the maximum cost of closure. The owner must notify the Director that the justification for the reduction of the closure cost estimate and the amount of financial assurance has been placed in the operating record.

(b) Financial assurance for closure: The owner of each swine feeding operation with an annual average of greater than 3000 AU must establish financial assurance for closure of the facility. The owner must provide continuous coverage for closure until released from financial assurance requirements by the Director. The owner must choose from the options as specified in paragraphs (c) through (f) of this section. The mechanism for financial assurance must be submitted to the Division for approval and must also allow the Director access to the funds in the event of failure of the owner to close the facility.

(c) Closure trust fund.

1. An owner may satisfy the requirements of this section by establishing a closure trust fund and submitting an originally signed duplicate of the trust agreement to the Director. The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency.
2. After the trust fund is established, whenever the current closure cost estimate changes, the owner must compare the new estimate with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less than the amount of the new estimate, the owner, within 60 days after the change in the cost estimate, must either deposit an amount into the fund so that its value after this deposit at least equals the amount of the current closure cost estimate, or obtain other financial assurance as specified in this section to cover the difference.
3. If the value of the trust fund is greater than the total amount of the current closure cost estimate, the owner may submit a written request to the Director for release of the amount in excess of the current closure cost estimate.
4. If an owner substitutes other financial assurance as specified in this section for all or part of the trust fund, he may submit a written request to the Director for release of the amount in excess of the current closure cost estimate covered by the trust fund.
5. After beginning partial or final closure, an owner or another person authorized to conduct partial or final closure may request reimbursements for partial or final closure expenditures by submitting itemized bills to the Director. The owner may request reimbursements for partial closure only if sufficient funds are remaining in the trust fund to cover the maximum costs

of closing the facility over its remaining operating life. No later than 60 days after receiving bills for partial or final closure activities, the Director will instruct the trustee to make reimbursements in those amounts as the Director specifies in writing, if the Director determines that the partial or final closure expenditures are in accordance with the approved closure plan, or otherwise justified. If the Director does not instruct the trustee to make such reimbursements, he will provide to the owner or operator a detailed written statement of reasons.

6. The Director will agree to termination of the trust when:
 - (i) An owner substitutes alternate financial assurance as specified in this section; or
 - (ii) The Director releases the owner from the requirements of this section.

(d) Closure letter of credit.

1. An owner may satisfy the requirements of this section by obtaining an irrevocable standby letter of credit and submitting the letter to the Director. The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a Federal or state agency.
2. The letter of credit must be accompanied by a letter from the owner referring to the letter of credit by number, issuing institution, and date, and providing the following information: The type of facility, name, and address of the facility, and the amount of funds assured for closure of the facility by the letter of credit.
3. The letter of credit must be irrevocable and issued for a period of at least 1 year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least 1 year unless, at least 120 days before the current expiration date, the issuing institution notifies both the owner or operator and the Director by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the 120 days will begin on the date when both the owner or operator and the Director have received the notice, as evidenced by the return receipts.
4. The letter of credit must be issued in an amount at least equal to the current closure cost estimate.
5. Whenever the current closure cost estimate increases to an amount greater than the amount of the credit, the owner, within 60 days after the increase,

must either cause the amount of the credit to be increased so that it at least equals the current closure cost estimate and submit evidence of such increase to the Director, or obtain other financial assurance as specified in this section to cover the increase. Whenever the current closure cost estimate decreases, the amount of the credit may be reduced to the amount of the current closure cost estimate following written approval by the Director.

6. Following a final administrative determination that the owner has failed to perform final closure in accordance with the approved closure plan when required to do so, the Director may draw on the letter of credit.
7. The Director will return the letter of credit to the issuing institution for termination when:
 - (i) An owner substitutes alternate financial assurance as specified in this section; or
 - (ii) The Director releases the owner from the requirements of this section.

(e) Closure insurance.

1. An owner may satisfy the requirements of this section by obtaining closure insurance which conforms to the requirements of this paragraph and submitting a certificate of such insurance to the Director. By the effective date of these rules the owner or operator must submit to the Director a letter from an insurer stating that the insurer is considering issuance of closure insurance conforming to the requirements of this paragraph to the owner or operator. Within 90 days after the effective date of these rules, the owner or operator must submit the certificate of insurance to the Director or establish other financial assurance as specified in this section. At a minimum, the insurer must be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more States.
2. The closure insurance policy must be issued for a face amount at least equal to the current closure cost estimate. The term "face amount" means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer's future liability will be lowered by the amount of the payments.
3. The closure insurance policy must guarantee that funds will be available to close the facility whenever final closure occurs. The policy must also guarantee that once final closure begins, the insurer will be responsible for

paying out funds, up to an amount equal to the face amount of the policy, upon the direction of the Director, to such party or parties as the Director specifies.

4. After beginning final closure, an owner or any other person authorized to conduct closure may request reimbursements for closure expenditures by submitting itemized bills to the Director. Within 60 days after receiving bills for closure activities, the Director will instruct the insurer to make reimbursements in such amounts as the Director specifies in writing if the Director determines that the final closure expenditures are in accordance with the approved closure plan or otherwise justified. If the Director has reason to believe that the maximum cost of closure over the remaining life of the facility will be significantly greater than the face amount of the policy, he may withhold reimbursement of such amounts as he deems prudent until he determines that the owner is no longer required to maintain financial assurance for final closure of the particular facility. If the Director does not instruct the insurer to make such reimbursements, he will provide to the owner a detailed written statement of reasons.
5. The owner must maintain the policy in full force and effect until the Director consents to termination of the policy by the owner. Failure to pay the premium, without substitution of alternate financial assurance as specified in this section, will constitute a significant violation of these rules, warranting such remedy as the Director deems necessary. Such violation will be deemed to begin upon receipt by the Director of a notice of future cancellation, termination, or failure to renew due to nonpayment of the premium, rather than upon the date of expiration.
6. Each policy must contain a provision allowing assignment of the policy to a successor owner. Such assignment may be conditional upon consent of the insurer, provided such consent is not unreasonably refused.
7. The policy must provide that the insurer may not cancel, terminate, or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may elect to cancel, terminate, or fail to renew the policy by sending notice by certified mail to the owner or operator and the Director. Cancellation, termination, or failure to renew may not occur, however, during the 120 days beginning with the date of receipt of the notice by both the Director and the owner, as evidenced by the return receipts.

Cancellation, termination, or failure to renew may not occur and the policy will remain in full force and effect in the event that on or before the date of expiration:

- (i) The Director deems the facility abandoned; or
- (ii) Closure is ordered by the Director or a U.S. district court or other court of competent jurisdiction; or
- (iii) The owner is named as debtor in a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code; or
- (iv) The premium due is paid.

8. Whenever the current closure cost estimate increases to an amount greater than the face amount of the policy, the owner, within 60 days after the increase, must either cause the face amount to be increased to an amount at least equal to the current closure cost estimate and submit evidence of such increase to the Director, or obtain other financial assurance as specified in this section to cover the increase. Whenever the current closure cost estimate decreases, the face amount may be reduced to the amount of the current closure cost estimate following written approval by the Director.
9. The Director will give written consent to the owner or operator that he may terminate the insurance policy when:
 - (i) An owner or operator substitutes alternate financial assurance; or
 - (ii) The Director releases the owner or operator from the requirements of this section.

(f) Surety Bond Guaranteeing Closure.

1. An owner or operator may demonstrate financial assurance for closure by obtaining a payment or performance surety bond which conforms to the requirements of this paragraph. The owner or operator must notify the Director that a copy of the bond has been placed in the operating record. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on Federal bonds in Circular 570 of the U.S. Department of the Treasury.
2. The penal sum of the bond must be in an amount at least equal to the current closure cost estimate.

3. Under the terms of the bond, the surety will become liable on the bond obligation when:
 - (i) The owner or operator fails to perform as guaranteed by the bond; or
 - (ii) The Director notifies the owner or operator that they have failed to meet the requirements of these rules.
 4. Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner and operator and to the Director 120 days in advance of cancellation. If the surety cancels the bond, the owner or operator must obtain alternate financial assurance as specified in this section.
 5. The Director will give written consent to the owner or operator that he may terminate the surety bond when:
 - (i) An owner or operator substitutes alternate financial assurance; or
 - (ii) The Director releases the owner or operator from the requirements of this section.
- (g) Release of the owner from the requirements of this section: Within 60 days after receiving certifications from the owner and an independent registered professional engineer that final closure has been completed in accordance with the approved closure plan, the Director will notify the owner in writing that he is no longer required by this section to maintain financial assurance for final closure of the facility, unless the Director has reason to believe that final closure has not been in accordance with the approved closure plan. The Director shall provide the owner a detailed written statement of any such reason to believe that closure has not been in accordance with the approved closure plan.
- (h) Failure of the owner to close the facility in accordance with 391-3-6-.20(8) of this rule shall constitute forfeiture of the funds retained in the financial assurance mechanism and the Director shall be allowed access to the funds to close the facility.
- (8) Closure.**
- (a) Closure for new swine feeding operations with more than 3000 AU shall include, but may not be limited to the following:
 1. The sampling, analysis, and reporting of results of all remaining livestock waste, including any sludge and the top 6 inches of any lagoon or structure soil liner;

2. The removal of all remaining livestock waste, including sludge, and the removal of a minimum 6-inch thickness of soil throughout all lagoon or structure interiors;
 3. The application of all such wastes to cropland or pasture at agronomic rates;
 4. The removal of all associated appurtenances, including but not limited to transfer lines, ramps, pumping ports, and any other waste conveyance structures;
 5. The management of any impounded precipitation in any remaining excavations if the excavations are not immediately filled and returned to the pre-construction condition; and
 6. Any monitoring wells will be filled, plugged, and sealed in accordance with procedure approved by the Division.
- (b) For new swine feeding operations with more than 3000 AU, the owner shall submit a detailed closure plan for clean up and closure of the swine management facility with the permit application. This plan shall include a schedule for completion of closure within six months after the facility is removed from service. This plan shall be updated with future subsequent renewals of the permit.

(9) Operator Training and Certification Requirements.

- (a) Swine feeding operations are required to have certified operators prior to the feeding of swine.
- (b) Swine feeding operators shall be trained and certified by the Georgia Department of Agriculture. Proof of such training, certification, and continuing education shall be maintained by the Department of Agriculture and records provided to the Georgia Environmental Protection Division.
- (c) Certification training, agenda, and topics will be determined by the Georgia Department of Agriculture; but will include, at a minimum, best management practices, nutrient management planning, understanding regulations and water quality laws, standards, and practices, siting, pollution prevention, monitoring, and record keeping. Training programs will be structured to address the needs of the operators of differing sizes and various waste management technologies. Continuing education will be required to maintain this certification.

Amended: Rule entitled "Swine Feeding Operating Permit Requirements for Operations with More than 3000 Animal Units. Amended". F. Jul. 18, 2012; eff. Aug. 7, 2012.

Rule 391-3-6-.21. Animal Feeding Operation Permit Requirements.

(1) Purpose.

The purpose of this paragraph 391-3-6-.21 is to provide for the uniform procedures and practices to be followed relating to the application for and the issuance or revocation of permits for animal feeding operations with more than 300 Animal Units (AU). This paragraph only includes swine feeding operations with more than 300 AU but equal to or less than 3000 AU. The requirements for swine feeding operations with more than 3000 AU are at paragraph [391-3-6-.20](#). Nothing in this paragraph shall be construed to preclude the modification of any requirement of this paragraph when the Division determines that the requirement is not protective of the environment.

(2) Definitions.

All terms used in this paragraph shall be interpreted in accordance with the definitions as set forth in the Act unless otherwise defined in this paragraph or in any other paragraph of these Rules:

- (a) "Act" means the Georgia Water Quality Control Act, as amended.
- (b) "Animal feeding operation," "operation," or "AFO" means a lot or facility (other than an aquatic animal production facility or swine feeding operation with more than 3000 AU) where animals have been, are, or will be stabled or confined and fed or maintained for a total of at least 45 days in any 12-month period, and the confinement areas do not sustain crops, vegetation, forage growth, or post-harvest residues in the normal growing season.
- (c) "Animal Unit" (AU) is a unit of measurement for any AFO calculated by adding the following numbers: the number of slaughter and feeder cattle multiplied by 1.0, plus the number of mature dairy cattle multiplied by 1.4, plus the number of swine weighing over 25 kilograms (approximately 55 pounds) multiplied by 0.4, plus the number of sheep multiplied by 0.1, plus the number of horses multiplied by 2.0.
- (d) "Barn" means a structure where confinement feeding (feeding in limited quarters under a roof) occurs. Structures where confinement feeding does not occur are not considered "barns" for the purposes of this rule.

- (e) "Certified operator" means any person who has been trained and certified by the Georgia Department of Agriculture and has direct general charge of the day-to-day field operation of an AFO waste storage and disposal system, and who is responsible for the quality of the treated waste.
- (f) "Closure plan" means the plan approved by the Division for clean up and closure of the AFO and associated waste storage and disposal facilities.
- (g) "Concentrated Animal Feeding Operation," or "CAFO," means an AFO which is defined as a Large CAFO or Medium CAFO by [40 CFR 122.23\(4\) and \(6\)](#), or that is designated as a CAFO.
- (h) "Existing" applies to that which existed prior to September 15, 2003. "Existing operation" means an AFO that was in operation prior to September 15, 2003.
- (i) "Freeboard" is the extra depth added to a waste storage lagoon or structure as a safety factor between the designed full depth and the overflow depth. This is the vertical distance below the lowest point of the lagoon or structure berm above which the liquid level must never rise except in the case of a storm event exceeding the design maximum precipitation event.
- (j) "Natural Resources Conservation Service" (NRCS) is an agency within the United States Department of Agriculture.
- (k) "New" applies to that which existed on or after September 15, 2003. "New or expanding operation" or "new AFO" means an AFO the construction or expansion of which is commenced on or after September 15, 2003.
- (l) "NRCS guidance" means the latest editions of the Natural Resources Conservation Service (NRCS) Agricultural Waste Management Field Handbook, Part 651, FOTG Section IV Georgia, and other applicable publications of the NRCS. A certified specialist or trained person may use NRCS guidance to develop or modify an NMP.
- (m) "Nutrient Management Plan" (NMP) is a plan which identifies actions or priorities that will be followed to meet clearly defined nutrient management goals at an agricultural operation. Defining nutrient management goals and identifying measures and schedules for attaining the goals are critical to reducing threats to water quality and public health. The NMP should address activities related to compliance with effluent limitations and other permit requirements, including manure handling and storage, land application of manure and wastewater, site management, record keeping, and management of other utilization options. For an AFO with a liquid manure handling system, the NMP must be developed or modified by a "certified specialist" as defined by the Division. The Division will specify the requirements for certification. For an AFO that handles dry manure, the NMP must be developed by a person trained in the subject by an academic or

trade organization. It should include emergency response planning and a closure plan for abandonment of any facility used for the treatment or storage of animal waste. The requirements for submittal and approval of the NMP are specified in the following paragraphs.

- (n) "Owner" means any person owning any system for waste treatment and disposal at an AFO.
- (o) "Permit" means a permit applied for and issued in accordance with the terms and conditions for paragraphs [391-3-6-.06](#), Waste Treatment and Permit Requirements (individual NPDES permits), or [391-3-6-.11](#), Land Disposal and Permit Requirements (non-NPDES individual land application system or "LAS" permit), or [391-3-6-.15](#), Non-Storm Water General Permit Requirements (general NPDES permit), or [391-3-6-.19](#), General Permit - Land Application System Requirements (non-NPDES general LAS permit), of this Chapter.
- (p) "Wetted area" or "disposal area" is the land area where AFO waste is sprayed, spread, incorporated, or injected so that the waste can either condition the soil or fertilize crops or vegetation grown in the soil.
- (q) "25-year, 24-hour storm event" is the maximum 24-hour precipitation event expressed in inches with a probable recurrence interval of once in 25 years, as defined by the National Weather Service of the United States Department of Commerce in Technical Paper Number 40, "Rainfall Frequency Atlas of the United States," May 1961, and subsequent amendments.
- (r) "100-year flood plain" is the land inundated from a flood whose peak magnitude would be experienced on an average of once every 100 years. The 100-year flood has a 1% probability of occurring in one given year.
- (s) "300 AU" means three hundred animal units. Paragraph 391-3-6-.21(2)(c) notwithstanding, the numbers of animals in any of the following categories are equivalent to 300 AU:
 - 1. 200 mature dairy cows, whether milked or dry,
 - 2. 300 veal calves,
 - 3. 750 swine each weighing 55 pounds or more.
 - 4. 300 cattle other than mature dairy cows or veal calves. Cattle includes but is not limited to heifers, steers, bulls, and cow/calf pairs,
 - 5. 150 horses,
 - 6. 3,000 sheep or lambs,

7. 16,500 turkeys,
 8. 9,000 laying hens or broilers, if the AFO uses a liquid manure handling system,
 9. 1,500 ducks, if the AFO uses a liquid manure handling system.
- (t) "1000 AU" means one thousand animal units. Paragraph 391-3-6-.21(2)(c) notwithstanding, the numbers of animals in any of the following categories are equivalent to 1000 AU:
1. 700 mature dairy cows, whether milked or dry,
 2. 1,000 veal calves,
 3. 2,500 swine each weighing 55 pounds or more,
 4. 10,000 swine each weighing less than 55 pounds (immature swine or nursery pigs),
 5. 1,000 cattle other than mature dairy cows or veal calves. Cattle includes but is not limited to heifers, steers, bulls, and cow/calf pairs,
 6. 500 horses,
 7. 10,000 sheep or lambs,
 8. 55,000 turkeys,
 9. 30,000 laying hens or broilers, if the AFO uses a liquid manure handling system,
 10. 125,000 chickens or broilers (other than laying hens), if the AFO handles dry manure only,
 11. 82,000 laying hens, if the AFO handles dry manure only,
 12. 30,000 ducks, if the AFO handles dry manure only,
 13. 5,000 ducks, if the AFO uses a liquid manure handling system.
- (u) "3000 AU" means three thousand animal units. Paragraph 391-3-6-.21(2)(c) notwithstanding, the numbers of swine in any of the following categories are equivalent to 3000 AU:
1. 7,500 swine each weighing 55 pounds or more,

2. 30,000 swine each weighing less than 55 pounds (immature swine or nursery pigs).

(3) Basic Permit Requirement.

- (a) Any person who is the owner of an AFO with more than 300 AU shall obtain a permit from the Division in accordance with this paragraph corresponding to the age and size of the AFO.
- (b) Any person who is the owner of an AFO is not required to obtain an NPDES permit unless the AFO is defined as a CAFO per 40 CFR 122 and discharges to a water of the State excluding subsurface water (groundwater), or the Division has made a case-by-case designation as a CAFO and NPDES permitting is required for discharges to a water of the State excluding subsurface water (groundwater) by [40 CFR 122.23](#). The owner of any AFO with 300 AU or less remains subject to applicable sections of the Act, including civil liability, civil penalty, and criminal penalty, §O.C.G.A. [12-5-51](#), *et seq.*
- (c) Discharges from a CAFO include discharges of manure, litter, or process wastewater from land application areas under the control of the CAFO that are not exempt as agricultural storm water discharges. Precipitation-related discharges qualifying as agricultural storm water discharges are not subject to these permit requirements. For discharges from the land application area to qualify as agricultural storm water, manure and wastewater must be applied in accordance with site-specific practices that ensure appropriate agricultural utilization of nutrients [under [40 CFR 122.23\(e\)](#)].
- (d) The Division will notify the public of a proposal to grant coverage under a general NPDES permit or a proposed individual NPDES permit and make available for public review and comment the permit application, the notice of intent, the NMP, and the draft terms of the NMP to be incorporated into the permit.
- (e) Two or more AFOs under common ownership are considered to be a single operation subject to this paragraph if they adjoin each other (are contiguous) or if they use a common area or system for the disposal of wastes.
- (f) Exclusions from all permit requirements of this paragraph are made for the following facilities unless they are defined as a CAFO per 40 CFR 122 or the Division has made a case-by-case designation as a CAFO and they discharge, in which cases NPDES permitting is required by [40 CFR 122.23](#):
 1. A livestock market, sale barn, stockyard, or auction house where animals are assembled from at least two sources to be publicly auctioned or privately sold on a commission basis and that is under state or federal supervision.

However, these facilities are defined as AFOs if they meet the definition of an AFO in 391-3-6-.21(2)(b).

- (g) Any person who removes and transports animal waste from its point of origin shall conform to the animal manure handler rules of the Georgia Department of Agriculture.

(4) Permit for Operations with Liquid Manure Handling Systems.

- (a) Any person who is the owner of an AFO with more than 300 AU and uses liquid manure handling must apply for an LAS permit from the Division. The Division may issue an individual or general permit. Permit applications for new or expanding AFOs should be submitted 180 days prior to beginning the AFO. Any person who owns an AFO must have waste storage and disposal systems pursuant to this rule and meet the conditions in subparagraphs (b) through (o) below.
- (b) Prior to beginning operation of the AFO, all new operations must have waste storage and disposal systems in operation that have been designed and constructed in accordance with NRCS guidance.
- (c) The owner of an existing AFO shall submit to the Division an NMP for the AFO. The NMP shall be of sufficient substance and quality as to be approvable by the Division. The owner of a new operation shall submit to the Division an NMP and obtain approval prior to beginning operation of the AFO.
- (d) All operations shall have a certified operator. New operations shall have a certified operator prior to beginning operation of the AFO. The certified operator shall be trained and certified in accordance with 391-3-6-.21(5).
- (e) Any new waste storage lagoon or structure must be constructed to ensure that seepage is limited to a maximum of 1/8 inch per day (3.67×10^{-6} cm/sec). However, new waste storage lagoons or structures located within significant ground water recharge areas which fall within the categories defined in the Georgia Department of Natural Resources Rules for Environmental Planning Criteria, Chapter [391-3-16-.02\(3\)\(e\)](#) must be provided with either a compacted clay or synthetic liner such that the vertical hydraulic conductivity does not exceed 5×10^{-7} cm/sec or other criteria as determined by the Division. If it is determined that an existing waste storage lagoon or structure is creating a ground water contamination problem, the Division may require the lagoon or structure to be repaired.
- (f) New barns and new waste storage lagoons or structures for all new AFOs shall not be located within a 100-year flood plain.

- (g) For new operations with more than 1000 AU, it is required that a minimum of 1 foot of freeboard plus storage for the 25 year 24 hour storm event be maintained in the waste storage lagoons or structures. The liquid level must not rise into this design storage level for lesser storms.
- (h) For new operations with more than 1000 AU, the following buffers and setbacks shall be maintained:
 - 1. 100 feet between wetted areas and water wells that supply water for human consumption;
 - 2. 100 feet between waste storage lagoons, waste storage structures, or barns and waters of the State excluding subsurface water;
 - 3. 500 feet between waste storage lagoons, waste storage structures, or barns and any existing wells that supply water to a public water system, or any other existing well off the owner's property that supplies water for human consumption.
- (i) For all operations with more than 1000 AU, the waste disposal system shall be designed and operated such that it does not cause Nitrate Nitrogen ($\text{NO}_3\text{-N}$) in the ground water at the operation's property line to exceed 10 mg/l. The Division will require the owner to implement corrective actions if the permitted waste disposal system has caused the Nitrate Nitrogen ($\text{NO}_3\text{-N}$) to exceed 10 mg/l as described.
- (j) For all operations with more than 1000 AU, a setback shall be maintained of 100 feet between wetted areas or waste disposal areas and waters of the State excluding subsurface water (ground water). As a compliance alternative, the owner may substitute the 100 feet setback with a 35 feet wide vegetated buffer where waste disposal is prohibited.
- (k) For all operations with more than 1000 AU, representative samples shall be collected from each major soil series present within the waste disposal field areas in a manner to be specified in the permit. One down gradient ground water monitoring well shall be installed for each waste storage lagoon or structure or series of lagoons or structures. The number, location, design, and construction specifications of the monitoring wells shall be included in the NMP. Existing wells that are approved by the Division can be used for testing. Monitoring wells shall be properly installed within 24 months of permit issuance.
- (l) For all operations with more than 1000 AU, the permit will contain specific requirements for monitoring the waste storage effluent to be land applied and for the ground water monitoring wells. This will usually consist, at a minimum, of semiannual monitoring of the effluent for Total Kjeldahl Nitrogen (TKN), Nitrate Nitrogen ($\text{NO}_3\text{-N}$) and Total Phosphorus (TP) as well as semiannual monitoring of the wells for TKN and $\text{NO}_3\text{-N}$.

- (m) For all operations with more than 1000 AU, the permittee must submit an annual report to the Division. The annual report must include the items specified in the permit.
 - (n) For all operations with more than 1000 AU, when the owner ceases operation of the AFO, he must notify the Division of that fact within three months, and he must properly close all waste storage lagoons or structures within twenty-four months. Proper closure of a lagoon or structure entails removing all waste from the lagoon or structure and land applying it at agronomic rates, and in a manner so as not to discharge to any surface water.
 - (o) Any failure to comply with any condition of (a) through (n) above or any condition of any individual permit issued for the operation shall be deemed a violation of the Act and may be punishable in accordance with the penalties provided in the Act.
- (5) **Certified Operator - Training and Certification Requirements for Operations With Liquid Manure Handling Systems.**
- (a) AFOs shall have certified operators prior to beginning the AFO.
 - (b) AFO certified operators shall be trained and certified by the Georgia Department of Agriculture. Proof of such training, certification, and continuing education may be maintained by the Department of Agriculture and records provided to the Georgia Environmental Protection Division.
 - (c) Certification training, agenda, and topics will be determined by the Georgia Department of Agriculture; but will include, at a minimum, best management practices, nutrient management planning, understanding regulations and water quality laws, standards and practices, siting, pollution prevention, monitoring, and record keeping. Training programs will be structured to address the needs of the certified operators of differing sizes and various waste management technologies. Continuing education will be required to maintain this certification.

Rule 391-3-6-.22. NPDES General Permit for Construction Activity Fees.

- (1) **Exclusions.** Those land disturbing activities not subject to regulation under the State General Permit are exempt from the fees required by this section.
- (2) **NPDES General Permit for Construction Activity Fees.** The requirements of this subsection are applicable to primary permittees that own or operate a site at which land disturbing activities occur in the State of Georgia.
 - (a) For the purpose of determining the disturbed acreage to which the fees of this subsection apply, the primary permittee shall use the erosion, sedimentation and pollution control plan created in compliance with the State General Permit showing the activities to be undertaken by any person at the site. This acreage shall be measured by methods that provide an appropriate measurement of the land area to the closest tenth (1/10th) of an acre of land disturbing activity proposed.
 - (b) Any Primary Permittee who has submitted a Notice of Intent to disturb land under a State General Permit, or who submits a Notice of Intent to disturb land under a State General Permit, shall submit a fee on the schedules described below which will cover the fee requirements for all stages or phases of development or land disturbing activity described in the Notice of Intent.
- (3) **Fee Schedule for Land Disturbing Activities in a Jurisdiction that is not Regulated by a Local Issuing Authority, after December 31, 2003.**
 - (a) Determination of applicable fee. Each Primary Permittee shall determine the proposed extent of land disturbing activities to be performed at the site covered by the permit in number of acres or fraction of acres to the nearest tenth (1/10th) acre to be disturbed. When a Primary Permittee pays the applicable fee of this subsection, that Primary Permittee shall not pay any additional State General Permit fees to the State unless the scope of work covered under the permit so paid for is increased. For each acre of proposed land disturbing activity, each Primary Permittee shall pay the fee established by this section prior to the commencement of any land disturbing activity.
 - (b) Primary Permittees shall pay the State of Georgia, as described in section 391-3-6-.22(7) below, \$80.00 per acre of land disturbed in a jurisdiction that is not regulated by a local issuing authority.
- (4) **Fee Schedule for Land Disturbing Activities in a Jurisdiction that is Regulated by a Local Issuing Authority, after December 31, 2003.**
 - (a) Determination of applicable fee. Each Primary Permittee shall determine the proposed extent of land disturbing activities to be performed at the site covered by the permit in number of acres or fraction of acres to the nearest tenth (1/10th) acre to be disturbed. When a Primary Permittee pays the applicable fee of this subsection, that Primary Permittee shall not pay any additional State General Permit fee to the State unless the scope of work covered under the permit so paid for is increased. For each acre of land disturbed, each Primary Permittee shall pay

the fee established by this section prior to the commencement of any land disturbing activity.

- (b) Primary Permittees shall pay the State of Georgia, as described in section 391-3-6-.22(7) below, \$40.00 per acre of land disturbed in a jurisdiction that is regulated by a local issuing authority.
- (c) Primary Permittees shall pay to the local issuing authority, as described in section 391-3-6-.22(7) below, \$40.00 per acre of land disturbed in a jurisdiction that is regulated by a local issuing authority.

(5) Fee Schedule for Land Disturbing Activities Performed by Permittees Exempt from Local Issuing Authority Regulation pursuant to O.C.G.A. [12-7-17](#), after December 31, 2003.

- (a) Determination of applicable fee. Each Primary Permittee shall determine the proposed extent of land disturbing activities to be performed at the site covered by the permit in number of acres or fraction of acres to the nearest tenth (1/10th) acre to be disturbed. When a Primary Permittee pays the applicable fee of this subsection, that Primary Permittee shall not pay any additional State General Permit fee to the State unless the scope of work covered under the permit so paid for is increased. For each acre of land disturbed, each Primary Permittee shall pay the fee established by this section prior to the commencement of any land disturbing activity.
- (b) Primary Permittees shall pay the State of Georgia, as described in section 391-3-6-.22(7) below, \$80.00 per acre of land disturbed regardless of jurisdiction.

(6) Fee Schedule for Land Disturbing Activities from August 13, 2003 through December 31, 2003.

- (a) For on-going or completed projects that have submitted a Notice of Intent to disturb land under a State General Permit the Primary Permittee shall pay a fee based on the following:
 - (i) the number of acres or fraction of acres to the nearest tenth (1/10th) acre that have not reached final stabilization before August 13, 2003; and
 - (ii) the proposed extent of land disturbing activities yet to be performed at the site covered by the permit in number of acres or fraction of acres to the nearest tenth (1/10th) acre to be disturbed.
- (b) For projects that did begin or will begin land disturbing activity during the period of August 13, 2003 through December 31, 2003, the Primary Permittee shall pay a fee based on the proposed extent of land disturbing activities to be performed at

the site covered by the permit in number of acres or fraction of acres to the nearest tenth (1/10th) acre to be disturbed.

- (c) The dollar amount of the fees paid under this subsection shall be the same as the dollar amounts due in the applicable subsections 391-3-6-.22(3) through (5).
- (d) Said payment is due and payable no later than January 31, 2004. Failure to pay outstanding fees under this provision on or before January 31, 2004 is a violation of these rules.

(7) Payment of Land Disturbing Activity Fees.

- (a) Payment due date. Except as described in subsection 391-3-6-.22(6), all land disturbing activity fees required by this section shall be paid to the Division or to the local issuing authority, as appropriate, prior to the commencement of land disturbing activities at the site. Persons who fail to make appropriate payments and who commence work without payment shall be in violation of the State General Permit and the Georgia Water Quality Control Act, O.C.G.A. [12-5-20](#)*et seq.*
- (b) Payment remittance. Payments required to be made to the State of Georgia, whether in a jurisdiction covered by a local issuing authority or a jurisdiction not covered by a local issuing authority shall be made payable to Georgia Dept. of Natural Resources and submitted on a form provided by the division. Payments required to be made to a local issuing authority shall be made in the manner specified by the local issuing authority and shall not be made to the division.
- (c) Failure to pay. Failure to make payments required under these rules is a violation of these rules for each day on which land disturbing activity occurs on the site.

- (8) Fees for Land Disturbing Activities by Out-of-State Businesses.** The requirements of this subsection are applicable to any person performing land disturbing activities in the state of Georgia. Out-of-state businesses shall comply with all applicable state and local laws, rules and regulations.

Authority: O.C.G.A. Secs. [12-5-23](#), [12-5-30](#)*et seq.*

History. Original Rule entitled "NPDES General Permit for Construction Activity Fees" adopted. F. Nov. 5, 2003; eff. Nov. 25, 2003.

Rule 391-3-6-.23. Land Disposal of Septage.

- (1) Purpose.**

The purpose of Rule 391-3-6-.23 is to establish procedures:

- (a) For the regulation and permitting of any land disposal site that receives septic tank waste (septage) that is applied via subsurface injection or incorporation into the soil;
- (b) To be followed by persons submitting to the Division engineering reports, plans and specifications, and related materials for the construction of any system for the storage and/or pretreatment of septage; and
- (c) To provide for public participation during the permitting process for any land disposal site that receives septic tank waste (septage).

This Rule includes general requirements, pollutant limits, pathogen and vector attraction reduction requirements, pretreatment standards, management practices, monitoring, record keeping, reporting, and permitting requirements.

(2) Definitions.

All terms used in this Rule shall be interpreted in accordance with the definitions as set forth in this Paragraph, in Rule [391-3-6-.17](#), or in any other Rules of this Chapter:

- (a) "Agronomic Rate" is the septage application rate based on a dry weight basis determined to provide the amount of nitrogen needed by the food crop, feed crop, fiber crop, cover crop or vegetation grown on the land; and to minimize the amount of nitrogen in the domestic septage that passes below the root zone of the crop or vegetation grown on the land to the groundwater.
- (b) "Annual septage application rate" is the maximum amount of septage (dry weight basis) that may be applied to a unit area of land during a 365-day period.
- (c) "Applicant" means the owner of the site or the operator of the site.
- (d) "Applier" is the person who applies septage to the land.
- (e) "Certification" means the procedure by which an accreditation or certification agency, a state, or a Federal agency evaluates and acknowledges a person as meeting certain qualifications or standards. The certification shall be valid only for the time period specified by the agency.
- (f) "Closure Plan" means a plan approved by the Division for the clean up and closure of a Tier 2 operation and associated waste storage and pretreatment facilities.

- (g) "County Board of Health" means the County Board of Health established by the Official Code of Georgia Annotated, Title 31-3-1 or its designee.
- (h) "DPH" means the Department of Public Health of the State of Georgia.
- (i) "Domestic Septage" is the liquid or solid material removed from a septic tank, cesspool, portable toilet, type III marine sanitation device, or a similar system that receives only domestic sewage. Domestic septage does not include liquid or solid material removed from a septic tank or similar treatment works that receives either commercial wastewater or industrial wastewater. Domestic septage does not include grease removed from a grease trap.
- (j) "Domestic Sewage" means water and wastewater from humans or household operations that is discharged to a treatment works. This includes wastes derived from a toilet, bath, shower, sink, garbage disposal, dishwasher, and/or washing machine. Domestic sewage may include household sewage as well as sewage from establishments such as schools, restaurants, businesses and motels as long as the sewage does not contain other types of waste than those listed above.
- (k) "EPA" or "US EPA" means the United States Environmental Protection Agency and any of its authorized personnel.
- (l) "Existing Site" means any site that was in operation on January 1, 2002.
- (m) "Land disposal" or "applied to the land" means the spraying or spreading of septage on the land surface; the injection of septage below the land surface; or the incorporation of septage into the soil at agronomic rates for the purpose of soil conditioning or fertilization of crops or vegetation grown in the soil.
- (n) "Land with a low potential for public exposure" is land that the public uses infrequently. This includes, but is not limited to, agricultural land, forest, and a reclamation site located in an unpopulated area.
- (o) "Monitoring well" means a well purposely installed, in accordance with Division guidelines, to ensure monitoring results that provide an accurate representation of groundwater quality.
- (p) "New Site" means any site that was not in operation on January 1, 2002.
- (q) "Operator" or "Certified Operator" means the person who has direct general charge of the day-to-day field operation of the septage storage, pretreatment, and disposal system and who is responsible for the quality of the treated septage; and who holds a valid certification acceptable to the Division.
- (r) "Owner" means any person owning land where septage or septic tank waste will be land applied.

- (s) "Permit" means a land disposal system permit issued to an applicant by the Division for a land disposal site that receives septage.
- (t) "Person" means any owner or operator who applies septage to land.
- (u) "Septage" means the same as "domestic septage".
- (v) "Septage management plan" means a detailed plan of operation for land disposal of septage. The plan shall, at a minimum, comply with these regulations, the Federal Code of Regulations, Title 40, Part 503, and any additional requirements established by the Division.
- (w) "Septage Removal and Disposal Permit" is a permit issued by a county board of health under the Rule for Onsite Sewage Management Systems of the Department of Public Health. The permit authorizes a business to remove and dispose of the contents of the on-site sewage management system.
- (x) "Septic Tank Pumping and Hauling Business" is a business that has been issued a septage removal and disposal permit by a county board of health for the removal and/or disposal of domestic septage.
- (y) "Soil Fertility Test" shall mean a test to determine the nitrogen, phosphorous and potassium requirements for a crop grown on a unit of land.
- (z) "Soil Report and Map" means a site specific soil interpretative table that identifies as a minimum the following: the name of the soil series, the percent slope, the seasonal high groundwater table, the depth of any impervious layer, and the absorption rate for each horizon.
- (aa) "Stockpile" means to place septage on land in piles or in any other manner that does not constitute application to the land as defined in land disposal above.
- (bb) "Tier 1 operation" means a land disposal site that receives and land applies septic tank waste from a single permitted septic tank pumping and hauling business.
- (cc) "Tier 2 operation" means a land disposal site that receives septic tank waste from more than one permitted septic tank pumping and hauling business.
- (dd) "Total solids" are the materials in septage that remain as residue when the septage is dried at 103 to 105 degrees Celsius.
- (ee) "Treat, treatment, or pretreatment of septage" is the preparation of septage for final use or disposal. This includes, but is not limited to, thickening, stabilization, and dewatering of septage. This does not include storage of septage.

- (ff) "Vector attraction" is the characteristic of septage that attracts rodents, flies, mosquitoes, or other organisms capable of transporting infectious agents.
- (gg) "Volatile solids" is the amount of the total solids in septage lost when the septage is combusted at 550 degrees Celsius in the presence of excess air.
- (hh) "Well" means an excavation or opening into the ground by which groundwater is sought for use. This term shall not include monitoring wells used to sample for groundwater quality.

(3) Coverage.

- (a) This Rule applies to any site that receives septage, to any person who prepares septage for land application, or to any person who applies septage to the land for subsurface injection or incorporation into soil. Any Tier 2 operation shall be required to adhere to the additional requirements specified in Paragraphs (10), (17), (20), and (21).
- (b) This Rule does not apply to:
 1. Grit and screenings generated during pretreatment of septage.
 2. Disposal of septage by means other than land application at agronomic rates via subsurface injection or incorporation into soil with the exception of septage applied to reclamation sites.
 3. The incineration of septage.
 4. Ash generated during the firing of septage in a septage incinerator.
 5. Persons proposing to sell or give away septage in a bag or other container for application to the land. Approval to sell or give away such bagged or contained septage must be obtained from the Georgia Department of Agriculture.

(4) Permit Required.

The requirements in this Rule shall be implemented through a permit issued or reissued to an applicant. If the applicant is not the owner of the site, then the applicant must submit a letter of agreement between the applicant and the owner of the site.

- (a) It shall be unlawful for any person to operate a land disposal site without having first obtained a valid permit from the Division pursuant to this Rule; provided however, that any site that as of June 30, 2007, operated under a valid permit issued on or before such date by the Department of Public Health under Code

Section [31-2-8](#) may continue to operate under such Code Section until July 1, 2014, but a permit shall be obtained from EPD prior to such date in order to continue such operation thereafter as a Tier 1 operation in accordance with this Rule.

- (b) Disposal of domestic septage by land disposal shall only occur on land with a low potential for public exposure.
- (c) Prior to the issuance of a land disposal permit, the applicant shall have submitted and the Division shall have approved a septage management plan. The application for a permit and information for the septage management plan shall be on forms provided by the Division. All information required for the septage management plan must be submitted prior to Division review. For Tier 1 operations the septage management plan shall include an identified section specifying details for the clean up and closure of the operation.

(5) Monitoring, Recording and Reporting Requirements.

Any pollutant discharged into a land disposal system authorized by a permit shall be subject to such monitoring, recording and reporting requirements as may be reasonably required by the Director. These requirements may include: the installation of monitoring wells or other equipment; the monitoring of surface waters; the use and maintenance of such monitoring equipment; specific requirements for recording of monitoring activities and results; and periodic reporting of monitoring results to the Division. The monitoring, recording and reporting requirements shall be specified in a permit when issued, provided, however, the Director may modify or require additional monitoring, recording and reporting by written notification to the permittee. Any Tier 1 operations covered under this Rule will have twenty-four (24) months after date of initial permit issuance to comply with any groundwater or surface water monitoring, recording and reporting requirements that may be specified in a permit.

- (a) The frequency of sampling and reporting shall be specified in the permit, but in no case shall the frequency be less than once per year.
- (b) The permittee shall retain any records of monitoring activities and results for a minimum of five (5) years, unless otherwise required or extended by the Director upon written notification.
- (c) Any holder of a permit that requires monitoring of the authorized pollutant discharged into a land disposal system shall report periodically to the Division results of all required monitoring activities.

(6) Buffer Criteria.

The following buffer distance requirements must be met as a minimum. The Division may require additional buffer distances, on a case-by-case basis.

- (a) Land disposal sites shall not be located within 300 feet of a residence or other facility or land frequently used by the general public.
 - (b) Domestic septage shall not be applied within 300 feet from the normal water level of any impoundment, tributary, stream, or other body of water considered waters of the State; within 300 feet of a sinkhole; within 300 feet of a marsh, wetland or coastal waters.
 - (c) Domestic septage shall not be applied within 500 feet of a public, non-public, or individual well.
 - (d) An undisturbed vegetative buffer strip of at least 50 feet wide shall be maintained along all streams and drainage ditches within or adjacent to the land disposal site.
- (7) Management of Land Disposal Sites.
- (a) Only domestic septage shall be applied to the site. No grease, industrial, solid or hazardous waste shall be applied on the site.
 - (b) Land disposal of domestic septage shall not be permitted unless an approved pretreatment process has properly treated such septage. Proper pretreatment includes screening and stabilization of all septage. Such pretreatment must occur at the land disposal site.
 - (c) The pH of the soil in the land disposal area shall be maintained at a pH amenable for growing the cover crop. The pH shall be measured by annual soil tests.
 - (d) Public access to the land disposal site shall be restricted by fencing or other means approved by the Division. The method of public access control shall be specified in the permit.
 - (e) Each site entrance shall be posted with a "No Trespassing" sign identifying the area as a land disposal site. The sign shall include the name and address of the person or business engaging in the land disposal of septage and the site permit number.
 - (f) An annual soil fertility test shall be required and utilized to determine the agronomic application rate. No person shall land apply domestic septage to a site on which the nitrogen requirements have been met for the calendar year.

- (g) No person shall land apply domestic septage to a site at a rate that exceeds the annual pollutant loading rate limit in Table 1 for arsenic, cadmium, chromium, copper, lead, mercury, nickel, selenium and zinc.
- (h) No person shall land apply domestic septage to a site that exceeds the cumulative pollutant loading rate limit in Table 1 for arsenic, cadmium, chromium, copper, lead, mercury, nickel, selenium and zinc.
- (i) The Division shall maintain current minimum requirements for a septage management plan.
- (j) The Division shall maintain a list of all acceptable certification agencies and certifications.
- (k) All application of septage shall be under the general supervision of certified operator unless no acceptable certification process exists.

(8) Vector Attraction Reduction Management.

Land application of domestic septage must meet one of the following two vector attraction reduction management practices.

- (a) Subsurface injection: Domestic septage shall be injected below the surface of the land and no significant amount of septage shall be present on the land surface within one hour after septage is injected. Injection may be accomplished by any device(s) that place the septage beneath the soil in a narrow trench at a depth of no greater than 18 inches and promptly replaces the cover soil in the same action of trenching and placing septage. Excavation of a trench followed by placement of septage and later covering of the trench is not considered injection.
- (b) Incorporation: Domestic septage applied to the surface of the land shall be incorporated into the soil within six hours after septage application.

(9) Pathogen Control Requirements.

The following management practices must be met for compliance with pathogen control requirements.

- (a) Food crops with harvested parts that touch the land surface or that develop above the land surface shall not be harvested for fourteen (14) months after domestic septage application.
- (b) Feed crops or fiber crops shall not be harvested for thirty (30) days after domestic septage application.

- (c) Food crops with harvested parts below the land surface shall not be harvested for thirty-eight (38) months after domestic septage application.
- (d) Turf grown on land where domestic septage is applied shall not be harvested for one (1) year after domestic septage application.
- (e) Animals shall not be allowed to graze on the land for thirty (30) days after the application of domestic septage.
- (f) Public access shall be restricted for thirty (30) days after the application of domestic septage.
- (g) Domestic septage shall not be applied to soils saturated with water or during rain events.

(10) **Monitoring.**

The pollutants listed in Table 1, and any additional parameters contained in the permit, shall be monitored at least once per year for Tier 1 operations and once per quarter for Tier 2 operations. Representative septage samples shall be analyzed in accordance with the analytical methods contained in [40 CFR 503.8](#) (or as revised by EPA). All samples shall be analyzed by a certified wastewater laboratory analyst or in a commercial environmental laboratory that is approved under the Division's Rules for Commercial Environmental Laboratories.

(11) **Application Rate.**

The annual application rate for domestic septage applied to a land disposal site shall be based on the Division approved septage management plan.

(12) **Septage Holding Facilities.**

All septage land disposal systems shall have an alternative method for the temporary holding of domestic septage during periods of adverse weather. Such method(s) shall comply with Division requirements and shall be part of the septage management plan.

(13) **Record Keeping.**

Individuals involved in the land disposal of domestic septage shall maintain the following information for five (5) years. The information shall be available for inspection at the place of business by the Division, the DPH, the local County Board of Health, or the US EPA. A septage application record form shall be used to record the following information:

- (a) The location, by street address (if available) and either latitude and longitude or GIS coordinates, of each site on which domestic septage is applied.
- (b) The number of acres of each site on which domestic septage is applied.
- (c) The date, time, and quantity of domestic septage applied to each site.
- (d) The crop or vegetation grown on each site.
- (e) The rate in gallons per acre per year at which domestic septage is applied to each site.
- (f) The cumulative loading of the parameters in Table 1 per acre for the site(s).
- (g) A description of how management requirements for pathogen control and vector reduction requirements are met.
- (h) The name and signature of the person who land applied the domestic septage.
- (i) The person supervising the land disposal of domestic septage at the site shall sign the following certification statement: "I certify under penalty of law, that the pathogen control requirements and the vector reduction requirements have been met. This determination has been made under my direction and supervision and I am aware that there are significant penalties for the false certification including the possibility of fine or imprisonment".

(14) Inspection.

- (a) Representatives of the Division, the Department of Public Health, the local County Health Department and or the US Environmental Protection Agency, after proper identification, shall be permitted to enter any property permitted as a land disposal site at any reasonable time for the purpose of making inspections to determine compliance with this Rule or the permit.
- (b) Representatives of the Division, the Department of Public Health, the local County Health Department and or the US Environmental Protection Agency, during inspections of the land disposal site, may review records to determine compliance with provisions of these regulations.

(15) Compliance.

Except as described in 391-3-6-.23(4)(a), a land disposal site that receives septic tank waste shall not operate until such time as the Division has issued a valid permit and the permit becomes effective.

(16) Modification, Revocation, Suspension and Termination of Permits.

- (a) The Director shall have the power and authority to modify, suspend, or revoke permits for good cause, including failure to provide accurate information in the permit application or septage management plan, or failure to comply with any provisions of the permit or this Rule. Suspension is effective upon service of a written notice and operation must cease immediately. The notice must state the basis for the suspension and advise the permit holder of the right to a preliminary hearing on request within 72 hours. If a hearing is not requested, upon correction of all violations, the permit holder may request an inspection to reinstate the permit.
- (b) Prior to any such modification, suspension or termination of an issued permit by the Director (other than modification of the monitoring, recording or reporting requirements), the Director will provide public notice and an opportunity for public hearing in accordance with the procedures set forth in this Rule.

(17) Application for a Permit.

The Division may issue individual permits or coverage under a general permit. Any person seeking coverage under an individual permit shall submit an application for an individual permit to the Director. Any person seeking coverage under a general permit shall submit a notice of intent, or NOI, to the Director.

- (a) Applications for a permit required under O.C.G.A. [12-8-41](#) shall be on forms as may be prescribed and furnished from time to time by the Division. Applications shall be accompanied by all pertinent information as the Division may require, including but not limited to complete engineering reports, closure plan, schedule of progress, plans and specifications, maps, measurements, quantitative and qualitative determinations, records, local ordinances applicable to the land disposal of septage and all related materials.
- (b) Engineering reports, plans, and specifications submitted to the Division in support of a Tier 2 operation permit application shall be prepared by a professional engineer, competent in the field of sewage and industrial waste treatment. Other materials in support of engineering reports, plans, specifications, and permit applications may be prepared by other persons competent in their field.
- (c) Materials submitted shall be complete and accurate.
- (d) Any permit application form or any other form submitted to the Division shall be signed in accordance with the following:
 - 1. For a corporation, by a responsible corporate officer. For this subparagraph a responsible corporate officer means a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function,

or any other person who performs similar policy- or decision-making functions for the corporation; or

2. For a partnership or sole proprietorship, by a general partner or the proprietor, respectively; or
 3. For a municipality, State, Federal, or other public facility, by either a principal executive officer or ranking elected official.
- (e) All other reports or requests for information required by the permit issuing authority shall be signed by a person designated in (d) above or a duly authorized representative of such person, if:
1. The representative so authorized is responsible for the overall operation of the facility, e.g., a manager, superintendent or person of equivalent responsibility; and
 2. The authorization is made by the person designated under (d) above and written authorization of such is submitted to the Director.
- (f) Any changes in the written authorization submitted to the permitting authority under (e) above which occur after the issuance of a permit shall be reported to the permitting authority by submitting a copy of a new written authorization which meets the requirements of (e) above.
- (g) Any person signing any document under (d) or (e) above shall make the following certification: "I certify under penalty of law that this document and all attachments were prepared under direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."
- (h) A complete NOI for coverage under a general permit shall, at a minimum, meet the requirements of paragraph [391-3-6-.19\(5\)](#).
- (18) Notice and Public Participation. The notice and public participation provisions of Rule 391-3-6-.26 shall apply. The public notice for permits with an approved Septage Management Plan will also include publication in one or more newspapers of general circulation in the area affected by the discharge.
- (19) Authorization Under a General Permit

- (a) Authorization to operate under a general permit shall be effective upon receipt of notification of inclusion from the Division, except for any site that as of June 30, 2007, operated under a valid permit issued on or before such date by the Department of Public Health under Code Section [31-2-8](#). For such sites, initial coverage shall be effective upon submission of an NOI.
- (b) The Director may revoke such authorization if the conditions of the general permit are not met, if the septage management plan is not approvable, if the closure plan, if required, is not approvable, or as otherwise provided for by State law.

(20) Trust Indenture for Non-governmentally Owned Septage Systems.

For non-governmentally owned Tier 2 operations, a trust indenture or other legal contract or agreement, acceptable to the Division, must be filed with the application for a permit. The trust indenture or other legal contract must establish and maintain evidence of financial responsibility to provide for the clean up and closure of the septage treatment facilities and the proper disposal of any remaining septage after closure of the facility. Available financial responsibility mechanisms include but are not limited to insurance, trust funds, surety bonds, letters of credit, personal bonds, certificates of deposit, financial tests, and corporate guarantees.

(21) Closure Plans for Non-governmentally Owned Septage Systems.

Prior to the issuance of a land disposal permit to a Tier 2 operation, the applicant shall have submitted and the Division shall have approved a detailed closure plan for clean up and closure of the facility. The closure plan shall include a schedule for completion of closure within six months after the facility is removed from service. This plan shall be updated with future reissuances of the permit.

(22) Duration, Transferability, and Reissuance of Permits.

- (a) Any permit issued shall have a fixed term not to exceed five years. Upon expiration of such permit a new permit may be issued by the Director, provided that an application for renewal is filed with the Director at least 180 days prior to the expiration date of the existing permit. The issuance of such new permit shall likewise have a fixed term not to exceed five years.
- (b) A permit may be transferred to another person by a permittee if:
 - 1. The permittee notifies the Director of the proposed transfer;
 - 2. A written agreement containing a specific date for transfer of permit responsibility and coverage between the current and new permittee (including acknowledgment that the existing permittee is liable for

violations up to that date, and that the new permittee is liable for violations from that date on) is submitted to the Director; and

3. The Director within thirty (30) days does not notify the current permittee and the new permittee of the Division's intent to modify, revoke and reissue, or terminate the permit and to require that new application be filed rather than agreeing to the transfer of the permit. A new application will be required when the change of ownership is accompanied by a change or proposed change in process or wastewater characteristics or a change or a potential change in any circumstances that the Director believes will affect the conditions or restrictions in the permit.

(23) **Enforcement.**

Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule of compliance or other requirement contained in a permit issued pursuant to the Act shall be subject to enforcement proceedings pursuant to the Act.

(24) **Effective Date.**

This Rule shall become effective twenty days after filing with the Secretary of State's office.

Table 1

Land Application Pollutant Limits for Domestic Septage

Pollutant	Annual Pollutant Loading Rate Limits (kilograms per hectare per 365-day period)	Cumulative Pollutant Loading Rate Limits (kilograms per hectare)
Arsenic	2.0	41
Cadmium	1.9	39
Chromium	150	3,000
Copper	75	1,500
Lead	15	300
Mercury	0.85	17
Nickel	21	420
Selenium	5.0	100
Zinc	140	2,800

Authority: O.C.G.A. § [12-5-20](#)*et seq.*

History. Original Rule entitled "Land Disposal of Septage" adopted. F. Feb. 2, 2004; eff. Feb. 22, 2004.

Amended: F. Feb. 7, 2008; eff. Feb. 27, 2008.

Amended: F. May 30, 2014; eff. June 19, 2014.

Amended: F. May 13, 2020; eff. June 2, 2020.

Rule 391-3-6-.24. Regulation of Commercial Waste Originators, Pumpers, Transporters, Processors, and Disposal Facilit.

- (1) **Purpose.** The purpose of Paragraph 391-3-6-.24 is to provide minimum uniform statewide regulations for the purpose of regulating transporters that collect and/or dispose of commercial waste; to prevent the improper disposal of commercial wastes; to provide a commercial waste transporter permit that is accepted statewide; and to provide for fees for the cost of permitting and inspecting transporter vehicles.
- (2) **Definitions.** All terms used in this Paragraph shall be interpreted in accordance with the definitions as set forth in this Paragraph, or in any other Paragraph of these Rules:
 - (a) "Commercial facilities" means a facility constructed and intended to produce commercial, domestic, or industrial wastewaters, including facilities intended to collect, transport, and treat storm water runoff.
 - (b) "Commercial Wastes" means:
 - (i) Non-toxic, non-hazardous liquid wastewater from commercial facilities;
 - (ii) Grease interceptor contents generated by a commercial food operation or institutional food preparation facility, including without limitation, fats, grease, and food scraps; or
 - (iii) Any oil waste residue produced from vehicle maintenance or washing that discharge to an oil-water separator or sand trap;
 - (c) "Commercial Waste Transporter Permit" is a permit issued by a local governing authority for an individual tank truck.
 - (d) "FOG" means fats, oils, and grease.
 - (e) "Hazardous Waste" means any solid waste that has been defined as a hazardous waste in regulation promulgated by the Board of Natural Resources, Chapter 391-3-11.
 - (f) "Grease interceptor" means a structure or device designed to collect and retain oils, grease, and fatty substances usually found in kitchen or similar wastes.

- (g) "Grit Trap" means a structure or device designed primarily for the accumulation and removal of grit.
- (h) "LGA" means local governing authority.
- (i) "Local Governing Authority" means the governing authority of a county or municipality, or the designee of any county or municipality in this state. The local governing authority for a county would typically be the County Board of Commissioners and for a municipality would typically be the City Council.
- (j) "Oil-water separator" means a structure or device designed primarily to collect and retain oily substances.
- (k) "On-site Sewage Management System" means any system that has been permitted by the local county board of health under rules promulgated by the Department of Human Resources.
- (l) "Originator" means the owner or operator of the grease interceptor, grit trap, oil-water separator, or sand trap from which commercial wastes are removed.
- (m) "Registration" means acceptance by the Division of a transporter.
- (n) "Registered Commercial Waste Transporter" is a business/owner registered by the Division and whose tank trucks are permitted by a local governing authority.
- (o) "Sand Trap" means a receptacle designed for the accumulation and removal of sand, grit, rocks and other similar debris.
- (p) "Septic Wastes" means the contents of a septic tank.
- (q) "Transporter" means any person or firm, which owns or operates one or more waste tank trucks that receive or dispose of commercial waste in this state.
- (r) "Tank truck" means any vehicle that removes and transports commercial wastes.

(3) Coverage.

- (a) This Paragraph applies to any facility that generates commercial wastes, to any person who removes commercial wastes, to any person who processes commercial wastes, and to any person who accepts commercial wastes for final disposal.
- (b) This Paragraph applies only within the geographical boundaries of the State of Georgia. However, any transporter or disposal site operator within the State of Georgia, who receives commercial wastes (whether such wastes originate within or outside the State), must still comply with the registration, permitting, and manifest requirements.

(4) Registration Required.

- (a) Any transporter, owning or operating one or more waste tank trucks that receive or dispose of commercial waste in this state, must submit a registration form to the Division for the purposes of receiving a registration number. Such registration number shall be prefaced with FOG.
- (b) This registration number shall be part of the commercial waste transporter permit number issued by the local governing authority.
- (c) The registration form shall be on a standard form prescribed by the Division.

(5) Commercial Waste Transporter Permit Required.

- (a) The requirements in this Paragraph shall be implemented through a commercial waste transporter permit issued to a transporter by a local governing authority in which such tank truck receives or disposes of such wastes.
- (b) The local governing authority shall inspect each tank truck prior to the issuance of a commercial waste transporter permit. Such inspection shall verify that the tank truck is substantially leak proof, durable, of easily cleaned construction, and is maintained in good repair. The local governing authority shall maintain records of each inspection.
- (c) No commercial waste transporter permit shall be issued except on a form prescribed by the Division. The transporter shall include the location of the disposal site(s) on the commercial waste transporter permit application.
- (d) No commercial waste transporter permit shall be issued if the owner of the tank truck(s) is not registered with the Division.
- (e) A commercial waste transporter permit shall be required for each individual tank truck owned and operated by a transporter.
- (f) The local governing authority shall charge a fee in the amount of \$250.00 for the first tank truck and \$100.00 for each additional tank truck.
- (g) Any commercial waste transporter permit issued by a local governing authority for operation of a tank truck shall be valid throughout the state.
- (h) A transporter, who has trucks permitted by a local governing authority, and who decides to have additional trucks permitted by another local governing authority, must provide copies of the current commercial waste transporter permits with the new commercial waste transporter permit application.
- (i) A transporter cannot have two tank trucks permitted with the same commercial waste transporter permit number.

- (j) A LGA may adopt a standard in their local ordinance defining reasons for declining to issue or reissue a commercial waste transporter permit.
- (k) A LGA shall issue or deny a request for a commercial waste transporter permit within 30 days of receipt of the initial permit application.

(6) Transporters.

- (a) No transporter shall pump grease interceptors, grit traps, sand traps, or oil-water separators, which are not connected to an on-site sewage management system, without a valid commercial waste transporter permit issued by a local governing authority.
- (b) A transporter must remove the entire contents of any tank that is serviced and dispose of such contents, unmingled with hazardous wastes or septic wastes, only at a facility authorized to receive and process such waste.
- (c) A transporter of commercial waste shall maintain copies of all manifests of tank pumping at their principal place of business for a period of three (3) years; except that the transporters manifest (or a copy thereof) covering not less than the immediately preceding 30 day period for a particular tank truck shall be kept in the transporter's tank truck. All such records shall be available for inspection.
- (d) A transporter shall provide a copy of the commercial waste transporter permit for the tank truck to each disposal site where the transporter disposes of commercial wastes.

(7) Originators.

- (a) An originator of commercial waste shall have such waste removed from their facility only by a transporter who holds a valid commercial waste transporter permit.
- (b) An originator of commercial waste shall maintain copies of all manifests of tank pumping at their principal place of business for a period of three (3) years and make such records available for inspection.

(8) Approved Commercial Waste Processing and Disposal Facilities. The following types of processing and disposal operations are approved to accept commercial wastes.

- (a) All facilities that have been issued an NPDES, LAS, or industrial pretreatment permit by the Division, and those who have been issued an industrial pretreatment permit by a delegated pretreatment authority, are approved to accept commercial wastes.

- (b) All facilities permitted under the Solid Waste Management Rules are approved for processing and disposal operations.
 - (c) All facilities that are not covered by any of the above shall request approval from the Division on a case-by-case basis. Such approval shall be in the form of a letter authorizing the facility to accept such wastes and shall be signed by the Director or his/her representative.
 - (d) The above approval does not require any such facility to accept such commercial wastes. The facility must be willing to accept the commercial wastes, be capable of receiving the commercial wastes in a sanitary manner, and have the appropriate technology to treat the commercial wastes.
 - (e) A receiver of commercial waste shall maintain copies of all manifests of tank pumping at their principal place of business for a period of three (3) years and make such records available for inspection.
- (9) **Manifest Record Keeping.** All originators, transporters, and disposal site operators in this state, involved in the removal, transport, and final disposal, of commercial wastes shall participate in the proper maintenance of manifests. A manifest shall be used as follows:
- (a) A transporter shall utilize a manifest for each location being serviced.
 - (b) A manifest shall consist of an originator section, a receiver section, and the transporter section.
 - (c) The transporter shall sign the transporter portion of the manifest and shall present the manifest to the disposal operator to complete and sign the receiver section, and shall leave one copy of the manifest with the disposal site operator.
 - (d) The transporter shall send a copy of the manifest to the originator with the signature of the disposal site operator within 30 days. The originator will sign the received manifest form and maintain such record for a period of three years.
 - (e) The transporter shall keep one copy of the completed manifest form demonstrating delivery to the disposal site operator for their records and shall maintain such records for a period of three years.
- (10) **Manifest Contents.** A commercial waste transporter shall ensure that the manifest contains all the information required on the manifest form prescribed and furnished from time to time by the Division.
- (11) **Inspection.**

- (a) Representatives of the Division or a local governing authority, after proper identification, shall be permitted to enter the premises of any originator, transporter, processor, or disposal site at any reasonable time for the purpose of making inspections to determine compliance with this Paragraph or the commercial waste transporter permit.
- (b) Representatives of the Division, or a local governing authority, during inspections of the originator, transporter, processor, and the disposal site operator, may review records to determine compliance with provisions of these regulations.

(12) Application for a Commercial Waste Transporter Permit.

- (a) Applications for a commercial waste transporter permit shall be on forms prescribed and furnished from time to time by the Division.
- (b) Applications shall be accompanied by all pertinent information as the Division may require.
- (c) Materials submitted shall be complete and accurate.
- (d) Any commercial waste transporter permit application form or any other form submitted to the local governing authority shall be signed as follows in accordance with the following:
 - 1. For a corporation, by a responsible corporate officer. For this subparagraph a responsible corporate officer means a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or
 - 2. For a partnership or sole proprietorship, by a general partner or the proprietor, respectively; or
 - 3. For a municipality, county, authority, State, Federal, or other public facility, by either a principal executive officer or ranking elected official.
- (e) All other reports or requests for information required by the local governing authority shall be signed by a person designated in (d) above or a duly authorized representative of such person, if:
 - (i) The representative so authorized is responsible for the overall operation of the facility, e.g., a manager, superintendent or person of equivalent responsibility; and

- (ii) The authorization is made by the person designated under (d) above and written authorization of such is submitted to the Director.
 - (f) Any changes in the written authorization submitted to the local governing authority under (e) above which occur after the issuance of a commercial waste transporter permit shall be reported to the local governing authority by submitting a copy of a new written authorization which meets the requirements of (e) above.
 - (g) Any person signing any document under (d) or (e) above shall make the following certification: "I certify under penalty of law that this document and all attachments were prepared under direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."
- (13) **Duration, Transferability, and Reissuance of Commercial Waste Transporter Permits.**
- (a) Any commercial waste transporter permit issued shall have a fixed term not to exceed one year.
 - (b) Upon expiration of such commercial waste transporter permit a new commercial waste transporter permit may be issued by the local governing authority, provided that an application for renewal is filed with the local governing authority at least 60 days prior to the expiration date of the existing commercial waste transporter permit. A LGA shall reissue or deny a request for a commercial waste transporter permit within 30 days of the permit application.
- (14) **Local Ordinance.**
- (a) A local governing authority may enact and enforce any local ordinance to regulate the removal, transport, and disposal of commercial wastes, as long as such local ordinance is not in conflict with these rules and O.C.G.A. [12-15-21](#) thru 12-15-24.
 - (b) A local governing authority adopting such a local ordinance shall be required to provide timely written notice to the division of any enforcement action taken pursuant to such an ordinance against an operator permitted under this article who is alleged to be in violation of such local ordinance. The division shall be notified of the initiation of any such local enforcement action and of the final conclusions or ultimate outcome of any such action.

(15) **Enforcement.**

- (a) The respective local governing authority is authorized to enforce these rules.
- (b) Any person who violates any provision of the Act, any rule promulgated and adopted pursuant thereto, or any term, condition, schedule of compliance or other requirement contained in a commercial waste transporter permit issued pursuant to the Act shall be subject to enforcement proceedings by the local governing authority pursuant to the Act.
- (c) Notwithstanding any other provision of law, or any municipal charter to the contrary, municipal courts shall have jurisdiction in cases of violations committed within municipalities, and magistrate courts shall have jurisdiction in cases of violations within unincorporated areas of counties. Either court shall be authorized to impose a civil penalty not to exceed \$2500.00 for each violation.

(16) **Effective Date.** This Paragraph shall become effective on June 1, 2005.

Authority: O.C.G.A. Sec. [12-5-20](#) *et seq.*

History. Original Rule entitled "Regulation of Commercial Waste Originators, Pumpers, Transporters, Processors, and Disposal Facilities" adopted. F. Nov. 5, 2004; eff. Nov. 25, 2004.

Rule 391-3-6-.25. Permitting Based on Regional Water Development and Conservation Plans.

- (1) **Purpose.** The purpose of Section 391-3-6-.25 is to provide minimum uniform statewide regulations for the issuance of any permit for the use of water based on Regional Water Development And Conservation Plans. As authorized by O.C.G.A. §§ [12-5-31](#) and [12-5-96](#), in a manner consistent with O.C.G.A. § [12-5-520](#), *et seq.*, and as provided in the Comprehensive State-wide Water Management Plan, Regional Water Development And Conservation Plans shall promote the sustainable use of Georgia's waters through the selection of an array of management practices, to support the State's economy, to protect public health and natural systems, and to enhance the quality of life for all citizens.
- (2) **Policy.** As provided in the Comprehensive State-wide Water Management Plan, the characteristics of water resources and water users vary significantly in differing regions across Georgia. Protecting the ability of the State's water resources to meet needs for water supply and assimilation of waterborne contaminants requires regional, resource-based plans that identify the management practices appropriate to the resources and users in each region.
- (3) **Definitions.** All terms used in this Section shall be interpreted in accordance with the definitions as set forth in this Paragraph, or in any other Paragraph of this Section:

- (a) "Comprehensive State-wide Water Management Plan" is the plan provided for by O.C.G.A. §§ [12-5-520](#)*et seq.* whose purpose is to help guide the stewardship of Georgia's water resources to ensure that those resources continue to support the State's economy while maintaining healthy natural systems. The Comprehensive State-wide Water Management Plan mandates preparation of regional Water Development and Conservation Plans;
 - (b) "Instream uses" means all those human and ecological uses of water which occur within the banks of rivers and streams, including, without limitation, waste assimilation, hydropower production, recreation, maintenance of aquatic habitats, and support of biological integrity;
 - (c) "Offstream uses" means the purposes for which water is withdrawn from streams, rivers, lakes, or aquifers;
 - (d) "Water Development and Conservation Plan," as provided in O.C.G.A. §§ [12-5-31\(h\)](#) and [12-5-96\(e\)](#), means a regional resource-based plan, developed in accordance with O.C.G.A. §§ [12-5-520](#)*et seq.*, that promotes the efficient use of water resources, promotes the conservation and reuse of water, guards against a shortage of water, and is consistent with the public welfare of the state, or an addendum to any statutorily required water management plan(s) prepared to satisfy the purposes of this rule and the Comprehensive State-wide Water Management Plan. Such plans include water development, conservation, and sustainable use and are based upon detailed scientific analysis of water sources, the projected future condition of the resources, current demand, and estimated future demands on the resources. Furthermore, as provided in the Comprehensive State-wide Water Management Plan, such plans identify the water management practices to be employed in each Water Planning Region to ensure that current and future needs for water supply and assimilative capacity are met within the capacity of the water resources;
 - (e) "Water Planning Region" is a defined area that includes one or more water quantity and/or quality resources;
 - (f) "Water resource" is a body of surface water or groundwater that is available or potentially available for offstream and/ or instream use, including, without limitation, agricultural, industrial, residential, recreational, or environmental activities, among others. Water resources may include freshwater bodies, brackish waters, and ocean water;
- (4) Use by Division of adopted Regional Water Development and Conservation Plans.
- (a) As provided in O.C.G.A. §§ [12-5-31](#), [12-5-96](#), and [12-5-522](#), the Director shall ensure that the issuance of any permit for the use of water is based upon the Comprehensive State-wide Water Management Plan and all applicable Water Development and Conservation Plans. Additionally, any political subdivision or

local water authority not in compliance with the Comprehensive State-wide Water Management Plan shall be ineligible for state grants or loans for water projects, except for those projects designed to bring such political subdivision or local water authority into compliance with the plan.

Rule 391-3-6-.26. Notice and Public Participation.

- (1) Tentative Determination and Draft Permits:
 - (a) When the Division is satisfied that a permit application is complete, a tentative determination will be made to issue or deny the permit. If the tentative determination is to issue the permit, a draft permit will be prepared in accordance with applicable Federal regulations and State laws prior to the issuance of a public notice. If the tentative determination is to deny the permit, the Division will public notice the denial in accordance with applicable Federal regulations and State laws.
 - (b) If the Division makes a tentative determination to issue a general permit, a draft permit and fact sheet will be prepared in accordance with applicable Federal regulations and State laws prior to issuance of a public notice.
- (2) Public Notice: Public notice of every complete permit application will be prepared and circulated in a manner designated to inform interested and potentially interested persons of the proposed permit and of the proposed determination to issue or deny a permit. Procedures for circulation of the public notice shall include the following:
 - (a) A copy of the public notice will be provided to the permit applicant, will be available at the EPD office in Atlanta, and will be posted to the EPD website;
 - (b) Electronic mailing (e-mail) notification of the public notice to any persons or groups included on the electronic mailing list to receive such notices. The EPD shall maintain an electronic mailing list for distribution of public notices. Any person or group may request that their e-mail address be added to the electronic mailing list or they may sign-up through the EPD website;
 - (c) The EPD shall provide a period of not less than thirty (30) days following the date of the public notice in which interested persons may submit their written views on the tentative determination with respect to the permit application. All written comments submitted during the thirty (30) day comment period will be retained by the EPD and considered in the final determination with respect to the permit

application and shall be responded to in accordance with Federal Regulations, [40 C.F.R. 124.17](#), and applicable State laws. The comment period may be extended at the discretion of the Director;

- (d) The contents of the public notice will be in accordance with Federal Regulations, [40 C.F.R. 124.10\(d\)](#) and applicable State laws;
 - (e) The EPD will prepare a fact sheet in accordance with Federal Regulations, [40 C.F.R. 124.8](#) and [124.56](#), and applicable State laws. A copy of the permit application, draft permit, and fact sheet will be available for public inspection at the EPD office in Atlanta and information on how to access electronic copies of these materials will be included in the contents of the public notice. Any person may request in writing a copy of the permit application, draft permit, and fact sheet and it will be provided;
 - (f) The Director will provide a copy of the public notice to the U.S. Army Corps of Engineers, Federal and State agencies with jurisdiction over fish, shellfish and wildlife resources and to other appropriate governmental authorities and will provide such agencies an opportunity to submit their written views and recommendations in accordance with Federal Regulations, [40 C.F.R. 124.10](#) and applicable State laws. The comments of the District Engineer of the Corps of Engineers, the U.S. Fish and Wildlife Service, the National Marine Fisheries Service, or any State or Federal Agency with jurisdiction over fish, wildlife, or public health shall be considered in accordance with Federal Regulations, [40 C.F.R. 124.59](#);
 - (g) Copies of draft, proposed, and issued NPDES and applicable UIC permits shall be transmitted to the Regional Administrator for review and comments in such manner as the Director and Regional Administrator agree, and in accordance with applicable Federal regulations, and the Memorandum of Agreement between the agencies pursuant to [40 C.F.R. 123.24](#).
- (3) Public Hearings:
- (a) The Director shall provide an opportunity for an applicant, any affected state or interstate agency, the Regional Administrator or any other interested agency, person or group of persons to request a public hearing with respect to a permit application. Any such request for a public hearing shall be filed within the 30-day comment period prescribed in subparagraph (2)(c) and shall indicate the interest of the party filing such a request, the reasons why a hearing is requested, and those specific portions of the application or other form or information to be considered at the public interest in holding such a hearing;
 - (b) Any public hearing held pursuant to this paragraph shall be held in the geographical area of the draft permit or other appropriate location at the discretion of the Director;

- (c) The Director may hold one public hearing on related groups of permit applications;
 - (d) Public notice of any hearing held pursuant to this paragraph shall be provided at least thirty (30) days in advance of the hearing date and shall be circulated in accordance with the public notification procedures in paragraph (2) and in accordance with Federal Regulations, [40 C.F.R. 124.10](#), or applicable State law.
- (4) Public Access to Information:
- (a) A copy of the permit application, public notice, applicable fact sheet and draft permit, and other forms related thereto, including written public comments and comments of all governmental agencies thereon and other reports, files and information not involving methods or processes entitled to protection as trade secrets, may be available online and will be available for public inspection and copying during normal business hours at the EPD office in Atlanta. Effluent data, Notice of Intent forms, and information regarding Class I, II and III injection wells that deals with the existence, absence, or level of contaminants in drinking water shall not be considered as information entitled to protection. Public access to NPDES and applicable UIC information shall be in accordance with Federal Regulations, [40 C.F.R. 122.7](#);
 - (b) Any information submitted with reports, records or plans that is considered confidential by the permittee (applicant), and that is not specifically excluded in subparagraph (4)(a) above, should be clearly labeled "Confidential" and be supported by a statement as to the reason that such information should be considered confidential. If the Director, with the concurrence of the Regional Administrator, determines that such information is entitled to confidential protection, he shall label and handle same accordingly;
 - (c) Any information accorded confidential status whether or not contained in an application form shall be made available, upon written request, to the Regional Administrator or his authorized representative who shall maintain the information as confidential.

Authority: O.C.G.A. § [12-5-20](#) *et seq.*

History. Original Rule entitled "Notice and Public Participation" adopted. F. May 13, 2020; eff. June 2, 2020.

Subject 391-3-7. EROSION AND SEDIMENTATION CONTROL.

[Rule 391-3-7-.01. Definitions.](#)

The following definitions shall apply in the interpretation and enforcement of these rules and regulations unless otherwise specifically stated.

- (a) "Best Management Practices" means a collection of structural measures and vegetative practices which, when properly designed, installed and maintained, will provide effective erosion and sedimentation control and are designed in accordance with the design specifications contained in the "Manual for Erosion and Sediment Control in Georgia." Best Management Practices also include, but are not limited to, design specifications from the most recent publications of the Georgia Stormwater Management Manual and Coastal Stormwater Supplement to the Georgia Stormwater Management Manual.
- (b) "Buffer" and "Buffer Area" each mean the area of land immediately adjacent to the banks of state waters in its natural state of vegetation, which facilitates the protection of water quality and aquatic habitat.
- (c) "Certification" means an action by the Division that states in writing that a local issuing authority has met the criteria established in these rules and regulations.
- (d) "Certified Personnel" means any person who meets or exceeds the education and training requirements of Code Section [12-7-19](#).
- (e) "Coastal Marshlands" shall have the same meaning as in Code Section [12-5-282](#).
- (f) "Complaint Investigation Process" means a process followed by a local issuing authority or the Division when dealing with inquiries, complaints or concerns about land disturbing activities.
- (g) "Decertification" means an action by the Division that states in writing that a local issuing authority has failed to meet the criteria established in these rules and regulations.
- (h) "Department" means the Department of Natural Resources of the State of Georgia.
- (i) "Director" means the Director of the Environmental Protection Division.
- (j) "District" means the appropriate local Soil and Water Conservation District.
- (k) "Division" means the Environmental Protection Division of the Department of Natural Resources.
- (l) "Erosion" means the process by which land surface is worn away by the action of wind, water, ice, or gravity.
- (m) "Erosion, Sedimentation and Pollution Control Plan" or "Plan" means a plan for the control of soil erosion and sediment resulting from a land disturbing activity.
- (n) "Infrastructure Project" means construction activities that are not part of a common development that include the construction, installation and maintenance of roadway and

railway projects and conduits, pipes, pipelines, substations, cables, wires, trenches, vaults, manholes, and similar or related structures or devices for the conveyance of natural gas (or other types of gas), liquid petroleum products, electricity, telecommunications (telephone, data television, etc.), water or sewage.

- (o) "Land Disturbing Activity" means any activity which may result in soil erosion and the movement of sediments into State waters or onto lands within the State, including but not limited to clearing, dredging, grading, excavating, transporting, and filling of land, but not including those practices to the extent described in O.C.G.A. [12-7-17](#).
- (p) "Local Issuing Authority" means the governing authority of any county, municipality, water authority, or water and sewer authority that is certified pursuant to these rules and regulations and pursuant to the requirements of O.C.G.A. [12-7-8\(a\)](#).
- (q) "Maintenance" means actions necessary or appropriate for retaining or restoring a currently serviceable improvement to the specified operable condition to achieve its maximum useful life. Maintenance includes emergency reconstruction of recently damaged parts of a currently serviceable structure so long as it occurs within a reasonable period of time after damage occurs. Maintenance does not include any modification that changes the character, scope or size of the original design.
- (r) "Major Buffer Impact" means any impact that does not meet the definition of "Minor Buffer Impact."
- (s) "Minor Buffer Impact" means an impact that upon completion yields no additional above ground, man-made materials or structures within the buffer, maintains the original grade, and results in less than 5,000 square feet of buffer impacts per stream crossing and/or less than 5,000 square feet of buffer impacts per individual area of encroachment for each project.
- (t) "Permit" means the authorization necessary to conduct a land disturbing activity under the provisions of these rules and regulations.
- (u) "Person" means any individual, partnership, firm, association, joint venture, public or private corporation, trust, estate, commission, board, public or private institution, utility, cooperative, State agency, municipality or other political subdivision or the State, any interstate body or any other legal entity.
- (v) "Project" means the entire area of the proposed development site, regardless of the size of the area to be disturbed.
- (w) "Sediment" means solid material, both organic and inorganic, that is in suspension, is being transported, or has been moved from its site of origin by wind, water, ice, or gravity as a product of erosion.
- (x) "Sedimentation" means the action or process of forming or depositing sediment.

- (y) "Serviceable" means usable in its current state or with minor maintenance but not so degraded as to essentially require reconstruction.
- (z) "Soil and Water Conservation District Approved Plan" means an erosion, sedimentation and pollution control plan approved in writing by the Soil and Water Conservation District in which the proposed land disturbing activity will take place.
- (aa) "Stabilization" means the process of establishing an enduring soil cover of vegetation and/or mulch or other ground cover and/or installing temporary or permanent structures for the purpose of reducing to a minimum the erosion process and the resultant transport of sediment by wind, water, ice or gravity.
- (bb) "State Waters" means any and all rivers, streams, creeks, branches, lakes, reservoirs, ponds, drainage systems, springs, wells, and other bodies of surface or subsurface water, natural and artificial, lying within or forming a part of the boundaries of the State which are not entirely confined and retained completely upon the property of a single individual, partnership, or corporation, except as may be defined in O.C.G.A. [12-7-17\(7\)](#).
- (cc) "Stream Bank" means the confining cut of a stream channel and is usually identified as the point where the normal stream flow has wrested the vegetation. For nontrout waters, the normal stream flow is any stream flow that consists solely of base flow or consists of both base flow and direct runoff during any period of the year. Base flow results from groundwater that enters the stream channel through the soil. This includes spring flows into streams. Direct runoff is the water entering stream channels promptly after rainfalls or snow melts.
- (dd) "Trout Streams" means all streams or portions of streams within the watershed as designated by the Division under the provisions of the Georgia Water Quality Control Act, O.C.G.A. [12-5-20](#) et seq. Streams designated as primary trout waters are defined as water supporting a self-sustaining population of rainbow, brown or brook trout. Streams designated as secondary trout waters are those in which there is no evidence of natural trout reproduction, but are capable of supporting trout throughout the year. First order trout waters are streams into which no other streams flow except springs.
- (ee) "Water authority" or "water and sewer authority" means a "local government authority", as that term is defined in O.C.G.A. § [36-80-16](#), that has been properly formed in accordance with applicable Georgia law and that provides water services or water and sewer services to the public.
- (ff) "Watercourse" means any natural or artificial waterway, stream, river, creek, channel, ditch, canal, conduit, culvert, drain, gully, ravine, or wash in which water flows either continuously or intermittently, having a definite channel, bed and bank, and includes any area adjacent thereto which is subject to inundation by reason of overflow or floodwater.
- (gg) "Water Quality" means the chemical, physical, and biological characteristics of the State's water resources.

Rule 391-3-7-.04. Georgia Department of Transportation Minimum Requirements and Buffer Variance Criteria.

- (1) For road construction or maintenance projects disturbing one or more contiguous acres of land, the Georgia Department of Transportation must abide by and follow the minimum requirements set forth within O.C.G.A. § [12-7-6\(a\) and \(b\)](#) and all requirements and procedures described in Sections 391-3-7-.05 and [391-3-7-.11](#).
- (2) In addition to the criteria for buffer variances described in Rule [391-3-7-.05\(2\)](#) and Rule [391-3-7-.11\(2\)](#), variance applications will be reviewed by the Director for road construction and maintenance projects undertaken by the Georgia Department of

Transportation only where the Georgia Department of Transportation provides reasonable evidence that impacts to the buffer have been avoided or minimized to the fullest extent practicable, the projects include required mitigation in accordance with the current EPD "Stream Buffer Variance Mitigation Guidance" document, and in the following cases:

- (a) The proposed land disturbing activity within the buffer is part of a project that will require a permit issued by the United States Army Corps of Engineers under Section 404 of the federal Water Pollution Control Act of 1972, as amended, or Section 10 of the Rivers and Harbors Act of 1899, contingent upon approval by the Corps of Engineers of that permit; provided, however, that adequate erosion control measures are incorporated into the project plans and specifications and such measures are fully implemented; or
- (b) The proposed land disturbing activity within the buffer is part of a project that is not eligible for a permit issued by the United States Army Corps of Engineers under Section 404 of the federal Water Pollution Control Act of 1972, as amended, and involves the piping, filling, or rerouting of waters that are not jurisdictional waters of the United States regardless as to whether or not such waters have been classified as primary or secondary trout waters.

Adopted: New Rule entitled "Georgia Department of Transportation Minimum Requirements and Buffer Variance Criteria" adopted. F. May 10, 2022; eff. May 30, 2022.

Rule 391-3-7-.05. Buffer Variance Procedures and Criteria.

- (1) Buffers on state waters are valuable in protecting and conserving land and water resources; therefore, buffers should be protected. The buffer variance process will apply to all projects legally eligible for variances and to all state waters having vegetation wrested from the channel by normal stream flow, provided that adequate erosion control measures are incorporated in the project plans and specifications and are implemented. Rule 391-3-7-.05 does not apply to coastal marshlands. The following activities do not require application to or approval from the Division:
 - (a) stream crossings for water lines or stream crossing for sewer lines that occur at an angle, as measured from the point of crossing, within 25 degrees of perpendicular to the stream and cause a width of disturbance of not more than 50 feet within the buffer; or

- (b) where drainage structures must be constructed within the twenty-five (25) foot buffer area of any state water not classified as a trout stream; or
 - (c) where roadway drainage structures must be constructed within the twenty-five (25) foot buffer area of any state waters or the fifty (50) foot buffer of any trout stream; or
 - (d) construction of bulkheads or sea walls on Lake Oconee and Lake Sinclair where required to prevent erosion at the shoreline; or
 - (e) construction of public water system reservoirs.
- (2) Variance applications will be reviewed by the Director only where the applicant provides reasonable evidence that impacts to the buffer have been avoided or minimized to the fullest extent practicable and only in the following cases:
- (a) The project involves the construction or repair of an existing infrastructure project or a structure that, by its nature, must be located within the buffer. Such structures include, but are not limited to, dams, public water supply intake structures, detention/retention ponds, waste water discharges, docks including access ways, boat launches including access ways, and stabilization of areas of public access to water; or
 - (b) The project will result in the restoration or enhancement to improve water quality and/or aquatic habitat quality; or
 - (c) Buffer intrusion is necessary to provide reasonable access to a property or properties; or
 - (d) The intrusion is for water and sewer lines that cannot reasonably be placed outside the buffer, and stream crossings and vegetative disturbance are minimized; or
 - (e) Crossing for utility lines, including but not limited to gas, liquid, power, telephone, and other pipelines, provided that the number of crossings and the amount of vegetative disturbance are minimized; or
 - (f) Recreational foot trails and viewing areas, providing that impacts to the buffer are minimal; or
 - (g) The project involves construction of one (1) single family home for residential use by the owner of the subject property and, at the time of adoption of this rule, there is no opportunity to develop the home under any reasonable design configuration unless a buffer variance is granted. Variances will be considered for such single family homes only if construction is initiated or local government approval is obtained prior to January 10, 2005; or

- (h) For non-trout waters, the proposed land disturbing activity within the buffer is part of a project that will require a permit from the United States Army Corps of Engineers under Section 404 of the federal Water Pollution Control Act Amendment of 1972, [33 U.S.C. Section 1344](#), contingent upon approval by the Corps of Engineers of that permit; or
 - (i) For non-trout waters, a plan is provided for buffer intrusion that shows that, even with the proposed land disturbing activity within the buffer, the completed project will result in maintained or improved water quality downstream of the project; or
 - (j) For non-trout waters, the project with a proposed land disturbing activity within the buffer is located in, or upstream and within ten linear miles of, a stream segment listed as impaired under Section 303(d) of the federal Water Pollution Control Act Amendment of 1972, [33 U.S.C. Section 1313\(d\)](#) and a plan is provided that shows that the completed project will result in maintained or improved water quality in such listed stream segment and that the project has no adverse impact relative to the pollutants of concern in such stream segment; or
 - (k) The proposed land disturbing activity within the buffer is part of a project that is not eligible for a permit from the United States Army Corps of Engineers under Section 404 of the federal Water Pollution Control Act Amendment of 1972, [33 U.S.C. Section 1344](#), but includes required mitigation in accordance with current EPD "Stream Buffer Variance Mitigation Guidance" document, and involves:
 - 1. piping, filling, or re-routing of non-trout waters that are not jurisdictional Waters of the U.S.; or
 - 2. stream buffer impacts due to new infrastructure projects adjacent to state waters (jurisdictional and non-jurisdictional Waters of the U.S.). This criterion shall not apply to maintenance and/or modification to existing infrastructure, which are covered under 391-3-7-.05(2)(a).
- (3) If the buffer impact will be minor, the buffer variance request shall include the following information at a minimum:
- (a) Site map that includes locations of all state waters, wetlands, floodplain boundaries and other natural features, as determined by field survey.
 - (b) Description of the shape, size, topography, slope, soils, vegetation and other physical characteristics of the property.
 - (c) Dated and numbered detailed site plan that shows the locations of all structures, impervious surfaces, and the boundaries of the area of soil disturbance, both inside and outside of the buffer. The exact area of the buffer to be impacted shall be accurately and clearly indicated.

- (d) Description of the project, with details of the buffer disturbance, including estimated length of time for the disturbance and justification for why the disturbance is necessary.
 - (e) Calculation of the total area and length of the buffer disturbance.
 - (f) Letter from the issuing authority (if other than the Division and as applicable) stating that the issuing authority has visited the site and determined the presence of state waters that require a buffer and that a stream buffer variance is required as per the local erosion and sedimentation control ordinance.
 - (g) Erosion, sedimentation and pollution control plan.
 - (h) Re-vegetation plan as described in the most recent publication of the Division's guidance book, "Streambank and Shoreline Stabilization" and/or a plan for permanent vegetation as per the "Manual for Erosion and Sedimentation Control in Georgia."
 - (i) For projects within the buffer of or upstream and within one linear mile of impaired stream segments on Georgia's "305(b)/303(d) List Documents (Final)," documentation that the project will have no adverse impacts relative to the pollutants of concern and if applicable, documentation that the project will be in compliance with the TMDL Implementation Plan(s).
 - (j) Any other reasonable information related to the project that the Division deems necessary to effectively evaluate the variance request.
 - (k) Applications must be on the most current forms provided by the Division.
- (4) If the buffer impact will be major, the buffer variance request shall include all of the information in Sections (3)(a) thru (k) above, with the exception of (3)(h). A buffer variance request for major buffer impacts shall also include the following additional information:
- (a) For variance requests made under Section (2)(h):
 1. Joint Public Notice (JPN), if it is an individual permit;
 2. Pre-Construction Notification (PCN), if it is a Nationwide Permit;
 3. Mitigation calculations; and
 4. Permit approval from the United States Army Corps of Engineers or, if not yet received, a signed statement from the applicant certifying that the applicant will provide a copy of the permit approval upon receipt.

- (b) Buffer mitigation plan addressing impacts to critical buffer functions, including water quality and floodplain, watershed and ecological functions based on an evaluation of existing buffer conditions and predicted post construction buffer conditions pursuant to Section (7)(c) herein.
 - (c) Plan for stormwater control once site stabilization is achieved, when required by a local stormwater ordinance.
 - (d) For variance requests made under Sections (2)(i) and (2)(j), the application shall include the following water quality information:
 - 1. Documentation that post-development stormwater management systems to conform to the minimum standards for water quality, channel protection, overbank flood protection and extreme flood protection as established in the Georgia Stormwater Management Manual or the equivalent and if applicable, the Coastal Stormwater Supplement to the Georgia Stormwater Management Manual.
 - 2. Documentation that existing water quality will be maintained or improved based on predicted pollutant loading under pre- and post-development conditions as estimated by models accepted by the Division.
 - (e) For variance requests made under Section (2)(j), if the proposed project is in, or upstream and within ten linear miles of impaired stream segments on Georgia's "305(b)/303(d) List Documents (Final)," documentation that the project will have no adverse impacts relative to the pollutants of concern and if applicable, documentation that the project will be in compliance with the TMDL Implementation Plan(s).
 - (f) For variance requests made under Section (2)(k)1., the application shall include documentation from the United States Army Corps of Engineers verifying the water bodies identified in the application are non-jurisdictional waters of the United States under Section 404 of the Clean Water Act.
- (5) Upon receipt of a completed application in accordance with Sections 391-3-7-.05(3) or 391-3-7-.05(4), the Division shall consider the completed application and the following factors in determining whether to issue a variance:
- (a) Locations of state waters, wetlands, floodplain boundaries and other natural features as determined by field surveys.
 - (b) Shape, size, topography, slope, soils, vegetation and other physical characteristics of the property.
 - (c) Location and extent of buffer intrusion.

- (d) Whether reasonable alternative project designs, such as the use of retaining walls, are possible which do not require buffer intrusion or which require less buffer intrusion.
- (e) Whether issuance of the variance, with the required mitigation plan, re-vegetation plan and/or plan for permanent vegetation, is at least as protective of natural resources and the environment (including wildlife habitat).
- (f) The current condition of the existing buffer, to be determined by:
 - 1. The extent to which existing buffer vegetation is disturbed;
 - 2. The hydrologic function of the buffer; and
 - 3. Stream characteristics such as bank vegetative cover, bank stability, prior channel alteration or sediment deposition.
- (g) The extent to which the encroachment into the buffer may reasonably impair buffer functions.
- (h) The value of mitigation activities conducted pursuant to this rule, particularly Subsections 391-3-7-.05(7)(c) and 391-3-7-.05(7)(d) herein, and shall take regional differences into consideration on-site or downstream, to be determined by development techniques or other measures that will contribute to the maintenance or improvement of water quality, including the use of low impact designs and integrated best management practices, and reduction in effective impervious surface area.
- (i) The long-term water quality impacts of the proposed variance, as well as the construction impacts. And for applications made under Subsections 391-3-7-.05(2)(i) and 391-3-7-.05(2)(j), the following criteria, which reflect regional differences in the state, shall be used by the Director to assist in determining whether the project seeking a variance will, when completed and with approved mitigation, result in maintained or improved water quality downstream of the project and minimal net impact to the buffer:
 - 1. Division will assume that the existing water quality conditions are commensurate with an undeveloped forested watershed unless the applicant provides documentation to the contrary. If the applicant chooses to provide baseline documentation, site and/or stream reach specific water quality, habitat, and/or biological data would be needed to document existing conditions. If additional data are needed to document existing conditions, the applicant may need to submit a monitoring plan and have it approved by the Division prior to collecting any monitoring data. Existing local data may be used, if available and of acceptable quality to the Division.

2. The results of the predicted pollutant loading under pre- and post-development conditions as estimated by models accepted by the Division indicate that existing water quality conditions will be maintained or improved.
- (j) For applications made under Section 391-3-7-.05(2)(j), for which a land disturbing activity is proposed within the buffer of a 303(d) listed stream, or upstream and within 10 linear miles of a 303(d) listed stream, the results of the model demonstrate that the project has no adverse impact relative to the pollutants of concern in such stream segment.
- (6) Within 60 days of receipt of a complete buffer variance application, the Division will either provide written comments to the applicant or propose to issue a variance.
 - (a) When the Division proposes to issue a variance, it will issue a public notice. The public notice shall describe the proposed buffer encroachment, the location of the project, where the public can review site plans, and where comments should be sent. The public shall have 30 days from the date of publication of the public notice to comment on the proposed buffer variance.
 - (b) If after the public comment period for a proposed buffer variance has closed or a buffer variance has been issued the applicant proposes to change the project as described in the variance application, the applicant must notify the Division in writing of those proposed changes.
 1. If the proposed changes include a change in the location of the buffer impacts, an increase in buffer impact, or change in project concept or design such that there may be a change to the applicable variance criteria described in Section 391-3-7-.05(2) and the Division approves such changes, the Division shall issue public notice in accordance with Section 391-3-7-.05(6)(a).
 2. If the proposed changes do not include changes described in 391-3-7-.05(6)(b)(1), the Division may approve those changes in writing or may elect to issue public notice in accordance with Section 391-3-7-.05(6)(a).
 - (c) If after the public comment period for a proposed buffer variance has closed or a buffer variance has been issued a person or entity other than the applicant wishes to carry out the work described in the proposed variance or variance, the new person or entity must submit an application for that variance and all other requirements and procedures described in this Section 391-3-7-.05 shall apply. A new application shall not be required where the applicant is merely changing its name or corporate structure, but the applicant must notify the Division in writing of that name or corporate structure change.

- (7) In all cases in which a buffer variance is issued, the following conditions shall apply:
- (a) The variance shall be the minimum reduction in buffer width necessary to provide relief. Streams shall not be piped if a buffer width reduction is sufficient to provide relief.
 - (b) Disturbance of existing buffer vegetation shall be minimized.
 - (c) Mitigation is required for all major buffer impacts and shall offset the buffer encroachment and any loss of buffer functions. Where lost functions cannot be replaced, mitigation shall provide other buffer functions that are beneficial. Buffer functions include, but are not limited to:
 - 1. temperature control (shading);
 - 2. streambank stabilization;
 - 3. trapping of sediments, if any;
 - 4. removal of nutrients, heavy metals, pesticides and other pollutants;
 - 5. aquatic habitat and food chain;
 - 6. terrestrial habitat, food chain and migration corridor; and
 - 7. buffering of flood flows.
 - (d) Mitigation should be on-site when possible. Depending on site conditions, acceptable forms of mitigation may include but are not limited to:
 - 1. Restoration of the buffer to a naturally vegetated state to the extent practicable, or to current existing conditions;
 - 2. Bioengineering of channels to reduce bank erosion and improve habitat;
 - 3. Creation or restoration of wetlands;
 - 4. Stormwater management systems to better maintain the pre-development flow regime (with consideration given to downstream effects) that exceeds the requirements of applicable ordinances at the time of application;
 - 5. Reduction in pollution sources, such as on-site water quality treatment or improving the level of treatment of septic systems;
 - 6. Other forms of mitigation that protect or improve water quality and/or aquatic wildlife habitat;
 - 7. An increase in buffer width elsewhere on the property;

8. Mitigation as required under a Clean Water Act Section 404 or Nationwide permit issued by the U.S. Army Corps of Engineers;
 9. Stormwater management systems described in the most recent publication of the Georgia Stormwater Management Manual and the Coastal Stormwater Supplement to the Georgia Stormwater Management Manual;
 10. Mitigation as described in the most recent publication of the Division's guidance document, Stream Buffer Mitigation Guidance.
- (e) Forms of mitigation that are not acceptable include:
1. Activities that are already required by the Georgia Erosion and Sedimentation Act, such as the minimal use of best management practices;
 2. Activities that are already required by other federal, state and local laws, except as described in 391-3-7-.05(7)(d) above. U.S. Army Corps of Engineers mitigation is acceptable.
- (f) The Division will not place a condition on a variance that requires a landowner to deed property or the development rights of property to the state or to any other entity. The landowner may voluntarily preserve property or the development rights of property as a mitigation option with the agreement of the Division.
- (8) If the approved buffer impacts are not completed within five years of the date issued, buffer variances issued on or after the effective date of this rule will become null and void, unless an extension is granted by the Division as specifically provided herein.
- (a) The applicant may request a time extension of that buffer variance only if the approved buffer impacts will not be completed prior to the buffer variance expiration date. The buffer variance time extension, if granted, can be for a period of up to five years. If the applicant can demonstrate that a time extension for a period of greater than five years is reasonable, the Director may grant a buffer variance time extension for a reasonable period of greater than five years. A buffer variance time extension may be issued only once.
 - (b) The buffer variance time extension must be requested in writing at least 90 calendar days prior to the buffer variance expiration date with justifiable cause demonstrated. Once an approved buffer variance expires, it is no longer eligible for a time extension.
 - (c) Time extension requests will be reviewed by the Division. The Division will either provide written comments to the applicant or propose to issue a buffer variance time extension within 60 days of receipt of a time extension request. If there are

any other changes to the original buffer variance application, the Division shall issue a public notice in accordance with Section 391-3-7-.05(6)(a).

- (d) If a variance issued by the Director is acceptable to the issuing authority, the variance shall be included as a condition of permitting and therefore becomes a part of the permit for the proposed land disturbing activity project. If a stream buffer variance is not acceptable to the issuing authority, the issuing authority may issue a land disturbing permit without allowing encroachment into the buffer.
- (9) A general variance is provided for piping of trout streams with an average annual flow of 25 gpm or less.
- (10) To obtain this general variance in Section 391-3-7-.05(9) for encroaching on the buffer of a trout stream, the applicant must submit information to the issuing authority or EPD if there is no issuing authority demonstrating that the average annual flow in the stream is 25 gpm or less. There are two acceptable methods for making this determination.
- (a) The USGS unit area runoff map may be used to determine the threshold acreage that will produce an average annual flow of 25 gpm or less.
 - (b) The applicant may submit a hydrologic analysis certified by a Registered Professional Engineer or Geologist that presents information sufficient to estimate that the average annual flow of each stream to be piped is 25 gpm or less with a high level of certainty.
- (11) Any stream piping performed in accordance with this general variance in Section 391-3-7-.05(9) shall be subject to the following terms:
- (a) The total length of stream that is piped in any one property shall not exceed 200 feet.
 - (b) Any project that involves more than 200 ft of piping will require an individual variance for the entire project. The general variance may not be applied to a portion of a project; e.g., it is not permissible to pipe 200 ft of a stream under the general variance and seek an individual variance for an additional length of pipe.
 - (c) The downstream end of the pipe shall terminate at least 25 ft before the property boundary.
 - (d) The applicant for a Land Disturbing Activity Permit shall notify the appropriate issuing authority of the precise location and extent of all streams piping as part of the land disturbing activity permit application. The issuing authority (if other than the Division) shall compile this information and convey it to the Division annually.

- (e) Where piping of a stream increases the velocity of stream flow at the downstream end of the pipe, appropriate controls shall be employed to reduce flow velocity to the predevelopment level. Plans for such controls must be submitted as part of the land disturbing activity permit.

Rule 391-3-7-.07. Inspection and Compliance.

- (1) The Division may periodically inspect the site of any land disturbing activity for which a permit has been issued to determine if such activity is being conducted in accordance with the permit and to evaluate the effectiveness of the erosion and sediment control measures employed.
- (2) The Division shall have the authority to conduct such investigations as it may reasonable deem necessary to carry out its duties as prescribed by O.C.G.A. [12-7-1](#) *et seq.*, and these rules and regulations and for this purpose to enter at reasonable times upon any property,

public or private, for the purpose of investigating and inspecting the sites of land disturbing activities. The Division shall make its best efforts to contact a local issuing authority prior to any site inspection of a project within that local issuing authority's jurisdiction, provided however, that the Division shall, if contact was not prior made, contact the local issuing authority not more than five (5) business days after the site visit.

- (3) No person shall refuse entry or access to any authorized representative of the Division who requests entry for purposes of inspection and who presents appropriate credentials, nor shall any person obstruct, hamper or interfere with any such representative while in the process of carrying out assigned official duties.

Rule 391-3-7-.08. Enforcement.

- (1) The administration and enforcement of these rules and regulations shall be in accordance with the Erosion and Sedimentation act of 1975, O.C.G.A. [12-7-1](#) *et seq.*; the Executive Reorganization Act of 1972, O.C.G.A. [12-2-1](#) *et seq.*, and the Georgia Administrative Procedure Act, O.C.G.A. [50-13-1](#) *et seq.*, all as amended, but also includes the authority to require corrective action and/or remediation of conditions creating adverse water quality impacts, or otherwise in violation of these rules, regulations and authorizing statutes.
- (2) When the Division seeks to enforce the requirements of these rules or the requirements of O.C.G.A. [12-7-1](#) *et seq.*, as amended, in a jurisdiction covered by a certified local issuing authority, the Division should coordinate enforcement with the local issuing authority. However, coordination with a local issuing authority is not a prerequisite for enforcement by the Division.

Rule 391-3-7-.09. Local Issuing Authorities.

- (1) Criteria for Certification of Municipalities or Counties as Local Issuing Authorities.
 - (A) Municipality or county has adopted an ordinance which demonstrates compliance with the provisions in Title 12, Chapter 7 of the Official Code of Georgia and related regulation.
 - (B) Municipality or county has inspection personnel, who are or will be qualified personnel (within 6 months of date of hire) in erosion and sediment control.
 - (C) Required Documentation. A municipality or county shall provide all of the following documentation to the Division:
 1. A letter from the municipality or county requesting certification as a Local Issuing Authority.
 2. A listing of the number of inspectors employed by the municipality or county that will be responsible for land disturbance activity inspections and documentation of the training for each inspector.
 3. Documentation of the geographic size of the jurisdiction.
 4. Documentation of the estimated workload and inspection frequency schedule for the inspectors.
 5. A copy of the ordinance which demonstrates compliance with the provisions in Title 12, Chapter 7 of the Official Code of Georgia.
 - (D) The Division shall provide written notification to the municipality or county of the Director's decision no later than 60 days after receipt of request for certification. In the case of a denial of local issuing authority certification, the Division shall explain the deficiencies causing the denial. The denial of certification by the Division shall not preclude a municipality or county from making any subsequent application for certification.
- (2) Criteria for Certification of Water Authorities or Water and Sewer Authorities as Local Issuing Authorities.
 - (A) Each municipality or county that is served by that water authority or water and sewer authority must be a certified Local Issuing Authority.
 - (B) The ordinances adopted by each municipality or county that is served by that water authority or water and sewer authority must be in compliance with the provisions of Title 12, Chapter 7 of the Official Code of Georgia and related regulations as of the date of the application by the water authority or water and sewer authority for certification as a Local Issuing Authority or, following

application, the water authority or water and sewer authority must provide documentation to the Division of the same before such water authority or water and sewer authority may be certified as a Local Issuing Authority.

- (C) Each municipality or county that is served by that water authority or water and sewer authority must have adopted ordinances or other such local law that allows the water authority or water and sewer authority the ability to enforce directly all ordinances described in Rule 391-3-7-.09(2)(B).
- (D) The water authority or water and sewer authority has inspection personnel, who are or will be qualified personnel (within 6 months of date of hire) in erosion and sediment control.
- (E) Required Documentation. A water authority or water and sewer authority shall provide all of the following documentation to the Division:
 - 1. A letter from the water authority or water and sewer authority requesting certification as a Local Issuing Authority, identifying each municipality or county that is served by that water authority or water and sewer authority, and verifying that each municipality or county that is served by that water authority or water and sewer authority has granted the same legal authority to the water authority or water and sewer authority to carry out the requirements of the provisions of Title 12, Chapter 7 of the Official Code of Georgia and related regulation.
 - 2. A letter from each municipality or county that is served by that water authority or water and sewer authority including all of the following:
 - A. A statement confirming that such municipality or county has been certified as a Local Issuing Authority.
 - B. A statement confirming that such municipality or county intends to allow the water authority or water and sewer authority to operate solely as the Local Issuing Authority within that municipality's or county's jurisdictional boundaries.
 - C. A statement that such municipality or county has adopted ordinances or other local laws that grant to the water authority or water and sewer authority the ability to enforce directly all ordinances required to implement the provisions of Title 12, Chapter 7 of the Official Code of Georgia and related regulation.
 - 3. A listing of the number of inspectors employed by the water authority or water and sewer authority that will be responsible for land disturbance activity inspections and documentation of the training for each inspector.

4. Documentation of the estimated workload and inspection frequency schedule for the inspectors.
5. A detailed boundary map for all areas in which the water authority or water and sewer authority intends to operate as a Local Issuing Authority, including but not limited to labeled street names. Such boundary map shall be provided in an electronic format that is compatible with the Division's GIS software.
6. A copy of the ordinance from each municipality or county that is served by the water authority or water and sewer authority that demonstrates compliance with the provisions in Title 12, Chapter 7 of the Official Code of Georgia and related regulation.
7. A copy of the ordinance or other local law from each municipality or county that is served by the water authority or water and sewer authority that grant to the water authority or water and sewer authority the ability to enforce directly all ordinances required to implement the provisions of Title 12, Chapter 7 of the Official Code of Georgia and related regulation.
8. A copy of the intergovernmental agreement(s) with the governing authority of each municipality or county that is served by the water authority or water and sewer authority. Such intergovernmental agreement shall:
 - A. Be executed by duly authorized representative(s) for each party; and
 - B. Specify how the municipality or county and water authority or water and sewer authority will notify one another regarding any updates to ordinances or local laws relevant to the enforcement by the water authority or water and sewer authority of ordinances required to implement the provisions of Title 12, Chapter 7 of the Official Code of Georgia and related regulation; and
 - C. Specify how changes to the service area of such water authority or water and sewer authority will affect which entity will act as Local Issuing Authority in the affected areas and describe a process by which any necessary updates to or amendments of relevant ordinances or local laws will be conducted; and
 - D. Describe in detail, with reference to and incorporation of boundary maps and customer lists as appropriate, in which areas the municipality or county will act as Local Issuing Authority and in which areas the water authority or water and sewer authority will act as Local Issuing Authority.

(F) The Division shall provide written notification to the water authority, or water and sewer authority of the Director's decision no later than 60 days after receipt of request for certification. In the case of a denial of local issuing authority certification, the Division shall explain the deficiencies causing the denial. The denial of certification by the Division shall not preclude water authority or water and sewer authority from making any subsequent application for certification.

(3) Responsibilities of Certified Local Issuing Authorities.

(A) Municipality, county, water authority, or water and sewer authority demonstrates adequate program administration, record keeping and enforcement as evidenced by:

1. Processing land disturbing activity applications, issuing permits and compliance with stream buffer variance requirements; and
2. Maintaining a list of open land disturbance permits; and
3. Conducting inspections and maintaining reports of inspections including violations; and
4. Enforcing the ordinance and keeping record of written notification of violations, stop-work orders, court actions, etc.

(B) Municipality, county, water authority, or water and sewer authority must follow a Complaint Investigation Process which:

1. Includes an investigation of the complaint by the local issuing authority within 5 business days; and
2. Includes a mechanism for referral of unresolved complaints to the Division; and
3. Includes a monthly log of complaints and inquiries, including actions taken.

(C) Municipality, county, water authority, or water and sewer authority with a Memorandum of Agreement (MOA) with the appropriate local Soil and Water Conservation District to review and approve an Erosion and Sedimentation Control Plan shall approve or disapprove a revised Plan submittal within 35 days of receipt. Failure of the municipality, county, water authority, or water and sewer authority to act within 35 days shall be considered an approval of the revised Plan submittal.

(D) In the event that a water authority or water and sewer authority that has been certified as a Local Issuing Authority alters the area the water authority or water and sewer authority is acting as a Local Issuing Authority from that described in

the application and related boundary maps included in its application for certification, within thirty (30) days from that alteration the water authority or water and sewer authority must send to the Division an updated boundary map and, if any new or different municipalities or counties have been added, a letter like that described in Rule 391-3-7-.09(2)(E)(2) from each municipality or county and a copy of the intergovernmental agreement described in Rule 391-3-7-.09(2)(E)(8).

(4) De-certification of a Local Issuing Authority.

(A) Recommendation for De-certification Investigation. The Division shall begin an investigation for de-certification upon request with adequate documentation by the local Soil and Water Conservation District or Georgia Soil and Water Conservation Commission or on its own initiative if any of the following occurs:

1. Municipality, county, water authority, or water and sewer authority no longer has an ordinance which demonstrates compliance with the provisions in Title 12, Chapter 7 of the Official Code of Georgia; or
2. Municipality, county, water authority, or water and sewer authority no longer has inspection personnel who are or will be qualified personnel (within 6 months of date of hire) in erosion and sediment control; or
3. Municipality, county, water authority, or water and sewer authority does not utilize their Complaint Investigation Process pursuant to 391-3-7-.09(3)(B); or
4. Municipality, county, water authority, or water and sewer authority no longer has adequate program administration, record keeping and enforcement pursuant to 391-3-7-.09(3)(A).

(B) De-certification Investigation. Within 60 days of receipt of the de-certification request, the Division shall initiate an investigation by providing written notice of the recommendation for de-certification to the local issuing authority and detailing the perceived deficiencies enumerated in the recommendation. Prior to any de-certification of a local issuing authority, the Division must perform an on-site evaluation of the program.

The municipality, county, water authority, or water and sewer authority shall have 30 days in which to respond in writing to the Division and:

1. Acknowledge the noted deficiencies and agree to comply; or
2. Offer explanation of why deficiency or omission has occurred and establish a target deadline to comply; or

3. Disagree with some or all of the noted deficiencies and recommendations for improvement and request mediation between the municipality, county, water authority, or water and sewer authority and the Division.
- (C) Review Local Issuing Authority Response. The Director or his/her designee will review any response received from the local issuing authority. The Director may then uphold, modify, suspend or dismiss the de-certification recommendation. The determination of the Director shall be made within 30 days from receipt of the response from the local issuing authority.
- (D) Final Decision and Appeal. A determination made by the Director to uphold, modify, suspend or dismiss the de-certification is a final action of the Director and may be appealed in accordance with subsection (c) of Code Section [12-2-2](#).
- (5) Continuing Certification.

A local issuing authority shall submit documentation showing continued compliance with the criteria for certification established at 391-3-7-.09(1)(A) and (B) to the Division whenever an event requiring the Division to evaluate a local issuing authority for continuing compliance with the certification requirements occurs.

Rule 391-3-7-.11. Coastal Marshlands Buffer Variance Procedures and Criteria.

- (1) Buffers on state waters are valuable in protecting and conserving land and water resources. Therefore, there is established a 25 foot buffer along coastal marshlands, as measured horizontally from the coastal marshland-upland interface, except:
 - (a) Where the Director determines to allow a variance that is at least as protective of natural resources and the environment under the variance criteria in 391-3-7-.11(2) through (7) or under the variance by rule criteria in 391-3-7-.11(9); or
 - (b) Where otherwise allowed by the Director pursuant to O.C.G.A. § [12-2-8](#); or
 - (c) Where an alteration within the buffer area has been authorized pursuant to O.C.G.A. § [12-5-286](#); or
 - (d) For maintenance of any currently serviceable structure, landscaping, or hardscaping, including bridges, roads, parking lots, golf courses, golf cart paths, retaining walls, bulkheads, and patios; provided, however, that if such maintenance requires any land-disturbing activity, adequate erosion control measures are incorporated into the project plans and specifications and such measures are fully implemented; or
 - (e) Where a drainage structure or roadway drainage structure is constructed or maintained; provided, however, that adequate erosion control measures are incorporated into the project plans and specifications and such measures are fully implemented; or
 - (f) On the landward side of any currently serviceable shoreline stabilization structure; or
 - (g) For the maintenance of any manmade storm-water detention basin, golf course pond, or impoundment that is located entirely within the property of a single individual, partnership, or corporation; provided, however, that adequate erosion control measures are incorporated into the project plans and specifications and such measures are fully implemented; or
 - (h) Crossings for utility lines that cause a width of disturbance of not more than 50 feet within the buffer; provided, however, that adequate erosion control measures are incorporated into the project plans and specifications and such measures are fully implemented; or

- (i) Any land-disturbing activity conducted pursuant to and in compliance with a valid and effective land-disturbing permit issued subsequent to April 22, 2014, and prior to December 31, 2015; provided, however, that adequate erosion control measures are incorporated into the project plans and specifications and such measures are fully implemented; or
 - (j) Any lot for which the preliminary plat has been approved prior to December 31, 2015 if roadways, bridges, or water and sewer lines have been extended to such lot prior to the effective date of this Act and if the requirement to maintain a 25 foot buffer would consume at least 18 percent of the high ground of the platted lot otherwise available for development; provided, however, that adequate erosion control measures are incorporated into the project plans and specifications and such measures are fully implemented.
- (2) The buffer variance process will apply to all projects legally eligible for variances, provided that adequate erosion control measures are incorporated in the project plans and specifications and are implemented. Variance applications will be reviewed by the Director only in the following cases:
- (a) The project involves the construction or repair of an existing infrastructure project or a structure that, by its nature, must be located within the buffer. Such structures include, but are not limited to, dams, public water supply intake structures, detention/retention ponds, waste water discharges, docks including access ways, boat launches including access ways and stabilization of areas of public access to water; or
 - (b) The project will result in the restoration or enhancement to improve water quality and/or aquatic habitat quality; or
 - (c) Buffer intrusion is necessary to provide reasonable access to a property or properties; or
 - (d) The intrusion is for utility lines within or adjacent to existing utility or transportation right of ways or that cannot reasonably be placed outside the buffer, and crossings and vegetative disturbance are minimized; or
 - (e) Crossing for utility lines, including but not limited to gas, liquid, power, telephone, and other pipelines, provided that the number of crossings and the amount of vegetative disturbance are minimized; or
 - (f) Recreational foot trails and viewing areas, providing that impacts to the buffer are minimal; or
 - (g) The project involves construction of one (1) single family home for residential use by the owner of the subject property and, at the time of adoption of this rule, there is no opportunity to develop the home under any reasonable design configuration

unless a buffer variance is granted. Variances will be considered for such single family homes only if construction is initiated or local government approval is obtained prior to January 10, 2005; or

- (h) The proposed land disturbing activity within the buffer is part of a project that will require a permit from the United States Army Corps of Engineers under Section 404 of the federal Water Pollution Control Act Amendment of 1972, [33 U.S.C. Section 1344](#), or Section 10 of the Rivers and Harbors Act of 1899, contingent upon approval by the Corps of Engineers of that permit; or
 - (i) A plan is provided for buffer intrusion that shows that, even with the proposed land disturbing activity within the buffer, the completed project will result in maintained or improved water quality; or
 - (j) (Reserved)
 - (k) The proposed land disturbing activity within the buffer is part of a project that is not eligible for a permit from the United States Army Corps of Engineers under Section 404 of the federal Water Pollution Control Act Amendment of 1972, [33 U.S.C. Section 1344](#), and involves:
 - 1. Piping, filling, or re-routing of waters that are not jurisdictional Waters of the U.S.; or
 - 2. Buffer impacts due to new infrastructure projects adjacent to state waters (jurisdictional and non-jurisdictional Waters of the U.S.). This criterion shall not apply to maintenance and/or modification to existing infrastructure.
- (3) Except as provided in 391-3-7-.11(9), if the buffer impact will be minor, the buffer variance request shall include the following information at a minimum:
- (a) Site map that includes locations of all state waters, wetlands, floodplain boundaries and other natural features, as determined by field survey.
 - (b) Description of the shape, size, topography, slope, soils, vegetation and other physical characteristics of the property.
 - (c) Dated and numbered detailed site plan that shows the locations of all structures, impervious surfaces, and the boundaries of the area of soil disturbance, both inside and outside of the buffer. The exact area of the buffer to be impacted shall be accurately and clearly indicated.
 - (d) Description of the project, with details of the buffer disturbance, including estimated length of time for the disturbance and justification for why the disturbance is necessary.

- (e) Calculation of the total area and length of the buffer disturbance.
 - (f) Letter from the issuing authority (if other than the Division and as applicable) stating that the issuing authority has visited the site and determined the presence of coastal marshlands that require a buffer and that a buffer variance is required.
 - (g) Erosion, sedimentation and pollution control plan.
 - (h) Re-vegetation plan as described in the most recent publication of the Division's guidance book, "Streambank and Shoreline Stabilization", or the "Hydromodification Best Management Practice Manual for Coastal Georgia," and/or a plan for permanent vegetation as per the "Manual for Erosion and Sedimentation Control in Georgia."
 - (i) For projects within the buffer of or upstream and within one linear mile of an impaired water body on Georgia's "305(b)/303(d) List Documents (Final)," documentation that the project will have no adverse impacts relative to the pollutants of concern and if applicable, documentation that the project will be in compliance with the TMDL Implementation Plan(s).
 - (j) Applications must be on the most current forms provided by the Division.
- (4) If the buffer impact will be major, the buffer variance request shall include all of the information in 391-3-7-.11(3)(a) through (i) above, with the exception of 391-3-7-.11(3)(h). A buffer variance request for major buffer impacts shall also include the following additional information:
- (a) For variance requests made under 391-3-7-.11(2)(h):
 1. Joint Public Notice (JPN), if it is an individual permit;
 2. Pre-Construction Notification (PCN), if it is a Nationwide Permit;
 3. Mitigation calculations; and
 4. Permit approval from the United States Army Corps of Engineers or, if not yet received, a signed statement from the applicant certifying that the applicant will provide a copy of the permit approval upon receipt.
 - (b) Buffer mitigation plan addressing impacts to critical buffer functions, including water quality and floodplain, watershed and ecological functions based on an evaluation of existing buffer conditions and predicted post construction buffer conditions pursuant to 391-3-7-.11(7)(c) herein.
 - (c) Plan for stormwater control once site stabilization is achieved, when required by a local stormwater ordinance.

- (d) For variance requests made under 391-3-7-.11(2)(i), the application shall include the following water quality information:
 - 1. Documentation that post-development stormwater management systems to conform to the minimum standards for water quality, channel protection, overbank flood protection and extreme flood protection as established in the Georgia Stormwater Management Manual or the equivalent and if applicable, the Coastal Stormwater Supplement to the Georgia Stormwater Management Manual.
 - 2. Documentation that existing water quality will be maintained or improved based on predicted pollutant loading under pre- and post-development conditions as estimated by models accepted by the Division.
 - (e) For variance requests made under 391-3-7-.11(2)(k)1., the application shall include documentation from the United States Army Corps of Engineers verifying the water bodies identified in the application are non-jurisdictional waters of the United States under Section 404 of the Clean Water Act.
- (5) Upon receipt of a complete application, the Division shall consider the complete application and the following factors in determining whether to issue a variance:
- (a) Locations of state waters, wetlands, coastal marshlands, floodplain boundaries and other natural features as determined by field surveys.
 - (b) Shape, size, topography, slope, soils, vegetation and other physical characteristics of the property.
 - (c) Location and extent of buffer intrusion.
 - (d) Whether reasonable alternative project designs, such as the use of retaining walls are possible which do not require buffer intrusion or which require less buffer intrusion.
 - (e) Whether issuance of the variance, with the required mitigation plan, re-vegetation plan and/or plan for permanent vegetation, is at least as protective of natural resources and the environment.
 - (f) The current condition of the existing buffer, to be determined by:
 - 1. The extent to which existing buffer vegetation is disturbed;
 - 2. The hydrologic function of the buffer; and
 - 3. Hydrologic functional characteristics such as bank vegetative cover, bank stability, or prior channel alteration.

- (g) The extent to which the encroachment into the buffer may reasonably impair buffer functions.
 - (h) The value of mitigation activities conducted pursuant to this rule, particularly 391-3-7-.11(7)(c) and (d) herein, development techniques or other measures that will contribute to the maintenance or improvement of water quality, including the use of low impact designs and integrated best management practices, and reduction in effective impervious surface area.
 - (i) The long-term water quality impacts of the proposed variance, as well as the construction impacts. And for applications made under 391-3-7-.11(2)(i), the following criteria shall be used by the Director to assist in determining whether the project seeking a variance will, when completed and with approved mitigation, result in maintained or improved water quality downstream of the project and minimal net impact to the buffer:
 - 1. The Division will assume that the existing water quality conditions are commensurate with an undeveloped maritime forested watershed unless the applicant provides documentation to the contrary. If the applicant chooses to provide baseline documentation, site specific water quality, habitat, and /or biological data would be needed to document existing conditions. If additional data are needed to document existing conditions, the applicant may need to submit a monitoring plan and have it approved by the Division prior to collecting any monitoring data. Existing local data may be used, if available and of acceptable quality to the Division.
 - 2. The results of the predicted pollutant loading under pre- and post-development conditions as estimated by models accepted by the Division indicate that existing water quality conditions will be maintained or improved.
 - (j) For applications made under 391-3-7-.11(2)(i), for which a land disturbing activity is proposed within the buffer of a 303(d) listed water body, or upstream and within one linear mile of a 303(d) listed water body, the results of the model demonstrate that the project has no adverse impact relative to the pollutants of concern.
- (6) Within 60 days of receipt of a complete buffer variance application, the Division will either provide written comments to the applicant or propose to issue a variance.
- (a) When the Division proposes to issue a variance, it will issue a public notice. The public notice shall describe the proposed buffer encroachment, the location of the project, where the public can review site plans, and where comments should be sent. The public shall have 30 days from the date of publication of the public notice to comment on the proposed buffer variance.

- (b) If after the public comment period for a proposed buffer variance has closed or a buffer variance has been issued the applicant proposes to change the project as described in the variance application, the applicant must notify the Division in writing of those proposed changes.
 - 1. If the proposed changes include a change in the location of the buffer impacts, an increase in buffer impact, or change in project concept or design such that there may be a change to the applicable variance criteria described in Section 391-3-7-.11(2) and the Division approves such changes, the Division shall issue public notice in accordance with Section 391-3-7-.11(6)(a).
 - 2. If the proposed changes do not include changes described in 391-3-7-.11(6)(b)(1), the Division may approve those changes in writing or may elect to issue public notice in accordance with Section 391-3-7-.11 (6)(a).

 - (c) If after the public comment period for a proposed buffer variance has closed or a buffer variance has been issued a person or entity other than the applicant wishes to carry out the work described in the proposed variance or variance, the new person or entity must submit an application for that variance and all other requirements and procedures described in this Section 391-3-7-.11 shall apply. A new application shall not be required where the applicant is merely changing its name or corporate structure, but the applicant must notify the Division in writing of that name or corporate structure change.
- (7) In all cases in which a buffer variance is issued, the following conditions shall apply:
- (a) The variance shall be the minimum reduction in buffer width necessary to provide relief.
 - (b) Disturbance of existing buffer vegetation shall be minimized.
 - (c) Mitigation is required for all major buffer impacts and shall offset the buffer encroachment and any loss of buffer functions. Where lost functions cannot be replaced, mitigation shall provide other buffer functions that are beneficial. Buffer functions include, but are not limited to:
 - 1. temperature control (shading);
 - 2. bank stabilization;
 - 3. trapping of sediments, if any;
 - 4. removal of nutrients, heavy metals, pesticides and other pollutants;
 - 5. aquatic habitat and food chain;

6. terrestrial habitat, food chain and migration corridor;
 7. buffering of flood flows; and
 8. maintenance of salinity through buffering of freshwater flows.
- (d) Mitigation should be on-site when possible. Depending on site conditions, acceptable forms of mitigation may include, but are not limited to:
1. Restoration of the buffer to a naturally vegetated state to the extent practicable, or to current existing conditions. Information on natural vegetation in coastal Georgia is available from the University of Georgia Marine Extension Service's website (visit <https://gacoast.uga.edu/> and search the terms "Ecoscapes" or "Native Plant Search Engine");
 2. Bioengineering of channels to reduce bank erosion and improve habitat;
 3. Creation or restoration of wetlands;
 4. Stormwater management systems to better maintain the pre-development flow regime (with consideration given to downstream effects) that exceeds the requirements of applicable ordinances at the time of application;
 5. Reduction in pollution sources, such as on-site water quality treatment or improving the level of treatment of septic systems;
 6. Other forms of mitigation that protect or improve water quality and/or aquatic wildlife habitat;
 7. An increase in buffer width elsewhere on the property;
 8. Mitigation as required under a Clean Water Act Section 404 or Nationwide permit issued by the U.S. Army Corps of Engineers; or
 9. Stormwater management systems described in the most recent publication of the Georgia Stormwater Management Manual and the Coastal Stormwater Supplement to the Georgia Stormwater Management Manual.
- (e) Forms of mitigation that are not acceptable include:
1. Activities that are already required by the Georgia Erosion and Sedimentation Act, such as the minimal use of best management practices;
 2. Activities that are already required by other federal, state and local laws, except as described in 391-3-7-.11(7)(d) above. U.S. Army Corps of Engineers mitigation is acceptable.

- (f) The Division will not place a condition on a variance that requires a landowner to deed property or the development rights of property to the state or to any other entity. The landowner may voluntarily preserve property or the development rights of property as a mitigation option with the agreement of the Division.
 - (g) If a variance issued by the Director is acceptable to the issuing authority, the variance shall be included as a condition of permitting and therefore becomes a part of the permit for the proposed land disturbing activity project. If a buffer variance is not acceptable to the issuing authority, the issuing authority may issue a land disturbing permit without allowing encroachment into the buffer.
- (8) A buffer variance will expire five years after the effective date, unless an extension is granted by the Division as specifically provided herein.
- (a) The applicant may request a time extension of that buffer variance only if the approved buffer impacts will not be completed prior to the buffer variance expiration date. The buffer variance time extension, if granted, can be for a period of up to five years. If the applicant can demonstrate that a time extension for a period of greater than five years is reasonable, the Director may grant a buffer variance time extension for a reasonable period of greater than five years. A buffer variance time extension may be issued only once.
 - (b) The buffer variance time extension must be requested in writing at least 90 calendar days prior to the buffer variance expiration date with justifiable cause demonstrated. Once an approved buffer variance expires, it is no longer eligible for a time extension.
 - (c) Time extension requests will be reviewed by the Division. The Division will either provide written comments to the applicant or propose to issue a buffer variance time extension within 60 days of receipt of a time extension request. If there are any significant changes to the original buffer variance application, the Division shall issue a public notice in accordance with 391-3-7-.11(6)(a).
- (9) Variance By Rule
- (a) Notwithstanding any other provision of these Rules, the following activities have minimal impact on the water quality or aquatic habitat of the adjacent coastal marshland and therefore are deemed to have an approved buffer variance.
 1. Activities where the area within the buffer is not more than 500 square feet.
 2. Activities that have a "Minor Buffer Impact" as defined in [391-3-7-.01\(r\)](#), provided that the total area of buffer impacts is less than 5,000 square feet. A proposed development site may not be subdivided into smaller projects or phases to circumvent the 5,000 square feet limitation.

- (b) Bank and shoreline stabilization structures are not eligible for coverage under the variance by rule.
- (c) Notification shall be made at least 14 days prior to the commencement of land-disturbing activities to provide the Division an opportunity to review the activity to ensure it meets the applicable criteria. Unless notified by the Division to the contrary, an applicant who submits a notification in accordance with 391-3-7-.11(9) is authorized to encroach into the buffer 14 days after the notification form is received by the Division. A buffer variance by rule expires if the buffer impacts are not completed within two years after the notification form is received by the Division. The Director may deny coverage under this variance by rule and require submittal of an application for an individual variance based on the review of the documentation submitted or other information. Persons failing to notify the Director of such activities shall be deemed to be operating without a variance.
- (d) Notification for a variance by rule is to be submitted by return receipt certified mail (or similar service that provides confirmation of receipt) to both the Division and to the Local Issuing Authority in jurisdictions authorized to issue Land Disturbance Permits.
- (e) An individual variance will be required for any activity that does not qualify for a variance by rule.
- (f) Any notification for a variance by rule shall include the following:
 - 1. Description of the activity, with details of the buffer disturbance, including area and length of the buffer to be impacted and estimated length of time for the disturbance.
 - 2. Photographs of the area that will be affected by the proposed activity.
 - 3. Notice of a land-disturbing activity to be covered by a variance by rule must be on the most current forms provided by the Division.
- (g) Any variance by rule shall be subject to the following requirements:
 - 1. The following information shall be maintained onsite until final stabilization of the site is complete:
 - i. Site plan that shows the locations of all structures, impervious surfaces, and the boundaries of the area of soil disturbance, both inside and outside of the buffer. The exact area and length of the buffer to be impacted shall be accurately and clearly indicated.
 - ii. Documentation that adequate erosion control measures are incorporated into the project plans and specifications.

2. Disturbance of existing buffer vegetation shall be minimized.
3. Final stabilization of the site must include a re-vegetation plan as described in the most recent publication of the Division's guidance book, "Streambank and Shoreline Stabilization." It is recommended that vegetation be native riparian vegetation.
4. Temporary vegetative measures must be implemented within 14 calendar days following the completion of any soil disturbance and the site shall be stabilized at the end of every day until project completion.
5. Proper and full implementation of the erosion control measures in 391-3-7-.11(9)(g)1. ii.
6. Post construction stormwater management practices should be considered. Best management practices can be found in the latest edition of the Georgia Stormwater Management Manual or the Coastal Supplement to the Georgia Stormwater Management Manual.
7. All other applicable federal, state, and local laws, rules and ordinances, including erosion and sedimentation control must be fully complied with prior to commencement of project construction.
8. For a variance by rule under 391-3-7-.11(9)(a)1., cumulative impacts shall not exceed 500 square feet within a 5 year period.
9. Any activity that does not meet the requirements of 391-3-7-.11(9)(g) is in violation of the variance by rule.

Subject 391-3-8. RULES FOR DAM SAFETY.

Rule 391-3-8-.01. Purpose.

The purpose of these Rules is to implement the responsibilities assigned to the Environmental Protection Division by the Georgia Safe Dams Act of 1978, (hereinafter the "Act") O.C.G.A. §§ [12-5-370](#) *et seq.* These Rules are promulgated to provide for the inventory, classification, inspection and permitting of certain dams in order to protect the health, safety and welfare of all

the citizens of the State by reducing the risk of failure of such dams to prevent death or injuries to persons.

Cite as Ga. Comp. R. & Regs. R. 391-3-8-.01

Authority: O.C.G.A. §§ [12-5-370](#) through [12-5-385](#).

History. Original Rule entitled "Purpose" was filed as Emergency Rule 391-3-8-0.5-.01 on August 28, 1978; effective July 28, 1978, the date of adoption, to remain in effect for a period of 120 days or until the effective date of a permanent Rule covering the same subject matter superseding said Emergency Rule, as specified by the Agency.

Amended: Permanent Rule of the same title adopted superseding Emergency Rule 391-3-8-0.5 -1. 0. Filed August 31, 1978; effective September 20, 1978.

Amended: Rule repealed and a new Rule of the same title adopted. Filed October 29, 1985; effective November 18, 1985.

Amended: F. Aug. 31, 1990; eff. Sept. 20, 1990.

Amended: Title changed from "Purpose. Amended" (as recorded in the Official Compilation, eff. Sep. 20, 1978) to "Purpose." F. Sep. 13, 2016; eff. Oct. 3, 2016.

Rule 391-3-8-.02. Definitions.

For the purpose of these rules and regulations, the term:

- (a) "abutment" means the bordering area of the dam site which functions as a support for the ends of the dam structure.
- (b) "Act" means the "Georgia Safe Dams Act of 1978" as amended (O.C.G.A. [12-5-370](#) through [12-5-385](#)).
- (c) "appurtenant works" means such structures as spillways, either in the dam or separate therefrom; the reservoir and its rims; low level outlet works; access bridges; and water conduits such as tunnels, pipelines or penstock, either through the dam or its abutments.
- (d) "Category I" means the classification where improper operation or dam failure would result in probable loss of human life. Situations constituting "probable loss of life" are those situations involving frequently occupied structures or facilities, including, but not limited to, residences, commercial and manufacturing facilities, schools and churches.
- (e) "Category II" means the classification where improper operation or dam failure would not be expected to result in probable loss of human life.
- (f) "conduit" means any closed waterway such as a cast-in-place cut-and-cover culvert, a precast or prefabricated pipe imbedded in the dam or foundation or a tunnel bored through the abutment used for the purpose of regulating or releasing water impounded by a dam.
- (g) "construct" or "construction" means the building, removal or modification of any artificial barrier, together with appurtenant works for the impoundment or diversion of water or liquid substances and shall include any activity which, other than routinely as part of an approved maintenance program, repairs, removes, or restores such artificial barrier, or

alters its design, shape or structural characteristics, and shall also include any enlargement of such artificial barrier.

- (h) "dam" means with the exception of the exemptions outlined in Rule [391-3-8-.04](#) herein, the following:
1. Any artificial barrier, including appurtenant works, which impounds or diverts water and which the improper operation or failure of such would result in probable loss of human life as determined pursuant to the Act, and which
 - (i) is twenty-five (25) feet or more in height from the natural bed of the stream or water course measured at the downstream toe or the lowest elevation of the outside limit of the barrier (whichever is lower) to the maximum water storage elevation; or
 - (ii) has an impounding capacity at maximum water storage elevation of one hundred (100) acre-feet or more.
 2. Any artificial barrier, including appurtenant works, constructed in conjunction with the reclamation of surface mined land, and meeting the requirements of subsection 1. above, and when improper operation or failure would result in probable loss of human life.
- (i) "small dam" means any artificial barrier meeting the requirements of subsection (h) above with a storage capacity not exceeding 500 acre-feet and a height not exceeding 25 feet.
- (j) "medium dam" means any artificial barrier meeting the requirements of subsection (h) above with a storage capacity exceeding 500 acre-feet but not exceeding 1000 acre-feet or a height exceeding 25 feet but not exceeding 35 feet.
- (k) "large dam" means any artificial barrier meeting the requirements of subsection (h) above and with a storage capacity exceeding 1000 acre-feet but not exceeding 50,000 acre-feet or a height exceeding 35 feet but not exceeding 100 feet.
- (l) "very large dam" means any artificial barrier meeting the requirements of subsection (h) above and with a storage capacity exceeding 50,000 acre-feet or a height exceeding 100 feet.
- (m) "engineer" means the State Conservation Engineer of the Natural Resources Conservation Service or the engineer of record.
- (n) "engineer of record" - means an individual who:
1. Is a licensed engineer registered with the State of Georgia; and

2. Is competent and has relevant experience in areas related to dam investigation, inspection, design, and construction for the type of dam being investigated, inspected, designed, or constructed; and
 3. Understands adverse dam incidents, failures and the potential causes and consequences of dam failures; and
 4. Will have responsible charge for the design of a new Category I dam or repair of an existing Category I dam; and
 5. Has substantiated their qualifications to the Georgia Safe Dams Program prior to their engagement by an Owner/Operator of an existing or proposed Category I Dam.
- (o) "flood control pool" means the storage volume of the entire reservoir at the crest of the emergency spillway.
- (p) "flood control zone" means the storage volume available between the normal pool and the flood control pool.
- (q) "foundation" means the earth or rock which the dams rests.
- (r) "freeboard" means the difference in elevation between the top of the dam and the maximum reservoir water surface that would result should the inflow design flood occur and should the outlet works function as planned.
- (s) "hydrometeorological gauges" means any of a variety of measuring devices used in determining data concerning rainfall, snow, fog, dew, etc.
- (t) "impoundment" means the water or liquid substance that is or will be stored by a dam--commonly referred to as the reservoir.
- (u) "maximum water storage elevation" means the elevation of the lowest point of the top of the impoundment structure independent of low points caused by partial failure or collapse.
- (v) "normal pool" means the reservoir storage volume at normal storage elevation.
- (w) "normal water storage elevation" means the normal elevation of water surface which is obtained by the reservoir when the intake and outlet works are operating as planned during periods of normal precipitation and runoff and not during periods of drought or flood.
- (x) "principal spillway" means the spillway which conveys normal runoff out of the reservoir.

- (y) "probable maximum precipitation (PMP)" means the greatest amount of rainfall of a six-hour duration which would be expected for a given drainage basin as determined by Hydrometeorological Report No. 52 published by the U.S. Weather Bureau.
- (z) "spillway" means the feature of a storage or detention dam which is designed to release surplus water which cannot be contained in the allotted storage space, and at diversion dams is a means to bypass flows exceeding those which are turned into the diversion system.
- (aa) "structural height" means the height of the dam measured from the lowest point of the dam's foundation to the highest point on the top of the dam.
- (bb) "surcharge zone" means the reservoir of the storage volume located between the crest of the emergency spillway (flood control pool) and the maximum water storage elevation.
- (cc) "surface mining" means any activity constituting all part of a process for the removal of minerals ores and the solid matter for sale or for processing or for consumption in the regular operations of a business. However the removal of mineral ores and other solid matter by tunnels, shafts, and dimension stone quarries shall not be considered surface mining.

Authority: O.C.G.A. §§ [12-5-370](#) through [12-5-385](#).

History. Original Rule entitled "Definitions" was filed as Emergency Rule 391-3-8-0.5-.02 on August 28, 1978, effective July 28, 1978, the date of adoption, to remain in effect for a period of 120 days or until the effective date of a permanent Rule covering the same subject matter superseding said Emergency Rule, as specified by the Agency.

Amended: Permanent Rule of the same title superseding Emergency Rule 391-3-8-0.5-.02. Filed August 31, 1978; effective September 20, 1978.

Amended: Filed October 29, 1985; effective November 18, 1985.

Amended: F. Aug. 31, 1990; eff. Sept. 20, 1990.

Amended: F. Oct. 5, 1998; eff. Oct. 25, 1998.

Amended: Title changed from "Definitions. Amended" (as recorded in the Official Compilation, eff. Sep. 20, 1978) to "Definitions." F. Sep. 13, 2016; eff. Oct. 3, 2016.

Rule 391-3-8-.03. Inventory and Classification.

- (1) It shall be the duty of the Director to inventory the dams in this state and to classify each dam into one of the following categories:
 - (a) Category I Dam; or
 - (b) Category II Dam.
- (2) The inventory shall consist of all dams not excluded under Rule [391-3-8-.04](#) subsections (a), (b), (c), (e) and (f).

- (3) When an existing Category II dam may be reclassified to a Category I dam because of proposed development downstream of the dam, the governing authority issuing the permit for the development shall provide for review by the Safe Dams Programs the following information:
 - (a) locations of the Category II dam and the proposed development; and
 - (b) a surveyed cross-section of the stream valley at the location of the proposed development, including proposed finished floor elevations; and
 - (c) a dam breach analysis to establish the height of the flood wave in the downstream floodplain. The analysis shall be completed by an engineer in accordance with the current version of the Safe Dams Program Engineer Guidelines.
- (4) If the Director determines that an existing Category II dam will be reclassified to a Category I dam if the proposed development occurs, then the owner of the existing Category II dam may request an inspection from the Director within ten (10) days of notification of the proposed development by the local governing authority. The preliminary visual inspection shall be carried out in accordance with Rule [391-3-8-.08\(2\)\(b\)](#) and Rule [391-3-8-.08\(3\)\(d\)\(2\)\(i\)](#) & (ii). Detailed surveys, hydrologic and hydraulic analyses will not be performed, however, the Director may provide an opinion on the hydraulic adequacy of the dam.
- (5) A written evaluation of the existing Category II dam's compliance with Category I requirements will be provided to the owner of the dam and the local governing authority based on the preliminary visual inspection by the Safe Dams Program.

Rule 391-3-8-.04. Scope and Exclusions.

- (1) These rules and regulations shall apply to any dams or artificial barriers existing or constructed in Georgia except for the following:

- (a) Any dam owned and operated by any department or agency of the United States government;
 - (b) Any dam constructed or financially assisted by the United States Natural Resources Conservation Service or any other department or agency of the United States government. This exemption only applies when such department or agency designed or approved plans and supervised construction, and maintains a regular program of inspection of the dam. This exemption shall cease on November 1, 1995, for all such dams for which the supervising federal agency has relinquished authority for operation and maintenance to a person, unless the supervising federal agency certifies by the said date and at least biannually thereafter to the Director that such dams are in compliance with requirements of this part, including minimum spillway design, and with the maintenance standards of the supervising federal agency;
 - (c) Any dam licensed by the Federal Energy Regulatory Commission, or for which a licensed application is pending with the Federal Energy Regulatory Commission;
 - (d) Any dam classified as a Category II Dam;
 - (e) Any artificial barrier, except as provided in Rule [391-3-8-.02\(h\)](#), constructed in connection with and incidental to surface mining, provided that upon completion of mining the impoundment created by the barrier is drained and reclaimed or stabilized as a lake pursuant to a mined land use plan approved by the Director pursuant to the Georgia Surface Mining Act;
 - (f) Any artificial barrier which is not in excess of 6 feet in height, regardless of storage capacity, or which has a storage capacity at maximum water storage elevation not in excess of 15 acre-feet, regardless of height.
- (2) The terms "dam owner" or "dam operator" in this chapter shall not refer to the owner of fee title to land on which a dam exists that was constructed by a governmental entity and for which a governmental entity has an easement. In such cases, the terms "dam owner" or "dam operator" in this chapter shall refer to the governmental entity that has an easement. The fee title land owner is not responsible for operating, maintaining, and/or inspecting the dam in such situations.

Rule 391-3-8-.05. Application for a Permit.

- (1) No Person shall operate or construct a dam as defined by the Act and these Rules without first having obtained a permit from the Division; provided, however, any persons who is operating a dam may continue such operation pending final action by the Director on the permit application, and provided such application has been filed with the Director within 180 days after that permit is required by the Director.
- (2) Permit applications shall be on forms as may be prescribed and furnished by the Division.
- (3) The Director may require the submission of plans, specifications, and other information as he deems relevant to the application.
- (4) If a permit application for the construction of a dam is not approved by the Director, the application shall be returned to the applicant along with the reasons for its disapproval.

Such applicants may reapply for said permit by correcting deficiencies in the application and resubmitting the application to the Director.

- (5) Permits shall not be transferred from one person to another without the approval of the Director. If the ownership changes from one person to another, the new owner shall immediately notify the Director in writing of such transactions. The Director shall also be notified of any proposed change in the operation of the dam.
- (6) Permits shall not be transferred from one dam to another dam.

Rule 391-3-8-.06. Revocation, Suspension or Modification of Permits.

Permits may be revoked, suspended, or modified, or denied by the Director for cause, including but not limited to the following:

- (a) violation of any permit condition;
- (b) failure to fully disclose all relevant facts or obtaining a permit through misrepresentation;
- (c) violations of the Act or these Rules;
- (d) changes in conditions that require such action on a permit in order to insure compliance with the Act or these Rules.

[Rule 391-3-8-.08. Permits for the Construction and/or Operation of New and Existing Dams.](#)

(1) New Dams

- (a) Applications for a permit to construct and operate a Category I dam shall be accompanied by a statement from an engineer who provides engineering design services for the dam, certifying that he/she has the necessary training and experience to design such dam, and that to the best of his/her knowledge, understanding and belief such design meets the standards of the Act and these Rules. If the design engineer determines that a geological investigation of the dam is advisable, such investigation shall be conducted by a professional geologist registered to practice in the State of Georgia.
- (b) As an alternative to a certificate from an engineer, the Director may accept a permit application accompanied by a certificate from the State Conservation Engineer of the Natural Resources Conservation Service stating that the design of the dam meets the standards of this Act and the rules and regulations promulgated hereunder.
- (c) Construction of such dams shall be completed in the time frame stated in the special conditions of the Construction and Operation Permit.
- (d) Notice by registered mail shall be given to the Director at least 10 days prior to the commencement of construction for permitted dam construction activities.

(2) Existing Dams

- (a) Permits for the operation of existing dams may be issued provided the application for a permit is judged complete and meets the requirements of the Act and these Rules.
- (b) When a visual inspection, performed by an engineer, reveals that abnormal stress exists or that the dam was not constructed in accordance with the requirements of the Act or these Rules, a detailed engineering survey meeting the requirements of this section shall be performed prior to final action on the permit application. Such visual inspection may be provided by the applicant, in accordance with Section [12-5-376\(g\)](#) of the Act, or by the Division, or by another authorized agency under contract with the Director on behalf of the Division.

(3) Applications for permits for existing or new dams shall include the following evaluations and information, when such information is relevant and available, as determined by the Director:

- (a) A regional vicinity map showing the location of the existing or new dam and the latitude and longitude of the center of the dam expressed to the nearest second, the watershed drainage area, and the downstream area subject to potential damage due to failure or misoperation of the dam or operation equipment (including other artificial barriers or downstream fixed improvements which would be affected);

- (b) A detailed description of the existing or new dam, including:
1. proposed or as-built drawings indicating plans, elevations and sections of the dam and appurtenant works including details of the discharge facilities such as outlet works, limited service and emergency spillways, flashboards, fuse plugs and other operation equipment;
 2. the elevation of the top and lowest outside limit of the dam, and the elevation of the lowest upstream and downstream toe;
 3. the profile of the top of the dam and the dam's structural height;
 4. the maximum and normal storage elevation, hydraulic heights and freeboard and storage capacity associated with each elevation;
 5. the surface area of the impoundment;
 6. the top and bottom width of the dam;
 7. the elevation of the crest, type, width or diameter; length and location of spillways and the number, size and type of gates if the structure is controlled;
 8. the type, location, entrance and exit inverts of outlet works, and emergency drawdown facilities;
 9. the location, crest elevation, and description of the invert, sides, and length of limited service and emergency spillways;
 10. the location and description of flashboards and fuse plugs, including hydraulic head (pool elevation) and other conditions required for breaching along with the assumed results of breaching;
 11. the type, location, observations and records of hydrometeorological gauges appurtenant to the project;
 12. the maximum non-damaging discharge causing only negligible damage at potential damage locations downstream;
 13. the location and description of any proposed or existing instrumentation including, but not limited to, observation wells, piezometers, settlement devices, seepage outlets and weirs; and
 14. the location, elevation and description of areas affected by reservoir fluctuation.

- (c) Design and safety evaluation reports, including:

1. a hydrological analysis of the new or existing dam, reservoir, drainage basin system including computation of the basin P.M.P. or the design storm event, average watershed slope, watershed area, hydrologic soil groups, land use of impoundment watershed, reservoir inflow hydrograph, spillway and exit water-surface profiles, flow rate, expected frequency of emergency spillway use and minimum freeboard;
2. analysis and/or evaluation of the new or existing dam that indicates that the dam will be stable during construction (new dams), filling (new dams) and under all conditions of reservoir operations including assumed material properties and all pertinent applied loads;
3. evaluation of seepage and measures taken to control seepage through the embankment, foundation, and abutments so that no internal erosion will take place and that there will be no significant sloughing in the area where the seepage emerges;
4. evaluation of the geology of the site and foundation including any boring logs or laboratory testing with engineering conclusions, foundation data, geological maps, profiles and cross sections, foundation treatment, and any relevant seismic information;
5. evaluation of materials in the foundation and embankment including results of any laboratory tests, field permeability tests, construction control tests, and assumed design or evaluation properties of materials;
6. the properties of concrete including source or proposed source of aggregate, mix design, type of cement and additives, and the result of testing during construction;
7. evaluation or design of cover (vegetation, masonry, or riprap) to protect the upstream slope, crest, and downstream slope of the dam and abutments against erosion from wind, waves and runoff;
8. the proposed water control plan, including the regulation plan under normal conditions and during flood or other emergency conditions;
9. analysis of the anticipated time required to completely drain the flood control zone and normal pool;
10. the electric and mechanical equipment types and rating of normal and emergency power supplies, hoists, cranes, valves and valve operators, control and alarm systems, and other electrical and mechanical equipment systems that could affect the safe operation of the dam;

11. the spillway and tailwater rating curve below the dam site, including the elevation corresponding to the maximum design flood discharge and approximate nondamaging channel capacity; and
12. evaluation and/or analysis of settlement estimates and steps adopted to compensate for total settlement and to minimize differential settlements;

(d) Other data requirements for new and existing dams:

1. New Dams:

- (i) the proposed method of construction and quality control provisions for the project, including the responsibilities of the applicant, the design engineer, the builder, and the prescribed order of the work;
- (ii) the proposed dam construction schedule and filling schedule for the reservoir;
- (iii) the proposed inspection and maintenance plan;
- (iv) the proposed instrumentation and monitoring plan including the filling surveillance plan;
- (v) the estimated life of the dam and reservoir; and
- (vi) any other pertinent data as may be required by the Director;

2. Existing dams:

- (i) detailed description of the condition of the dam and appurtenant works resulting from a detailed visual inspection, including a description of any signs of structural deterioration and seepage such as, but not limited to, surface cracks, settlement, structural condition of any conduits through the dam, and erosion;
- (ii) the year of construction, and the date and description of any modifications or repairs to the dam;
- (iii) the construction history of the dam, including the diversion scheme, construction sequence, pertinent construction problems, alterations, modifications, and major maintenance repairs;
- (iv) a summary of past major flood events or previous failures or known deficiencies of the dam, including any experiences that presented a threat to the safety of the project or to human life and any action taken to correct or eliminate such hazards;

- (v) the records of performance observations, including instrumentation records;
- (vi) the inspection history of the dam, including the results of the last safety inspection, the organization that performed the inspection, and the date the inspection was performed; and
- (vii) Any other pertinent information as may be required by the Director.

Amended: F. Oct. 5, 1998; eff. Oct. 25, 1998.

Amended: Title changed from "Permits for the Construction and/or Operation of New and Existing Dams. Amended" (as recorded in the Official Compilation, eff. Oct. 25, 1998) to "Permits for the Construction and/or Operation of New and Existing Dams." F. Sep. 13, 2016; eff. Oct. 3, 2016.

Rule 391-3-8-.09. Standards for the Design and Evaluation of Dams.

- (1) The design and/or evaluation of new and existing dams shall conform to accepted practices of the engineering profession and dam safety industry. Design manuals, evaluation guidelines, and procedures used by the following agencies can be considered as acceptable design or evaluation references, except as those references differ from Georgia Law and these regulations:
 - (a) U.S. Army Corps of Engineers;
 - (b) Natural Resources Conservation Service;
 - (c) U.S. Department of Interior, Bureau of Reclamation;
 - (d) Federal Energy Regulatory Commission.
- (2) Other design and evaluation methods may be used to demonstrate compliance with the objectives of these rules, but are subject to the approval of the Director.

- (3) Design and Evaluation of Dams under paragraph (1) and (2) above shall, as a minimum, consider the following basic principles:
- (a) All dams must be stable under all conditions of construction and/or operation of the impoundment. Details of stability evaluation shall be submitted to the Director for approval. Analyses using the methods, guidelines and procedures of the agencies listed in paragraph (1) yielding the following Minimum Safety Factors can be considered as acceptable stability:
 - 1. Earthen Embankments
 - (i) End of Construction: 1.3
 - (ii) Steady State Seepage: 1.5
 - (iii) Steady State Seepage with Seismic Loading: 1.1
 - (iv) Rapid Drawdown (Upstream): 1.3
 - (v) Submerged Toe with Rapid Drawdown: 1.3
 - 2. Concrete Structures (cohesion included)
 - (i) Normal Reservoir: 3.0
 - (ii) Normal Reservoir with Seismic Loading: 1.0
 - (iii) Design Flood: 2.0
 - (b) Details of the engineering evaluation of material properties in the dam or appurtenant structures shall be submitted to the Director for review and approval. Conservative selections for soil strength values shall be used for analyses or evaluations. Details of any foundation investigation and laboratory testing supporting assumed design or evaluation parameters shall be included for review.
 - (c) All dams and appurtenant structures shall be capable of withstanding seismic accelerations defined in the most current "Map for Peak Acceleration with a 2% exceedance in 50 years" for the contiguous United States published by the United States Geological Survey (NEHRP maps). The minimum seismic acceleration shall be .050 g. The seismic accelerations may be reduced or seismic evaluation eliminated if the applicant's engineer can successfully demonstrate to the Director by engineering analyses or judgment that smaller seismic accelerations are appropriate or no seismic evaluation is needed.
 - (d) All dams shall have a means of draining the reservoir to a safe level as demonstrated by the applicant's engineer. The submittal by the applicant's engineer shall include the computation of the maximum time required to drain the

reservoir. Exceptions to this rule may be given by the Director based on an engineering evaluation demonstrating the lack of this capability would not endanger the public.

- (e) All earthen embankments shall be protected from surface erosion by appropriate vegetation, or some other type of protective surface such as riprap or paving, and shall be maintained in a safe condition. Examples of appropriate vegetation include, but are not limited to, Bermuda, Tall Fescue, Centipede grasses and Lespedeza sericea. Inappropriate vegetation on existing dams such as trees shall be removed only after consultation with the Division or other qualified persons on the proper procedures for removal. Hedges and small shrubs may be allowed on existing dams if they do not obscure inspection or interfere with the operation and maintenance of the dam.
- (f) Design Storm. Each dam shall be capable of safely passing the fraction of the flood developed from the PMP hydrograph depending on the subclassification of the dam. The design storm for each subclassification of a dam is as follows:
 - 1. Small Dam: 25 percent PMP
 - 2. Medium Dam: 33.3 percent PMP
 - 3. Large Dam: 50 percent PMP
 - 4. Very Large Dam: 100 percent PMP
 - 5. Based on visual inspection and detailed hydrologic and hydraulic evaluation, including documentation of completed design and construction procedures, up to a 10 percent lower design storm requirement (22.5, 30, 45, or 90 percent) may be accepted on existing Public Law 566 (PL-566), including Resource Conservation & Development structures, and Public Law 534 (PL-534) Project Dams at the discretion of the Director, provided the project is in an acceptable state of maintenance. The design storm requirement may be reduced on existing dams if the applicant's engineer can successfully demonstrate to the Director, by engineering analysis, that the dam is sufficient to protect against probable loss of human life downstream at a lesser design storm. Earthen emergency spillways shall not function until the 50 year storm.
- (g) Seepage Control. All dams shall be able to prevent the development of instability due to excessive seepage forces, uplift forces, or loss of materials in the embankment, abutments, spillway areas, or foundation. For new dams, seepage analysis for design, and inspection during construction, shall be in sufficient detail to prevent the occurrence of critical seepage gradients.

1. For new dams, the design shall include a seepage control method that meets the minimum acceptable safety standards, as determined by the Division. All internal drainage systems with pipe collection systems shall have cleanouts.
 2. In existing dams, seepage shall be investigated by an engineer and appropriate control measures shall be taken as necessary.
- (h) Monitoring Devices.
1. Monitoring devices, including but not limited to piezometers, settlement plates, telltale stakes, seepage outlets and weirs, and permanent bench marks may be required by the Director for use in the inspection and monitoring of the safety of a dam during operation.
 2. Where appropriate for new or existing dams, a reservoir filling monitoring and surveillance plan to be implemented during reservoir filling or re-filling shall be submitted to the Director for approval prior to start of filling or re-filling.
- (i) Design Life. The design life for new dams and reservoirs shall be adequate for the dams and reservoirs to perform effectively as planned, as determined by the following criteria:
1. The time required to fill the reservoir with sediment from the contributing watershed; and
 2. The durability of appurtenances and materials used to construct the dams.
- (j) Freeboard. Appropriate freeboard for wave action shall be considered by an engineer through engineering analysis. The required freeboard shall be provided above the maximum reservoir surface elevation that would result from the inflow from the design storm for the structure. The resulting maximum reservoir surface elevation plus freeboard shall determine the elevation of the top of the dam. In lieu of determining the appropriate amount of freeboard by engineering analysis, a minimum of three (3) feet of freeboard shall be provided on earthen dams.
- (k) Existing concrete and/or masonry dams and appurtenant structures shall be structurally sound and shall have joints free of trees and other vegetation and shall show no signs of significant structural deterioration such as excessive cracks, spalling, efflorescence and exposed reinforcing steel.
- (4) Other design standards may be imposed as deemed appropriate by the Director after review of design of new structures or through a visual inspection of an existing structure

conducted pursuant to Rule [391-3-8-.08\(2\)\(b\)](#) of these regulations, or based on a review of the detailed engineering study prepared by an engineer.

Rule 391-3-8-.10. Inspection and Maintenance Plan Requirements.

- (1) Dam Owners and operators of dams shall be responsible for conducting routine inspection and maintenance of dams necessary to:
 - (a) Prevent the growth of trees or brush on the embankment of the dam and on the spillway system;
 - (b) Prevent the accumulation of debris, obstructions, or other deleterious materials from the spillway system;
 - (c) Insure that all gates, orifices, dissipators, trash racks, and other appurtenances that affect the proper operation of the dam and reservoir are kept in good repair and working order, and that spillway and outlet gates necessary to pass flood flows shall be test operated at least once each year. The dam owner shall file an affidavit with the Director certifying that such gates and other appurtenances are in good repair and working order;
 - (d) Maintain adequate and suitable vegetation to prevent erosion of the embankment and earthen spillway for the dam;
 - (e) Determine that any seepage on the downstream slopes of the dam does not exceed normal amounts and does not present a situation indicative of potential dam failure. At any time where there is a question regarding seepage and potential dam failure, the Director shall be notified in writing and provided a description of the situation; and

- (f) Dam owners shall immediately notify the Division when symptoms of failure, including but not limited to, erosion, surface cracks, seepage, settlement, or movement occur.
- (2) As part of the routine inspection and maintenance program described in Rule 391-3-8-.10(1), and in addition to any specific inspection and maintenance program requirements included in the permit, dam owners and operators shall ensure their dam is inspected, and reports are submitted to the Division, based upon the following schedule:
- (a) The dam owner shall inspect the dam each calendar quarter. This inspection may be conducted by the dam owner or the dam owner may hire someone to do the inspection on their behalf. This inspection is not required to be conducted by an engineer. Calendar quarters are January 1 through March 31, April 1 through June 30, July 1 through September 30, and October 1 through December 31;
 - (b) Except as provided in paragraph (c) below, the dam owner shall have the dam inspected by an engineer at least every two years. This inspection shall be conducted between October 1 and March 31, commencing with October 1, 2017. This inspection shall satisfy the inspection requirement in paragraph (a) above for the October 1 through December 31 and January 1 through March 31 quarterly inspections;
 - (c) For any dam that is less than 50 feet tall and that the dam owner has conducted at least four consecutive quarterly inspections in accordance with paragraph (a) above, the owner may submit to the Division a waiver request by October 1 for one two-year cycle of the engineer inspection required under paragraph (b). The waiver request shall be approved unless the Division denies the request in writing within 30 days of receipt of the waiver request. Reasons to deny the waiver request include, but are not limited to, inspection reports showing deficiencies that have not yet been corrected or Division enforcement actions within the past twenty-four months;
 - (d) For the purpose of Rule 391-3-8-.10(2), the term "engineer" shall have the same meaning as defined in Rule [391-3-8-.02\(m\)](#), and may also include any professional engineer registered by the State of Georgia.
 - (e) As stated in Rule 391-3-8-.10(1)(f), dam owners shall immediately notify the Division when symptoms of failure are observed. Otherwise, dam owners shall submit the inspection reports to the Division using the Division approved form by April 30 for all inspections conducted between April 1 of the preceding calendar year and March 31 of the current calendar year.

Subject 391-3-9. RADIOACTIVE WASTE MATERIAL DISPOSAL.

Rule 391-3-9-01. Authority.

These Rules and Regulations governing the disposal, concentration and storage of radioactive waste material are adopted pursuant to the Georgia Radioactive Control Act, as amended, i.e., Ga. Laws 1964, p. 566, as amended, particularly as amended by Ga. Laws 1976, p. 1567 *et seq.*, at p. 1570 all as amended (hereafter the "Act").

Authority: Ga. L. 1964, p. 566 as amended particularly as amended by Ga. L. 1976, p. 1567 *et seq.*, at p. 1570, as amended.

History. Original Rule entitled "Authority" was filed on June 14, 1979; effective July 4, 1979.

Rule 391-3-9-02. Declaration of Policy.

The Georgia Radiation Control Act, declares the policy of the Act to be, in part, to prevent any associated harmful effects of radiation upon the environment or the health and safety of the public through the institution and maintenance of a regulatory program for radioactive material waste sources. The policy is further declared to be, in part, to institute and maintain a program to allow development and utilization of sources of radiation for purposes that are consistent with the protection of the environment and health and safety of the public. These rules and regulations are in furtherance of the policy of the Act.

History. Original Rule entitled "Declaration of Policy" was filed on June 14, 1979; effective July 4, 1979.

Rule 391-3-9-03. Definitions.

All terms used in these rules or regulations shall be interpreted in accordance with the definitions set forth in the "Georgia Radiation Control Act" as amended, or as herein defined:

- (a) "Director" means the Director of the Division of the Environmental Protection Division of the Department of Natural Resources of the State of Georgia.
- (b) "Division" means the Environmental Protection Division of the Department of Natural Resources of the State of Georgia.
- (c) "Facility" or "Site" means a radioactive waste material burial, storage, or concentration facility.
- (d) "Site of Facility Boundary" means the boundary of that area surrounding a burial, storage, or concentration facility in which the permittee must have the authority to control all activities including exclusion or removal of personnel or property.
- (e) "Financial Protection" means the ability to respond in money damages for public liability for damage to property or person, and to meet the cost of investigating and defending claims and settling suits for such damages.
- (f) "Georgia Radiation Control Act" or "Act" whenever referred to in these Rule and Regulations means Ga. Laws 1964, p. 499, p. 566, as amended, particularly as amended by Ga. Laws 1976, pp. 1567, 1570, all as amended.
- (g) "Person" means the State or any agency or institution thereof, any municipality, political subdivision, public or private corporation, individual, partnership, association, or any other entity, including any agency, department, or subagency or entity of the Federal Government, and includes any officer or governing or managing body of any municipality, political subdivision, or public or private corporation.
- (h) "Burial Facility" means a structure, facility, or site where radioactive waste materials are permanently disposed of by implacement below the surface of the ground in a manner which indicates that removal or retrieval is not contemplated.
- (i) "Concentration Facility" means a structure, facility, or site where radioactive waste materials are consolidated in such a manner that the volume, radioactivity per unit volume (or weight), physical form, or chemical content may be or is intended to be altered. Generally excluded are systems, components or operation at NRC or state licensed facilities which result in concentration of processed material where such concentration is a routine part of a licensed activity or licensed operation and not a disposal operation. Specifically excluded are systems at nuclear power generating stations and research reactors such as radwaste, spent fuel pool cleanup, reactor water cleanup, steam generator blowdown treatment, or similar auxiliary systems.
- (j) "Storage Facility" means a structure, facility, or site where radioactive waste materials are held or disposed of in a manner which indicates that removal or retrieval is contemplated and does not include burial facilities. Generally excluded are licensed or nonwaste

materials which are temporarily stored while awaiting further processing or operations where such storage is not a waste disposal activity. Specifically excluded are:

- (i) any radioactive wastes generated in the State of Georgia which are stored for a period of not more than one year at an NRC or state licensed facility where such stored wastes are awaiting transfer to an authorized or licensed disposal facility, and (ii) any operating nuclear power electric generating station and operating nuclear test and research reactor spent fuel and new fuel storage facilities, where such fuel at said has been or is awaiting utilization in the State of Georgia.

- (k) "Radioactive Waste Material" means any solid, liquid, or gas that emits ionizing radiation spontaneously (and includes not only by-product, source and special nuclear materials, but all other naturally-occurring or artificially produced radioactive material in whatever physical or chemical state or form) which is, by the nature of its form, content, or radiation characteristics, either not subject to constructive utilization, or which has no immediate or foreseeable use. Excluded from this definition are naturally-occurring radioactive waste material which are also hazardous wastes and which are regulated under authority of the Georgia Hazardous Waste Management Act.

- (l) "Low-Level Radioactive Waste Material" means radioactive waste which does not exceed the limits specified in Title 10, Code of Federal Regulations, Part 20, Subpart 304 (a), as revised January 1, 1976.

- (m) "Other Than Low-Level Radioactive Waste Material" means any radioactive waste in excess of the limits specified in Title 10, Code of Federal Regulations, Part 20, Subpart 304(a), as revised January 1, 1976.

Authority: Ga. L. 1964, p. 566, as amended by particularly as amended by Ga. L. 1976, p. *et seq.*, at p. 1570, as amended. O.C.G.A. Secs. 31-31-2 thru 31-31-15, as amended.

History: Original Rule entitled "Definitions" was filed on June 14, 1979; effective July 4, 1979.

Amended: Filed July 6, 1984; effective July 24, 1984.

Rule 391-3-9-.04. Findings of the Director.

The Act provides that all facilities or sites for the concentration, storage or burial of radioactive waste must be constructed and operate pursuant to a permit issued by the Director of the Environmental Protection Division. It further provides that the Director may specify in the permit the conditions under which site or facility shall be operated. The Director, upon full consideration of the facts, including but not limited to storage, burial or concentration technology, geologic, hydrologic, environmental, ecological, meteorological factors, and the known impact of ionizing radiation from radioactive sources upon man and other fauna and flora, finds that:

- (a) No demonstrated technology exists relevant to long term (100 years) or terminal disposal of high-level wastes involving actual emplacement in either deep geologic repositories or surface facilities.
- (b) As of the effective date of these regulations there exists no tired or proven regulatory programs, which includes licensing, standards development, and inspection and enforcement, that is applicable to terminal disposal of high-level waste in geologic repositories.
- (c) The adequacy of current interim (100 years) high-level storage systems to protect the health and safety of the public and the environment is questionable.
- (d) Questions remain unanswered regarding the final chemical and physical form for high-level wastes emplaced in geologic repositories.
- (e) Currently, no approved transport cask exists for shipment of high-level wastes.
- (f) Several commercial radioactive waste disposal operations have ceased operations due in part to either moritoria or legal action regarding potential safety and environmental problems.

Cite as Ga. Comp. R. & Regs. R. 391-3-9-.04

Authority: Ga. L. 1964, p. 566, as amended, particularly as amended by Ga. L. 1976, p. 1567, *et seq.*, at p. 1570, as amended.

History. Original Rule entitled "Findings of the Director" was filed on June 14, 1979; effective July 4, 1979.

Rule 391-3-9-.05. Waste Disposal Moratorium.

- (1) Based upon the public policy of the Act, an evaluation of the current technology relevant to the disposal of "other than low-level radioactive waste material," considering past operating experiences at radioactive waste storage and burial facilities, and in view of the previous lack effective radioactive waste management policies and programs at the federal level and upon the above findings of the Director, it is the policy of the Director, subject to the provisions of Section (2) and (3) hereof, to recognize a moratorium on the permitting for construction or operation of certain facilities for the disposal of "other than low-level radioactive waste material." The said moratorium shall be applicable to those commercially operated, government operated, or government-contract operated facilities used for the purpose of storage, concentration, and burial of all radioactive waste except that in certain limited cases as may be determined by the Director, disposal of low-level radioactive wastes by burial will be permitted in accordance with the requirements in Section .06 below, provided that the total quantity of material buried in any year does not exceed the limits specified in Title 10 Code of Federal Regulations. Part 20, Subpart 304, dated January 1, 1976.

- (2) Within 90 days of the effective date of these regulations, all existing radioactive waste material storage, concentration, and burial facilities not subject to the moratorium must submit an application for an operating permit to the Director. Included in the permit process are decommissioned NRC and State licensed radioactive material process facilities involving a decommissioning option where radiologically contaminated equipment and facilities are not dismantled and removed from the site to an authorized disposal facility, but remains in place in a deactivated state.
- (3) Demonstration of Technology. Notwithstanding the findings of the Director contained in Rule (.04) above, and notwithstanding the policy of the Director as contained in Section (1) of this Rule (.05) any person may petition the Director for a reconsideration of the policy for operating "other than low-level radioactive waste material" disposal facilities within this State, and upon a demonstration by the petitioner to the satisfaction of the Director, that the findings of the Director concerning the non-availability of technology for the burial, storage, or concentration, of "other than low-level radioactive waste material" are no longer accurate and upon a demonstration of such technology, the Director will propose an amendment to Section (1) in accordance with the Georgia Administrative Procedure Act (Title 3A) and the Georgia Radiation Control Act.

Authority: Ga. L. 1964, p. 566, as amended, particularly as amended by Ga. L. 1976, p. 1567, et. seq., at p. 1570, as amended.

History. Original Rule entitled "Waste Disposal Moratorium" was filed on June 14, 1979; effective July 4, 1979.

Rule 391-3-9-.06. Radioactive Waste, Permit Requirements.

- (1) General.
 - (a) Activities Requiring Permit. No person shall construct or operate a facility for the concentration, storage or burial of radioactive waste materials without first obtaining a permit for such construction or operation from the Director authorizing such activity.
 - (b) Restriction and Conditions. Any permit issued shall specify the conditions under which the facility shall be constructed or operated. The Director may limit or restrict the type and quantity of radioactive waste material to be received or possessed by a concentration, storage, or burial facility if the Director determines that permitting receipt, possession or other activities involving such type and/or quantity of radioactive waste material would be inconsistent with the purposes and stated policy of the Act. The Director may also limit or restrict the receipt and/or possession of various types of radioactive waste materials at a concentration, storage, or burial facility, if such material exhibits additional hazard potential such as, but not limited to, explosive properties, pyrophoricity, or chemical toxicity.

- (c) Applicable Non-Radiological Rules and Regulations. If other rules, regulations, or requirements enforced by the Division pertaining to Solid Waste Management under Ga. Code Chapter 43-16, as amended, Air Quality Control under "The Georgia Air Quality Act of 1978," Ga. Code Chapter 43-27, as amended; and Water Quality Control under Ga. Code Chapter 17-5, as amended, apply, such requirements may be incorporated as conditions in the permit required by this Rule (.06) in lieu of issuing separated permits under those authorities. If such requirements are incorporated in a permit under this rule then such permit shall also be considered as a permit issued under those authorities with respect to requirements so incorporated.
- (d) Public Hearing. The Director shall issue a notice of public hearing and shall conduct a public hearing on any application for a permit pursuant to these rules and regulations.
- (e) Prohibitions. Activities unrelated to the operation or construction of a facility shall not be allowed within the site boundary of said facility.

(2) Bonding and Financial Protection.

- (a) Permittee shall post a surety bond payable to the State and shall have and maintain financial protection to cover possible public liability in amounts to be determined by the Director, based on such factors as, but not limited to, type of facility, proposed operations, location, proposed engineered control features, plans for eventual decommissioning or perpetual custody, the nature, amount and conditions of the radioactive waste material, and the degree of risk to the environment and public health and safety.
- (b) Failure to comply with any permit requirements or conditions may result in forfeiture (by order of the Director) of all or part of the surety bond posted as is reasonable and appropriate to adequately protect the environment and public health and safety, or to reimburse or compensate the State for any necessary action it may be required to take to effectively protect the same.
- (c) The Director is hereby authorized to take such action as may be reasonably necessary (including but not limited to, seeking injunctive or mandamus relief in Superior Court, or requesting the Governor to activate civil defense measures) to insure the adequate protection of the environment and the health and safety of the public, should the Director find that, the permittee is violating any permit condition and is thereby creating a substantial risk of public harm and has failed or refused to take reasonable corrective action to avoid such risk within a reasonable time.
- (d) Any order of the Director hereunder declaring bond forfeited shall be subject to review as provided in Section 17(a) of the executive Reorganization Act of 1972, Ga. Laws 1972, p. 1015, et. seq., as amended.

- (e) Agencies or instrumentalities of the State shall not be subject to the bonding or financial protection requirement of this rule (.06)

(3) Permit.

- (3) Permit Application. Applications for a permit to construct or operator a facility for the concentration, storage or burial of radioactive waste material shall be on forms as may be prescribed from time to time by the Director. Each application shall be supported and accompanied by documentation containing the following information:

1. Administrative Information:

- (i) The full name, address, and citizenship of the applicant. If the applicant is a corporation or other entity indicate the State where it was incorporated or organized and the location of the principal offices and the citizenship of the principal officers.
- (ii) Principal business or occupation of the applicant.
- (iii) Financial information or statements of sufficient detail to demonstrate to the Director the financial capability of the applicant to carry out the activity for which a permit is sought including decommissioning if ever required.
- (iv) A detail statement of the proposed activity for which the permit is requested.
- (v) The identity and mailing address of adjacent property owners. Such information may be used by the Director for the purpose of notifying the identified property owner of the proposed activity and date, time, and place of public hearing.
- (vi) Additional administrative information as shall be required by the Director to properly evaluate the proposed activity.

2. Technical Information:

- (i) The type, quantities, and form of low-level radioactive waste material to be concentrated, stored or buried.
- (ii) The technical qualifications, including experience and training, of the applicant and principal staff members to be engaged in the proposed activity.
- (iii) A detailed description of the proposed facility with special emphasis placed on operating characteristics.

- (iv) A detailed safety analysis of the facility and site on which the facility will be located.
- (v) A discussion of relevant system design considerations including design criteria, basis for selection of design criteria and equipment specifications.
- (vi) Information sufficient for the Director to determine that construction, fabrication, installation, testing or inspection of system and system components will be conducted in a manner consistent with protection of the public health, safety, and welfare.
- (vii) A detailed plan discussing the proposed radiological monitoring program at the facility and in the environs about the facility.
- (viii) Additional technical information as shall be required by the Director to evaluate the proposed activity.

3. Environmental Information:

- (i) A description of the site to include site locations, area occupied by the site, specification and character of the site boundaries and location of any adjacent residential, industrial or recreational sites.
- (ii) A discussion of the present and projected land and water use in the vicinity of the site.
- (iii) An ecological survey report sufficient to describe the fauna and flora in the vicinity of the site to include habitats and distributions.
- (iv) A discussion of features/areas valued for their natural, cultural, scenic, architectural, historical and archeological significance which may be affected by the proposed activity.
- (v) A discussion with supporting data of the geologic and seismic aspects of the site. The discussion shall include, but not limited to, such aspects as regional and site geology, seismicity, tectonic activity, surface faulting and stability of subsurface materials and foundations.
- (vi) A meteorological description of the site and surrounding area. The description shall contain sufficient information to permit an independent evaluation of the atmospheric diffusion characteristics of the site.
- (vii) A detailed description of the physical, chemical, biological, and hydrological characteristics, seasonal variation and historical ranges for surface and groundwater bodies in the vicinity of the site.

- (viii) An assessment of the radiological impact on man and other local fauna and flora resulting from direct radiation and the release of radioactive material from the facility.
- (ix) Additional environmental information as shall be required by the Director to properly evaluate the proposed activity.

(b) Permit Approval.

1. Construction Permit: The Director may issue a permit for the construction of a facility for the concentration, storage, or burial of low-level radioactive waste material provided that following a review and evaluation of the application for the proposed facility it is determined by the Director that the requirements of the Georgia Radiation Control Act, these rules and regulations and any other applicable rules and regulations enforced by the Division are met.
2. Operating Permit: Upon completion of the work for which a construction permit was issued, the Director may issue a permit for the operation of such facility provided that following post-construction review evaluation, and/or inspection by the Division staff, it is determined by the Director that the requirements of the Georgia Radiation Control Act, these rules and regulations and any other applicable rules and regulations enforced by the Division are met and that operation of the facility is consistent with protection of the public health, safety and welfare.
3. Permit Expiration, Renewal, Amendment: Any construction permit shall be terminated after 180 calendar days from the date of issuance if substantial construction operations have not been initiated. All operating permits issued shall be effective for a period not to exceed one year. Applications for permit renewal shall be submitted not later than 90 calendar days prior to the permit expiration date. A permittee may apply for permit amendment. Any application for a permit amendment shall be made in writing and shall identify those facets of the permit which the permittee desires amending and shall contain the basis for such request. The permittee shall not proceed with any actions described in the application without prior written approval of the Director.
4. Right of Permit Transfer: No permit issued pursuant to these rules and regulations shall be transferred, assigned or in any

manner disposed of either voluntarily or involuntarily, directly or indirectly.

(4) Operations.

- (a) Operation and Management. Operation and management of any concentration, storage, or burial facility shall be under the direct supervision and control of individuals qualified in such operation and management by training, education, and experience. Personnel engaged in the management and operation of the proposed facility shall possess qualifications equivalent to those prescribed in the American National Standards Institute document, ANSI NI8.1-1971, Selection and training of Nuclear Power Plant Personnel, except that the minimum education and experience requirements prescribed in ANSI NI8.1-1971 shall be applicable to facilities similar to the facility for which a permit is sought instead of a nuclear power plant.
- (b) Records and Reports. Each permittee shall maintain such records and make such reports, in connection with the permitted activity, as may be required by the Director or by the permit conditions.
- (c) Notification of incidents. Each permittee shall immediately notify the Director of any incident involving radioactive waste material possessed by him which may have caused or threatens to cause any of the following:
 - 1. Exposure of the whole body of any individual situated at or within the site boundary to 1.25 rems or more of radiation; exposure of the skin of the whole body of any individual to 7.5 rems or more of radiation; or exposure of the feet, ankles, hands and forearms of any individual to 18 rems or more of radiation.
 - 2. Exposure of the whole body of any individual situated outside the site boundary to levels of radiation in excess of ten percent (10%) of the levels specified in (1) above.
 - 3. The release of radioactive materials (s) in concentrations which would result in an exposure to any internal organ of any individual situated at or within the site boundary to an annual average radiation dose of 15 rems or more.
 - 4. The release of radioactive material(s) in concentrations which would result in an exposure to any internal organ of an individual situated outside the site boundary to an annual average radiation dose in exceeds of ten percent (10%) of the levels specified in (3) above.

5. A lost-time to any employee.
 6. A loss of two or more days of the operation of any facility affected.
 7. Damage to property in excess of \$1000.
- (d) Control of Radiation and Radioactive Waste Material. All activities necessary for the operation of the facility for the concentration, storage, and burial of low-level radioactive waste material shall be conducted in such a manner as to maintain radiation exposures to individuals and releases of radioactive material in both liquid effluents and airbourne emissions as low as reasonably achievable. From time to time, the Director shall issue numerical guidelines, for use as design objectives and limiting conditions for operation, to meet the as low as reasonably achievable criterion.
- (e) Cessation of Operation, Decommissioning, Perpetual Custody. Upon permit termination or cessation of routine concentration, storage, or burial operations, the permittee shall be solely responsible for such activities as decommissioning, dismantling, perpetual custody, perpetual maintenance, and all related activities. A permittee considering such actions as voluntary cessation of routine operations, facility dismantling, decommissioning or activities related thereunto shall submit a written request to the Director describing the proposed action. Such notice shall be submitted at least 180 calendar days prior to the date on which the proposed actions are requested to become effective. The permittee shall not proceed with any actions described in the written request without the prior written approval of the Director. Bonds posted by the permittee shall be held, and public liability insurance shall continue until satisfactory action actions are taken to assure continued protection of the public health and safety and the environment. Bonds or parts thereof, may be subject to forfeiture as provided in Section (2) of this Rule (.06). Upon satisfactory termination of all activities the permittee may have hid bonding obligation ended.
- (5) Inspection, Investigations and Tests.
- (a) Inspections and Investigations. Each permittee shall afford to the Director, or his duly authorized representative(s), at all reasonable times the opportunity to investigate within the site boundaries any activities related to a facility for which a permit is issued or pending issuance, and to inspect radioactive material and related facilities for which a permit is issued or pending issuance.
- (b) Tests. Each permittee shall perform or upon request of the Director allow the Director, or his duly authorized representatives(s) to perform, such test, monitoring, and evaluations as the Director deems necessary for the administration of these rules and regulations, and for the protection of the public health, safety and welfare.

- (6) Enforcement. The administration and enforcement of these rules and regulations shall be in accordance with the Georgia Radiation Control Act and Section 17(a) of the Executive Reorganization Act of 1972, as amended.

Subject 391-3-11. HAZARDOUS WASTE MANAGEMENT.

Rule 391-3-11-.01. General Provisions.

- (1) Purpose - The purpose of these rules is to establish policies, procedures, requirements, and standards to implement the Georgia Hazardous Waste Management Act, O.C.G.A. [12-8-60](#), *et seq.* These rules are promulgated for the purpose of protecting and enhancing the quality of Georgia's environment and protecting the public health, safety and wellbeing of its citizens.
- (2) Any reference in these rules to standards, procedures, and requirements of Title 40 of the Code of Federal Regulations (40 C.F.R.) Parts 124, 260-266, 268, 270, 273 and 279 shall constitute the full adoption by reference of the Part, Subpart, and Paragraph of the Federal Regulations so referenced including any notes and appendices as may be associated as amended through December 9, 2019, unless otherwise stated. Provided, however, nothing in 40 C.F.R. Parts 124, 260-266, 268, 270, 273 and 279, as pertains to any exclusion for carbon dioxide streams in geologic sequestration activities, or standardized permits (including all references to 40 C.F.R. Part 267, Part 270 Subpart J, Part 124 Subpart G), the May 2018 Response to Vacatur of Certain Provisions of the Definition of Solid Waste, or enforceable documents as defined in 270.1(c)(7), is adopted or included by reference herein.
 - (a) The text of the federal regulations incorporated by reference includes references to "RCRA", the "Resource Conservation and Recovery Act", "Subtitle C of RCRA",

"the Act", and other general references that refer to the federal hazardous waste program as a whole. Unless otherwise noted, these references shall be construed to refer to the Georgia Hazardous Waste Management Act, O.C.G.A. [12-8-60](#), et seq. and the Georgia hazardous waste management program. References to "RCRA permits" or "RCRA Part B permits" shall refer to permits issued by the Environmental Protection Agency, the State of Georgia, or another authorized state. References to specific sections of RCRA shall refer to both the federal provisions of RCRA to be implemented by the Environmental Protection Agency, as well as analogous provisions of the Georgia Hazardous Waste Management Act, O.C.G.A. [12-8-60](#) et seq., to be implemented by the Georgia Environmental Protection Division. References to other federal statutes and regulations contained in the text of the federal regulations incorporated by reference that are not specifically adopted by reference, including, but not limited to, references to the Clean Water Act, the Clean Air Act, and the Safe Drinking Water Act, shall be used to assist in interpreting the federal regulations, and the authority and power of the analogous or related portions of the Georgia statutes and regulations shall also be considered to apply.

- (b) When used in any provisions as may be adopted from 40 C.F.R. Parts 124, 260-266, 268, 270, 273, and 279, references to RCRA "Subtitle D" and 40 C.F.R. Part 258, including 258.40, shall also be construed to refer to the provisions contained in Sections [391-3-4-.01](#), [391-3-4-.05](#), [391-3-4-.07](#), and [391-3-4-.11](#) through [391-3-4-.14](#) of the Georgia Rules for Solid Waste Management, as amended.
- (c) When used in any such provisions as may be adopted from 40 C.F.R. Parts 124, 260-266, 268, 270, 273, and 279: Environmental Protection Agency or EPA, except in reference to EPA ID numbers, EPA hazardous waste numbers, EPA publications or forms, regulations on international shipments, the electronic manifest system or its associated fee system, or manifest registry functions, pre-transport markings of hazardous waste, or EPA in "EPA or an authorized state" shall mean the Georgia Environmental Protection Division; and Administrator or Regional Administrator, except in reference to regulations on international shipments, shall mean Director of the Environmental Protection Division.
- (d) Any reference to 40 C.F.R. Parts 124, 260-266, 268, 270, 273, and 279 in any provisions adopted by reference shall be construed to refer to the provisions contained in the following sections of these rules:

Federal Regulation Reference	Georgia Rules Reference
40 C.F.R. 260.2(d)	391-3-11-.03(4)
40 C.F.R. 260.3	391-3-11-.01(2)(e)
40 C.F.R. 260.4	391-3-11-.10(3)
40 C.F.R. 260.10-11	391-3-11-.02

40 C.F.R. 260.42	391-3-11-.04
40 C.F.R. Part 264 Subpart H	391-3-11-.05(1)
40 C.F.R. Part 265 Subpart H	391-3-11-.05(2)
40 C.F.R. Part 261 Subpart H	391-3-11-.05(5)
40 C.F.R. Part 260 Subpart C	391-3-11-.07(2)
40 C.F.R. Part 261 Subparts A-E, I-J, M, AA-CC	391-3-11-.07(1)
40 C.F.R. Part 262	391-3-11-.08(1)
40 C.F.R. Part 263	391-3-11-.09
40 C.F.R. Part 264 Subparts A-G, I-O, S, W, X, and AA-EE	391-3-11-.10(2)
40 C.F.R. Part 265 Subparts A-G, I-R, W, and AA-EE	391-3-11-.10(1)
40 C.F.R. Part 266	391-3-11-.19
40 C.F.R. Part 124	391-3-11-.11
40 C.F.R. Part 270	391-3-11-.11
40 C.F.R. Part 268	391-3-11-.16
40 C.F.R. Part 279	391-3-11-.17(1)
40 C.F.R. Part 273	391-3-11-.18

References to EPA forms or reports, except in reference to regulations on international shipments, manifests, or the electronic manifest system, shall mean EPD forms and reports as may be provided by the Director.

- (e) [40 C.F.R. 260.3](#) is hereby incorporated by reference.
- (3) As of July 10, 1992, any facility which failed to qualify for federal interim status for any waste code promulgated pursuant to the Hazardous and Solid Waste Amendments (HSWA) or who lost interim status for failing to certify under HSWA for any newly promulgated waste code, is also denied interim status under State law.

Rule 391-3-11-.03. Confidentiality of Information.

- (1) Any records, reports, or information obtained from any person by the Director under these rules shall be available to the public for inspection and copying at the expense of the person requesting copies, except that upon a showing satisfactory to the Director by any person that any records, reports, or information or any particular part thereof, to which the Director has access under these rules would, if made public, divulge information entitled to protection or confidentiality under law, the Director shall consider such information or any particular portion thereof confidential in accordance with the purposes of the law under which confidentiality or protection is claimed, except that such records, reports, documents, or information may be disclosed to officers, employees or authorized representatives of the United States government concerned with carrying out the terms of the Federal Act, or when required by any court in any proceedings under the Federal Act or under the Georgia Hazardous Waste Management Act.
- (2) Any claim of confidentiality filed pursuant to this section must be asserted at the time of initial submission of the record, report, or information in question, or it shall be deemed waived.
- (3) Any claim of confidentiality filed pursuant to this section must be accompanied by a statement of the legal basis supporting the claim of confidentiality.

Rule 391-3-11-.04. Notification of Hazardous Waste, Hazardous Secondary Material, and Used Oil Activities.

- (1) Every hazardous waste generator, hazardous waste transporter, hazardous waste transfer facility, hazardous secondary material generator, hazardous secondary material transporter, intermediate facility, verified hazardous secondary materials reclamation facility, hazardous secondary material remanufacturer, used oil transporter, used oil transfer facility, used oil processor, and owner or operator of a hazardous waste storage, treatment, or disposal facility shall notify the Division of such activities on forms provided by the Director. Very Small Quantity Generators are not required to notify. The owner or operator of a site that has ceased all regulated activities shall notify the Division that the EPA Identification Number assigned to the site should be deactivated.
- (2) Any person who, on the effective date of these rules or effective date of any subsequent revisions of these rules, is generating or transporting hazardous waste or who owns or operates a hazardous waste storage, treatment, or disposal facility must notify the Division of such activities within 90 days after these rules or revisions to these rules become effective, unless such notification has previously been provided to the Regional Administrator of the Environmental Protection Agency in accordance with 3010 of the Federal Act.
- (3) Any person who, on the effective date of these rules or effective date of any subsequent revisions to these rules, is not generating hazardous waste and who subsequently begins to generate hazardous waste must, within 30 days after commencing such generation, notify the Division of such generation in accordance with subsection (1) above.
- (4) Every hazardous waste transporter, hazardous waste transfer facility, used oil transporter, used oil transfer facility, used oil processor and owner or operator of a hazardous waste storage, treatment, or disposal facility with a physical location in Georgia shall, within 30 days after commencing such activities, notify the Division of such activities in

accordance with subsection (1) above. This notification shall be made to the Division, regardless of any notification to other states or the Environmental Protection Agency.

- (5) [40 C.F.R. 260.42](#) is hereby incorporated by reference.

Rule 391-3-11-.05. Financial Responsibility.

- (1) 40 C.F.R. Part 264 Subpart H is hereby incorporated by reference, except for 264.149, and 264.150.
- (2) 40 C.F.R. Part 265 Subpart H is hereby incorporated by reference, except for 265.149, and 265.150.
- (3) The Director shall require proof of adequate financial responsibility to insure any corrective action required as a condition of a permit issued pursuant to these rules.

- (4) Methods other than those provided for in subsection (1) above may be used to insure financial responsibility if the owner or operator can show that an equivalent degree of protection can be provided concerning human health and the environment.
- (5) 40 C.F.R. Part 261 Subpart H is hereby incorporated by reference, except for 261.149 and 261.150.

Rule 391-3-11-.06. Variances.

A variance shall be granted only if it is consistent with the requirements of the Georgia Hazardous Waste Management Act, as amended, and these rules and consistent with the Federal Act and regulations promulgated thereunder. The Director will evaluate the application for a variance and issue a draft notice tentatively granting or denying the application. Notification of this tentative decision will be provided by newspaper advertisement and radio broadcast in the locality where the applicant is located. The Director will accept comment on the tentative decision for thirty (30) days, and may also hold a public hearing upon request or at his discretion. The Director will issue a final decision after receipt of comments and after the hearing, if any.

[Rule 391-3-11-.11. Hazardous Waste Facility Permits.](#)

- (1) Permits Required: No person shall and it shall be unlawful and a violation of the Georgia Hazardous Waste Management Act to construct, install, operate or substantially alter a

hazardous waste facility without first obtaining and possessing a hazardous waste facility permit from the Director.

- (a) Scope of the RCRA Permit Requirement: [40 C.F.R. 270.1\(c\)](#), except for 270.1(c)(7) and 270.1(c)(2)(ix), is hereby incorporated by reference.
 - (b) [40 C.F.R. 124.1\(a\)](#) is hereby incorporated by reference.
- (2) Interim Status: Any person who owns or operates a facility required to have a permit under subsection (1) above, which facility was in existence on November 19, 1980, or is in existence on the effective date of statutory or regulatory changes pursuant to the Georgia Hazardous Waste Management Act that render the facility subject to the requirement to have a permit pursuant to subsection (1) above, shall be accorded interim status, which means that such person shall be treated as having been issued a permit until such time as final administrative disposition of the person's application has been made, if and to the extent the person:
 - (a) Has notified the Director of the existence of such facility as required pursuant to Rule [391-3-11-.04](#);
 - (b) Has filed an application for a permit as required pursuant to these rules;
 - (c) Furnishes to the Director information reasonably required or requested for processing such application;
 - (d) Does not treat, store, or dispose of hazardous waste not specified in the permit application, nor employ processes not specified in the permit application, nor exceed the design capacity specified in the permit application; and
 - (e) Complies with all standards applicable to interim status facilities set forth in these rules.
- (3) Application for Permit: An application for a Hazardous Waste Facility Permit shall be submitted in such manner and on such forms as the Director may prescribe.
 - (a) Application shall be complete and accurate and accompanied by required plans, data, specifications, engineering reports, design and other information as the Director deems necessary to make a determination of compliance with the Act, applicable standards and requirements and these rules. An application for a permit shall include a demonstration of financial responsibility including but not limited to guarantees, liability insurance, the posting of bonds, or any combination of guarantees, liability insurance, or bonds, in accordance with O.C.G.A. [12-8-68](#) et seq. and [391-3-11-.05](#) of these rules. Applications for permits will be reviewed together with such other information as may be necessary to ascertain the effect upon the environment and the health of humans.

- (b) Specific Procedures Applicable to RCRA Permits: [40 C.F.R. 124.31- 124.33](#) are hereby incorporated by reference, except the following sentences are deleted in section (a) of 124.31, 124.32 and 124.33 "For the purposes of this section only 'hazardous waste management units over which EPA has permit issuance authority' refers to hazardous waste management units for which the State where the units are located has not been authorized to issue RCRA permits pursuant to 40 C.F.R. Part 271. The requirements of this section do not apply to permit modifications under 270.42 or to applications that are submitted for the sole purpose of conducting post-closure activities or post-closure activities and corrective action at a facility."
 - (c) Permit Application and Updating Permit Applications for Existing and New Hazardous Waste Management Facilities: [40 C.F.R. 124.3](#), [270.10](#) and [270.235](#) are hereby incorporated by reference.
 - (d) Signatories to Permit Applications and Reports: [40 C.F.R. 270.11](#) is hereby incorporated by reference.
 - (e) Confidentiality of Information: [40 C.F.R. 270.12\(b\)](#) is hereby incorporated by reference. (f) Interim Status: [40 C.F.R. 270.70- 270.73](#) are hereby incorporated by reference.
 - (f) Interim Status: 40 C.F.R. 270 -.70 - 270.73 are hereby incorporated by reference.
 - (g) Contents of Part A: [40 C.F.R. 270.13](#) is hereby incorporated by reference.
 - (h) Contents of Part B: [40 C.F.R. 270.14- 270.28](#) are hereby incorporated by reference.
- (4) Upon the first receipt of an application for a Hazardous Waste Facility Permit, the Director, within fifteen (15) days, shall provide to the government of the county in which the facility is located or proposed to be located, to each city government located wholly or partially within that county, and to the government of each county and city having territorial boundaries within two miles of the hazardous waste facility or proposed hazardous waste facility a written notice indicating that an application has been received and describing the hazardous waste activities the applicant proposes to conduct. Within a 30 day period after first receipt of such application, the Director shall also publish in at least one local newspaper of general circulation in the county a public notice that an application for a hazardous waste facility permit has been received. A public hearing shall be held if such is requested in writing within thirty (30) days after publication of notification and is requested by twenty-five (25) or more persons who claim to be affected by the pending permit application, by a governmental subdivision, or by an association having no fewer than twenty-five (25) members. If requested, the public hearing shall be conducted at the county seat of the county in which the hazardous waste facility is proposed to be located. At least forty-five (45) days prior to the date of the public hearing, the Director shall provide written notice to the various local governmental

subdivisions and other interested parties in the locality in which the proposed facility may be located that a public hearing has been requested, which written notice shall also include the date, time, location and purpose of the public hearing. The date, time, location and purpose of such public hearing shall be advertised in the legal organ of the county in which the facility is proposed at least forty-five (45) days in advance of the date set for the hearing. Such public hearings shall be held for the purpose of receiving comments and suggestions concerning the location and requirements for the operation of a hazardous waste facility. The Director shall consider fully all written and oral submissions regarding the proposed facility and the pending application.

- (a) Public Notice of Permit Actions and Public Comment Period: [40 C.F.R. 124.10](#) is hereby incorporated by reference.
 - (b) Public Comments and Request for Public Hearings: [40 C.F.R. 124.11](#) is hereby incorporated by reference.
 - (c) Public Hearings: [40 C.F.R. 124.12\(a\)](#) is hereby incorporated by reference.
 - (d) Obligation to Raise Issues During Public Comment: [40 C.F.R. 124.13](#) is hereby incorporated by reference.
 - (e) Reopening of the Public Comment Period: [40 C.F.R. 124.14](#) is hereby incorporated by reference.
 - (f) Issuance and Effective Date of Permit: [40 C.F.R. 124.15](#) is hereby incorporated by reference.
 - (g) Response to Comments: [40 C.F.R. 124.17\(a\)](#) and [124.17\(c\)](#) are hereby incorporated by reference.
 - (h) The owner or operator of any hazardous waste treatment, storage or disposal facility shall pay any costs or expenses associated with public notices or notifications required by these rules including, but not limited to, public notices or notifications relating to permitting and closure activities.
- (5) Issuance of Permit: A permit shall be issued to an applicant on evidence satisfactory to the Director of compliance with the provisions of the Act, any applicable standards or requirements and these rules.
- (a) Any permit shall contain such terms and conditions, including conditions requiring corrective action beyond the facility boundary, as are deemed necessary by the Director to protect the environment and the health of humans, and the Director may require such testing and construction supervision as he deems necessary to protect the environment and the health of humans. Any permit issued subsequent to November 8, 1984, shall contain conditions requiring corrective action for any releases into the environment of hazardous waste or hazardous constituents at the

facility seeking a permit, regardless of the time at which waste was placed at such facility.

- (b) Conditions Applicable to all Permits: [40 C.F.R. 270.30](#) is hereby incorporated by reference.
 - (c) Establishing Permit Conditions: [40 C.F.R. 270.32](#) is hereby incorporated by reference.
 - (d) Schedules of Compliance: [40 C.F.R. 270.33](#) is hereby incorporated by reference.
 - (e) Requirements for Recording and Reporting of Monitoring Results: [40 C.F.R. 270.31](#) is hereby incorporated by reference.
 - (f) Effect of a Permit: [40 C.F.R. 270.4](#) is hereby incorporated by reference.
 - (g) Draft Permits: [40 C.F.R. 124.6\(a\)](#), [124.6\(d\)](#) and [124.6\(e\)](#) are hereby incorporated by reference.
 - (h) Statement of Basis and Fact Sheet: [40 C.F.R. 124.7](#) and [124.8](#) are hereby incorporated by reference.
- (6) Denial of Permit: In the event of denial of a permit application, the Director shall send written notice of such action to the applicant and shall set forth in such notice the reason for the action. The denial of any permit by the Director shall become final unless a petition for hearing in accordance with O.C.G.A. [12-8-73](#) is filed.
- (a) [40 C.F.R. 124.6\(b\)](#) is hereby incorporated by reference.
 - (b) [40 C.F.R. 270.29](#) is hereby incorporated by reference.
- (7) Amendment, Modification, Revocation or Suspension of Permit:
- (a) The Director may amend, modify, suspend or revoke any permit issued for cause, including but not limited to the following:
 1. Violation of any condition or provision of such permit or failure to comply with any final order of the Director;
 2. Failure to comply with the Act or these rules;
 3. Obtaining a permit by misrepresentation or failure to disclose fully all relevant facts; or
 4. When the permitted facility poses a threat to the environment or the health of humans.

- (b) In the event of amendment, modification, suspension or revocation of any permit, the Director shall serve written notice of such action on the permit holder and shall set forth in such notice the reason for such action.
 - (c) Modification, Revocation, Reissuance, or Termination of Permits: [40 C.F.R. 270.41](#), [270.43](#) and [124.5](#), are hereby incorporated by reference.
 - (d) Permit Modification at the Request of Permittee: [40 C.F.R. 270.42](#) and [124.5](#) are hereby incorporated by reference.
- (8) Transfer of Permits: Permits are not transferable from one person to another or from one site or facility to another unless such transfer is approved by the Director.
- (a) [40 C.F.R. 270.40](#) is hereby incorporated by reference.
- (9) Duration of Permit: A permit shall be effective for a fixed term not to exceed 10 years.
- (a) Each permit for a land disposal facility shall be reviewed by the Director five years after the date of permit issuance or reissuance and shall be modified as necessary to assure that the facility continues to comply with the currently applicable requirements of these rules.
- (10) Special Forms of Permits: [40 C.F.R. 270.60- 270.63](#), [270.65](#), [270.66](#), [270.68](#) and [270.79-270.230](#), are hereby incorporated by reference.
- (11) Noncompliance and Program Reporting by the Director: [40 C.F.R. 270.5](#) is hereby incorporated by reference.
- (12) Definitions Applicable to RCRA Permits: Definitions of words or terms applicable to RCRA permits as defined in [40 C.F.R. 270.2](#) are hereby incorporated by reference.
- (13) **References:** [40 C.F.R. 270.6](#) is hereby incorporated by reference.

Rule 391-3-11-12. Inspection and Investigation.

- (1) The Director or his authorized representative, upon presentation of his credentials, shall have a right to enter upon, to or through premises of persons subject to this Act, or premises whereon a violation of the Act or rules and regulations is reasonably believed to be occurring or is reasonably believed to be about to occur, to investigate, take samples, copy all records relating to hazardous wastes, and inspect for compliance with the requirements imposed under the Act or the rules and regulations or to determine whether such a violation or threatened violation exists, in accordance with the following purposes:
 - (a) for the purpose of determining whether any person subject to the requirements of the Act is in compliance with these rules;
 - (b) for the purpose of investigating conditions relating to hazardous waste management or hazardous waste management practices where the Director is in possession of information sufficient to form a reasonable belief that a violation of the Act or these rules is occurring or is about to occur; or
 - (c) for the purpose of determining whether there has been a violation of any of the provisions of the Act, or these rules, or any permit or order issued pursuant to the Act and these rules.
- (2) In the event any person does not consent to an inspection or investigation, the Director or his authorized representative may seek to obtain a warrant authorizing the inspection or investigation pursuant to O.C.G.A. [12-2-2\(d\)](#).
- (3) Each such inspection or investigation shall be commenced and completed with reasonable promptness. If the Director or his authorized representatives obtain any samples prior to leaving the premises, he or they shall give to the owner, operator, or agent in charge a receipt describing the sample obtained and, if requested, a portion of each sample equal in volume or weight to the portion retained. If any analysis is made of such samples, a copy

of the results of such analysis shall be furnished promptly to the owner, operator, or agent in charge.

- (4) This Section of these rules shall be construed so as to be consistent with 3007(a) of the Federal Act, [42 U.S.C. 6927\(a\)](#).

Rule 391-3-11-15. Availability of Information.

- (1) The Director shall make disclosure of records to the public within three working days of receipt of a request for disclosure, if and to the extent the requester:
 - (a) Has filed a request in writing with the Director;
 - (b) Has requested records which are subject to the Georgia Open Records Act, O.C.G.A. [50-18-70](#), *et seq.*; and
 - (c) Has requested records that are not exempt from disclosure pursuant to state law, O.C.G.A. [50-18-70](#), *et seq.*, and O.C.G.A. [12-8-78\(a\)](#).
- (2) No fee shall be charged for record inspection. Reasonable fees for copying records may be charged in accordance with procedures developed by the Director.
- (3) If a request to inspect or copy records is denied, the Director shall furnish to the requester in writing the basis for the denial and a statement of the judicial remedies available to seek to obtain the requested records.

Subject 391-3-12. UNDERGROUND GAS STORAGE.

Rule 391-3-12-.01. Adequate Formation.

The underground storage of gas shall be limited to geologic structures reasonably capable of confining the gas to the storage area and permitting it to be withdrawn.

Subject 391-3-13. OIL AND GAS AND DEEP DRILLING.

Rule 391-3-13-.01. Purpose.

The purpose of these rules is govern the drilling of and subsequent use of wells subject to the Georgia Oil and Gas and Deep Drilling Act of 1975, as amended. Wells subject to the requirements of Rules 391-3-2, 391-3-5, 391-3-6 or 391-3-12 are not subject to the provisions of these rules.

Cite as Ga. Comp. R. & Regs. R. 391-3-13-.01

Authority: O.C.G.A. § 12-4-2, et seq., as amended.

History. Original Rule entitled "Purpose" was filed on December 23, 1981; effective January 12, 1982.

Amended: F. July 15, 2019; eff. August 4, 2019.

Rule 391-3-13-.02. Definitions.

All definitions contained in O.C.G.A. [12-4-42](#) are incorporated herein by reference.

- (a) "Abandonment" means, for purposes of compliance with requirements herein, that a well has not been used for six (6) consecutive months and cannot be operated, whether because it was drilled as a dry hole or has ceased to produce, or that operations have not been conducted thereon. "Shut-in" wells, shall not be considered to be abandoned. "Abandonment" shall not be construed to require the plugging of a well that has been approved by the Division for future utilization.
- (b) "Blow-out" means any uncontrolled flow of well fluids and/or formation fluids from the wellbore to the surface or into lower pressured subsurface zones.
- (c) "Blow-out preventer" means equipment installed on the wellhead assemblies to contain wellbore fluids either in the annular space between the casing and the tubulars, or in an open hole during drilling, completion, and testing operations.
- (d) "Blowout preventer control system" means the assembly of pumps, valves, lines, accumulators, and other items necessary to open and close the blowout preventer equipment.
- (e) "Circulation" means the passing of fluid (typically drilling mud) down through the drill stem and up to the surface in the process of rotary drilling or down the casing and up to the surface in the setting of casing.
- (f) "Common source of supply" means the reservoir strata or pool separated from any other reservoir strata or pool that contain, or from competent evidence appears to contain, a common accumulation of oil or gas or both.
- (g) "Completion" means development of a well in an attempt to produce oil and/or gas or final placement of cement plugs in a nonproducing well, whichever occurs last. Completion is the last act as determined by the Director on a well which result in such well being capable of producing oil and/or gas through permanent well head equipment after production tubing has been run, or final placement to cement plug(s) in a nonproducing well.
- (h) "Condensate" means the liquid hydrocarbons produced by the condensation of natural gas, either after it leaves the reservoir or while it remains in the reservoir.
- (i) "Conservation" means conserving, preserving, guarding, or protecting the oil and gas resources of the State by obtaining the maximum efficiency with a maximum efficiency with a minimum waste in the production, transportation, processing, refining, treating, and marketing of the unrenovable oil and gas resources of the State.
- (j) "Drill site" means the exact location of the well bore.
- (k) "Drill site tract" means the land area devoted to the well, mud pits, and other ancillary operations.

- (l) "Operator" means any person who is in charge of the development of a lease, the drilling of a well, or the operation of a producing well, and in addition, for the purpose of assigning responsibility, may also be the person indicated as operator by the most current records of the Division.
- (m) "Re-enter" means to bring a rig back onto a boring after having moved off location in order to re-establish contact with the borehole. "Re-enter" shall not be construed to mean bringing a rig back onto a location simply to facilitate downhole geophysical logging; rather "re-enter" applies when "completion" or "drilling" operations are performed.
- (n) "Shut-in" means a well where the wellhead valves are closed thereby shutting off production. A "shut-in" well is capable of producing either oil or gas.
- (o) "Well Completion Report" means a form prescribed by the Division with accompanying illustrations and narrative providing descriptive as-constructed well information. The "Well Completion Report" generally consists of all well records including well logs, test locations and intervals, sampling locations and intervals, test results, casing installed, plugs installed, perforated intervals and other descriptive information.
- (p) Words other than those defined in (a)-(o) above are given their usual customary and accepted meaning; all words of a technical nature or a nature peculiar to the oil and gas industry are given that meaning defined in the Handbook of Oil Industry Terms and Phrases or that which is generally accepted within the oil and gas industry.

Rule 391-3-13-.04. Well Permit.

- (1) Before any well is drilled or re-entered, the person desiring to drill or re-enter the same shall submit to the Division the following items:
 - (a) A properly completed "Application for Permit to Drill" on application forms obtained from the Division.

- (b) A fee of \$500 for each application submitted.
- (c) A plat and an index map (see 8. below) showing the location of the proposed well which conforms to the following specifications:
 1. The scale of the plat shall be indicated graphically and shall not be less than one (1) inch equals one thousand (1,000) feet. The size of the sheet upon which the plat is drawn shall not exceed twenty-four (24) inches by twenty-four (24) inches.
 2. A labeled vector indicating either true, grid, or magnetic north.
 3. The surface elevation of the drill site (well location) shall be established.
 4. The plat shall accurately show the distance to the two closest lease lines and/or property lines and/or drilling unit boundaries from the proposed well location. Where appropriate, the plat shall show the military district, block number and tract or unit identity.
 5. The plat shall be constructed by a surveyor registered by the State of Georgia or by a professional engineer registered by the State of Georgia.
 6. The plat shall contain a signed statement or certification by the surveyor or registered professional engineer that all measurements are accurate as shown on the plat.
 7. The plat shall show the amount of acreage assigned to the drilling unit and the drill site tract.
 8. The index map shall show all federal, state, county, and municipal highways and roads and all railroads within a radius of one (1) mile of the proposed well location; and all buildings, prominent landmarks within one thousand (1,000) feet of the proposed well location. In addition, sufficient information shall be provided so that the location of the proposed well can be plotted to within plus or minus one hundred (± 100) feet on a standard U.S. Geological Survey quadrangle map. The appropriate U.S. Geological Survey quadrangle map with the well site location indicated within plus or minus one hundred (± 100) feet may be substituted for a hand drafted index map.
 9. If conditions require that two or more attempts are necessary in order to satisfactorily drill and/or construct the well, the location of each attempt shall be indicated on updated plats submitted to the Division.
- (d) A properly completed "Affidavit of Ownership or Control" on an application form obtained from the Division.

- (e) A properly completed "Organization Report" as specified in paragraph (7) of this section.
- (f) Illustrations and narrative material of the proposed operation. The illustrations and narratives should as described in the Oil and Gas Exploration and Production Well, Deep Mineral Exploration and Production Well, and Deep Fresh Water Production Well Permitting Checklist describe the following:
 - 1. Proposed well depth.
 - 2. Casing and cementing program.
 - 3. Procedures to prevent blow-outs, caving, and seepage.
 - 4. Procedures to prevent fires, waste, H2S containment and spillage.
 - 5. Sampling and logging program.
 - 6. Reclamation program for mud-pits, sumps, reserve pits, and dikes.
 - 7. Disposal of drilling fluids.
 - 8. Testing the integrity of well casings.
 - 9. Maintenance and repair of roadways significantly impacted by drilling operations, including hydraulic fracturing activities; and
 - 10. Buffers around wells and property line setbacks that are sufficient to protect potentially affected property owners from any noise, light, water, or air pollution resulting from any drilling or hydraulic fracturing operations.
- (g) Procedures for hazard mitigation identified in 3. and 4. above may be included by reference if the operator has already provided such procedures to the Division. The Division also may request such additional information as it deems necessary.
- (h) A bond, or undertaking, in the amount specified below in Table I for each proposed well. Such bond shall be executed by the operator as principal, and by a surety approved to do business in this State, and shall be payable to the State of Georgia Department of Natural Resources. The bond shall be conditioned to secure the faithful performance of all requirements of the Act, these Rules and Regulations and permit conditions. (The correct legal name and address of the principal and the surety shall be set forth on the bond, which shall be countersigned by the Georgia agent of such surety, who shall also set forth the correct legal name and address of such agent). In the event of a failure by the operator to fully comply with the Act, Rules and Regulations or permit conditions, said bond shall be forfeited and the Division shall expend the proceeds of the bond

to fulfill the operator's responsibilities so as to protect the State and its citizens from any injury which may result from such failure. The bond shall remain in effect for a period of two years after said well is plugged and properly abandoned, two years after receipt by the Director of a properly completed "Well Completion Report" as described in [391-3-13-.15](#), or two years from the date of receipt of all data and reports required by these Rules, whichever occurs last. As an alternate to a bond an irrevocable letter of credit may be issued provided the irrevocable letter of credit is acceptable to the Division and the irrevocable letter of credit is issued to the State by a bank domiciled in the State of Georgia.

TABLE I

Permit Depth	Amount of Bond
Less than 5,000 feet	\$20,000
5,000 to 10,000 feet	\$40,000
10,000 to 15,000 feet	\$60,000
Over 15,000 feet	\$80,000

A lesser amount of a bond or an irrevocable letter of credit may be proposed if the applicant can document that a lesser amount is appropriate in accordance with requirements in the Oil and Gas Exploration and Production Well, Deep Mineral Exploration and Production Well, and Deep Fresh Water Production Well Permitting Checklist.

- (i) In the event the owner or operator wishes to keep the well open for additional testing after drilling rig removal. The Director may require that an additional bond in the amount of \$25,000 be furnished, subject to the same terms and conditions as the initial bond. Also, if the operator plans to drill multiple wells and can demonstrate to the satisfaction of the Director that the operator has adequate financial resources to cover all plugging and abandonment costs, and the cost for restoration and reclamation of the well site, a blanket bond in the amount of \$100,000 may be substituted. This blanket bond shall be subject to the same terms and conditions as the aforementioned individual well bond. The Director may require that the blanket bond not be applicable for any well left open after rig removal.
- (j) In addition to the above requirements, for those operations that will be conducting hydraulic fracturing, the following information is also required in the permit application:
 1. The location of the well proposed to be fractured and the route of any directional borehole to the end point of such borehole;

2. A brief description of the project, including information regarding the sources of water to be used as base fluid and estimated amounts and methods of waste-water disposal;
 3. The identification of ground-water sources within one-half mile of any proposed wellhead and within one-half mile along the route of any directional borehole to the end point of such borehole, and for ground-water quality monitoring before, during, and after drilling operations;
 4. A comprehensive groundwater monitoring plan in the vicinity of the oil or gas borehole, in nearby drinking water aquifers, and at public and private water supply wells, as detailed in the Narratives section of the Oil and Gas Exploration and Production Well, Deep Mineral Exploration and Production Well, and Deep Fresh Water Production Well Permitting Checklist;
 5. Disclosure of the chemicals in the fluids used in the hydraulic fracturing process, a copy of which shall also be submitted to the Commissioner of Public Health;
 6. A description of the provisions for the safe disposal of all hydraulic fracturing fluids; and
 7. A description of the provisions for the restoration and reclamation of abandoned well sites, storage facility sites, pits, and access roads.
- (2) Any operator applying for a permit to drill a directionally controlled well shall fulfill the prescribed requirements of (1) of this paragraph. In addition, the survey plat must show the proposed bottom hole location and the surface location. In the event an operator, in good faith, commences and proceeds with the drilling of a straight well and thereafter decides to deviate the well directionally, he may do so by first notifying the Director by telephone, secondly confirming in writing the fact thereof, and thirdly complying with the provisions governing intentionally deviated wells as hereinabove provided.
- (3) The Director shall, within 30 days after the receipt of a properly completed application from any person desiring to drill a well covered by this part, issue a public notice for the permit application by posting such notice to the Division website and by sending such notice via mail or e-mail to any persons who have requested notification of permit applications from the Division.
- (a) The Director shall allow for a 30 day public comment period to begin running from the date the public notice is posted on the Division website.
 - (b) The permit applicant shall provide public notice of the proposed well to property owners and residents who may be impacted by the issuance of the permit within ten days of the date of the public notice issued by the Director by, at a minimum:

1. Posting the public notice along the road nearest to the proposed well
 2. Providing the public notice to all persons owning real property within one-half mile of the proposed wellhead and within one-half mile along the route of any directional borehole and any residence that has any drinking water wells within one-half mile of the proposed wellhead and within one-half mile along the route of any directional borehole
 3. Publishing the public notice in at least one legal organ in the county where the well will be located
-
- (4) After considering the permit application, the Director shall either issue or deny a permit for the well. The Director shall notify the public of the final permit decision via mail or e-mail to any persons who have requested notification of permit application from the Division.
 - (5) Drilling or re-entry shall not begin until a permit is issued. Permits shall expire one (1) year from the date of issuance if spudding operations in connection with the proposed well have not begun.
 - (6) Noncompliance with any provision of the Act, these Rules and Regulations, or any permit condition shall be grounds for the revocation, suspension or modification of any permit.
 - (7) Every person acting as an operator or agent for an operator or independently engaged in the production of or drilling for oil, condensate, or gas shall file with the Director an "Organization Report," on forms obtained from the Division. The "Organization Report" shall contain the following information: the name, telephone number, post office address of such person; the exact legal name under which such person or businesses is being operated or conducted; the exact corporate name, if such is incorporated, and the place of incorporation of such corporation; the business or businesses in which the person is typically engaged; the names and post office addresses of all other persons acting as trustee, together with the names and post office addresses of the manager, agent, or executives thereof, as well as the names and post office addresses of principal officers thereof. When a business is conducted under an assumed name, as a partnership or a sole proprietorship, the "Organization Report" shall show the names and post office addresses of all owners or partners in addition to the other information herein required. Should any change occur as to facts stated in the filed report prior to bond termination, a revised "Organization Report" shall be filed with the Director within thirty (30) days of such change.
 - (8) An operator may request modification of any permit condition. Such request must be in writing and properly documented. The Director may grant such modification if he is satisfied that the request is justified and if the modification will allow the operator to remain in compliance with Act and these Rules and Regulations.

- (9) Within ten (10) days after permit approval, the operator shall give written notice to the land-owner or tenant occupying the land of the operator's intent to drill and general schedule.

History. Original Rule entitled "Well Permit" was filed on December 23, 1981; effective January 12, 1982.

Amended: F. July 15, 2019; eff. August 4, 2019.

Rule 391-3-13-.05. Spacing of Wells.

- (1) The spacing of wells in proven oil and/or gas fields or in areas that Board may designate, shall be governed by special rules for that particular field or area, adopted after due notice and public hearing.
- (2) Wells drilled in areas not covered by special rules shall be drilled a minimum of 330 feet or other distance, determined by the Director to provide an adequate safety buffer to the public, from any lease boundary, property line, dwelling, place of public gathering or producing oil or gas well. The applicant for a permit to drill such a well shall demonstrate to the Director that the application has available for assignment to said well, leases or acreage of area and size to constitute a reasonable producing unit for such well. Oil wells drilled in areas not covered by special rules shall be drilled on a drilling unit consisting of forty (40) surface contiguous acres. The well shall be located 330 feet from the exterior boundary of the drilling unit and at least 660 feet from the every other well drilling to or producing from, or for which a permit shall have been granted to drill to the same pool. Gas wells drilled in areas not covered by special rules shall be drilled on a drilling unit consisting of one hundred sixty (160) surface contiguous acres. The well shall be located 660 feet from the exterior boundary of the drilling unit and at least 1867 feet from every other well drilling to or producing from, or for which a permit shall have been granted to drill to the same pool.

Rule 391-3-13-.06. Establishment of the Drilling Units and Operation Units.

After discovery of an oil and gas pool and for the prevention of waste, to avoid the drilling of an excessive number of wells and to assure the ultimate maximum recovery of gas or oil, the Director shall, after due investigation and a hearing, establish drilling and/or operation units. The Director also, after investigation and a hearing, shall make such special orders as will give to each producer the opportunity to use his or her just and equitable share of the maximum reservoir energy of any pool.

Rule 391-3-13-.07. Determining and Naming Fields and Pools.

Oil and Gas fields and pools shall be classified as to common sources of supply from which they produce and such sources shall be determined and named by the Director. In naming fields, reference shall be given to common usage and geographic names. Separate pools within the same field shall be named according to the producing formation.

Rule 391-3-13-.09. Change of Operator.

- (1) Any person or persons wishing to become the new operator of a well or wells must submit to the Director for his or her approval a request for a change of operator accompanied by the following if not previously filed:
 - (a) A properly completed and notarized "Affidavit of Ownership or Control" of said well or wells.
 - (b) A properly completed "Organization Report," on form obtained from the Division.
 - (c) A bond, or undertaking, in full and complete compliance with subparagraph [391-3-13-.04\(1\)\(h\)](#) of these Rules, if such requirement has not been fulfilled previously.
 - (d) A notarized letter from the present operator requesting the Director to approve the applicant as the new operator of such well.

- (2) The request for Change of Operator will be reviewed by the Director, who shall approve or deny the change within thirty (30) days of receipt of the above items. If a change of operator is denied, the application may request a hearing, if such request is in writing and made within thirty (30) days of the denial of the permit.

History. Original Rule entitled "Change of Operator" was filed on December 23, 1981; effective January 12, 1982.

Amended: F. July 15, 2019; eff. August 4, 2019.

Rule 391-3-13-.10. Drilling.

- (1) Identification of wells. The operator of any well shall paint or stencil and post and keep posted in a conspicuous place near the well, the name of the operator, the name of the lease or property owner, the number of the well and the number of the permit for the well. The identification shall be posted before spudding or re-entry and shall remain posted until the well is properly plugged and the location is restored to a condition satisfactory to the Director. In the event of a change of operator, well name or number, a new sign reflecting the change shall be posted.
- (2) Notices of activities. The Director shall be notified by telephone no less than twenty-four (24) hours (or other time-period acceptable to the Director) prior to performing any one or more of the following activities:
 - (a) spudding;
 - (b) setting casing;
 - (c) electrical or geophysical logging;
 - (d) drill-steam testing;
 - (e) removing drilling rig;
 - (f) perforating;
 - (g) plugging; or,
 - (h) any other activity the Director may designate.
- (3) Prior notification to performing the aforesaid activities shall be to allow the Director to send a duly authorized representative to the location to witness the activity at the specified time, if the Director deems necessary.
- (4) Control of wells. The operator shall take all necessary precautions to keep all wells under control at all times, shall utilize only contractors or employees trained and competent to

drill and operate such wells, and shall utilize and maintain materials and high-pressure fittings and equipment necessary to insure the safety of operating conditions and procedures. The design of integrated casing, cementing, drilling mud and blow-out prevention programs shall be based upon sound engineering principles and must take into account the depths at which various fluid or mineral-bearing formations are expected to be penetrated, the formation fractures gradients and pressures expected to be encountered, and other pertinent geologic and engineering data and information about the area.

- (5) Notification of fire, leaks, or blow-outs. The operator shall immediately notify the Director by phone giving full details concerning all fires, leaks or blow-outs which occur at such wells. Drillers shall take immediate action to control fires, leaks or blow-outs as appropriate.
- (6) Well record. During the drilling of every well, the owner, operator, contractor, driller, or other persons responsible for the conduct of drilling operations, shall keep at the well a detailed and accurate record available to the Division and its agents at all times. Pertinent information from such records shall be recorded on a "Well Information Form" obtained from the Division. The "Well Information Form" shall be furnished to the Director within forty-five (45) days after removal of the rig from the well site and will describe progressively the general lithology of strata, water and oil or gas encountered as well as such additional information as to abnormal pressure, zones of lost circulation, caving strata, casing record, and other information as are usually recorded in the normal procedure of drilling. The "Well Information Form" shall be held in confidence as described in paragraph (9) below.
- (7) Electrical, Geophysical and Other Logs.
 - (a) A record of all electrical, sonic, radioactivity, mud, and mechanical logging or surveying of the well shall be maintained and two copies furnished to the Director within forty-five (45) days after completion. Field prints of logs necessary to determine fresh water-salt water interfaces and, if appropriate, integrity of cement to casing must be available to the Division's agent at Oil well site.
 - (b) To assure the protection of fresh surface-water and ground-water zones, the Division shall have the authority to require and/or perform geophysical logging at any time during the drilling provided:
 1. Hole conditions allow such logging;
 2. The operator does not intend or has not scheduled to perform spontaneous potential-resistivity type logs of sufficient accuracy to identify the fresh water-salt water interface.
 - (c) The Division will not perform any logging where the operator has performed logging adequate for identifying the fresh water-salt water interface. If the Division performs the logging of any well, the owner or operator shall prepare and provide full access to the well and assist the Division as necessary until the

logging is completed. If the owner of operator is requested to conduct logging, such logging shall be at the owner or operator's expense. Two copies of all geophysical logs obtained by the Division shall be supplied to the owner of the well within (30) days. All geophysical logs obtained by the Division shall be held in confidence as provided in paragraph (9) of this paragraph.

- (8) Samples: Each operator shall file with the Director a complete set of cuttings or cores correctly labeled and identified as to depth, not later than thirty (30) days for cuttings and ninety (90) days for core splits after completion of the well. Cuttings shall be collected at 30 foot intervals from a depth of 500 feet to the total depth drilled. Cuttings are not required for the uppermost 500 feet. Missing intervals shall be noted and the reasons for the missing samples shall be described. Side-wall cores need not be submitted as long as written descriptions are filed within forty-five (45) days after completion of the well.
- (9) Confidentiality. If an applicant or an operator believes that information contained in their application or that is generated as a result of their operation and that must be submitted to the Division to comply with these rules, is protected under Georgia law from disclosure to the public, they must comply with the Division's June 2015 Procedures for Submitting Information Pursuant to a Claim that Information in the Submittal is Protected Under Georgia Law from Disclosure to the Public or any updates or substitution to such procedures.
- (10) Protection of fresh surface-water and ground-water supplies. All fresh water shall be confined to its respective strata and shall be adequately protected. Special precautions identified in paragraphs (11), (12), (13), (14), and (15) and rule [391-3-13-.12](#) shall be taken in drilling and abandoning of wells to guard against any loss of fresh water or contamination of fresh surface-water or ground-water supplies by oil, condensate, gas, salt-water, or other contaminants.
- (11) Mud pits, sumps, reserve pits and dikes.
 - (a) Before commencing to drill, properly maintained mud pits, sumps, reserve pits or tanks of sufficient size to receive and contain the maximum volume of drilling fluid anticipated at the surface shall be constructed, and thereafter maintained, for the reception of such materials.
 - (b) After a well is completed or abandoned, all fluids, and recoverable slurry that remain in all pits, sumps, and tanks shall be safely returned to the well on location, or removed and disposed of, as approved by the Director. All mud pits, sumps, reserve pits and dikes shall be backfilled with earth or graded and compacted in such a manner as to be returned to a nearly natural state.
- (12) Casing.
 - (a) The operator shall case and cement all wells with a sufficient number of strings of high-quality casing, without leaks, in a manner necessary to:

1. prevent release of fluids from any stratum through the well bore (directly or indirectly) into the ground waters or onto the surface, except into pits or tanks provided for this purpose;
 2. prevent communication between separate hydrocarbon bearing strata (except where such strata have been approved for commingling) and between hydrocarbon and water-bearing strata;
 3. prevent contamination of fresh-water strata;
 4. support unconsolidated sediments; and,
 5. otherwise provide a means to control formation pressures and fluids.
- (b) The operator shall install such casing necessary to withstand collapse, bursting, tensility, and other stresses and the casing shall be cemented in a manner which supports the casing. Safety factors in casing program design shall be of sufficient magnitude to provide optimum well control while drilling and to assure safe operations for the life of the well.
- (c) Determination of proper casing-setting depths shall be based upon all geologic factors including the presence or absence of hydrocarbons and fresh-water depths on a well-for-well basis.
- (d) Surface casing shall be new or reconditioned pipe that, to the satisfaction of the Director, has been tested, inspected and certified to verify a good usable condition. Surface casing shall be set at a depth and cemented in a manner necessary to protect all fresh-water aquifers and provide well control until the next string of casing is set. Surface casing shall be cemented with a volume sufficient to fill the annular space from the casing shoe to the surface, plus 10 percent. Cement shall be added from the bottom upward. All cement shall be allowed to set for 12 hours before the cement plug is drilled or test initiated. If cement returns are not received at the surface or returns are lost while circulating, remedial cementing at the surface will be done by running a minimum of 100 feet of small diameter pipe in the annular space bringing cement to the surface. Also if circulation is lost during cementing operations, the Director may require that a temperature or cement bond log be run to determine whether the casing is properly cemented.
- (e) Production casing shall be set before completing well for production, and such casing shall be new pipe or reconditioned pipe that to the satisfaction of the Director has been tested, inspected, and certified to verify good usable condition. It shall be cemented in a manner necessary to cover or isolate all zones which contain hydrocarbons, but in case, a calculated volume sufficient to fill the annular space at least 500 feet above the uppermost producible hydrocarbon zone

must be used. After the cement has set and before drilling the plug, the casing or a maximum test of 1500 pounds per square inch. Whenever the pressure drops ten (10) percent in thirty (30) minutes, the casing will be deemed inadequate and shall be repaired and retested until the requirements thereof are met.

- (13) Blow-out prevention. Adequate blow-out preventers and high pressure fittings for keeping the well control shall be attached to properly anchored and cemented casing strings. The blow-out preventers must meet the approval of the Director and shall be tested regularly and the results recorded in the driller's log. Agents of the Division may require that the blow-out preventers be tested at any reasonable time during operations provided such testing does not result in creating a hazardous condition.
- (14) Control of formation pressures. The operator shall continuously maintain in the hole, from top to bottom, good drilling fluid of sufficient weight to control any formation pressures which may be encountered. In the event of lost-circulation, the operator will immediately notify the Director and make provisions to restore circulation either by casing-off the affected zone, increasing mud viscosity, or other techniques acceptable to the Director. The aforementioned drilling fluid requirements shall in no way be construed to preclude other drilling techniques. Air drilling, flame drilling, electric-arc drilling, plasma jet drilling, laser beams, and erosion drilling are permitted, provided, however, that the operator uses other appropriate methods approved by the Director to control any pressures which may be encountered.
- (15) Directional drilling. All wells must be drilled with due diligence to maintain a reasonably vertical well bore; however, a well may be intentionally deviated and directionally controlled, provided that the location of the deviated well at total depth of the well is in compliance with the applicable spacing rules and the requirements of paragraph (3) above are met.

Authority: O.C.G.A. § 12-4-2, et seq., as amended.

History. Original Rule entitled "Drilling" was filed on December 23, 1981; effective January 12, 1982.

Amended: F. July 15, 2019; eff. August 4, 2019.

Rule 391-3-13-.11. Shooting, Perforating, Chemical Treatment, Fracturing, or Hydraulic Fracturing of Wells.

Wells should not be shot, perforated, chemically treated, fractured, or hydraulically fractured until the Director is notified. Each well shall be treated, fractured, or hydraulically fractured in such manner as will not cause injury to the formation, or result in water encroachment into any oil or gas formation. Necessary precautions shall be taken to prevent injury to the casing. Routine chemical treatments for corrosion control shall be excluded from this notice requirement. If chemical treating, fracturing, or hydraulically fracturing results in irreparable

injury to the well or to the oil or gas information, the Director may issue emergency orders for the well to be properly plugged and abandoned.

Rule 391-3-13-.12. Plugging.

- (1) The owner or operator may keep a well open for additional testing after removal of the drilling rig, if the written approval of the Director is first obtained, and by demonstrating to the satisfaction of the Director that (a) the open well is constructed so as to assure that fresh water aquifers are protected from intraformational migration of fluids through the bore hole and (b) that the operator has adequate and readily available financial resources to plug the well.
- (2) The owner or operator of any well shall be responsible for the plugging of any well after said well is abandoned, utilizing the services of a well cementing contractor. Any well declared abandoned by the Director shall be plugged within sixty (60) days by the operator, or the surety bond will be forfeited to the Division.
- (3) Before any work is commenced to plug any well, the owner or operator thereof shall give 24-hours notice to the Director of this intent. Upon notification, the Division may send duly authorized representatives to the location at the time specified to witness the plugging of such well.
- (4) The methods and procedure for plugging a well shall be as follows;
 - (a) Each oil or gas producing formation shall be sealed with a cement plug which extends not less than 100 feet above the producing formations nor less than 100 feet below the producing formations. The Director may allow a bridge plug with a minimum of 10 feet of cement on top to be placed immediately above each perforated horizon in cased holes.
 - (b) A cement plug of appropriate ingredients not less than 150 feet in length shall be placed at the base of all fresh water bearing strata unless the strata are protected by properly cemented surface casing. Where the natural contact between fresh and salt ground waters is transitional the cement plug shall be such length to extend at least 50 feet above and below the transition zone.
 - (c) A cement plug not less than 200 feet in length shall be placed 100 feet above to 100 feet below the base of the surface casing. This plug may be omitted if this interval is protected by smaller diameter casing which has been properly grouted.

- (d) A 50 foot plug shall be placed near the surface of the ground in each hole to be plugged in such a manner as not to interfere with soil cultivation.
- (e) The interval between plugs shall be filled with fluid weighing not less than nine and one-half (9.5) pounds per gallon.
- (f) Additional cement plugs not specified above may required by the Director at other locations so as to prevent the commingling of oil, gas, salt, water, and fresh water from one formation to another.
- (g) Other plugging methods may be used provided written approval is obtained from the Director.
- (h) When a well to be plugged may be used safely as a fresh water well and such utilization is desired by the land or surface owner, the well need not be filled above the required sealing plug set at the base of fresh water, provided the land or surface owner agrees in writing to the Director to take full responsibility for the well, including correcting any plugging defects that result in the migration of salty water or oil or gas through the well, and to comply fully with all laws and rules and provided written approval is obtained from the Director.
- (j) When a well to be plugged may be safely used as a ground water monitoring well by the Division, the well need not be filled above the required sealing plug set at the base of fresh water; provided the owner will permit the Division access to the well for testing purposes.

Rule 391-3-13-.13. Notice of Rig Removal.

The Director shall be notified before any drilling rig is removed from any unplugged well, and permission must be granted by the Director for such removal. The Director may stipulate special protective measures to be taken before granting permission to remove a drilling rig, including but not limited to, the temporary plugging of the well, requiring monthly inspections of the well by an engineer or geologist registered to practice in Georgia, and proper restoration and reclamation of the well site. If, in the judgment of the Director, the well poses a hazard to health of the public or the environment, the Director may issue emergency orders for the well to be properly plugged and abandoned.

Rule 391-3-13-.14. Production Well.

- (1) Before any mineral well can be initially tested for production the operator must notify the Director. The test may be witnessed by a representative of the Director and the results filed with the Director within forty-five (45) days such test.
- (2) As described in rule [391-3-13-.11](#) wells shall not be shot, perforated, chemically treated, or fractured until the Director is notified.
- (3) Before any oil or gas well can be brought into production, the operator must apply to the Director for permission to produce. Such application shall include, but not be limited to, a description of the geologic characteristics of the reservoir and safety precautions. The operator also shall describe whether the proposed production will be oil or gas, how waste brines and gases will be disposed, how the oil or gas will be transported from the wellhead, the nature and timing of proposed production, and any additional information so that the Director may investigate and hold hearings for the establishment of drilling and operations units.

Rule 391-3-13-.15. Well Completion Report.

A properly completed "Well Completion Report" shall be submitted to the Director within forty-five (45) days of well completion. This report shall include, but not limited to, information pertaining to the well record, well logs, tests conducted, casing installed, plugs installed, and other descriptive information that the Director may require. Such report shall be signed by the operator or his representative, and the operator shall affirm that all provided information is accurate. Within thirty (30) days of receipt of an accurate and properly completed "Well Completion Report" the Director shall notify the operator whether additional measures are necessary in order to safely produce oil or gas or to finally abandon the well.

Subject 391-3-14. ASBESTOS REMOVAL AND ENCAPSULATION.

Rule 391-3-14-.01. Definitions.

Unless a different meaning is required by the context, the following terms as used in these rules shall have the meaning hereinafter respectively ascribed, except that to the extent terms are not defined in these rules, the Act's definitions control; and provided, that definitions within any subsequent rule, or subdivision thereof, which are expressly made applicable to the rule or subdivision within which they appear, shall apply for purposes of such specific rule or subdivision thereof.

- (a) "Act" means the "Georgia Asbestos Safety Act", O.C.G.A. Section [12-12-1](#) et seq.
- (b) "Asbestos" means any naturally-occurring hydrated mineral silicates separable into commercially used fibers, specifically the asbestiform varieties of serpentine, chrysotile; cummingtonite-grunerite, amosite; riebeckite, crocidolite; anthophyllite; tremolite; and actinolite.
- (c) "Asbestos Supervisor" means any individual who is employed or engaged by a contractor to supervise the removal, encapsulation, cleaning, or disposal of friable asbestos-containing materials.
- (d) "Contractor" means any person who contracts with an owner or operator of a facility or residential dwelling to perform the removal or encapsulation of friable asbestos-

containing material from any such facility or residential dwelling. `Contractor' shall not include any employee of such owner or operator.

- (e) "Department" means the Department of Natural Resources of the State of Georgia.
- (f) "Demolition" means the wrecking or taking out of any load supporting structural members of a facility together with the related handling operations.
- (g) "Director" means the director of the Environmental Protection Division of the Department of Natural Resources of the State of Georgia or his designee.
- (h) "Division" means the Environmental Protection Division of the Department of Natural Resources of the State of Georgia.
- (i) "Emergency Project" means the removal or encapsulation of friable asbestos-containing material from any facility where such activity must be conducted immediately in order to prevent disruption of a commercial or industrial process or activity or destruction of property.
- (j) "Encapsulation" means to coat, bind, or resurface walls, ceilings, pipes or other structures with a sealant to prevent friable asbestos from becoming airborne.
- (k) "Facility" means any institutional, commercial, or industrial structure, installation, or building, including apartment buildings having more than four dwelling units.
- (l) "Friable Asbestos-Containing Material" means any material which is applied onto ceilings, walls, structural members, piping, boilers, tanks, pumps, ductwork or any other part of the building containing more than 1 percent asbestos, by weight, and which when dry may be crumbled, pulverized, or reduced to powder by hand pressure.
- (m) "Outside Air" means the air outside buildings and structures.
- (n) "Person" means any individual, partnership, association, trust, firm, corporation, county, municipality, or other entity, including the state and federal governments.
- (o) "Project" means the removal or encapsulation by a contractor of friable asbestos-containing material from any facility or residential dwelling.
- (p) "Removal" means to take out, strip, clean-up, or dispose of friable or potentially friable asbestos-containing materials from any facility or residential dwelling as defined by this chapter.
- (q) "Residential Dwelling" means any family residence or apartment building with four or fewer dwelling units.
- (r) "Small Project" means any asbestos removal or encapsulation project involving less than 160 square feet or 260 linear feet of friable asbestos-containing materials.

- (s) "Structural Member" means any load supporting member of a facility, such as beams and load supporting walls; or any nonload supporting member, such as ceilings and nonload supporting walls.
- (t) "Visible Emission" means any emissions containing particulate asbestos material that are visually detectable without the aid of instruments. This does not include condensed, uncombined water vapor.

History. Original Rule entitled "Definitions" was filed on December 9, 1986; effective December 29, 1986.

Amended: F. Jun 3, 1996; eff. June 23, 1996.

Rule 391-3-14-.02. Provisions.

- (1) Standards for Removal and Encapsulation.
 - (a) Standard for Asbestos Emission Control.
 - 1. Each contractor to whom this section applies shall comply with the following procedures to prevent emissions of particulate asbestos material to the outside air:
 - (i) Remove friable asbestos materials from a facility or residential dwelling being demolished or renovated before any wrecking or dismantling that would break up the materials or preclude access to the materials for subsequent removal. However, friable asbestos materials need not be removed before demolition if:
 - (I) they are on a facility or residential dwelling component that is encased in concrete or other similar material; and
 - (II) these materials are adequately wetted whenever exposed during demolition.
 - (ii) When components of a facility or residential dwelling covered or coated with friable asbestos material are being taken out of the facility or residential dwelling as units or in sections:
 - (I) adequately wet any friable asbestos material exposed during cutting or disjointing operators; and
 - (II) carefully lower the units or sections to ground level, not dropping them or throwing them.

- (iii) Adequately wet friable containing asbestos materials when they are being stripped from components of a facility or residential dwelling before the components are removed from the facility or residential dwelling. In removal operations, wetting that would unavoidably damage equipment is not required if the contractor or owner/operator:
 - (I) asks the Director to determine whether wetting to comply with this paragraph would unavoidably damage equipment, and, before beginning to strip, supplies the Director with adequate information to make this determination; and
 - (II) when the Director does not determine that equipment damage would be unavoidable, use a local exhaust ventilation and collection system designed and operated to capture the particulate asbestos containing material produced by the stripping and removal of the friable asbestos containing materials. The system must exhibit no visible emissions to the outside air and must be designed and operated in accordance with the requirements in 391-3-14-.02(1)(c).

- (iv) After components of a facility or residential dwelling have been taken out of the facility or residential dwelling as units or in sections, either:
 - (I) adequately wet friable asbestos containing materials during stripping; or
 - (II) use the local exhaust ventilation and collection system designed and operated to capture the particulate asbestos material produced by the stripping. The system must exhibit no visible emissions to the outside air and must be designed in accordance with the requirements of 391-3-14-.02(1)(c).

- (v) For friable asbestos-containing materials that have been removed or stripped:
 - (I) adequately wet the material to insure that they remain wet until they are collected for disposal; and
 - (II) carefully lower the materials to the ground or lower floor, not dropping or throwing them; and

- (III) transport the material to the ground by way of dust-tight chutes or containers if they have been removed or stripped more than 50 feet above ground level and were not removed as units or in sections.

- (vi) When the temperature at the point of wetting is below 32 degrees F:
 - (I) comply with the requirements of paragraphs (iv) and (v) of this section. The contractor or owner/operator need not comply with the other wetting requirements in this section; and

 - (II) remove facility or residential dwelling components coated or covered with friable asbestos-containing materials as units or in sections to the maximum extent possible.

- (vii) For facilities or residential dwellings being demolished under order of State or local governmental agencies, issued because the facility or residential dwelling is structurally unsound and in danger of imminent collapse adequately wet the portion of the facility that contains friable asbestos containing material during the wrecking operation.

(b) Standard for Waste Disposal;

1. Each contractor to whom this section applies shall comply with the following procedures:
 - (i) deposit all asbestos containing waste material at waste disposal sites approved by the Division for disposal of asbestos-containing material; and

 - (ii) discharge no visible emissions to the outside air during the collection, processing, packaging, transporting or deposition of any asbestos-containing waste material, or use one of the disposal methods as follows:
 - (I) treat asbestos-containing waste material with water;
 - I. mix asbestos-containing waste from control devices with water to form a slurry; adequately wet other asbestos-containing waste material; and

- II. discharge no visible emissions to the outside air from collection, mixing and wetting operations, or use the methods specified by 391-3-14-.02(1)(c) to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air; and
- III. after wetting, seal all asbestos-containing waste material in leak-tight containers while wet; and
- IV. label the containers as follows: CAUTION!
CONTAINS ASBESTOS -- AVOID OPENING OR
BREAKING CONTAINER. BREATHING
ASBESTOS IS HAZARDOUS TO YOUR HEALTH.
Alternatively, use warning labels specified by Occupational Safety and Health Standards of the United States Department of Labor, Occupational Safety and Health Administration (OSHA) under [29 CFR 1910.1001\(g\)\(2\)\(ii\)](#).

- (II) Use an alternative disposal method that has received prior approval by the Director.

(c) Standard for Air Cleaning:

- 1. The contractor who elects to use air cleaning shall:
 - (i) use fabric filter collection devices doing all of the following:
 - (I) operating the fabric filter collection devices at a pressure drop of no more than four inches water gauge, as measured across the fabric filter; and
 - (II) ensuring that the air flow permeability, as measured by ASTM Method D 737-75 does not exceed 30ft³/min/ft² for woven fabrics or 35 ft³/min/ft² for felted fabrics; and
 - (III) ensuring that felted fabric weighs at least 14 ounces per square yard and is at least one-sixteenth inch thick throughout;
 - (IV) avoiding the use of synthetic fabrics that contain fill yarn other than that is spun.

- (ii) Properly install, use, operate and maintain all air cleaning equipment. Bypass devices may be used only during upset or emergency conditions and then only for as long as it takes to shut down the operation generating the particulate asbestos material.
 - 2. If the use of fabric creates a fire or explosion hazard, the Director may authorize as a substitute the use of wet collectors designed to operate with a unit contacting energy of at least 40 inches water gauge pressure.
 - 3. The Director may authorize the use of filtering equipment other than described in this paragraph if the contractor demonstrates to the Director's satisfaction that it is equivalent to the described equipment in filtering particulate asbestos material.
- (2) Project Notification: No contractor shall engage in a project prior to notifying the Director of such activities at least seven calendar days prior to commencement of same. Such prior notice need not be provided for an emergency project; however, the contractor shall notify the Director of the activity within seven calendar days after the commencement of such emergency project. The notification shall be made in the manner and form required by the Director and shall be accompanied by a project fee. The notification shall state the location of the project, the owner's name and address, the expected dates on which the project will begin and end and any other information as may be required by the Director. Upon completion of the project, the contractor shall certify to the Director, on forms specified by the Director, that the project was conducted in accordance with the Rules contained in this Chapter.

History. Original Rule entitled "Provisions" was filed on December 9, 1986; effective December 29, 1986.

Rule 391-3-14-.03. Schedule of Project Fees.

A contractor shall remit a fee to the Department of Natural Resources based upon the following formula:

- (a) \$0.10 per square foot of friable asbestos-containing materials plus \$0.10 per linear foot of friable asbestos-containing materials, with a minimum of \$25 for any project; but not to exceed \$50 for any small project or residential dwelling project nor to exceed \$1,000 for any other project.

- (b) Such fee remittance shall be made at least seven calendar days prior to commencement of the project.

History. Original Rule entitled "Schedule of Project Fees" was filed on December 9, 1986; effective December 29, 1986.

Rule 391-3-14-.04. Contractor Licensing.

- (1) From and after July 1, 1996, any contractor shall obtain a license prior to engaging in the removal or encapsulation of friable asbestos-containing materials from any facility or residential dwelling.
- (2) A copy of the license and evidence of satisfactory training shall be available for review by the Division at all projects sites.
- (3) The application for a license or renewal of a license shall be accompanied by an application fee of \$100, and shall be submitted in such manner, and on such forms, as specified by the Director. The application shall include information sufficient to demonstrate:
 - (a) Satisfactory completion of an initial training course or required annual update courses, as applicable, in the removal and abatement of asbestos as described in 391-3-14-.016. The initial training course must have been completed within 48 months prior to submittal of the application;
 - (b) Reliability in performance of general contracting activities;
 - (c) Prior experience in performing asbestos abatement activities as demonstrated through the submission of information that the applicant has successfully completed or supervised three previous asbestos abatement projects;
 - (d) Satisfactory in-use written standard operating procedures for employee respiratory protection, overall work practices, worker and public protection practices, and bulk and air sampling procedures for asbestos abatement activities; and
 - (e) Applicant's competence in the performance of asbestos abatement activities, as documented by:
 - 1. A description of any asbestos abatement activities conducted by the applicant that have been terminated prior to completion including the circumstances of the termination;

2. A list of any contractual penalties that the applicant has paid for breach of or noncompliance with contract specifications for asbestos abatement activities;
3. Identification of any citations levied against the applicant by any Federal, State or local governmental agencies for violations relating to asbestos abatement;
4. A description of all legal proceedings, law suits, or claims that have been filed or levied against the applicant for asbestos-related activities;
5. A training process for applicant's employees in the hazards and procedures of asbestos abatement activities; and
6. The availability of personal and public protective equipment appropriate to asbestos abatement activity.

- (4) The Director shall license contractors whose qualifications meet or exceed the criteria set forth in this Rule. Any license issued in accordance with this Rule shall be valid for a period of time not to exceed three years. Any contractor holding a valid license on June 30, 1996 shall be considered to hold a valid license until June 30, 1996.

Rule 391-3-14-.05. Asbestos Supervisor Training.

- (1) From and after July 1, 1996, no person shall be employed as an asbestos supervisor unless that person has satisfactorily completed training in the removal and abatement of asbestos as described in Rule [391-3-14-.06](#).
- (2) Evidence of satisfactory training shall be available for review by the Division at all project sites which are being supervised.

Cite as Ga. Comp. R. & Regs. R. 391-3-14-.05

Authority: The Georgia Asbestos Safety Act, O.C.G.A. Sec. [12-12-1](#) *et seq.*

History. Original Rule entitled "Asbestos Supervisor Training" adopted. F. Jun. 3, 1996; eff. Jun. 23, 1996.

Rule 391-3-14-.06. Asbestos Abatement Training Criteria.

- (1) Contractors and supervisors must have completed initial and annual update courses approved by the Director in supervision of asbestos abatement projects and have satisfactorily completed an examination with a passing grade of at least 70 percent. To be approved, the training shall meet or exceed the following criteria:
 - (a) The initial training course shall consist of 32 hours or more, and provided, at a minimum, information on the following topics:
 1. The physical characteristics of asbestos including fiber size, aerodynamic characteristics and physical appearance;
 2. The health hazards of asbestos including the nature of asbestos related diseases, routes of exposure, dose-response relationships, synergism between cigarette smoking and asbestos exposure, latency period for disease and health basis for standards;
 3. Employee personal protective equipment including the classes and characteristics of respirator types, limitations of respirators, proper selection, inspection, donning, use, maintenance and storage procedures, methods for field testing of the face piece-to-face seal (positive and negative pressure fitting tests), qualitative and quantitative fit testing procedures, variability between field and laboratory protection factors, factors that alter respirator fit (e.g., facial hair), the components of a proper respiratory protection program, selection and use of personal protective clothing, use, storage and handling of launderable clothing, non-slip footwear, gloves, eye-protection and hard hats, procedures and requirements of [29 CFR 1926.58](#) and [29 CFR 1910.134](#), benefits of medical monitoring and employee access to records;
 4. Air monitoring procedures and requirements included under [29 CFR 1926.58](#) including a description of equipment and methods, reasons for air monitoring, types of samples and current standards with proposed changes;
 5. State-of-the-art work practices for asbestos abatement activities including purpose, proper construction and maintenance of barriers and decontamination enclosure systems, posting of warning signs, electrical and ventilation system lock-out, proper working techniques of minimizing fiber release, use of wet methods and surfactants, use of negative pressure ventilation equipment, use of HEPA vacuums and proper clean-up disposal procedures. Work practice requirements as they apply to removal, encapsulation, enclosure and repair shall be discussed individually;
 6. Personal hygiene including entry and exit procedures for the work area, use of showers and prohibition of eating, drinking, smoking and chewing (gum or tobacco) in the work area;

7. Additional safety hazards that may be encountered during abatement activities and how to deal with them including electrical hazards, heats stress, air contaminants other than asbestos, fire and explosion hazards, scaffold and ladder hazards, slips, trips and falls confined spaces and noise; and
 8. The requirements, procedures and standards established by:
 - (i) 40 CFR Part 61, Subpart M; and
 - (ii) 40 CFR Part 763, Subpart E.
- (b) The annual update course shall consists of 8 hours or more and at a minimum. adequately review the topics in subsection (a), update information on state-of-the-art procedures and equipment and review regulatory changes and interpretations. Such training shall have been completed within 12 months of completion of previous training.
2. Approval of initial and update courses.
 - (a) Any person responsible for conducting asbestos abatement training and examination who has received approval from the State of Georgia for such training and examination prior to April 1, 1996 shall be considered to have approval from the Director under these Rules and Regulations.
 - (b) After April 1, 1996, persons responsible for conducting asbestos abatement training and examination shall submit adequate documentation of the course content and coverage, as well as examination practices, top enable the Director to determine that the course meets the requirements of their Rule. Approval will be granted by a letter from the Director, with any conditions or term limits deemed appropriate by the Director.

Rule 391-3-14-.07. Licensing By Reciprocity.

- (1) Any person requesting licensing by reciprocity shall complete and submit an approved application form, together with a copy of the applicant's valid license or certificate or equivalent issued by another State, territory or possession of the United States.

- (2) Reciprocity privileges are granted to contractors or asbestos foremen holding valid licenses or certificates from outside the State of Georgia only when the standards of such licenses are not less than those in Georgia, and reciprocity privileges are granted to licensed contractors of Georgia.

Rule 391-3-14-.08. Refusal, Suspension and Revocation of License.

- (1) The Director may refuse to grant a license to an applicant or may revoke or suspend the license of a person licensed upon a finding that the licensee or applicant has:
 - (a) Made any false statement or given any false information in connection with an application for license, including an application for renewal thereof;
 - (b) Violated the Act or violated any rule or regulation promulgated pursuant to the authority contained in the Act; or
 - (c) Failed to demonstrate the qualifications or standards for licensure contained in this Chapter, It shall be incumbent upon the applicant to demonstrate to the satisfaction of the Director that he meets all the requirements for licensure; and, if the Director is not satisfied as to the applicant's qualifications, he shall have the power to deny such licensure.
- (2) Review of a decision of the Director under this Chapter shall be in accordance with Chapter 13 of Title 50, the "Georgia Administrative Procedures Act."

Rule 391-3-14-.09. Exemptions.

- (1) Any person who is licensed under Chapter 14 of Title 43 shall be exempt from the licensing and training requirements of this Chapter when performing asbestos removal or installation which is incidental to the performance of the business or profession for which said person is licensed and when the project involved includes less than:
 - (a) Ten continuous linear feet of material constructed of asbestos; or

- (b) Ten square feet of material constructed of asbestos.

- (2) Any project involving less than the amounts in (1)(a) or (1)(b) above shall be exempt from the project notification required by the Rule [391-3-14-.02\(2\)](#) and the project fee required by Rule [391-3-14-.03](#).

Subject 391-3-15. UNDERGROUND STORAGE TANK MANAGEMENT.

[Rule 391-3-15-.01. General Provisions.](#)

- (1) **Purpose.** These Rules and Regulations (Rules) are promulgated for the purpose of protecting and enhancing the quality of Georgia's environment and of protecting the public health, safety, and well-being of its citizens and of instituting and maintaining a comprehensive Statewide program for the management of regulated substances stored in underground tanks.

- (2) **Authority**
 - (a) These Rules are issued under the authority of the Georgia Underground Storage Tank Act (GUSTA), Official Code of Georgia Annotated (O.C.G.A.) § [12-13-1](#)*et seq.* (1988), as amended.

 - (b) The Director of the Environmental Protection Division (Director) or his authorized representative or an authorized contractor or agent of the Department upon presentation of his credentials, shall have a right to enter upon, into or through premises of persons subject to GUSTA, or premises whereon a violation of GUSTA or these Rules is reasonably believed to be occurring or causing impact or is reasonably believed to be about to occur or cause impact. The Director or his

authorized representative shall have the right to investigate, take samples, copy all records relating to underground storage tanks, and inspect in accordance with the following purposes:

1. to determine whether any person subject to the requirements of GUSTA is in compliance with these Rules;
 2. to investigate conditions relating to underground storage tanks (UST) or UST management practices where the Director is in possession of information sufficient to form a reasonable belief that a violation of GUSTA or these Rules is occurring or is about to occur; or
 3. to determine whether there has been a violation of any of the provisions of GUSTA or these Rules, or any permit or order issued pursuant to GUSTA and these Rules.
- (c) In the event any person does not consent to an inspection or investigation, the Director or his authorized representative may seek to obtain a warrant authorizing the inspection or investigation pursuant to O.C.G.A. § [12-13-8\(b\)](#) and § [12-2-2\(d\)](#).
- (d) EPD or its contractors may enter upon the property of the owner or operator, at such time and in such manner as deemed necessary, to effectuate the necessary corrective action to protect health and the environment.
- (e) The Director, an authorized employee of the Department, or an authorized contractor or agent of the Department, upon presentation of his or her credentials, shall have a right to enter upon, to, or through premises of persons subject to GUSTA or premises whereon a release of a regulated substance in violation of GUSTA or the rules and regulations adopted pursuant to GUSTA is reasonably believed to be occurring or is reasonably believed to have previously occurred to investigate, take samples, copy all records relating to storage of regulated substances in underground storage tanks, and inspect for compliance with the requirements imposed under GUSTA or these Rules, or any permit or order issued pursuant to GUSTA or these Rules in order to determine whether such a current release or past release exists and to conduct appropriate corrective action for any release which may currently exist or may have existed.

(3) Reference.

- (a) Any reference in these Rules to standards, procedures, and requirements of Title 40 of the Code of Federal Regulations (40 CFR) Part 280 shall constitute the full adoption by reference of the Part, Subpart, and Paragraph so referenced including any notes and appendices as may be associated, as amended through July 15, 2015, unless otherwise stated.

- (b) When used in any such provisions as may be adopted from 40 CFR Part 280: implementing agency or state implementing agency shall mean Environmental Protection Division (EPD); and Regional Administrator or Director of the implementing agency shall mean Director of the Environmental Protection Division. Unless specifically indicated otherwise, any reference to implementation by, submissions to, or inspections, investigations or enforcement by the EPA in such Regulations as may be adopted by reference by these Rules shall be construed to mean EPD unless such interpretation would be inconsistent with the intent of the Georgia Underground Storage Tank Act (GUSTA).
- (c) Any reference in 40 CFR Part 280, or in any provisions adopted by reference from 40 CFR Part 280, to EPA forms or reports shall mean EPD forms and reports as may be provided by the Director.

Rule 391-3-15-.03. Definitions.

- (1) [40 CFR 280.12](#) is hereby incorporated by reference, with the exception of the definition for "Replace". In addition, the following words or terms shall have the meanings set forth herein when used in these Rules:
- (a) "Controlling interest" means direct or indirect ownership of at least 50 percent of the voting stock of another entity.
 - (b) "Corrective action" means those activities required for response to and cleanup of releases of regulated substances from underground storage tanks, including, but not limited to, initial response, initial abatement measures and site check, initial site characterization, free product removal, investigations for soil and groundwater cleanup, and preparation and implementation of a corrective action plan.
 - (c) "Department" means the Department of Natural Resources of the State of Georgia.
 - (d) "Director" means the Director of the Environmental Protection Division of the Department of Natural Resources.
 - (e) "EPD" means the Environmental Protection Division of the Department of Natural Resources of the State of Georgia.
 - (f) "Federal Act" means the Solid Waste Disposal Act, [42 U.S.C., § 3152](#) et seq., as amended, particularly by the Hazardous and Solid Waste Amendments of 1984, Public Law 98-616, [42 USC, § 6991](#) et seq., as amended by Public Law 99-499, 1986, as further amended by Public Law 109-58, 2005.
 - (g) "Jobber" means anyone who distributes petroleum product from a bulk storage plant to an UST owner or operator, or purchases petroleum product from a terminal for distribution to an UST owner or operator.
 - (h) "Owner" means, in the case of an UST system in use on November 8, 1984, or brought into use or capable of being used after that date, any person who owns an UST system used for or capable of being used for the storage or dispensing of regulated substances and, in the case of any UST system in use before November 8, 1984, but no longer in use or capable of being used on or after November 8, 1984, any person who owned such UST immediately before the discontinuation of its use; provided, however, such term shall not include any person who, without participating in the management of an underground storage tank and otherwise not engaged in petroleum production, refining, and marketing, holds indicia of ownership primarily to protect that person's security interest in the underground storage tank.
 - (i) "Participating owner or operator" means an owner or operator of an UST who participates in the GUST Trust Fund as a financial assurance mechanism.

- (j) "Petroleum" means petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute).
- (k) "Petroleum product" means petroleum-based substance comprised of a complex blend of hydrocarbons such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.
- (l) "Plume" means the area of groundwater containing concentrations of petroleum constituents or other regulated substances above Estimated Quantitation Limits as established in Test Methods for Evaluating Solid Waste (United States Environmental Protection Agency, Office of Solid Waste and Emergency Response, SW-846, Third Edition, as revised) or in an alternate method approved by EPD.
- (m) "Release Response" means, in addition to certain corrective action activities, those actions taken as initial response, initial abatement measures and site check, initial site characterization, and free product removal.
- (n) "Replace" means,
 - (1) When referring to an underground storage tank, the removal of an existing UST and the installation of another UST in its place.
 - (2) When referring to piping, the removal and replacement of 25% or more of the existing piping, as measured along an existing piping run between the submersible pump connection for the pressurized pump system or UST surface for suction pump systems to the bottom of the shear valve below the dispenser.
- (o) "Responsibility for" means either the right or authority to close an UST or maintain and repair an UST or take action for compliance with all or part of the requirements of GUSTA and these Rules.
- (p) "Terminal" means a bulk storage facility for storing petroleum products supplied by pipeline or marine vessel.
- (q) "Third party liability" insofar as GUST Trust Fund usage is concerned means liability for bodily injury or property damage caused directly by a release of petroleum products from an underground storage tank; however, it does not include or mean any liability for bodily injury or property damage to the person or property of the owner of the real property on which the USTs are located.
 - 1. As to bodily injury, specific physical bodily injury proximately resulting from exposure, explosion, or fire caused by the presence of a release from a regulated underground storage tank and which is incurred by a person other

than the owner or operator, the landlord of the owner or operator, employees or agent of an owner or operator, or employees or agents of the landlord of an owner or operator; and

2. As to property damage, actual physical damage or damage due to specific loss of normal use of property owned by a person other than either the owner or operator of an underground storage tank from which a release has occurred or the landlord of an owner or operator of the underground storage tank from which a release has occurred.

(r) "Trustee" means the Director of the Environmental Protection Division of the Department of Natural Resources.

Rule 391-3-15-.04. Confidentiality of Information.

- (1) Any records, reports, or information obtained from any person by the Director under these Rules shall be available to the public for inspection and copying at the expense of the person requesting copies, except that upon a showing satisfactory to the Director by any person that any records, reports, or information or any particular part thereof, to which the Director has access under these rules would, if made public, divulge information entitled to protection or confidentiality under GUSTA, the Director shall consider confidential such information or any particular portion thereof in accordance with the purposes of GUSTA. However, such records, reports, documents, or information may be disclosed to officers, employees or authorized representatives of the United States government or the State of Georgia concerned with carrying out the terms of the Federal Act, or when required by any court in any proceedings under the Federal Act or under GUSTA.
- (2) Any claim of confidentiality filed pursuant to this section must be asserted at the time of initial submission of the record, report, or information in question or it shall be deemed waived.
- (3) Any claim of confidentiality filed pursuant to this section must be accompanied by a statement of the legal basis supporting the claim of confidentiality.

Rule 391-3-15-.05. UST Systems: Design, Construction, Installation and Notification.

- (1) 40 CFR Part 280, Subpart B is hereby incorporated by reference, except for the following:
 - (a) Each reference to "October 13, 2015" shall be replaced by "December 15, 2017".
 - (b) Each reference to "April 11, 2016" shall be replaced by "April 7, 2008".
- (2) For purposes of performance standards for new UST systems, as required in [40 CFR 280.20](#), any tank previously installed and subsequently removed must be recertified by the manufacturer or by an authorized representative of the manufacturer or by a Georgia-registered Professional Engineer and shall comply with the secondary containment requirements in accordance with 391-3-15-.05(1) prior to installation as an UST.
- (3) For purposes of notification of USTs, as required in [40 CFR 280.22](#), owners shall use forms as prescribed by the Director.
- (4) Annual Registration of USTs.
 - (a) The owner or operator of an UST for which notification should have previously been submitted pursuant to O.C.G.A. [12-13-13](#) and which has not been properly closed in accordance with [391-3-15-.11](#), but is in use or capable of being used, shall submit to EPD an UST Registration Form by December 31 of each year.
 - (b) The UST Registration Form shall be submitted by the UST owner for all USTs at all UST facilities on forms furnished by EPD and shall provide such information as may reasonably be required by EPD which, at a minimum, shall include the following:
 1. Name and address of facility at which USTs are located.

2. Name and address of owner and current Class A and Class B operators of USTs at the facility location in 1. immediately above.
 3. Size and identification of USTs at the facility location indicated in 1. above.
 4. Certification that the financial responsibility requirements of Rule [391-3-15-.12](#) have been met, including:
 - (i) the mechanism utilized to provide such financial responsibility; and
 - (ii) if the mechanism is the Georgia Underground Storage Tank Trust Fund, the financial assurance mechanism used for the \$10,000 deductible.
 5. Changes in owners, operators, upgrades, replacement of UST systems and changes in service from either the initial notification form filed or from the last annual notification filed, whichever is later.
 6. Method of leak detection for lines and USTs and verification that leak detection requirements are being met.
 7. Verification that spill and overfill devices and, if applicable, corrosion protection mechanisms are properly installed and operationally functional.
 8. Verification that, as of April 7, 2008, all new or replaced USTs, piping or motor fuel dispensers have been properly installed and meet the secondary containment requirements set forth in 391-3-15-.05(1).
- (c) If an UST is brought into service during the year, an Annual UST Registration Certificate for the facility for the year in which the UST was brought into service shall be issued by EPD after the receipt of the initial notification of USTs, as required under paragraph 391-3-15-.05(1).
- (d) The Annual UST Registration Certificate, as provided by EPD, for each underground storage tank facility shall be conspicuously posted and displayed at each UST facility, an alternate location approved by EPD or a copy of such form shall be provided by the facility to each person placing regulated substances into the UST. It shall be a violation of O.C.G.A. [12-13-5](#) and these Rules to either fail to file an annual UST notification or to fail to conspicuously post and display the Annual UST Registration Certificate at an UST facility or provide a copy such that any person placing regulated substances in an UST can determine that the Annual UST Registration Certificate is current.

- (e) No person may place a regulated substance in a regulated UST unless they have verified that the facility has a valid Annual UST Registration Certificate. Such verification shall be performed by December 31 of each year.

Rule 391-3-15-.09. Release Response and Corrective Action for UST Systems Containing Petroleum.

- (1) 40 CFR Part 280, Subpart F is hereby incorporated by reference.

- (2) Corrective action plans (CAPs), Part A for reporting completed release response activities and for summarizing the proposed site investigation, including a schedule for submittal of a CAP - Part B, and Part B for reporting the results of the site investigation and for summarizing the proposed soil and groundwater corrective action objectives and the activities required to meet those objectives, shall be submitted to the Division on such forms as provided by the Environmental Protection Division, Georgia Department of Natural Resources. The plans must include certifications by the UST owner or operator, in the format specified, that the plans are factual and meet all the criteria and requirements of these Rules and other environmental laws and regulations of the State of Georgia. The plans must also be stamped or sealed by a Georgia-registered Professional Engineer or Professional Geologist. The Corrective Action Plan - Part A shall be submitted in lieu of the initial abatement report, the initial site characterization report, and the free product removal report, as referenced by [40 CFR 280.62\(b\)](#), [280.63\(b\)](#), and [280.64\(d\)](#), respectively, and must be submitted to EPD within 60 days after release confirmation.
- (3) A Corrective Action Plan - Part B must be submitted when one or more of the conditions listed in subparagraphs (a) through (e) below are encountered:
- (a) Free product exceeds one-eighth inch (1/8") thickness or an alternate thickness, as required by EPD;
 - (b) Groundwater or surface water contamination exceeds federal and state in-stream water quality standards, as established by the Georgia Rules for Water Quality Control (Chapter 391-3-6, as amended);
 - (c) Groundwater contamination exceeds federal and state Maximum Contaminant Levels for Safe Drinking Water, and either:
 - (i) The plume is located in an area of average or higher groundwater pollution susceptibility, as defined by the Ground-Water Pollution Susceptibility Map of Georgia (Georgia Department of Natural Resources, Environmental Protection Division, Georgia Geologic Survey, 1992), within two (2) miles of a point of withdrawal for a public water system, as defined in the Georgia Rules for Safe Drinking Water (Chapter 391-3-5, as amended), and/or within one-half (1/2) mile of a point of withdrawal for a non-public water system; or
 - (ii) The plume is located in an area of lower groundwater pollution susceptibility within one (1) mile of a point of withdrawal for a public water system and/or within one-quarter (1/4) mile of a point of withdrawal for a non-public water system;
 - (d) Concentrations of volatile organic compounds and/or polynuclear aromatic hydrocarbons, as appropriate, in soil exceed:
 - (i) Threshold levels listed in Table A; or

(ii) Threshold levels listed in Table B; or

(iii) Alternate threshold levels, as approved by EPD.

Table A. Petroleum Constituents and Soil Threshold Levels^a At UST corrective action sites where withdrawal points for public and nonpublic water supplies do not exist within distances defined in GUST Rule 391-3-15-.09(3):				
CONSTITUENT	AVERAGE OR HIGHER GROUNDWATER POLLUTION SUSCEPTIBILITY AREA ^b (Where public water supplies exist with 2.0 miles and/or non-public supplies exist within 0.5 miles)		LOWER GROUNDWATER POLLUTION SUSCEPTIBILITY AREA ^c (Where public water supplies exist within 1.0 mile and/or non-public supplies exist within 0.25 mile)	
	=500 feet to withdrawal point	>500 feet to withdrawal point	=500 feet to withdrawal point	>500 feet to withdrawal point
VOLATILE ORGANIC COMPOUNDS	=500 feet to withdrawal point	>500 feet to withdrawal point	=500 feet to withdrawal point	>500 feet to withdrawal point
Benzene ^e	0.005 mg/kg ^d	0.008 mg/kg	0.005 mg/kg	0.71 mg/kg
Toluene	0.400 mg/kg	6.00 mg/kg	0.400 mg/kg	500.00 mg/kg
Ethylbenzene	0.370 mg/kg	10.00 mg/kg	0.500 mg/kg	140.00 mg/kg
Xylenes (total)	20.00 mg/kg	700.00 mg/kg	27.00 mg/kg	700.00 mg/kg
POLYNUCLEAR AROMATIC HYDROCARBONS				
Acenaphthene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Anthracene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Benz(a)anthracene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Benzo(a)pyrene	0.660 mg/kg ^d	N/A ^e	N/A ^e	N/A ^e
Benzo(b)fluoranthene	0.820 mg/kg ^d	N/A ^e	N/A ^e	N/A ^e

Benzo(g,h,i)perylene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Benzo(k)fluoranthene	1.60 mg/kg ^{df}	N/A ^e	N/A ^e	N/A ^e
Chrysene	0.660 mg/kg ^{df}	N/A ^e	N/A ^e	N/A ^e
Dibenz(a,h)anthracene	1.50 mg/kg ^{df}	N/A ^e	N/A ^e	N/A ^e
Fluoranthene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Fluorene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Indeno(1,2,3,- c,d)pyrene	0.660 mg/kg ^d	N/A ^e	0.660 mg/kg ^d	N/A ^e
Naphthalene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Phenanthrene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Pyrene	N/A ^e	N/A ^e	N/A ^e	N/A ^e

a -	Based on worst-case assumptions for one-dimensional vadose zone and groundwater contaminant fate and transport models.
b -	Based on an assumed distance of 0.5 feet between contaminated soils and the water table.
c -	Based on an assumed distance of 5.0 feet between contaminated soils and the water table.
d -	Estimated Quantitation Limit. The health-based threshold level is less than the laboratory method limit of detection.
e -	Not applicable. The health-based threshold level exceeds the expected soil concentration under free product condition.
f -	In order to protect surface waters, the soil threshold level in Table B may supersede that found in Table A.
g -	In the presence of other petroleum contaminants in concentrations exceeding 1.0 mg/kg the Estimated Quantitation Limit, and hence the soil threshold level, may be substantially greater, as approved by EPD.

Table B. Petroleum Constituents and Soil Threshold^a Levels At other UST corrective action sites where withdrawal points for public and nonpublic water supplies do not exist within distances defined in GUST Rule 391-3-15-.09(3):

CONSTITUENT	AVERAGE OR HIGHER GROUNDWATER POLLUTION	LOWER GROUNDWATER POLLUTION
-------------	---	-----------------------------

	SUSCEPTIBILITY AREA ^b		SUSCEPTIBILITY AREA ^e	
	=500 feet to surface water body	>500 feet to surface water body	=500 feet to surface water body	>500 feet to surface water body
VOLATILE ORGANIC COMPOUNDS				
Benzene ^e	0.017 mg/kg	0.120 mg/kg	0.020 mg/kg	11.30 mg/kg
Toluene	115.00 mg/kg	500.00 mg/kg	135.00 mg/kg	500.00 mg/kg
Ethylbenzene	18.00 mg/kg	140.00 mg/kg	28.00 mg/kg	140.00 mg/kg
Xylenes (total)	700.00 mg/kg	700.00 mg/kg	700.00 mg/kg	700.00 mg/kg
POLYNUCLEAR AROMATIC HYDROCARBONS				
Acenaphthene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Anthracene	N/A ^e	N/A ^e	N/A ^e	N/A ^e

Chrysene	0.660 mg/kg ^d	N/AN/A ^e	N/A ^e	N/A ^e
Dibenz(a,h)anthracene	0.660 mg/kg ^d	N/A ^e	N/A ^e	N/A ^e
Fluoranthene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Fluorene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Indeno(1,2,3,-c,d)pyrene	0.660 mg/kg	N/A ^e	0.660 mg/kg ^d	N/A ^e

Naphthalene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Phenanthrene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
Pyrene	N/A ^e	N/A ^e	N/A ^e	N/A ^e
a	Based on worst-case assumptions for one-dimensional vadose zone and groundwater contaminant fate and transport models.			
b	Based on an assumed distance of 0.5 feet between contaminated soils and the water table.			
c	Based on an assumed distance of 5.0 feet between contaminated soils and the water table.			
d	Estimated Quantitation Limit. The health-based threshold level is less than the laboratory method limit of detection.			
e	Not applicable. The health-based threshold level exceeds the expected soil concentration under free product condition.			
f	In the presence of other petroleum contaminants in concentrations exceeding 1.0 mg/kg, the Estimated Quantitation Limit, and hence the solid threshold level, may be substantially greater, as approved by EPD.			

- (e) EPD has determined that, because of unique geologic, hydrologic or other site-specific conditions, a Corrective Action Plan - Part B is necessary to adequately protect human health and the environment.
- (4) If a Corrective Action Plan - Part B must be proposed in compliance with paragraph 391-3-15-.09(3) above, the full extent of groundwater and surface water contamination must be delineated and one or more of the following corrective action objectives for contaminated soil, surface water, and groundwater, as applicable, in subparagraphs (a) through (d) below must be proposed and implemented upon approval by EPD:
- (a) Remediate soil contamination that exceeds the threshold levels listed in Table A or Table B or exceeds alternate threshold levels approved by EPD, as applicable;
 - (b) Remediate free product that exceeds one-eighth inch (1/8") thickness or an alternate thickness, as approved by EPD;
 - (c) Remediate groundwater contamination that exceeds federal and state Maximum Contaminant Levels where drinking water supplies exist within the distances defined in subparagraph (3)(c)(i) or (ii) above, as applicable, or that exceeds in-stream water quality standards, as applicable, or alternate concentration limits as required by EPD;

- (d) Determine alternate concentration limits for soil and groundwater corrective action through the use of an appropriate risk assignment, as determined by EPD, that demonstrates that the objectives in (a) and (c) above are not necessary to protect human health and the environment. The request for alternate concentration limits must explain clearly and concisely how these alternate concentration limits will adequately protect human health, safety, and the environment and shall not be utilized unless approved by EPD. Upon approval of proposed alternate concentration limits by EPD, the owner or operator must either:
1. Remediate contaminated soils and/or groundwater to approved alternate concentration limits and monitor the soils and/or the plume to validate and verify predictions of the risk assessment, including the natural degradation of petroleum contaminants, unless such monitoring is deemed unnecessary by EPD; or
 2. If remediation of contaminated soils and/or groundwater is not necessary, monitor the soils and/or the plume to validate and verify predictions of the risk assessment, including the natural degradation of petroleum contaminants, unless such monitoring is deemed unnecessary by EPD;
- (5) An owner or operator may transport or provide for transportation of petroleum contaminated soil only to storage, treatment or disposal facilities which have all applicable local, state and federal permits and such facility or facilities shall be designated in the applicable corrective action plan.
- (6) Upon completion of corrective action, the UST owner or operator must certify in the completion report, in the format specified, that the CAP was implemented completely and correctly and that the objectives of the corrective action have been achieved.
- (7) An owner or operator conducting a corrective action with funds from a source other than the Georgia Underground Storage Tank Trust Fund, may remediate contaminated soil or groundwater to more stringent objectives than those of paragraph 391-3-15-.09(4) at the owner or operator's discretion.
- (8) All determinations of petroleum contaminants in soil or groundwater must be performed in conformity with Test Methods for Evaluating Solid Waste (United States Environmental Protection Agency, Office of Solid Waste and Emergency Response, SW-846, Third Edition, as revised) or with an alternate method, as approved by EPD.

Rule 391-3-15-11. Out-of-Service UST Systems and Closure.

- (1) 40 CFR Part 280, Subpart G is hereby incorporated by reference.
- (2) The owner or operator, or past owner or operator, of an UST system, in service on or after January 1, 1974, but taken out of service or abandoned before December 22, 1988, is not required to conduct closure activities or submit closure documents. However, corrective action is required if contamination is subsequently discovered.
- (3) For all UST systems permanently closed after the effective date of these rules, a closure report, prepared on such forms as provided by EPD, must be submitted to EPD by the owner within 45 days of completion of closure.

Rule 391-3-15-.13. Georgia Underground Storage Tank (GUST) Trust Fund.

- (1) Administration.
 - (a) Funding the GUST Trust Fund.
 1. **Environmental Assurance Fee (EAF).** In order to participate in the liability limitations and reimbursement benefits of the GUST Trust Fund, commencing on July 1, 1988, an UST owner or operator shall pay to EPD an EAF on each gallon of petroleum products imported into Georgia. The EAF was 0.1¢ per gallon from July 1, 1988 through September 30, 1991; 0.2¢ per gallon from October 1, 1991 through September 30, 1996; 0.5¢ per gallon from October 1, 1996 through June 30, 2013; and the EAF is 0.75¢ per gallon effective July 1, 2013. This fee is established to assure the funding of emergency, preventive, or corrective actions necessary when public health or safety is, or potentially may be, threatened from a release of regulated substances from an UST and to provide compensation for third-party liability.
 - (i) **Point of EAF Collection.** This fee shall be collected by the terminal operator or jobber upon request of the UST owner or operator when

the petroleum product is removed from a terminal, or if the petroleum product will never be stored in a terminal in Georgia, then by the importer thereof and paid to EPD. Proof of such payment shall be provided the UST owner or operator by the terminal operator or jobber. Exchanges of petroleum products on a gallon-for-gallon basis within a terminal shall be exempt from this fee. Petroleum product which is subsequently exported from Georgia is exempt from this fee. An UST owner or operator purchasing petroleum products from an out-of-state terminal operator or jobber must remit the EAF directly to EPD, unless the terminal operator or jobber agrees to remit the EAF for the owner or operator.

- (ii) **Timetable for Remittance.** EAFs shall be remitted to EPD quarterly. Terminal operators remitting collected EAFs may be required to provide EPD with a list(s) of owners or operators who elected or declined payment of EAFs. Fees are due to EPD on the 20th day of each October, January, April, and July for the previous three month period. The EAF payment shall be accompanied by such forms as may be prescribed by the Director. If a terminal operator, direct importer or direct pay owner or operator has good cause for an extension of time, he may apply to the Director for additional time to file his EAF payment. Such application must be made to the Director before the payment becomes delinquent and must state all facts giving rise to the necessity for additional time. If the Director grants an extension, such extension may not exceed 30 days.

- 2. **Civil Penalties.** All civil penalties recovered by the Director as provided in O.C.G.A. § [12-13-19](#) shall be paid into the GUST Trust Fund.

(b) **Establishing GUST Trust Fund Eligibility.**

- 1. **Notification Requirements for UST Systems.** In order to participate in the GUST Trust Fund as a financial assurance mechanism, each owner or operator of an UST currently in use must have submitted notification forms as required in Rule [391-3-15-.05\(3\)](#).
- 2. **Eligibility For Existing UST Systems.**
 - (i) **Initial Election.** All owners or operators of existing USTs who elect to participate in the GUST Trust Fund as a financial assurance mechanism under Rule [391-3-15-.12](#), as of July 1, 1988, must:
 - (I) pay the EAF on each gallon of petroleum product purchased after July 1, 1988; or

- (II) the owner or operator purchasing petroleum product from an out-of-state terminal operator or jobber must remit the EAF for each gallon thus purchased after July 1, 1988 directly to EPD unless the terminal operator or jobber agrees to remit the EAF to EPD for the owner or operator; and
 - (III) report any known or suspected leaks from an existing UST. Meeting these conditions automatically makes a tank owner or operator a participant in the GUST Trust Fund, and no specific notice to EPD is required to confirm such participation. Any tank owner or operator who elects not to participate in the GUST Trust Fund must make a written declaration of that election to the Director and to the terminal operator or jobber.
- (ii) **Subsequent Election.** All owners or operators of existing USTs who elect to participate in the GUST Trust Fund as a financial assurance mechanism under Rule [391-3-15-.12](#), ninety (90) or more days after July 1, 1988, or who elect to participate in the GUST Trust Fund as a financial assurance mechanism under Rule [391-3-15-.12](#) after there has been an interruption in GUST Trust Fund participation subsequent to the initial or subsequent election to participate either by the current owner or operator or the current owner or operator's predecessor in title, must:
- (I) perform and pass a tank system precision tightness test, the results of which must be acceptable to EPD;
 - (II) perform a site check of the UST site in accordance with [40 CFR 280.52\(b\)](#), the results of which must be acceptable to EPD;
 - (III) remit to EPD all EAFs which would have been collected under the provisions of Rule 391-3-15-.13(1)(b)2.(i), including an amount equal to any interest which would have accrued to those monies had they been remitted from July 1, 1988, or from the date of the interruption of participation in the GUST Trust Fund, as determined by EPD, provided there has not been a release of petroleum that has not been remediated in accordance with these Rules; and
 - (IV) comply with (b)2.(i) of this paragraph.

(iii) **Subsequent Election for New Owners or Operators.**

Notwithstanding the foregoing, in subsection (ii) above, all owners or operators who acquire a new interest or ownership in existing USTs through purchase or other transfer of title which are not covered by the GUST Trust Fund as a financial assurance mechanism as provided under Rule [391-3-15-.12](#) at the time of the acquisition may elect to participate in the GUST Trust Fund as a financial assurance mechanism under Rule [391-3-15-.12](#) for those USTs so acquired. The new owner or operator, in order to participate in the GUST Trust Fund as a financial assurance mechanism under Rule [391-3-15-.12](#), must, within one (1) year from the date of acquisition:

- (I) perform and pass a tank system precision tightness test, the results of which must be acceptable to EPD;
- (II) perform a site check of the UST site in accordance with [40 CFR 280.52\(b\)](#), the results of which must be acceptable to EPD;
- (III) remit to EPD all EAFs from the date of the acquisition of the USTs by the new owner or operator under the provisions of Rule 391-3-15-.13(1)(b)2.(i), provided that prior to the initial EAF payment herein there has not been a release of petroleum that has not been remediated in accordance with these Rules;
- (IV) submit a sworn statement by the new owner that the owner from whom the USTs are being or were acquired has no controlling interest in the new owner; and
- (V) comply with (b)2.(i) of this paragraph.

3. **Eligibility For New USTs Installed After July 1, 1988.** All owners or operators of new USTs who elect to participate in the GUST Trust Fund as a financial assurance mechanism under Rule [391-3-15-.12](#) must:

- (i) comply with all requirements of Rule [391-3-15-.05](#), Rule [391-3-15-.06](#) and Rule [391-3-15-.07](#); and
- (ii) comply with all requirements under the provision of Rule 391-3-15-.13(1)(b)2.(i).

- (c) **Maintaining GUST Trust Fund Eligibility.** In order to maintain eligibility for GUST Trust Fund disbursements, all participating owners or operators of UST systems must satisfy the following requirements:
1. **Reporting Changes in UST Status.** The participating owner or operator shall notify EPD in writing of any of the following changes in UST status:
 - (i) change in ownership; or
 - (ii) closure.
 2. **Payment of EAF.** Payment of EAFs must be made for each UST until such time as closure requirements are satisfied.
 3. **Recordkeeping.** The participating owner or operator shall maintain the following records for each UST and make them available to EPD:
 - (i) records of any tank system tightness tests as required in 391-3-15-.13(1)(b);
 - (ii) receipts for any and all EAF payments, whether remitted directly or indirectly to EPD;
 - (iii) records of compliance with operator training and examination, release detection, secondary containment, interstitial monitoring and under dispenser containment requirements per Rules [391-3-15-.05](#) and [391-3-15-.16](#); and
 - (iv) proof of payment of EAFs as required by O.C.G.A. § [12-13-18\(a\)](#) for the time period prior to September 2000 is presumed from the filing of the Annual Tank Registration form for 2001, in accordance with Rule [391-3-15-.05\(4\)](#), indicating that the method of Financial Responsibility for the USTs at the time of filing was participation in the GUST Trust Fund as provided in Rule [391-3-15-.12](#), if payment of the most recent EAF for the registered tank has been made. This presumption shall be overcome and no longer effective if payment of such fees cannot be verified by records of EPD, the station owner, the UST owner or operator, or the terminal operator, maintained in accordance with Rule 391-3-15-.13(1)(c)4.(i) or any other relevant provision of law.
 - (v) any records as may be required by EPD.
 4. **Retention of Records.**

(i) All records identified in (c)3. above shall be retained for a period of thirty-six (36) months or until one of the following is accomplished, whichever comes first:

(I) ownership of an UST, and all records pertaining thereto, are transferred to a new owner for retention; or

(II) owner or operator is instructed otherwise by EPD.

5. **Reporting of Suspected Leaks or Spills.** The participating owner or operator shall report to EPD any suspected leak or spill of petroleum product.

6. **Loss of GUST Trust Fund Coverage.** Whenever the Director has reason to believe that a participating owner or operator has failed to maintain GUST Trust Fund eligibility pursuant to these Rules, the Director shall issue a notice of violation. The participating owner or operator shall have 30 days from receipt of such notice to provide evidence of compliance with all GUST Trust Fund eligibility requirements or take all necessary steps to correct such violation. If, after 30 days, the participating owner or operator fails to resolve the notice of violation, the Director shall issue a notice of termination of GUST Trust Fund eligibility. Within 60 days of such notice of termination, the owner or operator must provide an alternate financial assurance mechanism.

(d) **Amount and Scope of GUST Trust Fund Coverage.**

1. The GUST Trust Fund will provide, to participating owners or operators, coverage for release response and corrective action, as identified in 40 CFR Part 280, Subpart F, and for compensation of third parties for bodily injury and property damage caused by accidental releases arising from operating regulated petroleum product USTs not to exceed \$1 million per occurrence cumulatively. For purposes of Rule 391-3-15-.13, the term "occurrence" shall mean any unexpected or unintended sudden or non-sudden release of petroleum product arising from operating an UST that results in a need for corrective action, bodily injury, or property damage.

(i) Any property owner shall not be considered a third-party claimant if the property was transferred to that property owner by the owner or operator of an underground storage tank after a release where damages could be reasonably anticipated;

(ii) Third-party liability property damage shall be reimbursed from the GUST Trust Fund based on the rental costs of comparable property

during the period of loss of use up to a maximum amount equal to the fair market value. In the case of property that is actually destroyed as a result of a petroleum release, reimbursement shall be an amount necessary to replace or repair the destroyed property, whichever is less; and

- (iii) Payments for third-party liability damages, as defined in these Rules, shall never exceed the amount of the GUST Trust Fund coverage as provided in these Rules for any owner or operator and shall not include payments for any claims for attorney's fees for third-party claimants or claims for punitive damages or mental anguish.
2. The GUST Trust Fund will provide, to participating owners or operators, annual aggregate coverage for release response and corrective action and for compensation of third parties for bodily injury and property damage caused by accidental releases arising from operating petroleum product USTs not to exceed cumulatively the following amounts:
 - (i) For participating owners or operators of one to 100 petroleum product USTs, \$1 million; and
 - (ii) For participating owners or operators of 101 or more petroleum product USTs, \$2 million.
3. The participating owner or operator shall be liable for the first \$10,000 of release response and corrective action costs and third party liability claims per occurrence and be totally responsible for any replacement or retrofitting or both of affected tanks and associated piping. The participating owner or operator must demonstrate financial responsibility for the first \$10,000 of release response and corrective action costs and third party liability claims per occurrence by an allowable financial assurance mechanism as described in [40 CFR 280.95- 280.99](#), [280.102](#), and [280.103](#).
4. The State of Georgia and the GUST Trust Fund shall have no liability for loss of business, damages, or taking of property associated with any release response or corrective action.
5. Whenever the trustee of the GUST Trust Fund determines that all costs eligible for payment, both release response and corrective action costs and third-party liability claims, may exceed the per-occurrence or aggregate coverages, the first priority for payment shall be the corrective action costs necessary to protect human health and the environment. The trustee shall

pay third-party liability claims in the order in which the trustee received valid court orders under Rule 391-3-15-.13(1)(h)2.

6. If a corrective action is to be conducted using funds from the Georgia Underground Storage Tank Trust Fund, the corrective action will not extend substantially beyond the target objectives of Rule [391-3-15-.09\(4\)](#). If a participating owner or operator desires to have the corrective action scope go beyond these objectives, the owner or operator must pay the difference in cost between those objectives and the owner or operator's alternative objectives.

(e) Principal Disbursements.

1. The principal of the monies deposited in such fund pursuant to O.C.G.A. § [12-13-10](#) may be expended by the Director for the following purposes:
 - (i) to take whatever emergency action is necessary or appropriate to assure that the public health or safety is not threatened whenever there is a release or substantial threat of a release of regulated substances from an UST;
 - (ii) to take preventive or corrective actions where the release of the regulated substances presents an actual or potential threat to human health or the environment where the owner or operator has not been identified or where the owner or operator is unable, as determined by the Director, to perform corrective action, including, but not limited to, provisions for providing alternative water supplies;
 - (iii) to provide compensation for third-party liability;
 - (iv) to pay for any portion of the administrative cost of administering the GUST Trust Fund which exceeds the amount of interest earned on the corpus of such fund; provided, however, that no more than 10 percent of the fees collected annually pursuant to Subsection (a) of O.C.G.A. [12-13-10](#) shall be used for such purpose;
 - (v) to provide reimbursement to eligible, participating owners and operators who have conducted release response and corrective action; and
 - (vi) to provide payments to state contractors for eligible, participating owners and operators who are unable, as determined by the Director, to conduct corrective action for petroleum releases from USTs.

2. To encourage voluntary release response and corrective action, a participating owner or operator conducting such activities under these regulations, either through his own personnel or through response action contractors or subcontractors, is entitled to reimbursement of reasonable costs from the GUST Trust Fund, subject to the following provisions:
 - (i) subsequent to release response and prior to initiating additional corrective action, the participating owner or operator must submit to EPD a proposed Corrective Action Plan - Part A for release response activities completed and for proposal of site investigation activities, together with incurred and projected costs of the activities completed and proposed, respectively, and upon receipt of approval by EPD, shall promptly continue corrective action. Upon implementation and completion of the approved Corrective Action Plan - Part A and prior to initiating additional corrective action for soil and groundwater, the participating owner or operator must submit to EPD a proposed Corrective Action Plan - Part B for site investigation reporting and for proposal of additional site activities, together with projected costs of those activities, and upon receipt of approval by EPD, shall promptly continue corrective action;
 - (ii) the participating owner or operator or his agents shall keep and preserve detailed records demonstrating compliance with the approved corrective action plans and all invoices and financial records associated with costs for which reimbursement will be requested;
 - (iii) upon receipt of a complete Corrective Action Plan - Part A, EPD shall make a determination and provide written notice as to whether the participating owner or operator responsible for corrective action is eligible or ineligible for reimbursement of costs. Should EPD determine the participating owner or operator is ineligible, it shall include in its written notice an explanation setting forth in detail the reasons for the determination;
 - (iv) the participating owner or operator shall submit to the Director, within 30 days of completing all corrective action, a completion report that corrective action has been completed;
 - (v) no later than 30 days from the submission of the completion report, the participating owner or operator must submit an application for reimbursement of costs in accordance with criteria established by EPD. The application for reimbursement must include the total cost of the corrective action and the amount of reimbursement sought;

- (vi) the first \$10,000 of approved corrective action costs incurred by the participating owner or operator are not eligible for reimbursement from the GUST Trust Fund nor are costs for replacement or retrofitting of affected tanks and associated piping;
- (vii) no costs may be reimbursed to the participating owner or operator until such time as corrective action has been completed in accordance with a plan approved by EPD. However, provisions for interim payments may be made if the corrective action is being conducted in accordance with a plan approved by EPD which allows interim payments; and
- (viii) reimbursement of reasonable costs from the GUST Trust Fund shall be limited as provided in Rule 391-3-15-.13(1)(d).

(f) Cost Recovery.

1. The participating owner or operator of an UST shall be liable for all costs of preventive, corrective, and enforcement actions incurred by the State of Georgia as a result of a release or a substantial threat of release of a petroleum product from an UST unless the participating owner or operator enters into a consent agreement as directed in O.C.G.A. § [12-13-11\(c\)](#). The provisions for cost recovery from owners or operators participating in the GUST Trust Fund are as follows:
 - (i) whenever costs have been incurred by EPD pursuant to Subsection (f) of O.C.G.A. § [12-13-9](#) or Subsection (b) of O.C.G.A. § [12-13-11](#), for corrective action, the participating owner or operator shall be liable for the first \$10,000 per occurrence for corrective action; such funds to be paid into the GUST Trust Fund within 90 days of notice by the Director;
 - (ii) notwithstanding the provisions of Subsections (b) and (c) of O.C.G.A. § [12-13-11](#), the participating owner or operator shall be liable for 100 percent of costs associated with preventive, corrective or enforcement actions necessary to protect human health or the environment, or for compensation of third-party liability claims, should EPD find that any of the following situations exist:
 - (I) the release was due to willful or negligent actions by the participating owner or operator;
 - (II) the participating owner or operator is in arrears for monies owed to the GUST Trust Funds;

- (III) the participating owner or operator moves in any way to obstruct the efforts of EPD or its contractors to effectuate corrective action;
 - (IV) the participating owner or operator of a petroleum product UST has stored any petroleum product in such UST which has not been subjected to, nor paid any, EAF imposed in Subsection (a) of O.C.G.A. § [12-13-10](#).
- (iii) notwithstanding the provisions of Subsections (b) and (c) of O.C.G.A. § [12-13-11](#), the participating owner or operator may be liable for up to 100 percent of costs associated with preventive, corrective or enforcement actions necessary to protect human health or the environment, or for compensation of third-party liability claims, should EPD find that any of the following situations exist:
- (I) the release is from an UST not registered in accordance with O.C.G.A. § [12-13-13](#);
 - (II) the participating owner or operator fails to comply with any provision of the consent agreement required by Subsection (c) of O.C.G.A. § [12-13-11](#);
 - (III) the participating owner or operator has failed to comply with any provisions of GUSTA or these Rules and such failure has caused, contributed to or otherwise adversely affected the release, or when non-compliance has not directly contributed to or otherwise adversely affected a release and such non-compliance was not or has not been corrected in a timely fashion when directed to do so by the Director.
- (iv) notwithstanding subparagraph (ii) or (iii) above, the participating owner or operator may not be liable for costs associated with preventive, corrective, or enforcement actions necessary to protect human health or the environment, or for compensation of third party liability claims, should EPD find that the following exist:
- (I) the source of the release is an UST system that was removed or abandoned prior to July 1, 1988, and is within close proximity, but not more than 200 feet, of an existing UST system owned or operated by a participant in the GUST Trust

Fund, and the existing UST system is a replacement for the removed or abandoned UST system; or

- (II) the current contamination from an existing UST system owned and operated by a participant in the GUST Trust Fund and another source cannot be differentiated, as determined by the Director.

- 2. Except as otherwise provided for in Subsection (c) of O.C.G.A. § [12-13-11](#), in the event of any discharge or threatened discharge of a regulated substance, the State or any of its agencies may recover in a civil action from any owner, operator, or other responsible person all costs incurred by the State or any of its agencies or monies from the Federal Leaking Underground Storage Tank (LUST) Trust Fund in the assessment and the cleanup of any release of a regulated substance and all costs incurred in the prevention, abatement, or removal of any threatened discharge of a regulated substance, including reasonable attorney's fees and any other necessary costs of response incurred by the State or any of its agencies. All such monies recovered shall be deposited into the GUST Trust Fund. The State shall have a lien on the property of owners or operators until funds are paid.

- (g) **Bankruptcy of GUST Trust Fund Participant.** Following the commencement of a voluntary or involuntary proceeding under the U.S. Bankruptcy Code, [11 U.S.C. § 101](#) *et seq.*, naming a participating owner or operator as debtor, EPD may file a claim against the participating owner or operator for the following, as necessary:

- 1. satisfaction of closure requirements; or
- 2. corrective action.

- (h) **Third-Party Compensation Claims.** Subject to all other provisions of these Rules, the trustee of the GUST Trust Fund shall provide compensation for third-party liability claims only when:

- 1. the trustee has received notice of potential third-party liability from the participating owner or operator within sixty (60) days of the date the participating owner or operator is made aware of a claim or claimant, which notice shall contain particulars sufficient to identify the UST covered by the GUST Trust Fund financial assurance mechanism and other information with respect to the time, place and circumstances of the occurrence, as well as the names and addresses of the persons alleged to be injured and all available witnesses. Failure to timely give a notice in compliance herewith

shall forfeit all rights of a participating owner or operator to have third-party compensation claims paid from the GUST Trust Fund; and

2. the trustee has received a valid final court order establishing a judgment against the participating owner or operator for bodily injury or property damage caused by an accidental release of petroleum products from an underground storage tank covered by the GUST Trust Fund financial assurance mechanism and the trustee of the GUST Trust Fund determines that the participating owner or operator has not satisfied the judgment. However, there shall be no liability on the part of the GUST Trust Fund and the trustee thereof unless the trustee shall have been given timely notice by a participating owner or operator of any lawsuit filed by a potential third-party liability claimant, and the trustee has an opportunity to intervene in said lawsuit and defend on behalf of the participating owner or operator with the full cooperation and assistance of the participating owner or operator against any claim which might be asserted by a potential third-party liability claimant for bodily injury or property damage allegedly caused by an accidental release of petroleum products from an underground storage tank covered by the GUST Trust Fund financial assurance mechanism. There shall be no liability for the GUST Trust Fund under this provision should the participating owner or operator fail to provide notice to the trustee within fifteen (15) days of the service of a law suit against the participating owner or operator or fail to cooperate with the trustee in the defense against the claim or should the final judgment presented to the trustee be a default judgment.

(2) Corrective Action.

(a) GUST Trust Fund Corrective Action for Participating Owners or Operators.

1. **Reporting.** The participating owner or operator shall report to EPD any suspected leak or spill of petroleum product as required in [40 CFR 280.50](#), and the participating owner or operator must inform EPD in writing within sixty (60) days of the date of the confirmation of the release of an intent to file a claim for reimbursement against the GUST Trust Fund or an intent to obtain corrective action through the State contractor.
2. **Corrective Action by Participating Owner or Operator.**
 - (i) **Corrective Action Plan - Part A.** Subsequent to release response and prior to initiating additional corrective action, the participating owner or operator must submit to and receive approval from EPD for the proposed Corrective Action Plan - Part A, in accordance with the provisions of Rules [391-3-15-.09\(2\)](#) and 391-3-15-.13(1)(e)2. Such corrective action plan shall, at a minimum:

- (I) provide documentation of participation in the GUST Trust Fund, if not submitted previously;
 - (II) report completed release response activities;
 - (III) summarize the proposed site investigation including a projected schedule for submittal of a Corrective Action Plan - Part B; and
 - (IV) provide cost projections and a schedule of reimbursements for the proposed site investigation activities.
- (ii) **Corrective Action Agreement.** Following approval by EPD of the Corrective Action Plan - Part A, the participating owner or operator will enter into a corrective action agreement with EPD, which shall, at a minimum:
- (I) provide approval, if not granted previously to protect human health and the environment, for continuation of corrective action;
 - (II) confirm eligibility under the GUST Trust Fund;
 - (III) approve an estimated schedule of reimbursement; and
 - (IV) require submittal of a Corrective Action Plan - Part B, unless directed by EPD not to submit such plan.
- (iii) **Corrective Action Plan - Part B.** Subsequent to completion of the site investigation proposed in the Corrective Action Plan - Part A and prior to initiating additional corrective action, the participating owner or operator must submit to and receive approval from EPD for the proposed Corrective Action Plan - Part B, in accordance with the provisions of Rules [391-3-15-.09\(2\)](#) and 391-3-15-.13(1)(e)2. Such corrective action plan shall, at a minimum:
- (I) report the results of the site investigation;
 - (II) summarize the proposed corrective action including projected schedules and corrective action objectives; and
 - (III) provide cost projections and a schedule of reimbursement for proposed corrective action activities.

(iv) the proposed scopes of work, schedules and cost projections submitted under the Corrective Action Plan - Part A and the Corrective Action Plan - Part B may be modified, and, if approved by EPD in writing, said approval shall amend the Corrective Action Agreement.

3. **Corrective Action by State.** If the participating owner or operator is unable, as determined by EPD, to perform corrective action, the participating owner or operator of an UST shall be liable for all costs incurred by the State of Georgia as a result of a release of a petroleum product from an UST unless the participating owner or operator enters into a consent agreement with the State as provided for in O.C.G.A. § [12-13-1\(c\)](#).

(b) **Other GUST Trust Fund Corrective Action.** Whenever the Director has reason to believe that there is or has been a release of a regulated substance into the environment from an UST, regardless of the time at which storage of such material occurred, and has reason to believe that such release poses a danger to human health or the environment, the Director may obtain corrective action for such release, utilizing funds from the GUST Trust Fund, provided however, that corrective action for regulated substances other than petroleum products shall not be obtained by utilizing funds generated from EAFs.

Rule 391-3-15-.14. Enforcement.

The enforcement of these Rules and Regulations shall be in accordance with the Georgia Underground Storage Tank Act and the Georgia Administrative Procedure Act. Such enforcement measures include, but are not limited to, administrative orders, court orders, injunctive relief, and civil penalties pursuant to these Acts.

Rule 391-3-15-.16. Operator Responsibilities, Training and Examination.

(1) Responsibilities.

- (a) Each UST facility must have a Class A, Class B and Class C Operator designated for each UST system or group of UST systems and shall not operate without a designated operator for each class as herein defined. Should an operator in any class as herein defined either resign or be terminated for any reason, the UST facility must replace the vacated operator with another one in the same class within sixty (60) days or cease operations until such a replacement is designated. The Class A, Class B and Class C Operator may be the same person or multiple persons, provided the person designated to more than one operator class must be trained or meet the responsibilities for each operator class for which that person is designated. The Class A or B Operator does not have to be present at each UST facility at all times. For unmanned UST locations not open to the public where no attendant is present and each dispenser is either key or card controlled, each key or card holder shall be trained to the standards of a Class C Operator; provided however, the operators and owners of that facility are still responsible for the compliance requirements of the UST facility.
- (b) In addition to those responsibilities for Class A Operators required by these Rules, the Class A Operator must ensure that appropriately trained individuals operate and maintain the UST systems; maintain appropriate records; conduct required emergency response activities and provide required financial responsibility

documentation to EPD as required under these Rules. A Class A Operator must demonstrate to the satisfaction of the Director by passing an EPD authorized test that he or she has sufficient general knowledge of UST system requirements to be able to make informed decisions regarding UST compliance and be able to recognize if Class B or C operators are fulfilling the UST operation, maintenance, notification and record keeping requirements of these Rules and GUSTA, including, but not limited to, spill prevention, overfill prevention, release detection, corrosion protection, emergency response, product compatibility, release and suspected release reporting, temporary and permanent closure requirements, financial responsibility requirements, notification requirements and operator training requirements, for UST facilities as required by these Rules.

- (c) In addition to those responsibilities for Class B Operators required by these Rules, the Class B Operator must demonstrate to the satisfaction of the Director through passing an appropriate test as established by EPD a sufficient knowledge of all UST system requirements indicating that he or she can make informed decisions and implement the UST operational, maintenance, notification and reporting requirements of these Rules and GUSTA, including, but not limited to UST system components, UST system component construction, methods of release detection and prevention, corrosion protection, emergency response requirements, product compatibility, reporting and record keeping requirements, product compatibility, reporting and record keeping requirements, delivery prohibition requirements and Class C Operator training requirements, as required by these Rules.
- (d) In addition to those responsibilities for Class C Operators as are required by these Rules, the Class C Operator must demonstrate to the satisfaction of the Director, through passing appropriate examination as established by EPD, a sufficient knowledge of all UST system requirements indicating that he or she can make informed decisions and take appropriate actions in response to emergencies or alarms caused by spills or releases from an UST system.

(2) Training.

- (a) All Class A and Class B Operators of all UST systems regulated under these Rules are required to pass a written examination corresponding to their respective operator classification known as the Georgia UST Operator Examination, as authorized and amended periodically by the Director, which shall determine that the person being tested has the knowledge and skills necessary to be considered as competent to operate UST systems at the operator level for which they have been designated and tested. The Director shall periodically publish the name of the test administrator, contact information, testing locations, testing frequency and a list of the guidance documents and training materials on which the test will be based. The Director shall approve the content of any tests administered by the approved test administrator and the curriculum of any UST operator training courses. This

testing of Class A and B Operators must be accomplished for all Class A and B Operators for any UST facility as identified on the Annual Tank Registration as required under Rule [391-3-15-.05\(4\)\(b\)2](#).

- (b) Should any Class A or Class B Operator take the Georgia UST Operator Examination and fail to pass the same as certified to the EPD by the test administrator, the operator shall attend and successfully complete an UST Operator training course of the operator's choice; provided, the curriculum of which is based on the list of the guidance documents and training materials as periodically identified by the Director. After successful completion of an UST operator training course, evidenced by appropriate documentation presented to the Georgia UST Operator Test administrator, the operator will be required to retake and pass the Georgia UST Operator Examination.
 - (c) Fees for the initial and retake of the Georgia UST Operator Examination shall be as set by the test administrator and shall be payable to the test administrator. Fees for training courses shall be set by the training course providers and shall be payable to the training provider.
 - (d) All new Class A and Class B operators, if not already certified as trained, or subject to the reciprocity provisions hereof, shall be required to pass the Georgia UST Operators Examination within 30 days of taking responsibility of a UST system. After satisfactorily passing the Georgia Underground Storage Tank Operators Exam, the Class A or Class B Operator shall be issued a Certificate from the approved test administrator indicating the name of the test applicant, operator category of the test and the date of the test, which certificate shall expire seven (7) years from the date of issue.
 - (e) Class C Operators shall receive training in the responsibilities of that class prior to assuming responsibilities of that position. Class C operators shall be trained in the responsibilities of that class by either the Class A or Class B Operators for that facility. The method and curriculum used to train the Class C operator shall be kept onsite at the UST facility and shall specifically identify which employees are considered Class C operators and which have received the Class C operator training. Any Class C operator if not already certified as trained shall be trained as required herein before taking responsibility for a UST system.
- (3) Retraining.
- (a) All Class A and Class B operators shall be required to retake and pass the Georgia UST Operator Examination once every seven (7) years.
 - (b) Should EPD determine that a UST facility is out of compliance with significant operational compliance requirements for release detection and release prevention requirements, or financial assurance responsibility requirements as provide in these Rules, the EPD shall require the Class A or Class B operator be trained and

re-tested at a minimum for the criteria in which the UST facility was determined to be out of significant operational compliance.

- (c) A Certificate of Training may be granted at the discretion of the Director to operators who have received certification from other States whose UST rules are compatible with these Rules and have an approved EPA operator training program and provide reciprocity to Georgia operators in that State.

(4) Revocation of Certification.

The Director may investigate the actions of any operator and may revoke or suspend the certificate of an operator when it is found by the Director that in obtaining such certificate the operator has practiced fraud or deception; or that reasonable care, judgment, or the application of knowledge or ability was not used in the performance of the operator's duties; or that the operator is incompetent or unable to perform his duties properly.

(5) Violations.

It shall be a violation of these Rules for any UST owner to operate or allow to be operated any UST facility owned by that owner without a Class A, Class B or Class C operator being designated and existing for said UST facility as prescribed by these Rules. If any UST owner operates or allows to be operated any UST facility in violation of this Rule, 391-3-15-.16, the current Annual Tank Registration Certificate issued by EPD as required by Rule [391-3-15-.05](#) may be revoked by the Director.

Subject 391-3-16. RULES FOR ENVIRONMENTAL PLANNING CRITERIA.

Rule 391-3-16-.01. Criteria for Water Supply Watersheds.

(1) Background.

- (a) These Criteria establish pursuant to O.C.G.A. § [12-2-8](#) a basis to be used by local governments to allow development of a water supply watershed without contaminating the water source to a point where it cannot be treated to meet drinking water standards. The criteria accomplish this by establishing buffer zones around streams and by specifying allowable impervious surface densities within watersheds. The criteria also include protection of water supply reservoirs by buffer zones and management practices to be established by reservoir owners and approved by the Department of Natural Resources.
- (b) Large drainage basins are less vulnerable to contamination by land use development than small basins. Therefore, more stringent watershed protection criteria are established for water supply watersheds less than 100 square miles in size. Since existing water supply sources as well as future sources must be protected, the criteria apply to both existing and future water supply watersheds. Watersheds are not identical; consequently alternate criteria may be adopted by local governments to protect water supply watersheds.
- (c) The purpose of these criteria is to establish the protection of drinking water watersheds. This protection is necessary for the enhancement of public health, safety and welfare as well as to assure that surface sources of drinking water are of high quality in order to be treated to meet all State and Federal drinking water standards.

(2) Definitions.

- (a) "Buffer" means a natural or enhanced vegetated area with no or limited minor land disturbances, such as trails and picnic areas. Specific buffer uses may be defined by local governments consistent with these criteria.
- (b) "Corridor" means all land within the buffer areas and other setback areas specified in Paragraphs (6) and (7) of these criteria.
- (c) "Impervious Surface" means a man-made structure or surface which prevents the infiltration of storm water into the ground below the structure or surface.

Examples are buildings, roads, driveways, parking lots, decks, swimming pools, or patios.

- (d) "Perennial Stream" means a stream that has normal stream flow consisting of base flow (discharge that enters the stream channel mainly from groundwater) or both base flow and direct runoff during any period of the year.
 - (e) "Reservoir Boundary" means the edge of a water supply reservoir defined by its normal pool level.
 - (f) "Utility" means public or private water or sewer piping systems, water or sewer pumping stations, electric power lines, fuel pipelines, telephone lines, roads, driveways, bridges, river/lake access facilities, storm water systems and railroads or other utilities identified by a local government.
 - (g) "Water Supply Reservoir" means a governmentally owned impoundment of water for the primary purpose of providing water to one or more governmentally owned public drinking water systems. This excludes the multipurpose reservoirs owned by the U.S. Army Corps of Engineers.
 - (h) "Water Supply Watersheds" means the area of land upstream of a governmentally owned public drinking water intake.
 - (i) "Water Supply Watershed Protection Plan" is a land use plan prepared and adopted by local governments for the protection of the quality of drinking water obtained from the watershed.
- (3) **Coverage.** These criteria shall apply to all governments located within water supply watersheds. Exceptions to coverage may be allowed for watersheds providing secondary or emergency sources of water only. These criteria do not apply to watersheds not used for public drinking water supply. Standards established in the Metropolitan Rivers Protection Act and the Erosion and Sedimentation Act are not superseded by these criteria.
- (4) **Local Government Adoption.** Local Governments shall identify existing and future water supply watersheds and shall adopt water supply watershed protection plans as part of their planning process. These criteria shall be used as the basis for local water supply watershed protection plans. Local governments may refine and enhance the criteria in their water supply watershed protection plans. All existing or proposed withdrawals for public water supply must be approved by the Department of Natural Resources.
- (5) **Exemptions.**
- (a) Local governments may exempt land uses existing prior to promulgation of water supply watershed protection plans from the provisions of water supply watershed protection plans.

- (b) Local governments may exempt mining activities permitted by the Department of Natural Resources under the Surface Mining Act from the provisions of water supply watershed protection plans.
- (c) Local governments may exempt utilities from the stream corridor buffer and setback area provisions of water supply watershed protection plans in accordance with the following conditions if the utilities to be located in the buffer or setback areas cannot feasibly be located outside these areas:
 - 1. The utilities shall be located as far from the stream bank as reasonably possible.
 - 2. The installation and maintenance of the utilities shall be such to protect the integrity of the buffer and setback areas as best as reasonably possible.
 - 3. The utilities shall not impair the quality of the drinking water stream.
- (d) Local governments may exempt specific forestry and agricultural activities from the stream corridor buffer and setback area provisions of water supply watershed protection plans in accordance with the following conditions:
 - 1. The activity shall be consistent with best management practices established by the Georgia Forestry Commission or the Georgia Department of Agriculture.
 - 2. The activity shall not impair the quality of the drinking water stream.

(6) Minimum Criteria for Large Water Supply Watersheds.

- (a) A large water supply watershed has 100 square miles or more of land within the drainage basin upstream of a governmentally owned public drinking water supply intake.
- (b) The stream corridors of a large water supply watershed tributary to the water supply intake shall have no specified minimum criteria for protection, except the stream corridors of the perennial tributaries of a water supply reservoir in a large water supply watershed are protected as described in (c) below.
- (c) The corridors of all perennial streams in a large water supply watershed tributary to a water supply reservoir within a seven (7) mile radius of the reservoir boundary are protected by the following criteria:
 - 1. A buffer shall be maintained for a distance of 100 feet on both sides of the stream as measured from the stream banks.

2. No impervious surface shall be constructed within a 150 foot setback area on both sides of the stream as measured from the stream banks.
 3. Septic tanks and septic tank drainfields are prohibited in the setback area of 2. above.
- (d) The remainder of a large water supply watershed tributary to the water supply intake shall have no specified minimum criteria for protection, except that new facilities, located within seven (7) miles of a water supply intake or water supply reservoir, which handle hazardous materials of the types and amounts determined by the Department of Natural Resources, shall perform their operations on impermeable surfaces having spill and leak collection systems as prescribed by the Department of Natural Resources.
- (e) The water supply reservoirs in large water supply watersheds will be managed as described in (8).

(7) Minimum Criteria for Small Water Supply Watersheds.

- (a) A small water supply watershed has less than 100 square miles of land within the drainage basin upstream of a governmentally owned public drinking water supply intake.
- (b) Stream Corridor Criteria for Small Water Supply Watersheds.
1. The perennial stream corridors of a small water supply watershed within a seven (7) mile radius upstream of a governmentally owned public drinking water supply intake or water supply reservoir are protected by the following criteria:
 - (i) A buffer shall be maintained for a distance of 100 feet on both sides of the stream as measured from the stream banks.
 - (ii) No impervious surface shall be constructed within a 150 foot setback area on both sides of the stream as measured from the stream banks.
 - (iii) Septic tanks and septic tank drainfields are prohibited in the setback area of (ii) above.
 2. The perennial stream corridors within a small water supply watershed and outside a seven (7) mile radius upstream of a governmentally owned public drinking water supply intake or water supply reservoir are protected by the following criteria:

- (i) A buffer shall be maintained for a distance of 50 feet on both sides of the stream as measured from the stream banks.
 - (ii) No impervious surface shall be constructed within a 75 foot setback area on both sides of the stream as measured from the stream banks.
 - (iii) Septic tanks and septic tanks drainfields are prohibited in the setback areas of (ii) above.
- (c) The following criteria apply at all locations in a small water supply watershed.
 - 1. New sanitary landfills are allowed only if they have synthetic liners and leachate collection systems.
 - 2. New hazardous waste treatment or disposal facilities are prohibited.
 - 3. The impervious surface area, including all public and private structures, utilities, or facilities, of the entire water supply watershed shall be limited to twenty-five (25) percent, or existing use, whichever is greater.
 - 4. New facilities which handle hazardous materials of the types and amounts determined by the Department of Natural Resources shall perform their operations on impermeable surfaces having spill and leak collection systems as prescribed by the Department of Natural Resources.
- (d) The water supply reservoirs in small water supply watersheds are to be managed as described in (8).

(8) Water Supply Reservoir Management Plans.

- (a) The owner of a water supply reservoir shall develop a reservoir management plan for approval of the Department of Natural Resources. If the Department owns the reservoir, the plan shall be prepared in cooperation with the local governments using the reservoir.
- (b) A reservoir management plan shall address the recreational use of the reservoir and the maintenance of a buffer around the reservoir.
 - 1. Any recreational uses shall take into consideration the protection of the water quality of the reservoir for drinking water purposes. The following recreational uses are permissible in the reservoir management plan if the water quality of the reservoir is adequately protected.
 - (i) Swimming;

- (ii) Fishing;
 - (iii) Boating;
 - (iv) Docks;
 - (v) Public Access; and
 - (vi) Adjacent Property Owner Access.
2. The reservoir management plan shall include a buffer that shall be maintained for a distance of 150 feet from the reservoir boundary. The allowable buffer vegetation and disturbance shall be specified in the reservoir management plan. Allowable disturbances may include public and/or private access to the reservoir and/or the buffer via docks, trails, and similar amenities provided that such disturbances are addressed in the reservoir management plan.
 3. Reservoir owners may adopt buffers of differing sizes than in 2. above upon approval of the Department of Natural Resources.

(9) Additional Criteria.

- (a) Within water supply watersheds, local governments may adopt additional criteria to protect drinking water sources.

(10) Alternate Minimum Criteria for Water Supply Watersheds.

- (a) A local government within a water supply watershed may adopt alternate minimum criteria for the stream buffer requirements in paragraphs (6)(c) and (7)(b) of these criteria if the alternate criteria meet the following requirements:
 1. The local government is certified by the Director as having a program in place adequate to implement and enforce these alternate minimum criteria, including implementing ordinances. Such certification may be suspended or revoked pursuant to the same procedures provided for Local Issuing Authorities under O.C.G.A. § [12-7-8](#);
 2. As part of any certification by the Director required above, the local government shall, through its planning department or other appropriate body, require that all approvals for the subdivision or development of parcels within the water supply watershed shall include a determination that the subject parcel or parcels within a development are consistent with the buffers required hereunder and that all plats of survey and approvals provide clear notice of the alternate minimum criteria and requirements

adopted by the local government. Further, after the effective date of the ordinance, the creation of lots on which there is not sufficient area for construction is prohibited; and

3. The local government shall adopt an ordinance that incorporates one of the following three (3) options provided below in subparagraphs 3.(i), 3.(ii), or 3.(iii) for all perennial stream corridors within the water supply watershed that are within a seven (7) mile radius upstream of a governmentally owned public drinking water supply intake or water supply reservoir. Beyond such seven (7) mile radius, the ordinance shall also provide for a 50-foot buffer for perennial stream corridors within the water supply watershed. These options do not affect the buffer around the water supply reservoir.

- (i) "Option 1" For a one-mile radius upstream of a public water supply intake, within such local government jurisdiction that is a certified Local Issuing Authority as defined in O.C.G.A. § [12-7-8](#), there is a 100-foot critical area with an undisturbed buffer on both sides of the stream; for the balance of the watershed, there is a 50-foot undisturbed buffer on both sides of the stream. Beyond the adopted 50-foot and 100-foot riparian buffers, development is allowed but is limited to an effective impervious cover of ten (10) percent as described below in subparagraph 4.(vi) of these criteria.

- (I) For local government ordinances incorporating the options in subparagraph 3.(i) above, all of the following practices are also required within the water supply watersheds:

- I. development and implementation of a public education program approved by the Division that includes items described below in subparagraph 4.(i) of these criteria;

- II. implementation of design guidelines that ensure a diffuse flow requirement with no concentrated flow leaving the property as described below in subparagraph 4.(ii) of these criteria;

- III. declarations of development restrictions on either survey plats and/or deeds that indicate that the parcel is located within a water supply watershed and that there are restrictions on disturbance of the buffer area and specific development practices for said property;

- IV. adoption of a stormwater ordinance as described below in subparagraph 4.(iii) of these criteria;

- V. performance of a septic tank inspection every seven (7) years with mandatory repairs and pumping, if required;
 - VI. implementation of a Division approved monitoring program as described below in subparagraph 4.(iv) of these criteria; and
 - VII. vegetation of riparian buffers as described in subparagraph 4.(v) of these criteria;
- (ii) "Option 2" Upstream of a public water supply intake, within such local government jurisdiction that is a certified Local Issuing Authority as defined in O.C.G.A. § [12-7-8](#), there is a 75-foot undisturbed riparian buffer on both sides of the stream.
- (I) For local government ordinances incorporating the options in subparagraph 3.(ii) above, all of the following practices are also required within the water supply watersheds:
 - I. development and implementation of a public education program approved by the Division that includes items described below in subparagraph 4.(i) of these criteria;
 - II. implementation of design guidelines that ensure a diffuse flow requirement with no concentrated flow leaving the property as described below in subparagraph 4.(ii) of these criteria;
 - III. declarations of development restrictions on either survey plats and/or deeds that indicate that the parcel is located within a water supply watershed and that there are restrictions on disturbance of the buffer area and specific development practices for said property;
 - IV. adoption of a stormwater ordinance as described below in subparagraph 4.(iii) of these criteria;
 - V. performance of a septic tank inspection every seven (7) years with mandatory repairs and pumping, if required;

- VI. implementation of a Division approved monitoring program as described below in subparagraph 4.(iv) of these criteria; and
 - VII. vegetation of riparian buffers as described in subparagraph 4.(v) of these criteria;
- (iii) "Option 3" Upstream of a public water supply intake, within such local government jurisdiction that may or may not be a certified Local Issuing Authority as defined in O.C.G.A. § [12-7-8](#), there is a 100-foot undisturbed riparian buffer on both sides of the stream.
- (I) For local government ordinances incorporating the options in subparagraph 3.(iii) above, all of the following practices are also required within the water supply watersheds:
 - I. development and implementation of a Division approved public education program that includes items described below in subparagraph 4.(i) of these criteria;
 - II. implementation of design guidelines that ensure a diffuse flow requirement with no concentrated flow leaving the property as described below in subparagraph 4.(ii) of these criteria;
 - III. declarations of development restrictions on either survey plats and/or deeds that indicate that the lot is located within a water supply watershed and that there are restrictions on disturbance of the buffer area and specific development practices for said property; and
 - IV. adoption of a stormwater ordinance as described below in subparagraph 4.(iii) of these criteria;
 - (II) For local government ordinances incorporating the options in subparagraph (iii) above, the following practices are recommended but not required within the water supply watersheds:
 - I. acquiring certification as a Local Issuing Authority;

- II. mandatory notification by the local government every seven years for all owners of septic tanks and septic tank drain fields within 100-feet of any stream within the water supply watershed, as measured from the top of the stream bank, outlining the risk of fines and enforcement for illegal discharge or seepage into waters of the State and the need for routine maintenance and replacement under guidance and direction from the local health department;
- III. implementation of a Division approved monitoring program as described below in subparagraph 4.(iv) of these criteria; and
- IV. vegetation of riparian buffers as described in subparagraph 4.(v) of these criteria.

4. If required above, the local government shall:

- (i) Adopt and implement a Division approved public education plan that is designed to educate the community and conduct equivalent outreach activities targeting but not limited to citizens, government officials, developers, engineers, architects, landscapers, builders, construction workers, non-profit organizations, and volunteers. The plan shall include but is not limited to information about the use and maintenance of stormwater best management practices, septic system inspection and maintenance, agricultural best management practices, forestry best management practices, native landscaping and water conservation;
- (ii) Require that diffuse flow or runoff must be maintained within the riparian buffer by dispersing concentrated flow and re-establishing vegetation. Concentrated runoff from new ditches or constructed conveyances shall be converted to diffuse flow before the runoff enters the riparian buffer. If necessary to impede the formation of erosion gullies, periodic corrective action to restore diffuse flow shall be required in a maintenance agreement with appropriate entities;
- (iii) Adopt a Division approved stormwater management ordinance that applies in the water supply watershed. Any local government

certified as a Local Issuing Authority under the Georgia Erosion and Sedimentation Control Act shall implement said adopted stormwater management ordinance that incorporates the post-development best management practices expressly required hereunder and permanent storm water control measures as well as design standards appropriate for the terrain and topography to protect water quality, stream channels and flooding. These standards shall be consistent with criteria established for such control measures in the Georgia Storm Water Management Manual. If such local government is not required above to become a certified Local Issuing Authority, then it shall adopt an ordinance approved by the Division that requires at a minimum that plans for permanent storm water control measures be reviewed and approved by such local government. The local government shall have the resources necessary to review and inspect such measures;

- (iv) Implement a Division approved program to monitor streams within the water supply watershed for the following:
 - (I) Georgia bacterial standard,
 - (II) turbidity and
 - (III) nutrients. The samples shall be taken immediately after the first substantial rain of the month (0.5 inches or larger); or if rain has not occurred and is not predicted, the samples shall be taken during the last week of the month. Should the monthly data show three (3) consecutive months of degrading water quality (each month's data set for any or all parameters showing increasing values), a corrective action plan shall be submitted within thirty (30) days to the Division for approval. Upon approval by the Division the corrective action plan shall be implemented and the monthly sampling continued until such time as the Division notifies the local government that corrective action is no longer required;
- (v) Require that a 50-foot riparian buffer be vegetated with understory trees and shrubs and canopy trees native to the region or approved by the Division planted no more than ten (10) feet apart and pursuant to guidelines contained in the storm water management ordinance approved by the Division. Vegetation and permanent maintenance of the buffers is the responsibility of the developer, subsequent property owner or homeowners association. This

vegetation shall only be required upon a change in use or development of the lot or parcel that includes the riparian buffer subject to these criteria.

- (vi) Require an effective impervious cover of no more than ten (10) percent upon the development or redevelopment of a parcel for either lots immediately adjacent to a perennial stream or for the area of land within 150-feet of a perennial stream, whichever is larger. On single, individual lots this requirement shall be triggered for projects with greater than 5,000 square feet of impervious surfaces. An effective impervious cover shall be generally defined in terms of controlling runoff and pollutants so that post-development runoff is only ten (10) percent greater than pre-development conditions. The pre-development (baseline) conditions shall be assumed to be good forested conditions appropriate to the site. This requirement and the methodology to achieve it shall be further defined in accordance with guidelines to be developed as part of a local government's storm water management ordinance approved by the Division.
 - (vii) Notify all owners of septic tanks and septic tank drain fields within the water supply watershed every seven (7) years of the risk of fines and enforcement for illegal discharge or seepage into waters of the State and the need for routine maintenance and replacement under guidance and direction from the local health department.
5. Septic systems and drain fields shall be located outside of the required riparian buffers and setbacks indicated in the above paragraphs and are recommended to be at least 100-feet away from a perennial stream where practicable. As part of any subdivision or development of parcels within the water supply watershed, the local government shall in cooperation with the Georgia Department of Human Resources, through its planning department or other appropriate bodies, require that:
- (i) Considering the size, configuration and household appliances and equipment, septic tanks and septic drain fields shall be sized appropriately by qualified personnel;
 - (ii) Septic tank risers shall be installed;
 - (iii) Only multi-stage septic tanks with effluent filters shall be installed;
and

- (iv) All approvals for new building permits for additions or remodeling of existing structures on the subject parcel or parcels within a subdivision or development shall be accompanied by a review of septic tank and septic drainfield sizing, configuration and design with mandatory upgrades if required.
6. Local governments may exempt those structures existing, under construction, or for which a complete application for a land disturbance permit, building permit, or similar government approval has been submitted as of the effective date of the ordinances adopted pursuant to this rule, or on which construction will commence no later than one year following the date of the adoption of the ordinances required pursuant to this rule. However, any modification or expansion of such existing structure which results in a net increase in the structure footprint or of the impervious surface area within the buffer shall subject the structure to the applicable criteria hereunder. Further, local governments may exempt parcels on which only one (1) single family home is built for residential use by the owner of the parcel, provided that this exemption shall not apply to parcels that are subdivided into lots after the effective date of ordinances adopted pursuant to this rule.
 7. After the effective date of the ordinance, the local government shall have one year to implement the stormwater ordinance and two years to design and implement a Division approved public education program and a Division approved monitoring program. The local jurisdiction shall submit a report on the aforementioned activities to the Division and get approval from the Division to proceed with buffer reductions.
 8. Local governments may consider granting a variance to the buffers established in the adopted ordinance only when:
 - (i) There are hardships that prevent compliance with the buffer widths and required practices. Local governments shall provide an opportunity for meaningful public notice of, comment upon, and administrative appeal of all decisions relating to action upon an application for a variance under these provisions. Such terms shall be referenced or included in the storm water management ordinance to be considered by the Division. Such terms shall include any rights of appeal or further administrative review as otherwise provided for land use decisions in the local government. Hardships shall be evaluated in accordance with the following:
 - (I) If the applicant complies with the buffer widths and required practices, he or she can secure no reasonable return from, nor

make reasonable use of, his or her property. Merely proving that the variance would permit a greater profit from the property shall not be considered adequate justification for a variance. Moreover, the local government shall consider whether the variance is the minimum possible deviation from the buffer widths that shall make reasonable use of the property possible;

- (II) The hardship results from application of the buffer widths to the property rather than from other factors such as unrelated deed restrictions;
- (III) The hardship is due to the physical nature of the applicant's property, such as its size, shape, or topography;
- (IV) The applicant did not cause the hardship;
- (V) The variance is in harmony with the general purpose and intent of the riparian buffer widths and required practices and preserves the purpose thereof;
- (VI) In granting the variance, the public safety and welfare have been assured, and the quality of downstream water, including but not limited to water used to supply public drinking water, has been maintained or improved; and
- (VII) The applicant certifies that the applicant has not and does not intend to apply for a variance from the minimum buffer requirements contained in the Georgia Erosion and Sedimentation Control Act for the same perennial stream or streams for which a variance is sought pursuant to this paragraph.

Authority: 1990 Ga. General Assembly Resolution No. 63, O.C.G.A. §§ [12-2-8](#), [12-5-20](#), [12-7-1](#).

History. Original Rule entitled "Criteria for Water Supply Watersheds" adopted. F. Dec. 27, 1990; eff. Mar. 28, 1990, as specified by the Agency.

Amended: F. July 2, 2007; eff. July 22, 2007.

Amended: F. Jan. 28, 2019; eff. Feb. 17, 2019.

Rule 391-3-16-.02. Criteria For Protection of Groundwater Recharge Areas.

(1) Background. Variable levels of recharge area protection can be based upon the State's hydrogeology (e.g., areas such as the Dougherty Plain where a major aquifer crops out would receive a relatively high degree of protection whereas other areas, such as the shale hills of northwest Georgia, would receive a lower degree of Protection). Recharge area protection within the significant recharge areas would be further refined, based upon the local susceptibility or vulnerability to human induced pollution (e.g., high, medium, or low). The significant recharge areas have already been identified and mapped (about 22-23% of the State). Pollution susceptibility mapping is ongoing. Existing statutes are adequate for protection of the remaining recharge areas (about 77-78% of the State).

(2) Definitions:

- (a) "Aquifer" means any stratum or zone of rock beneath the surface of the earth capable of containing or producing water from a well. (Note: this is the same definition as in the Groundwater Use Act.)
- (b) "DRASTIC" means the standardized system for evaluating groundwater pollution potential using the hydrogeologic settings described in U.S. Environmental Protection Agency document EPA-600/287-035 (Note: the DRASTIC methodology is the most widely used technique for evaluating pollution susceptibility).
- (c) "Pollution Susceptibility" means the relative vulnerability of an aquifer to being polluted from spills, discharges, leaks, impoundments, applications of chemicals, injections and other human activities in the recharge area.
- (d) "Pollution Susceptibility Maps" means maps of relative vulnerability to pollution prepared by the Department of Natural Resources, using the DRASTIC methodology. Pollution susceptibility maps categorize the land areas of the State into areas having high, medium and low groundwater pollution potential.
- (e) "Recharge Area" means any portion of the earth's surface, where water infiltrates into the ground to replenish an aquifer.
- (f) "Significant Recharge Areas" means those areas mapped by the Department of Natural Resources in Hydrologic Atlas 18 (1989 edition). Mapping of recharge areas is based on outcrop area, lithology, soil type thickness, slope, density of lithologic contacts, geologic structure, the presence of karst, and potentiometric surface. Significant recharge areas are as follows in the various geologic provinces of Georgia:
 - 1. In the Valley and Ridge and in the Cumberland Plateau, significant recharge areas outcrop areas of carbonate rock where low slope (less than 8% slope) conditions prevail. Such areas commonly are characterized by karst topography (caves and sinkholes).

2. In the Piedmont and in the Blue Ridge, rocks have little primary porosity, with most groundwater being stored in the overlying soils. The significant recharge areas are those with thicker soils. Field mapping indicates that thick soils in the Piedmont and Blue Ridge are characterized by a density of two or more geologic contacts per four squares miles (source:1976 1:500,000 Geologic Map of Georgia) and slopes lower than 8%.
 3. In the Coastal Plain, the significant recharge areas are the surface outcroppings of the large and extensively used drinking water aquifers (e.g., the Floridian, the Clayton, etc.) and soils having high permeability according to the 1976 1:750,000 Soils Association Map of Georgia.
- (3) The following criteria pursuant to O.C.G.A. § [12-2-8](#) shall apply in significant recharge areas:
- (a) The Department of Natural Resources shall not issue any permits for new sanitary landfills not having synthetic liners and leachate collection systems.
 - (b) The Department of Natural Resources shall not issue any new permits for the land disposal of hazardous wastes.
 - (c) The Department of Natural Resources shall require all new facilities permitted or to be permitted to treat, store, or dispose of hazardous waste to perform such operations on an impermeable pad having a spill and leak collection system.
 - (d) New above-ground chemical or petroleum storage tanks, having a minimum volume of 660 gallons, shall have secondary containment for 110% of the volume of such tanks or 110% of the volume of the largest tank in a cluster of tanks. (Note: These figures are consistent with US EPA rules for oil pollution prevention, [40 CFR 112.1](#)). Such tanks used for agricultural purposes are exempt, provided they comply with all Federal requirements
 - (e) New agriculture waste impoundment sites shall be lined if they are within:
 1. a high pollution susceptibility areas;
 2. a medium pollution susceptibility area and exceed 15 acre-feet;
 3. a low pollution susceptibility area and exceed 50 acre-feet.
 - (i) As a minimum, the liner shall be constructed of compacted clay having a thickness of one-foot and a vertical hydraulic conductivity of less than 5×10^{-7} cm/sec or other criteria established by the U.S. Soil Conservation Service. (The average size of existing agricultural waste impoundments in Georgia is about 15 acre-feet; sheeps-foot rollers or

pans with heavy tires, which are normal equipment for most Georgia moving contractors, should be able to compact clay to the recommended vertical hydraulic conductivity).

- (f) New homes served by septic tank/drain field systems shall be on lots having the following minimum size limitations as identified on Table MT-1 of the Department of Human Resources' Manual for On-Site Sewage Management systems (herein after "DHR Table MT-1")
 - 1. 150% of the subdivision minimum lot size of DHR Table MT-1 if they are within a high pollution susceptibility area; and
 - 2. 125% of the subdivision minimum lot size of DHR Table MT-1 if they are within a medium pollution susceptibility area; and
 - 3. 110% of the subdivision minimum lot size DHR Table MT-1 if they are within a low pollution susceptibility area.

- (g) New mobile home parks served by septic tank/drain field systems shall have lots or spaces having the following size limitation as identified on Table MT-2 of the Department of Human Resources' Manual for On-Site Sewage Management System (hereinafter "DHR Table MT-2").
 - 1. 150% of the subdivision minimum lot or space size of DHR Table MT-2 if they are within a high pollution susceptibility area; and
 - 2. 125% of the subdivision minimum lot or space size of DHR table MT-2 if they are within a medium pollution susceptibility area; and
 - 3. 110% of the subdivision minimum lot or space size of DHR Table MT-2 if they are within a low pollution susceptibility area.

- (h) If a local government requires a larger lot size than that required by (f) above for homes or by (g) above mobile homes, the larger lot size shall be used.

- (i) Local governments at their option may exempt from the requirement of (f) or (g) any lot of record on the date of their adoption of these lot size standards.

- (j) No construction may proceed on building or mobile home to be served by a septic tank unless the county health department first approves the proposed septic tank installation as meeting the requirements of the DHR Manual and (f), (g), (h), and (i) above.

- (k) Each Regional Development Center is responsible for considering, in its regional plan, the cumulative environmental effects of a significant number of septic tank

systems being used in close proximity to each other. In so considering the Regional Development Center shall not approve any local plans which would result in adverse environmental effects on another area. A Regional Development Center may consult with the Department of Human Resources and Department of Natural Resources for technical assistance as to appropriate densities of lots served by septic tanks insignificant recharge areas.

- (l) New facilities which handle hazardous materials, of types and in amounts determined by the Department of Natural Resources, shall perform their operations on impermeable surfaces having spill and leak collection systems, as prescribed by the Department of Natural Resources.
 - (m) The Department of Natural Resources shall require conservative design in any new permits for the spray irrigation of wastewater sludges in areas having pollution susceptibility. This shall be accomplished by comparing the Department's CRITERIA FOR SLOW RATE LAND TREATMENT (February, 1986 or latest edition) with amendments and other technical publication to site specific information submitted by a registered professional engineer for each project.
 - (n) Permanent storm water infiltration basins shall not be constructed in areas having pollution susceptibility.
 - (o) Exclusive of mining settling basins, new wastewater treatment basins shall have an impermeable liner in areas having high pollution susceptibility.
- (4) Local governments having jurisdiction authority over all significant recharge areas shall adopt, implement, and enforce ordinances for recharge area protection at least as stringent as the standards developed by the Department of Natural Resources.

Cite as Ga. Comp. R. & Regs. R. 391-3-16-.02

Authority: 1990 General Assembly Resolution No. 63 (Senate Resolution No. 331).

History. Original Rule entitled "Criteria for Production of Groundwater Recharge Areas" adopted. F. Dec 27, 1990; eff. March 28, 1990, as specified by certification of this Agency.

Rule 391-3-16-.03. Criteria for Wetlands Protection.

- (1) Local governments and regional development centers should acknowledge the importance of wetlands for the public good in the land-use planning process as mandated by O.C.G.A. § [12-2-8](#). The Department of Natural Resources shall establish a freshwater wetlands database and minimum criteria for local government consideration of wetlands protection in the land-use planning process. DNR's database shall include field checked mapping wetlands. The criteria are designed to assist in the identification and protection of wetlands, and do not constitute a state or local permit program.

- (2) The wetlands permit program under Section 404 of the Clean Water Act provides a federal permit process that may allow activities in wetlands after a public interest review. Most activities in wetlands will require a Section 404 permit from the Corps of Engineers. If wetlands are altered or degraded, mitigation of offset losses will be required as a condition of a Section 404 Permit. Under current federal policy, alternations or degradations of wetlands should be avoided unless it can be demonstrated that there will be no long-term adverse impacts or net loss of wetlands. Section 401 of the Clean Water Act requires certification by the State for any permit issued under Section 404. Other state and federal laws are also applicable to wetlands and wetlands protection.
- (3) The following are definitions and criteria for developing local and regional land-use plans with respect to wetlands:
 - (a) Definition of Freshwater Wetlands. "Wetlands" mean those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps marshes, bogs, and similar areas. (33 CFR 32.93). The ecological parameters for designating wetlands include hydric soils, hydrophytic vegetation, and hydrological conditions that involve a temporary or permanent source of water to cause soil saturation. Freshwater wetlands do not include any areas defined as "coastal marshlands" by the State Coastal Marshlands Protection Act.
 - (b) At a minimum, the following categories of freshwater wetlands and aquatic habitats will be defined, identified and mapped by the State:
 1. Open water -- areas of open water, primarily reservoirs, ponds, lakes, rivers, and estuaries.
 2. Non-forested emergent wetlands -- freshwater marshes dominated by a variety of grasses, sedges, rushes, and broadleaved aquatic associated with streams, ponded areas, and tidally-influenced non-saline waters.
 3. Scrub/shrub wetlands -- non-forested areas dominated by woody shrubs, seedlings and saplings averaging less than 20 ft. in height; these wetlands may intergrade with forested wetlands, non-forested emergent wetlands, and open water.
 4. Forested wetlands -- natural or planted forested areas having a dominant tree crown closure of hardwoods, pines, gums, cypress, or any combination of these types. These areas are usually in stream or river floodplains, isolated depressions, and drainways and contain standing or flowing water for a portion of the year. Subcategories:
 - (i) Hardwood floodplain forest;

- (ii) Coniferous floodplain forest;
- (iii) Mixed floodplain forests;
- (iv) Non-alluvial forested wetlands.

5. Altered wetlands -- areas with hydric soils that have been denuded of natural vegetation and put to other uses, such as pasture, row crops, etc., but that otherwise retain certain wetlands function and values.

(c) Wetlands will be appropriately identified and mapped in the land-use plans developed by local and regional governments. A "minimum areas" will be established for identification and mapping of wetlands in land-use plans. The "minimum area" established will be contingent upon the methodology used in developing the State's wetlands database and other available information, but under no conditions will an identified wetland "minimum area" exceed 5 acres. Land-use plans should address at least the following considerations with regards to wetlands classes identified in the database:

1. Whether impacts to an area would adversely affect the public health, safety, welfare, or the property of others.
2. Whether the area is unique or significant in the conservation of flora and fauna including threatened, rare or endangered species.
3. Whether alteration or impacts to wetlands will adversely affect the function, including the flow or quality of water, cause erosion or shoaling, or impact navigation.
4. Whether impacts or modification by a project would adversely affect fishing or recreational use of wetlands.
5. Whether an alteration or impact would be temporary in nature.
6. Whether the project contains significant state historical and archaeological resources, defined as "Properties On or Eligible for the National Register of Historic Places".
7. Whether alteration of wetlands would have measurable adverse impacts on adjacent sensitive natural areas.
8. Where wetlands have been created for mitigation purposes under Section 404 of the Clean Water Act, such wetlands shall be considered for protection.

- (d) Uses of wetlands without long term impairment for function should be included in land use plans. Acceptable uses may include:
 - 1. Timber production and harvesting;
 - 2. Wildlife and fisheries management;
 - 3. Wastewater treatment;
 - 4. Recreation;
 - 5. Natural water quality treatment or purification;
 - 6. Other uses permitted under Section 404 of the Clean Water Act.

- (e) Unacceptable uses may include:
 - 1. Receiving areas for toxic or hazardous waste or other contaminants;
 - 2. Hazardous or sanitary waste landfills;
 - 3. Other uses unapproved by local governments.

Cite as Ga. Comp. R. & Regs. R. 391-3-16-.03

Authority: 1990 General Assembly Resolution No. 63 (Senate Resolution No. 331)

History. Original Rule entitled "Criteria for Wetlands Protection" adopted. F. Dec 27, 1990; eff. March 28, 1990, as specified by certification of this Agency

Rule 391-3-16-.04. Criteria for River Corridor Protection.

- (1) **Background.** The following section on background is strictly for the purpose of introduction of the criteria. The section explains the importance of the river corridors, the relevant section of the Official Code of Georgia, and the method prescribed by the law for protection of river corridors.
 - (a) River corridors are the strips of land that flank major rivers in Georgia. These corridors are of vital importance to Georgia in that they preserve those qualities that make a river suitable as a habitat for wildlife, a site for recreation, and a source for clean drinking water. River corridors also allow the free movement of wildlife from area to area within the state, help control erosion and river sedimentation, and help absorb flood waters.
 - (b) The Comprehensive Georgia Planning Act of 1989 provides for the development of coordinated and comprehensive planning by municipal and county governments. Such comprehensive plans shall consider the natural resources,

environments, and vital areas within the jurisdiction of the local government. Maintenance of the status as a "Qualified Local Government" is contingent upon the development of such comprehensive plans (O.C.G.A. [50-8-1](#) *et seq.*).

- (c) Section [12-2-8](#) (as amended of Article 1, Chapter 2, Title 12 of the Official Code of Georgia Annotated (O.C.G.A.) authorized the Department of Natural Resources (DNR) to develop minimum planning standards and procedures for the protection of river corridors in the state, and requires local governments to use these minimum standards in developing and implementing local comprehensive plans.
- (d) The method mandated in O.C.G.A. [12-2-8](#) for the protection of river corridors is the established of natural vegetative buffer area bordering each protected river. Local government will develop River Corridor Protection Plans (as part of the comprehensive plans authorized under O.C.G.A. [36-70-3](#)) that will maintain the integrity of this buffer area.

(2) Definitions.

- (a) "Hazardous waste" means any solid waste which has been defined as a hazardous waste in regulations, promulgated by the administrator of the United States Environmental Protection Agency pursuant to the federal act, which are in force and effect on February 1, 1988, codified as [40 C.F.R. Section 261.3](#).

(Note: This is the same definition as used in the Georgia Hazardous Waste Management Act.)

- (b) "Land-disturbing activity" means any grading, scraping, excavating, or filling of land; clearing of vegetation; and any construction, rebuilding, or alteration of a structure. Land-disturbing activity shall not include activities such as ordinary maintenance and landscaping operations, individuals home gardens, yard and grounds upkeep, repairs, additions or minor modifications to a single family dwelling, and the cutting of firewood for personal use.
- (c) "Land uses existing prior to the promulgation of a River Corridor Protection Plan" means any land use or land-distributing activity, including all human endeavors directly associated with such use or activity, which, prior to the promulgation of the River Corridor Protection Plan falls within one of the following categories:
 - 1. is completed;
 - 2. is under construction;
 - 3. is fully approved by the governing authority;
 - 4. all material have been submitted for approval by the governing authority; or

5. is zoned for such use and expenditures in excess \$2,500.00 have been made in preparation for construction in accordance with such zoning.
- (d) "Local government" means the governing authority of a political subdivision.
- (e) "Natural vegetative buffer" or "buffer area" means a river corridor containing the flora native to that area. The natural floras for specific areas are described in Georgia Geologic Survey Bulletin 114, "The Natural Environment of Georgia." Habitats for endangered and threatened species may require human management of the river corridor in order to maintain those species.
- (f) "Perennial river" means a river or section of a river that flows continuously throughout the year.
- (g) "Plans" or "comprehensive plan" means any plan by a county or a municipality covering such county or municipality or any plan by a regional development center covering the center's region proposed or prepared pursuant to be minimum planning standard and procedures for preparation of comprehensive plans and for implementation of comprehensive plans, established by the Department of Community Affairs in accordance with O.C.G.A. [50-8-1](#) through [50-8-12](#).
- (Note: this is the same definition as used in O.C.G.A. [50-8-2](#))
- (h) "Port facility" means any facility for the docking, loading, and unloading of ships.
- (i) "Protected river" means any perennial river or watercourse with an average annual flow of at least 400 cubic feet per second as determined by appropriate U.S. Geological Survey documents. However, those segments of river covered by the Metropolitan River Protection Act or the Coastal Marshlands Protection Act are specifically excluded from the definition of a protected river. In coastal areas, the seaward limit of any protected river shall be the inland limits of the jurisdiction of the Coastal Marshlands Protection Act.
- (j) "Public utility" or "utilities" means a service or services provided by a public utility company or a private entity which provides or services and all equipment and structures necessary to provide such services.
- (k) "Quadrangle map" means the most recently published U.S. Geological Survey 7.5 minute topographic map prepared at a scale of 1:24,000.
- (l) "River bank" means the rising ground, bordering a river, which serves to confine the water to the natural channel during the normal course of flow.
- (m) "River corridor" means all the land, inclusive of islands, not regulated under the Metropolitan River Protection Act (O.C.G.A. [12-5-440](#) through [12-5-457](#)), or the

Coastal Marshlands Protection Act (O.C.G.A. [12-5-280](#) through [12-5-293](#)), in areas of a protected river and being within 100 feet horizontally on both sides of the river as measured from the river banks. The 100 foot buffer shall be measured horizontally from the uppermost part of the river banks, usually marked by a break in slope. Although not within the measured 100 foot wide buffer, the area between the top of the bank and the edge of the river shall be treated by the local governments in the same manner as the river corridor and shall be included within the River Corridor Protection Plan. Because stream channels move due to natural processes such as meandering, river bank erosion, and jumping of channels, the river corridor may shift with time. For the purposes of these standards, the river corridor shall be considered to be fixed at its position at the beginning of each review period for local comprehensive plans. Any shift in the location of the protected river after at the start of the review period will require a revision of the boundaries of the river corridor at the time of the next review by the Department of Community Affairs.

- (n) "River Corridor Protection Plan" means that part of the local comprehensive plan which deals with the river corridor protection requirements specified herein.
 - (o) "Sensitive natural areas" means any area, as identified now or hereafter by the Department of Natural Resources, which contains one or more of the following:
 - 1. habitat, including nesting sites, occupied by rare or endangered species;
 - 2. rare or exemplary natural communities;
 - 3. significant landforms, hydroforms, or geological features; or
 - 4. other areas so designed by the Department of Natural Resources; and which is sensitive or vulnerable to physical or biological alteration.
 - (p) "Single-family dwelling" means a dwelling structure that is designed for the use of one family.
- (3) Applicability.
- (a) These minimum planning standards and procedures shall apply to each local government which contains within its boundaries a river corridor.
 - (b) These minimum planning standards and procedures shall apply to all state owned or administered land that contains a protected river within its boundaries. All state agencies shall comply with these minimum standards. Failure by a state agency to comply with such standards shall be considered an indicia of a governmental action which may significantly adversely affect the quality of the environment under the Environmental Policy Act (O.C.G.A. [12-6-1](#) *et seq.*)

- (c) Standards and requirements established in the Metropolitan Rivers Protection Act and the Erosion and Sedimentation Act are not superseded by River Corridor standards.
- (d) Affected local governments shall incorporate a River Corridor Protection Plan within their comprehensive plans on or before the date established by the Department of Community Affairs (DCA). For local government which have already submitted comprehensive plans to DCA, DCA shall establish a schedule for the review of a River Corridor Protection Plan.

(4) Protection Criteria.

- (a) The River Corridor Protection Plan shall provide for the maintenance of a natural vegetative buffer except as otherwise provided herein.
- (b) The River Corridor Protection Plan shall not prohibit the building of single-family dwellings, including the usual appurtenances, within the buffer area, subject to the following conditions:
 - 1. The dwelling shall be in compliance with all local zoning regulations.
 - 2. The dwelling shall be located on a tract of land containing at least two acres. For the purposes of these standards, the size of the tract of the land shall not include any area that lies within the protected river, (that is, for tracts of the lands that include portions of a protected river, the area between the river banks can not be counted towards the two acre minimum size).
 - 3. There shall be only one such dwelling on each two-acre or larger tract of land.
 - 4. A septic tank or tanks serving such a dwelling may be located within the buffer area.
 - 5. Septic tank drainfields shall not be located within the buffer area.
- (c) Within a river corridor, industrial and commercial land uses existing prior to the promulgation of a River Corridor Protection Plan are exempt from these criteria provided that:
 - 1. Industrial and commercial uses of river corridors shall not impair the drinking quality of the river water; and
 - 2. Industrial and commercial activity within the river corridor shall meet all state and federal environmental rules and regulations.

- (d) Excepts as expressly provided for under section IV.B of these criteria (dealing with single-family dwellings within the river corridor), septic tanks and septic tank drainfields are prohibited within river corridors.
- (e) River Corridors Protection Plans shall provide for the construction of road crossings and utility crossings of river corridors, provided that construction of such road and utility crossings shall meet all requirements of the Erosion and Sedimentation Control Act of 1975, and of any applicable local ordinances on soil erosion and sedimentation control
- (f) River Corridor Protection Plans, developed by local governments, shall provide the following acceptable uses of river corridors, provided that such uses do not impair the long-term functions of the protected river or the river corridor:
 - 1. Timber production and harvesting, subject to the following conditions:
 - (i) Forestry activity shall be consistent with best management practices established by the Georgia Forestry Commission; and
 - (ii) Forestry activity shall not impair the drinking quality of the river water as defined by the federal Clean Water Act, as amended.
 - 2. Wildlife and fisheries management activities consistent with the purposes of O.C.G.A. [12-2-8](#).
 - 3. Waste-water treatment.
 - 4. Recreational usage consistent either with the maintenance of a natural vegetative buffer or with river-dependent recreation. For example, a boat ramp would be consistent with this criterion but a hard-surface tennis court would not. Parking lots are not consistent with this criterion. Paths and walkways within the river corridor are consistent with this criterion.
 - 5. Natural water quality treatment or purification.
 - 6. Agricultural production and management, subject to the following conditions:
 - (i) Agricultural activity shall be consistent with best management practices established by the Georgia Soil And Water Conservation Commission;
 - (ii) Agricultural activity shall not impair the drinking quality of the river water as defined by the federal Clean Water Act, as amended; and

(iii) Agricultural activity shall be consistent with all the state and federal laws, and all regulations promulgated by the Georgia Department of Agriculture.

7. Other uses permitted by the Department of Natural Resources or under Section 404 of the Clean Water Act.

(g) Handling areas for the receiving and storage of hazardous waste are prohibited within river corridors. Port facilities are exempted from this criterion provided that;

1. Port facilities shall meet all federal and state laws and regulations for the handling and transport of hazardous waste.
2. Port facilities handling hazardous waste shall perform their operations on impermeable surfaces having spill and leak protection systems as prescribed by the Department of Natural Resources.

(Note: this is the same criterion as set in the Department of Natural Resources Criterion for Water-Supply Watersheds for facilities which handle hazardous materials.)

(h) Hazardous waste or solid waste landfills are prohibited within river corridors.

(i) Other uses unapproved by local government shall not be acceptable within river corridors.

(j) Local governments may exempt the following from the River Corridor Protection Plans:

1. Land uses existing prior to the promulgation of a River Corridor Protection Plan.
2. Mining activities, if permitted by the Department of Natural Resources pursuant to the Georgia Surface Mining Act of 1968, as amended.
3. Utilities, (except as discussed above in Section IV.E) if such utilities cannot feasibly be located outside the buffer area (feasibility shall be decided conservatively by the local government), provided that:
 - (i) The utilities shall be located as far from the river bank as reasonably possible;
 - (ii) Installation and maintenance of the utilities shall be such as to protect the integrity of the buffer area as well as is reasonably possible; and

(iii) Utilities shall not impair the drinking quality of the river water.

4. Specific forestry and agriculture activities except as discussed above in Sections IV.F.1 and IV.F.6.

(k) The natural vegetative buffer shall be stored as quickly as possible following any land-disturbing activity within the river corridor.

(l) Except as noted above, all construction within the buffer area shall be prohibited.

(5) Local Government Responsibilities:

(a) Local government shall identify any protected river within their jurisdiction. The Department of Natural Resources will provide maps and technical guidance regarding protected rivers if and as available.

(b) Local governments, which contain protected rivers within their jurisdiction, shall adopt River Corridor Protection Plans.

(6) River Corridor Protection Plans:

(a) River corridors shall be appropriately mapped and identified in the River Corridor Protection Plans.

(b) River Corridor Protection Plan shall address, at a minimum, the following considerations with regards to river corridors:

1. The plans shall consider the effect of the activities in the river corridor on public health, safety, welfare, and the private property rights.
2. The plans shall consider any characteristics of the river corridor that make it unique or significant in the conservation and movement of flora and fauna including threatened, rare, and endangered species. The plans shall establish the local government's policies regarding such flora and fauna rather than identifying specific sites containing such species.
3. The plans shall consider the effect of any activities within the river corridor on the function of the protected river and corridor including the flow and quality of the river water, erosion and shoaling of the river bed or margins, and to the navigability of the river.
4. The plans shall consider the effect of activities in the river corridor on fishing or recreational use of river corridors.

5. The plans shall consider whether the effect of activities in the river corridor are temporary or permanent in nature and, if temporary, the length of time the impact.
6. The plans shall consider the preservation of significant state historical and archaeological resources (defined as properties on or eligible for the National Register of Historic Places) within the river corridor.
7. The plans shall consider the effect of activities within river corridors on immediately adjacent sensitive natural areas. The plans shall established the local government's policies regarding such adjacent sensitive natural areas rather than identifying specific sites.

Authority: O.C.G.A. Secs. [12-2-8](#), [50-8-7.1](#), [50-8-7.2](#).

History. Original Rule entitled "Criteria for River Corridor Protection" adopted. F. Dec. 20, 1991; eff Jan. 9, 1992.

Rule 391-3-16-.05. Criteria for Mountain Protection.

- (1) **Background.** The following section on background is strictly for the purpose of introduction of the criteria. The section explains the significance of land-disturbing activities on Georgia mountains, the relevant section of the Official Code of Georgia, and the method prescribed by the law for protection of a mountain areas.
 - (a) The mountain of Georgia are characterized by steeps slopes, thin soils, and, because of the natural stresses placed on such environments, they require special protection. Land-disturbing activity on the high-elevation, steep-slope mountains of Georgia potentially threatens the public health, safety, welfare, and economic progress of the state. Such land-disturbing activity:
 1. may endanger the quality of surface water by increasing erosion and stream sedimentation;
 2. has the potential to induce landslides;
 3. has the potential to adversely affect ground water due to the difficulty in providing proper sewage disposal in areas of steep slope and high elevation;
 4. may damage the habitat for some species of wildlife (both plants and animals); and
 5. may detract from the mountains' scenic and natural beauty which is vital to the recreation and tourism industry of North Georgia.

- (b) The Comprehensive Georgia Planning Act of 1989 provides for the development of coordinated and comprehensive planning by municipal and county governments. Such comprehensive plans shall consider the natural resources, environments, and vital areas within the jurisdiction of the local government. Maintenance of the status as a "Qualified Local Government" is contingent upon the development of such comprehensive plans (O.C.G.A. [50-8-1](#) *et seq.*).
- (c) Section [12-2-8](#) (as amended) of Article 1, Chapter 2, Title 12 of the Official Code of Georgia Annotated (O.C.G.A.) authorizes the Department of Natural Resources (DNR) to develop minimum planning standards and procedures for the protection of mountains in the state, and requires local governments to use these minimum planning standards in developing and implementing local comprehensive plans.
- (d) The method mandated in O.C.G.A. [12-2-8](#) for the protection of mountain areas is the development of the local plans (as part of the comprehensive plans authorized under O.C.G.A. [36-70-3](#)) that control the extent of the land-disturbing activity on affected mountains.

(2) Definitions.

- (a) "Hazardous waste" means any solid waste which has been defined as a hazardous waste in regulations, promulgated by the administrator of the United States Environmental Protection Agency pursuant to the federal act, which are in force and effect on February 1, 1988, codified as [40 C.F.R. Section 261.3](#).

(Note: This is same definition as used in the Georgia Hazardous Waste Management Act.)

- (b) "Land-disturbing activity" means any grading, scraping, excavating, or filling of land; clearing of vegetation; and any construction, rebuilding, or alteration of a structure. Land-disturbing activity shall not include activities such as ordinary maintenance and landscaping operations, individual home gardens, yard and grounds upkeep, repairs, additions or minor modifications to a single-family dwelling, and the cutting of firewood for personal use.
- (c) "Local governing authority" or "local government" means the governing authority of a political subdivision.
- (d) "Mountain Protection Plans" means that part of the local comprehensive plan which deals with the mountain protection requirement specified herein.
- (e) "Multi-family dwelling" means a structure that contains multiple dwelling units."
- (f) "Persons" means any individual, partnership, corporation, trust, entity, or authority and shall include the State of Georgia, its political subdivisions, and all of its departments, boards, bureaus, commissions, or other agencies.

- (g) "Plan" or "comprehensive plan" means any plan by a county or municipality covering such county or municipality or any plan by a regional development center covering the center's region proposed or prepared pursuant to the minimum standards and procedures for preparations of comprehensive plans and for implementation of comprehensive plans, established by the Department of Community Affairs in accordance with O.C.G.A. [50-8-1](#) through [50-8-12](#).

(Note: This is the same definition as used in O.C.G.A. [50-8-2](#))

- (h) "Plat map" means a large scale map that shows the location of tracts of land within a jurisdiction, and the tax status of such tracts.
- (i) "Protected mountain" means all land area 2,200 feet or more above mean sea level, that has a percentage slope of 25 percent or greater for at least 500 feet horizontally, and shall include the crests, summits, and ridge tops which lie at elevations higher than any such area.
- (j) "Quadrangle map" means the most recently published U.S. Geological Survey 7.5 minute topographic map prepared at a scale of 1:24,000.
- (k) "Reforestation plan" means a plan, prepared by a registered forester, for replacing of harvested timber by replanting (as described in the Recommended Best Management Practices for Forestry in Georgia, published by the Georgia Forestry Commission) or by natural regenerative processes (such as coppicing, seed trees, etc.)
- (l) "Sensitive natural areas" means any area, as identified now or hereafter by the Department of Natural Resources, which contains one or more of the following:
1. habitat, including nesting sites, occupied by rare or endangered species;
 2. rare or exemplary natural communities;
 3. significant landforms, hydroforms, or geological features; or
 4. other areas so designated by the Department of Natural Resources; and which is sensitive or vulnerable to physical or biological alteration.
- (m) "Single-family dwelling" means a dwelling structure that is designed for the use of one family.

(3) Applicability.

- (a) These minimum planning standards and procedures shall apply to each local government which contains a protected mountains within its boundaries.

- (b) These minimum planning standards and procedures shall apply to all state owned or administered land that contains a protected mountain within its boundaries. All state agencies shall comply with these minimum standards. Failure by a state agency to comply with such standards shall be considered an indicia of a governmental action which may significantly adversely affect the quality of the environment under the Environmental Policy Act (O.C.G.A. [12-16-1](#) *et seq.*)
 - (c) Standards and requirements established in the Erosion and Sedimentation Act are not superseded by Mountain Protection standards.
 - (d) Affected local governments shall incorporate a Mountain Protection Plan within their comprehensive plans on or before the date established by the Department of Community Affairs (DCA). For local governments which have already submitted comprehensive plans to DCA, DCA shall establish a schedule for the review of a Mountain Protection Plan.
- (4) Protection Criteria.
- (a) Proposed land-disturbing activity shall meet all applicable requirements of the "Erosion and Sedimentation Act of 1975 as amended", and of any applicable local ordinances on soil erosion and sedimentation control.
 - (b) Where one or more septic tanks are to be used for individual sewage disposal, the proposed land-disturbing activity shall meet all applicable requirements imposed by the local governing authority.
 - (c) Where one or more wells are to be used for individuals water supply, the proposed land-disturbing activity shall meet all applicable requirements of the "Water Well Standards Act of 1985"; the requirements of the rules and regulations of the Department of Human Resources regarding individual or nonpublic wells; and any more stringent requirements imposed by the local governing authority.
 - (d) If sewage treatment is to be provided by any means other than one or more individual septic tanks, the sewage treatment shall meet all applicable requirements of the "Georgia Water Quality Control Act".
 - (e) If a public water supply system is to be provided, the water supply system shall meet all applicable requirements of the "Georgia Safe Drinking Water Act of 1977".
 - (f) Single-family dwellings shall not be constructed at a density of more than one per acre, however, no such acre shall be less than 100 feet wide at the building site. This density restriction shall not apply to:
 - 1. Any lot of less than one acre if such a lot was, as of July 1, 1991, owned and described as a discrete of real property according to the instrument of title of

the person or persons owning the lot on July 1, 1991; or such a lot was as of July 1, 1991, shown as a discrete parcel or real property on a plat of survey properly recorded in the real property records of the clerk of superior court by the person or persons owning the lot July 1, 1991.

2. Any land, or part of any land, which was contained in or subject to any master plan, planned unit development plan if such plan was filed with and approved by the local governing authority prior to July 1, 1991, pursuant to a duly enacted planning and zoning ordinance; provided further, that any such planning and zoning ordinance must have provided for rules and procedures and governed lot sizes, density, types of buildings, and other limitations usually associated with the implementation of local zoning ordinances.
- (g) Multi-family dwellings, in the absence of a public water supply and sewerage system, shall not be constructed at a density of more than four dwelling units per acre. If there is a public water supply and sewage system available to this property, then the density may be increased to no more than six dwelling units per acre. No such acre shall be less than 100 feet wide at the building site.
- (h) Structures shall not extend more than 40 feet, as measured from the highest point at which the foundation of such structure intersects the ground, above the uppermost point of the crest, summit, or ridge top of the protected mountain on which the structure is constructed. This height restriction shall not apply to water, radio, or television towers; to any equipment for the transmission of electricity, to minor vertical projections of a parent building, including chimneys, flagpoles, flues spires, steeples, belfries, cupolas, antennas, poles, wires; or to windmills.
- (i) Any application for a building permit to construct a commercial structure shall contain a detailed landscaping plan. Such landscaping plan:
1. shall identify all trees which are to be moved that exceed eight inches in diameter as measured at a point on the tree four and one-half feet above the surface of the ground; and
 2. shall contain a plan for replacement of any such trees that are removed.
 - (i) Such application shall also include a topographical survey of the project site and an assessment of the effect that the project will have on the environment of the mountain after the project has been completed and is in operation. Nothing in this paragraph shall be construed to require commercial structures to comply with the density provision of sections F and G cited above.

- (ii) In counties which do not require building permits, persons wishing to construct a commercial structure on a protected mountain shall obtain permission from the local government for such construction. The request for permission from the local government for such construction. The request for permission shall include the same information (listed above) that would be required if local building permit regulations were in place.

 - (j) No person engaging in land-disturbing activity shall remove more than 50 percent of the existing trees which exceed eight inches in diameter as measured at a point on such a tree four and one-half feet above the surface of the ground unless such person has filed with the application a plan of reforestation developed by a registered forester.

 - (k) Handling areas for the receiving and storage of hazardous waste are prohibited from protected mountains.

 - (l) Hazardous waste or solid waste disposal facilities are prohibited from protected mountains. Disposal facilities permitted by the Environmental Protection Division prior to the promulgation of a Mountain Protection Plan shall be exempt from this criterion.

 - (m) Other uses unapproved by local governments shall not be acceptable on protected mountains.

 - (n) Agriculture and forestry may be permitted on protected mountains provided that:
 - 1. Such agriculture and forestry must be consistent with the best management practices established by the Georgia Forestry Commission or the Georgia Soil and Water Conservation Commission;
 - 2. Agricultural and forestry activity shall be consistent with all state and federal laws, and all regulation promulgated by the Georgia Department of Agriculture.

 - (o) All roads on protected mountains shall be designed and constructed to minimize the potential for landslides, erosion, and runoff.

 - (p) Local governments may allow mining activity on protected mountains if such activity is permitted by the Department of Natural Resources.
- (5) Local Government Responsibilities.

- (a) Local government shall identify and map any protected mountain within their jurisdiction. The Department of Natural Resources will provide maps and technical guidance regarding protected mountains if and as available.
 - (b) Local governments, which contain a protected mountain within their jurisdictions, shall adopt Mountain Protection Plans.
- (6) Mountain Protection Plans.
- (a) Protected mountains shall be appropriately mapped and identified in the Mountain Protection Plans.
 - (b) Mountain Protection Plans shall address, at a minimum, the following considerations with regard to protected mountains:
 1. The plans shall consider the effect of the activities within protected mountain areas on a public health, safety, welfare, and private property rights.
 2. The plans shall consider any characteristics of a protected mountain that make it unique or significant in the conservation of flora and fauna including threatened, rare, and endangered species. The plans shall establish the local government's policies regarding such flora and fauna rather than identifying specific sites containing such species.
 3. The plans shall consider the effect of activities within protected mountain areas on ground-water or surface-water quality.
 4. The plans shall consider the effect of activities within protected mountain areas on the visual esthetics of the protected mountain.
 5. The plans shall consider whether the effects of activities within a protected mountain area are temporary or permanent in nature and, if temporary, the length of time of the impact.
 6. The plans shall consider the preservation of significant state historical and archaeological resources (defined as properties on or eligible for the National Register of Historic Places) within protected mountain areas.
 7. The plans shall consider the effect of activities within protected mountain areas on immediately adjacent sensitive natural areas. The plans shall establish the local government's policies regarding such adjacent sensitive natural areas rather than identifying specific sites.

(7) Procedures.

(a) Determination of Elevation.

1. All land that lies above 2,200 feet elevation shown on a U.S. Geological Survey quadrangle map shall meet the elevation criterion for classification as a protected mountain.
 - (i) The 2,200 foot contour line on the quadrangle map shall serve as the line of delineation.

(b) Determination of Slope.

1. All land that has a slope of 25 percent or greater for at least 500 feet horizontally as shown on a U.S. Geologic Survey quadrangle map or contained in a U.S. Geologic Survey computer data file (Digital Elevation Model) shall meet the slope criterion for classification as a protected mountain.
2. Actual calculation of slope shall be done in one of three ways:
 - (i) Slope may be determined by measuring the proximity of contour lines on a quadrangle map.
 - (ii) Slope may be determined by using appropriate computer algorithms working on U.S. Geological Survey Digital Elevation Models.
 - (iii) Slope may be determined by a registered surveyor using standard surveying practices.
3. On an otherwise protected mountain, areas that are at an elevation of 2,200 feet or more and have slope of less than 25 percent, exclusive of valley floors shall be included within the protected mountain area.
4. The crests, summits, and ridge tops of mountains whose flanks meet the criteria for a protected mountain shall also be included within the protected area, even though the slopes of such crests, summits and ridge tops have slope of less than 25 percent.

(c) Preparation of Maps.

1. As part of their Mountain Protection Plans, local governments shall include maps showing all protected mountains within their jurisdiction. These maps shall consist of either:
 - (i) Quadrangle maps (at 1:24,000 scale) on which the protected mountains have been delineated.
 - (ii) Plat maps on which the protected mountains have been delineated.

Authority: O.C.G.A. Secs. [12-2-8](#), [50-8-7.1](#), [50-8-7.2](#).

History. Original Rule entitled "Criteria for Mountain Protection" adopted. F. Dec. 20, 1991; eff. Jan. 9, 1992.

Subject 391-3-17. RADIOACTIVE MATERIALS.

Rule 391-3-17-.01. General Provisions.

- (1) **Scope.** Except as otherwise specifically provided, this Chapter, 391-3-17, applies to all persons who manufacture, produce, receive, possess, use, transfer, own, or acquire any source of radiation; provided, however, that nothing in this Chapter shall apply to any person to the extent such person is subject to regulation by the U.S. Nuclear Regulatory Commission.¹ Nothing in Rule [391-3-17-.03](#) of this Chapter shall be interpreted as limiting the intentional exposure of patients to radiation for the purpose of diagnosis or therapy.
- (2) **Definitions.** As used in this Chapter, these terms have the definitions set forth below. Additional definitions used only in a certain Rule will be found in that Rule.
 - (a) "A₁" means the maximum activity of special form radioactive material permitted in a Type A package. "A₂" means the maximum activity of radioactive material, other than special form, LSA and SCO material, permitted in a Type A package. These values are either listed in the "Table of A₁ and A₂ Values for Radionuclides" of [49 CFR 173.435](#) or may be derived in accordance with the procedure prescribed in 49 CFR 173.433-173.435.
 - (b) "Absorbed dose" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the rad and the Gray (Gy).
 - (c) "Accelerator-produced radioactive material" means any material made radioactive by a particle accelerator.
 - (d) "Act" means Chapter 13 of the Official Code of Georgia, Annotated, entitled "Radiation Control" as amended.
 - (e) "Activity" means the rate of disintegration or transformation or decay of radioactive material. The units of activity are the Curie (Ci) and the Becquerel (Bq).
 - (f) "Adult" means an individual 18 or more years of age.
 - (g) "Agreement State" means any State with which the U.S. Nuclear Regulatory Commission or the U.S. Atomic Energy Commission has entered into an effective agreement under subsection 274b. of the Atomic Energy Act of 1954, as amended (73 Stat. 689).

- (h) "Airborne radioactive material" means any radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors, or gases.
- (i) "Airborne radioactivity area" means a room, enclosure or operating area in which airborne radioactive materials, composed wholly or partly of licensed materials, exist in concentrations;
 - 1. In excess of the derived air concentrations (DACs) specified in Appendix B, to 10 CFR 20.1001-20.2401, or
 - 2. To such a degree that an individual present in the area without respiratory protective equipment could exceed, during the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI) or 12 DAC-hours.
- (j) "Annually" means once every 12 calendar months or no later than the last day of the same calendar month of the following year.
- (k) "As low as is reasonably achievable" (ALARA) means making every reasonable effort to maintain exposures to radiation as far below the dose limits in this Chapter as is practical, consistent with the purpose for which the licensed activity is undertaken, taking into account the state of technology, the economics of improvements in relation to the state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed or registered sources of radiation in the public interest.
- (l) "Background radiation" means radiation from cosmic sources; naturally occurring radioactive materials, including radon, except as a decay product of source or special nuclear material, and including global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents such as Chernobyl that contribute to background radiation and are not under the control of the licensee. "Background radiation" does not include sources of radiation from radioactive materials regulated by the Division.
- (m) "Becquerel" (Bq) means the SI unit of activity. One Becquerel is equal to one disintegration or transformation per second.
- (n) "Bioassay" means the determination of kinds, quantities or concentrations, and, in some cases, the locations of radioactive material in the human body, whether by direct measurement, in vivo counting, or by analysis and evaluation of materials excreted or removed from the human body. For purposes of this Chapter, "radiobioassay" is an equivalent term.
- (o) "Byproduct material" means:

1. Any radioactive material, except special nuclear material, yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material;
 2. The tailings or wastes produced by the extraction or concentration of uranium or thorium from ore processed primarily for its source material content, including discrete surface wastes resulting from uranium solution extraction processes. Underground ore bodies depleted by these solution extraction operations do not constitute "byproduct material" within this definition.
 3.
 - (i) Any discrete source of radium-226 that is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity; or
 - (ii) Any material that:
 - (I) Has been made radioactive by use of a particle accelerator; and
 - (II) Is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity; and
 4. Any discrete source of naturally occurring radioactive material, other than source material, that:
 - (i) The Nuclear Regulatory Commission, in consultation with the Administrator of the Environmental Protection Agency, the Secretary of Energy, the Secretary of Homeland Security, and the head of any other appropriate Federal agency, determines would pose a threat similar to the threat posed by a discrete source of radium-226 to the public health and safety or the common defense and security; and
 - (ii) Before, on, or after August 8, 2005, is extracted or converted after extraction for use in a commercial, medical, or research activity.
- (p) "Calibration" means the determination of:
1. The response or reading of an instrument relative to a series of known radiation values over the range of the instrument, or
 2. The strength of a source of radiation relative to a standard.
- (q) "CFR" means the Code of Federal Regulations.

- (r) "Collective dose" means the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.
- (s) "Committed dose" means the radiation dose that will accumulate over time as a result of retention in the body of radioactive material. Committed dose is a generic term for internal dose and must be calculated by summing the projected dose over the 50 years after intake for all irradiated organs or tissues multiplying the doses to individual organs and tissues by applicable tissue weighting factors.
- (t) "Committed dose equivalent" ($H_{T,50}$) means the dose equivalent to organs or tissues of reference (T) that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.
- (u) "Committed effective dose equivalent" ($H_{E,50}$) is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to each of these organs or tissues ($H_{E,50} = [\text{SIGMA}] w_{T,H_{T,50}}$).
- (v) "Consortium" means an association of medical use licensees and a PET radionuclide production facility in the same geographical area that jointly own or share in the operation and maintenance cost of the PET radionuclide production facility that produces PET radionuclides for use in producing radioactive drugs within the consortium for noncommercial distributions among its associated members for medical use. The PET radionuclide production facility within the consortium must be located at an educational institution or a Federal facility or a medical facility.
- (w) "Curie" means a unit of quantity of radioactivity. One Curie (Ci) is that quantity of radioactive material that decays at the rate of 3.7×10^{10} transformations per second (tps).
- (x) "Daily" means once every calendar day worked.
- (y) "Deep dose equivalent" (H_d), which applies to external whole body exposure, means the dose equivalent at a tissue depth of one centimeter ($1,000 \text{ mg/cm}^2$).
- (z) "Department" means the Department of Natural Resources of the State of Georgia.
- (aa) "Depleted uranium" means the source material uranium in which the isotope uranium-235 is less than 0.711 weight percent of the total uranium present. Depleted uranium does not include special nuclear material.
- (bb) "Derived air concentration" (DAC) means the concentration of a given radionuclide in air which, if breathed by the reference man for a working year of 2,000 hours under conditions of light work (inhalation rate 1.2 cubic meters of air per hour), results in an intake of one ALI. (Annual Limit on Intake defined in

Rule .03(2) (d)) DAC values are given in Table 1, Column 3 of Appendix B to [10 CFR 20.1001- 20.2401](#).

- (cc) "Discrete source" means a radionuclide that has been processed so that its concentration within a material has been purposely increased for use for commercial, medical, or research activities.
- (dd) "Dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, or total effective dose equivalent.
- (ee) "Dose equivalent" (H_T) means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the rem and Sievert (Sv).
- (ff) "Dose limits" means the permissible upper bounds of radiation doses established in accordance with this Chapter. For purposes of this Chapter, "limits" is an equivalent term.
- (gg) "Effective dose equivalent" (H_E) means the sum of the products of the dose equivalent to each organ or tissue (H_T) and the weighting factor (w_T) applicable to each of the body organs or tissues that are irradiated ($H_E = [\Sigma] w_T H_T$).
- (hh) "Embryo/fetus" means the developing human organism from conception until the time of birth.
- (ii) "Entrance or access point" means any opening through which an individual or extremity of an individual could gain access to radiation areas or to licensed radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.
- (jj) "Explosive material" means any chemical compound, mixture, or device that produces a substantial instantaneous release of gas and heat spontaneously or by contact with sparks or flame.
- (kk) "Exposure" means being exposed to ionizing radiation or to radioactive material.
- (ll) "Exposure rate" means the exposure per unit of time, such as Roentgen per minute or milliroentgen per hour.
- (mm) "External dose" means that portion of the dose equivalent received from any source of radiation outside the body.
- (nn) "Extremity" means hand, elbow, arm below the elbow, foot, knee, and leg below the knee.

- (oo) "Former U.S. Atomic Energy Commission (AEC) or U.S. Nuclear Regulatory Commission (NRC) licensed facilities" means nuclear reactors, nuclear fuel reprocessing plants, uranium enrichment plants, or critical mass experimental facilities where AEC or NRC licenses have been terminated.
- (pp) "Generally applicable environmental radiation standards" means standards issued by the U.S. Environmental Protection Agency (EPA) under the authority of the Atomic Energy Act of 1954, as amended, that impose limits on radiation exposures, levels, concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.
- (qq) "Gray" (Gy) means the SI unit of absorbed dose. One Gray is equal to an absorbed dose of one Joule/kilogram (100 rad).
- (rr) "Hazardous waste" means those wastes designated as hazardous by U.S. Environmental Protection Agency regulations in 40 CFR Part 261.
- (ss) "Healing arts" means medicine, dentistry, chiropractic, podiatry, osteopathy or veterinary medicine.
- (tt) "High radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving a dose equivalent in excess of 0.1 rem (1 mSv) in one hour at 30 centimeters from any source of radiation or from any surface that the radiation penetrates. For purposes of this Chapter, rooms or areas in which diagnostic x-ray systems are used for healing arts purposes are not considered high radiation areas.
- (uu) "Human use" means the internal or external administration of radiation or radioactive material to human beings.
- (vv) "Individual" means any human being.
- (ww) "Individual monitoring" means the assessment of:
 - 1. Dose equivalent by the use of:
 - (i) Individual monitoring devices, or
 - (ii) Survey data; or
 - 2. Committed effective dose equivalent:
 - (i) By bioassay, or

- (ii) By determination of the time-weighted air concentrations to which an individual has been exposed, that is, DAC-hours [See the definition of DAC-hours in Rule [391-3-17-03\(2\)\(q\)](#)].

- (xx) "Individual monitoring devices" means devices designed to be worn by a single individual for the assessment of dose equivalent. For purposes of this Chapter, individual monitoring devices and personnel monitoring equipment are equivalent terms. Examples of individual monitoring devices are film badges, thermoluminescent dosimeters (TLDs), optically stimulated luminescent devices, pocket ionization chambers, and personal air sampling devices.

- (yy) "Inspection" means an official examination or observation including, but not limited to, tests, surveys, and monitoring to determine compliance.

- (zz) "Interlock" means a device arranged or connected such that the occurrence of an event or condition is required before a second event or condition can occur or continue to occur.

- (aaa) "Internal dose" means that portion of the dose equivalent received from radioactive material taken into the body.

- (bbb) "Lens dose equivalent" (LDE) means the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeter (300 mg/cm²).

- (ccc) "License" means a license issued by the Director in accordance with the Regulations promulgated by the Board.

- (ddd) "Licensed material" means radioactive material received, possessed, used, transferred or disposed of under a general or specific license issued by the Director.

- (eee) "Licensee" means any person who is licensed by the Director in accordance with this Chapter and the Act.

- (fff) [Reserved]

- (ggg) "Limits" [See Dose limits].

- (hhh) "Lost or missing licensed material" means licensed material whose location is unknown. This definition includes licensed material that has been shipped but has not reached its planned destination and whose location cannot be readily traced in the transportation system.

- (iii) "Major processor" means a user processing, handling, or manufacturing radioactive material exceeding Type A quantities as unsealed sources or material, or exceeding four times Type B quantities as sealed sources, but does not include nuclear medicine programs, universities, industrial radiographers, or small industrial programs. Type A and B quantities are defined in Section 71.4 of 10 CFR Part 71.
- (jjj) "Management" means the chief executive officer or other individual having the authority to manage, direct, or administer the licensee's activities, or those persons' delegate or delegates.
- (kkk) "Member of the public" means any individual except when that individual is receiving an occupational dose.
- (lll) "Minor" means an individual less than 18 years of age.
- (mmm) "Monthly" means once every calendar month, not to exceed an interval of 35 days.
- (nnn) "Monitoring" means the measurement of radiation, radioactive material concentrations, surface area activities or quantities of radioactive material and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of this Chapter, "radiation monitoring" and "radiation protection monitoring" are equivalent terms.
- (ooo) "NARM" means any naturally-occurring or accelerator-produced radioactive material. It does not include byproduct, source, or special nuclear material.
- (ppp) "Natural radioactivity" means radioactivity of naturally-occurring nuclides.
- (qqq) "NORM" (Naturally-Occurring Radioactive Material) means any nuclide which is radioactive in its natural physical state (i.e., not man-made), but does not include byproduct, source, or special nuclear material.
- (rrr) "Nuclear Regulatory Commission" (NRC) means the U.S. Nuclear Regulatory Commission or its duly authorized representatives.
- (sss) "Occupational dose" means the dose received by an individual in the course of employment while engaged in activities licensed by the Director in which the individual's assigned duties involve exposure to licensed and unlicensed sources of radiation whether in the possession of the licensee, or other person. Occupational dose does not include doses received from background radiation, as a patient from medical practices, from exposure from individuals administered radioactive material and released in accordance with Rule [391-3-17-05\(37\)](#), from voluntary participation in medical research programs, or as a member of the public.

- (ttt) "Package" means the assembly of components necessary to ensure compliance with packing requirements of DOT regulations together with its radioactive contents as presented for transport.
1. "Fissile material package" means a fissile material packaging together with its fissile material contents.
 2. "Type B package" means a Type B packaging together with its radioactive contents. On approval, a Type B package design is designated by NRC as B(U) unless the package has a maximum normal operating pressure of more than 700 kPa (100 lb/in²) gauge or pressure relief device that will allow the release of radioactive material to the environment under the tests specified in 10 CFR 71 (hypothetical accident conditions), in which case it will receive a designation B(M). B(U) refers to the need for unilateral approval of international shipments; B(M) refers to the need for multilateral approval of international shipments. There is no distinction made in how packages with these designations may be used in domestic transportation. To determine their distinction for international transportation, see DOT regulations in 49 CFR 173. A Type B package approved before September 6, 1983, was designated only as Type B. Limitations on its use are specified in [10 CFR 71.13](#).
- (uuu) "Particle accelerator" means any machine capable of accelerating electrons, protons, deuterons, or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of one MeV. For purposes of this definition, "accelerator" is an equivalent term.
- (vvv) "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this State, any other state or political subdivision or agency thereof, and any legal successor, representative, agent, or department of the foregoing, but shall not include federal government agencies.
- (www) "Personnel monitoring equipment" [See Individual monitoring devices].
- (xxx) "Pharmacist" means any individual who is licensed to practice Pharmacy in this State by the Georgia State Board of Pharmacy.
- (yyy) "Physician" means any person who is licensed to engage in the practice of medicine under the Authority of O.C.G.A. [43-34-20](#) or the limited practice of medicine under O.C.G.A. [43-35-1](#).
- (zzz) "Positron Emission Tomography (PET) radionuclide production facility" is defined as a facility operating a cyclotron or accelerator for the purpose of producing PET radionuclides.

- (aaaa) "Principal activities," as used in this Chapter, means activities authorized by the license which are essential to achieving the purpose(s) for which the license was issued or amended. Storage during which no license material is accessed for use or disposal and activities incidental to decontamination or decommissioning are not principal activities.
- (bbbb) "Public dose" means the dose received by a member of the public from radiation and/or radioactive material released by a licensee or from any other source of radiation under the control of a licensee. It does not include occupational dose, doses received from background radiation, doses received as a patient from medical practices, from exposure from individuals administered radioactive material and released in accordance with Rule [391-3-17.05\(37\)](#), or doses from voluntary participation in medical research programs.
- (cccc) "Pyrophoric liquid" means any liquid that ignites spontaneously in dry or moist air at or below 130 °F (54.4 °C). A pyrophoric solid is any solid material, other than one classed as an explosive, which under normal conditions is liable to cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily and, when ignited, burns so vigorously and persistently as to create a serious transportation, handling, or disposal hazard. Included are spontaneously combustible and water-reactive materials.
- (dddd) "Qualified expert" means an individual having the knowledge and training to measure ionizing radiation, to evaluate safety techniques, and to advise regarding radiation protection needs, for example, individuals certified in the appropriate field by the American Board of Radiology or the American Board of Health Physics, or those having equivalent qualifications. With reference to the calibration of radiation therapy equipment, an individual having, in addition to the above qualifications, training and experience in the clinical applications of radiation physics to radiation therapy, for example, individuals certified in Therapeutic Radiological Physics or X-Ray and Radium Physics by the American Board of Radiology, or those having equivalent qualifications.
- (eeee) "Quality factor" (Q) means the modifying factor, listed in Tables 1 and 2 of this Rule that is used to derive dose equivalent from absorbed dose.
- (ffff) "Quarterly" means once every three calendar months or no later than the last day of the third month after the initial month.
- (gggg) "Rad" means the special unit of absorbed dose. One rad is equal to an absorbed dose of 100 ergs/gram or 0.01 Joule/kilogram (0.01 Gray).
- (hhhh) "Radiation" means alpha particles, beta particles, gamma rays, x-rays, neutrons, high-speed electrons, high-speed protons, and other particles capable

of producing ions. For purposes of this Chapter, ionizing radiation is an equivalent term. Radiation, as used in this Chapter, does not include non-ionizing radiation, such as radiowaves, microwaves, visible, infrared, or ultraviolet light.

- (iii) "Radiation area" means any area, accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 5 mrem (0.05 mSv) in one hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates.
- (jjj) "Radiation machine" means any device capable of producing radiation except those devices with radioactive material as the only source of radiation.
- (kkk) "Radiation Safety Officer" (RSO) means an individual who has the knowledge and responsibility to apply appropriate radiation protection regulations.
- (III) "Radioactive material" means any solid, liquid, or gas that emits radiation spontaneously.
- (mmm) "Radioactivity" means the transformation of unstable atomic nuclei by the emission of radiation.
- (nnn) "Regulations of the U.S. Department of Transportation" means the regulations in 49 CFR Parts 100-189.
- (ooo) "Rem" means the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 Sievert).
- (ppp) "Research and development" means
 1. Theoretical analysis, exploration, or experimentation; or
 2. The extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials, and processes. Research and development does not include the internal or external administration of radiation or radioactive material to human beings.
- (qqq) "Restricted area" means any area to which access is limited by the licensee for purposes of protecting individuals against undue risks from exposure to sources of radiation and radioactive material. A restricted area does not include areas used as residential quarters, but separate rooms in a residential building may be set apart as a restricted area.

- (rrrr) "Roentgen" means the special unit of exposure. One Roentgen (R) equals 2.58×10^{-4} Coulombs/kilogram of air.
- (ssss) "Sealed source" means radioactive material that is permanently bonded or fixed in a capsule or matrix designed to prevent release and dispersal of the radioactive material under the most severe conditions which are likely to be encountered in normal use and handling.
- (tttt) "Sealed Source and Device Registry" means the national registry that contains all the registration certificates, generated by both the NRC and the Agreement States, that summarize the radiation safety information for the sealed sources and devices and describe the licensing and use conditions approved for the product.
- (uuuu) "Shallow dose equivalent" (H_s), which applies to the external exposure of the skin of the whole body or the skin of an extremity, means the dose equivalent at a tissue depth of 0.007 centimeter (7 mg/cm^2).
- (vvvv) "SI" means an abbreviation of the International System of Units.
- (wwww) "Sievert" means the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in Sievert is equal to the absorbed dose in Gray multiplied by the quality factor ($1 \text{ Sv} = 100 \text{ rem}$).
- (xxxx) "Site boundary" means that line beyond which the land or property is not owned, leased, or otherwise controlled by the licensee.
- (yyyy) "Source material" means
1. Uranium or thorium, or any combination thereof, in any physical or chemical form; or
 2. Ores that contain by weight one-twentieth of one percent (0.05 percent) or more of uranium, thorium, or any combination thereof. Source material does not include special nuclear material.
- (zzzz) "Source material milling" means any activity that results in the production of byproduct material as defined by .01(2)(o)2.
- (aaaa) "Source of radiation" means any radioactive material or any device or equipment emitting, or capable of producing, radiation.
- (bbbb) "Special form radioactive material" means radioactive material that satisfies the following conditions:
1. It is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

2. The piece or capsule has at least one dimension not less than five millimeters (0.197 inch); and
3. It satisfies the test requirements specified by the U.S. Nuclear Regulatory Commission. A special form encapsulation designed in accordance with the U.S. Nuclear Regulatory Commission requirements in effect on June 30, 1983, and constructed prior to July 1, 1985, may continue to be used. A special form encapsulation either designed or constructed after June 30, 1985, must meet requirements of this definition applicable at the time of its design or construction.

(cccc) "Special nuclear material" means:

1. Plutonium, uranium-233, uranium enriched in the isotope 233 or in the isotope 235, and any other material that the U.S. Nuclear Regulatory Commission, pursuant to the provisions of section 51 of the Atomic Energy Act of 1954, as amended, determines to be special nuclear material but does not include source material; or
2. Any material artificially enriched by any of the foregoing but does not include source material.

(dddd) "Special nuclear material in quantities not sufficient to form a critical mass" means uranium enriched in the isotope U-235 in quantities not exceeding 350 grams of contained U-235; uranium-233 in quantities not exceeding 200 grams; plutonium in quantities not exceeding 200 grams; or any combination of them in accordance with the following formula: For each kind of special nuclear material, determine the ratio between the quantity of that special nuclear material and the quantity specified above for the same kind of special nuclear material. The sum of such ratios for all of the kinds of special nuclear material in combination shall not exceed 1.

For example, the following quantities in combination would not exceed the limitation and are within the formula:

$$\frac{175 \text{ (grams contained U-235)}}{350} + \frac{50 \text{ (grams U-233)}}{200} + \frac{50 \text{ (grams Pu)}}{200} \leq 1$$

(eeee) "Survey" means an evaluation of the radiological conditions and potential hazards incident to the production, use, transfer, release, disposal, or presence of sources of radiation. When appropriate, such evaluation includes, but is not limited to, tests, physical examinations, and measurements of levels of radiation or concentrations of radioactive material present.

- (fffff) "Test" means the process of verifying compliance with an applicable regulation.
- (ggggg) "This Chapter" means all of the Rules in Chapter 391-3-17.
- (hhhhh) "Total effective dose equivalent" (TEDE) means the sum of the effective dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures).
- (iiiiii) "U.S. Department of Energy" means the Department of Energy established by Public Law 95-91, August 4, 1977, 91 Stat. 565, [42 U.S.C. 7101](#) et seq., to the extent that the Department exercises functions formerly vested in the U.S. Atomic Energy Commission, its Chairman, members, officers, and components and transferred to the U.S. Energy Research and Development Administration and to the Administrator thereof pursuant to sections 104(b), (c) and (d) of the Energy Reorganization Act of 1974 (Public Law 93-438, October 11, 1974, 88 Stat. 1233 at 1237, [42 U.S.C. 5814](#), effective January 19, 1975) and retransferred to the Secretary of Energy pursuant to section 301(a) of the Department of Energy Organization Act (Public Law 95-91, August 4, 1977, 91 Stat. 565 at 577-578, [42 U.S.C. 7151](#), effective October 1, 1977).
- (jjjjj) "Unrefined and unprocessed ore" means ore in its natural form prior to any processing, such as grinding, roasting, beneficiating, or refining. Processing does not include sieving or encapsulation of ore or preparation of samples for laboratory analysis.
- (kkkkk) "Unrestricted area" means an area to which access is neither limited nor controlled by the licensee.
- (lllll) "Very High Radiation Area" means an area, accessible to individuals, in which radiation levels could result in an individual receiving an absorbed dose in excess of 500 rads (5 Grays) in one hour at one meter from a radiation source or from any surface that the radiation penetrates.
- (mmmmm) "Waste" means those low-level radioactive wastes containing source, special nuclear, or byproduct material that are acceptable for disposal in a land disposal facility. For the purposes of this definition, low-level waste has the same meaning as radioactive waste not classified as high-level radioactive waste, transuranic waste, spent nuclear fuel, or byproduct material as defined in .01(2)(o)2., 3., and 4.
- (nnnnn) "Waste handling licensees" mean persons licensed to receive and store radioactive wastes prior to disposal and/or persons licensed to dispose of radioactive waste.

- (ooooo) "Weekly" means once every calendar week, not to exceed an interval of ten days.
- (ppppp) "Whole body" means, for purposes of external exposure, head, trunk, including male gonads, arms above the elbow, or legs above the knee.
- (qqqqq) "Worker" means an individual engaged in work under a license issued by the Director and controlled by a licensee. If the licensee is an individual rather than one of the other legal entities defined under "person," the radiation exposure limits for the worker also apply to the individual who is the licensee.
- (rrrrr) "Working level" (WL) means any combination of short-lived radon daughters in one liter of air that will result in the ultimate emission of 1.3×10^5 MeV of potential alpha particle energy. The short-lived radon daughters for radon-222 are: polonium-218, lead-214, bismuth-214, and polonium-214; and for radon-220: polonium-216, lead-212, bismuth-212, and polonium-212.
- (sssss) "Working level month" (WLM) means an exposure to one working level for 170 hours. Two thousand working hours per year divided by 12 months per year is approximately equal to 170 hours per month.
- (ttttt) "Year" means the period of time beginning in January used to determine compliance with the provisions of this Chapter. The licensee may change the starting date of the year used to determine compliance by the licensee provided that the change is made at the beginning of the year and that no day is omitted or duplicated in consecutive years.
- (uuuuu) "Director" means the Director of the Environmental Protection Division of the Department of Natural Resources.
- (vvvvv) "Division" means the Environmental Protection Division.

(3) Exemptions from the Regulatory Requirements.

- (a) General Provision. The Director may, upon application or upon its own initiative, grant such exemptions or exceptions from the requirements of this Chapter as it determines are authorized by law and will not result in undue hazard to public health and safety or property.
- (b) U.S. Department of Energy Contractors and U.S. Nuclear Regulatory Commission Contractors. Any U.S. Department of Energy contractor or subcontractor and any U.S. Nuclear Regulatory Commission contractor or subcontractor of the following categories operating within this State are exempt from this Chapter to the extent that such contractor or subcontractor under his contract receives, possesses, uses, transfers, or acquires sources of radiation:

1. Prime contractors performing work for the U.S. Department of Energy at U.S. government-owned or -controlled sites, including the transportation of sources of radiation to or from such sites and the performance of contract services during temporary interruptions of such transportation;
 2. Prime contractors of the U.S. Department of Energy performing research in, or development, manufacture, storage, testing, or transportation of, atomic weapons or components thereof;
 3. Prime contractors of the U.S. Department of Energy using or operating nuclear reactors or other nuclear devices in a United States government-owned vehicle or vessel; and
 4. Any other prime contractor or subcontractor of the U.S. Department of Energy or of the U.S. Nuclear Regulatory Commission when the Department and the Nuclear Regulatory Commission jointly determine:
 - (i) That the exemption of the prime contractor or subcontractor is authorized by law; and
 - (ii) That, under the terms of the contract or subcontract, there is adequate assurance that the work thereunder can be accomplished without undue risk to public health and safety.
- (4) **Records.** Each licensee shall maintain records showing the receipt, transfer, and disposal of all sources of radiation. Additional record requirements are specified elsewhere in this Chapter.
- (5) **Inspections.**
- (a) Each licensee shall afford the Division at all reasonable times, an opportunity to inspect sources of radiation and the premises and facilities wherein such sources of radiation are used or stored.
 - (b) Each licensee shall make available to the Division for inspection, upon reasonable notice, records maintained pursuant to this Chapter.
 - (c) The Division or its designated representative is authorized under the authority of O.C.G.A. [31-5-5](#) to classify as confidential and privileged such documents, reports, and other information and data obtained from persons, firms, corporations, municipalities, counties, and other public authorities and political subdivisions where such matters relate to:
 1. Trade secrets and commercial or financial information furnished to the Division on a privileged or confidential basis. Matters subject to this

exemption are those that are customarily held in confidence by the originator. They include, but are not limited to:

- (i) Information received in confidence, such as trade secrets, inventions, and proprietary data;
 - (ii) Technical reports and data, designs, drawings, specifications, formulas, or other types of proprietary information which are furnished to the Division or which are generated or developed by the Division or for the Division under contract.
2. Personnel and medical files and similar files, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy. Examples of files exempt from disclosure include, but are not limited to names or identifying information regarding individuals who have received exposure to radiation.
- (d) Discovery of material qualified pursuant to 391-3-17-.01(5)(c) shall be subject to the statutory requirements found in O.C.G.A. [31-5-5](#).
- (6) **Tests.** Each licensee shall perform upon instructions from the Division, or shall permit the Division to perform, such reasonable tests as the Division deems appropriate or necessary, including, but not limited to, tests of:
- (a) Sources of radiation;
 - (b) Facilities wherein sources of radiation are used or stored;
 - (c) Radiation detection and monitoring instruments; and
 - (d) Other equipment and devices used in connection with utilization or storage of licensed sources of radiation.
- (7) **Additional Requirements.** The Director by Order, may impose upon any licensee such requirements in addition to those established in this Chapter as it deems appropriate or necessary to minimize danger to public health and safety or property.
- (8) **Violations.**
- (a) An injunction or other court order may be obtained prohibiting any violation of the provisions of the Act, this Chapter, or any Order issued thereunder in accordance with Rule [391-3-17-.11](#). Any person who willfully violates any provision of the Act, this Chapter, or any Order issued thereunder may be guilty of a misdemeanor as provided by law. Violators of this Chapter may also be subject to civil penalties in accordance with O.C.G.A. [31-13-15](#).

- (b) Any licensee, certificate of registration holder, applicant for a license or certificate of registration, employee of a licensee, certificate of registration holder or applicant; or any contractor (including a supplier or consultant), subcontractor, employee of a contractor or subcontractor of any licensee or certificate of registration holder or applicant for a license or certificate of registration, who knowingly provides to any licensee, applicant, certificate holder, contractor, or subcontractor, any components, equipment, materials, or other goods or services that relate to a licensee's, certificate holder's or applicant's activities in this part, may not:
 - 1. Engage in deliberate misconduct that causes or would have caused, if not detected, a licensee, certificate of registration holder, or applicant to be in violation of any Rule, Regulation, or Order; or any term, condition, or limitation of any license issued by the Director; or
 - 2. Deliberately submit to the Division, a licensee, certificate of registration holder, an applicant, or a licensee's, certificate holder's or applicant's, contractor or subcontractor, information that the person submitting the information knows to be incomplete or inaccurate in some respect material to the Division.
- (c) A person who violates 8(b)1. or 8(b)2. may be subject to enforcement action in accordance with the provisions of Rule .11 of this Chapter.
- (d) For the purposes of 8(b)1., deliberate misconduct by a person means an intentional act or omission that the person knows:
 - 1. Would cause a licensee, certificate of registration holder or applicant to be in violation of any Rule, Regulation, or Order; or any term, condition, or limitation, of any license issued by the Director; or
 - 2. Constitutes a violation of a requirement, procedure, instruction, contract, purchase order, or policy of a licensee, certificate of registration holder, applicant, contractor, or subcontractor.
- (9) **Impounding.** The Director shall have the authority in the event of an emergency to impound or order the impounding of radioactive material in the possession of any person who is not equipped to observe or fails to observe the provisions of this Chapter or any Rules issued thereunder.
 - (a) Upon a showing that the emergency no longer exists and the owner of the radioactive material has demonstrated that he has achieved and is capable of maintaining compliance with the Act, the terms and conditions of his license, all Rules and Orders of the Director, the Director may return the impounded radioactive material to its owner.

- (b) In the event an owner cannot demonstrate his ability to achieve and maintain compliance with the Act, the terms and conditions of his license, all Rules and Orders of the Director, the Director is authorized to seek a court order condemning such radioactive material and providing for its destruction or other disposition for the health and safety of the populace.
- (10) **Severability.** Should any section, paragraph, sentence, clause or phrase of this Chapter be declared unconstitutional or invalid for any reason, the remainder of this Chapter shall not be affected thereby.
- (11) **Units of Exposure and Dose.**
- (a) As used in this Chapter, the unit of Exposure is the Coulomb per kilogram (C/kg). One Roentgen is equal to 2.58×10^{-4} Coulomb per kilogram of air.
- (b) As used in this Chapter, the units of dose are:
1. Gray (Gy) is the SI unit of absorbed dose. One Gray is equal to an absorbed dose of 1 Joule/kilogram (100 rad).
 2. Rad is the special unit of absorbed dose. One rad is equal to an absorbed dose of 100 ergs/gram or 0.01 Joule/kilogram (0.01 Gy).
 3. Rem is the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 Sv).
 4. Sievert is the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in Sievert is equal to the absorbed dose in Gray multiplied by the quality factor (1 Sv = 100 rem).
- (c) As used in this Chapter, the quality factors for converting absorbed dose to dose equivalent are shown in Table I.

TABLE I

QUALITY FACTORS AND ABSORBED DOSE EQUIVALENCIES

TYPE OF RADIATION	Quality Factor (Q)	Absorbed Dose Equal to a Unit Dose Equivalent ^(a)
X, gamma, or beta radiation and high-speed electrons	1	1

Alpha particles, multiple-charged particles, fission fragments and heavy particles of unknown charge	20	0.05
Neutrons of unknown energy	10	0.1
High-energy protons	10	0.1

(a) Absorbed dose in rad equal to 1 rem or the absorbed dose in Gray equal to 1 Sv.

- (d) If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in Sievert per hour or rem per hour, as provided in (11)(c) of this Rule, 0.01 Sv (1 rem) of neutron radiation of unknown energies may, for purposes of this Chapter, be assumed to result from a total fluence of 25 million neutrons per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee may use the fluence rate per unit dose equivalent or the appropriate Q value from Table II to convert a measured tissue dose in Gray or rad to dose equivalent in Sievert or rem.

TABLE II

MEAN QUALITY FACTORS, Q, AND FLUENCE PER UNIT DOSE EQUIVALENT FOR MONOENERGETIC NEUTRONS

Neutron Energy (MeV)	Quality Factor (a) (Q)	Fluence per Unit Dose Equivalent (b) (neutrons cm ⁻² rem ⁻¹)	Fluence per Unit Dose Equivalent (b) (neutrons cm ⁻² Sv ⁻¹)
(thermal)	2.5 x 10 ⁻⁸	2	980 x 10 ⁶
1 x 10 ⁻⁷	2	980 x 10 ⁶	980 x 10 ⁸
1 x 10 ⁻⁶	2	810 x 10 ⁶	810 x 10 ⁸
1 x 10 ⁻⁵	2	810 x 10 ⁶	810 x 10 ⁸
1 x 10 ⁻⁴	2	840 x 10 ⁶	840 x 10 ⁸
1 x 10 ⁻³	2	980 x 10 ⁶	980 x 10 ⁸
1 x 10 ⁻²	2.5	1010 x 10 ⁶	1010 x 10 ⁸
1 x 10 ⁻¹	7.5	170 x 10 ⁶	170 x 10 ⁸
5 x 10 ⁻¹	11	39 x 10 ⁶	39 x 10 ⁸
1	11	27 x 10 ⁶	27 x 10 ⁸
2.5	9	29 x 10 ⁶	29 x 10 ⁸
5	8	23 x 10 ⁶	23 x 10 ⁸

7	7	24×10^6	24×10^8
10	6.5	24×10^6	24×10^8
14	7.5	17×10^6	17×10^8
20	8	16×10^6	16×10^8
40	7	14×10^6	14×10^8
60	5.5	16×10^6	16×10^8
1×10^2	4	20×10^6	20×10^8
2×10^2	3.5	19×10^6	19×10^8
3×10^2	3.5	16×10^6	16×10^8
4×10^2	3.5	14×10^6	14×10^8

(a) Value of quality factor (Q) at the point where the dose equivalent is maximum in a 30-cm diameter cylinder tissue-equivalent phantom.

(b) Monoenergetic neutrons incident normally on a 30-cm diameter cylinder tissue-equivalent phantom.

(12) **Units of Radioactivity.** For purposes of this Chapter, activity is expressed in the SI unit of Becquerel (Bq) or in the special unit of Curie (Ci), or their multiples, or disintegrations or transformations per unit of time.

(a) One Becquerel (Bq) = 1 disintegration or transformation per second.

(b) One Curie (Ci) = 3.7×10^{10} disintegrations or transformations per second = 3.7×10^{10} Becquerel (Bq) = 2.22×10^{12} disintegrations or transformations per minute.

(13) **Communications.** All communications and reports concerning this Chapter, and applications filed thereunder should be addressed to the Georgia Department of Natural Resources/Environmental Protection Division, Radioactive Materials Program, at 4244 International Parkway, Suite 120, Atlanta, Georgia 30354.

Rule 391-3-17-.02. Licensing of Radioactive Material.

(1) Purpose and Scope.

- (a) This Rule, 391-3-17-.02, provides for the licensing of radioactive material. No person shall receive, possess, use, transfer, own, or acquire radioactive material except as authorized in a specific or general license issued pursuant to this Rule or as otherwise provided in this Chapter. However, nothing in this Rule shall apply to any person to the extent such person is subject to regulation by the U.S. Nuclear Regulatory Commission.

- (b) In addition to the requirements of this Rule, all licensees are subject to the requirements of Rules .01, .03, .06, .07, .10, and .11 of this Chapter. Licensees engaged in industrial radiographic operations are subject to the requirements of Rule .04 of this Chapter. Licensees using radioactive material in the healing arts are also subject to the requirements of Rule .05 of this Chapter. Licensees engaged in the extrusion, mining, storage, beneficiating, processing, use, transfer, or disposal of NORM in such a manner as to alter the chemical properties or physical state of the NORM or its potential exposure pathways to humans are also subject to the requirements of Rule .08 of this Chapter. Licensees using irradiators whose dose rate exceeds 500 rads (5 Grays) per hour at one meter from the radioactive sealed sources are also subject to the requirements of Rule .09 of this Chapter.

Note: All numbered and lettered references within this Rule refer to parts of this Rule, unless stated otherwise.

(2) Exemptions/Source Material.

- (a) Any person is exempt from this Rule to the extent that such person receives, possesses, uses, owns, or transfers source material in any chemical mixture, compound, solution, or alloy in which the source material is by weight less than 1/20 of one percent (0.05 percent) of the mixture, compound, solution, or alloy.
- (b) Any person is exempt from this Rule to the extent that such person receives, possesses, uses, or transfers unrefined and unprocessed ore containing source material; provided that, except as authorized in a specific license, such person shall not refine or process such ore.
- (c) Any person is exempt from this Rule to the extent that such person receives, possesses, uses, or transfers:
 - 1. Any quantities of thorium contained in:
 - (i) Incandescent gas mantles,
 - (ii) Vacuum tubes,
 - (iii) Welding rods,
 - (iv) Electric lamps for illuminating purposes provided that each lamp does not contain more than 50 milligrams of thorium,
 - (v) Germicidal lamps, sunlamps, and lamps for outdoor or industrial lighting provided that each lamp does not contain more than two grams of thorium,

- (vi) Rare earth metals and compounds, mixtures, and products containing not more than 0.25 percent by weight thorium, uranium, or any combination of these, or
 - (vii) Personnel neutron dosimeters, provided that each dosimeter does not contain more than 50 milligrams of thorium;
2. Source material contained in the following products:
- (i) Glazed ceramic tableware manufactured before August 27, 2013, provided that the glaze contains not more than 20 percent by weight source material,
 - (ii) Glassware containing not more than ten percent by weight source material, but not including commercially manufactured glass brick, pane glass, ceramic tile, or other glass or ceramic used in construction,
 - (iii) Glassware containing not more than 2 percent by weight source material, or for glassware manufactured before August 27, 2013, 10 percent by weight source material; but not including commercially manufactured glass brick, pane glass, ceramic tile, or other glass or ceramic used in construction, or
 - (iv) Piezoelectric ceramic containing not more than two percent by weight source material;
3. Photographic film, negatives, and prints containing uranium or thorium;
4. Any finished product or part fabricated of, or containing, tungsten-thorium or magnesium-thorium alloys, provided that the thorium content of the alloy does not exceed four percent by weight and that this exemption shall not be deemed to authorize the chemical, physical, or metallurgical treatment or processing of any such product or part;
5. Uranium contained in counterweights installed in aircraft, rockets, projectiles, and missiles, or stored or handled in connection with installation or removal of such counterweights, provided that:
- (i) Each such counterweight has been impressed with the following legend clearly legible through any plating or other covering:
"DEPLETED URANIUM",

- (ii) Each counterweight is durably and legibly labeled or marked with the identification of the manufacturer and the statement: "UNAUTHORIZED ALTERATIONS PROHIBITED", and
- (iii) This exemption shall not be deemed to authorize the chemical, physical, or metallurgical treatment or processing of any such counterweights other than repair or restoration of any plating or other covering;

Note: The requirements specified in (2)(c)5.(i) and (ii) need not be met by counterweights manufactured prior to December 31, 1969, provided that such counterweights are impressed with the legend: "CAUTION - RADIOACTIVE MATERIAL - URANIUM".

6. Natural or depleted uranium metal used as shielding constituting part of any shipping container which is conspicuously and legibly impressed with the legend: "CAUTION - RADIOACTIVE SHIELDING - URANIUM" and the uranium metal is encased in mild steel or equally fire-resistant metal of minimum wall thickness of 1/8 inch (3.2 mm);
7. Thorium or uranium contained in or on finished optical lenses and mirrors, provided that each lens or mirror does not contain more than 10 percent by weight thorium or uranium or, for lenses manufactured before August 27, 2013, 30 percent by weight of thorium; and that this exemption contained in this subparagraph (c) does not authorize either:
 - (i) The shaping, grinding, or polishing of such lens or mirror or manufacturing processes other than the assembly of such lens or mirror into optical systems and devices without any alteration of the lens or mirror; or
 - (ii) The receipt, possession, use, or transfer of uranium or thorium contained in contact lenses, in spectacles, or in eyepieces in binoculars or other optical instruments;
8. Uranium contained in detector heads for use in fire detection units, provided that each detector head contains not more than 0.005 microcurie of uranium; or
9. Thorium contained in any finished aircraft engine part containing nickel-thoria alloy, provided that:
 - (i) The thorium is dispersed in the nickel-thoria alloy in the form of finely divided thoria (thorium dioxide), and

- (ii) The thorium content in the nickel-thoria alloy does not exceed four percent by weight.
10. No person may initially transfer for sale or distribution a product containing source material to persons exempt under this subparagraph (c), or equivalent regulations of an Agreement State or the U.S. Nuclear Regulatory Commission, unless authorized by a license issued under [10 CFR 40.52](#) to initially transfer such products for sale or distribution.
- (i) Persons initially distributing source material in products covered by the exemptions in this subparagraph (c) before August 27, 2013, without specific authorization may continue such distribution for 1 year beyond this date. Initial distribution may also be continued until the Commission takes final action on a pending application for license or license amendment to specifically authorize distribution submitted no later than 1 year beyond this date.
 - (ii) Persons authorized to manufacture, process, or produce these materials or products containing source material by an Agreement State, and persons who import finished products or parts, for sale or distribution must be authorized by a license issued under [10 CFR 40.52](#) for distribution only and are exempt from the requirements of 10 CFR 19 and 20, and 10 CFR 40.32(b) and (c).
- (d) The exemptions in paragraph (2)(c) do not authorize the manufacture of any of the products described.

(3) Exemptions/Radioactive Material Other Than Source Material.

- (a) Exempt Concentrations.
 - 1. Except as provided in (3)(a)3. and 4., any person is exempt from this Chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires products containing radioactive material in concentrations not in excess of those listed in (21)(a), Schedule A.
 - 2. This section shall not be deemed to authorize the import of radioactive material or products containing radioactive material.
 - 3. A manufacturer, processor, or producer of a product or material is exempt from the requirements of this Rule to the extent that this person transfers products containing radioactive material in concentrations not in excess of those listed in (21)(a) Schedule A and introduced into the product or material by a licensee holding a specific license issued by the Director

expressly authorizing such introduction. This exemption does not apply to the transfer of radioactive material contained in any food, beverage, cosmetic, drug, or other commodity or product designed for ingestion or inhalation by, or application to, a human being.

4. No person may introduce radioactive material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under (3)(a). or equivalent Regulations of the U.S. Nuclear Regulatory Commission or any Agreement State, except in accordance with a specific license issued pursuant to [10 CFR 32.11](#).

(b) Exempt Quantities.

1. Except as provided in (3)(b)3. through 5., any person is exempt from this Chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires radioactive material in individual quantities each of which does not exceed the applicable quantity set forth in (21)(b), Schedule B.
2. Any person, who possesses radioactive material received or acquired before September 25, 1971, under the general license then provided in [10 CFR 31.4](#), or similar general license of an Agreement State, is exempt from the requirements of this Chapter to the extent that this person possesses, uses, transfers, or owns byproduct material.
3. Paragraph (3)(b) does not authorize the production, packaging, repackaging, or transfer of radioactive material for purposes of commercial distribution, or the incorporation of radioactive material into products intended for commercial distribution.
4. No person may, for purposes of commercial distribution, transfer radioactive material in the individual quantities set forth in (21)(b), Schedule B, knowing or having reason to believe that such quantities of radioactive material will be transferred to persons exempt under (3)(b) or equivalent regulations of the U.S. Nuclear Regulatory Commission or any Agreement State, except in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to Section 32.18 of 10 CFR, Part 32, or by the Director pursuant to (11)(b) which license states that the radioactive material may be transferred by the licensee to persons exempt under (3)(b) or the equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State.
5. No person may, for purposes of producing an increased radiation level, combine quantities of byproduct material covered by this exemption so that the aggregate quantity exceeds the limits set forth in (21)(b), Schedule B,

except for radioactive material combined within a device placed in use before May 3, 1999, or as otherwise permitted by this Chapter.

(c) Exempt Items.

1. Certain Items Containing Radioactive Material. Except for persons who apply radioactive material to, or who incorporate radioactive material into, the following products, or persons who initially transfer for sale or distribution the following products containing radioactive material, any person is exempt from the requirements for a license set forth in this Chapter to the extent that he receives, possesses, uses, transfers, owns, or acquires the following products:

Note: Authority to transfer possession or control by the manufacturer, processor, or producer of any equipment, device, commodity, or other product containing radioactive material whose subsequent possession, use, transfer, and disposal by all other persons are exempted from regulatory requirements may be obtained only from the U.S. Nuclear Regulatory Commission, Washington, D.C., 20555.

- (i) Timepieces or hands or dials containing not more than the following specified quantities of radioactive material and not exceeding the following specified radiation dose rates:
 - (I) 25 millicuries (925 MBq) of tritium per timepiece.
 - (II) 5 millicuries (185 MBq) of tritium per hand.
 - (III) 15 millicuries (555 MBq) of tritium per dial (bezels when used shall be considered as part of the dial).
 - (IV) 100 microcuries (3.7 MBq) of promethium-147 per watch or 200 microcuries (7.4 MBq) of promethium-147 per any other timepiece.
 - (V) 20 microcuries (0.74 MBq) of promethium-147 per watch hand or 40 microcuries (1.48 MBq) of promethium-147 per other timepiece hand.
 - (VI) 60 microcuries (2.22 MBq) of promethium-147 per watch dial or 120 microcuries (4.44 MBq) of promethium-147 per other timepiece dial (bezels when used shall be considered as part of the dial).

- (VII) The levels of radiation from hands and dials containing promethium-147 will not exceed, when measured through 50 milligrams per square centimeter of absorber:
 - I. For wrist watches, 0.1 millirad (1 μ Gy) per hour at ten centimeters from any surface.
 - II. For pocket watches, 0.1 millirad (1 μ Gy) per hour at one centimeter from any surface.
 - III. For any other timepiece, 0.2 millirad (2 μ Gy) per hour at ten centimeters from any surface.

- (VIII) One microcurie (37 kBq) of radium-226 per timepiece in intact timepieces manufactured prior to November 30, 2007.

- (ii) Static elimination devices which contain, as a sealed source or sources, byproduct material consisting of a total of not more than 18.5 MBq (500 μ Ci) of polonium-210 per device.

- (iii) Ion generating tubes designed for ionization of air that contain, as a sealed source or sources, byproduct material consisting of a total of not more than 18.5 MBq (500 μ Ci) of polonium-210 per device or of a total of not more than 1.85 GBq (50 mCi) of hydrogen-3 (tritium) per device.

- (iv) Such devices authorized before October 23, 2012, for use under the general license then provided in Section 31.3 of 10 CFR, Part 31 and equivalent regulations of Agreement States and manufactured, tested, and labeled by the manufacturer in accordance with the specifications contained in a specific license issued by the Director.

- (v) Precision balances containing not more than one millicurie (37 MBq) of tritium per balance or not more than 0.5 millicurie (18.5 MBq) of tritium per balance part manufactured before December 17, 2007.

- (vi) [Reserved]

- (vii) Marine compasses containing not more than 750 millicuries (27.8 GBq) of tritium gas and other marine navigational instruments containing not more than 250 millicuries (9.25 GBq) of tritium gas manufactured before December 17, 2007.

- (viii) [Reserved]
- (ix) Ionization chamber smoke detectors containing not more than 1 microcurie (μCi) of americium-241 per detector in the form of a foil and designed to protect life and property from fires.
- (x) Electron tubes, provided that the levels of radiation from each electron tube containing radioactive material will not exceed one millirad ($10 \mu\text{Gy}$) per hour at one centimeter from any surface when measured through seven milligrams per square centimeter of absorber. Provided also, that each tube does not contain more than one of the following specified quantities of radioactive material:
 - (I) 150 millicuries (5.55 GBq) of tritium per microwave receiver protector tube or ten millicuries (370 MBq) of tritium per any other electron tube.
 - (II) 1 microcurie (37 kBq) of cobalt-60.
 - (III) 5 microcuries (185 kBq) of nickel-63.
 - (IV) 30 microcuries (1.11 MBq) of krypton-85.
 - (V) 5 microcuries (185 kBq) of cesium-137.
 - (VI) 30 microcuries (1.11 MBq) of promethium-147.

NOTE: For the purpose of .02(3)(c)1.(x), "Electron tubes" includes spark gap tubes, power tubes, gas tubes including glow lamps, receiving tubes, microwave tubes, indicator tubes, pick-up tubes, radiation detection tubes, and any other completely sealed tube that is designed to conduct or control electrical currents.

- (xi) Ionizing radiation measuring instruments containing, for purposes of internal calibration or standardization, one or more sources of radioactive material, provided that:
 - (I) Each source contains no more than one exempt quantity set forth in (21)(b), Schedule B;
 - (II) Each instrument contains no more than ten exempt quantities. For purposes of this requirement, an instrument's source(s) may contain either one or different types of

radionuclides and an individual exempt quantity may be composed of fractional parts of one or more of the exempt quantities specified in (21)(b), Schedule B, provided that the sum of such fractions shall not exceed unity; and

(III) For purposes of .02(3)(c)1.(xi), 0.05 microcurie (1.85 kBq) of americium-241 is considered an exempt quantity under (21)(b), Schedule B.

(xii) [Reserved]

(xiii) Any person who desires to apply byproduct material to, or to incorporate byproduct material into, the products exempted in 3(c)1., or who desires to initially transfer for sale or distribution such products containing radioactive material, should apply for a specific license with the U.S. Nuclear Regulatory Commission pursuant to Section 32.14 of 10 CFR, Part 32, which license states that the product may be distributed by the licensee to persons exempt under (3)(c)1., or the equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State.

2. Self-Luminous Products Containing Radioactive Material.

(i) Tritium, krypton-85, or promethium-147. Except for persons who manufacture, process, produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147, any person is exempt from the requirements for a license set forth in this Chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires tritium, krypton-85 or promethium-147 in self-luminous products manufactured, processed, produced, or initially transferred in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to Section 32.22 of 10 CFR, Part 32, which license authorizes the initial transfer of the product to persons who are exempt from regulatory requirements. This exemption does not apply to tritium, krypton-85, or promethium-147 used in products for frivolous purposes or in toys or adornments.

(ii) Radium-226. Any person is exempt from this Chapter to the extent that such person receives, possesses, uses, transfers, or owns articles containing less than 0.1 microcurie (3.7 kBq) of radium-226 that were acquired prior to July 12, 1982.

- (iii) Any person who desires to manufacture, process, or produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147 for use under paragraph .02(3)(c)2.(i) should apply for a license with the U.S. Nuclear Regulatory Commission pursuant to Section 32.22 of 10 CFR Part 32 and apply to the U.S. Nuclear Regulatory Commission for a certificate of registration in accordance with Section 32.210 of 10 CFR Part 32.

3. Gas and Aerosol Detectors Containing Radioactive Material.

- (i) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution gas and aerosol detectors containing radioactive material, any person is exempt from the requirements for a license set forth in this Chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires radioactive material in gas and aerosol detectors designed to protect health, safety, or property provided that detectors containing radioactive material shall have been manufactured, processed, produced, or initially transferred in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to Section 32.26 of 10 CFR, Part 32. This exemption also covers gas and aerosol detectors manufactured or distributed before November 30, 2007, in accordance with a specific license issued by a State under comparable provisions to Section 32.26 of 10 CFR, Part 32 authorizing distribution to persons exempt from regulatory requirements.
- (ii) Gas and aerosol detectors containing naturally-occurring and accelerator-produced radioactive material (NARM) previously manufactured and distributed to general licensees in accordance with a specific license issued by an Agreement State shall be considered exempt under (3)(c)3.(i), provided that the device is labeled in accordance with the specific license authorizing distribution of the generally licensed device, and provided further that they meet the requirements of [10 CFR 32.26](#).
- (iii) Gas and aerosol detectors containing NARM previously manufactured and distributed in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission or another Agreement State shall be considered exempt under (3)(c)3.(i), provided that the device is labeled in accordance with the specific license authorizing distribution, and provided further that they meet the requirements of [10 CFR 32.26](#).

- (iv) Any person who desires to manufacture, process, or produce gas and aerosol detectors containing radioactive material, or to initially transfer such products for use under .02(3)(c)3.(i) should apply for a license with the U.S. Nuclear Regulatory Commission pursuant to Section 32.26 of 10 CFR Part 32 and apply to the U.S. Nuclear Regulatory Commission for a certificate of registration in accordance with Section 32.210 of 10 CFR, Part 32.
4. Radioactive drug: Capsules containing carbon-14 urea for "in vivo" diagnostic use for humans.
- (i) Except as provided in .02(3)(c)4.(ii) and .02(3)(c)4.(iii), any person is exempt from the requirements for a license set forth in O.C.G.A. Section [31-13-5\(a\)\(9\)](#) (Georgia Radiation Control Act) and from the regulations in this Chapter provided that such person receives, possesses, uses, transfers, owns, or acquires capsules containing one μCi (37 kBq) carbon-14 urea (allowing for nominal variation that may occur during the manufacturing process) each, for "in vivo" diagnostic use for humans.
 - (ii) Any person who desires to use the capsules for research involving human subjects shall apply for and receive a specific license pursuant to Rule .02 and Rule .05 of this chapter.
 - (iii) Any person who desires to manufacture, prepare, process, produce, package, repackage, or transfer for commercial distribution such capsules shall apply for and receive a specific license pursuant to Rule .02 of this chapter.
 - (iv) Nothing in .02(3)(c)4. relieves persons from complying with applicable FDA, other Federal, and State requirements governing receipt, administration, and use of drugs.
5. Except for persons who manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing an ionized atmosphere, any person is exempt from the requirements for a license set forth in this Chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires byproduct material, in these certain detecting, measuring, gauging, or controlling devices and certain devices for producing an ionized atmosphere, and manufactured, processed, produced, or initially transferred in accordance with a specific license issued

under Section 32.30 of 10 CFR Part 32, which license authorizes the initial transfer of the device for use under this section. This exemption does not cover sources not incorporated into a device, such as calibration and reference sources.

6. Any person who desires to manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material for use under .02(3)(c)5. should apply for a license to the U.S. Nuclear Regulatory Commission pursuant to Section 32.30 of 10 CFR Part 32 and to the U.S. Nuclear Regulatory Commission for a certificate of registration in accordance with § 32.210 of 10 CFR, Part 32.

(4) **Types of Licenses.** Licenses for radioactive materials are of two types: general and specific.

- (a) General licenses provided in this Rule are effective without the filing of applications with the Division or the issuance of licensing documents to the particular persons, although the filing of a certificate with the Division may be required by the particular general license. The general licensee is subject to all other applicable portions of this Chapter and any limitations of the general license.
- (b) Specific licenses require the submission of an application to the Division and the issuance of a licensing document by the Director to a named person. The licensee is subject to all applicable portions of this Chapter as well as any limitations specified in the licensing document.

(5) **General Licenses - Source Material.**

- (a) A general license is hereby issued authorizing persons to hold bare title to source material without regard to quantity. This general license does not authorize any person to receive, possess, use, or transfer source material.
- (b) A general license is hereby issued authorizing commercial and industrial firms; research, educational, and medical institutions; and Federal, State and local government agencies to receive, possess, use, and transfer uranium and thorium, in their natural isotopic concentrations and in the form of depleted uranium, for research, development, educational, commercial, or operational purposes in the following forms and quantities:
 1. No more than 1.5 kg (3.3 lb) of uranium and thorium in dispersible forms (e.g., gaseous, liquid, powder, etc.) at any one time. Any material processed by the general licensee that alters the chemical or physical form of the material containing source material must be accounted for as a dispersible form. A person authorized to possess, use, and transfer source material under this subparagraph may not receive more than a total of 7 kg (15.4 lb)

of uranium and thorium in any one calendar year. Persons possessing source material in excess of these limits as of August 27, 2013, may continue to possess up to 7 kg (15.4 lb) of uranium and thorium at any one time for one year beyond this date, or until the Nuclear Regulatory Commission takes final action on a pending application submitted on or August 27, 2014, for a specific license for such material; and receive up to 70 kg (154 lb) of uranium or thorium in any one calendar year until December 31, 2014, or until the Nuclear Regulatory Commission takes final action on a pending application submitted on or before August 27, 2014, for a specific license for such material; and

2. No more than a total of 7 kg (15.4 lb) of uranium and thorium at any one time. A person authorized to possess, use, and transfer source material under this subparagraph may not receive more than a total of 70 kg (154 lb) of uranium and thorium in any one calendar year. A person may not alter the chemical or physical form of the source material possessed under this subparagraph unless it is accounted for under the limits of subparagraph (b)(1) of this section; or
 3. No more than 7 kg (15.4 lb) of uranium, removed during the treatment of drinking water, at any one time. A person may not remove more than 70 kg (154 lb) of uranium from drinking water during a calendar year under this subparagraph; or
 4. No more than 7 kg (15.4 lb) of uranium and thorium at laboratories for the purpose of determining the concentration of uranium and thorium contained within the material being analyzed at any one time. A person authorized to possess, use, and transfer source material under this subparagraph may not receive more than a total of 70 kg (154 lb) of source material in any one calendar year.
- (c) Any person who receives, possesses, uses, or transfers source material in accordance with the general license in subparagraph (b) of this section.
1. Is prohibited from administering source material, or the radiation there from, either externally or internally, to human beings except as may be authorized by the NRC in a specific license.
 2. Shall not abandon such source material. Source material may be disposed of as follows:
 - (i) A cumulative total of 0.5 kg (1.1 lb) of source material in a solid, non-dispersible form may be transferred each calendar year, by a person authorized to receive, possess, use, and transfer source material under this general license to persons receiving the material

for permanent disposal. The recipient of source material transferred under the provisions of this subparagraph (c) is exempt from the requirements to obtain a license under paragraph (5) to the extent the source material is permanently disposed. This provision does not apply to any person who is in possession of source material under a specific license issued under 391-3-17-.02(7) through 391-3-17-.02(13); or

(ii) In accordance with [391-3-17-.03\(13\)](#) of this Chapter.

3. Is subject to the provisions of [391-3-17-.03\(13\)](#) of this Chapter.
4. Is subject to the provisions in [391-3-17-.01\(4\), \(5\), \(6\) and \(8\)](#), 391-3-17-.02(13), (18) and (19), and [391-3-17-.03\(14\) and \(15\)](#).
5. Shall not export such source material except in accordance with 10 CFR Part 110.

(d) Depleted Uranium in Industrial Products and Devices.

1. A general license is hereby issued to receive, acquire, possess, use, or transfer, in accordance with the provisions of (5)(d)2., 3., 4., and 5., depleted uranium contained in industrial products or devices for the purpose of providing a concentrated mass in a small volume of the product or device.
2. The general license in (5)(d)1. applies only to industrial products or devices which have been manufactured either in accordance with a specific license issued to the manufacturer of the products or devices in accordance with a specific license issued to the manufacturer by the U.S. Nuclear Regulatory Commission or an Agreement State which authorizes manufacture of the products or devices for distribution to persons generally licensed by the U.S. Nuclear Regulatory Commission or an Agreement State.
3. Persons who receive, acquire, possess, or use depleted uranium pursuant to the general license established by (5)(d)1. shall:
 - (i) File Division form "Registration Certificate - Use of Depleted Uranium Under General License" with the Division. The form shall be submitted within 30 days after the first receipt or acquisition of such depleted uranium. The registrant shall furnish on the form the following information and such other information as may be required by that form:

- (I) Name and address of the registrant;
 - (II) A statement that the registrant has developed and will maintain procedures designed to establish physical control over the depleted uranium described in (5)(d)1. and designed to prevent transfer of such depleted uranium in any form, including metal scrap, to persons not authorized to receive the depleted uranium; and
 - (III) Name and/or title, address, and telephone number of the individual duly authorized to act for and on behalf of the registrant in supervising the procedures identified in (5)(d)3.(i)(II); and
- (ii) Report in writing to the Division any changes in information furnished by him in Division form "Registration Certificate - Use of Depleted Uranium Under General License". The report shall be submitted within 30 days after the effective date of such change.
4. A person who receives, acquires, possesses, or uses depleted uranium pursuant to the general license established by (5)(d)1:
- (i) Shall not introduce such depleted uranium, in any form, into a chemical, physical, or metallurgical treatment or process, except a treatment or process for repair or restoration of any plating or other covering of the depleted uranium;
 - (ii) Shall not abandon such depleted uranium;
 - (iii) Shall transfer or dispose of such depleted uranium only by transfer in accordance with the provisions of (19). In the case where the transferee receives the depleted uranium pursuant to the general license established by (5)(d)1., the transferor shall furnish the transferee a copy of this Regulation and a copy of Division form "Registration Certificate - Use of Depleted Uranium Under General License". In the case where the transferee receives the depleted uranium pursuant to a general license contained in the U.S. Nuclear Regulatory Commission's or Agreement State's regulation equivalent to (5)(d)1., the transferor shall furnish the transferee a copy of this Regulation and a copy of Division form "Registration Certificate - Use of Depleted Uranium Under General License" accompanied by a note explaining that use of the product or device is regulated by the U.S. Nuclear Regulatory Commission or

Agreement State under requirements substantially the same as those in this Regulation;

- (iv) Shall report in writing to the Division the name and address of the person receiving the depleted uranium pursuant to such transfer within 30 days of any transfer.
5. Any person receiving, acquiring, possessing, using, or transferring depleted uranium pursuant to the general license established by (5)(d)1. is exempt from the requirements of Rule .03 and Rule .07 of this Chapter with respect to the depleted uranium covered by that general license.
- (e) Any person who receives, possesses, uses, or transfers source material in accordance with subparagraph (b) of this section shall conduct activities so as to minimize contamination of the facility and the environment. When activities involving such source material are permanently ceased at any site, if evidence of significant contamination is identified, the general licensee shall notify the Division about such contamination and may consult with the Division as to the appropriateness of sampling and restoration activities to ensure that any contamination or residual source material remaining at the site where source material was used under this general license is not likely to result in exposures that exceed the limits in [10 CFR 20.1402](#).
 - (f) Any person who receives, possesses, uses, or transfers source material in accordance with the general license granted in subparagraph (b) of this section is exempt from the provisions of [391-3-17-.03](#) and [391-3-17-.07](#) to the extent that such receipt, possession, use, and transfer are within the terms of this general license, except that such person shall comply with the provisions of [391-3-17-.03\(7\)\(b\)](#) and [391-3-17-.03\(13\)\(a\)](#) to the extent necessary to meet the provisions of subparagraphs (c)(2) and (e) of this section. However, this exemption does not apply to any person who also holds a specific license issued under this Chapter.
 - (g) No person may initially transfer or distribute source material to persons generally licensed under subparagraph (b) of this section, or equivalent regulations of an Agreement State or NRC, unless authorized by a specific license issued in accordance with 391-3-17-.02(5)(h), [10 CFR 40.54](#), or equivalent provisions of an Agreement State. This prohibition does not apply to analytical laboratories returning processed samples to the client who initially provided the sample.
 - (h) An application for a specific license to initially transfer source material for use under 391-3-17-.02 will be approved if:
 - 1. The applicant satisfies the general requirements specified in this Chapter; and

2. The applicant submits adequate information on, and the Division approves the methods to be used for quality control, labeling, and providing safety instructions to recipients.
- (i) Each person licensed under 391-3-17-.02 shall label the immediate container of each quantity of source material with the type of source material and quantity of material and the words, "radioactive material."
 - (j) Each person licensed under 391-3-17-.02 shall ensure that the quantities and concentrations of source material are as labeled and indicated in any transfer records.
 - (k) Each person licensed under 391-3-17-.02 shall report transfers as follows:
 1. File a report with the Division. The report shall include the following information:
 - (i) The name, address, and license number of the person who transferred the source material;
 - (ii) For each general licensee under 391-3-17-.02, [10 CFR 40.22](#) and equivalent Agreement State regulations or provisions to whom greater than 50 grams (0.11 lb) of source material has been transferred in a single calendar quarter, the name and address of the general licensee to whom source material is distributed; a responsible agent, by name and/or position and phone number, of the general licensee to whom the material was sent; and the type, physical form, and quantity of source material transferred; and
 - (iii) The total quantity of each type and physical form of source material transferred in the reporting period to all such generally licensed recipients.
 2. File a report with each responsible Agreement State agency or NRC that identifies all persons, operating under provisions equivalent to this Chapter, to whom greater than 50 grams (0.11 lb) of source material has been transferred within a single calendar quarter. The report shall include the following information specific to those transfers made to the Agreement State or NRC being reported to:
 - (i) The name, address, and license number of the person who transferred the source material; and
 - (ii) The name and address of the general licensee to whom source material was distributed; a responsible agent, by name and/or

position and phone number, of the general licensee to whom the material was sent; and the type, physical form, and quantity of source material transferred.

(iii) The total quantity of each type and physical form of source material transferred in the reporting period to all such generally licensed recipients within the Agreement State or NRC.

3. Submit each report by January 31 of each year covering all transfers for the previous calendar year. If no transfers were made to persons generally licensed under [10 CFR Part 40.22](#) or equivalent Agreement State or NRC provisions during the current period, a report shall be submitted indicating so. If no transfers have been made to general licensees in a particular Agreement State or falling under the jurisdiction of the NRC, during the reporting period, this information shall be reported to the NRC or responsible Agreement State agency upon request of the agency or NRC.

(l) Each person licensed under 391-3-17-.02 shall maintain all information that supports the reports required by this subparagraph concerning each transfer to a general licensee for a period of 1 year after the event is included in a report to the Division, Commission or to an Agreement State agency.

(m) Each person licensed under 391-3-17-.02(5)(h) shall provide the information specified in this paragraph to each person to whom source material is transferred for use under 391-3-17-.02(5)(b). This information must be transferred before the source material is transferred for the first time in each calendar year to the particular recipient. The required information includes:

1. A copy of 391-3-17-.02(5)(b) and .02(19) or relevant equivalent regulations of the NRC or an Agreement State.
2. Appropriate radiation safety precautions and instructions relating to handling, use, storage, and disposal of the material.

(6) **General Licenses - Radioactive Materials Other Than Source Material.** Each general license issued under (6) has its own specific conditions and requirements.

(a) **Ownership of Radioactive Material.** A general license is hereby issued to own radioactive material without regard to quantity. Notwithstanding any other provisions of this Rule, this general license does not authorize the manufacture, production, transfer, receipt, possession, or use of radioactive material.

(b) [Reserved]

- (c) Certain Detecting, Measuring, Gauging, or Controlling Devices and Certain Devices for Producing Light or an Ionizing Atmosphere.
1. A general license is hereby issued to commercial and industrial firms and to research, educational and medical institutions, individuals in the conduct of their business, and State or local government agencies to own, receive, acquire, possess, use, or transfer, in accordance with the provisions of (6)(c)2., 3., and 4., radioactive material, excluding special nuclear material, contained in devices designed and manufactured for the purpose of detecting, measuring, gauging, or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing light or an ionized atmosphere.
 2. The general license in (6)(c)1. applies only to radioactive material contained in devices which have been manufactured or initially transferred and labeled in accordance with the specifications contained:
 - (i) in a specific license issued by the Director pursuant to (11)(d); or
 - (ii) in accordance with the specifications contained in a specific license issued by the U.S. Nuclear Regulatory Commission or an Agreement State, which authorizes distribution of devices to persons generally licensed by the U.S. Nuclear Regulatory Commission or an Agreement State.

The devices must have been received from one of the specific licensees described in (i) or (ii) above or through a transfer made under (6)(c)3.(viii).

Note: Regulations under the Federal Food, Drug, and Cosmetic Act authorizing the use of radioactive control devices in food production require certain additional labeling thereon which is found in Section 179.21 of the Code of Federal Regulations, Title 21.
 3. Any person who owns, receives, acquires, possesses, uses, or transfers radioactive material in a device pursuant to the general license in (6)(c)1.:
 - (i) Shall assure that all labels affixed to the device at the time of receipt, and bearing a statement that removal of the label is prohibited, are maintained thereon and shall comply with all instructions and precautions provided by such labels;
 - (ii) Shall assure that the device is tested for leakage of radioactive material and proper operation of the on/off mechanism and indicator, if any, at no longer than six-month intervals or at such other intervals as are specified in the label; however,

- (I) Devices containing only krypton need not be tested for leakage of radioactive material, and
 - (II) Devices containing only tritium or not more than 100 microcuries (3.7 MBq) of other beta- and/or gamma-emitting material or ten microcuries (0.37 MBq) of alpha-emitting material and devices held in storage in the original shipping container prior to initial installation need not be tested for any purpose;
- (iii) Shall assure that the tests required by (6)(c)3.(ii) and other testing, installation, servicing, and removal from installation involving the radioactive material, its shielding or containment, are performed:
- (I) In accordance with the instructions provided by the labels, or
 - (II) By a person holding an applicable specific license from the Director, the U.S. Nuclear Regulatory Commission or an Agreement State to perform such activities;
- (iv) Shall maintain records showing compliance with the requirements of (6)(c)3.(ii) and (iii). The records shall show the results of tests. The records also shall show the dates of performance of, and the names of persons performing, testing, installation, servicing, and removal from installation concerning the radioactive material, its shielding, or containment. Records of tests for leakage of radioactive material required by (6)(c)3.(ii) shall be maintained for three years after the next required leak test is performed. Records of tests of the on/off mechanism and indicator required by (6)(c)3.(ii) shall be maintained for three years after the next required test of the on/off mechanism and indicator is performed. Records which are required by (6)(c)3.(iii) shall be maintained for three years. In case of transfer or disposal, records required by this paragraph (iv) shall be maintained for three years after the transfer or disposal.
- (v) Shall, upon the occurrence of a failure of or damage to, or any indication of a possible failure of or damage to, the shielding of the radioactive material or the on/off mechanism or indicator, or upon the detection of 0.005 microcurie (185 Bq) or more removable radioactive material, immediately suspend operation of the device. The device may not be operated until it has been repaired by the manufacturer or other person holding an applicable specific license from the Director, the U.S. Nuclear Regulatory Commission or an

Agreement State to repair such devices. The device and any radioactive material from the device may only be disposed of by transfer to a person authorized by an applicable specific license to receive the radioactive material contained in the device or as otherwise approved by the Division. A report containing a brief description of the event and the remedial action taken; and, in the case of detection of 0.005 microcurie (185 Bq) or more of removable radioactive material, or failure or damage to a source likely to result in contamination of the premises or environs, a plan for ensuring that the premises and environs are acceptable for unrestricted use, must be furnished to the Division within 30 days. Under these circumstances, the criteria set out in Rule .03(7)(b) "Radiological requirements for unrestricted use" may be applicable, as determined by the Division on a case-by-case basis;

- (vi) Shall not abandon the device containing radioactive material;
- (vii)
 - (I) Shall transfer or dispose of the device containing radioactive material only by export as provided in (6)(c)3.(xiv), by transfer to another general licensee as specified in (6)(c)3.(viii) or equivalent regulations of the NRC or another Agreement State, by transfer to a specific licensee of the Director, the U.S. Nuclear Regulatory Commission or an Agreement State whose specific license authorizes him to receive the device or authorizes him to collect waste, or as otherwise approved under (6)(c)(3)(vii)(III).
 - (II) Within 30 days after transfer of a device to a specific licensee or export, the licensee shall furnish to the Division a report containing identification of the device by manufacturer's (or initial transferor's) name, model number, serial number, the name and address and license number (license number not applicable if exported) of the person receiving the device and the date of transfer;
 - (III) If transfer is to any other licensee not identified in (vii)(I), the licensee shall obtain written approval from the Division before transferring the device to any other person; however, a holder of a specific license may transfer a device for possession and use under its own specific license without prior approval, if, the holder:

- I. Verifies that the specific license authorizes the possession and use, or applies for and obtains an amendment to the license authorizing the possession and use;
- II. Removes, alters, covers, or clearly and unambiguously augments the existing label (otherwise required by Rule .02(6)(c)3.(i) so that the device is labeled in compliance with Rule .03(12)(d); however the manufacturer, model number, and serial number must be retained;
- III. Obtains the manufacturer's or initial transferor's information concerning maintenance that would be applicable under the specific license (such as leak testing procedures); and
- IV. Reports the transfer under Rule .02(6)(c)3.(vii)

(viii) Shall transfer the device to another general licensee only:

- (I) Where the device remains in use at a particular location. In such case the transferor shall give the transferee a copy of this Regulation and any safety documents identified in the label on the device. Within 30 days of the transfer, report to the Division the manufacturer's (or initial transferor's) name, model number, serial number of the device transferred, the name and mailing address for place of use of the transferee, and the name, title and telephone number of a person identified by the transferee as the individual responsible for having knowledge of and authority to take actions to ensure compliance with the appropriate regulations and requirements; or
- (II) Where the device is held in storage by an intermediate person in the original shipping container at its intended location of use prior to initial use by a general licensee;

(ix) Shall comply with the provisions of Rule .03(15) of this Chapter for reporting radiation incidents, or the theft or loss of licensed material, but shall be exempt from the other requirements contained in Rules .03 and .07 of this Chapter;

- (x) Shall appoint an individual responsible for having knowledge of the appropriate regulations and requirements and the authority for taking required actions to comply with appropriate regulations and requirements. The general licensee, through this individual, shall ensure the day-to-day compliance with appropriate regulations and requirements. This appointment does not relieve the general licensee of any of its responsibility in this regard;

- (xi)
 - (I) Shall register, in accordance with paragraphs (6)(c)3.(xi)(II) and (III), devices containing at least 10 mCi (370 MBq) of cesium-137, 0.1 mCi (3.7 MBq) of strontium-90, 1 mCi (37 MBq) of cobalt-60, 0.1 mCi (3.7 MBq) of radium 226, or 1 mCi (37 MBq) of americium-241 or any other transuranic [i.e., element with atomic number greater than uranium (92)], based on the activity indicated on the label. Each address for a location of use, as described under paragraph 3.(xi)(III)IV. of this section, represents a separate general licensee and requires a separate registration.

 - (II) If in possession of a device meeting the criteria of paragraph (6)(c)3.(xi)(I), shall register these devices annually with the Division. Registration must be done by verifying, correcting, and/or adding to the information provided in a request for registration received from the Division. The registration information must be submitted to the Division within 30 days of the date of the request for registration or as otherwise indicated in the request. In addition, a general licensee holding devices meeting the criteria of (6)(c)3.(xi)(I) is subject to the bankruptcy notification requirement in (13)(e) of this rule.

 - (III) In registering devices, the general licensee shall furnish the following information and any other information specifically requested by the Division;
 - I. Name and mailing address of the general licensee.

 - II. Information about each device: the manufacturer (or initial transferor), model number, serial number, the radioisotope and activity (as indicated on the label).

- III. Name, title, and telephone number of the responsible person designated as a representative of the general licensee under (6)(c)3.(x).
- IV. Address or location at which the device(s) are used and/or stored.
- V. Certification by the responsible representative of the general licensee that the information concerning the device(s) has been verified through a physical inventory and checking of label information.
- VI. Certification by the responsible representative of the general licensee that they are aware of the requirements of the general license.

(IV) Persons generally licensed by the NRC or an Agreement State are not eligible for reciprocity.

- (xii) Shall report changes to the mailing address for the location of use (including change in name of general licensee) to the Division within 30 days of the effective date of the change;
- (xiii) May not hold devices that are not in use for longer than two years. If devices with shutters are not being used, the shutter must be locked in the closed position. The testing required by (6)(c)3.(ii) need not be performed during the period of storage only. However, when devices are put back into service or transferred to another person, and have not been tested within the required test interval, they must be tested for leakage before use or transfer and the shutter tested before use. Devices kept in standby for future use are excluded from the two-year time limit if the general licensee performs quarterly physical inventories of these devices while they are in standby.
- (xiv) Shall not export the device containing byproduct material except in accordance with the requirements of 10 CFR Part 110.
- (xv) Shall respond to written requests from the Program to provide information relating to the general license within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information

within the allotted time, it shall, within that same time period, request a longer period to supply the information by providing the Program a written justification for the request.

4. The general license in (6)(c)1. does not authorize the manufacture or import of devices containing radioactive material.
5. The general license provided in (6)(c)1. is subject to the provisions of (13), (18), and (19) of this rule, of paragraphs (4), (5), (6), (7), (8), (9) and (10) of Rule .01, and of Rule .06 of this Chapter.

(d) Luminous Safety Devices for Aircraft.

1. A general license is hereby issued to own, receive, acquire, possess, and use tritium or promethium-147 contained in luminous safety devices for use in aircraft, provided:
 - (i) Each device contains not more than ten Curies (370 GBq) of tritium or 300 millicuries (11.1 GBq) of promethium-147; and
 - (ii) Each device has been manufactured, assembled, or imported in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission, or each device has been manufactured or assembled in accordance with the specifications contained in a specific license issued by the Director or any Agreement State to the manufacturer or assembler of such device pursuant to licensing requirements equivalent to those in Section 32.53 of 10 CFR, Part 32, of the regulations of the U.S. Nuclear Regulatory Commission.
2. Persons who own, receive, acquire, possess, or use luminous safety devices pursuant to the general license in (6)(d) are exempt from the requirements of Rules .03 and .07 of this Chapter, except that they shall comply with the provisions of Rule .03(15) of this Chapter.
3. This general license does not authorize the manufacture, assembly, or repair of luminous safety devices containing tritium or promethium-147.
4. This general license does not authorize the ownership, receipt, acquisition, possession, or use of promethium-147 contained in instrument dials.
5. This general license is subject to the provisions of paragraphs (13), (18), and (19) of this Rule, of paragraphs (4), (5), (6), (7), (8), (9) and (10) of Rule .01, and of Rule .06 of this Chapter.

(e) Ice-Detection Devices.

1. A general license is hereby issued to own, receive, acquire, possess, use, and transfer strontium-90 contained in ice-detection devices, provided each device contains not more than 50 microcuries (1.85 MBq) of strontium-90 and each device has been manufactured or imported in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission or each device has been manufactured in accordance with the specifications contained in a specific license issued by the Director or any Agreement State to the manufacturer of such device pursuant to licensing requirements equivalent to those in Section 32.61 of 10 CFR, Part 32, of the regulations of the U.S. Nuclear Regulatory Commission.
2. Persons who own, receive, acquire, possess, use, or transfer strontium-90 contained in ice-detection devices pursuant to the general license in (6)(e)1.:
 - (i) Shall, upon occurrence of visually observable damage, such as a bend or crack or discoloration from overheating to the device, discontinue use of the device until it has been inspected, tested for leakage, and repaired by a person holding a specific license or equivalent licensing document from the U.S. Nuclear Regulatory Commission or an Agreement State to manufacture or service such devices; or shall dispose of the device pursuant to the provisions of Rule .03(13) of this Chapter;
 - (ii) Shall assure that all labels affixed to the device at the time of receipt and which bear a statement that prohibits removal of the labels are maintained thereon; and
 - (iii) Are exempt from the requirements of Rules .03 and .07 of this Chapter except that such persons shall comply with the provisions of Rule .03(13) and (15) of this Chapter.
3. This general license does not authorize the manufacture, assembly, disassembly, or repair of strontium-90 in ice-detection devices.
4. This general license is subject to the provisions of paragraphs (13), (18), and (19) of this Rule, of paragraphs (4), (5), (6), (7), (8), (9) and (10) of Rule .01, and of Rule .06 of this Chapter.

(f) Calibration and Reference Sources.

1. A general license is hereby issued to those persons listed below to own, receive, acquire, possess, use, and transfer, in accordance with the provisions of (6)(f)4. and 5., americium-241 in the form of calibration or reference sources:

- (i) Any person who holds a specific license issued by the Director which authorizes him to receive, possess, use, and transfer radioactive material; and
 - (ii) Any person who holds a specific license issued by the U.S. Nuclear Regulatory Commission which authorizes him to receive, possess, use, and transfer special nuclear material.
- 2. A general license is hereby issued to own, receive, possess, use, and transfer plutonium in the form of calibration or reference sources in accordance with the provisions of (6)(f)4. and 5. to any person who holds a specific license issued by the Director which authorizes him to receive, possess, use, and transfer radioactive material.
- 3. A general license is hereby issued to own, receive, possess, use, and transfer radium-226 in the form of calibration or reference sources in accordance with the provisions of (6)(f)4. and 5. to any person who holds a specific license issued by the Director which authorizes him to receive, possess, use, and transfer radioactive material.
- 4. The general licenses in (6)(f)1., 2., and 3. apply only to calibration or reference sources which have been manufactured in accordance with the specifications contained in a specific license issued to the manufacturer or importer of the sources by the U.S. Nuclear Regulatory Commission pursuant to Section 32.57 of 10 CFR, Part 32, or Section 70.39 of 10 CFR, Part 70, or which have been manufactured in accordance with the specifications contained in a specific license issued to the manufacturer by the Director or any Agreement State pursuant to licensing requirements equivalent to those contained in Section 32.57 of 10 CFR, Part 32, or Section 70.39 of 10 CFR, Part 70, of the regulations of the U.S. Nuclear Regulatory Commission.
- 5. The general licenses provided in (6)(f)1., 2., and 3. are subject to the provisions of paragraphs (13), (18), and (19) of this Rule, of paragraphs (4), (5), (6), (7), (8), (9) and (10) of Rule .01, and of Rules .03, .06, and .07 of this Chapter. In addition, persons who own, receive, acquire, possess, use, or transfer one or more calibration or reference sources pursuant to these general licenses:
 - (i) Shall not possess at any one time, at any one location of storage or use, more than five microcuries (185 kBq) of americium-241, five microcuries (185 kBq) of plutonium, or five microcuries (185 kBq) of radium-226 in such sources;

(ii) Shall not receive, possess, use, or transfer such source unless the source, or the storage container, bears a label that includes the following statement, or a substantially similar statement that contains the information called for, as appropriate:

(I) The receipt, possession, use, and transfer of this source, Model _____, Serial No. _____, are subject to a general license and the regulations of the U.S. Nuclear Regulatory Commission or of a State with which the U.S. Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority. Do not remove this label.

CAUTION - RADIOACTIVE MATERIAL -

THIS SOURCE CONTAINS (AMERICIUM-241)*

(PLUTONIUM)*. DO NOT TOUCH RADIOACTIVE PORTION OF THIS SOURCE.

(NAME OF MANUFACTURER OR IMPORTER)

*Note: Showing only the name of the appropriate material, i.e., either plutonium or americium.

(iii) Shall not transfer, abandon, or dispose of such source except by transfer to a person authorized by a license from the Director, the U.S. Nuclear Regulatory Commission or an Agreement State to receive the source;

(iv) Shall store such source, except when the source is being used, in a closed container adequately designed and constructed to contain americium-241, plutonium, or radium-226 which might otherwise escape during storage; and

(v) Shall not use such source for any purpose other than the calibration of radiation detectors or the standardization of other sources.

6. These general licenses do not authorize the manufacture of calibration or reference sources containing americium-241, plutonium, or radium-226.

(g) General License for Use of Radioactive Material for Certain In Vitro Clinical or Laboratory Testing.

Note: The new drug provisions of the Federal Food, Drug, and Cosmetic Act also govern the availability and use of any specified diagnostic drugs in interstate commerce.

1. A general license is hereby issued to any physician, veterinarian in the practice of veterinary medicine, clinical laboratory, or hospital to receive, acquire, possess, transfer, or use, for any of the following radioactive material, in accordance with the provisions of (6)(g) 2., 3., 4., 5., and 6., the following radioactive materials in prepackaged units for use in in-vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals:
 - (i) Iodine-125, in units not exceeding ten microcuries (370 kBq) each.
 - (ii) Iodine-131, in units not exceeding ten microcuries (370 kBq) each.
 - (iii) Carbon-14, in units not exceeding ten microcuries (370 kBq) each.
 - (iv) Hydrogen-3 (tritium), in units not exceeding 50 microcuries (1.85 MBq) each.
 - (v) Iron-59, in units not exceeding 20 microcuries (740 kBq) each.
 - (vi) Cobalt-57, in units not exceeding ten microcuries (370 kBq) each.
 - (vii) Selenium-75, in units not exceeding ten microcuries (370 kBq) each.
 - (viii) Mock Iodine-125 reference or calibration sources, in units not exceeding 0.05 microcurie (1.85 kBq) of iodine-129 and 0.005 microcurie (185 Bq) of americium-241 each.
2. No person shall receive, acquire, possess, use, or transfer radioactive material pursuant to the general license established by (6)(g)1. until he has filed Division form, "Certificate - In-Vitro Testing with Radioactive Material Under General License" with the Division and received from the Division a validated copy of this form with certification number assigned or until he has been authorized pursuant to (9)(e)3. to use radioactive material under the general license in (6)(g). The physician, veterinarian in the practice of veterinary medicine, clinical laboratory, or hospital shall furnish on the form the following information and such other information as may be required by that form:

- (i) Name and address of the physician, veterinarian in the practice of veterinary medicine, clinical laboratory, or hospital;
 - (ii) The location of use; and
 - (iii) A statement that the physician, veterinarian in the practice of veterinary medicine, clinical laboratory, or hospital has appropriate radiation measuring instruments to carry out in vitro clinical or laboratory tests with radioactive material as authorized under the general license in (6)(g)1. and that such tests will be performed only by personnel competent in the use of such instruments and in the handling of the radioactive material.
3. A person who receives, acquires, possesses, or uses radioactive material pursuant to the general license established by (6)(g)1. shall comply with the following:
- (i) The general licensee shall not possess at any one time, pursuant to the general license in (6)(g)1., at any one location of storage or use, a total amount of iodine-125, iodine-131, selenium-75, iron-59, and/or cobalt-57 in excess of 200 microcuries (7.4 MBq).
 - (ii) The general licensee shall store the radioactive material, until used, in the original shipping container or in a container providing the equivalent amount of radiation protection.
 - (iii) The general licensee shall use the radioactive material only as authorized by (6)(g)1.
 - (iv) The general licensee shall not transfer the radioactive material to a person who is not authorized to receive it pursuant to a license issued by the Director, the U.S. Nuclear Regulatory Commission or any Agreement State, nor transfer the radioactive material in any manner other than in the unopened, labeled shipping container as received from the supplier.
 - (v) The general licensee shall dispose of the Mock Iodine-125 reference or calibration sources described in (6)(g)1.(viii) as required by Rule .03(13) of this Chapter.
4. The general licensee shall not receive, acquire, possess, or use radioactive material pursuant to (6)(g)1.:

- (i) Except as prepackaged units which are labeled in accordance with the provisions of an applicable specific license issued pursuant to (11)(g) or in accordance with the provisions of a specific license issued by the U.S. Nuclear Regulatory Commission or any Agreement State which authorizes the manufacture and distribution of iodine-125, iodine-131, carbon-14, hydrogen-3 (tritium), iron-59, selenium-75, cobalt-57, or Mock Iodine-125 to persons generally licensed under (6)(g) or its equivalent, and
- (ii) Unless the following statement, or a statement which contains the information called for, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:
 - (I) This radioactive material shall be received, acquired, possessed, and used only by physicians, veterinarians in the practice of veterinary medicine, clinical laboratories, or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation therefrom, to human beings or animals. Its receipt, acquisition, possession, use, and transfer are subject to the regulations and a general license of the U.S. Nuclear Regulatory Commission or of a State with which the Commission has entered into an agreement for the exercise of regulatory authority.

(NAME OF MANUFACTURER)

- 5. The physician, veterinarian in the practice of veterinary medicine, clinical laboratory, or hospital possessing or using radioactive material under the general license of (6)(g)1. shall report in writing to the Division any changes in the information furnished by him in the "Certificate - In Vitro Testing with Radioactive Material Under General License". The report shall be furnished within 30 days after the effective date of such change.
- 6. Any person using radioactive material pursuant to the general license of (6)(g)1. is exempt from the requirements of Rules .03 and .07 of this Chapter with respect to radioactive material covered by that general license, except that such persons using the Mock Iodine-125 described in (6)(g)1.(viii) shall comply with the provisions of (13) and (15) of Rule .03 of this Chapter.

(7) Filing Application for Specific Licenses.

- (a) Applications for specific licenses shall be filed on forms supplied by the Georgia Department of Natural Resources, Environmental Protection Division, Radioactive Materials Program, 4244 International Parkway, Suite 120, Atlanta, Georgia, 30354, or current mailing address. The application shall set forth all applicable information called for by the form.
- (b) The Division may at any time after the filing of the original application, and before the expiration of the license, require further statements in order to enable the Director to determine whether the application should be granted or denied or whether a license should be modified or revoked.
- (c) Each application shall be signed by the applicant or person duly authorized to act for and on his behalf.
- (d) An application for a license may include a request for a license authorizing one or more activities.
- (e) In his application, the applicant may incorporate, by reference, information contained in previous applications, statements, or reports filed with the Division, provided that such references are clear and specific by page, paragraph, and date.
- (f) Applications and documents submitted to the Division may be made available for public inspection except those documents described in Rule .01(5)(c) which may be withheld from public inspection or discovery.
- (g) The Division may verify information contained in applications and secure additional information deemed necessary to make a reasonable determination as to whether to issue a license and whether special conditions should be attached thereto by visiting the facility or location where radioactive materials would be possessed, or used, and by discussing details of proposed possession or use of the radioactive materials with the applicant or the applicant's designated representatives.
- (h) Emergency Plan for Large Quantity Users.
 - 1. Each application to possess radioactive materials in unsealed form, on foils or plated sources, or sealed in glass in excess of the quantities specified in (21)(e), Schedule E, must contain either:
 - (i) An evaluation showing that the maximum dose to a person offsite due to a release of radioactive materials would not exceed one rem (.01 Sv) effective dose equivalent or five rems (.05 Sv) to the thyroid;
or

- (ii) An emergency plan for responding to a release of radioactive material.
2. One or more of the following factors may be used to support an evaluation submitted under (7)(h)1.(i):
- (i) The radioactive material is physically separated so that only a portion could be involved in an accident;
 - (ii) All or part of the radioactive material is not subject to release during an accident because of the way it is stored or packaged;
 - (iii) The release fraction in the respirable size range would be lower than the release fraction shown in (21)(e), Schedule E, due to the chemical or physical form of the material;
 - (iv) The solubility of the radioactive material would reduce the dose received;
 - (v) Facility design or engineered safety features in the facility would cause the release fraction to be lower than shown in (21)(e), Schedule E;
 - (vi) Operating restrictions or procedures would prevent a release fraction as large as that shown in (21)(e), Schedule E; or
 - (vii) Other factors appropriate for the specific facility.
3. An emergency plan for responding to a release of radioactive material submitted under (7)(h)1.(ii) must include the following information:
- (i) Facility description - a brief description of the licensee's facility and the area near the site.
 - (ii) Types of accidents - an identification of each type of radioactive materials accident for which protective actions may be needed.
 - (iii) Classification of accidents - a classification system for classifying accidents as alerts or site area emergencies.
 - (iv) Detection of accidents - identification of the means of detecting each type of accident in a timely manner.
 - (v) Mitigation of consequences - a brief description of the means and equipment for mitigating the consequences of each type of accident,

including those provided to protect workers on site, and a description of the program for maintaining the equipment.

- (vi) Assessment of releases - a brief description of the methods and equipment to assess releases of radioactive materials.
- (vii) Responsibilities - a brief description of the responsibilities of licensee personnel should an accident occur, including identification of personnel responsible for promptly notifying offsite response organizations and the Division; also responsibilities for developing, maintaining, and updating the plan.
- (viii) Notification and coordination - a commitment to and a brief description of the means to promptly notify offsite response organizations and request offsite assistance, including medical assistance for the treatment of contaminated injured onsite workers when appropriate. A control point must be established to prevent spreading of contamination during recovery activities. The notification and coordination must be planned so that unavailability of some personnel, parts of the facility, and some equipment will not prevent the notification and coordination. The licensee shall also commit to notify the Division immediately after notification of the appropriate offsite response organizations and not later than one hour after the licensee declares an emergency.

Note: This Chapter does not supersede or release licensees from complying with the requirements under the Emergency Planning and Community Right-to-Know Act of 1986, Title III, Pub. L-99-499 or other State or Federal reporting requirements.

- (ix) Information to be communicated - a brief description of the types of information on facility status, radioactive releases, and recommended protective actions, if necessary, to be given to offsite response organizations and to the Division.
- (x) Training - a brief description of the frequency, performance objectives, and plans for the training that the licensee will provide workers on how to respond to an emergency, including any special instruction and orientation tours the licensee would offer to fire, police, medical, and other emergency personnel. The training shall familiarize personnel with site-specific emergency procedures. Also, the training shall thoroughly prepare site personnel for their responsibilities in the event of accident scenarios postulated as most

probable for the specific site, including the use of team training for such scenarios.

- (xi) Safe shutdown - a brief description of the means of restoring the facility to a safe condition after an accident.
 - (xii) Exercises - provisions for conducting quarterly communications checks with offsite response organizations and biennial onsite exercises to test response to simulated emergencies. Quarterly communications checks with offsite response organizations must include the check and update of all necessary telephone numbers. The licensee shall invite offsite response organizations to participate in the biennial exercises. Participation of offsite response organizations in biennial exercises, although recommended, is not required. Exercises must use accident scenarios postulated as most probable for the specific site, and the scenarios shall not be known to most exercise participants. The licensee shall critique each exercise using individuals not having direct implementation responsibility for the plan. Critiques of exercises must evaluate the appropriateness of the plan, emergency procedures, facilities, equipment, training of personnel, and the overall effectiveness of the response. These exercises must be documented and deficiencies found by the critiques must be corrected.
 - (xiii) Hazardous chemicals - a certification that the applicant has met its responsibilities under the Emergency Planning and Community Right-to-Know Act of 1986, Title III, Pub. L. 99-499, if applicable to the applicant's activities at the proposed place of use of the radioactive material.
4. The licensee shall allow the offsite response organizations expected to respond in case of an accident 60 days to comment on the licensee's emergency plan before submitting it to the Division. The licensee shall provide any comments received within the 60 days to the Division with the emergency plan.
- (i) Except as provided in paragraphs 2., 3. and 4. of this section, an application for a specific license to use radioactive material in the form of a sealed source or in a device that contains the sealed source must:
 - 1. Identify the source or device by manufacturer and model number as registered with the Nuclear Regulatory Commission, an Agreement State, or for a source or a device containing radium-226 or accelerator produced

radioactive material with a State under provisions comparable to Section 32.210 of 10 CFR Part 32.

2. For sources or devices manufactured before October 23, 2012, that are not registered with the Commission under Section 32.210 of 10 CFR, Part 32 or with an Agreement State, and for which the applicant is unable to provide all categories of information specified in [Section 32.210\(c\) of 10 CFR, Part 32](#), the application must include:
 - (i) All available information identified in [Section 32.210\(c\) of 10 CFR, Part 32](#) concerning the source, and, if applicable, the device; and
 - (ii) Sufficient additional information to demonstrate that there is reasonable assurance that the radiation safety properties of the source or device are adequate to protect health and minimize danger to life and property. Such information must include a description of the source or device, a description of radiation safety features, the intended use and associated operating experience, and the results of a recent leak test.
 3. For sealed sources and devices allowed to be distributed without registration of safety information in accordance with [Section 32.210\(g\)\(1\) of 10 CFR, Part 32](#), the applicant may supply only the manufacturer, model number, and radionuclide and quantity.
 4. If it is not feasible to identify each sealed source and device individually, the applicant may propose constraints on the number and type of sealed sources and devices to be used and the conditions under which they will be used, in lieu of identifying each sealed source and device.
- (j) An application from a medical facility, educational institution, or Federal facility to produce Positron Emission Tomography (PET) radioactive drugs for noncommercial transfer to licensees in its consortium authorized for medical use under Rule .05 or equivalent Nuclear Regulatory Commission or Agreement State requirements shall include:
1. A request for authorization for the production of PET radionuclides or evidence of an existing license issued under Rule .02, Nuclear Regulatory Commission or of this chapter or Agreement State requirements for a PET radionuclide production facility within its consortium from which it receives PET radionuclides.
 2. Evidence that the applicant is qualified to produce radioactive drugs for medical use by meeting one of the criteria in .02(11)(i)2. of this Rule.

3. Identification of individual(s) authorized to prepare the PET radioactive drugs if the applicant is a pharmacy, and documentation that each individual meets the requirements of an authorized nuclear pharmacist as specified in .02(11)(i)5. of this Rule.
4. Information identified in Rule .02(11)(i)3. of this Rule on the PET drugs to be noncommercially transferred to members of its consortium.

(8) **General Requirements for the Issuance of Specific Licenses.** A license application will be approved if the Division determines the following:

- (a) That the applicant is qualified by reason of training and experience to use the material in question for the purpose requested in accordance with this Chapter in such a manner as to minimize danger to public health and safety or property;
- (b) That the applicant's proposed equipment, facilities, and procedures are adequate to minimize danger to public health and safety or property;
- (c) That the issuance of the license will not be inimical to the health and safety of the public; and
- (d) That the applicant satisfies any applicable special requirements in (9), (10), and (11).

(e) Bonding Requirements.

1. Pursuant to Georgia Laws 1979, pp. 1059, 1060, a specific license will be issued to a Major Processor as defined in Rule .01(2) of this Chapter only if the applicant has posted a surety bond with, and made payable to, the Director, Environmental Protection Division, Department of Natural Resources, to ensure the protection of the public health and safety in the event of abandonment, insolvency, or other inability of the licensee to meet the requirements of the Act and this Chapter.

- (i) The bond provided shall be not less than \$100,000.00, nor more than \$5,000,000.00.

- (ii) The exact amount of the bond shall be determined by the Director, Environmental Protection Division, and shall be based on the probable extent of contamination, the amount of possible property damage, the costs of removal and disposal of sources of radiation used by the licensee, and the costs of reclamation of the property in the event of abandonment, insolvency, or other inability of the licensee to meet the requirements of the Act and this Chapter,

including performing such services to the satisfaction of the Division.

2. Persons licensed at the time the bonding requirements of this Chapter became effective, and upon notice by the Division, must, within a period of 90 days following such notice, provide the bond required by (8)(e)1. as a condition for continuation of the license.
- (f) Environmental Report, Commencement of Construction. In the case of an application for a license to receive and possess radioactive material for the conduct of any activity which the Division determines will significantly affect the quality of the environment, commencement of construction of the plant or facility in which the activity will be conducted shall not begin until the Director has concluded, after weighing the environmental, economic, technical, and other benefits against environmental costs and considering available alternatives, that the action called for is the issuance of the proposed license, with any appropriate conditions to protect environmental values. Commencement of construction prior to such conclusion shall be grounds for denial of a license to receive and possess radioactive material in such plant or facility. As used in this paragraph, the term "commencement of construction" means any clearing of land, excavation, or other substantial action that would adversely affect the environment of a site. The term does not mean site exploration, necessary borings to determine foundation conditions, or other preconstruction monitoring or testing to establish background information related to the suitability of the site or the protection of environmental values.
- (g) Financial assurance and record-keeping for decommissioning.
1. The following are required to furnish financial assurance and record-keeping for decommissioning:
 - (i) Each applicant for a specific license authorizing the possession and use of unsealed radioactive material of half-life greater than 120 days and in quantities exceeding 10^5 times the applicable quantities set forth in Schedule F shall submit a decommissioning funding plan as described in subparagraphs (8)(g)5 and (8)(g)6. The decommissioning funding plan must also be submitted when a combination of isotopes is involved if R divided by 10^5 is greater than 1 (unity Rule), where R is defined here as the sum of the ratios of the quantity of each isotope to the applicable value in Schedule F.
 - (ii) Each applicant for a specific license authorizing the possession and use of sealed sources or plated foils of half-life greater than 120 days and in quantities exceeding 10^{12} times the applicable quantities set

forth in Schedule F shall submit a decommissioning funding plan as described in subparagraphs (8)(g)5 and (8)(g)6. The decommissioning funding plan must also be submitted when a combination of isotopes is involved if R divided by 10^{12} is greater than 1 (unity Rule), where R is defined here as the sum of the ratios of the quantity of each isotope to the applicable value in Schedule F.

2. Each applicant for a specific license authorizing the possession and use of radioactive material of half-life greater than 120 days and in quantities specified in subparagraphs (8)(g)4. shall either:
 - (i) Submit a decommissioning funding plan as described in subparagraphs (8)(g)5 and (8)(g)6.; or
 - (ii) Submit a certification that financial assurance for decommissioning has been provided in the amount prescribed by (8)(g)4. using one of the methods described in (8)(g)7. For an applicant, this certification may state that the appropriate assurance will be obtained after the application has been approved and the license issued but prior to the receipt of licensed material. As part of the certification, a copy of the financial instrument obtained to satisfy the requirements of (8)(g)7. is to be submitted to the Division. If the applicant defers execution of the financial instrument until after the license has been issued, a signed original of the financial instrument obtained to satisfy the requirements (8)(g)7. must be submitted to the Division before the receipt of licensed material. If the applicant does not defer execution of the financial instrument, the applicant shall submit to the Division, as part of the certification a signed original of the financial instrument obtained to satisfy the requirements of (8)(g)7.

3.
 - (i) Each holder of a specific license issued on or after January 1, 1993, which is of a type described in (8)(g)1. or 2. shall provide financial assurance for decommissioning in accordance with the criteria set forth in this Rule.
 - (ii) Each holder of a specific license issued before January 1, 1993, which is of a type described in (8)(g)1. shall submit, on or before January 1, 1993, a decommissioning funding plan or a certification of financial assurance for decommissioning in an amount at least equal to \$1,125,000 in accordance with the criteria set forth in this Rule. If the licensee submits the certification of financial assurance rather than a decommissioning funding plan at this time, the licensee

shall include a decommissioning funding plan in any application for license renewal.

- (iii) Each holder of a specific license issued before January 1, 1993, and of a type described in (8)(g)2. shall submit, on or before January 1, 1993, a certification of financial assurance for decommissioning or a decommissioning funding plan in accordance with the criteria set forth in this .02(8)(g).
- (iv) Waste collectors and waste processors shall provide financial assurance in an amount based on a decommissioning funding plan as described in subparagraphs .02(8)(g)5 and (8)(g)6. The decommissioning funding plan must also include the cost of disposal of the maximum amount (curies) of radioactive material permitted by the license, and the cost of disposal of the maximum quantity, by volume, of radioactive material that could be present at the licensee's facility at any time, in addition to the cost to remediate the licensee's site to meet the license termination requirements in .02(18).

4. Table of required amounts of financial assurance for decommissioning by quantity of material.

Greater than 10^4 but less than or equal to 10^5 times the applicable quantities of Schedule F in unsealed form. (For a combination of isotopes, if R, as defined in (8)(g), divided by 10^4 is greater than 1 but R divided by 10^5 is less than or equal to 1): \$1,125,000

Greater than 10^3 but less than or equal to 10^4 times the applicable quantities of Schedule F in unsealed form. (For a combination of isotopes, if R, as defined in (8)(g), divided by 10^3 is greater than 1 but R divided by 10^4 is less than or equal to 1): \$225,000

Greater than 10^{10} times the applicable quantities of Schedule F in sealed sources or plated foils. (For a combination of isotopes, if R, as defined in (8)(g), divided by 10^{10} is greater than 1): \$113,000

5. Each decommissioning funding plan must be submitted for review and approval and must contain
 - (i) A detailed cost estimate for decommissioning, in an amount reflecting:

- (I) The cost of an independent contractor to perform all decommissioning activities;
 - (II) The cost of meeting the .03(7)(b) criteria for unrestricted use, provided that, if the applicant or licensee can demonstrate its ability to meet the provisions of .03(7)(c), the cost estimate may be based on meeting the .03(7)(c) criteria;
 - (III) The volume of onsite subsurface material containing residual radioactivity that will require remediation to meet the criteria for license termination; and
 - (IV) An adequate contingency factor.
- (ii) Identification of and justification for using the key assumptions contained in the DCE;
 - (iii) A description of the method of assuring funds for decommissioning from subparagraph 7 of this section, including means for adjusting cost estimates and associated funding levels periodically over the life of the facility;
 - (iv) A certification by the licensee that financial assurance for decommissioning has been provided in the amount of the cost estimate for decommissioning; and
 - (v) A signed original of the financial instrument obtained to satisfy the requirements of subparagraph 7 of this section (unless a previously submitted and accepted financial instrument continues to cover the cost estimate for decommissioning).
6. At the time of license renewal and at intervals not to exceed 3 years, the decommissioning funding plan must be resubmitted with adjustments as necessary to account for changes in costs and the extent of contamination. If the amount of financial assurance will be adjusted downward, this cannot be done until the updated decommissioning funding plan is approved. The decommissioning funding plan must update the information submitted with the original or prior approved plan, and must specifically consider the effect of the following events on decommissioning costs:
- (i) Spills of radioactive material producing additional residual radioactivity in onsite subsurface material;

- (ii) Waste inventory increasing above the amount previously estimated;
 - (iii) Waste disposal costs increasing above the amount previously estimated;
 - (iv) Facility modifications;
 - (v) Changes in authorized possession limits;
 - (vi) Actual remediation costs that exceed the previous cost estimate;
 - (vii) Onsite disposal; and
 - (viii) Use of a settling pond.
7. Financial assurance for decommissioning must be provided by one or more of the following methods:
- (i) Prepayment. Prepayment is the deposit prior to the start of operation into an account segregated from licensee assets and outside the licensee's administrative control of cash or liquid assets such that the amount of funds would be sufficient to pay decommissioning costs. Prepayment may be in the form of a trust, escrow account, government fund, certificate of deposit, or deposit of government securities.
 - (ii) A surety method, insurance, or other guarantee method. These methods guarantee that decommissioning costs will be paid. A surety method may be in the form of a surety bond, letter of credit, or line of credit. A parent company guarantee of funds for decommissioning costs based on a financial test may be used if the guarantee and test are as contained in (21)(d) Schedule D. A parent company guarantee may not be used in combination with other financial methods to satisfy the requirements of this section. For commercial corporations that issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs based on a financial test may be used if the guarantee and test are as contained in (21)(g) Schedule G. For commercial companies that do not issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs may be used if the guarantee and test are as contained in (21)(d) Schedule D. For nonprofit entities, such as colleges, universities, and nonprofit hospitals, a guarantee of funds by the applicant or licensee may be used if the guarantee and test are as contained in (21)(h) Schedule H. A guarantee by the applicant or

licensee may not be used in combination with any other financial methods used to satisfy the requirements of this section or in any situation where the applicant or licensee has a parent company holding majority control of the voting stock of the company. Any surety method or insurance used to provide financial assurance for decommissioning must contain the following conditions:

- (I) The surety method or insurance must be open-ended or, if written for a specified term, such as five years, must be renewed automatically, unless 90 days or more prior to the renewal date the issuer notifies the Division, the beneficiary, and the licensee of its intention not to renew. The surety method or insurance must also provide that the full face amount be paid to the beneficiary automatically prior to the expiration without proof of forfeiture if the licensee fails to provide a replacement acceptable to the Division within 30 days after receipt of notification of cancellation.
 - (II) The surety method or insurance must be payable to a trust established for decommissioning costs. The trustee and trust must be acceptable to the Division. An acceptable trustee includes an appropriate State or Federal government agency or an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency.
 - (III) The surety method or insurance must remain in effect until the Director has terminated the license.
- (iii) An external sinking fund in which deposits are made at least annually, coupled with a surety method or insurance, the value of which may decrease by the amount being accumulated in the sinking fund. An external sinking fund is a fund established and maintained by setting aside funds periodically in an account segregated from licensee assets and outside the licensee's administrative control in which the total amount of funds would be sufficient to pay decommissioning costs at the time termination of operation is expected. An external sinking fund may be in the form of a trust, escrow account, government fund, certificate of deposit, or deposit of government securities. The surety or insurance provisions must be as stated in (8)(g)2.
- (iv) In the case of Federal, State, or local government licensees, a statement of intent containing a cost estimate for decommissioning

or an amount based on the Table in (8)(g)4., and indicating that funds for decommissioning will be obtained when necessary.

8. Each person licensed under this Chapter shall keep records of information important to the safe and effective decommissioning of the facility in an identified location until the site is released for unrestricted use by the Division. Before licensed activities are transferred or assigned in accordance with .02(13)(b), licensees shall transfer all records described in (7)(i) through (iv) to the new licensee. In this case, the new licensee will be responsible for maintaining these records until the license is terminated. If records of relevant information to the decommissioning of a facility are kept for other purposes, references to these records and their locations may be used. Information the Division considers important to decommissioning consists of:
 - (i) Records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment, or site. These records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage into porous materials such as concrete. These records must include any known information on identification of involved nuclides, quantities, forms, and concentrations.
 - (ii) As-built drawings and modifications of structures and equipment in restricted areas where radioactive materials are used and/or stored, and of locations of possible inaccessible contamination such as buried pipes which may be subject to contamination. If required drawings are referenced, each relevant document need not be indexed individually. If drawings are not available, the licensee shall substitute appropriate records of available information concerning these areas and locations.
 - (iii) Except for areas containing only sealed sources (provided the sources have not leaked or no contamination remains after any leak) or radioactive materials having only half-lives of less than 65 days, or depleted uranium used only for shielding or as penetrators in unused munitions, a list contained in a single document and updated every two years, of the following:
 - (I) All areas designated and formerly designated as restricted areas as defined under Rule [391-3-17-.01\(2\)](#);

- (II) All areas outside of restricted areas that require documentation under (8)(g)8.(i);
 - (III) All areas outside of restricted areas where current and previous wastes have been buried as documented under Rule .03(14)(i) of this Chapter; and
 - (IV) All areas outside of restricted areas that contain materials such that, if the license expired, the licensee would be required to either decontaminate the area to unrestricted release levels or apply for approval for disposal under Rule .03(13)(b) of this Chapter.
- (iv) Records of the cost estimate performed for the decommissioning funding plan or of the amount certified for decommissioning, and records of the funding method used for assuring funds if either a funding plan or certification is used.
9. Teletherapy licensees are exempted from decommissioning financial assurance requirements for possession of licensed material in sealed sources in quantities greater than 10^{10} times the applicable quantities of Schedule F of this rule, for the purpose of source changes only. This exemption is granted for no more than 30 days for any one source change.
- (h) Expiration and termination of licenses and decommissioning of sites and separate buildings or outdoor areas.
1. Each specific license continues in effect, beyond the expiration date if necessary, with respect to possession of radioactive material until the Director notifies the licensee in writing that the license is terminated. During this time, the licensee shall:
 - (i) Limit actions involving radioactive material to those related to decommissioning; and
 - (ii) Continue to control entry to restricted areas until they are suitable for release in accordance with Division requirements.
 2. Within 60 days of the occurrence of any of the following, each licensee shall provide notification to the Division in writing of such occurrence, and either begin decommissioning its site, or any separate building or outdoor area that contains residual radioactivity so that the building or outdoor area is suitable for release in accordance with Division requirements, or submit

within 12 months of notification a decommissioning plan, if required by (8)(h)5.(i), and begin decommissioning upon approval of that plan if:

- (i) The license has expired pursuant to (14) or (18)(c); or
 - (ii) The licensee has decided to permanently cease principal activities, as defined in this part, at the entire site or in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Division requirements; or
 - (iii) No principal activities under the license have been conducted for a period of 24 months; or
 - (iv) No principal activities have been conducted for a period of 24 months in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Division requirements.
3. Coincident with the notification required by (8)(h)2., the licensee shall maintain in effect all decommissioning financial assurances established by the licensee pursuant to (8)(g) in conjunction with a license issuance or renewal or as required by this section. The amount of the financial assurance must be increased or may be decreased, as appropriate, to cover the detailed cost estimate for decommissioning established pursuant to (8)(h)5.(iv)(V).
- (i) Any licensee who has not provided financial assurance to cover the detailed cost estimate submitted with the decommissioning plan shall do so when this rule becomes effective.
 - (ii) Following approval of the decommissioning plan, a licensee may reduce the amount of the financial assurance as decommissioning proceeds and radiological contamination is reduced at the site with the approval of the Director.
4. The Division may grant a request to extend the time periods in (8)(h)2. if the Division determines that this relief is not detrimental to the public health and safety and is otherwise in the public interest. The request must be submitted no later than 30 days before notification pursuant to (8)(h)2. The schedule for decommissioning set forth in (8)(h)2. may not commence until the Director has made a determination on the request.

- 5.
- (i) A decommissioning plan must be submitted if required by license condition or if the procedures and activities necessary to carry out decommissioning of the site or separate building or outdoor area have not been previously approved by the Division and these procedures could increase potential health and safety impacts to workers or to the public, such as in any of the following cases:
 - (I) Procedures would involve techniques not applied routinely during cleanup or maintenance operations;
 - (II) Workers would be entering areas not normally occupied where surface contamination and radiation levels are significantly higher than routinely encountered during operation;
 - (III) Procedures could result in significantly greater airborne concentrations of radioactive materials than are present during operation or;
 - (IV) Procedures could result in significantly greater releases of radioactive material to the environment than those associated with operation.
 - (ii) The Division may approve an alternate schedule for submittal of a decommissioning plan required pursuant to (8)(h)2. if the Division determines that the alternative schedule is necessary to the effective conduct of decommissioning operations and presents no undue risk from radiation to the public health and safety and is otherwise in the public interest.
 - (iii) Procedures such as those listed in (8)(h)5.(i) with potential health and safety impacts may not be carried out prior to approval of the decommissioning plan.
 - (iv) The proposed decommissioning plan for the site or separate building or outdoor area must include:
 - (I) A description of the conditions of the site or separate building or outdoor area sufficient to evaluate the acceptability of the plan;
 - (II) A description of planned decommissioning activities;

- (III) A description of methods used to ensure protection of workers and the environment against radiation hazards during decommissioning;
 - (IV) A description of the planned final radiation survey; and
 - (V) An updated detailed cost estimate for decommissioning, comparison of that estimate with present funds set aside for decommissioning, and a plan for assuring the availability of adequate funds for completion of decommissioning.
 - (VI) For decommissioning plans calling for completion of decommissioning later than 24 months after plan approval, the plan shall include a justification for the delay based on the criteria in (8)(h)7.
- (v) The proposed decommissioning plan will be approved by the Division if the information therein demonstrates that the decommissioning will be completed as soon as practicable and that the health and safety of workers and the public will be adequately protected.
- 6.
- (i) Except as provided in (8)(h)7., licensees shall complete decommissioning of the site or separate building or outdoor area as soon as practical but no later than 24 months following the initiation of decommissioning.
 - (ii) Except as provided in (8)(h)7. when decommissioning involves the entire site, the licensee shall request license termination as soon as practical but no later than 24 months following the initiation of decommissioning.
7. The Division may approve a request for an alternative schedule for completion of decommissioning of the site or separate building or outdoor area, and license termination if appropriate, if the Division determines that the alternative is warranted by consideration for the following:
- (i) Whether it is technically feasible to complete decommissioning within the allotted 24-month period;
 - (ii) Whether sufficient waste disposal capacity is available to allow completion of decommissioning within the allotted 24-month period;

- (iii) Whether a significant volume reduction in wastes requiring disposal will be achieved by allowing short-lived radionuclides to decay;
- (iv) Whether a significant reduction in radiation exposure to workers can be achieved by allowing short-lived radionuclides to decay; and
- (v) Other site-specific factors which the Division may consider appropriate on a case-by-case basis, such as the regulatory requirements of other government agencies, lawsuits, ground-water treatment activities, monitored natural ground-water restoration, actions that could result in more environmental harm than deferred cleanup, and other factors beyond the control of the licensee.

8. As the final step in decommissioning, the licensee shall follow the requirements of Rule .02(18)(d).

(9) Special Requirements for Issuance of Certain Specific Licenses for Radioactive Material.

- (a) **Use of Sealed Sources in Industrial Radiography.** In addition to the requirements set forth in (8), a specific license for the use of sealed sources in industrial radiography will be issued if the licensee meets all of the requirements of Rule .04 of this Chapter.
- (b) **Human Use of Radioactive Materials in Institutions.** In addition to the requirements set forth in (8), a specific license for the human use of radioactive material in an institution will be issued only if the licensee also meets all of the requirements of Rule .05 of this Chapter.
- (c) **Specific Licenses to Individual Physicians for Human Use of Radioactive Material.**
 - 1. An application by an individual physician or group of physicians for a specific license for human use of radioactive material will be approved if:
 - (i) The applicant satisfies the general requirements specified in (8), and all of the requirements of Rule .05 of this Chapter;
 - (ii) The application is for use in the applicant's practice in an office outside a medical institution;
 - (iii) The applicant has access to a hospital possessing adequate facilities to hospitalize and monitor the applicant's radioactive patients whenever it is advisable; and

- (iv) The applicant has extensive experience in the proposed use, the handling and administration of radionuclides, and where applicable, the clinical management of radioactive patients.
2. The Director will not approve an application by an individual physician or group of physicians for a specific license to receive, possess, or use radioactive material on the premises of a medical institution unless:
- (i) The use of radioactive material is limited to:
 - (I) The administration of radiopharmaceuticals for diagnostic or therapeutic purposes;
 - (II) The performance of diagnostic studies on patients to whom a radiopharmaceutical has been administered;
 - (III) The performance of in vitro diagnostic studies; or
 - (IV) The calibration and quality control checks of radioactive assay instrumentation, radiation safety instrumentation, and diagnostic instrumentation;
 - (ii) The physician brings the radioactive material with him and removes the radioactive material when he departs (The institution cannot receive, possess, or store radioactive material other than the amount of material remaining in the patient.); and
 - (iii) The medical institution does not hold a radioactive material license under (9)(b).
- (d) Human Use of Sealed Sources Containing Radioactive Material. In addition to the requirements set forth in (8), a specific license for the human use of sealed sources containing radioactive material will be issued only if the applicant, or, if the application is made by an institution, the individual user is a physician and either:
- 1. Has specialized training in the therapeutic use of the sealed source considered (e.g., teletherapy unit, beta applicator), or has experience equivalent to such training; or
 - 2. Has specialized training in the diagnostic use of the sealed source considered (e.g., bone mineral analyzer) or has experience equivalent to such training.
- (e) Specific Licenses for Certain Medical Uses of Radioactive Material.

1. Subject to the provisions of (9)(e)2. and 3., an application for a specific license pursuant to (9)(b), (c), or (d), for any medical use or uses of radioactive material specified in Rule .05 of this Chapter, will be approved if:
 - (i) The applicant satisfies the requirements of (9)(b), (c), or (d);
 - (ii) The applicant, or the physician designated in the application as the individual user, has adequate clinical experience in the types of uses specified in the application;
 - (iii) The applicant, or the physicians and all other personnel who will be involved in the preparation and use of the radioactive material, has adequate training and experience in the handling of radioactive material appropriate to his participation in the uses specified in the application;
 - (iv) The applicant's radiation detection and measuring instrumentation is adequate for conducting the procedures involved in the uses specified in the application;
 - (v) The applicant's radiation safety operating procedures are adequate for handling and disposal of the radioactive material involved in the uses specified in the application; and
 - (vi) For uses regulated by Rules .05(41) and (44) of this Chapter, any licensee using radioactive material for clinical procedures other than those specified in the product labeling (package insert) shall comply with the product labeling regarding:
 - (I) Chemical and physical form,
 - (II) Route of administration, and
 - (III) Dosage range.
2. Any licensee who is authorized to use radioactive material pursuant to (9)(e) and to Rule .05 of this Chapter is subject to the following conditions:
 - (i) For paragraphs (41), (44), and (48) of Rule .05 of this Chapter, no licensee shall receive, possess, or use radioactive material except as a radiopharmaceutical manufactured in the form to be administered to the patient, and labeled, packaged, and distributed in accordance with a specific license issued by the Director pursuant to (11)(i), a specific license issued by the U.S. Nuclear Regulatory Commission pursuant

to Section 32.72 of 10 CFR, Part 32, or a specific license issued by an Agreement State pursuant to equivalent regulations.

(ii) For Rule [391-3-17-.05\(44\)](#), no licensee shall receive, possess, or use generators or reagent kits containing radioactive material or shall use reagent kits that do not contain radioactive material to prepare radiopharmaceuticals containing radioactive material, except:

(I) Reagent kits not containing radioactive material that are approved by the Division, the U.S. Nuclear Regulatory Commission or an Agreement State for use by persons licensed pursuant to (9)(d) and to Rule .05 of this Chapter or

(II) Generators or reagent kits containing radioactive material that are manufactured, labeled, packaged, and distributed in accordance with a specific license issued by the Director pursuant to (11)(i), a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to Section 32.73 of 10 CFR, Part 32, or a specific license issued by an Agreement State pursuant to equivalent regulations; and

(iii) For Brachytherapy, regulated by Rule .05 of this Chapter, no licensee shall receive, possess, or use radioactive material except as contained in a source or device that has been manufactured, labeled, packaged, and distributed in accordance with a specific license issued by the Director pursuant to (11)(j), a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to Section 32.74 of 10 CFR, Part 32, or a specific license issued to the manufacturer by an Agreement State pursuant to equivalent regulations.

3. Any licensee who is licensed pursuant to (9) for one or more of the medical uses regulated by Rule .05 of this Chapter also is authorized to use radioactive material under the general license in (6)(g) for in vitro uses without filing the Certificate as required by (6)(g)2, provided that the licensee is subject to the other provisions of (6)(g).

(f) Use of Naturally-Occurring Radioactive Material (NORM). In addition to the requirements set forth in (8), a specific license for the use of NORM will be issued if the licensee meets all of the requirements of Rule .08 of this Chapter.

(g) Use of Sealed Sources in Irradiators. In addition to the requirements set forth in (8), a specific license for the use of sealed sources in large irradiators will be issued if the licensee meets all of the requirements of Rule .09 of this Chapter.

- (10) **Special Requirements for Specific Licenses of Broad Scope.** These requirements are for the issuance of non-medical specific licenses of broad scope for radioactive material ("broad licenses") and contain certain regulations governing holders of such licenses. (The issuance of medical specific licenses of broad scope is addressed in (9).)

Nota Bene: See Note, in (3)(c)1.

- (a) The different types of broad scope licenses are set forth below:
1. A "Type A specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use, and transfer of any chemical or physical form of the radioactive material specified in the license, but not exceeding quantities specified in the license, for any authorized purpose. The quantities specified are usually in the multicurie range.
 2. A "Type B specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use, and transfer of any chemical or physical form of radioactive material specified in (21)(c), Schedule C, for any authorized purpose. The possession limit for a Type B broad license, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in (21)(c), Schedule C, Column I. If two or more radionuclides are possessed thereunder, the possession limit for each is determined as follows: For each radionuclide, determine the ratio of the quantity possessed to the applicable quantity specified in (21)(c), Schedule C, Column I, for that radionuclide. The sum of the ratios for all radionuclides possessed under the license shall not exceed unity.
 3. A "Type C specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use, and transfer of any chemical or physical form of radioactive material specified in (21)(c), Schedule C, for any authorized purpose. The possession limit for a Type C broad license, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in (21)(c), Schedule C, Column II. If two or more radionuclides are possessed thereunder, the possession limit is determined for each as follows: For each radionuclide, determine the ratio of the quantity possessed to the applicable quantity specified in (21)(c), Schedule C, Column II, for that radionuclide. The sum of the ratios for all radionuclides possessed under the license shall not exceed unity.
- (b) An application for a Type A specific license of broad scope will be approved if:
1. The applicant satisfies the general requirements specified in (8);

2. The applicant has engaged in a reasonable number of activities involving the use of radioactive material; and
 3. The applicant has established administrative controls and provisions relating to organization and management, procedures, record-keeping, material control and accounting, and management review that are necessary to assure safe operations, including:
 - (i) The establishment of a Radiation Safety Committee composed of such persons as a Radiation Safety Officer, a representative of management, and persons trained and experienced in the safe use of radioactive material;
 - (ii) The appointment of a Radiation Safety Officer who is qualified by training and experience in radiation protection, and who is available for advice and assistance on radiation safety matters; and
 - (iii) The establishment of appropriate administrative procedures to assure:
 - (I) Control of procurement and use of radioactive material;
 - (II) Completion of safety evaluations of proposed uses of radioactive material which take into consideration such matters as the adequacy of facilities and equipment, the training and experience of the user, and the operating or handling procedures; and
 - (III) Review, approval, and recording by the Radiation Safety Committee of safety evaluations of proposed uses prepared in accordance with (10)(b)3.(iii)(II) prior to the use of the radioactive material.
- (c) An application for a Type B specific license of broad scope will be approved if:
1. The applicant satisfies the general requirements specified in (8); and
 2. The applicant has established administrative controls and provisions relating to organization and management, procedures, record-keeping, material control and accounting, and management review that are necessary to assure safe operations, including:
 - (i) The appointment of a Radiation Safety Officer who is qualified by training and experience in radiation protection, and who is available for advice and assistance on radiation safety matters, and

- (ii) The establishment of appropriate administrative procedures to assure:
 - (I) Control of procurement and use of radioactive material,
 - (II) Completion of safety evaluations of proposed uses of radioactive material which take into consideration such matters as the adequacy of facilities and equipment, the training and experience of the user, and the operating or handling procedures, and
 - (III) Review, approval, and recording by the Radiation Safety Officer of safety evaluations of proposed uses prepared in accordance with (10)(c)2.(ii)(II) prior to the use of the radioactive material.

- (d) An application for a Type C specific license of broad scope will be approved if:
 - 1. The applicant satisfies the general requirements specified in (8);
 - 2. The applicant submits a statement that radioactive material will be used only by, or under the direct supervision of, individuals who have received:
 - (i) A college degree at the bachelor level, or equivalent training and experience, in the physical or biological sciences or in engineering, and
 - (ii) At least 40 hours of training and experience in the safe handling of radioactive material, and in the characteristics of ionizing radiation, units of radiation dose and quantities, radiation detection instrumentation, and biological hazards of exposure to radiation appropriate to the type and forms of radioactive material to be used; and
 - 3. The applicant has established administrative controls and provisions relating to procurement of radioactive material, procedures, record-keeping, material control and accounting, and management review necessary to assure safe operations.

- (e) Specific non-medical licenses of broad scope are subject to the following conditions:
 - 1. Unless specifically authorized, persons licensed pursuant to (10) shall not:

- (i) Conduct tracer studies in the environment involving direct release of radioactive material;
 - (ii) Receive, acquire, own, possess, use, or transfer devices containing 100,000 Curies (3.7 PBq) or more of radioactive material in sealed sources used for irradiation of materials;
 - (iii) Conduct activities for which a specific license issued by the Division under (9) or (11) is required; or
 - (iv) Add or cause the addition of radioactive material to any food, beverage, cosmetic, drug, or other product designed for ingestion or inhalation by, or application to, a human being.
2. Each Type A specific license of broad scope issued under (10) shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals approved by the licensee's Radiation Safety Committee.
 3. Each Type B specific license of broad scope issued under (10) shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals approved by the licensee's Radiation Safety Officer.
 4. Each Type C specific license of broad scope issued under (10) shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals who satisfy the requirements of (10)(d).

(11) **Special Requirements for a Specific License to Manufacture, Assemble, Repair, or Distribute Commodities, Products, or Devices which Contain Radioactive Material.**

- (a) [Reserved]
- (b) Licensing the Distribution of Naturally-Occurring and Accelerator-Produced Radioactive Material (NARM) in Exempt Quantities.

Nota Bene: See Note, in (3)(c)1.

1. An application for a specific license to distribute NARM to persons exempted from this Chapter pursuant to (3)(b) will be approved if:

- (i) The radioactive material is not contained in any food, beverage, cosmetic, drug, or other commodity designed for ingestion or inhalation by, or application to, a human being;
- (ii) The radioactive material is in the form of processed chemical elements, compounds, mixtures, tissue samples, bioassay samples, counting standards, plated or encapsulated sources, or similar substances identified as radioactive and to be used for its radioactive properties, but is not incorporated into any manufactured or assembled commodity, product, or device intended for commercial distribution; and
- (iii) The applicant submits copies of prototype labels and brochures and the Division approves such labels and brochures.

2. The license issued under (11)(b)1. is subject to the following conditions:

- (i) No more than ten exempt quantities shall be sold or transferred in any single transaction. However, an exempt quantity may be composed of fractional parts of one or more of the exempt quantities provided the sum of the fractions shall not exceed unity.
- (ii) Each exempt quantity shall be separately and individually packaged. No more than ten such packaged exempt quantities shall be contained in any outer package for transfer to persons exempt pursuant to (3)(b). The outer package shall be such that the dose rate at the external surface of the package does not exceed 0.5 millirem (5 μ Sv) per hour.
- (iii) The immediate container of each quantity or separately- packaged fractional quantity of radioactive material shall bear a durable and legible label which:
 - (I) Identifies the radionuclide and the quantity of radioactivity, and
 - (II) Bears the words "Radioactive Material".
- (iv) In addition to the labeling information required by (11)(b)2.(iii), the label affixed to the immediate container, or an accompanying brochure, shall:

- (I) State that the contents are exempt from applicable U.S. Nuclear Regulatory Commission or Agreement State requirements,
- (II) Bear the words "Radioactive Material - Not for Human Use - Introduction into Foods, Beverages, Cosmetics, Drugs, or Medicinals, or into Products Manufactured for Commercial Distribution is Prohibited - Exempt Quantities Should Not Be Combined", and
- (III) Set forth appropriate additional radiation safety precautions and instructions relating to the handling, use, storage, and disposal of the radioactive material.

3. Each person licensed under (11)(b) shall maintain records identifying, by name and address, each person to whom radioactive material is transferred for use under (3)(b) or the equivalent regulations of the U.S. Nuclear Regulatory Commission or another Agreement State, and stating the kinds and quantities of radioactive material transferred. An annual summary report stating the total quantity of each radionuclide transferred under the specific license shall be filed with the Division. Each report shall cover the year ending June 30, and shall be filed within 30 days thereafter. If no transfers of radioactive material have been made pursuant to (11)(b) during the reporting period, the report shall so indicate.

(c) [Reserved]

(d) Licensing the Manufacture and Initial Transfer of Devices to Persons Generally Licensed Under (6)(c).

1. An application for a specific license to initially transfer devices containing radioactive material to persons generally licensed under (6)(c) or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State will be approved if:
 - (i) The applicant satisfies the general requirements of (8);
 - (ii) The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control, labels, proposed uses, installation, servicing, leak testing, operating and safety instructions, and potential hazards of the device to provide reasonable assurance that:

- (I) The device can be safely operated by persons not having training in radiological protection,
 - (II) Under ordinary conditions of handling, storage, and use of the device, the radioactive material contained in the device will not be released or inadvertently removed from the device, and it is unlikely that any person will receive in any period of one year a dose in excess of ten percent of the annual limits specified in Rule .03(5)(a)1. of this Chapter, and
 - (III) Under accident conditions (such as fire and explosion) associated with handling, storage, and use of the device, it is unlikely that any person would receive an external radiation dose or dose commitment in excess of the following organ doses:
 - I. Whole body; head and trunk; active blood-forming organs; gonads; or lens of eye

15 rem (150 mSv);
 - II. Hands and forearms; feet and ankles; localized areas of skin averaged over areas no larger than one square centimeter

200 rem (2 Sv);
 - III. Other Organs

50 rem (500 mSv); and
- (iii) Each device bears a durable, legible, and clearly visible label or labels approved by the Division, which contain in a clearly identified and separate statement:
- (I) Instructions and precautions necessary to assure safe installation, operation, and servicing of the device (documents such as operating and service manuals may be identified in the label and used to provide this information);
 - (II) The requirement, or lack of requirement, for leak testing, or for testing any on/off mechanism and indicator,

including the maximum time interval for such testing, and the identification of radioactive material by isotope, quantity of radioactivity, and date of determination of the quantity; and

- (III) The information called for in the following statement, in the same or substantially similar form:
- I. The receipt, possession, use, and transfer of this device, Model ____, Serial No. ____, are subject to a general license or the equivalent and to the regulations of the U.S. Nuclear Regulatory Commission or of a State with which the U.S. Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority. This label shall be maintained on the device in a legible condition. Removal of this label is prohibited.

CAUTION - RADIOACTIVE MATERIAL

(NAME OF MANUFACTURER OR INITIAL TRANSFEROR)

Note: The model, serial number, and name of the manufacturer or distributor may be omitted from the appropriate label provided the information is elsewhere specified in labeling affixed to the device. Devices distributed pursuant to Regulations equivalent to (11)(d) prior to January 1, 1981, may bear labels authorized by the Regulations in effect on January 1, 1980. Devices distributed on or after January 1, 1981, including devices redistributed upon radioactive sources exchange, shall bear labels authorized in (11)(d).

- (iv) Each device having a separable source housing that provides the primary shielding for the source also bears, on the source housing, a durable label containing the device model number and serial number, the isotope and quantity, the words, "Caution-Radioactive

Material," the radiation symbol described in Rule .03(12), and the name of the manufacturer or initial distributor.

- (v) Each device meeting the criteria of (6)(c)3.(xii), bears a permanent (e.g., embossed, etched, stamped, or engraved) label affixed to the source housing if separable, or the device if the source housing is not separable, that includes the words, "Caution-Radioactive Material," and, if practical, the radiation symbol described in Rule .03(12).
 - (vi) The device has been registered in the Sealed Source and Device Registry.
2. In the event the applicant desires that the device be tested at intervals longer than six months, either for proper operation of the on/off mechanism and indicator, if any, or for leakage of radioactive material, or for both, the applicant shall include in his application sufficient information to demonstrate that such longer interval is justified by performance characteristics of the device or similar devices and by design features which have a significant bearing on the probability or consequences of leakage of radioactive material from the device or failure of the on/off mechanism and indicator. In determining the acceptable interval for the test for leakage of radioactive material, the Division will consider information that includes, but is not limited to:
- (i) Primary containment (source capsule);
 - (ii) Protection of primary containment;
 - (iii) Method of sealing containment;
 - (iv) Containment construction materials;
 - (v) Form of contained radioactive material;
 - (vi) Maximum temperature withstood during prototype tests;
 - (vii) Maximum pressure withstood during prototype tests;
 - (viii) Maximum quantity of contained radioactive material;
 - (ix) Radiotoxicity of contained radioactive material; and
 - (x) Operating experience with identical devices or similarly designed and constructed devices.

3. In the event the applicant desires that the general licensee under (6)(c), or under equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State, be authorized to install the device, collect the sample to be analyzed by a specific licensee for leakage of radioactive material, service the device, test the on/off mechanism and indicator, or remove the device from installation, the applicant shall include in his application written instructions to be followed by the general licensee, estimated calendar quarter doses associated with such activity or activities, and the basis for such estimates. The submitted information shall demonstrate that the performance of such activity or activities by an individual untrained in radiological protection, in addition to other handling, storage, and use of devices under the general license, is unlikely to cause that individual to receive a dose in excess of ten percent of the annual limits specified in Rule .03(5)(a)1. of this Chapter.
4. Each person licensed under (11)(d) shall provide the information specified in (11)(d)4.(i) to each generally licensed recipient to whom a device is to be transferred. This information must be provided before the device may be transferred. In the case of a transfer through an intermediate person, the information must also be provided to the intended user prior to initial transfer to the intermediate person.
 - (i) The required information includes:
 - (I) A copy of the general license contained in (6)(c); if (6)(c)3.(ii) through (iv) or (6)(c)3.(xii) do not apply to the particular device, these rules may be omitted.
 - (II) A copy of Rule .01(4), (5), (6), (7), (8), (9) and (10), Rule .02(13), (18), and (19), Rule .03(15)(a) and (b) and Rule .06;
 - (III) A list of the services that can only be performed by a specific licensee;
 - (IV) Information on acceptable disposal options including estimated costs of disposal; and
 - (V) An indication that improper disposal can result in high civil penalties.
 - (ii) If a device containing radioactive material is to be transferred for use under a general license contained in the U.S. Nuclear Regulatory Commission's or Agreement State's regulation equivalent to (6)(c), the licensee shall provide the information specified in (11)(d)4.(ii) to each person to whom a device is to be

transferred. This information must be provided before the device may be transferred. In the case of a transfer through an intermediate person, the information must also be provided to the intended user prior to initial transfer to the intermediate person. The required information includes:

- (I) A copy of this equivalent regulation or, alternatively, furnish a copy of the general license contained in (6)(c) to each person to whom he directly or through an intermediate person transfers radioactive material in a device for use pursuant to the general license of the U.S. Nuclear Regulatory Commission or the Agreement State. In the case of a transfer through an intermediate person, the information must also be provided to the intended user prior to initial transfer to the intermediate person. If a copy of the general license in (6)(c) is furnished to such a person, it shall be accompanied by a note explaining that the use of the device is regulated by the U.S. Nuclear Regulatory Commission or the Agreement State under requirements substantially the same as those in (6)(c); if certain paragraphs of the regulations do not apply to the particular device, those paragraphs may be omitted;
 - (II) A list of the services that can only be performed by a specific licensee;
 - (III) Information on acceptable disposal options including estimated costs of disposal;
 - (IV) An indication that improper disposal can result in high civil penalties; and
 - (V) The name or title, address, and telephone number of the contact at the appropriate NRC Regional Office or Agreement State from which additional information may be obtained.
- (iii) An alternative approach to informing customers may be proposed by the licensee for approval by the Division.
5. Each device that is transferred after January 1, 2003, must meet the labeling requirements of (11)(d)1.(iii) through (v).

6. If a notification of bankruptcy has been made under (13)(e) or the license is to be terminated, each person licensed under (11)(d) shall provide, upon request, to the Division and as appropriate to any Agreement State or the NRC, records of final disposition required under (11)(d)4.(viii).
7. The licensee shall report to the Division all transfers of such devices to persons for use under the general license in (6)(c) and report all receipts of such devices from persons licensed under (6)(c).
 - (i) Such report shall identify each general licensee by the following:
 - (I) The name and mailing address for the location of use; if there is no mailing address for the location of use, an alternate address for the general licensee shall be submitted along with information on the actual location of use;
 - (II) The name, title, and telephone number of the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the appropriate regulations and requirements;
 - (III) The date of the transfer;
 - (IV) The type, model number, and serial number of the device transferred; and
 - (V) The quantity and type of radioactive material contained in the device.
 - (ii) If one or more intermediate persons will temporarily possess the device at the intended place of use prior to its possession by the user, the report shall include the same information for both the intended user and each intermediate person, and clearly designate the intermediate person(s).
 - (iii) For devices received from a (6)(c) general licensee, the report must include the identity of the general licensee by name and address, the type, model number, and serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.
 - (iv) If the licensee makes changes to a device possessed by a (6)(c) general licensee, such that the label must be changed to update

required information, the report must identify the general licensee, the device, and the changes to information on the device label.

- (v) The report must cover each calendar quarter, must be filed within 30 days of the end of the calendar quarter, and must clearly indicate the period covered by the report.
- (vi) The report must clearly identify the specific licensee submitting the report and include the license number of the specific licensee.
- (vii) If no transfers have been made to or from persons generally licensed under (6)(c) during the reporting period, the report shall so indicate.

8. The licensee shall furnish reports to other agencies as follows:

- (i) Report to the U.S. Nuclear Regulatory Commission all transfers of such devices to persons for use under the U.S. Nuclear Regulatory Commission general license in Section 31.5 of 10 CFR, Part 31 and all receipts of devices from U.S. Nuclear Regulatory Commission Section 31.5 general licensees;
- (ii) Report to the responsible state agency all transfers of devices manufactured and distributed pursuant to (11)(d) for use under a general license in that state's regulations equivalent to (6)(c) and all receipts of devices from general licensees in the state agency's jurisdiction;
- (iii) The reports identified in 8.(i) and 8.(ii) shall identify each general licensee by the following:
 - (I) The name and mailing address for the location of use; if there is no mailing address for the location of use, an alternate address for the general licensee shall be submitted along with information on the actual location of use.
 - (II) The name, title and telephone number the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the appropriate regulations and requirements;
 - (III) The date of the transfer;

- (IV) The type, model, and serial number of the device transferred; and
 - (V) The quantity and type of radioactive material contained in the device.
-
- (iv) If one or more intermediate persons will temporarily possess the device at the intended place of use prior to its possession by the user, the report shall include the same information for both the intended user and each intermediate person, and clearly designate the intermediate person(s).
 - (v) For devices received from a (6)(c) general licensee, the report must include the identity of the general licensee by name and address, the type, model number, and serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.
 - (vi) If the licensee makes changes to a device possessed by a general licensee, such that the label must be changed to update required information, the report must identify the general licensee, the device, and the changes to information on the device label.
 - (vii) The report must cover each calendar quarter, must be filed within 30 days of the end of the calendar quarter, and must clearly indicate the period covered by the report.
 - (viii) The report must clearly identify the specific licensee submitting the report and must include the license number of the specific licensee.
 - (ix) If no transfers have been made to U.S. Nuclear Regulatory Commission licensees during the reporting period, report this information to the U.S. Nuclear Regulatory Commission; and
 - (x) If no transfers have been made to general licensees within a particular state during the reporting period, report this information to the responsible state agency upon request of that agency.
9. Each person licensed under (11)(d) to distribute devices to generally licensed persons shall maintain all information concerning transfers and receipts of devices that supports the reports required by (11)(d)4. These

records shall be maintained for a period of three years following the date of the recorded event.

- (e) Special Requirements for the Manufacture, Assembly, or Repair of Luminous Safety Devices for Use in Aircraft. An application for a specific license to manufacture, assemble, repair, or initially transfer luminous safety devices containing tritium or promethium-147 for use in aircraft, and for distribution to persons generally licensed under (6)(d), will be approved subject to the following conditions:
 - 1. The applicant satisfies the general requirements specified in (8), and
 - 2. The applicant satisfies the requirements of [Sections 32.53](#), [32.54](#), [32.55](#), and 32.56 of 10 CFR, Part 32, or their equivalent.

- (f) Special Requirements for License to Manufacture or Initially Transfer Calibration Sources Containing Americium-241, Plutonium, or Radium-226 for Distribution to Persons Generally Licensed Under (6)(f). An application for a specific license to manufacture or initially transfer calibration and reference sources containing americium-241, plutonium, or radium-226 to persons generally licensed under (6)(f) will be approved subject to the following conditions:
 - 1. The applicant satisfies the general requirement of (8), and
 - 2. The applicant satisfies the requirements of [Sections 32.57](#), [32.58](#), and 32.59 of 10 CFR, Part 32, and Section 70.39 of 10 CFR, Part 70, or their equivalent.

- (g) Manufacture and Distribution of Radioactive Material for Certain In Vitro Clinical or Laboratory Testing Under General License. An application for a specific license to manufacture or distribute radioactive material for use under the general license of (6)(g) will be approved subject to the following conditions:
 - 1. The applicant satisfies the general requirements specified in (8);
 - 2. The radioactive material is to be prepared for distribution in prepackaged units of:
 - (i) Iodine-125 in units not exceeding ten microcuries (370 kBq) each,
 - (ii) Iodine-131 in units not exceeding ten microcuries (370 kBq) each,
 - (iii) Carbon-14 in units not exceeding ten microcuries (370 kBq) each,
 - (iv) Hydrogen-3 (tritium) in units not exceeding 50 microcuries (1.85 MBq) each,

- (v) Iron-59 in units not exceeding 20 microcuries (740 kBq) each,
 - (vi) Cobalt-57 in units not exceeding ten microcuries (370 kBq) each,
 - (vii) Selenium-75 in units not exceeding ten microcuries (370 kBq) each,
 - (viii) Mock Iodine-125 in units not exceeding 0.05 microcurie (1.85 kBq) of iodine-129 and 0.005 microcurie (185 Bq) of americium-241 each;
3. Each prepackaged unit bears a durable and clearly visible label:
- (i) Identifying the radioactive contents as to chemical form and radionuclide, and indicating that the amount of radioactivity does not exceed ten microcuries (370 kBq) of iodine-125, iodine-131, carbon-14, cobalt-57, or selenium-75; 50 microcuries (1.85 Mbq) of hydrogen-3 (tritium); 20 microcuries (740 kBq) of iron-59; or Mock Iodine-125 in units not exceeding 0.05 microcurie (1.85 kBq) of iodine-129 and 0.005 microcurie (185 Bq) of americium-241 each; and
 - (ii) Displaying the radiation caution symbol described in Rule [391-3-17-.03](#), of this Chapter, and the words, "CAUTION, RADIOACTIVE MATERIAL", and "Not for Internal or External Use in Humans or Animals";
4. The following statement, as appropriate, or a substantially similar statement which contains the information called for in the following statement, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:
- (i) This radioactive material may be received, acquired, possessed, and used only by physicians, veterinarians in the practice of veterinary medicine, clinical laboratories, or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation therefrom, to human beings or animals. Its receipt, acquisition, possession, use, and transfer are subject to the regulations of and a general license of the U.S. Nuclear Regulatory Commission or of a State with which the U.S. Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority.

(NAME OF MANUFACTURER)

and

5. The label affixed to the unit, or the leaflet or brochure, which accompanies the package, contains adequate information as to the precautions to be observed in handling and storing such radioactive material. In the case of the Mock Iodine-125 reference or calibration source, the information accompanying the source must also contain directions to the licensee regarding the waste disposal requirements set out in Rule .03(13) of this Chapter.
- (h) Licensing the Manufacture and Distribution of Ice-Detection Devices. An application for a specific license to manufacture and initially transfer ice-detection devices to persons generally licensed under (6)(e) will be approved subject to the following conditions:
1. The applicant satisfies the general requirements of (8), and
 2. The criteria of [Sections 32.61](#) and 32.62 of 10 CFR, Part 32, are met.
- (i) Manufacture, Preparation, or Transfer, for Commercial Distribution of Pharmaceuticals Containing Radioactive Material for Medical Use. An application for a specific license to manufacture, prepare, or transfer for commercial distribution pharmaceuticals containing radioactive material for use by persons licensed pursuant to (9) for the uses listed in (41), (44), and (48) of Rule .05 of this Chapter will be approved subject to the following conditions:
1. The applicant satisfies the general requirements specified in (8);
 2. The applicant submits evidence that the applicant is at least one of the following:
 - (i) Registered or licensed with the U.S. Food and Drug Administration (FDA) as the owner or operator of a drug establishment that engages in the manufacture, preparation, propagation, compounding, or processing of a drug under 21 CFR 207.20(a);
 - (ii) Registered or licensed with a State Agency as a drug manufacturer;
 - (iii) Licensed as a pharmacy by the Georgia State Board of Pharmacy;

- (iv) Operating as a nuclear pharmacy within a Federal medical institution; or
 - (v) A Positron Emission Tomography (PET) drug production facility registered with a State agency.
3. The applicant submits information on the radionuclide, chemical and physical form, packaging including maximum activity per vial, syringe, generator, or other container of the radiopharmaceutical, and shielding provided by the packaging to show it is appropriate for safe handling and storage of radiopharmaceuticals by licensees; and
4. The applicant commits to the following labeling requirements:
- (i) A label is affixed to each transport radiation shield, whether it is constructed of lead, glass, plastic, or other material, of a radiopharmaceutical to be transferred for commercial distribution. The label must include the radiation symbol and words "Caution, Radioactive Material" or "Danger Radioactive Material"; the name of the radiopharmaceutical or its abbreviation, and quantity of radioactivity at a specified date and time. For radiopharmaceuticals with a half-life greater than 100 days, the time may be omitted.
 - (ii) A label is affixed to each syringe, vial, or other container used to hold a radiopharmaceutical to be transferred for commercial distribution. The label must include the words "Caution, Radioactive Material" or "Danger Radioactive Material" and an identifier that ensures that the syringe, vial, or other container can be correlated with the information on the transport radiation shield label, leaflet, or brochure.
5. A licensee described by (11)(i)2.(iii) or (iv):
- (i) May prepare radiopharmaceuticals for medical use, as defined in Rule .05(2)(s) provided that the radiopharmaceutical is prepared by either an authorized nuclear pharmacist, as specified in (ii) and (iv) or an individual under the supervision of an authorized nuclear pharmacist as specified in Rule .05(18)(b).
 - (ii) May allow a pharmacist to work as an authorized nuclear pharmacist if this individual:
 - (I) Qualifies as an authorized nuclear pharmacist as defined in .05(2)(e),

- (II) Meets the requirements specified in Rule .05(24)(b) and .05(27) and the licensee has received an approved license amendment identifying this individual as an authorized nuclear pharmacist, or has notified the Division in accordance with Rule .05(11), or
 - (III) Is designated as an authorized nuclear pharmacist in accordance with (iv).
- (iii) The actions authorized in (i) and (ii) are permitted notwithstanding more restrictive language in license conditions.
 - (iv) May designate a nuclear pharmacist in accordance with Rule .05(26) as an authorized nuclear pharmacist if the individual is identified as of December 31, 1996, as an "authorized user" on a license issued by the Director, the NRC, or an Agreement State, under this rule or equivalent requirements, or if the individual was a nuclear pharmacist preparing only radiopharmaceuticals containing accelerator produced radioactive material and the individual practiced at a Government Agency or Federally recognized Indian Tribe before November 30, 2007 or at all other pharmacies before August 8, 2009, or an earlier date as noticed by the NRC.
 - (v) Shall provide to the Division a copy of each individual's certification by a specialty board whose certification process has been recognized by the Commission or an Agreement State as specified in [391-3-17-.05\(24\)](#), or a Division, NRC, or Agreement State issued license, or permit issued by a licensee of broad scope, or documentation that only accelerator-produced radioactive materials were used in the practice of nuclear pharmacy at a Government agency or Federally recognized Indian Tribe before November 30, 2007 or at all other locations of use before August 8, 2009, or an earlier date as noticed by the NRC, and a copy of the individual's license to practice pharmacy in the State of Georgia issued by the Secretary of State's office, no later than 30 days after the date that the licensee allows pursuant to (ii) and (iii), the individual to work as an authorized nuclear pharmacist.
6. A licensee shall possess and use instrumentation to measure the radioactivity of radiopharmaceuticals. The licensee shall measure, by direct measurements or by combination of measurements and calculations, the amount of radioactivity in dosages of alpha-, beta-, or photon-emitting

radiopharmaceuticals prior to transfer for commercial distribution. In addition, the licensee shall:

- (i) Perform test before initial use, periodically, and following repair, on each instrument for accuracy, linearity, and geometry dependence, as appropriate for the use of the instrument; and make adjustments when necessary; and
- (ii) Check each instrument for constancy and proper operation at the beginning of each day of use.

7. A licensee shall satisfy the labeling requirements in subparagraph (11)(i)4.

8. Nothing in this section relieves the licensee from complying with applicable FDA, other Federal, or other State requirements governing radiopharmaceuticals.

(j) **Manufacture and Distribution of Sources or Devices Containing Radioactive Material for Medical Use.** An application for a specific license to manufacture and distribute sources and devices containing radioactive material to persons licensed pursuant to Rule .05 of this chapter for use as a calibration, transmission, or reference source or for medical uses regulated by Rule .05(55), (65), or (67) of this Chapter will be approved subject to the following conditions:

- 1. The applicant satisfies the general requirements of (8);
- 2. The applicant submits sufficient information regarding each type of source or device pertinent to an evaluation of its radiation safety, including:
 - (i) The radioactive material contained, its chemical and physical form, and amount,
 - (ii) Details of design and construction of the source or device,
 - (iii) Procedures for, and results of, prototype tests to demonstrate that the source or device will maintain its integrity under stresses likely to be encountered in normal use and accidents,
 - (iv) For devices containing radioactive material, the radiation profile of a prototype device,
 - (v) Details of quality control procedures to assure that production sources and devices meet the standards of the design and prototype tests,
 - (vi) Procedures and standards for calibrating sources and devices,

- (vii) Legend and methods for labeling sources and devices as to their radioactive content, and
 - (viii) Instructions for handling and storing the source or device from the radiation safety standpoint. (These instructions are to be included on a durable label attached to the source or device or attached to a permanent storage container for the source or device. Instructions which are too lengthy for such label may be summarized on the label and printed in detail on a brochure that is referenced on the label.)
3. The label affixed to the source or device, or to the permanent storage container for the source or device, contains information on the radionuclide, quantity, and date of assay, and a statement that the source or device is licensed by the Director for distribution to persons licensed pursuant to (9) and to Rule .05(55), (65), or (67) of this Chapter or under equivalent licenses of the U.S. Nuclear Regulatory Commission or an Agreement State;
 4. The source or device has been registered in the Sealed Source and Device Registry;
 5. In the event the applicant desires that the source or device be required to be tested for leakage of radioactive material at intervals longer than six months, he shall include in his application sufficient information to demonstrate that such longer interval is justified by performance characteristics of the source or device or similar sources or devices and by design features that have a significant bearing on the probability or consequences of leakage of radioactive material from the source;
 6. In determining the acceptable interval for test of leakage of radioactive material, the Division will consider information that includes, but is not limited to, that which is listed in (11)(d)2.
- (k) Requirements for License to Manufacture and Distribute Industrial Products Containing Depleted Uranium for Mass-Volume Applications.
1. An application for a specific license to manufacture industrial products and devices containing depleted uranium for use pursuant to (5)(d) or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State will be approved subject to the following conditions:
 - (i) The applicant satisfies the general requirements specified in (8);

- (ii) The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling or marking, proposed uses, and potential hazards of the industrial product or device to provide reasonable assurance that possession, use, or transfer of the depleted uranium in the product or device is not likely to cause any individual to receive in any period of 1 year a radiation dose in excess of ten percent of the annual limits specified in Rule .03(5)(a)1. of this Chapter; and
 - (iii) The applicant submits sufficient information regarding the industrial product or device and the presence of depleted uranium for a mass-volume application in the product or device to provide reasonable assurance that unique benefits will accrue to the public because of the usefulness of the product or device.
- 2. In the case of an industrial product or device whose unique benefits are questionable, the Director will approve an application for a specific license under (11)(k) only if the product or device is found to combine a high degree of utility and low probability of uncontrolled disposal and dispersal of significant quantities of depleted uranium into the environment.
- 3. The Director may deny any application for a specific license under (11)(k) if the end use(s) of the industrial product or device cannot be reasonably foreseen.
- 4. Each person licensed pursuant to (11)(k)1. shall:
 - (i) Maintain the level of quality control required by the license in the manufacture of the industrial product or device and in the installation of the depleted uranium into the product or device;
 - (ii) Label or mark each unit to:
 - (I) Identify the manufacturer of the product or device and the number of the license under which the product or device was manufactured, the fact that the product or device contains depleted uranium, and the quantity of depleted uranium in each product or device; and
 - (II) State that the receipt, possession, use, and transfer of the product or device are subject to a general license or the equivalent and to the regulations of the U.S. Nuclear Regulatory Commission or an Agreement State;

- (iii) Assure that the depleted uranium before being installed in each product or device has been impressed with the following legend clearly legible through any plating or other covering: "Depleted Uranium";
- (iv) Furnish a copy of the general license contained in:
 - (I) (5)(d) and a copy of Division form "Registration Certificate - Use of Depleted Uranium Under General License" to each person to whom he transfers depleted uranium in a product or device for use pursuant to the general license contained in (5)(d), or
 - (II) The U.S. Nuclear Regulatory Commission's or Agreement State's regulation equivalent to (5)(d) and a copy of the U.S. Nuclear Regulatory Commission's or Agreement State's certificate, or, alternatively, furnish a copy of the general license contained in (5)(d) and a copy of Division form "Registration Certificate - Use of Depleted Uranium Under General License" to each person to whom he transfers depleted uranium in a product or device for use pursuant to the general license of the U.S. Nuclear Regulatory Commission or an Agreement State, with a note explaining that use of the product or device is regulated by the U.S. Nuclear Regulatory Commission or an Agreement State under requirements substantially the same as those in (5)(d);
- (v) Report to the Division all transfers of industrial products or devices to persons for use under the general license in (5)(d). Such report shall identify each general licensee by name and address, an individual by name and/or position who may constitute a point of contact between the Division and the general licensee, the type and model number of device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within 30 days after the end of each calendar quarter in which such a product or device is transferred to the generally licensed person. If no transfers have been made to persons generally licensed under (5)(d) during the reporting period, the report shall so indicate;
- (vi) Report to other agencies as follows:

- (I) To the U.S. Nuclear Regulatory Commission all transfers of industrial products or devices to persons for use under the U.S. Regulatory Commission general license in Section 40.25 of 10 CFR, Part 40;
 - (II) To the responsible state agency all transfers of devices manufactured and distributed pursuant to [10CFR 32.210](#) for use under a general license in that state's regulations equivalent to (5)(d);
 - (III) Have such reports identify each general licensee by name and address, an individual by name and/or position who may constitute a point of contact between the agency and the general licensee, the type and model number of the device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within 30 days after the end of each calendar quarter in which such product or device is transferred to the generally licensed person;
 - (IV) If no transfers have been made to U.S. Nuclear Regulatory Commission licensees during the reporting period, report this information to the U.S. Nuclear Regulatory Commission; and
 - (V) If no transfers have been made to general licensees within a particular Agreement State during the reporting period, report this information to the responsible Agreement State agency upon the request of that agency; and
- (vii) Keep records showing the name, address, and point of contact for each general licensee to whom he transfers depleted uranium in industrial products or devices for use pursuant to the general license provided in (5)(d) or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State. The records shall be maintained for a period of two years and shall show the date of each transfer, the quantity of depleted uranium in each product or device transferred, and compliance with the report requirements of (11).

(I) [Reserved]

(12) Issuance of Specific Licenses.

- (a) Upon a determination that an application meets the requirements of the Act and the Rules of the Division, the Director may issue a specific license authorizing the proposed activity in such form and containing such conditions and limitations as it deems appropriate or necessary to effectuate the purposes of the Act.
- (b) The Director may incorporate in any license at the time of issuance, or thereafter, such additional requirements and conditions, as authorized by the Act or Rules, or Order, with respect to the licensee's receipt, possession, use, and transfer of radioactive material subject to this Chapter as necessary in order to:
 - 1. Minimize danger to public health and safety or property;
 - 2. Require such reports and the keeping of such records, and to provide for such inspections of activities under the license as necessary to effectuate the purposes of the Act; and
 - 3. Prevent loss or theft of material subject to this Rule.

(13) Specific Terms and Conditions of Licenses.

- (a) Each license issued pursuant to this Rule shall be subject to all the provisions of the Act, and to all Rules of the Division and Orders of the Director.
- (b) No license issued or granted under this Rule and no right to possess or utilize radioactive material granted by any license issued pursuant to this Rule shall be transferred, assigned, or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of any license to any person unless the Division, after securing full information, finds that the transfer is in accordance with the provisions of the Act, and gives its consent in writing.
 - 1. An application for transfer of license must include:
 - (i) The identity, technical and financial qualification of the proposed transferee; and
 - (ii) Financial assurance for decommissioning information required by .02(8)(g).
- (c) Each person licensed by the Director pursuant to this Rule shall confine use and possession of the material licensed to the locations and purposes authorized in the license.
- (d) Each licensee shall notify the Division in writing immediately and request termination of his license when the licensee decides to terminate all activities

involving radioactive materials authorized under the license. This notification and request for termination must include the information specified in (18)(d).

- (e) Each general licensee required to register by (6)(c)3.(xi) and each specific licensee shall notify the Division in writing immediately following the filing of a voluntary or involuntary petition for bankruptcy under any Chapter of Title 11 (Bankruptcy) of the United States Code by or against:
 - 1. The licensee;
 - 2. An entity (as that term is defined in [11 U.S.C. 101\(15\)](#)) controlling the licensee or listing the license or licensee as property of the estate; or
 - 3. An affiliate (as that term is defined in [11 U.S.C. 101\(2\)](#)) of the licensee.
- (f) The notification specified in (13)(e) shall indicate the bankruptcy court in which the petition for bankruptcy was filed and the date of the filing of the petition.
- (g) Security requirements for portable gauges. Each portable gauge licensee shall use a minimum of two independent physical controls that form tangible barriers to secure portable gauges from unauthorized removal, whenever portable gauges are not under the control and constant surveillance of the licensee.
- (h) Each licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators or rubidium-82 from strontium-82/rubidium-82 generators shall test the generator eluates for molybdenum-99 breakthrough or strontium-82 and strontium-85 contamination, respectively, in accordance with Rule .05(45)(a)(b) and (c). The licensee shall record the results of each test and retain each record for 3 years after the record is made. The licensee shall report the results of any test that exceeds the permissible concentration listed in [391-3-17-.05\(45\)](#) at the time of generator elution, in accordance with [391-3-17-.05\(120\)](#).
- (i) Authorization under .02(7)(j) to produce Positron Emission Tomography (PET) radioactive drugs for noncommercial transfer to medical use licensees in its consortium does not relieve the licensee from complying with applicable FDA, other Federal, and State requirements governing radioactive drugs.
 - 1. Each licensee authorized under .02(7)(j) to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall:
 - (i) Satisfy the labeling requirements in .02(11)(i)4. of this Rule for each PET radioactive drug transport radiation shield and each syringe, vial, or other container used to hold a PET radioactive drug intended for noncommercial distribution to members of its consortium.

- (ii) Possess and use instrumentation to measure the radioactivity of the PET radioactive drugs intended for noncommercial distribution to members of its consortium and meet the procedural, radioactivity measurement, instrument test, instrument check, and instrument adjustment requirements in .02(11)(i)6. of this Rule.
- 2. A licensee that is a pharmacy authorized under .02(7)(j) to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall require that any individual that prepares PET radioactive drugs shall be:
 - (i) an authorized nuclear pharmacist that meets the requirements in .02(11)(i)5. of this Rule, or
 - (ii) an individual under the supervision of an authorized nuclear pharmacist as specified in Rule .05(18).
- 3. A pharmacy, authorized under .02(7)(j) to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium that allows an individual to work as an authorized nuclear pharmacist, shall meet the requirements of .02(11)(i)5.(v) of this Rule.

(14) **Expiration of Licenses.** Except as provided in (15)(b), each specific license shall expire at the end of the day, in the month and year stated therein.

(15) **Renewal of Licenses.**

- (a) No less than 30 days before the expiration date specified in a specific license, the licensee shall either:
 - 1. Submit an application for license renewal filed in accordance with (7), or
 - 2. Notify the Division in writing in accordance with (13)(d) and (15)(c) if the licensee decides not to renew the license.
- (b) In any case in which a licensee, not less than 30 days prior to the expiration of his existing license, has filed an application in proper form for renewal or for a new license authorizing the same activities, such existing license shall not expire until the application has been finally determined by the Division.
- (c) If a licensee does not submit an application for license renewal on or before the expiration date specified in the license, then the licensee shall, on or before that expiration date:
 - 1. Terminate the use of radioactive material,

2. Remove radioactive contamination to the extent practicable,
3. Properly dispose of the radioactive material, and
4. Submit the information specified in (18)(d).

(16) **Amendment of Licenses at Request of Licensee.** Applications for amendment of a license shall be filed in accordance with (7) and shall specify the respects in which the licensee desires the license to be amended and the grounds for such amendment.

(17) **Action on Applications to Renew or Amend.** In considering an application by a licensee to renew or amend the license, the Director will apply the criteria set forth in (8), (9), (10), or (11), as applicable.

(18) **Modification, Revocation, and Termination of Licenses.**

- (a) The terms and conditions of all licenses shall be subject to amendment, revision, or modification, or the license may be suspended or revoked by reason of amendments to the Act, or by reason of Rules, and Orders issued by the Director.
- (b) Any license may be revoked, suspended, or modified, in whole or in part, for any material false statement in the application or any statement of fact required under provisions of the Act or of this Rule, or because of conditions revealed by such application or statement of fact or any report, record, or inspection or other means which would warrant the Director to refuse to grant a license on an original application, or for violation of, or failure to observe, any of the terms and conditions of the Act, of the license, or of any Rule or Order of the Director.
- (c) Each specific license revoked by the Director expires at the end of the day on the date of the Director's final determination to revoke the license, or on the expiration date stated in the determination, or as otherwise provided by Order of the Director.
- (d) The Director may terminate a specific license upon request submitted by the licensee to the Division in writing provided the following:
 1. The licensee certifies the disposition of all licensed material, including accumulated wastes, by submitting a completed "Request to Terminate Radioactive Materials License" form or equivalent information; and
 2. The licensee conducts a radiation survey of the premises where the licensed activities were carried out and submits a report of the results of the survey unless the licensee demonstrates that the premises are suitable for release in accordance with the requirements for decommissioning in Rule .03(7). As appropriate, the licensee shall:

- (i) Report levels of gamma radiation in units of microroentgen (millisieverts) per hour at one meter from surfaces, and report levels of radioactivity, including alpha and beta, in units of disintegrations per minute or microcuries (megabecquerels) per 100 square centimeters - removable and fixed - for surfaces, microcuries (megabecquerels) per milliliter for water, and picocuries (becquerels) per gram for solids such as soils or concrete; and
 - (ii) Specify the survey instrument(s) used and certify that each instrument is properly calibrated and tested.
 - 3. If detectable levels of residual radioactive contamination are found, the license continues to be in effect, even beyond the expiration date if necessary, with respect to possession of residual radioactive material as contamination until the Division notifies the licensee in writing that the license is terminated. Each licensee who possesses residual radioactive material under this paragraph shall initiate decommissioning activities as required by (8)(h).
 - 4. If no residual radioactive contamination is detected, the licensee shall submit a certification that no detectable radioactive contamination was found. If the information submitted is found to be adequate, the Director will notify the licensee in writing that the license is terminated.
- (e) Specific licenses, including expired licenses, will be terminated by written notice to the licensee when the Director determines that:
- 1. Radioactive material has been properly disposed;
 - 2. Reasonable effort has been made to eliminate residual radioactive contamination, if present; and
 - 3.
 - (i) A radiation survey has been performed which demonstrates that the premises are suitable for release in accordance with Division requirements for decommissioning in Rule .03(7); or
 - (ii) Other information submitted by the licensee is sufficient to demonstrate that the premises are suitable for release in accordance with Division requirements for decommissioning in Rule .03(7).
 - 4. Prior to license termination, each licensee authorized to possess radioactive material with a half-life greater than 120 days, in an unsealed form, shall forward the following records to the Division:

- (i) Records of disposal of licensed material made under Rule .03(13)(b) (including burials authorized before January 28, 1982), .03(13)(c), .03(13)(d), .03(13)(e); and
 - (ii) Records required by Rule .03(14)(c)2.(iv).
- 5. If licensed activities are transferred or assigned in accordance with Rule .02(13)(b), each licensee authorized to possess radioactive material, with a half-life greater than 120 days, in an unsealed form, shall transfer the following records to the new licensee and the new licensee will be responsible for maintaining these records until the license is terminated:
 - (i) Records of disposal of licensed material made under Rule .03(13)(b) (including burials authorized before January 28, 1982), .03(13)(c), .03(13)(d), .03(13)(e); and
 - (ii) Records required by Rule .03(14)(c)2.(iv).
- 6. Prior to license termination, each licensee shall forward the records required by Rule .02(8)(g)8. to the Division.

(19) Transfer of Material.

- (a) Authorization for Transfer. No licensee shall transfer radioactive material except as authorized pursuant to (19)(b).
- (b) Condition of Transfer. Any licensee may transfer radioactive material, subject to acceptance by the transferee, to:
 - 1. The Division, after receiving prior approval from the Division;
 - 2. The United States Department of Energy or any successor thereto;
 - 3. Any person exempt from this Rule to the extent permitted under such exemption;
 - 4. Any person licensed to receive such material under terms of a general license or its equivalent, or specific license or equivalent licensing document issued by the Director, the U.S. Nuclear Regulatory Commission or any Agreement State, to any person otherwise authorized to receive such material by the Federal Government or any agency thereof, the Division or any Agreement State; or
 - 5. Any person authorized by the Division in writing.

- (c) Before transferring radioactive material to a specific licensee of the Director, the U.S. Nuclear Regulatory Commission or an Agreement State or to a general licensee who is required to register with the Division, the U.S. Nuclear Regulatory Commission or an Agreement State prior to receipt of the radioactive material, the licensee transferring the material shall verify that the transferee's license authorizes the receipt of the type, form, and quantity of radioactive material to be transferred.
- (d) The following methods for the verification required by (19)(c) are acceptable:
 - 1. The transferor may possess, and read, a current copy of the transferee's specific license or registration certificate.
 - 2. The transferor may have in his possession a written certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form, and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency, and expiration date.
 - 3. For emergency shipments, the transferor may accept oral certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form, and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency, and expiration date; provided that the oral certification is confirmed in writing within ten days.
 - 4. The transferor may obtain other sources of information compiled by a reporting service from official records of the Division, the U.S. Nuclear Regulatory Commission or the licensing agency of an Agreement State regarding the identity of licensees and the scope and expiration date of licenses and registration.
 - 5. When none of the methods of verification described in paragraphs (19)(d)1., 2., 3., and 4. is readily available or when a transferor desires to verify that information received by one of such methods is correct or up-to-date, the transferor may obtain and record confirmation from the Division, the U.S. Nuclear Regulatory Commission or the licensing agency of an Agreement State that the transferee is licensed to receive the radioactive material.
- (e) Preparation for shipment and transport of radioactive material shall be in accordance with the provisions of Rule .06 of this Chapter.
- (f) Each person who receives source or byproduct material pursuant to a license issued pursuant to the regulations in Rule 391-3-17-.02 shall keep records

showing the receipt, transfer, and disposal of this source or byproduct material as specified in [10 CFR 40.61](#).

(20) Reciprocity.

- (a) Persons licensed by other Agencies. Subject to the provisions of this Chapter, any person who holds a specific license from the U.S. Nuclear Regulatory Commission or any Agreement State, other than this State, and issued by the agency having jurisdiction where the licensee maintains an office for directing the licensed activity and at which radiation safety records are normally maintained, is hereby granted a general license to conduct the activities authorized in such licensing document within this State, except in areas of exclusive federal jurisdiction, for a period not in excess of 180 days in any calendar year provided that:
1. The licensing document does not limit the activity authorized by such document to specified installations or locations;
 2. The out-of-state licensee notifies the Division in writing at least three days prior to engaging in such activity. Such notification shall indicate the location, period, and type of proposed possession and use within the State, and shall be accompanied by a copy of the pertinent licensing document. If, for a specific case, the 3-day period would impose an undue hardship on the out-of-state licensee, he may, upon application to the Division, obtain permission to proceed sooner;
 3. The out-of-state licensee complies with all applicable Rules of the Division, and with all the terms and conditions of his licensing document except any such terms and conditions that may be inconsistent with applicable Rules of the Division;
 4. Provided further that the Division may require the out-of-state licensee to supply such other information as the Division may reasonably request; and
 5. The out-of-state licensee shall not transfer or dispose of radioactive material possessed or used under the general license provided in (20)(a) except by transfer to a person who is:
 - (i) Specifically licensed by the Director or the U.S. Nuclear Regulatory Commission to receive such material; or
 - (ii) Exempt from the requirements for a license for such material under (3)(a).
- (b) Notwithstanding the provisions of (20)(a), any person who holds a specific license issued by the U.S. Nuclear Regulatory Commission or an Agreement

State authorizing the holder to manufacture, transfer, install, or service a device described in (6)(c)1. within areas subject to the jurisdiction of the licensing body is hereby granted a general license to install, transfer, demonstrate, or service such device in this State provided that:

1. Such person shall file a report with the Division within 30 days after the end of each calendar quarter in which any device is transferred to or installed in this State. Each such report shall identify each general licensee to whom such a device is transferred by name and address, the type of device transferred, and the quantity and type of radioactive material contained in the device;
2. The device has been manufactured, labeled, installed, and serviced in accordance with applicable provisions of the specific license issued to such person by the U.S. Nuclear Regulatory Commission or an Agreement State;
3. Such person shall assure that any labels required to be affixed to the device under regulations of the authority which licensed the manufacturing of the device bear a statement that "Removal of This Label is Prohibited"; and
4. The holder of the specific license shall furnish to each general licensee to whom he transfers such a device or on whose premises he installs such a device a copy of the general license contained in (6)(c).

- (c) The Division may withdraw, limit, or qualify its acceptance of any specific license or equivalent licensing document issued by another agency, or any product distributed pursuant to such licensing document, upon determining that such action is necessary in order to prevent undue hazard to public health and safety, to property, or to the environment.

(21) **Schedules.**

- (a) Schedule A.

SCHEDULE A

EXEMPT CONCENTRATIONS

Exempt Concentrations	Schedule A	Column I Gas Concentration (μCi/mL) ⁽¹⁾	Column II Liquid and Solid Concentration (μCi/mL) ⁽²⁾
Element (Atomic Number)	Isotope		
Antimony (51)	Sb 122	3 x 10 ⁻⁴	
Sb 124		2 x 10 ⁻⁴	

Sb 125	1 x 10 ⁻³		
Argon (18)	Ar 37	1 x 10 ⁻³	
Ar 41	4 x 10 ⁻⁷		
Arsenic (33)	As 73	5 x 10 ⁻³	
As 74	5 x 10 ⁻⁴		
As 76	2 x 10 ⁻⁴		
As 77	8 x 10 ⁻⁴		
Barium (56)	Ba 131	2 x 10 ⁻³	
Ba 140	3 x 10 ⁻⁴		
Beryllium (4)	Be 7	2 x 10 ⁻²	
Bismuth (83)	Bi 206	4 x 10 ⁻⁴	
Bromine (35)	Br 82	4 x 10 ⁻⁷	3 x 10 ⁻³
Cadmium (48)	Cd 109	2 x 10 ⁻³	
Cd 115m	3 x 10 ⁻⁴		
Cd 115	3 x 10 ⁻⁴		
Calcium (20)	Ca 45	9 x 10 ⁻⁵	
Ca 47	5 x 10 ⁻⁴		
Carbon (6)	C 14	1 x 10 ⁻⁶	8 x 10 ⁻³
Cerium (58)	Ce 141	9 x 10 ⁻⁴	
Ce 143	4 x 10 ⁻⁴		
Ce 144	1 x 10 ⁻⁴		
Cesium (55)	Cs 131	2 x 10 ⁻²	
Cs 134m	6 x 10 ⁻²		
Cs 134	9 x 10 ⁻⁵		
Chlorine (17)	Cl 38	9 x 10 ⁻⁷	4 x 10 ⁻³
Chromium (24)	Cr 51	2 x 10 ⁻²	
Cobalt (27)	Co 57	5 x 10 ⁻³	
Co 60	5 x 10 ⁻⁴		
Copper (29)	Cu 64	3 x 10 ⁻³	
Dysprosium (66)	Dy 165	4 x 10 ⁻³	
Dy 166	4 x 10 ⁻⁴		
Erbium (68)	Er 169	9 x 10 ⁻⁴	
Er 171	1 x 10 ⁻³		
Europium (63)	Eu 152	6 x 10 ⁻⁴	
(T ^{0.5} = 9.2 h)			
Eu 155	2 x 10 ⁻³		
Fluorine (9)	F 18	2 x 10 ⁻⁶	8 x 10 ⁻³

Gadolinium (64)	Gd 153	2×10^{-3}	
Gd 159		8×10^{-4}	
Gallium (31)	Ga 72	4×10^{-4}	
Germanium (32)	Ge 71	2×10^{-2}	
Gold (79)	Au 196	2×10^{-3}	
Au 198		5×10^{-4}	
Au 199		2×10^{-3}	
Hafnium (72)	Hf 181	7×10^{-4}	
Hydrogen (1)	H 3	5×10^{-6}	3×10^{-2}
Indium (49)	In 113m	1×10^{-2}	
In 114m		2×10^{-4}	
Iodine (53)	I 126	3×10^{-9}	2×10^{-5}
I 131		3×10^{-9}	2×10^{-5}
I 132		8×10^{-8}	6×10^{-4}
I 133		1×10^{-8}	7×10^{-5}
I 134		2×10^{-7}	1×10^{-3}
Iridium (77)	Ir 190	2×10^{-3}	
Ir 192		4×10^{-4}	
Ir 194		3×10^{-4}	
Iron (26)	Fe 55	8×10^{-3}	
Fe 59		6×10^{-4}	
Krypton (36)	Kr 85m	1×10^{-6}	
Kr 85		3×10^{-6}	
Lanthanum (57)	La 140	2×10^{-4}	
Lead (82)	Pb 203	4×10^{-3}	
Lutetium (71)	Lu 177	1×10^{-3}	
Manganese (25)	Mn 52	3×10^{-4}	
Mn 54		1×10^{-3}	
Mn 56		1×10^{-3}	
Mercury (80)	Hg 197m	2×10^{-3}	
Hg 197		3×10^{-3}	
Hg 203		2×10^{-4}	
Molybdenum (42)	Mo 99	2×10^{-3}	
Neodymium (60)	Nd 147	6×10^{-4}	
Nd 149		3×10^{-3}	
Nickel (28)	Ni 65	1×10^{-3}	
Niobium	Nb 95	1×10^{-3}	

(columbium) (41)		
Nb 97		9×10^{-3}
Osmium (76)	Os 185	7×10^{-4}
Os 191m		3×10^{-2}
Os 191		2×10^{-3}
Os 193		6×10^{-4}
Palladium (46)	Pd 103	3×10^{-3}
Pd 109		9×10^{-4}
Phosphorus (15)	P 32	2×10^{-4}
Platinum (78)	Pt 191	1×10^{-3}
Pt 193m		1×10^{-2}
Pt 197m		1×10^{-2}
Pt 197		1×10^{-3}
Polonium (84)	Po 210	7×10^{-6}
Potassium (19)	K 42	3×10^{-3}
Praseodymium (59)	Pr 142	3×10^{-4}
Pr 143		5×10^{-4}
Promethium (61)	Pm 147	2×10^{-3}
Pm 149		4×10^{-4}
Radium (88)	Ra 226	1×10^{-7}
Ra 228		3×10^{-7}
Rhenium (75)	Re 183	6×10^{-3}
Re 186		9×10^{-4}
Re 188		6×10^{-4}
Rhodium (45)	Rh 103m	1×10^{-1}
Rubidium (37)	Rb 86	7×10^{-4}
Ruthenium (44)	Ru 97	4×10^{-3}
Ru 103		8×10^{-4}
Ru 105		1×10^{-3}
Ru 106		1×10^{-4}
Samarium (62)	Sm 153	8×10^{-4}
Scandium (21)	Sc 46	4×10^{-4}
Sc 47		9×10^{-4}
Sc 48		3×10^{-3}
Selenium (34)	Se 75	3×10^{-3}
Silicon (14)	Si 31	9×10^{-3}

Silver (47)	Ag 105	1×10^{-3}	
Ag 110m		3×10^{-4}	
Ag 111		4×10^{-4}	
Sodium (11)	Na 24	2×10^{-3}	
Strontium (38)	Sr 85	1×10^{-3}	
Sr 89		1×10^{-4}	
Sr 91		7×10^{-4}	
Sr 92		7×10^{-4}	
Sulfur (16)	S 35	9×10^{-8}	6×10^{-4}
Tantalum (73)	Ta 182	4×10^{-4}	
Technetium (43)	Tc 96m	1×10^{-1}	
Tc 96		1×10^{-3}	
Tellurium (52)	Te 125m	2×10^{-3}	
Te 127m		6×10^{-4}	
Te 127		3×10^{-3}	
Te 129m		3×10^{-4}	
Te 131m		6×10^{-4}	
Te 132		3×10^{-4}	
Terbium (65)	Tb 160	4×10^{-4}	
Thallium (81)	Tl 200	4×10^{-3}	
Tl 201		3×10^{-3}	
Tl 202		1×10^{-3}	
Tl 204		1×10^{-3}	
Thulium (69)	Tm 170	5×10^{-4}	
Tin (50)	Sn 113	9×10^{-4}	
Sn 125		2×10^{-4}	
Tungsten (wolfram) (74)	W 181	4×10^{-3}	
W 187		7×10^{-4}	
Vanadium (23)	V 48	3×10^{-4}	
Xenon (54)	Xe 131m	4×10^{-6}	
Xe 133		3×10^{-6}	
Xe 135		1×10^{-6}	
Ytterbium (70)	Yb 175	1×10^{-3}	
Yttrium (39)	Y 90	2×10^{-4}	
Y 91m		3×10^{-2}	
Y 91		3×10^{-4}	

Y 92	6 x 10 ⁻⁴	
Y 93	3 x 10 ⁻⁴	
Zinc (30)	Zn 65	1 x 10 ⁻³
Zn 69m	7 x 10 ⁻⁴	
Zn 69	2 x 10 ⁻²	
Zirconium (40)	Zr 95	6 x 10 ⁻⁴
Zr 97	2 x 10 ⁻⁴	
Beta- and/or gamma-emitting radioactive material not listed above with halflife less than three years	1 x 10 ⁻¹⁰	1 x 10 ⁻⁶

Note: Many radioisotopes disintegrate into isotopes that are also radioactive. In expressing the concentrations in Schedule A, the activity stated is that of the parent isotope and takes into account the daughters. For purposes of (3)(a) where there is involved a combination of isotopes, the limit for the combination should be derived as follows:

Determine for each isotope in the product the ratio between the concentration present in the product and the exempt concentration established in Schedule A for the specific isotope when not in combination. The sum of such ratios may not exceed "1" (i.e., unity).

$$\text{EXAMPLE: } \frac{\text{Concentration of Isotope A in Product}}{\text{Exempt concentration of Isotope A}} +$$

$$\frac{\text{Concentration of Isotope B in Product}}{\text{Exempt concentration of Isotope B}} \leq 1$$

(b) Schedule B.

SCHEDULE B

EXEMPT QUANTITIES

Schedule B - Exempt Quantities

Radioactive Material	Exempt Quantity (Microcuries)
Antimony-122 (Sb 122)	100
Antimony-124 (Sb 124)	10
Antimony-125 (Sb 125)	10

Arsenic-73 (As 73)	100
Arsenic-74 (As 74)	10
Arsenic-76 (As 76)	10
Arsenic-77 (As 77)	100
Barium-131 (Ba 131)	10
Barium-133 (Ba 133)	10
Barium-140 (Ba 140)	10
Bismuth-210 (Bi 210)	1
Bromine-82 (Br 82)	10
Cadmium-109 (Cd 109)	10
Cadmium-115m (Cd 115m)	10
Cadmium-115 (Cd 115)	100
Calcium-45 (Ca 45)	10
Calcium-47 (Ca 47)	10
Carbon-14 (C 14)	100
Cerium-141 (Ce 141)	100
Cerium-143 (Ce 143)	100
Cerium-144 (Ce 144)	1
Cesium-129 (Cs 129)	100
Cesium-131 (Cs 131)	1,000
Cesium-134m (Cs 134m)	100
Cesium-134 (Cs 134)	1
Cesium-135 (Cs 135)	10
Cesium-136 (Cs 136)	10
Cesium-137 (Cs 137)	10
Chlorine-36 (Cl 36)	10
Chlorine-38 (Cl 38)	10
Chromium-51 (Cr 51)	1,000
Cobalt-57 (Co 57)	100
Cobalt-58m (Co 58m)	10
Cobalt-58 (Co 58)	10
Cobalt-60 (Co 60)	1
Copper-64 (Cu 64)	100

(d) Schedule D. Criteria Relating to Use of Financial Tests and Parent Company Guarantees for Providing Reasonable Assurance of Funds for Decommissioning.

1. Introduction. An applicant or licensee may provide reasonable assurance of the availability of funds for decommissioning based on obtaining a parent company guarantee that funds will be available for decommissioning costs and on a demonstration that the parent company passes a financial test. This schedule establishes criteria for passing the financial test and for obtaining the parent company guarantee.

2. Financial Test. To pass the financial test, the parent company must meet the criteria of either (21)(d)2.(i) or (21)(d)2.(ii) as follows:

(i) The parent company must have:

(I) two of the following three ratios: a ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5;

(II) Net working capital and tangible net worth each at least six times the current decommissioning cost estimates (or prescribed amount if a certification is used);

(III) Tangible net worth of at least \$10 million; and

(IV) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the current decommissioning cost estimates (or prescribed amount if a certification is used).

(ii) The parent company must have:

(I) A current rating for its most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's;

(II) Tangible net worth each at least six times the current decommissioning cost estimates for the total of all facilities or parts thereof (or prescribed amount if a certification is used);

- (III) Tangible net worth of at least \$10 million; and
 - (IV) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the current decommissioning cost estimates for the total of all facilities or parts thereof (or prescribed amount if a certification is used).
- (iii) The parent company's independent certified public accountant must have compared the data used by the parent company in the financial test, which is derived from the independently-audited, year-end financial statements for the latest fiscal year, with the amounts in such financial statement. In connection with that procedure the licensee shall inform the Director and Division within 90 days of any matters coming to the auditor's attention that cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test.
 - (iv) After the initial financial test, the parent company must repeat the passage of the test within 120 days after the close of each succeeding fiscal year. If the parent company no longer meets the requirements, as appropriate, of either (21)(d)2.(i) or (21)(d)2.(ii), the licensee must send notice to the Director and Division of intent to establish alternate financial assurance as specified in the Division's Rules. The notice must be sent by certified mail within 90 days after the end of the fiscal year for which the year-end financial data show that the parent company no longer meets the financial test requirements. The licensee must provide alternate financial assurance within 120 days after the end of such fiscal year.
3. Parent Company Guarantee. The terms of a parent company guarantee which an applicant or licensee obtains must provide that:
- (i) The parent company guarantee shall remain in force unless the guarantor sends notice of cancellation by certified mail to the licensee and the Director and Division. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the licensee and the Director, as evidenced by the return receipts;

- (ii) If the licensee fails to provide alternate financial assurance as specified in the Division's Rules within 90 days after receipt by the licensee and the Director and Division of a notice of cancellation of the parent company guarantee from the guarantor, the guarantor shall provide such alternative financial assurance in the name of the licensee;
 - (iii) The parent company guarantee and financial test provisions must remain in effect until the Department has terminated the license; and
 - (iv) If a trust is established for decommissioning costs, the trustee and trust must be acceptable to the Department. An acceptable trustee includes an appropriate State or Federal government agency or an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency.

(g) Schedule G. Criteria Relating to Use of Financial Tests and Self Guarantees for Providing Reasonable Assurance of Funds for Decommissioning.

1. Introduction

An applicant or licensee may provide reasonable assurance of the availability of funds for decommissioning based on furnishing its own guarantee that funds will be available for decommissioning costs and on a demonstration that the company passes the financial test of (21)(g)2. The terms of the self-guarantee are in (21)(g)3. This schedule establishes criteria for passing the financial test for the self-guarantee and establishes the terms for a self-guarantee.

2. Financial Test

(i) To pass the financial test, a company must meet all of the following criteria:

(I) Tangible net worth at least ten times the total current decommissioning cost estimate for the total of all facilities or parts thereof (or the current amount required if certification is

used) for all decommissioning activities for which the company is responsible as self-guaranteeing licensee.

- (II) Assets located in the United States amounting to at least 90 percent of total decommissioning cost estimate for the total of all facilities or parts thereof (or the current amount required if certification is used) for all decommissioning activities for which the company is responsible as self-guaranteeing licensee.
 - (III) A current rating for its most recent bond issuance of AAA, AA, or A as issued by Standard and Poors (S&P), or Aaa, Aa, or A as issued by Moodys.
- (ii) To pass the financial test, a company must meet all of the following additional requirements:
- (I) The company must have at least one class of equity securities registered under the Security Exchange Act of 1934.
 - (II) The company's independent certified public accountant must have compared the data used by the company in the financial test, which is derived from the independently audited, year-end financial statements for the latest fiscal year, with the amounts in such financial statement. In connection with that procedure, the licensee shall inform the Director and Division within 90 days of any matters coming to the attention of the auditor that cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test.
 - (III) After the initial financial test, the company must repeat passage of the test within 90 days after the close of each succeeding fiscal year.
- (iii) If the licensee no longer meets the requirements of (21)(g)2.(i), the licensee must send immediate notice to the Director and Division of its intent to establish alternate financial assurance as specified in the Division's Rules within 120 days of such notice.

3. Company Self-Guarantee

The terms of a self-guarantee which an applicant or licensee furnishes must provide that:

- (i) The guarantee will remain in force unless the licensee sends notice of cancellation by certified mail to the Director and Division. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by the Director, as evidenced by the return receipt.
 - (ii) The licensee shall provide alternative financial assurance as specified in the Division's Rules within 90 days following receipt by the Director of a notice of cancellation of the guarantee.
 - (iii) The guarantee and financial test provisions must remain in effect until the Director has terminated the license or until another financial assurance method acceptable to the Director has been put in effect by the licensee.
 - (iv) The licensee will promptly forward to the Department, the Division and the licensee's independent auditor all reports covering the latest fiscal year filed by the licensee with the Securities and Exchange Commission pursuant to the requirements of Section 13 of the Securities and Exchange Act of 1934.
 - (v) If, at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys, the licensee will provide notice in writing of such fact to the Director and Division within 20 days after publication of the change by the rating service. If the licensee's most recent bond issuance ceases to be rated in any category of A or above by both Standard and Poors and Moodys, the licensee no longer meets the requirements of (21)(g)2.(i).
 - (vi) The applicant or licensee must provide to the Director and Division a written guarantee (a written commitment by a corporate officer) which states that the licensee will fund and carry out the required decommissioning activities or, upon issuance of an order by the Director, the licensee will set up and fund a trust in the amount of the current cost estimates for decommissioning.
- (h) Schedule H. Criteria Relating to Use of Financial Tests and Self-Guarantee For Providing Reasonable Assurance of Funds For Decommissioning by Nonprofit Colleges, Universities, and Hospitals.

1. Introduction

An applicant or licensee may provide reasonable assurance of the availability of funds for decommissioning based on furnishing its own guarantee that funds will be available for decommissioning costs and on a demonstration that the applicant or licensee passes the financial test of (h)2. The terms of the self-guarantee are in (h)3. This schedule establishes criteria for passing the financial test for the self-guarantee and establishes the terms for a self-guarantee.

2. Financial Test

- (i) For colleges and universities, to pass the financial test a college or university must meet either the criteria in (h)2.(i)(I) or the criteria in (h)2.(i)(II).
 - (I) For applicants or licensees that issue bonds, a current rating for its most recent uninsured, uncollateralized, and unencumbered bond issuance of AAA, AA, or A as issued by Standard and Poors (S&P) or Aaa, Aa, or A as issued by Moodys.
 - (II) For applicants or licensees that do not issue bonds, unrestricted endowment consisting of assets located in the United States of at least \$50 million, or at least 30 times the total current decommissioning cost estimate (or the current amount required if certification is used), whichever is greater, for all decommissioning activities for which the college or university is responsible as a self-guaranteeing licensee.
- (ii) For hospitals, to pass the financial test a hospital must meet either the criteria in (h)2.(ii)(I) or the criteria in (h)2.(ii)(II):
 - (I) For applicants or licensees that issue bonds, a current rating for its most recent uninsured, uncollateralized, and unencumbered bond issuance of AAA, AA, or A as issued by Standard and Poors (S&P) or Aaa, Aa, or A as issued by Moodys.
 - (II) For applicants or licensees that do not issue bonds, all the following tests must be met:
 - I. $(\text{Total Revenues less total expenditures}) / \text{total revenues}$ must be equal to or greater than 0.04.

- II. Long term debt divided by net fixed assets must be less than or equal to 0.67.
 - III. (Current assets and depreciation fund) divided by current liabilities must be greater than or equal to 2.55.
 - IV. Operating revenues must be at least 100 times the total current decommissioning cost estimate (or the current amount required if certification is used) for all decommissioning activities for which the hospital is responsible as a self-guaranteeing license.
- (iii) In addition, to pass the financial test, a licensee must meet all the following requirements:
- (I) The licensee's independent certified public accountant must have compared the data used by the licensee in the financial test, which is required to be derived from the independently audited year-end financial statements, based on United States generally accepted accounting practices, for the latest fiscal year, with the amounts in such financial statement. In connection with that procedure, the licensee shall inform the Director and Division within 90 days of any matters coming to the attention of the auditor that cause the auditor to believe that the data specified in the financial test should be adjusted and that the licensee no longer passes the test.
 - (II) After the initial financial test, the licensee must repeat passage of the test within 90 days after the close of each succeeding fiscal year.
 - (III) If the licensee no longer meets the requirements of (h)1., the licensee must send notice to the Director and Division of its intent to establish alternative financial assurance as specified in Division's Rules. The notice must be sent by certified mail, return receipt requested, within 90 days after the end of the fiscal year for which the year-end financial data show that the licensee no longer meets the financial test requirements. The licensee must provide

alternate financial assurance within 120 days after the end of such fiscal year.

3. Self-Guarantee

The terms of a self-guarantee which an applicant or licensee furnishes must provide that:

- (i) The guarantee shall remain in force unless the licensee sends notice of cancellation by certified mail, and/or return receipt requested, to the Director and Division. Cancellation may not occur unless an alternative financial assurance mechanism is in place.
- (ii) The licensee shall provide alternative financial assurance as specified in the Division's Rules within 90 days following receipt by the Director of a notice of cancellation of the guarantee.
- (iii) The guarantee and financial test provisions must remain in effect until the Director has terminated the license or until another financial assurance method acceptable to the Director has been put in effect by the licensee.
- (iv) The applicant or licensee must provide to the Director and Division a written guarantee (a written commitment by a corporate officer or officer of the institution) which states that the licensee will fund and carry out the required decommissioning activities or, upon issuance of an order by the Director, the licensee will set up and fund a trust in the amount of the current cost estimates for decommissioning.
- (v) If, at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys, the licensee shall provide notice in writing of such fact to the Director and Division within 20 days after publication of the change by the rating service.

Footnotes: ⁽¹⁾ Values are given only for those materials normally used as gases.

⁽²⁾ $\mu\text{Ci/gm}$ for solids.

Footnotes:

(1) For combinations of radioactive materials listed above, consideration of the need for an emergency plan is required if the sum of the ratios of the quantity of each radioactive material authorized to the quantity listed for that material in Schedule E exceeds one.

(2) Waste packaged in Type B containers does not require an emergency plan.

^{a/} To convert μCi to kBq , multiply the μCi value by 37.

^{b/} Based on alpha disintegration rate of Th-232, Th-230 and their daughter products.

^{c/} Based on alpha disintegration rate of U-238, U-234, and U-235.

Rule 391-3-17-.03. Standards for Protection Against Radiation.

(1) General Provisions

(a) Purpose.

This Rule, 391-3-17-.03, establishes standards for protection against ionizing radiation resulting from activities conducted pursuant to licenses issued by the Director. The requirements in this Rule are designed to control the receipt, possession, use, transfer, and disposal of sources of radiation by any licensee so that the total dose to an individual, including doses resulting from all sources of radiation other than background radiation, does not exceed the standards for protection against radiation prescribed in this Rule. However, nothing in this Rule shall be construed as limiting actions that may be necessary to protect health and safety.

(b) Scope.

This Rule applies to persons licensed by the Director on or after January 1, 1994, to receive, possess, use, transfer, or dispose of sources of radiation. The limits in this Rule do not apply to doses due to background radiation, to exposure of patients to radiation for the purpose of medical diagnosis or therapy, or to voluntary participation in medical research programs.

(2) **Definitions**

The definitions set forth for certain terms under [391-3-17-.01](#) are applicable to those terms as used in this Rule, unless the term is otherwise defined herein. As used in this Rule:

- (a) "Air-purifying respirator" means a respirator with an air-purifying filter, cartridge, or canister that removes specific air contaminants by passing ambient air through the air-purifying element.
- (b) "Assigned protection factor" (APF) means the expected workplace level of respiratory protection that would be provided by a properly functioning respirator or a class of respirators to properly fitted and trained users. Operationally, the inhaled concentration can be estimated by dividing the ambient airborne concentration by the APF.
- (c) "Atmosphere-supplying respirator" means a respirator that supplies the respirator user with breathing air from a source independent of the ambient atmosphere, and includes supplied-air respirators (SARs) and self-contained breathing apparatus (SCBA) units.
- (d) "Annual limit on intake" (ALI) means the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the reference man that would result in a committed effective dose

equivalent of five rem (0.05 Sv) or a committed dose equivalent of 50 rem (0.5 Sv) to any individual organ or tissue. ALI values for intake by ingestion and by inhalation of selected radionuclides are given in Table I, Columns 1 and 2, of Appendix B to 10 CFR 20.

- (e) "Chelating agent" means amine polycarboxylic acids, hydroxycarboxylic acids, gluconic acid, and polycarboxylic acids.
- (f) "Chemical description" means a description of the principal chemical characteristics of a low-level radioactive waste.
- (g) "Class" means a classification scheme for inhaled material according to its rate of clearance from the pulmonary region of the lung. Materials are classified as D, W, or Y, which apply to a range of clearance half-times: for Class D (Days), of less than ten days; for Class W (Weeks), from ten to 100 days; and for Class Y (Years), of greater than 100 days. For purposes of this Chapter, "lung class" and "inhalation class" are equivalent terms.
- (h) "Computer-readable medium" means that the Division's computer can transfer the information from the medium into its memory.
- (i) "Consignee" means the designated receiver of the shipment of low-level radioactive waste.
- (j) "Constraint (dose constraint)" means a value above which specified licensee actions are required.
- (k) "Critical Group" means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.
- (l) "Declared pregnant woman" means any woman who has voluntarily informed the licensee, in writing, of her pregnancy and the estimated date of conception. The declaration remains in effect until the declared pregnant woman withdraws the declaration in writing or is no longer pregnant.
- (m) "Decommission" means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits release of the property for unrestricted use and termination of the license.
- (n) "Decontamination facility" means a facility operating under a Division, U.S. Nuclear Regulatory Commission or Agreement State license whose principal purpose is decontamination of equipment or materials to accomplish recycle, reuse, or other waste management objectives, and, for purposes of this part, is not considered to be a consignee for LLW shipments.

- (o) "Demand respirator" means an atmosphere-supplying respirator that admits breathing air to the facepiece only when a negative pressure is created inside the facepiece by inhalation.
- (p) "Derived air concentration" (DAC) means the concentration of a given radionuclide in air which, if breathed by the reference man for a working year of 2,000 hours under conditions of light work (inhalation rate of 1.2 cubic meters of air per hour), results in an intake of one ALI. DAC values are given in Table I, Column 3 of Appendix B to 10 CFR 20.
- (q) "Derived air concentration-hour" (DAC-hour) means the product of the concentration of radioactive material in air, expressed as a fraction or multiple of the derived air concentration for each radionuclide, and the time of exposure to that radionuclide, in hours. A licensee may take 2,000 DAC-hours to represent one ALI, equivalent to a committed effective dose equivalent of five rem (0.05 Sv).
- (r) "Disposable respirator" means a respirator for which maintenance is not intended and that is designed to be discarded after excessive breathing resistance, sorbent exhaustion, physical damage, or end-of-service-life renders it unsuitable for use. Examples of this type of respirator are a disposable half-mask respirator or a disposable escape-only self-contained breathing apparatus (SCBA).
- (s) "Disposal container" means a container principally used to confine low-level radioactive waste during disposal operations at a land disposal facility (also see "high integrity container"). Note that for some shipments, the disposal container may be the transport package.
- (t) "Distinguishable from background" means that the detectable concentration of a radionuclide is statistically different from the background concentration of that radionuclide in the vicinity of the site or, in the case of structures, in similar materials using adequate measurement technology, survey, and statistical techniques.
- (u) "Dosimetry processor" means a person that processes and evaluates individual monitoring equipment devices in order to determine the radiation dose delivered to the monitoring devices.
- (v) "EPA identification number" means the number received by a transporter following application to the Administrator of EPA as required by 40 CFR part 263.
- (w) "Filtering facepiece" (dust mask) means a negative pressure particulate respirator with a filter as an integral part of the facepiece or with the entire facepiece composed of the filtering medium, not equipped with elastomeric sealing surfaces and adjustable straps.

- (x) "Fit factor" means a quantitative estimate of the fit of a particular respirator to a specific individual, and typically estimates the ratio of the concentration of a substance in ambient air to its concentration inside the respirator when worn.
- (y) "Fit test" means the use of a protocol to qualitatively or quantitatively evaluate the fit of a respirator on an individual.
- (z) "Generator" means a licensee operating under a Division, U.S. Nuclear Regulatory Commission or Agreement State license who (1) is a waste generator or (2) is the licensee to whom waste can be attributed within the context of the Low-Level Radioactive Waste Policy Amendments Act of 1985 (e.g., waste generated as a result of decontamination or recycle activities).
- (aa) "Helmet" means a rigid respiratory inlet covering that also provides head protection against impact and penetration.
- (bb) "High integrity container (HIC)" means a container commonly designed to meet the structural stability requirements of Rule 391-3-17-.03(13)(g), and to meet Department of Transportation requirements for a Type A package.
- (cc) "Hood" means a respiratory inlet covering that completely covers the head and neck and may also cover portions of the shoulders and torso.
- (dd) "Land disposal facility" means the land, buildings and structures, and equipment that are intended to be used for the disposal of radioactive waste. For purposes of this Rule, a "geologic repository" as defined in 10 CFR Part 60 is not considered a "land disposal facility."
- (ee) "Lens dose equivalent" (LDE) means the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeter (300 mg/cm²).
- (ff) "Loose-fitting facepiece" means a respiratory inlet covering that is designed to form a partial seal with the face.
- (gg) "Nationally tracked source" means a sealed source containing a quantity equal to or greater than Category 1 or Category 2 levels of any radioactive material listed in Table 3 of 391-3-17-.03(15). In this context a sealed source is defined as radioactive material that is sealed in a capsule or closely bonded, in a solid form and which is not exempt from regulatory control. It does not mean material encapsulated solely for disposal, or nuclear material contained in any fuel assembly, subassembly, fuel rod, or fuel pellet. Category 1 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the Category 1 threshold. Category 2 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the Category 2 threshold but less than the Category 1 threshold.

- (hh) "Negative pressure respirator" (tight fitting) means a respirator in which the air pressure inside the facepiece is negative during inhalation with respect to the ambient air pressure outside the respirator.
- (ii) "Nonstochastic effect" means a health effect, the severity of which varies with the dose and for which a threshold is believed to exist. Radiation-induced cataract formation is an example of a nonstochastic effect. For purposes of this Chapter, "deterministic effect" is an equivalent term.
- (jj) "Positive pressure respirator" means a respirator in which the pressure inside the respiratory inlet covering exceeds the ambient air pressure outside the respirator.
- (kk) "Physical description" means the items called for on NRC Form 541 or equivalent form to describe a low-level radioactive waste.
- (ll) "Planned special exposure" means an infrequent exposure to radiation separate from and in addition to the annual occupational dose limits.
- (mm) "Powered air-purifying respirator" (PAPR) means an air-purifying respirator that uses a blower to force the ambient air through air-purifying elements to the inlet covering.
- (nn) "Pressure demand respirator" means a positive pressure atmosphere-supplying respirator that admits breathing air to the facepiece when the positive pressure is reduced inside the facepiece by inhalation.
- (oo) "Qualitative fit test" (QLFT) means a pass/fail fit test to assess the adequacy of respirator fit that relies on the individual's response to the test agent.
- (pp) "Quantitative fit test" (QNFT) means an assessment of the adequacy of respirator fit by numerically measuring the amount of leakage into the respirator.
- (qq) "Reference man" means a hypothetical aggregation of human physical and physiological characteristics determined by international consensus. These characteristics may be used by researchers and public health workers to standardize results of experiments and to relate biological insult to a common base.
- (rr) "Residual radioactivity" means radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials remaining at the site as a result of routine or accidental releases of radioactive material at the site and previous burials at the site, even if those burials were made in accordance with the provisions of Rule .03 of this Chapter.

- (ss) "Residual waste" means low-level radioactive waste resulting from processing or decontamination activities that cannot be easily separated into distinct batches attributable to specific waste generators. This waste is attributable to the processor or decontamination facility, as applicable.
- (tt) "Respiratory protective device" means an apparatus, such as a respirator, used to reduce an individual's intake of airborne radioactive materials.
- (uu) "Self-contained breathing apparatus" (SCBA) means an atmosphere-supplying respirator for which the breathing air source is designed to be carried by the user.
- (vv) "Sanitary sewerage" means a system of public sewers for carrying off waste water and refuse, but excluding sewage treatment facilities, septic tanks, and leach fields owned or operated by the licensee.
- (ww) "Shipper" means the licensed entity (i.e., the waste generator, waste collector, or waste processor) who offers low-level radioactive waste for transportation, typically consigning this type of waste to a licensed waste collector, waste processor, or land disposal facility operator.
- (xx) "Shipping paper" means NRC Form 540 and, if required, NRC Form 540A or equivalent forms which include the information required by DOT in 49 CFR Part 172.
- (yy) "Source material" means
1. Uranium or thorium, or any combination thereof, in any physical or chemical form; or
 2. Ores that contain by weight one-twentieth of one percent (0.05 percent) or more of uranium, thorium, or any combination thereof. Source material does not include special nuclear material.
- (zz) "Stochastic effect" means a health effect that occurs randomly and for which the probability of the effect occurring, rather than its severity, is assumed to be a linear function of dose without threshold. Hereditary effects and cancer incidence are examples of stochastic effects. For purposes of this Chapter, "probabilistic effect" is an equivalent term.
- (aaa) "Supplied-air respirator" (SAR) or airline respirator means an atmosphere-supplying respirator for which the source of breathing air is not designed to be carried by the user.
- (bbb) "Tight-fitting facepiece" means a respiratory inlet covering that forms a complete seal with the face.

- (ccc) "Uniform Low-Level Radioactive Waste Manifest" or "Uniform Manifest" means the combination of NRC Forms 540, 541, and if necessary, 542, and their respective continuation sheets as needed, or equivalent forms.
- (ddd) "User seal check" (fit check) means an action conducted by the respirator user to determine if the respirator is properly seated to the face. Examples include negative pressure check, positive pressure check, irritant smoke check, or isoamyl acetate check.
- (eee) "Very high radiation area" means an area, accessible to individuals, in which radiation levels from radioactive materials external to the body could result in an individual receiving an absorbed dose in excess of 500 rads (5 Gray) in one hour at one meter from a source of radiation or from any surface that the radiation penetrates.¹
- (fff) "Waste collector" means an entity, operating under a Division, U.S. Nuclear Regulatory Commission or Agreement State license, whose principal purpose is to collect and consolidate waste generated by others, and to transfer this waste, without processing or repackaging the collected waste, to another licensed waste collector, licensed waste processor, or licensed land disposal facility.
- (ggg) "Waste description" means the physical, chemical and radiological description of a low-level radioactive waste as called for on NRC Form 541 or equivalent form.
- (hhh) "Waste generator" means an entity, operating under a Division, U.S. Nuclear Regulatory Commission or Agreement State license, who (1) possesses any material or component that contains radioactivity or is radioactively contaminated for which the licensee foresees no further use, and (2) transfers this material or component to a licensed land disposal facility or to a licensed waste collector or processor for handling or treatment prior to disposal. A licensee performing processing or decontamination services may be a "waste generator" if the transfer of low-level radioactive waste from its facility is defined as "residual waste."
- (iii) "Waste processor" means an entity, operating under a Division, U.S. Nuclear Regulatory Commission or Agreement State license, whose principal purpose is to process, repackage, or otherwise treat low-level radioactive material or waste generated by others prior to eventual transfer of waste to a licensed low-level radioactive waste land disposal facility.
- (jjj) "Waste type" means a waste within a disposal container having a unique physical description (i.e., a specific waste descriptor code or description; or a waste sorbed on or solidified in a specifically defined media).

- (kkk) "Weighting factor" (w_T) for an organ or tissue (T) means the proportion of the risk of stochastic effects resulting from irradiation of that organ or tissue to the total risk of stochastic effects when the whole body is irradiated uniformly. For calculating the effective dose equivalent, the values of w_T are:

ORGAN DOSE WEIGHTING FACTORS

<u>Organ or Tissue</u>	<u>w_T</u>
Gonads	0.25
Breast	0.15
Red bone marrow	0.12
Lung	0.12
Thyroid	0.03
Bone surfaces	0.03
Remainder	0.30 ^a
Whole Body	1.00 ^b

^a 0.30 results from 0.06 for each of five "remainder" organs, excluding the skin and the lens of the eye, that receive the highest doses.

^b For the purpose of weighting the external whole body dose, for adding it to the internal dose, a single weighting factor, $w_T = 1.0$, has been specified. The use of other weighting factors for external exposure will be approved on a case-by-case basis until such time as specific guidance is issued.

(3) **Implementation**

- (a) Any existing license condition that is more restrictive than this Rule remains in force until there is an amendment or renewal of the license.
- (b) If a license condition exempts a licensee from a provision of Rule 391-3-17-.03 in effect on or before January 1, 1994, it also exempts the licensee from the corresponding provision of this Rule.
- (c) If a license condition cites provisions of Rule 391-3-17-.03 in effect prior to January 1, 1994, which do not correspond to any provisions of this Rule, the license condition remains in force until there is an amendment or renewal of the license that modifies or removes this condition.

(4) **Radiation Protection Programs**

- (a) Each licensee shall develop, document, and implement a Radiation Protection Program sufficient to ensure compliance with the provisions of this Rule. See (14)(b) of this Rule for record-keeping requirements relating to these Programs.
- (b) The licensee shall use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable (ALARA).
- (c) The licensee shall, at least annually, review the Radiation Protection Program content and implementation.
- (d) To implement the ALARA requirements of .03(4)(b), and notwithstanding the requirements in .03(5)(i) of this rule, a constraint on air emissions of radioactive material to the environment, excluding Radon-222 and its daughters, shall be established by licensees such that the individual member of the public likely to receive the highest dose will not be expected to receive a total effective dose equivalent in excess of ten (10) mrem (0.1 mSv) per year from these emissions. If a licensee subject to this requirement exceeds this dose constraint, the licensee shall report the exceedance as provided in .03(15)(c) and promptly take appropriate corrective action to ensure against recurrence.

(5) Occupational Dose Limits and Dose Limits for Individual Members of the Public

- (a) Occupational Dose Limits for Adults.
 - 1. The licensee shall control the occupational dose to individual adults, except for planned special exposures pursuant to (5)(f) of this Rule, in accordance with the following dose limits:
 - (i) An annual limit, which is the more limiting of:
 - (I) The total effective dose equivalent being equal to five (5) rem (0.05 Sv); or
 - (II) The sum of the deep dose equivalent and the committed dose equivalent to any individual organ or tissue other than the lens of the eye being equal to 50 rem (0.50 Sv).
 - (ii) The annual limits to the lens of the eye, to the skin of the whole body, and to the skin of the extremities, which are:
 - (I) A lens dose equivalent of 15 rem (0.15 Sv); and
 - (II) A shallow dose equivalent of 50 rem (0.50 Sv) to the skin of the whole body or to the skin of any extremity.

2. Doses received in excess of the annual limits, including doses received during accidents, emergencies, and planned special exposures, shall be subtracted from the limits for planned special exposures that the individual may receive during the current year and during the individual's lifetime, listed in (5)(f)5.(i) and (ii) of this Rule.
 3. When the external exposure is determined by measurement with an external personal monitoring device, the deep-dose equivalent must be used in place of the effective dose equivalent, unless the effective dose equivalent is determined by a dosimetry method approved by the NRC. The assigned deep dose equivalent shall be for the portion of the body receiving the highest exposure. The assigned shallow dose equivalent shall be the dose averaged over the contiguous ten (10) square centimeters of skin receiving the highest exposure.
 4. The deep dose equivalent, lens dose equivalent, and shallow dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure or the results of individual monitoring are unavailable.
 5. Derived air concentration (DAC) and annual limit on intake (ALI) values are specified in Table I of Appendix B to 10 CFR 20 and may be used to determine the individual's dose and to demonstrate compliance with the occupational dose limits. See (14)(g) of this Rule for maintaining records of these exposures.
 6. Notwithstanding the annual dose limits, the licensee shall limit the soluble uranium intake by an individual to ten milligrams in a week in consideration of chemical toxicity. See footnote 3 of Appendix B 10 CFR 20.
 7. The licensee shall reduce the dose that an individual may be allowed to receive in the current year by the amount of occupational dose received while employed by any other person during the current year. See (5)(e) of this Rule.
- (b) Compliance with Requirements for Summation of External and Internal Doses.
1. General Requirements. If the licensee is required to monitor pursuant to both (8)(b)1. and 2. of this Rule, the licensee shall demonstrate compliance with the dose limits by summing external and internal doses. If the licensee is required to monitor only pursuant to (8)(b)1. of this Rule or only pursuant to (8)(b)2. of this Rule, then summation is not required to demonstrate compliance with the dose limits. The licensee must demonstrate compliance with the requirements for summation of external and internal doses pursuant

to (5)(b)2., 3., and 4. of this Rule. The dose equivalents for the lens of the eye, the skin, and the extremities are not included in the summation, but are subject to separate limits.

2. Intake by Inhalation. If the only intake of radionuclides is by inhalation, the total effective dose equivalent limit is not exceeded if the sum of the deep dose equivalent divided by the total effective dose equivalent limit and one of the following does not exceed unity:
 - (i) The sum of the fractions of the inhalation ALI for each radionuclide;
 - (ii) The total number of derived air concentration-hours (DAC-hours) for all radionuclides divided by 2,000; or
 - (iii) The sum of the calculated committed effective dose equivalents to all significantly irradiated organs or tissues (T) calculated from bioassay data using appropriate biological models and expressed as a fraction of the annual limit. For purposes of this requirement, an organ or tissue is deemed to be significantly irradiated if, for that organ or tissue, the product of the weighting factors, w_T , and the committed dose equivalent, $H_{T,50}$, per unit intake is greater than ten percent of the maximum weighted value of H_{50} (i.e., $w_T H_{T,50}$), per unit intake for any organ or tissue.
3. Intake by Oral Ingestion. If the occupationally-exposed individual receives an intake of radionuclides by oral ingestion greater than ten percent of the applicable oral ALI, the licensee shall account for this intake and include it in demonstrating compliance with the limits.
4. Intake through Wounds or Absorption through Skin. The licensee shall evaluate and, to the extent practical, account for intakes through wounds or skin absorption. The intake through intact skin has been included in the calculation of DAC for hydrogen-3 and does not need to be evaluated or accounted for pursuant to (5)(b)4. of this Rule.

(c) Determination of External Dose from Airborne Radioactive Material.

1. Licensees shall, when determining the dose from airborne radioactive material, include the contribution to the deep dose equivalent, lens dose equivalent, and shallow dose equivalent from external exposure to the radioactive cloud. See Appendix B, footnotes 1 and 2, of 10 CFR 20.
2. Airborne radioactivity measurements and DAC values shall not be used as the primary means to assess the deep dose equivalent when the airborne radioactive material includes radionuclides other than noble gases or if the

cloud of airborne radioactive material is not relatively uniform. The determination of the deep dose equivalent to an individual shall be based upon measurements using instruments or individual monitoring devices.

(d) Determination of Internal Exposure.

1. For purposes of assessing the dose used to determine compliance with occupational dose equivalent limits, the licensee shall, when required under (8)(b) of this Rule, take suitable and timely measurements of:
 - (i) Concentrations of radioactive materials in air in work areas during operations;
 - (ii) Quantities of radionuclides in the body;
 - (iii) Quantities of radionuclides excreted from the body; or
 - (iv) Combinations of these measurements.
2. Unless respiratory protective equipment is used, as provided in (10)(d) of this Rule, or the assessment of intake is based on bioassays, the licensee shall assume that an individual inhales radioactive material at the airborne concentration in which the individual is present.
3. When specific information on the physical and biochemical properties of the radionuclides taken into the body or the behavior of the material in an individual is known, the licensee may:
 - (i) Use that information to calculate the committed effective dose equivalent, and, if used, the licensee shall document that information in the individual's record;
 - (ii) Upon prior approval of the Division, adjust the DAC or ALI values to reflect the actual physical and chemical characteristics of airborne radioactive material, for example, aerosol size distribution or density; and
 - (iii) Separately assess the contribution of fractional intakes of Class D, W, or Y compounds of a given radionuclide to the committed effective dose equivalent. See Appendix B of 10 CFR 20.
4. If the licensee chooses to assess intakes of Class Y material using the measurements given in (5)(d)1.(ii) or (iii) of this Rule, the licensee may delay the recording and reporting of the assessments for periods up to seven months, unless otherwise required by (15)(b) or (15)(c) of this Rule. This

delay permits the licensee to make additional measurements basic to the assessments.

5. If the identity and concentration of each radionuclide in a mixture are known, the fraction of the DAC applicable to the mixture for use in calculating DAC-hours shall be either:
 - (i) The sum of the ratios of the concentration to the appropriate DAC value (i.e. D, W, or Y) from Appendix B of 10 CFR 20, for each radionuclide in the mixture; or
 - (ii) The ratio of the total concentration for all radionuclides in the mixture to the most restrictive DAC value for any radionuclide in the mixture.
6. If the identity of each radionuclide in a mixture is known, but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.
7. When a mixture of radionuclides in the air exists, a licensee may disregard certain radionuclides in the mixture if:
 - (i) The licensee uses the total activity of the mixture in demonstrating compliance with the dose limits in (5)(a) of this Rule and in complying with the monitoring requirements in (8)(b)2. of this Rule;
 - (ii) The concentration of any radionuclide disregarded is less than ten percent of its DAC; and
 - (iii) The sum of these percentages for all of the radionuclides disregarded in the mixture does not exceed 30 percent.
8. When determining the committed effective dose equivalent, the following information may be considered:
 - (i) In order to calculate the committed effective dose equivalent, the licensee may assume that the inhalation of one ALI, or an exposure of 2,000 DAC-hours, results in a committed effective dose equivalent of five rem (0.05Sv) for radionuclides that have their ALIs or DACs based on the committed effective dose equivalent;
 - (ii) When the ALI (and the associated DAC) is determined by the non-stochastic organ dose limit of 50 rem (0.50 Sv), the intake of radionuclides that would result in a committed effective dose

equivalent of five rem (0.05 Sv), (i.e., the stochastic ALI) is listed in parentheses in Table I of Appendix B of 10 CFR 20. In this case, the licensee may, as a simplifying assumption, use the stochastic ALIs to determine the committed effective dose equivalent. However, if the licensee uses the stochastic ALIs, the licensee shall also demonstrate that the limit in (5)(a)1.(i)(II) of this Rule is not exceeded.

(e) Determination of Prior Occupational Dose.

1. For each individual who is likely to receive, in a year, an occupational dose requiring monitoring pursuant to (8)(b) of this Rule, the licensee shall:
 - (i) Determine the occupational radiation dose received during the current year; and
 - (ii) Attempt to obtain the records of lifetime cumulative occupational radiation dose.
2. Prior to permitting an individual to participate in a planned special exposure, the licensee shall determine:
 - (i) The internal and external doses from all previous planned special exposures; and
 - (ii) All doses in excess of the limits, including doses received during accidents and emergencies, received during the lifetime of the individual.
3. In complying with the requirements of (5)(e)1. of this Rule, a licensee may:
 - (i) Accept, as a record of the occupational dose that the individual received during the current year, a written signed statement from the individual, or from the individual's most recent employer for work involving radiation exposure, that discloses the nature and the amount of any occupational dose that the individual may have received during the current year;
 - (ii) Accept, as the record of lifetime cumulative radiation dose, an up-to-date Division Form "Occupational Radiation Exposure History" or equivalent, signed by the individual and countersigned by an appropriate official of the most recent employer for work involving radiation exposure, or the individual's current employer if the individual is not employed by the licensee; and

- (iii) Obtain the individual's dose equivalent from the most recent employer for work involving radiation exposure, or the individual's current employer if the individual is not employed by the licensee, by telephone, telegram, electronic media, facsimile, or letter. The licensee shall request a written verification of the dose data if the authenticity of the transmitted report cannot be established.
- 4. The licensee shall record the exposure history, as required by (5)(e)1. of this Rule, on Division Form "Occupational Radiation Exposure History" or other clear and legible record, and all of the information required on that form. The form or record shall show each period in which the individual received occupational exposure to radiation or radioactive material and shall be signed by the individual who received the exposure. For each period for which the licensee obtains a report, the licensee shall use the dose shown in the report in preparing the Division Form "Occupational Radiation Exposure History" or equivalent form. For any period in which the licensee does not obtain a report, the licensee shall place a notation on the "Occupational Radiation Exposure History" or equivalent form indicating the periods of time for which data are not available.
- 5. Licensees are not required to partition historical dose between external dose equivalents and internal committed dose equivalents of radionuclides assessed under the Regulations in effect before January 1, 1994. Further, occupational exposure histories obtained and recorded on Division Form "Occupational Radiation Exposure History" or equivalent before January 1, 1994, might not have included effective dose equivalent but may be used in the absence of specific information on the intake of radionuclides by the individual.
- 6. If the licensee is unable to obtain a complete record of an individual's current and previously accumulated occupational dose, the licensee shall assume:
 - (i) In establishing administrative controls under (5)(a)7. of this Rule, for the current year, that the allowable dose limit for the individual is reduced by 1.25 rem (12.5 mSv) for each quarter for which records were unavailable and the individual was engaged in activities that could have resulted in occupational radiation exposure; and
 - (ii) That the individual is not available for planned special exposures.
- 7. The licensee shall retain the records on Division Form "Occupational Radiation Exposure History" or equivalent until the Director terminates each pertinent license requiring this record. The licensee shall retain records used

in preparing Division Form "Occupational Radiation Exposure History" or equivalent for three years after the record is made.

- (f) Planned Special Exposures. A licensee may authorize an adult worker to receive doses in addition to and accounted for separately from the doses received under the limits specified in (5)(a) of this Rule provided that each of the following conditions is satisfied:
1. The licensee authorizes a planned special exposure only in an exceptional situation when alternatives that might avoid the higher exposure estimated to result from the planned special exposure are unavailable or impractical (i.e., industrial radiography source retrieval for an area that cannot be evacuated).
 2. The management official of the licensee (and employer if the employer is not the licensee) specifically authorizes the planned special exposure, in writing, before the exposure occurs.
 3. Before a planned special exposure, the licensee ensures that each individual involved is:
 - (i) Informed of the purpose of the planned operation;
 - (ii) Informed of the estimated doses and associated potential risks and specific radiation levels or other conditions that might be involved in performing the task; and
 - (iii) Instructed in the measures to be taken to keep the dose ALARA considering other risks that may be present.
 4. Prior to permitting an individual to participate in a planned special exposure, the licensee ascertains prior doses as required by (5)(e)2. of this Rule during the lifetime for each individual involved.
 5. Subject to (5)(a)2. of this Rule, the licensee shall not authorize a planned special exposure that would cause an individual to receive a dose from all planned special exposures and all doses in excess of the limits to exceed:
 - (i) The numerical values of any of the dose limits in (5)(a)1. of this Rule in any year; and
 - (ii) Five times the annual dose limits in (5)(a)1. of this Rule during the individual's lifetime.

6. The licensee maintains records of the conduct of a planned special exposure in accordance with (14)(f) of this Rule and submits a written report in accordance with (15)(d) of this Rule.
 7. The licensee records the best estimate of the dose resulting from the planned special exposure in the individual's record and informs the individual, in writing, of the dose within 30 days after the date of the planned special exposure. The dose from planned special exposures shall not be considered in controlling the future occupational dose of the individual pursuant to (5)(a)1. of this Rule but shall be included in evaluations required by (5)(f)1. and (5)(f)5. of this Rule.
- (g) Occupational Dose Limits for Minors. The annual occupational dose limits for minors are ten percent of the annual occupational dose limits specified for adult workers in (5)(a) of this Rule.
- (h) Dose to an Embryo/Fetus.
1. The licensee shall ensure that the dose equivalent to an embryo/fetus during the entire pregnancy, due to occupational exposure of a declared pregnant woman, does not exceed 0.5 rem (5 mSv). For record-keeping requirements, see (14)(g) of this Rule.
 2. The licensee shall make efforts to avoid substantial variation² above a uniform monthly exposure rate to a declared pregnant woman so as to satisfy the limit in (5)(h)1. of this Rule.
 3. The dose equivalent to an embryo/fetus shall be taken as the sum of:
 - (i) The deep-dose equivalent to the declared pregnant woman; and
 - (ii) The dose equivalent to the embryo/fetus from radionuclides in the embryo/fetus and radionuclides in the declared pregnant woman.
 4. If by the time the woman declares pregnancy to the licensee the dose equivalent to the embryo/fetus is found to have exceeded 0.50 rem (5.0 mSv), or is within 0.05 rem (0.5 mSv) of this dose equivalent, the licensee shall be deemed to be in compliance with (5)(h)1. of this Rule if the additional dose equivalent to the embryo/fetus does not exceed 0.05 rem (0.5 mSv) during the remainder of the pregnancy.
- (i) Radiation Dose Limits for Individual Members of the Public.
1. Each licensee shall conduct operations so that:

- (i) Except as provided in (5)(i)1.(iii) the total effective dose equivalent to individual members of the public from the licensed operation does not exceed 0.1 rem (1 mSv) in a year, exclusive of the dose contributions from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material and released in accordance with Rule .05(37), from voluntary participation in medical research programs, and from the licensee's disposal of radioactive material into sanitary sewerage in accordance with (13)(c) of this Rule; and
 - (ii) The dose in any unrestricted area from external sources, exclusive of the dose contributions from individuals administered radioactive material and released in accordance with Rule .05(37), does not exceed 0.002 rem (0.02 mSv) in any one hour.
 - (iii) The total effective dose equivalent to individual members of the public from infrequent exposure to radiation from radiation machines does not exceed 0.5 rem (5 mSv).
 2. A licensee or license applicant may apply for prior Division authorization to operate up to an annual dose limit for an individual member of the public of 0.5 rem (5 mSv). The licensee or license applicant shall include the following information in this application:
 - (i) Demonstration of the need for and the expected duration of operations in excess of the limit in (5)(i)1. of this Rule;
 - (ii) The licensee's program to assess and control dose within the 0.5 rem (5 mSv) annual limit; and
 - (iii) The procedure to be followed to maintain the dose as low as is reasonably achievable (ALARA).
 3. In addition to the requirements of this Rule, a licensee subject to the provisions of the U.S. Environmental Protection Agency's (EPA) generally applicable environmental radiation standards in 40 CFR Part 190 shall comply with those standards.
 4. The Division may impose additional restrictions on radiation levels in unrestricted areas and on the total quantity of radionuclides that a licensee may release in effluents in order to restrict the collective dose.
- (j) Compliance with Dose Limits for Individual Members of the Public.

1. The licensee shall make or cause to be made, as appropriate, surveys of radiation levels in unrestricted areas and radioactive materials in effluents released to unrestricted areas to demonstrate compliance with the dose limits for individual members of the public in (5)(i) of this Rule.
2. A licensee shall show compliance with the annual dose limit in (5)(i) of this Rule by:
 - (i) Demonstrating by measurement or calculation that the total effective dose equivalent to the individual likely to receive the highest dose from the licensed operation does not exceed the annual dose limit; or
 - (ii) Demonstrating that:
 - (I) The annual average concentrations of radioactive material released in gaseous and liquid effluents at the boundary of the unrestricted area do not exceed the values specified in Table II of Appendix B of 10 CFR 20.
 - (II) If an individual were continually present in an unrestricted area, the dose from external sources would not exceed 0.002 rem (0.02 mSv) in one hour and 0.05 rem (0.50 mSv) in one year.
3. Upon approval from the Division, the licensee may adjust the effluent concentration values in Appendix B, Table II of 10 CFR 20, for members of the public, to take into account the actual physical and chemical characteristics of the effluents (e.g., aerosol size distribution, solubility, density, radioactive decay equilibrium, and chemical form).

(6) Testing for Leakage or Contamination of Sealed Sources

- (a) The licensee in possession of any sealed source shall assure that:
 1. Each sealed source, other than hydrogen-3, with a half-life greater than 30 days and in any form other than gas, shall be tested for leakage or contamination as follows:
 - (i) Prior to initial use;
 - (ii) Unless otherwise authorized by the Division, at intervals not to exceed six months, except that each source designed for the purpose of emitting alpha particles shall be tested at intervals not to exceed three months;

- (iii) At any other time there is reason to suspect that a sealed source might have been damaged or might be leaking, it shall be tested for leakage before further use; and
 - (iv) In the absence of a certificate from a transferor indicating that a test for leakage has been made within six months prior to the transfer, the sealed source shall not be put into use until tested and the results received.
 - 2. Tests for leakage for all sealed sources, except those manufactured to contain radium, shall be capable of detecting the presence of 0.005 μCi (185 Bq) of radioactive material on a test sample. Test samples shall be taken from the sealed source or from the surfaces of the container in which the sealed source is stored or mounted on which one might expect contamination to accumulate. For sealed sources contained in a device, test samples are obtained when the source is in the "off" position.
 - 3. Tests for leakage for sources manufactured to contain radium shall be capable of detecting an absolute leakage rate of 0.001 μCi (37 Bq) of radon-222 in a 24-hour period when the collection efficiency for radon-222 and its daughters has been determined with respect to collection method, volume, and time.
 - 4. Test samples shall also be taken from the interior surfaces of the container in which sealed sources of radium are stored. This test shall be capable of detecting the presence of 0.005 μCi (185 Bq) of a radium daughter that has a half-life greater than four days.
 - 5. Notwithstanding the periodic test for leakage required, any sealed source is exempt from such tests for leakage when the sealed source contains 100 μCi (3.7 MBq) or less of beta- or gamma-emitting material or ten μCi (370 kBq) or less of alpha-emitting material.
- (b) Tests for leakage or contamination shall be performed by persons specifically authorized by the Director or Division, an Agreement State, or the U.S. Nuclear Regulatory Commission to perform such services.
- (c) The following shall be considered evidence that the sealed source is leaking:
- 1. The presence of 0.005 μCi (185 Bq) or more of removable contamination on any test sample. If the test of a sealed source, other than radium, reveals the presence of 0.005 μCi (185 Bq) or more of removable contamination, the licensee shall immediately withdraw the sealed source from use, take action to prevent the spread of contamination, and cause the sealed source to be

decontaminated and repaired or to be disposed of in accordance with this Rule.

2. Leakage of 0.001 μCi (37 Bq) of radon-222 per 24 hours for sealed sources manufactured to contain radium. If the test of a sealed source manufactured to contain radium reveals the presence of removable contamination resulting from the decay of 0.005 μCi (185 Bq) or more of radium-226, the licensee shall immediately withdraw the sealed source from use, take action to prevent the spread of contamination, and cause the sealed source to be decontaminated and repaired or to be disposed of in accordance with this Rule.

- (d) Records of test results for sealed sources shall be made pursuant to (14)(d).
- (e) Reports of test results for leaking or contaminated sealed sources shall be made pursuant to (15)(g) of this Rule.

(7) Radiological Requirements for License Termination

- (a) General provisions and scope.
 1. The requirements in this section apply to the decommissioning of facilities licensed under Rule .02(8)(g), (Licensing of Radioactive Materials. Amended);
 2. The requirements in this section do not apply to sites which:
 - (i) Have been decommissioned prior to April 18, 2002 in accordance with requirements identified in .03(7) and Rule .02 of this Chapter; or
 - (ii) Have previously submitted and received Division approval on a decommissioning plan by April 18, 2002.
 3. After a site has been decommissioned and the license terminated in accordance with the requirements in this section, the Division will require additional cleanup only if, based on new information, it determines that the requirements of this section were not met and residual radioactivity remaining at the site could result in significant threat to public health and safety.
 4. When calculating TEDE to the average member of the critical group the licensee shall determine the peak annual TEDE dose expected within the first 1,000 years after decommissioning.

- (b) Radiological requirements for unrestricted use. A site will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a TEDE to an average member of the critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater sources of drinking water, and the residual radioactivity has been reduced to levels that are as low as reasonably achievable (ALARA). Determination of the levels which are ALARA must take into account consideration of any detriments, such as deaths from transportation accidents, expected to potentially result from decontamination and waste disposal.
- (c) Alternate requirements for license termination.
 - 1. The Director may terminate a license using alternate requirements greater than the dose requirements of .03(7)(b) if the licensee:
 - (i) Provides assurance that public health and safety would continue to be protected, and that it is unlikely that the dose from all man-made sources combined, other than medical, would be more than the 100 mrem/year (1 mSv/year) limit of .03(5)(i), by submitting an analysis of possible sources of exposure;
 - (ii) Reduces doses to ALARA levels, taking into consideration any detriments such as traffic accidents expected to potentially result from decontamination and waste disposal;
 - (iii) Has provided sufficient financial assurance in the form of a trust fund to enable an independent third party, including a governmental custodian of a site, to assume and carry out responsibilities for any necessary control and maintenance of the site; and
 - (iv) Has submitted a decommissioning plan to the Division indicating the licensee's intent to decommission in accordance with requirements of Rule .02(18)(d), and specifying that the licensee proposes to decommission by use of alternate requirements. The licensee shall document in the decommissioning plan how the advice of individuals and institutions in the community who may be affected by the decommissioning has been sought and addressed, as appropriate, following analysis of that advice. In seeking such advice, the licensee shall provide for:
 - (I) Participation by representatives of a broad cross section of community interests who may be affected by the decommissioning;
 - (II) An opportunity for a comprehensive, collective discussion on the issues by the participants represented; and

- (III) A publicly available summary of the results of all such discussions, including a description of the individual viewpoints of the participants on the issues and the extent of agreement and disagreement among the participants on the issues.
 - 2. The use of alternate requirements to terminate a license requires the approval of the Director after consideration of the Division's recommendations that will address any comments provided by the U.S. Environmental Protection Agency (EPA) and any public comments submitted in accordance with (7)(d) of this rule.
- (d) Public notification and public participation. Upon the receipt of a decommissioning plan from the licensee, or a proposal by the licensee for release of a site in accordance with (7)(c) of this Rule, or whenever the Division deems such notice to be in the public interest, the Division will:
- 1. Notify and solicit comments from:
 - (i) Local and State governments in the vicinity of the site and any Indian Nation or other indigenous people that have treaty or statutory rights that could be affected by the decommissioning; and
 - (ii) The EPA for cases where the licensee proposes to release a site in accordance with (7)(c).
 - 2. Publish a notice in the local newspaper(s), letters to State or local organizations, or other appropriate forum, that is readily accessible to individuals in the vicinity of the site, and solicit comments from affected parties.
- (e) Minimization of contamination.
- 1. Applicants for licenses, other than renewals, after April 18, 2002, shall describe in the application how facility design and procedures for operation will minimize, to the extent practical, contamination of the facility and the environment, facilitate eventual decommissioning, and minimize, to the extent practical, the generation of radioactive waste.
 - 2. Licensees shall, to the extent practical, conduct operations to minimize the introduction of residual radioactivity into the site, including the subsurface, in accordance with the existing radiation protection requirements in .03(4) and radiological criteria for license termination in .03(7) of this Rule.

(8) Surveys and Monitoring

(a) General.

1. Each licensee shall make, or cause to be made, surveys of areas, including the subsurface, that:
 - (i) May be necessary for the licensee to demonstrate compliance with this Rule; and
 - (ii) Are reasonable under the circumstances to evaluate:
 - (I) The magnitude and extent of radiation levels;
 - (II) Concentrations or quantities of residual radioactivity; and
 - (III) The potential radiological hazards of the radiation levels and residual radioactivity detected.
2. Notwithstanding .03(14)(c)1, records from surveys describing the location and amount of subsurface residual radioactivity identified at the site must be kept with records important for decommissioning, and such records must be retained in accordance with .02(8)(g)8, as applicable.
3. The licensee shall ensure that instruments and equipment used for quantitative radiation measurements (e.g., dose rate and effluent monitoring) are calibrated periodically, at least annually, for the radiation measured except when a more frequent interval is specified in other applicable parts of these Rules or a license condition.
4. All personnel dosimeters, except for direct and indirect reading pocket ionization chambers and those dosimeters used to measure the dose to any extremity, that require processing to determine the radiation dose and that are used by licensees to comply with (5)(a) of this Rule, with other applicable provisions of this Chapter, or with conditions specified in a license shall be processed and evaluated by a qualified dosimetry processor. A dosimetry processor is qualified if it:
 - (i) Holds current personnel dosimetry accreditation from the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology; and
 - (ii) Is approved in this accreditation process for the type of radiation or radiations included in the NVLAP program that most closely approximates the type of radiation or radiations for which the individual wearing the dosimeter is monitored.

5. The licensee shall ensure that adequate precautions are taken to prevent a deceptive exposure of an individual monitoring device.

(b) Conditions Requiring Individual Monitoring of External and Internal Occupational Dose. Each licensee shall monitor exposures to sources of radiation and radioactive material at levels sufficient to demonstrate compliance with the occupational dose limits of this Rule. As a minimum:

1. Each licensee shall monitor occupational exposure to radiation and shall supply and require the use of individual monitoring devices by:
 - (i) Adults likely to receive, in one year from sources external to the body, a dose in excess of ten percent of the limits in (5)(a)1. of this Rule;
 - (ii) Minors likely to receive, in one year from radiation sources external to the body, a deep dose equivalent in excess of 0.1 rem (1mSv), a lens dose equivalent in excess of 0.15 rem (1.5 mSv), or a shallow dose equivalent to the skin or to extremities in excess of 0.5 rem (5mSv);
 - (iii) Declared pregnant women likely to receive during the entire pregnancy, from radiation sources external to the body, a deep dose equivalent in excess of 0.1 rem (1 mSv);³ and
 - (iv) Individuals entering a high or very high radiation area.
2. Each licensee shall monitor, to determine compliance with (5)(d) of this Rule, the occupational intake of radioactive material by, and assess the committed effective dose equivalent to:
 - (i) Adults likely to receive, in one year, an intake in excess of ten percent (10%) of the applicable ALI in Table I, Columns 1 and 2, of Appendix B of 10 CFR 20; and
 - (ii) Minors likely to receive, in one year, a committed effective dose equivalent in excess of 0.05 rem (0.50 mSv).
 - (iii) Declared pregnant women likely to receive, during the entire pregnancy, a committed effective dose equivalent in excess of 0.1 rem (1 mSv).

(9) Control Of Exposure From External Sources In Restricted Areas

(a) Control of Access to High Radiation Areas.

1. The licensee shall ensure that each entrance or access point to a high radiation area has one or more of the following features:
 - (i) A control device that, upon entry into the area, causes the level of radiation to be reduced below that level at which an individual might receive a deep dose equivalent of 0.1 rem (1 mSv) in one hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates;
 - (ii) A control device that energizes a conspicuous visible or audible alarm signal so that the individual entering the high radiation area and the supervisor of the activity are made aware of the entry; or
 - (iii) Entryways that are locked, except during periods when access to the areas is required, with positive control over each individual entry.
2. In place of the controls required by (9)(a)1. of this Rule, the licensee may substitute continuous direct or electronic surveillance that is capable of preventing unauthorized entry.
3. The licensee may apply to the Division for approval of alternative methods for controlling access to high radiation areas.
4. The licensee shall establish the controls required by (9)(a)1. and (9)(a)3. of this Rule in a way that does not prevent individuals from leaving a high radiation area.
5. The licensee is not required to control each entrance or access point to a room or other area that is a high radiation area solely because of the presence of radioactive materials prepared for transport and packaged and labeled in accordance with the regulations of the U.S. Department of Transportation provided that:
 - (i) The packages do not remain in the area longer than three days; and
 - (ii) The dose rate at one meter from the external surface of any package does not exceed 0.01 rem (0.1 mSv) per hour.
6. The licensee is not required to control entrance or access to rooms or other areas in hospitals solely because of the presence of patients containing radioactive material, provided that there are personnel in attendance who will take the necessary precautions to prevent the exposure of individuals to radiation or radioactive material in excess of the established limits in this Rule and to ensure operation within the ALARA provisions of the licensee's Radiation Protection Program.

7. The licensee is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a high radiation area if the licensee has met all the specific requirements for access and control specified in other applicable Rules, such as [391-3-17-.04](#) for industrial radiography.

(b) Control of Access to Very High Radiation Areas.

1. In addition to the requirements in (9)(a) of this Rule, the licensee shall institute additional measures to ensure that an individual is not able to gain unauthorized or inadvertent access to areas in which radiation levels could be encountered at 500 rads (5 Gy) or more in one hour at one meter from a source of radiation or any surface through which the radiation penetrates. This requirement does not apply to rooms or areas in which diagnostic x-ray systems are the only source of radiation, or to non-self-shielded irradiators.
2. The licensee is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a very high radiation area as defined in this Rule if the licensee has met all the specific requirements for access and control specified in other applicable Rules, such as [391-3-17-.04](#) for industrial radiography.

(10) **Respiratory Protection and Controls to Restrict Internal Exposure in Restricted Areas**

- (a) Use of Process or Other Engineering Controls. The licensee shall use, to the extent practicable, process or other engineering controls (e.g., containment, decontamination, or ventilation) to control the concentrations of radioactive material in air.
- (b) Use of Other Controls. When it is not practical to apply process or other engineering controls to control the concentrations of radioactive material in air to values below those that define an airborne radioactivity area, the licensee shall, consistent with maintaining the total effective dose equivalent ALARA, increase monitoring and limit intakes by one or more of the following means:
 1. Control of access;
 2. Limitation of exposure times;
 3. Use of respiratory protection equipment; or
 4. Other controls.

- (c) If the licensee performs an ALARA analysis to determine whether or not respirators should be used, the licensee may consider safety factors other than radiological factors. The licensee should also consider the impact of respirator use on workers' industrial health and safety.
- (d) Use of Individual Respiratory Protection Equipment.
 - 1. If the licensee uses respiratory protection equipment to limit intakes pursuant to (10)(b) of this Rule:
 - (i) Except as provided in (10)(d)1.(ii) of this Rule, the licensee shall use only respiratory protection equipment that is tested and certified by or had certification extended by the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration (NIOSH/MSHA).
 - (ii) The licensee may use equipment that has not been tested or certified by the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration or had certification extended by NIOSH/MSHA or for which there is no schedule for testing or certification, provided the licensee has submitted to the Division and the Division has approved an application for authorized use of that equipment, including a demonstration by testing, or a demonstration on the basis of reliable test information, that the material and performance characteristics of the equipment are capable of providing the proposed degree of protection under anticipated conditions of use.
 - (iii) The licensee shall implement and maintain a respiratory protection program that includes:
 - (I) Air sampling sufficient to identify the potential hazard, permit proper equipment selection, and estimate exposures;
 - (II) Surveys and bioassays, as appropriate, to evaluate actual intakes;
 - (III) Testing of respirators for operability (user seal check for face sealing devices and functional check for others) immediately prior to each use;
 - (IV) Written procedures regarding: respirator selection; fit testing; breathing air quality; inventory control; storage, issuance, maintenance, repair, and quality assurance of respiratory protection equipment, including testing for operability immediately prior to each use; supervision and

training of personnel; monitoring, including air sampling and bioassays; and record-keeping; and

- (V) Determination by a physician prior to initial fitting of face sealing respirators; before the first use of non-face sealing respirators; and either every 12 months thereafter or periodically at a frequency determined by a physician, that the individual user is medically fit to use the respiratory protection equipment.
 - (VI) Fit testing, with fit factor " ten times the APF for negative pressure devices", and a fit factor " 500 for any positive pressure, continuous flow, and pressure-demand devices", before the first field use of tight fitting, face-sealing respirators and periodically thereafter at a frequency not to exceed one year. Fit testing must be performed with the facepiece operating in the negative pressure mode.
- (iv) The licensee shall advise each respirator user that the user may leave the area at any time for relief from respirator use in the event of equipment malfunction, physical or psychological distress, procedural or communication failure, significant deterioration of operating conditions, or any other conditions that might require such relief.
 - (v) The licensee shall also consider limitations appropriate to the type and mode of use. When selecting respiratory devices the licensee shall provide for vision correction, adequate communication, low temperature work environments, and the concurrent use of other safety or radiological protection equipment. The licensee shall use equipment in such a way as not to interfere with the proper operation of the respirator.
 - (vi) Standby rescue persons are required whenever one-piece atmosphere-supplying suits, or any combination of supplied air respiratory protection device and personnel protective equipment are used from which an unaided individual would have difficulty extricating himself. The standby persons must be equipped with respiratory protection devices or other apparatus appropriate for the potential hazards. The standby rescue persons shall observe or otherwise maintain continuous communication with the workers (visual, voice, signal line, telephone, radio, or other suitable means), and be immediately available to assist them in case of a

failure of the air supply or for any other reason that requires relief from distress. A sufficient number of standby rescue persons must be immediately available to assist all users of this type of equipment and to provide effective emergency rescue if needed.

- (vii) Atmosphere-supplying respirators must be supplied with respirable air of grade D quality or better as defined by the Compressed Gas Association in publication G-7.1, "Commodity Specification for Air," 1997 and included in the regulations of the Occupational Safety and Health Administration ([29 CFR 1910.134\(i\)\(1\)\(ii\)\(A\) through \(E\)](#)). Grade D quality air criteria include:
 - (I) Oxygen content (v/v) of 19.5-23.5 %;
 - (II) Hydrocarbon (condensed) content of five (5) milligrams per cubic meter of air or less;
 - (III) Carbon monoxide (CO) content of ten (10) ppm or less;
 - (IV) Carbon dioxide content of 1,000 ppm or less; and
 - (V) Lack of noticeable odor.
 - (viii) The licensee shall ensure that no objects, materials or substances, such as facial hair, or any conditions that interfere with the face to facepiece seal or valve function, and that are under the control of the respirator wearer, are present between the skin of the wearer's face and the sealing surface of a tight-fitting respirator facepiece.
 - (ix) In estimating the dose to individuals from intake of airborne radioactive materials, the concentration of radioactive material in the air that is inhaled when respirators are worn is initially assumed to be the ambient concentration in air without respiratory protection, divided by the assigned protection factor. If the dose is later found to be greater than the estimated dose, the corrected value must be used. If the dose is later found to be less than the estimated dose, the corrected value may be used.
- (e) Further Restrictions on the Use of Respiratory Protection Equipment. The Division may impose restrictions in addition to those in (10)(b) and (10)(c) of this Rule and Appendix A to 10 CFR 20, in order to:

1. Ensure that the respiratory protection program of the licensee is adequate to limit doses to individuals from intakes of airborne radioactive materials consistent with maintaining total effective dose equivalent ALARA; and
 2. Limit the extent to which a licensee may use respiratory protection equipment instead of process or other engineering controls.
- (f) Application for use of higher assigned protection factors. The licensee shall obtain authorization from the Division before using assigned protection factors in excess of those specified in Appendix A to 10 CFR Part 20. The Division may authorize a licensee to use higher assigned protection factors on receipt of an application that:
1. Describes the situation for which a need exists for higher protection factors; and
 2. Demonstrates that the respiratory protection equipment provides these higher protection factors under the proposed conditions of use.

(11) Storage and Control of Licensed Material

- (a) Security and Control of Licensed Radioactive Material. The licensee shall secure licensed materials from unauthorized removal or access.
- (b) Control of material sources of radiation not in storage. The licensee shall maintain constant surveillance and use devices or administrative procedures to prevent unauthorized use of licensed radioactive material that is in an unrestricted area and that is not in storage or in a patient.

(12) Precautionary Procedures

- (a) Caution Signs.
 1. Standard Radiation Symbol. Unless otherwise authorized by the Division, the symbol prescribed by (12)(a) of this Rule uses the colors magenta (or purple or black) on yellow background. The symbol prescribed is the three-bladed design as follows:
 - (i) Cross-hatched area is to be magenta, purple, or black; and
 - (ii) The background is to be yellow.
 2. Exception to Color Requirements for Standard Radiation Symbol. Notwithstanding the requirements of (12)(a)1. of this Rule, licensees are authorized to label sources, source holders, or device components containing sources of radiation that are subjected to high temperatures with

conspicuously etched or stamped radiation caution symbols without a color requirement.

3. In addition to the contents of signs and labels prescribed in this Rule, the licensee shall provide, on or near the required signs and labels, additional information, as appropriate, to make individuals aware of potential radiation exposures and to minimize the exposures.

(b) Posting Requirements.

1. Posting of Radiation Areas. The licensee shall post each radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIATION AREA."
2. Posting of High Radiation Areas. The licensee shall post each high radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, HIGH RADIATION AREA" or "DANGER, HIGH RADIATION AREA." The licensee may satisfy this requirement by posting the sign at the boundary of the high radiation area.
3. Posting of Very High Radiation Areas. The licensee shall post each very high radiation area with a conspicuous sign or signs bearing the radiation symbol and words "GRAVE DANGER, VERY HIGH RADIATION AREA."
4. Posting of Airborne Radioactivity Areas. The licensee shall post each airborne radioactivity area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, AIRBORNE RADIOACTIVITY AREA" or "DANGER, AIRBORNE RADIOACTIVITY AREA."
5. Posting of Areas or Rooms in which Licensed Material is Used or Stored. The licensee shall post each area or room in which there is used or stored an amount of licensed material exceeding ten times the quantity of such material specified in Appendix C of 10 CFR Part 20 with a conspicuous

sign or signs bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL(S)" or "DANGER, RADIOACTIVE MATERIAL(S)".

(c) Exceptions to Posting Requirements.

1. A licensee is not required to post caution signs in areas or rooms containing sources of radiation for periods of less than eight hours, if all of the following conditions are met:
 - (i) The sources of radiation are constantly attended during these periods by an individual who takes the precautions necessary to prevent the exposure of individuals to sources of radiation in excess of the limits established in this Rule; and
 - (ii) The area or room is subject to the licensee's control.
2. Rooms or other areas in hospitals that are occupied by patients are not required to be posted with caution signs pursuant to (12)(b) of this Rule provided that the patient could be released from licensee control pursuant to Rule [391-3-17-.05](#).
3. A room or area is not required to be posted with a caution sign pursuant to (12)(b) of this Rule because of the presence of a sealed source provided that the radiation level at 30 centimeters from the surface of the source container or housing does not exceed 0.005 rem (0.05 mSv) per hour.

(d) Labeling Containers and Radiation Machines.

1. The licensee shall ensure that each container of licensed material bears a durable, clearly visible label bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL." The label shall also provide information such as the radionuclides present, an estimate of the quantity of radioactivity, the date for which the activity is estimated, radiation levels, kinds of materials, and mass enrichment, to permit individuals handling or using the containers, or working in the vicinity of the containers, to take precautions to avoid or minimize exposures.
2. Each licensee shall, prior to removal or disposal of empty uncontaminated containers to unrestricted areas, remove or deface the radioactive material label or otherwise clearly indicate that the container no longer contains radioactive materials.

(e) Exemptions to Labeling Requirements. A licensee is not required to label:

1. Containers holding licensed material in quantities less than the quantities listed in Appendix C of 10 CFR 20;
2. Containers holding licensed material in concentrations less than those specified in Table III of Appendix B of 10 CFR 20;
3. Containers attended by an individual who takes the precautions necessary to prevent the exposure of individuals in excess of the limits established by this Rule;
4. Containers when they are in transport and packaged and labeled in accordance with the regulations of the U.S. Department of Transportation⁴;
5. Containers that are accessible only to individuals authorized to handle or use them or to work in the vicinity of the containers, if the contents are identified to these individuals by a readily available written record. Examples of containers of this type are containers in locations such as water-filled canals, storage vaults, or hot cells. The record shall be retained as long as the containers are in use for the purpose indicated on the record; or
6. Installed manufacturing or process equipment, such as chemical process equipment, piping, and tanks.

(f) Procedures for Receiving and Opening Packages.

1. Each licensee who is authorized to receive a package containing quantities of radioactive material in excess of a Type A quantity, as defined in Rule [391-3-17-.06\(3\)](#), shall make arrangements to receive:
 - (i) The package when the carrier offers it for delivery; or
 - (ii) The notification of the arrival of the package at the carrier's terminal and to take possession of the package expeditiously.
2. Each licensee shall:
 - (i) Monitor the external surfaces of a labeled⁵ package for radioactive contamination unless the package contains only radioactive material in the form of gas or in "special form" as defined in Rule [391-3-17-.01\(2\)](#);
 - (ii) Monitor the external surfaces of a labeled package for radiation levels unless the package contains quantities of radioactive material that are less than or equal to the Type A quantity, as defined in Rule

[391-3-17-.06\(3\)](#), and the radioactive material is in the form of a gas or in special form as defined in Rule [391-3-17-.01\(2\)](#); and

- (iii) Monitor all packages known to contain radioactive material for radioactive contamination and radiation levels if the package has evidence of potential contamination, such as packages that are crushed, wet, or damaged.
3. The licensee shall perform the monitoring required by (12)(f)2. of this Rule as soon as practicable after receipt of the package, but not later than three hours after the package is received at the licensee's facility if it is received during the licensee's normal working hours, or not later than three hours from the beginning of the next working day if it is received after working hours.
 4. The licensee shall immediately notify the final delivery carrier and the Division by telephone, telegram, mailgram, or facsimile, when:
 - (i) Removable radioactive surface contamination exceeds the limits of Rule [391-3-17-.06\(16\)\(i\)](#); or
 - (ii) External radiation levels exceed the limits of Rule [391-3-17-.06\(16\)\(j\)](#).
 5. Each licensee shall:
 - (i) Establish, maintain, and retain written procedures for safely opening packages in which radioactive material is received; and
 - (ii) Ensure that the procedures are followed and that special instructions for the type of package being opened are followed.
 6. Licensees transferring special form sources in vehicles owned or operated by the licensee to and from a work site are exempt from the contamination monitoring requirements of (12)(f)2. of this Rule, but are not exempt from the monitoring requirement in (12)(f)2. of this Rule for measuring radiation levels to ensure that the source is still properly lodged in its shield.

(13) **Waste Disposal**

(a) General Requirements.

1. A licensee shall dispose of licensed material only:

- (i) By transfer to an authorized recipient as provided in (13)(i) of this Rule and in Rule [391-3-17-.02\(19\)](#), or to the U.S. Department of Energy;
 - (ii) By decay in storage;
 - (iii) By release in effluents within the limits in (5)(i) of this Rule; or
 - (iv) As authorized pursuant to (13)(b), (13)(c), (13)(d), (13)(e), or (13)(k) of this Rule.
- 2. A person shall be specifically licensed by the Director, the U.S. Nuclear Regulatory Commission or an Agreement State to receive waste containing licensed material from other persons for:
 - (i) Treatment prior to disposal;
 - (ii) Treatment or disposal by incineration;
 - (iii) Decay in storage;
 - (iv) Disposal at a land disposal facility licensed pursuant to 10 CFR Part 61, or equivalent regulations of an Agreement State; or
 - (v) Storage until transferred to a disposal facility authorized to receive the waste.
- (b) Method for Obtaining Approval of Proposed Disposal Procedures. A licensee or applicant for a license may apply to the Division for approval of proposed procedures not otherwise authorized in this Chapter to dispose of licensed material generated in the licensee's operations. Each application shall include:
 - 1. A description of the waste containing licensed material to be disposed of, including the physical and chemical properties that have an impact on risk evaluation, and the proposed manner and conditions of waste disposal;
 - 2. An analysis and evaluation of pertinent information on the nature of the environment;
 - 3. The nature and location of other potentially affected facilities; and
 - 4. Analyses and procedures to ensure that doses are maintained ALARA and within the dose limits in this Rule.
- (c) Disposal by Release into Sanitary Sewerage.

1. A licensee may discharge licensed material into sanitary sewerage if each of the following conditions is satisfied:
 - (i) The material is readily soluble, or is readily dispersible biological material, in water;
 - (ii) The quantity of licensed radioactive material that the licensee releases into the sewer in one month divided by the average monthly volume of water released into the sewer by the licensee does not exceed the concentration listed in Table III of Appendix B of 10 CFR 20;
 - (iii) If more than one radionuclide is released, the following conditions must also be satisfied:
 - (I) The licensee shall determine the fraction of the limit in Table III of Appendix B of 10 CFR 20, represented by discharges into sanitary sewerage by dividing the actual monthly average concentration of each radionuclide released by the licensee into the sewer by the concentration of that radionuclide listed in Table III of Appendix B of 10 CFR 20; and
 - (II) The sum of the fractions for each radionuclide required by (13)(c)1.(iii)(I) of this Rule does not exceed unity; and
 - (iv) The total quantity of licensed radioactive material that the licensee releases into the sanitary sewerage system in a year does not exceed five Ci (185 GBq) of hydrogen-3, one Ci (37 GBq) of carbon-14, and one Ci (37 GBq) of all other radioactive materials combined.
 2. Excreta from individuals undergoing medical diagnosis or therapy with radioactive material are not subject to the limitations contained in (13)(c)1. of this Rule.
- (d) Treatment or Disposal by Incineration. A licensee may treat or dispose of licensed material by incineration only in the forms and concentrations specified in (13)(e) of this Rule or as specifically approved by the Division pursuant to (13)(b) of this Rule.
- (e) Disposal of Specific Wastes.
1. A licensee may dispose of the following licensed material as if it were not radioactive:

- (i) 0.05 μCi (1.85 kBq) or less of hydrogen-3, carbon-14, or iodine-125 per gram of medium used for liquid scintillation counting; and
 - (ii) 0.05 μCi (1.85 kBq) or less of hydrogen-3, carbon-14, or iodine-125 per gram of animal tissue, averaged over the weight of the entire animal.
 - 2. A licensee shall not dispose of tissue under (13)(e)1.(ii) of this Rule in a manner that would permit its use either as food for humans or as animal feed.
 - 3. The licensee shall maintain records in accordance with (14)(i) of this Rule.
- (f) Classification of Radioactive Waste for Near-Surface Disposal.
- 1. Considerations. Determination of the classification of radioactive waste involves two considerations. First, consideration must be given to the concentration of long-lived radionuclides (and their shorter-lived precursors) whose potential hazard will persist long after such precautions as institutional controls, improved waste form, and deeper disposal have ceased to be effective. These precautions delay the time when long-lived radionuclides could cause exposures. In addition, the magnitude of the potential dose is limited by the concentration and availability of the radionuclide at the time of exposure. Second, consideration must be given to the concentration of shorter-lived radionuclides for which requirements on institutional controls, waste form, and disposal methods are effective.
 - 2. Classes of waste.
 - (i) Class A waste is waste that is usually segregated from other waste classes at the disposal site. The physical form and characteristics of Class A waste must meet the minimum requirements set forth in (13)(g)1. of this Rule. If Class A waste also meets the stability requirements set forth in (13)(g)2. of this Rule, it is not necessary to segregate the waste for disposal.
 - (ii) Class B waste is waste that must meet more rigorous requirements on waste form to ensure stability after disposal. The physical form and characteristics of Class B waste must meet both the minimum and stability requirements set forth in (13)(g) of this Rule.
 - (iii) Class C waste is waste that not only must meet more rigorous requirements on waste form to ensure stability but also requires additional measures at the disposal facility to protect against

inadvertent intrusion. The physical form and characteristics of Class C waste must meet both the minimum and stability requirements set forth in (13)(g) of this Rule.

3. Classification determined by long-lived radionuclides. If the waste contains only radionuclides listed in Table 1, classification shall be determined as follows:
 - (i) If the concentration does not exceed 0.1 times the value in Table 1, the waste is Class A.
 - (ii) If the concentration exceeds 0.1 times the value in Table 1, the waste is Class C.
 - (iii) If the concentration exceeds the value in Table 1, the waste is not generally acceptable for near-surface disposal.
 - (iv) For wastes containing mixtures of radionuclides listed in Table 1, the total concentration shall be determined by the sum of fractions rule described in (13)(f)7. of this Rule.

Table 1

Radionuclide	Concentration (Curies/cubic meter)
C-14	8
C-14 in activated metal	80
Ni-59 in activated metal	220
Nb-94 in activated metal	0.2
Tc-99	3
I-129	0.08
Alpha-emitting transuranic radionuclides with half-life greater than five years	100 ^(a)
Pu-241	3,500 ^(a)
Cm-242	20,000 ^(a)
Ra-226	100 ^(a)

^(a) Units are in nanocuries per gram.

4. Classification determined by short-lived radionuclides. If the waste does not contain any of the radionuclides listed in Table 1, classification shall be determined based on the concentrations shown in Table 2. If a nuclide is not listed in Table 2, it does not need to be considered in determining the waste class.
- (i) If the concentration does not exceed the value in Column 1, the waste is Class A.
 - (ii) If the concentration exceeds the value in Column 1, but does not exceed the value in Column 2, the waste is Class B.
 - (iii) If the concentration exceeds the value in Column 2, but does not exceed the value in Column 3, the waste is Class C.
 - (iv) If the concentration exceeds the value in Column 3, the waste is not generally acceptable for near-surface disposal.
 - (v) For wastes containing mixtures of the radionuclides listed in Table 2, the total concentration shall be determined by the sum of fractions rule described in (13)(f)7. of this Rule.

Table 2

Concentration (Curies/ cubic meter)

Radionuclide	Column 1	Column 2	Column 3
Total of all radionuclides with less than five year half-life	700	(b)	(b)
H-3	40	(b)	(b)
Co-60	700	(b)	(b)
Ni-63	3.5	70	700
Ni-63 in activated metal	35	700	7000
Sr-90	0.04	150	7000
Cs-137	1	44	4600

^(b) There are no limits established for these radionuclides in Class B or C wastes. Practical considerations such as the effects of external radiation and internal heat generation on transportation, handling, and disposal will limit the concentrations for these wastes. These wastes shall be Class B unless the concentrations of other

radionuclides in Table 2 determine the waste to be Class C independent of these radionuclides.

5. Classification determined by both long- and short-lived radionuclides. If the waste contains a mixture of radionuclides, some of which are listed in Table 1 and some of which are listed in Table 2, classification shall be determined as follows:
 - (i) If the concentration of a radionuclide listed in Table 1 is less than 0.1 times the value listed in Table 1, the class shall be that determined by the concentration of radionuclides listed in Table 2.
 - (ii) If the concentration of a radionuclide listed in Table 1 exceeds 0.1 times the value listed in Table 1, the waste shall be Class C, provided the concentration of radionuclides listed in Table 2 does not exceed the value shown in Column 3 of Table 2.
6. Classification of wastes with radionuclides other than those listed in Tables 1 and 2. If the waste does not contain any radionuclides listed in either Table 1 or 2, it is Class A.
7. The sum of the fractions rule for mixtures of radionuclides. For determining classification for waste that contains a mixture of radionuclides, it is necessary to determine the sum of fractions by dividing each radionuclide's concentration by the appropriate limit and adding the resulting values. The appropriate limits must all be taken from the same column of the same table. The sum of the fractions for the column must be less than 1.0 if the waste class is to be determined by that column. Example: A waste contains Sr-90 in a concentration of 50 Ci/m³ and Cs-137 in a concentration of 22 Ci/m³. Since the concentrations both exceed the values in Column 1, Table 2, they must be compared to Column 2 values. For Sr-90 fraction, $50/150 = 0.33$; for Cs-137 fraction, $22/44 = 0.5$; the sum of the fractions = 0.83. Since the sum is less than 1.0, the waste is Class B.
8. Determination of concentrations in wastes. The concentration of a radionuclide may be determined by indirect methods such as the use of scaling factors, which relate the inferred concentration of one radionuclide to another that is measured, or radionuclide material accountability, if there is reasonable assurance that the indirect methods can be correlated with actual measurements. The concentration of a radionuclide may be averaged over the volume of the waste or weight of the waste if the units are expressed as nanocuries per gram.

(g) Radioactive Waste Characteristics.

1. The following are minimum requirements for all classes of waste and are intended to facilitate handling and provide protection of health and safety of personnel at the disposal site:
 - (i) Wastes shall be packaged in conformance with the conditions of the license issued to the site operator to which the waste will be shipped. Where the conditions of the site license are more restrictive than the provisions of this Chapter, the site license conditions shall govern.
 - (ii) Wastes shall not be packaged for disposal in cardboard or fiberboard boxes.
 - (iii) Liquid waste shall be packaged in sufficient absorbent material to absorb twice the volume of the liquid.
 - (iv) Solid wastes containing liquid shall contain as little free-standing and non-corrosive liquid as is reasonably achievable, but in no case shall the liquid exceed one percent of the volume.
 - (v) Wastes shall not be readily capable of detonation or of explosive decomposition or reaction at normal pressures and temperatures or of explosive reaction with water.
 - (vi) Wastes shall not contain, or be capable of generating, quantities of toxic gases, vapors, or fumes harmful to persons transporting, handling, or disposing of the waste. This does not apply to radioactive gaseous wastes packaged in accordance with (13)(g)1.(viii) of this Rule.
 - (vii) Pyrophoric materials contained in wastes shall be treated, prepared, and packaged to be nonflammable.
 - (viii) Wastes in a gaseous form shall be packaged at an absolute pressure that does not exceed 1.5 atmospheres at 20 degrees Celsius. Total activity shall not exceed 100 Curies (3.7 TBq) per container.
 - (ix) Wastes containing hazardous, biological, pathogenic, or infectious material shall be treated to reduce to the maximum extent practicable the potential hazard from the non-radiological materials.

2. The following requirements are intended to provide stability of the waste. Stability is intended to ensure that the waste does not degrade and affect overall stability of the site through slumping, collapse, or other failure of the disposal unit and thereby lead to water infiltration. Stability is also a factor in limiting exposure to an inadvertent intruder, since it provides a recognizable and nondispersible waste.
 - (i) Waste shall have structural stability. A structurally stable waste form will generally maintain its physical dimensions and its form under the expected disposal conditions such as the weight of overburden and compaction equipment, the presence of moisture and microbial activity, and internal factors such as radiation effects and chemical changes. Structural stability can be provided by the waste form itself, processing the waste to a stable form, or placing the waste in a disposal container or structure that provides stability after disposal.
 - (ii) Notwithstanding the provisions in (13)(g)1.(iii) and (iv) of this Rule, liquid wastes, or wastes containing liquid, shall be converted into a form that contains as little freestanding and noncorrosive liquid as is reasonably achievable, but in no case shall the liquid exceed one percent of the volume of the waste when the waste is in a disposal container designed to ensure stability, or 0.5 percent of the volume of the waste for waste processed to a stable form.
 - (iii) Void spaces within the waste and between the waste and its package shall be reduced to the extent practicable.
- (h) Labeling. Each package of waste shall be clearly labeled to identify whether it is Class A, Class B, or Class C waste in accordance with (13)(f) of this Rule.
- (i) Transfer for Disposal and Manifest.
 1. A waste generator, collector, or processor who transports, or offers for transportation, low-level radioactive waste intended for ultimate disposal at a licensed low-level radioactive waste land disposal facility must prepare a Manifest reflecting information requested on applicable NRC Forms 540 or equivalent forms (Uniform Low-Level Radioactive Waste Manifest (Shipping Paper)) and 541 (Uniform Low-Level Radioactive Waste Manifest (Container and Waste Description)) and if necessary, on an applicable NRC Form 542 or equivalent form (Uniform Low-Level Radioactive Waste Manifest (Manifest Index and Regional Compact Tabulation)). NRC Forms 540 and 540A or equivalent forms must be completed and must physically accompany the pertinent low-level radioactive waste shipment. Upon agreement between shipper and

consignee, NRC Forms 541 and 541A and 542 and 542A or equivalent forms may be completed, transmitted, and stored in electronic media with the capability for producing legible, accurate, and complete records on the respective forms. Licensees are not required by the Division to comply with the manifesting requirements of this Chapter when they ship:

- (i) LLW for processing and expect its return (i.e., for storage under their license) prior to disposal at a licensed land disposal facility;
- (ii) LLW that is being returned to the licensee who is the "waste generator" or "generator," as defined in this Rule; or
- (iii) Radioactively contaminated material to a "waste processor" that becomes the processor's residual waste.

For guidance in completing these forms, refer to the instructions that accompany the forms. Copies of manifests required by this Rule may be legible carbon copies, photocopies, or computer printouts that reproduce the data in the format of the uniform manifest. NRC Forms 541 and 541A and 542 and 542A or equivalent forms and the accompanying instructions, in hard copy, may be obtained from Radioactive Materials Program, 4244 International Parkway, Suite 120, Atlanta, Georgia 30354, or current address.

This Rule includes information requirements of the Department of Transportation, as codified in 49 CFR Part 172. Information on hazardous, medical, or other waste, required to meet EPA regulations, as codified in 40 CFR Parts 259, 261 or elsewhere, is not addressed in this Rule, and must be provided on the required EPA forms. However, the required EPA forms must accompany the Uniform Low-Level Radioactive Waste Manifest required by this Rule.

2. General Information. The shipper of the low-level radioactive waste shall provide the following information on the uniform manifest:
 - (i) The name, facility address, and telephone number of the licensee shipping the waste;
 - (ii) An explicit declaration indicating whether the shipper is acting as a waste generator, collector, processor, or a combination of these identifiers for purposes of the manifested shipment; and

- (iii) The name, address, and telephone number, or the name and EPA identification number for the carrier transporting the waste.
3. Shipment Information. The shipper of the radioactive waste shall provide the following information regarding the waste shipment on the uniform manifest:
- (i) The date of the waste shipment;
 - (ii) The total number of packages/disposal containers;
 - (iii) The total disposal volume and disposal weight in the shipment;
 - (iv) The total radionuclide activity in the shipment;
 - (v) The activity of each of the radionuclides H-3, C-14, Tc-99, and I-129 contained in the shipment; and
 - (vi) The total masses of U-233, U-235, and plutonium in the form of special nuclear material, and the total mass of uranium and thorium in the form of source material.
4. Disposal Container and Waste Information. The shipper of the radioactive waste shall provide the following information on the uniform manifest regarding the waste and each disposal container of waste in the shipment:
- (i) An alphabetic or numeric identification that uniquely identifies each disposal container in the shipment;
 - (ii) A physical description of the disposal container, including the manufacturer and model of any high integrity container;
 - (iii) The volume displaced by the disposal container;
 - (iv) The gross weight of the disposal container, including the waste;
 - (v) For waste consigned to a disposal facility, the maximum radiation level at the surface of each disposal container;
 - (vi) A physical and chemical description of the waste;
 - (vii) The total weight percentage of chelating agent for any waste containing more than 0.1 percent chelating agent by weight, plus the identity of the principal chelating agent;

- (viii) The approximate volume of waste within a container;
 - (ix) The sorbing or solidification media, if any, and the identity of the solidification media vendor and brand name;
 - (x) The identities and activities of individual radionuclides contained in each container, the masses of U-233, U-235, and plutonium in the form of special nuclear material, and the masses of uranium and thorium in the form of source material. For discrete waste types (i.e., activated materials, contaminated equipment, mechanical filters, sealed source/devices, and wastes in solidification/stabilization media), the identities and activities of individual radionuclides associated with a disposal container shall be reported;
 - (xi) The total radioactivity within each container; and
 - (xii) For wastes consigned to a disposal facility, the classification of the waste pursuant to (13)(f). Waste not meeting the structural stability requirements of (13)(g)2. must be identified.
5. Uncontainerized Waste Information. The shipper of the radioactive waste shall provide the following information on the uniform manifest regarding a waste shipment delivered without a disposal container:
- (i) The approximate volume and weight of the waste;
 - (ii) A physical and chemical description of the waste;
 - (iii) The total weight percentage of chelating agent if the chelating agent exceeds 0.1 percent by weight, plus the identity of the principal chelating agent;
 - (iv) For waste consigned to a disposal facility, the classification of the waste pursuant to (13)(f) of this Rule. Waste not meeting the structural stability requirements of (13)(g)2. of this Rule must be identified;
 - (v) The identities and activities of individual radionuclides contained in the waste, the masses of U-233, U-235, and plutonium in the form of special nuclear material, and the masses of uranium and thorium in the form of source material; and

(vi) For wastes consigned to a disposal facility, the maximum radiation levels at the surface of the waste.

6. Multi-Generator Disposal Container Information. This section applies to disposal containers enclosing mixtures of waste originating from different generators. (Note: The origin of the LLW resulting from a processor's activities may be attributable to one or more "generators" (including "waste generators") as defined in this Chapter). It also applies to mixtures of wastes shipped in an uncontainerized form, for which portions of the mixture within the shipment originate from different generators.

(i) For homogeneous mixtures of waste, such as incinerator ash, provide the waste description applicable to the mixture and the volume of the waste attributed to each generator.

(ii) For heterogeneous mixtures of waste, such as the combined products from a large compactor, identify each generator contributing waste to the disposal container, and, for discrete waste types (i.e., activated materials, contaminated equipment, mechanical filters, sealed source/devices, and wastes in solidification/stabilization media), the identities and activities of individual radionuclides contained on these waste types within the disposal container. For each generator, provide the following:

(I) The volume of waste within the disposal container;

(II) A physical and chemical description of the waste, including the solidification agent, if any;

(III) The total weight percentage of chelating agents for any disposal container containing more than 0.1 percent chelating agent by weight, plus the identity of the principal chelating agent;

(IV) The sorbing or solidification media, if any, and the identity of the solidification media vendor and brand name if the media is claimed to meet stability requirements of (13)(g)2. of this Rule; and

(V) Radionuclide identities and activities contained in the waste, the masses of U-233, U-235, and plutonium in the form of special nuclear material, and the masses of uranium and thorium in the form of source material if contained in the waste.

7. An authorized representative of the waste generator, processor, or collector shall certify by signing and dating the shipment manifest that the transported materials are properly classified, described, packaged, marked, and labeled and are in proper condition for transportation according to the applicable regulations of the Department of Transportation and the Division. A collector in signing the certification is certifying that nothing has been done to the collected waste which would invalidate the waste generator's certification.
8. Control and Tracking. Any licensee who transfers radioactive waste to a land disposal facility or a licensed waste collector shall comply with all of the following requirements. Any licensee who transfers waste to a licensed waste processor for waste treatment or repackaging shall comply with the requirements of (13)(i)8.(iv) through (ix). A licensee shall:
 - (i) Prepare all wastes so that the waste is classified according to (13)(f) and meets waste characteristics requirements in (13)(g);
 - (ii) Label each disposal container (or transport package if potential radiation hazards preclude labeling of the individual disposal container) of waste to identify whether it is Class A waste, Class B waste, Class C waste, or greater than Class C waste, in accordance with (13)(f);
 - (iii) Conduct a quality assurance program to assure compliance with (13)(f) and (13)(g) (the program must include management evaluation of audits);
 - (iv) Prepare the NRC Forms 540 and 540A or Equivalent Forms, "Uniform Low-Level Radioactive Waste Manifest" as required by this Section;
 - (v) Forward a copy or electronically transfer the Uniform Low-Level Radioactive Waste Manifest to the intended consignee so that either:
 - (I) Receipt of the manifest precedes the LLW shipment, or
 - (II) The manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee, or
 - (III) Both (I) and (II) is also acceptable.
 - (vi) Include NRC Form 540 (and NRC 540A, if required) or Equivalent Forms with the shipment regardless of the option in (13)(i)8.(v);

- (vii) Receive acknowledgment of the receipt of the shipment in the form of a signed copy of NRC Form 540 or Equivalent Form;
- (viii) Retain a copy of or electronically store the Uniform Low-Level Radioactive Waste Manifest and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by Rule [391-3-17-.02](#); and
- (ix) For any shipments or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this section, conduct an investigation in accordance with (13)(i)12.

9. Any waste collector licensee who handles only prepackaged waste shall:

- (i) Acknowledge receipt of the waste from the shipper within one week of receipt by returning a signed copy of NRC Form 540 or Equivalent Form.
- (ii) Prepare a new manifest to reflect consolidated shipments that meet the requirements of this section. The waste collector shall ensure that, for each container of waste in the shipment, the manifest identifies the generator of that container of waste;
- (iii) Forward a copy or electronically transfer the Uniform Low-Level Radioactive Waste Manifest to the intended consignee so that either:
 - (I) Receipt of the manifest precedes the LLW shipment, or
 - (II) The manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee, or
 - (III) Both (I) and (II) is also acceptable;
- (iv) Include NRC Form 540 (and NRC Form 540A, if required) or Equivalent Forms, with the shipment regardless of the option chosen in (13)(i)9.(iii);
- (v) Receive acknowledgment of the receipt of the shipment in the form of a signed copy of NRC Form 540 or Equivalent Form;
- (vi) Retain a copy of or electronically store the Uniform Low-Level Radioactive Waste Manifest and documentation of acknowledgment of receipt;

- (vii) For any shipments or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this section, conduct an investigation in accordance with (13)(i)12.; and
- (viii) Notify the shipper and the Division when any shipment, or part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

10. Any licensed waste processor who treats or repackages waste shall:

- (i) Acknowledge receipt of the waste from the shipper within one week of receipt by returning a signed copy of NRC Form 540 or Equivalent Form;
- (ii) Prepare a new manifest that meets the requirements of this section. Preparation of the new manifest reflects that the processor is responsible for meeting these requirements. For each container of waste in the shipment, the manifest shall identify the waste generators, the preprocessed waste volume, and other information as required in (13)(i)6.;
- (iii) Prepare all wastes so that the waste is classified according to (13)(f) and meets the waste characteristics requirements in (13)(g);
- (iv) Label each package of waste to identify whether it is Class A waste, Class B waste, or Class C waste, in accordance with (13)(f) and (13)(h);
- (v) Conduct a quality assurance program to assure compliance with (13)(f) and (13)(g) (the program shall include management evaluation of audits);
- (vi) Forward a copy or electronically transfer the Uniform Low-Level Radioactive Waste Manifest to the intended consignee so that either:
 - (I) Receipt of the manifest precedes the LLW shipment, or
 - (II) The manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee, or

- (III) Both (I) and (II) is also acceptable;
- (vii) Include NRC Form 540 (and NRC Form 540A if required) or Equivalent Forms, with the shipment regardless of the option chosen in (13)(i)10.(vi);
- (viii) Receive acknowledgment of the receipt of the shipment in the form of a signed copy of NRC Form 540 or Equivalent Form;
- (ix) Retain a copy of or electronically store the Uniform Low-Level Radioactive Waste Manifest and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by Rule [391-3-17-.02](#);
- (x) For any shipment or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this section, conduct an investigation in accordance with (13)(i)12.; and
- (xi) Notify the shipper and the Division when any shipment, or any part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

11. The land disposal facility operator shall:

- (i) Acknowledge receipt of the waste within one week of receipt by returning, as a minimum, a signed copy of NRC Form 540 or Equivalent Form to the shipper. The shipper to be notified is the licensee who last possessed the waste and transferred the waste to the operator. If any discrepancy exists between materials listed on the Uniform Low-Level Radioactive Waste Manifest and materials received, copies or electronic transfer of the affected forms must be returned indicating that discrepancy.
- (ii) Maintain copies of all completed manifests and electronically store the information until the Director terminates the license; and
- (iii) Notify the shipper and the Division when any shipment, or part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

12. Any shipments or part of a shipment for which acknowledgment is not received within the times set forth in this section must:
 - (i) Be investigated by the shipper if the shipper has not received notification or receipt within 20 days after transfer; and
 - (ii) Be traced and reported. The investigation shall include tracing the shipment and filing a report with the Division. Each licensee who conducts a trace investigation shall file a written report with the Division within two weeks of completion of the investigation.

13. The requirements of this section are to:
 - (i) Control transfers of low-level radioactive waste by any waste generator, waste collector, or waste processor licensee, as defined in this section, who ships low-level waste either directly, or indirectly through a waste collector or waste processor, to a licensed low-level waste land disposal facility (as defined in 10 CFR 61);
 - (ii) Establish a manifest tracking system; and
 - (iii) Supplement existing requirements concerning transfers and recordkeeping for those wastes.

14. Any licensee shipping radioactive waste intended for ultimate disposal at a licensed land disposal facility must document the information required on NRC's Uniform Low-Level Radioactive Waste Manifest and transfer this recorded manifest information to the intended consignee in accordance with (13)(i)1. through 12. of this Rule.

15. Each shipment manifest must include a certification by the waste generator as specified in (13)(i)7. of this Rule.

16. Each person involved in the transfer for disposal and disposal of waste, including the waste generator, waste collector, waste processor, and disposal facility operator, shall comply with the requirements specified in (13)(i)8. of this Rule

17. Any licensee shipping byproduct material as defined in paragraphs (3) and (4) of the definition of *Byproduct material* set forth in Rule .01(2)(o), intended for ultimate disposal at a land disposal facility licensed under 10 CFR 61 must document the information required on the NRC's Uniform Low-Level Radioactive Waste Manifest and transfer this recorded

manifest information to the intended consignee in accordance with (13)(i)1. through 12. of this Rule.

(j) Compliance with Environmental and Health Protection Regulations. Nothing in this Rule relieves the licensee from complying with other applicable Federal, State, and local regulations governing other toxic or hazardous properties of materials that may be disposed of pursuant to this Rule.

(k) Disposal of Certain Byproduct Material

1. Licensed material as defined in Rule .01(2)(o)3. and 4. of the definition of Byproduct material may be disposed of in accordance with .03(13) of this chapter, even though it is not defined as low-level radioactive waste. Therefore, any licensed byproduct material being disposed of at a facility, or transferred for ultimate disposal at a facility licensed under .03(13) of this chapter, must meet the requirements of Rule .03(13)(i).
2. A licensee may dispose of byproduct material, as defined in Rule .01(2)(o)3. and 4. of the definition of Byproduct, at a disposal facility authorized to dispose of such material in accordance with any Federal or State solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act of 2005.

(14) **Records**

(a) General Provisions.

1. Each licensee shall use the units of Curie, rad, rem, and dpm, including multiples and subdivisions and shall clearly indicate the units of all quantities on records required by this Rule.
2. In the records required by this rule, the licensee may record quantities in SI units in parentheses following each of the units specified in (14)(a)1. However, all quantities must be recorded as stated in (14)(a)1.
3. The licensee shall make a clear distinction among the quantities entered on the records required by this Rule, such as total effective dose equivalent, shallow dose equivalent, lens dose equivalent, deep dose equivalent, total organ dose equivalent, or committed effective dose equivalent.

(b) Records of Radiation Protection Programs.

1. Each licensee shall maintain records of the Radiation Protection Program required pursuant to (4) of this Rule, including:

- (i) The provisions of the Program; and
 - (ii) Audits and other reviews of Program content and implementation.
 - 2. The licensee shall retain the records required by (14)(b)1.(i) of this Rule until the Director terminates each pertinent license requiring the record. The licensee shall retain each of the records required by (14)(b)1.(ii) of this Rule for three years after the record is made.
- (c) Records of Surveys.
- 1. Each licensee shall maintain records showing the results of surveys and calibrations required by (8)(a) and (12)(f)2. of this Rule. The licensee shall retain each of these records for three years after the record is made.
 - 2. The licensee shall retain each of the following records until the Director terminates each pertinent license requiring the record:
 - (i) Records of the results of surveys to determine the dose from external sources of radiation used, in the absence of or in combination with individual monitoring data, in the assessment of individual dose equivalents;
 - (ii) Records of the results of measurements and calculations used to determine individual intakes of radioactive material and used in the assessment of internal dose;
 - (iii) Records showing the results of air sampling, surveys, and bioassays required pursuant to (10)(d)1.(iii)(I) and (II) of this Rule; and
 - (iv) Records of the results of measurements and calculations used to evaluate the release of radioactive effluents to the environment.
 - 3. Upon termination of the license, the licensee shall permanently store records on Division Form "Occupational Radiation Exposure History" or equivalent or shall make provision with the Division for their transfer to the Division.
- (d) Records of Tests for Leakage or Contamination of Sealed Sources. Records of tests for leakage or contamination of sealed sources required by (6) of this Rule shall be kept in units of microcuries or becquerels and maintained for inspection by the Division for three years after the record is made.
- (e) Records of Prior Occupational Dose.

1. The licensee shall retain the records of prior occupational dose and of exposure history as specified in (5)(e) of this Rule on Division Form "Occupational Radiation Exposure History" or equivalent until the Director terminates each pertinent license requiring this record. The licensee shall retain records used in preparing Division Form "Occupational Radiation Exposure History" for three years after the record is made.
2. Upon termination of the license, the licensee shall permanently store records on Division Form "Occupational Radiation Exposure History" or equivalent or shall make provision with the Division for their transfer to the Division.

(f) Records of Planned Special Exposures.

1. For each use of the provisions of (5)(e) of this Rule for planned special exposures, the licensee shall maintain records that describe:
 - (i) The exceptional circumstances requiring the use of a planned special exposure;
 - (ii) The name of the management official who authorized the planned special exposure and a copy of the signed authorization;
 - (iii) What actions were necessary;
 - (iv) Why the actions were necessary;
 - (v) What precautions were taken to assure that doses were maintained ALARA;
 - (vi) What individual and collective doses were expected to result; and
 - (vii) The doses actually received in the planned special exposure.
2. The licensee shall retain the records until the Director terminates each pertinent license requiring these records.
3. Upon termination of the license, the licensee shall permanently store records on Division Form "Occupational Radiation Exposure History" or equivalent or shall make provision with the Division for their transfer to the Division.

(g) Records of Individual Monitoring Results.

1. Record-keeping Requirement. Each licensee shall maintain records of doses received by all individuals for whom monitoring was required

pursuant to (8)(b) of this Rule and records of doses received during planned special exposures, accidents, and emergency conditions. Assessments of dose equivalent and records made using units in effect before January 1, 1994, need not be changed. These records shall include when applicable:

- (i) The deep dose equivalent to the whole body, lens dose equivalent, shallow dose equivalent to the skin, and shallow dose equivalent to the extremities;
 - (ii) The estimated intake of radionuclides (see (5)(b) of this Rule);
 - (iii) The committed effective dose equivalent assigned to the intake of radionuclides;
 - (iv) The specific information used to calculate the committed effective dose equivalent pursuant to (5)(d)3. of this Rule;
 - (v) The total effective dose equivalent when required by (5)(b) of this Rule; and
 - (vi) The total of the deep dose equivalent and the committed dose to the organ receiving the highest total dose.
2. Record-keeping Frequency. The licensee shall make entries of the records specified in (14)(g)1. of this Rule at intervals not to exceed one year.
 3. Record-keeping Format. The licensee shall maintain the records specified in (14)(g)1. of this Rule on Division Form "Occupational Radiation Exposure History" in accordance with the instructions or in clear and legible records containing all the information required by the Division Form.
 4. The licensee shall maintain the records of dose to an embryo/fetus with the records of dose to the declared pregnant woman. The declaration of pregnancy, including the estimated date of conception, shall also be kept on file, but may be maintained separately from the dose records.
 5. The licensee shall retain each required form or record until the Director terminates each pertinent license requiring the record.
 6. Upon termination of the license, the licensee shall permanently store records on Division Form "Occupational Radiation Exposure History" or equivalent or shall make provisions with the Division for their transfer to the Division.

7. Privacy Protection. The records required pursuant to (14)(g) should be protected from public disclosure because of their personal privacy nature.

(h) Records of Dose to Individual Members of the Public.

1. Each licensee shall maintain records sufficient to demonstrate compliance with the dose limit for individual members of the public. See (5)(i) of this Rule.
2. The licensee shall retain the records required by (14)(h)1. of this Rule until the Director terminates each pertinent license requiring the record.

(i) Records of Waste Disposal.

1. Each licensee shall maintain records of the disposal of licensed materials made pursuant to (13)(b), (13)(c), (13)(d), (13)(e), and (13)(k) of this Rule and of disposal of licensed materials by burial in soil, including burials authorized before July 12, 1982.⁶
2. The licensee shall retain the records required by (14)(i) of this Rule until the Director terminates each pertinent license requiring the record.

(j) Records of Testing Entry Control Devices for Very High Radiation Areas.

1. Each licensee shall maintain records of tests made on entry control devices for very high radiation areas. These records must include the date, time, and results of each such test of function.
2. The licensee shall retain the records required by (14)(j)1. of this Rule for three years after the record is made.

(k) Form of Records. Each record required by this Rule shall be legible throughout the specified retention period. The record shall be the original or a reproduced copy or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period; or the record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records, such as letters, drawings, and specifications, shall include all pertinent information, such as stamps, initials, and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.

(15) Reports

(a) Reports of Stolen, Lost, or Missing Licensed Sources of Radiation.

1. Telephone. Each licensee shall report to the Division by telephone as follows:
 - (i) Immediately after its occurrence becomes known to the licensee, stolen, lost, or missing licensed radioactive material in an aggregate quantity equal to or greater than 1,000 times the quantity specified in Appendix C of 10 CFR 20, under such circumstances that it appears to the licensee that an exposure could result to individuals in unrestricted areas; or
 - (ii) Within 30 days after its occurrence becomes known to the licensee, lost, stolen or missing licensed radioactive material in an aggregate quantity greater than ten times the quantity specified in Appendix C of 10 CFR 20 that is still missing.

2. Written. Each licensee who is required to make a report pursuant to (15)(a)1. of this Rule shall, within 30 days after making the telephone report, make a written report to the Division setting forth the following information:
 - (i) A description of the licensed source of radiation involved, including, for radioactive material, the kind, quantity, and chemical and physical form;
 - (ii) A description of the circumstances under which the loss or theft occurred;
 - (iii) A statement of disposition, or probable disposition, of the licensed material or source of radiation involved;
 - (iv) Exposures of individuals to radiation, the circumstances under which the exposures occurred, and the possible total effective dose equivalent to persons in unrestricted areas;
 - (v) Actions that have been taken, or will be taken, to recover the source of radiation; and
 - (vi) Procedures or measures that have been, or will be, adopted to ensure against a recurrence of the loss or theft of licensed sources of radiation.

3. Subsequent to filing the written report, the licensee shall also report additional substantive information on the loss or theft within 30 days after the licensee learns of such information.

4. The licensee shall prepare any report filed with the Division pursuant to (15)(a) of this Rule so that names of individuals who may have received exposure to radiation are stated in a separate and detachable portion of the report.

(b) Notification of Incidents.

1. Immediate notification. Each licensee shall:

- (i) Notify the Division as soon as possible but not later than four hours after the discovery of an event that prevents immediate protective actions necessary to avoid exposures to radiation or radioactive materials that could exceed regulatory limits or releases of licensed material that could exceed regulatory limits (events may include fires, explosions, toxic gas releases, etc.).

- (ii) Notwithstanding any other requirements for notification, immediately report, to the Division, any event involving radioactive material or sources of radiation possessed by the licensee that may have caused or threatens to cause any of the following conditions:

- (I) An individual to receive:

- I. A total effective dose equivalent of 25 rem (0.25 Sv) or more; or

- II. An lens dose equivalent of 75 rem (0.75 Sv) or more; or

- III. A shallow-dose equivalent to the skin or extremities of 250 rad (2.5 Gy) or more; or

- (II) The release of radioactive material, inside or outside a restricted area, so that had an individual been present for 24 hours, the individual could have received an intake five times the annual limit on intake (the provisions of this paragraph do not apply to locations where personnel are not normally stationed during routine operations, such as hot cells or process enclosures).

2. Twenty-four hour report. Each licensee shall notify the Division within 24 hours after the discovery of any of the following events involving licensed material:

- (i) An unplanned contamination event that:
 - (I) Requires access to the contaminated area, by workers or the public, to be restricted for more than 24 hours by imposing additional radiological controls or by prohibiting entry into the area;
 - (II) Involves a quantity of material greater than five times the lowest annual limit on intake specified in Appendix B of 10 CFR Part 20 for the material; and
 - (III) Has access to the area restricted for a reason other than to allow isotopes with a half-life of less than 24 hours to decay prior to decontamination.

- (ii) An event in which equipment is disabled or fails to function as designed when:
 - (I) The equipment is required by regulation or license condition to prevent releases exceeding regulatory limits, to prevent exposures to radiation and radioactive materials exceeding regulatory limits, or to mitigate the consequences of an accident;
 - (II) The equipment is required to be available and operable when it is disabled or fails to function; and
 - (III) No redundant equipment is available and operable to perform the required safety function.

- (iii) An event that requires unplanned medical treatment at a medical facility of an individual with spreadable radioactive contamination on the individual's clothing or body;

- (iv) An unplanned fire or explosion damaging any licensed material or any device, container, or equipment containing licensed material when:
 - (I) The quantity of material involved is greater than five times the lowest annual limit on intake specified in Appendix B of 10 CFR Part 20 for the material; and
 - (II) The damage affects the integrity of the licensed material or its container.

- (v) Notwithstanding any other requirements for notification, within 24 hours report, to the Division any event involving radioactive material or sources of radiation possessed by the licensee that may have caused or threatens to cause any of the following conditions:
 - (I) An individual to receive, in a period of 24 hours:
 - I. A total effective dose equivalent exceeding 5 rems (0.05 Sv); or
 - II. A lens dose equivalent exceeding 15 rems (0.15 Sv); or
 - III. A shallow-dose equivalent to the skin or extremities exceeding 50 rems (0.5 Sv); or
 - (II) The release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake in excess of one occupational annual limit on intake (the provisions of this paragraph do not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures).

3. Preparation and submission of reports. Reports made by licensees in response to the requirements of this section must be made as follows:

- (i) Licensees shall make reports required by (15)(b)(1.) and (2.) by telephone to the Division. To the extent that the information is available at the time of notification, the information provided in these must include:
 - (I) The caller's name, position title, and call back telephone number;
 - (II) Date, time, and the exact location of the event;
 - (III) Description of the event, including:
 - I. Radiological or chemical hazards involved, including isotopes, quantities, and chemical and physical form of any material released;
 - II. Actual or potential health and safety consequences to the workers, the public, and the environment,

including relevant chemical and radiation data for actual personnel exposures to radiation or radioactive materials or hazardous chemicals produced from licensed materials (e.g., level of radiation exposure, concentration of chemicals, and duration of exposure);

III. The sequence of occurrences leading to the event, including degradation or failure of structures, systems, equipment, components, and activities of personnel relied on to prevent potential accidents or mitigate their consequences; and

IV. Whether the remaining structures, systems, equipment, components, and activities of personnel relied on to prevent potential accidents or mitigate their consequences are available and reliable to perform their function;

(IV) External conditions affecting the event;

(V) Additional actions taken by the licensee in response to the event;

(VI) Status of the event (e.g., whether the event is on-going or was terminated);

(VII) Current and planned site status, including any declared emergency class;

(VIII) Notifications, related to the event, that were made or are planned to any local, State, or other Federal agencies;

(IX) Status of any press releases, related to the event, that were made or are planned.

(ii) Written report. Each licensee who makes a report required by (15)(b)(1) and (2) shall submit a written follow-up report within 30 days of the initial report. Written reports prepared pursuant to other regulations may be submitted to fulfill this requirement if the reports contain all of the necessary information and the appropriate distribution is made. These written reports must be sent to the

Radioactive Materials Program, 4244 International Parkway, Suite 120, Atlanta, Georgia 30354 or current mailing address. The written report must include the following:

- (I) Complete applicable information required by (b)(3)(i);
 - (II) A description of the event, including the probable cause, all factors that contributed to the event, and the manufacturer and model number (if applicable) of any equipment that failed or malfunctioned; and
 - (III) Corrective actions taken or planned to prevent occurrence of similar or identical events in the future and the results of any evaluations or assessments.
4. The licensee shall prepare each report filed with the Division pursuant to (15)(b) of this Rule so that names of individuals who have received exposure to sources of radiation are stated in a separate and detachable portion of the report.
5. Licensees shall make the required by (15)(b)1. and 2. of this Rule by telephone to the Division, and shall confirm the initial contact by telegram, mailgram, or facsimile to the Division.
6. The provisions of (15)(b) of this Rule do not apply to doses that result from planned special exposures, provided such doses are within the limits for planned special exposures and are reported pursuant to (15)(d) of this Rule.
- (c) Reports of Exposures, Radiation Levels, and Concentrations of Radioactive Material Exceeding the Limits.
1. Reportable Events. In addition to the notification required by (15)(b) of this Rule, each licensee shall submit a written report to the Division within 30 days after learning of any of the following occurrences:
- (i) Incidents for which notification is required by (15)(b) of this Rule;
 - (ii) Doses in excess of any of the following:
 - (I) The occupational dose limits for adults in (5)(a) of this Rule;
 - (II) The occupational dose limits for a minor in (5)(g) of this Rule;

- (III) The limits for an embryo/fetus of a declared pregnant woman in (5)(h) of this Rule;
 - (IV) The limits for an individual member of the public in (5)(i) of this Rule;
 - (V) Any applicable limit in the license; or
 - (VI) The ALARA constraints for air emissions established under .03(4)(d).
- (iii) Levels of radiation or concentrations of radioactive material in:
- (I) A restricted area in excess of applicable limits in the license; or
 - (II) An unrestricted area in excess of ten times the applicable limit set forth in this Rule or in the license, whether or not the exposure of any individual in excess of the limits in (5)(i) of this Rule is involved; or
- (iv) For licensees subject to the provisions of U.S. Environmental Protection Agency's generally applicable environmental radiation standards in 40 CFR 190, levels of radiation or releases of radioactive material in excess of those standards, or of license conditions related to those standards⁷.

2. Contents of Reports.

- (i) Each report required by (15)(c)1. of this Rule shall describe the extent of exposure of individuals to radiation and radioactive material, including, as appropriate:
 - (I) Estimates of each individual's dose;
 - (II) The levels of radiation and concentrations of radioactive material involved;
 - (III) The cause of the elevated exposures, dose rates, or concentrations; and
 - (IV) Corrective steps taken or planned to ensure against a recurrence, including the schedule for achieving conformance with applicable limits, ALARA constraints,

generally applicable environmental standards, and associated license conditions.

- (ii) Each report filed pursuant to (14)(c)1. of this Rule shall include for each occupationally exposed individual: the name, Social Security account number, and date of birth. With respect to the limit for the embryo/fetus in (5)(h) of this Rule, the identification should be that of the declared pregnant woman. The report shall be prepared so that this information is stated in a separate and detachable portion of the report.
3. All licensees who make pursuant to (15)(c)1. of this Rule shall submit the report in writing to the Division.
- (d) Reports of Planned Special Exposures. The licensee shall submit a written report to the Division within 30 days following any planned special exposure conducted in accordance with (5)(f) of this Rule, informing the Division that a planned special exposure was conducted and indicating the date that the planned special exposure occurred and the information required by (14)(g) of this Rule.
 - (e) Reports to Individuals of Exceeding Dose Limits. When a licensee is required, pursuant to the provisions of (15)(c), (15)(d), or (15)(f), to report to the Division any exposure of an identified occupationally exposed individual, or an identified member of the public to radiation or radioactive material, the licensee shall also provide a copy of the report submitted to the Division to the individual. This report must be transmitted at a time no later than the transmittal to the Division.
 - (f) Notifications and Reports to Individuals.
 - 1. Requirements for notification and to individuals of exposure to radiation or radioactive material are specified in Rule [391-3-17-.07\(4\)](#).
 - 2. When a licensee is required pursuant to (15)(c) of this Rule to report to the Division any exposure of an identified occupationally exposed individual or identified member of the public to radiation or radioactive material, the licensee shall also provide the individual a report on his or her exposure data included in the report to the Division. This report shall be transmitted at a time not later than the transmittal to the Division, and shall comply with the provisions of Rule [391-3-17-.07\(4\)\(a\)](#).
 - (g) Reports of Leaking or Contaminated Sealed Sources. If the test for leakage or contamination required pursuant to Rule .03(6) indicates that the sealed source is leaking or contaminated, a report of the test shall be filed within five days with

the Division describing the equipment involved, the test results, and the corrective action taken.

- (h) [Reserve]
- (i) **Serialization of Nationally Tracked Sources.**
 - 1. Each licensee who manufactures a nationally tracked source after February 6, 2007 shall assign a unique serial number to each nationally tracked source. Serial numbers must be composed only of alpha-numeric characters.
- (j) **Reports of Transactions Involving Nationally Tracked Sources.**
 - 1. Each licensee who manufactures, transfers, receives, disassembles, or disposes of a nationally-tracked source shall complete and submit a National Source Tracking Transaction Report as specified below for each type of transaction.
 - 2. Each licensee who manufactures a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:
 - (i) The name, address, and license number of the reporting licensee;
 - (ii) The name of the individual preparing the report;
 - (iii) The manufacturer, model, and serial number of the source;
 - (iv) The radioactive material in the source;
 - (v) The initial source strength in becquerels (curies) at the time of manufacture; and
 - (vi) The manufacture date of the source.
 - 3. Each licensee that transfers a nationally tracked source to another person shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:
 - (i) The name, address, and license number of the reporting licensee;
 - (ii) The name of the individual preparing the report;
 - (iii) The name and license number of the recipient facility and shipping address;

- (iv) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the source;
 - (v) The radioactive material in the source;
 - (vi) The initial or current source strength in becquerels (curies);
 - (vii) The date for which the source strength is reported;
 - (viii) The shipping date;
 - (ix) The estimated arrival date; and
 - (x) For nationally tracked sources transferred as waste under a Uniform Low-Level Radioactive Waste Manifest, the waste manifest number and the container identification of the container with the nationally tracked source.
4. Each licensee that receives a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:
- (i) The name, address, and license number of the reporting licensee;
 - (ii) The name of the individual preparing the report;
 - (iii) The name, address and license number of the person that provided the source;
 - (iv) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the source;
 - (v) The radioactive material in the source;
 - (vi) The initial or current source strength in becquerels (curies);
 - (vii) The date for which the source strength is reported;
 - (viii) The date of receipt; and
 - (ix) For material received under a Uniform Low-Level Radioactive Waste Manifest, the waste manifest number and the container identification with the nationally tracked source.

5. Each licensee that disassembles a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:
 - (i) The name, address, and license number of the reporting licensee;
 - (ii) The name of the individual preparing the report;
 - (iii) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the source;
 - (iv) The radioactive material in the source;
 - (v) The initial or current source strength in becquerels (curies);
 - (vi) The date for which the source strength is reported; and
 - (vii) The disassemble date of the source.

6. Each licensee who disposes a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:
 - (i) The name, address, and license number of the reporting licensee;
 - (ii) The name of the individual preparing the report;
 - (iii) The waste manifest number;
 - (iv) The container identification with the nationally tracked source;
 - (v) The date of disposal; and
 - (vi) The method of disposal.

7. The reports discussed in (15)(j)2.-6. above must be submitted by the close of the next business day after the transaction. A single report may be submitted for multiple sources and transactions. The reports must be submitted to the National Source Tracking System by using:
 - (i) The on-line National Source Tracking System;
 - (ii) Electronically using a computer-readable format;
 - (iii) By facsimile;

(iv) By mail to the address on the National Sources Tracking Transaction Report Form (NRC Form 748); or

(v) By telephone with follow-up by facsimile or mail.

8. Each licensee shall correct any error in previously filed reports or file a new report for any missed transaction within five (5) business days of the discovery of the error or missed transaction. Such errors may be detected by a variety of methods such as administrative reviews or by physical inventories required by regulation. In addition, each licensee shall reconcile the inventory of nationally tracked sources possessed by the licensee against that licensee's data in the National Source Tracking System. The reconciliation must be conducted during the month of January in each year. The reconciliation process must include resolving any discrepancies between the National Source Tracking System and the actual inventory by filing the reports identified in (15)(j)2-6 of this section. By January 31 of each year, each licensee must submit to the National Source Tracking System confirmation that the data in the National Source Tracking System is correct.
9. Each licensee that possesses Category 1 nationally tracked sources shall report its initial inventory of Category 1 nationally tracked sources to the National Source Tracking System by January 31, 2009. Each licensee that possesses Category 2 nationally tracked sources shall report its initial inventory of Category 2 nationally tracked sources to the National Source Tracking System by January 31, 2009. Nationally Tracked Source Thresholds are presented in Table 3 of 391-3-17-.03(15). The information may be submitted by using any of the methods identified in (15)(j)7. The initial inventory report must include the following information:
- (i) The name, address, and license number of the reporting licensee;
 - (ii) The name of the individual preparing the report;
 - (iii) The manufacturer, model, and serial number of each nationally tracked source or, if not available, other information to uniquely identify the source;
 - (iv) The radioactive material in the source;
 - (v) The initial or current source strength in becquerels (curies); and
 - (vi) The date for which the source strength is reported.

Table 3: Nationally Tracked Source Thresholds

Radioactive Material	Category 1 (TBq)	Category 1 (Ci)	Category 2 (TBq)	Category 2 (Ci)
Actinium-227	20	540	0.2	5.4
Americium-241	60	1,600	0.6	16
Americium-241/Beryllium	60	1,600	0.6	16
Californium-252	20	540	0.2	5.4
Cobalt-60	30	810	0.3	8.1
Curium-244	50	1,400	0.5	14
Cesium-137	100	2,700	1	27
Gadolinium-153	1,000	27,000	10	270
Iridium-192	80	2,200	0.8	22
Plutonium-238	60	1,600	0.6	16
Plutonium-238/Beryllium	60	1,600	0.6	16
Polonium-210	60	1,600	0.6	16
Promethium-147	40,000	1,100,000	400	11,000
Radium-226	40	1,100	0.4	11
Selenium-75	200	5,400	2	54
Strontium-90	1,000	27,000	10	270
Thorium-228	20	540	0.2	5.4
Thorium-229	20	540	0.2	5.4
Thulium-170	20,000	540,000	200	5,400
Ytterbium-169	300	8,100	3	81

The Terabecquerel (TBq) values are the regulatory standard. The Curie (Ci) values specified are obtained by converting from the TBq value. The Curie values are provided for practical usefulness only and are rounded after conversion.

(16) Exemptions and Additional Requirements

- (a) Vacating Premises. Each specific licensee shall, no less than 30 days before vacating or relinquishing possession or control of premises which may have been contaminated with radioactive material as a result of his activities, notify the Division in writing of his intent to vacate. When deemed necessary by the Division, the licensee shall decontaminate the premises in such a manner as the Division may specify.
- (b) Orders. The Director may, by order, impose upon any licensee such requirements, issued in furtherance of this rule, as it deems appropriate or necessary to protect health or minimize danger to life or property.

¹ For very high doses received at high dose rates, units of absorbed dose, Gray and rad, are appropriate, rather than units of dose equivalent, Sievert and rem.

² The National Council on Radiation Protection and Measurements recommended in NCRP Report No. 91 (June 1, 1987) that no more than 0.05 rem (0.5 mSv) to the embryo/fetus be received in any one month.

³ All of the occupational doses in .03(5)(a) continue to be applicable to the declared pregnant worker as long as the embryo/fetus dose limit is not exceeded.

⁴ Labeled with a Radioactive White I, Yellow II, or Yellow III label as specified in U.S. Department of Transportation (DOT) regulations, 49 CFR 172.403-172.440.

⁵ Labeling of packages containing radioactive materials is required by the U.S. Department of Transportation (DOT) if the amount and type of radioactive material exceeds the limits for an excepted quantity or article as defined and limited by U.S. Department of Transportation (DOT) regulations [49 CFR 173.403\(m\) and \(w\)](#) and [173.421](#) -.424.

⁶ A previous Rule, .03(5)(d), permitted burial of small quantities of licensed materials in soil before July 12, 1982, without specific Division authorization.

⁷ For purposes of these Regulations, the U.S. Environmental Protection Agency Standards apply only to source material mills and nuclear power plants.

Rule 391-3-17-.04. Special Radiation Safety Requirements for Industrial Radiographic Operations.

(1) Purpose.

The provisions of this Rule establish radiation safety requirements and certification procedures for persons utilizing radioactive materials for industrial radiography. Each licensee and certificate holder is responsible for ensuring compliance with these Rules, his license conditions, and Orders of the Director. Each licensee and certificate holder is also responsible for ensuring that persons performing activities under a license comply with the Rules, license conditions, and Orders of the Director.

(2) Scope.

(a) The provisions of this Rule are in addition to and not a substitution for the other requirements of this Chapter. The provisions of this Rule apply to all licensees who use radioactive materials for industrial radiography; provided, however, that nothing in this Rule shall apply to the use of radioactive materials in the healing arts.

(b) The licensee shall inform the Division within three days of work to be performed at temporary job sites within the State of Georgia. If the licensee was not given three days notice for a particular job site the licensee shall provide notification to the Division prior to starting work at the site. The following information is required in the notification: the location of the job site; the employing company; a point of contact for the employing company; the dates of the job; and the starting and ending times on the job site.

(3) Definitions. The definitions set forth for certain terms in Rule [391-3-17-.01](#) are applicable to those terms as used in this Rule. The following additional definitions also apply:

(a) "Annual refresher safety training" means a review conducted or provided by the licensee for its employees on radiation safety aspects of industrial radiography. The review shall include, as a minimum, any results of internal inspections, new procedures or equipment, new or revised regulations, and accidents or errors that

have been observed. The review shall also provide opportunities for employees to ask safety questions.

- (b) "ANSI" means American National Standards Institute.
- (c) "Associated equipment" means equipment that is used in conjunction with a radiographic exposure device to make radiographic exposures that drives, guides, or comes in contact with the source. (e.g., guide tube, control tube, control (drive) cable, removable source stop, "J" tube and collimator when used as an exposure head.)
- (d) "Cabinet radiography" means industrial radiography conducted in an enclosure or cabinet so shielded that radiation levels at every location on the exterior meet the conditions specified in Rule [391-3-17-.03\(5\)\(i\)](#).
- (e) "Certifying entity" means an independent certifying organization meeting the requirements in Appendix A of this Rule or an Agreement State regulatory program meeting the requirements in Appendix A, Parts II and III of this Rule.
- (f) "Collimator" means a device used to limit the size, shape, and direction of the primary beam of radiation.
- (g) "Control cable" means the cable that is connected to the source assembly and used to drive the source to and from the exposure location.
- (h) "Control drive mechanism" means a device that enables the source assembly to be moved into and out of the exposure device.
- (i) "Control tube" means a protective sheath for guiding the control cable. The control tube connects the control drive mechanism to the radiographic exposure device.
- (j) "Enclosed radiography" means industrial radiography conducted in an enclosed cabinet or room and includes cabinet radiography and shielded room radiography.
- (k) "Exposure head" means a device that locates the gamma radiography sealed source in the selected working position. An exposure head is also known as a source stop.
- (l) "Field station" means a facility from which sources of radiation may be stored or used and from which equipment is dispatched.
- (m) "Guide tube" means a flexible or rigid tube, or "J" tube, for guiding the source assembly and the attached control cable from the exposure device to the exposure head. The guide tube may also include the connections necessary for attachment to the exposure device and to the exposure head.

- (n) "Hands-on experience" means experience in all of those areas considered to be directly involved in the radiography process.
- (o) "Independent certifying organization" means an independent organization that meets all of the criteria of Appendix A of this Rule.
- (p) "Industrial radiography" means the examination of the macroscopic structure of materials by nondestructive methods using sources of ionizing radiation to produce radiographic images.
- (q) "Lay-barge radiography" means industrial radiography performed on any water vessel used for laying pipe.
- (r) "Offshore platform radiography" means industrial radiography conducted from a platform over a body of water.
- (s) "Permanent radiographic installation" means a shielded installation or structure designed or intended for radiography and in which radiography is regularly performed.
- (t) "Personal supervision" means guidance and instruction provided to a radiographer's assistant by a radiographer who is present at the site, in visual contact with the radiographer's assistant while the radiographer's assistant is using radioactive material, and in such proximity that immediate assistance can be given if required.
- (u) "Pigtail" see "Source assembly".
- (v) "Pill" see "Sealed source".
- (w) "Practical examination" means a demonstration through application of the safety rules and principles in industrial radiography including use of all procedures and equipment to be used by radiographic personnel.
- (x) "Radiation Safety Officer" means an individual named by the licensee who has a knowledge of, responsibility for, and authority to impose appropriate radiation protection rules, standards, and practices on behalf of the licensee and who meets the requirements of (15) of this Rule.
- (y) "Radiographer" means any individual who performs or who, in attendance at the site where radioactive materials are being used, personally supervises industrial radiographic operations and who is responsible to the licensee for assuring compliance with the requirements of this Chapter and all license conditions.

- (z) "Radiographer certification" means written approval received from a certifying entity stating that an individual has satisfactorily met the radiation safety, testing, and experience criteria in (16) of this rule.
- (aa) "Radiographer's assistant" means any individual who under the direct supervision of a radiographer, uses radiographic exposure devices, radioactive materials, related handling tools, or radiation survey instruments in industrial radiography.
- (bb) "Radiographic exposure device" means any instrument containing a sealed source fastened or contained therein, in which the sealed source or shielding thereof may be moved, or otherwise changed, from a shielded to an unshielded position for purposes of making a radiographic exposure (e.g. camera).
- (cc) "Radiographic operations" means all activities performed with a radiographic exposure device. Activities include using, transporting except by common or contract carriers, or storing at a temporary job site, performing surveys to confirm the adequacy of boundaries, setting up equipment, and any activity inside restricted area boundaries.
- (dd) "Residential location" means any area where structures in which people live or lodge are located, and the grounds on which such structures are located including, but not limited to, houses, apartments, condominiums, and garages.
- (ee) "S-tube" means a tube through which the radioactive source travels when inside a radiographic exposure device.
- (ff) "Sealed source" means any radioactive material that is encased in a capsule designed to prevent leakage or escape of the radioactive material.
- (gg) "Shielded position" means the location within the radiographic exposure device or storage container which, by manufacturer's design, is the proper location for storage of the sealed source.
- (hh) "Shielded-room radiography" means industrial radiography conducted in a room shielded so that radiation levels at every location on the exterior meet the limitations specified in Rule [391-3-17-.03\(5\)\(i\)](#) of this Chapter.
- (ii) "Source assembly" means an assembly that consists of the sealed source and a connector that attaches the source to the control cable. The source assembly may include a ball stop to secure the source in the shielded position.
- (jj) "Source changer" means a device designed and used for replacement of sealed sources in radiographic exposure devices, including those source changers also used for transporting and storage of sealed sources.

- (kk) "Storage area" means any location, facility, or vehicle which is used to store, to transport, or to secure a radiographic exposure device, a storage container, or a sealed source when it is not in use and which is locked or has a physical barrier to prevent accidental exposure, tampering with, or unauthorized removal of the device, container, or source.
 - (ll) "Storage container" means a shielded device in which sealed sources are secured and stored.
 - (mm) "Temporary job site" means any location where radiographic operations are performed and where sources of radiation may be stored other than the location(s) listed specifically on the license.
 - (nn) "Transport container" means a package that is designed to provide radiation safety and security when sealed sources are transported and meets all applicable requirements of the U.S. Department of Transportation.
 - (oo) "Underwater radiography" means radiographic operations performed when the radiographic exposure device or radiation machine and/or related equipment are beneath the surface of the water.
- (4) **Licensing Requirements for Industrial Radiography Operations.** The Director will approve an application for a specific license for the use of licensed material if the applicant meets the following requirements:
- (a) The applicant satisfies the general requirements specified in Rule [391-3-17-.02\(8\)](#), as applicable, and any special requirements contained in this Rule;
 - (b) The applicant submits an adequate program for training radiographers and radiographer's assistants that meets the requirements of .04(16):
 1. After April 18, 2004, the applicant need not describe the initial training and examination program for radiographers in the subjects outlined in .04(16)(g).
 2. The applicant may affirm that all individuals acting as industrial radiographers will be certified in radiation safety by a certifying entity before commencing duty as radiographers. This affirmation substitutes for a description of its initial training and examination program for radiographers in the subjects outlined in .04(16)(g).
 - (c) The applicant submits procedures for verifying and documenting the certification status of radiographers and for ensuring that the certification of individuals acting as radiographers remains valid;

- (d) The applicant submits written operating and emergency procedures as described in .04(17);
- (e) The applicant submits a description of a program for inspections of the job performance of each radiographer and radiographer's assistant at intervals not to exceed six months as described in .04(16)(e);
- (f) The applicant submits a description of the applicant's overall organizational structure as it applies to the radiation safety responsibilities in industrial radiography, including specified delegation of authority and responsibility;
- (g) The applicant submits the qualifications of the individual(s) designated as the radiation safety officer as described in .04(15)(a);
- (h) If an applicant intends to perform leak testing of sealed sources or exposure devices containing depleted uranium (DU) shielding, the applicant must describe the procedures for performing the test. The description must include the:
 - 1. Methods of collecting the samples;
 - 2. Instruments to be used;
 - 3. Methods of analyzing the samples; and
 - 4. Qualifications of the individual who analyzes the samples.
- (i) If the applicant intends to perform calibrations of survey instruments and alarming ratemeters, the applicant must describe methods to be used and the experience of the person(s) who will perform the calibrations. All calibrations must be performed according to the procedures described and at the intervals prescribed in .04(8)(b) and .04(19)(g)4.;
- (j) The applicant identifies and describes the location(s) of all field stations and permanent radiographic installations;
- (k) The applicant identifies the location(s) where all records required by this and other Rules in this Chapter will be maintained;
- (l) If a license application includes underwater radiography the applicant must submit a description of:
 - 1. Radiation safety procedures and radiographer responsibilities unique to the performance of underwater radiography;
 - 2. Radiographic equipment and radiation safety equipment unique to underwater radiography; and

3. Methods for gas-tight encapsulation of equipment; and
- (m) If an application includes offshore platform and/or lay-barge radiography the applicant must submit a description of:
1. Transport procedures for radioactive material to be used in industrial radiographic operations;
 2. Storage facilities for radioactive material; and
 3. Methods for restricting access to radiation areas.
- (5) **Performance Requirements for Radiography Equipment.** Equipment used in industrial radiographic operations must meet the following minimum criteria:
- (a) Each radiographic exposure device, source assembly or sealed source and all associated equipment must meet the requirements specified in American National Standards Institute (ANSI) N432-1980 "Radiological Safety for the Design and Construction of Apparatus for Gamma Radiography," (published as NBS Handbook 136, issued January 1981). (This publication may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402 and from the American National Standards Institute, Inc., 25 West 43rd Street, New York, New York 10036, Telephone (212) 642-4900. Copies of the document are available for inspection at the Department of Natural Resources, Environmental Protection Division, Radioactive Materials Program, 4244 International Parkway, Suite 120, Atlanta, Georgia 30354 or current address.)
 - (b) In addition to the requirements specified in (5)(a) of this Rule, the following requirements apply to radiographic exposure devices, source changers, source assemblies or sealed sources:
 1. Each radiographic exposure device must have attached to it by the user, a durable, legible, clearly visible label bearing the:
 - (i) Chemical symbol and mass number of the radionuclide in the device;
 - (ii) Activity and the date on which this activity was last measured;
 - (iii) Model number (or product code) and serial number of the sealed source;
 - (iv) Manufacturer of the sealed source; and
 - (v) Licensee's name, address, and telephone number.

2. Radiographic exposure devices intended for use as Type B transport containers must meet the applicable requirements of 10 CFR Part 71.
 3. Modification of any radiographic exposure devices, source changers, source assemblies and associated equipment is prohibited, unless the design of any replacement component, including source holder, source assembly, controls or guide tubes would not compromise the design safety features of the system.
- (c) In addition to the requirements specified in .04(5)(a) and (5)(b) the following requirements apply to radiographic exposure devices, source assemblies and associated equipment that allow the source to be moved out of the device for routine operation or to source changers:
1. The coupling between the source assembly and the control cable must be designed in such a manner that the source assembly will not become disconnected if cranked outside the guide tube. The coupling must be such that it cannot be unintentionally disconnected under normal and reasonably foreseeable abnormal conditions.
 2. The device must automatically secure the source assembly when it is cranked back into the fully shielded position within the device. This securing system may only be released by means of a deliberate operation on the exposure device.
 3. The outlet fittings, lock box, and drive cable fittings on each radiographic exposure device must be equipped with safety plugs or covers which must be installed during storage and transportation to protect the source assembly from water, mud, sand or other foreign matter.
 4. Each sealed source or source assembly must have attached to it or engraved in it, a durable, legible, visible label with the words: "DANGER - RADIOACTIVE." The label must not interfere with the safe operation of the exposure device or associated equipment.
 5. The guide tube must be able to withstand a crushing test that closely approximates the crushing forces that are likely to be encountered during use, and be able to withstand a kinking resistance test that closely approximates the kinking forces likely to be encountered during use.
 6. Guide tubes must be used when moving the source out of the device.
 7. An exposure head or similar device designed to prevent the source assembly from passing out of the end of the guide tube must be attached to the outermost end of the guide tube during radiographic operations.

8. The guide tube exposure head connection must be able to withstand the tensile test for control units specified in ANSI N432-1980.
 9. Source changers must provide a system for ensuring that the source will not be accidentally withdrawn from the changer when connecting or disconnecting the drive cable to or from a source assembly.
- (d) All radiographic exposure devices and associated equipment in use after January 10, 1996 must comply with the requirements of .04(5).
 - (e) Notwithstanding (5)(a) equipment used in industrial radiographic operations need not comply with section 8.9.2(c) of the Endurance Test in ANSI N432-1980 if the prototype equipment has been tested using a torque value representative of the torque that an individual using the radiography equipment can realistically exert on the lever or crankshaft of the drive mechanism.
- (6) **Equipment Control. Limits on External Radiation Levels From Storage Containers and Source Changers.** The maximum exposure rate limits for storage containers and source changers are 2 millisieverts (200 mrem) per hour at any exterior surface, and 0.1 millisieverts (10 mrem) per hour at one meter from any exterior surface with the sealed source in the shielded position.
- (7) **Locking and Storage of Radiographic Devices, Storage Containers, and Source Changers.**
- (a) Each radiographic exposure device shall be provided with a lock or outer locked container designed to prevent unauthorized or accidental removal of a sealed source from its shielded position. The exposure device and/or its container shall be kept locked¹ at all times except when not under the direct surveillance of a radiographer or a radiographer's assistant except at a permanent radiographic installations as stated in .04(21).
 - (b) Each sealed source storage container and source changer shall be provided with a lock or outer locked container designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. Storage containers and source changers must be and kept locked when containing sealed sources except when the container is under the direct surveillance of a radiographer or radiographer's assistant.
 - (c) Radiographic exposure devices, source changers, and storage containers, prior to being moved from one location to another and also prior to being secured at a given location, shall be locked and surveyed to assure that the sealed source is in the shielded position.

- (d) During radiographic operations the sealed source shall be secured in its shielded position by locking the exposure device or securing the remote control each time the sealed source is returned to its shielded position. A survey shall be performed to determine that the sealed source is in the shielded position.
- (e) Storage Precautions.
 - 1. Locked radiographic exposure devices and storage containers shall be physically secured to prevent tampering or removal by unauthorized personnel.
 - 2. Radiographic exposure devices, source changers, or transport containers that contain radioactive material may not be stored in residential locations. This Rule does not apply to storage of radioactive material in a vehicle in transit for use at temporary job sites, if the licensee complies with (7)(e)3. of this Rule and if the vehicle does not constitute a permanent storage location as described in (7)(e)4. of this Rule.
 - 3. If a vehicle is to be used for storage of radioactive material, a vehicle survey shall be performed after securing the radioactive material in the vehicle and before transport to ensure that radiation levels do not exceed the limits specified in Rule .03(5(i) of this Chapter at the exterior surface of the vehicle.
 - (i) If this vehicle is parked in a residential location a 360° survey of the vehicle must be performed before leaving the vehicle unattended to ensure that radiation levels do not exceed the limits specified in Rule .03(5(i) of this Chapter.
 - (ii) An unattended vehicle shall have the name, local address, and local telephone number of the person responsible for the vehicle, posted on it in a conspicuous place on the vehicle.
 - 4. A storage or use location is considered permanent if radioactive material is stored at the location for more than 90 days and any one or more of the following applies to the location:
 - (i) Telephone service is established by the licensee;
 - (ii) Industrial radiographic services are advertised for or from the location;
 - (iii) Industrial radiographic operations are conducted at other sites due to arrangements made from the location.

(8) Radiation Survey Instruments.

- (a) The licensee shall maintain sufficient calibrated and operable radiation survey instruments to make physical radiation surveys as required by this Rule and Rule [391-3-17-.03\(7\)\(a\)1. and 2.](#) Instrumentation required herein shall have a range such that two milliroentgens per hour through one Roentgen per hour can be measured.
- (b) The licensee shall have each radiation survey instrument required under .04(4)(d) calibrated:
 - 1. By a person licensed or certified by the Director, another Agreement State, or the U.S. Nuclear Regulatory Commission to perform such service;
 - 2. At energies appropriate for the licensee's use;
 - 3. At intervals not to exceed six months and after each instrument servicing, except for battery changes;
 - 4. To demonstrate an accuracy within ± 20 percent; and
 - 5. At two points located approximately $1/3$ and $2/3$ of full-scale on each scale for linear scale instruments; at midrange of each decade, and at two points of at least one decade for logarithmic scale instruments; and at approximate points for digital instruments.
- (c) The licensee shall maintain records of the results of the instrument calibrations in accordance with .04(25).

(9) Leak Testing and Replacement of Sealed Sources.

- (a) The replacement of any sealed source fastened to or contained in a radiographic exposure device and leak testing of any sealed source shall be performed only by persons specially authorized to do so by the Division, the U.S. Nuclear Regulatory Commission, or an Agreement State.
- (b) The opening, repair, or modification of any sealed source shall be performed only by persons specially authorized to do so by the Division, the U.S. Nuclear Regulatory Commission, or an Agreement State.
- (c) Testing and Record keeping Requirements
 - 1. Each licensee who uses a sealed source shall have the source tested for leakage at intervals not to exceed six months. The leak testing of the source must be performed using a method approved by the Division, the U.S. Nuclear Regulatory Commission, or by another Agreement State. The wipe sample should be taken from the nearest accessible point to the sealed source where contamination might accumulate. The wipe sample must be

analyzed for radioactive contamination. The analysis must be capable of detecting the presence of 0.005 microcuries (185 becquerel) of radioactive material on the test sample and must be performed by a person specifically authorized by the Division, the U.S. Nuclear Regulatory Commission, or another Agreement State to perform the analysis.

2. The licensee shall maintain records of the leak test in accordance with .04(26)
3. Unless a sealed source is accompanied by a certificate from a transferor that shows that it has been leak tested within the six months before the transfer, it shall not be used by the licensee until tested for leakage. Sealed sources authorized for storage and not in use do not require leak testing, but must be tested before use or transfer to another person if the interval of storage exceeds six months.
4. Any test conducted pursuant to the requirements of (9)(c)1. and 3. of this Rule which reveals the presence of 0.005 microcuries (185 becquerel) or more of removable radioactive material shall be considered evidence that the sealed source is leaking. The licensee shall immediately withdraw the equipment involved from use and shall cause it to be decontaminated and repaired or to be disposed of in accordance with Division Rules. A report shall be filed, within five (5) days after obtaining results of the test, with the Division, describing the equipment involved, the test results, and the corrective action taken.
5. Each exposure device using depleted uranium (DU) shielding and an "S" tube configuration must be tested for DU contamination at intervals not to exceed 12 months. The analysis must be capable of detecting the presence of 0.005 microcuries (185 becquerel) of radioactive material on the test sample and must be performed by a person specifically authorized by the Division, the U.S. Nuclear Regulatory Commission, or another Agreement State to perform the analysis. Should such testing reveal the presence of DU contamination, the exposure device must be removed from use until an evaluation of the wear of the S-tube has been made. Should the evaluation reveal that the S-tube is worn through, the device may not be used again. DU shielded devices do not have to be tested for DU contamination while not in use and in storage. Before using or transferring such a device, however, the device must be tested for DU contamination, if the interval of storage exceeds 12 months. A record of the DU leak-test must be made in accordance with .04(26).

(10) Quarterly Inventory.

- (a) Each licensee shall conduct a quarterly physical inventory to account for all sealed sources and devices containing depleted uranium received or possessed under the license.
- (b) The licensee shall maintain records of the quarterly inventories in accordance with .04(27)

(11) Inspection and Maintenance of Radiographic Exposure Devices, Transport and Storage Containers, Associated Equipment, Source Changers, and Survey Instruments.

- (a) The licensee shall perform visual and operability checks on survey meters radiographic exposure devices, transport and storage containers, associated equipment and source changers before each day's use, or work shift, to ensure that:
 - 1. The equipment is in good working condition;
 - 2. The sources are adequately shielded; and
 - 3. Required labeling is present.
- (b) Survey instrument operability must be performed using check sources or other appropriate means.
- (c) If equipment problems are found, the equipment must be removed from service until repaired.
- (d) Each licensee shall have written procedures for and perform inspection and routine maintenance of radiographic exposure devices, source changers, associated equipment, transport and storage containers, and survey instruments at intervals not to exceed three months or before the first use thereafter to ensure the proper functioning of components important to safety. If equipment problems are found, the equipment must be removed from service until repaired.
- (e) The licensee's inspection and maintenance program must include procedures to assure that Type B packages are shipped and maintained in accordance with the certificate of compliance or other approval.
- (f) Records of equipment problems and of any maintenance performed under .04(11)(c) and (d) shall be maintained in accordance with .04(29).

(12) Permanent Radiographic Installations.

- (a) Each entrance that is used for personnel access to the high radiation area in a permanent radiographic installation shall have either:

1. An entrance control of the types described in Rule [391-3-17-.03\(9\)\(a\)1.](#), or [.03\(9\)\(a\)2.](#) that causes the radiation level upon entry into the area to be reduced; or
 2. Both visible and audible warning signals to warn of the presence of radiation. The visible signal shall be activated by radiation whenever the source is exposed. The audible signal shall be actuated when an attempt is made to enter the installation while the source is exposed.
- (b) The alarm system shall be tested for proper operation with a radiation source each day before the installation is used for radiographic operations. The test must include a check of both the visible and audible signals. Entrance control devices that reduce the radiation level upon entry as designated in .04(12)(a) must be tested monthly. If an entrance control device or alarm system is operating improperly, it shall be immediately labeled as defective and repaired within seven calendar days. The facility may continue to be used during this seven day period, provided the licensee implements the continuous surveillance requirements of .04(21) and uses an alarming ratemeter. Test records for entrance controls and audible and visual alarms and records of repairs must be maintained in accordance with .04(30).

(13) Labeling, Storage, and Transportation.

- (a) The licensee may not use a source changer or a container to store radioactive material unless the source changer or the storage container has securely attached to it a durable, legible, and clearly visible label bearing the standard trefoil radiation caution symbol conventional colors, i.e., magenta, purple or black on a yellow background, having a minimum diameter of 25 mm, and the wording:

CAUTION *

RADIOACTIVE MATERIAL

NOTIFY CIVIL AUTHORITIES [or " NAME OF COMPANY"]

* --- or "DANGER"

- (b) The licensee may not transport radioactive material unless the material is packaged, and the package is labeled, marked, and accompanied with appropriate shipping papers in accordance with regulations set out in Rule [391-3-17-.06.](#)
- (c) Radiographic exposure devices, source changers, and storage containers, must be physically secured to prevent tampering or removal by unauthorized personnel. The licensee shall store radioactive material in a manner that will minimize danger from explosion or fire.

- (d) The licensee shall lock and physically secure the transport package containing radioactive material in the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal.
- (e) The licensee's name and city or town where the main business office is located shall be prominently displayed with a durable, clearly visible label(s) on both sides of all vehicles used to transport radioactive material for temporary job site use.

(14) Conducting Industrial Radiographic Operations.

- (a) Whenever radiography is performed at a location other than a permanent radiographic installation, the radiographer must be accompanied by at least one other qualified radiographer or an individual who has at a minimum met the requirements of .04(16)(c). The additional qualified individual shall observe the operations and be capable of providing immediate assistance to prevent unauthorized entry. Radiography may not be performed if only one qualified individual is present.
- (b) All radiographic operations conducted at locations of use authorized on the license must be conducted in a permanent radiographic installation, unless otherwise specifically authorized by the Division.
- (c) Except when physically impossible, collimators shall be used in industrial radiographic operations that use radiographic exposure devices that allow the source to be moved out of the device.
- (d) A licensee may conduct lay-barge, offshore platform, or underwater radiography only if procedures have been approved by the Division.

(15) Radiation Safety Officer. A Radiation Safety Officer (RSO) shall be designated on every industrial radiography license issued by the Director. The Radiation Safety Officer shall ensure that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation of the licensee's program.

- (a) The minimum qualifications, training, and experience for radiation safety officers for industrial radiography are as follows:
 1. Completion of the training and testing requirements of .04(16);
 2. 2,000 hours of hands-on experience as a qualified radiographer in industrial radiographic operations; and
 3. Formal training in the establishment and maintenance of a radiation protection program.

- (b) The Division will consider alternatives when the radiation safety officer has appropriate training and experience in the field of ionizing radiation, and in addition, has adequate formal training with respect to the establishment and maintenance of a radiation safety protection program.
- (c) The specified duties of the RSO include, but are not limited to, the following:
 1. Establishing and overseeing all operating, emergency, and ALARA procedures, and to review them regularly to ensure that the procedures are current and conform with these Rules;
 2. Overseeing and approving all phases of the training program for radiographic personnel so that appropriate and effective radiation protection practices are taught;
 3. Ensuring that required radiation surveys and leak tests are performed and documented in accordance with these Rules, including any corrective measures when levels of radiation exceed established limits;
 4. Ensuring that personnel monitoring devices are calibrated and used properly by occupationally-exposed personnel, that records are kept of the monitoring results, and that timely notifications are made as required by this Chapter;
 5. Ensuring that any required interlock switches and warning signals are functioning and that radiation signs, ropes, and barriers are properly posted and positioned;
 6. Investigating and reporting to the Division each known or suspected case of radiation exposure to an individual, or radiation level detected, in excess of limits established by this Chapter and each theft or loss of source(s) of radiation, to determine the cause and to take steps to prevent its recurrence;
 7. Having a thorough knowledge of management policies and administrative procedures of the licensee;
 8. Assuming control and having the authority to institute corrective actions including shutdown of operations when necessary in emergency situations or unsafe conditions;
 9. Maintaining records as required by this Chapter;
 10. Ensuring the proper storing, labeling, transport, and use of exposure devices and sources of radiation;

11. Ensuring that inventory and inspection and maintenance programs are performed in accordance with (10) and (11) of this Rule;
12. Ensuring that personnel are complying with this Chapter, the conditions of the license, and the operating and emergency procedures of the licensee.

(16) Training.

- (a) The licensee shall not permit any individual to act as a radiographer until such individual has received at least 40 hours of training in the subjects outlined in .04(16)g, in addition to on the job training consisting of hands- on experience under the supervision of a radiographer and is certified through a radiographer certification program by a certifying entity in accordance with the criteria specified in Appendix A of this Rule. The on the job training shall include a minimum of 2 months (320 hours) of active participation in the performance of industrial radiography utilizing radioactive material.
- (b) In addition, the licensee may not permit any individual to act as a radiographer until the individual:
 1. Has received copies of and instruction in the requirements described in the regulations contained in this Rule, and applicable sections of Rules 391-1-7-.03, .06, and .07, in the license under which the radiographer will perform industrial radiography, and the licensee's operating and emergency procedures;
 2. Has demonstrated an understanding of items in .04(16)(b)1. by successful completion of a written or oral examination;
 3. Has received training in the use of the licensee's radiographic exposure devices, sealed sources, in the daily inspection of devices and associated equipment, and in the use of radiation survey instruments; and
 4. Has demonstrated understanding of the use of the equipment described in .04(16)(b)3. by successful completion of a practical examination.
- (c) The licensee may not permit any individual to act as a radiographer's assistant until the individual:
 1. Has received copies of and instruction in the requirements described in these regulations contained in this Rule, and applicable sections of Rules 391-3-17-03, .06, and .07, in the license under which the radiographer's assistant will perform industrial radiography, and the licensee's operating and emergency procedures;

2. Has demonstrated an understanding of items in .04(16)(c)1. by successful completion of a written or oral examination;
 3. Under the personal supervision of a radiographer, has received training in the use of the licensee's radiographic exposure devices and sealed sources, in the daily inspection of devices and associated equipment, and in the use of radiation survey instruments; and
 4. Has demonstrated understanding of the use of the equipment described in .04(16)(c)3. by successful completion of a practical examination.
- (d) The licensee shall provide annual refresher safety training for each radiographer and radiographer's assistant at intervals not to exceed 12 months.
- (e) Except as provided in .04(16)(e)4., the radiation safety officer or designee shall conduct an inspection program of the job performance of each radiographer and radiographer's assistant to ensure that the Division's Rules, the license, and operating and emergency procedures are followed. The inspection program must:
1. Include observation of the performance of each radiographer and radiographer's assistant during an actual industrial radiographic operation, at intervals not to exceed six months; and
 2. Provide that, if a radiographer or a radiographer's assistant has not participated in an industrial radiographic operation for more than six months since the last inspection, the radiographer must demonstrate knowledge of the training requirements of .04(16)(b)3. and the radiographer's assistant must demonstrate knowledge of the training requirements of .04(16)(c)3. by a practical examination before these individuals can next participate in a radiographic operation.
 3. The Division may consider alternative in those situations where the individual serves as both radiographer and radiation safety officer.
 4. In those operations where a single individual serves as both radiographer and radiation safety officer, and performs all radiography operations, an inspection program is not required.
- (f) The licensee shall maintain records of the above training to include certification documents, written, oral and practical examinations, refresher safety training and inspections of job performance in accordance with .04(31).
- (g) The licensee shall include the following subjects required in .04(16)(a):
1. Fundamentals of Radiation Safety including:

- (i) Characteristics of gamma and x-radiation.
- (ii) Units of radiation dose (rem or Sievert) and quantity of radioactivity (Curie or becquerel).
- (iii) Significance of radiation dose:
 - (I) Radiation protection standards;
 - (II) Biological effects of radiation dose; and
 - (III) Case histories of radiography accidents.
- (iv) Levels of radiation from sources of radiation.
- (v) Methods of controlling radiation dose:
 - (I) Working time;
 - (II) Working distances; and
 - (III) Shielding.

2. Radiation Detection Instrumentation including.

- (i) Use of radiation survey instruments:
 - (I) Operation;
 - (II) Calibration; and
 - (III) Limitations.
- (ii) Survey techniques.
- (iii) Use of personnel monitoring equipment including but not limited to:
 - (I) Film badges;
 - (II) Thermoluminescent dosimeters (TLDs);
 - (III) Pocket dosimeters;
 - (IV) Alarm ratemeters; and

(V) Optically stimulated luminescent devices.

3. Radiographic Equipment to be Used including:

- (i) Remote handling equipment.
- (ii) Operation and control of radiographic exposure equipment, remote handling equipment, storage containers, and sealed sources, including pictures or models of source assemblies (pigtailed).
- (iii) Storage control, and disposal of sources of radiation; and transport containers and source changers.
- (iv) Collimators.

4. Inspection and maintenance of equipment.

5. The Requirements of Pertinent Federal and State Regulations.

6. The Licensee's Written Operating and Emergency Procedures.

7. Case histories of accidents in radiography.

(h) Licensees will have one year from the effective date of this rule to comply with the additional training requirements specified in .04(16)(b)1. and .04(16)(c)1.

(17) Operating and Emergency Procedures.

- (a) The operating and emergency procedures of the licensee shall include, as a minimum, instruction in the following:
 - 1. Appropriate handling and use of sources of radiation so that no individual is likely to be exposed to radiation doses in excess of the limits established in Rule [391-3-17-.03](#), "Standards for Protection Against Radiation";
 - 2. Methods and occasions for conducting radiation surveys;
 - 3. Methods for posting and controlling access to radiographic areas;
 - 4. Methods and occasions for locking and securing sealed sources;
 - 5. Personnel monitoring and the use of personnel monitoring equipment;

6. Transporting equipment to field locations, including packing of radiographic exposure devices and storage containers in the vehicles, placarding of vehicles when required, and control of the equipment during transportation as described in Rule .06 of this Chapter;
7. The inspection, maintenance and operability checks of radiographic exposure devices, survey instruments, alarming ratemeters, transport containers, and storage containers.
8. Steps that must be taken immediately by radiography personnel in the event a pocket dosimeter is found to be off-scale or an alarming ratemeter alarms unexpectedly;
9. The procedure(s) for identifying and reporting defects and noncompliance, as required by .04(37);
10. The procedure for notifying proper persons in the event of an accident or incident;
11. Minimizing exposure of individuals in the event of an accident or incident, including a source disconnect, a transport accident, or loss of a source of radiation;
12. Source recovery procedure if licensee will perform source recoveries; and
13. Maintenance of records.

(b) The licensee shall maintain copies of current operating and emergency procedures in accordance with .04(32) and .04(36).

(18) Supervision of Radiographer's Assistants.

- (a) Whenever a radiographer's assistant uses radiographic exposure devices, associated equipment, or a sealed source, or conducts radiation surveys required by (20)(b) and (c) of this Rule to determine that the sealed source has returned to the shielded position after an exposure, he shall be under the personal supervision of a radiographer. The personal supervision shall include:
 1. The radiographer's physical presence at the site where the sealed sources are being used;
 2. The ability of the radiographer to give immediate assistance if required; and
 3. The radiographer's direct observation of the assistant's performance of the operations referred to in .04(18) of this Rule.

(19) Personnel Monitoring Control.

- (a) The licensee shall not permit any individual to act as a radiographer or a radiographer's assistant unless, at all times during radiographic operations, each individual wears, on the trunk of the body, a combination of direct-reading dosimeter, an alarming ratemeter, and a personal monitoring device. At permanent radiographic installations where other appropriate alarming or warning devices are in routine use the use of an alarming ratemeter is not required.
1. Pocket dosimeters shall have a range from zero to 200 milliroentgens (2 millisieverts) and shall be recharged daily or at the start of each shift. Electronic personal dosimeters may only be used in place of ion-chamber pocket dosimeters.
 2. Each personal monitoring device shall be assigned to and worn by only one individual.
 3. Personal monitoring devices must be exchanged at periods not to exceed one month. After replacement each personal monitoring device must be returned to the supplier for processing within 14 calendar days of the end of the monitoring period, or as soon as practicable. If circumstances exist which make it impossible to return each personal monitoring device within 14 calendar days, such circumstances must be documented and available for review by the Division.
- (b) Direct reading dosimeters such as pocket dosimeters or electronic personal dosimeters shall be read and exposures recorded at the beginning and end of each shift, and records must be maintained in accordance with .04(33).
- (c) Pocket dosimeters or electronic personal dosimeters shall be checked at periods not to exceed one year for correct response to radiation, and records must be maintained in accordance with .04(33). Acceptable dosimeters shall read within plus or minus 20 percent of the true radiation exposure.
- (d) If an individual's pocket dosimeter is found to be off-scale, or the electronic personal dosimeter reads greater than 200 mrem (2 millisieverts), the personal monitoring device must be sent for processing within 24 hours. For personnel dosimeters that do not require processing, evaluation of the dosimeter may be started within 24 hours. In addition, the individual may not resume work associated with the use of sources of radiation until a determination of the individual's radiation exposure has been made. This determination must be made by the radiation safety officer or the radiation safety officer's designee. The results of this determination must be included in the records maintained in accordance with .04(33).

- (e) If a personal monitoring device is lost or damaged, the worker shall cease work immediately until a replacement personal monitoring device is provided and the exposure is calculated for the time period from issuance to loss or damage of the personal monitoring device. The results of the calculated exposure and the time period for which the personal monitoring device was lost or damaged must be included in the records maintained in accordance with .04(33).
- (f) Reports received from personal monitoring devices shall be retained in accordance with .04(33).
- (g) Each alarm ratemeter must:
 1. Be checked to ensure that the alarm functions properly prior to use at the start of each shift;
 2. Emit an alarm signal at a preset dose-rate of 500 mr (5 mSv) per hour; with an accuracy of plus or minus 20 percent of the true radiation dose rate.
 3. Require special means to change the preset alarm function; and
 4. Be calibrated at periods not to exceed one year for correct response to radiation. The licensee shall maintain records of alarming ratemeter calibrations in accordance with .04(33).

(20) **Radiation Surveys.** The license shall:

- (a) Conduct all surveys with a calibrated and operable radiation survey instrument that meets the requirements of .04(8);
- (b) Conduct a survey of the radiographic exposure device and the guide tube after each exposure when approaching the device or the guide tube. The survey shall be to determine that the sealed source has been returned to its shielded position before exchanging films, repositioning the exposure head, or dismantling equipment.
- (c) Conduct a survey of the radiographic exposure device whenever the source is exchanged and whenever a radiographic exposure device is placed in a storage area as defined in .04(3), to ensure that the sealed source is in its shielded position; and
- (d) Maintain records in accordance with .04(34).

(21) **Surveillance.** During each radiographic operation, the radiographer shall ensure continuous direct visual surveillance of the operation to protect against unauthorized entry into a radiation area or a high radiation area, as defined in Rule .01 of this Chapter,

except at permanent radiographic installations where all entryways are locked and the requirements of .04(12) are met.

- (22) **Posting.** Notwithstanding any provisions of Rule [391-3-17-.03\(12\)\(c\)](#) all areas in which industrial radiography is being performed shall be conspicuously posted as required by Rule [391-3-17-.03\(12\)\(b\)1.](#) and 2.
- (23) **Records for Industrial Radiography.** Each licensee shall maintain a copy of its license, documents incorporated by reference, and amendments to each of these items until superseded by new documents approved by the Division, or until the Director terminates the license.
- (24) **Records of Receipt and Transfer of Sources of Radiation.**
 - (a) Each licensee shall maintain records showing the receipts and transfers of sealed sources, devices using DU for shielding, and radiation machines, and retain each record for three years after it is made.
 - (b) These records must include the date, the name of the individual making the record, radionuclide, number of curies (becquerels) or mass (for DU), and manufacturer, model, and serial number of each source of radiation and/or device, as appropriate.
- (25) **Records of Radiation Survey Instruments.** Each licensee shall maintain records of the calibrations of its radiation survey instruments that are required under .04(8) and retain each record for three years after it is made.
- (26) **Records of Leak Testing of Sealed Sources and Devices Containing DU.** Each licensee shall maintain records of leak test results for sealed sources and for devices containing DU. The results must be stated in units of microcuries (becquerels). The licensee shall retain each record for three years after it is made or until the source in storage is removed.
- (27) **Records of Quarterly Inventory.**
 - (a) Each licensee shall maintain records of the quarterly inventory of sources of radiation, including devices containing depleted uranium as required by .04(10), and retain each record for three years.
 - (b) The record must include the date of the inventory, name of the individual conducting the inventory, radionuclide, number of curies (becquerels) or mass (for DU) in each device, location of sources of radiation and/or devices, and manufacturer, model, and serial number of each source of radiation and/or device, as appropriate.
- (28) **Utilization Logs.**

- (a) Each licensee shall maintain utilization logs showing for each source of radiation the following information:
 - 1. A description, including the make, model, and serial number the radiographic exposure device, transport, or storage container in which the sealed source is located;
 - 2. The identity and signature of the radiographer to whom assigned;
 - 3. The location and dates of use, including the dates removed and returned to storage; and
 - 4. For permanent radiographic installations, the dates each radiographic exposure device is used.
 - (b) The licensee shall retain the logs required by .04(28)(a) for three years.
- (29) **Records of Inspection and Maintenance of Radiographic Exposure Devices, Transport and Storage Containers, Associated Equipment, Source Changers, and Survey Instruments.**
- (a) Each licensee shall maintain records specified in .04(11) of equipment problems found in daily checks and quarterly inspections of radiation machines, radiographic exposure devices, transport and storage containers, associated equipment, source changers, and survey instruments; and retain each record for three years after it is made.
 - (b) The record must include the date of check or inspection, name of inspector, equipment involved, any problems found, and what repair and/or maintenance, if any, was performed.
- (30) **Records of Alarm System and Entrance Control Checks at Permanent Radiographic Installations.** Each licensee shall maintain records of alarm system and entrance control device tests required by .04(12) and retain each record for three years after it is made.
- (31) **Records Of Training and Certification.** Each licensee shall maintain the following records for three years:
- (a) Records of training of each radiographer and each radiographer's assistant. The record must include radiographer certification documents and verification of certification status, copies of written tests, dates of oral and practical examinations, the names of individuals conducting and receiving the oral and practical examinations, and a list of items tested and the results of the oral and practical examinations; and

- (b) Records of annual refresher safety training and semi-annual inspections of job performance for each radiographer and each radiographer's assistant. The records must list the topics discussed during the refresher safety training, the dates the annual refresher safety training was conducted, and names of the instructors and attendees. For inspections of job performance, the records must also include a list showing the items checked and any non-compliance observed by the radiation safety officer or designee.
- (32) **Copies of Operating and Emergency Procedures.** Each licensee shall maintain a copy of current operating and emergency procedures until the Director terminates the license. Superseded material must be retained for three years after the change is made.
- (33) **Records of Personnel Monitoring.** Each licensee shall maintain the following exposure records specified in .04(19):
- (a) Direct reading dosimeter readings and yearly operability checks required by .04(19)(b) and .04(19)(c) for three years after the record is made;
 - (b) Records of alarming ratemeter calibrations for three years after the record is made;
 - (c) Reports received from the personal dosimeter processor until the Director terminates the license; and
 - (d) Records of estimates of exposures as a result of off-scale personal direct reading dosimeters, or lost or damaged personnel monitoring device, until the Director terminates the license.
- (34) **Records of Radiation Surveys.** Each licensee shall maintain a record of each exposure device survey conducted before the device is placed in storage as specified in .04(20)(c). Each record must be maintained for three years after it is made.
- (35) **Form of Records.** Each record required by these rules must be legible throughout the specified retention period. The record may be the original or a reproduced copy or a microform provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of reproducing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records, such as letters, drawings, and specifications, must include all pertinent information, such as stamps, initials, and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.
- (36) **Location Of Documents and Records.**
- (a) Each licensee shall maintain copies of records required by this Rule and other applicable Rules of this Chapter at the location specified in .04(4)(k).

(b) Each licensee shall also maintain current copies of the following documents and records sufficient to demonstrate compliance at each applicable field station and each temporary job site:

1. The license authorizing the use of sources of radiation;
2. Operating and emergency procedures as required by .04(32);
3. A copy of Rules .02, .03, .04 of this Chapter;
4. Survey records required by .04(34) and Rule .03(8) of this Chapter as applicable for the period of operation at the site;
5. Records of dosimeter readings as required by .04(33);
6. Valid radiographer's identification cards issued by a certifying entity for each radiographer working at the temporary job site or field location;
7. Evidence of the latest instrument calibration of the radiation survey instruments in use at the site as required by .04(25);
8. Utilization logs for each source of radiation dispatched from that location as required by .04(28);
9. Records of equipment problems identified in daily checks of equipment as required by .04(29)(a);
10. Records of alarm system and entrance control checks required by .04(30), if applicable;
11. Evidence of the latest calibrations of alarming ratemeters and operability checks of dosimeters as required by .04(33);
12. The shipping papers for the transportation of radioactive materials required by Rule .06 of this Chapter; and
13. When operating under reciprocity pursuant to Rule [391-3-17-.02\(20\)](#) of this Chapter, a copy of the applicable Agreement State license or Nuclear Regulatory Commission license authorizing the use of sources of radiation.

(37) **Notifications.**

- (a) In addition to the reporting requirements specified in [10CFR 30.50](#) and in Rule 391-3-17.03 of this Chapter, each licensee shall provide a written report to the Division within 30 days of the occurrence of any of the following incidents involving radiographic equipment:

1. Unintentional disconnection of the source assembly from the control cable.
2. Inability to retract the source assembly to its fully shielded position and secure it in this position.
3. Failure of any component, which is critical to safe operation of the device, to properly perform its intended function.

(b) The licensee shall include the following information in each report submitted under (37)(a)1. of this Rule and in each report of overexposure submitted under Rule [391-3-17-.03\(15\)\(c\)](#) which involves failure of safety components of radiography equipment:

1. A description of the equipment problem;
2. Cause of each incident, if known;
3. Name of the manufacturer and model number of equipment involved in the incident;
4. Place, time, and date of the incident;
5. Actions taken to establish normal operations;
6. Corrective actions taken or planned to prevent recurrence; and
7. Qualifications of personnel involved in the incident.

(c) Any licensee conducting radiographic operations or storing sources of radiation at any location not listed on the license for a period in excess of 180 days in a calendar year, shall notify the Division prior to exceeding the 180 days.

(38) **[Reserved]**

(39) **[Reserved]**

(40) **Reciprocity.**

- (a) All reciprocal recognition of licenses by the Director will be granted in accordance with Rule [391-3-17-.02\(20\)](#) of this Chapter.
- (b) Reciprocal recognition by the Director of an individual radiographer certification will be granted provided that:
 1. The individual holds a valid certification in the appropriate category issued by a certifying entity, as defined in .04(3);

2. The requirements and procedures of the certifying entity issuing the certification affords the same or comparable certification standards as those afforded by .04(16)(a);
 3. The applicant presents the certification to the Division prior to entry into the state; and
 4. No escalated enforcement action is pending with the Nuclear Regulatory Commission or in any other state.
- (c) Certified individuals who are granted reciprocity by the Director shall maintain the certification upon which the reciprocal recognition was granted, or prior to the expiration of such certification, shall meet the requirements of .04(16)(a).

(41) Specific Requirements for Radiographic Personnel Performing Industrial Radiography.

- (a) The licensee shall supply the following at the job site:
1. At least one operable, calibrated survey instrument for each exposure device in use;
 2. A current whole body personal dosimeter for each individual;
 3. An operable, calibrated pocket dosimeter with a range of zero to 200 milliroentgens for each person performing radiographic operations;
 4. An operable, calibrated alarm ratemeter with preset dose-rate of 500 mr (5 mSv) per hour for each person performing radiographic operations using a radiographic exposure device; and
 5. The appropriate barrier ropes and signs.
- (b) Each radiographer at a job site shall have on their person a valid certification ID card issued by a certifying entity.
- (c) Industrial radiographic operations shall not be performed if any of the items in .04(41)(a) or .04(41)(b) are not available at the job site or are inoperable.
- (d) Each licensee shall provide as a minimum two-person crews, i.e., two radiographers or a radiographer assistant who is under the personal supervision of a radiographer, when sources of radiation are used at temporary job sites.
- (e) No individual other than a radiographer or a radiographer assistant who is under the personal supervision of a radiographer shall manipulate controls or operate equipment used in industrial radiographic operations.

- (f) During an inspection by the Division, the Division inspector may terminate an operation if any of the items in .04(41)(a) are not available and operable or if the required number of radiographic personnel are not present. Operations shall not be resumed until such conditions are met.
- (g) Special Requirements for Enclosed Radiography. Systems for enclosed radiography designed to allow admittance of individuals shall:
 - 1. Comply with all applicable requirements of this Rule and Rule [391-3-17-.03\(5\)\(i\)](#); and
 - 2. Be evaluated at intervals not to exceed one year to assure compliance with the applicable requirements as specified in .04(41)(g)1. Records of these evaluations shall be maintained for inspection by the Division for a period of two years after the evaluation.
- (h) Prohibitions. Industrial radiography performed with a sealed source which is not fastened to or contained in a radiographic exposure device (fishpole technique) is prohibited unless specifically authorized in a license issued by the Director.

APPENDIX A

I. Requirements for an Independent Certifying Organization.

An independent certifying organization shall:

- 1. Be an organization such as a society or association, whose members participate in, or have an interest in, the field of industrial radiography;
- 2. Make its membership available to the general public nationwide. Membership shall not be restricted because of race, color, religion, sex, age, national origin or disability;
- 3. Have a certification program open to non-members, as well as members;
- 4. Be an incorporated, nationally-recognized organization that is involved in setting national standards of practice within its fields of expertise;
- 5. Have an adequate staff, a viable system for financing its operations, and a policy and decision-making review board;

6. Have a set of written organizational by-laws and policies that provide adequate assurance of lack of conflict of interest and a system for monitoring and enforcing those by-laws and policies;
7. Have a committee, whose members can carry out their responsibilities impartially, to review and approve the certification guidelines and procedures, and to advise the organization's staff in implementing the certification program;
8. Have a committee, whose members can carry out their responsibilities impartially, to review complaints against certified individuals and to determine appropriate sanctions;
9. Have written procedures describing all aspects of its certification program, maintain records of the current status of each individual's certification and the administration of its certification program;
10. Have procedures to ensure that certified individuals are provided due process with respect to the administration of its certification program, including the process of becoming certified and any sanctions imposed against certified individuals;
11. Have procedures for proctoring examinations, including qualifications for proctors. These procedures must ensure that the individuals proctoring each examination are not employed by the same company or corporation (or a wholly-owned subsidiary of such company or corporation) as any of the examinees;
12. Exchange information about certified individuals with the Nuclear Regulatory Commission and other independent certifying organizations and/or Agreement States and allow periodic review of its certification program and related records; and
13. Provide a description to the Nuclear Regulatory Commission of its procedures for choosing examination sites and for providing an appropriate examination environment.

II. Requirements for Certification Programs.

All certification programs must:

1. Require applicants for certification to (a) receive training in the topics set forth in .04(16)(g) or equivalent State or Nuclear

Regulatory Commission regulations, and (b) satisfactorily complete a written examination covering these topics;

2. Require applicants for certification to provide documentation that demonstrates that the applicant has:
 - (a) Received training in the topics set forth in .04(16)(g) or equivalent State or Nuclear Regulatory Commission regulations;
 - (b) Satisfactorily completed a minimum period of on-the-job training as specified in .04(16)(a); and
 - (c) Received verification by a State licensee or a Nuclear Regulatory Commission licensee that the applicant has demonstrated the capability of independently working as a radiographer.
3. Include procedures to ensure that all examination questions are protected from disclosure;
4. Include procedures for denying an application and revoking, suspending, and reinstating a certification;
5. Provide a certification period of not less than three years nor more than five years;
6. Include procedures for renewing certifications and, if the procedures allow renewals without examination, require evidence of recent full-time employment and annual refresher training; and
7. Provide a timely response to inquiries, by telephone or letter, from members of the public, about an individual's certification status.

III. Requirements for Examinations.

All examinations must be:

1. Designed to test an individual's knowledge and understanding of the topics listed in .04(16)(g) or equivalent State or Nuclear Regulatory Commission requirements;
2. Written in a multiple-choice format;

3. Have test items drawn from a question bank containing psychometrically valid questions based on the material in .04(16)(g).

¹ If a keyed lock, the key must be removed at all times.

Rule 391-3-17-.05. Use of Radionuclides in the Healing Arts.

- (1) **Purpose and Scope.** This Rule, 391-3-17-.05, establishes requirements and provisions for the production, preparation, compounding and use of radionuclides in the healing arts and for issuance of licenses authorizing these activities. These requirements and provisions provide for the radiation safety of workers, the general public, patients, and human research subjects. The requirements and provisions of this Rule are in addition to, and not in substitution for, others in these regulations unless specifically exempted. All numbered and lettered references within this Rule refer to parts of this Rule, unless stated otherwise.
- (2) **Definitions.**
 - (a) "Accredited institution," means a teaching facility for nuclear medicine technology or radiation therapy technology whose standards are accepted by the United States Department of Education.
 - (b) "Address of use," means the building or buildings that are identified on the license and where radioactive material may be produced, prepared, received, used, or stored.
 - (c) "Area of use," means a portion of an address of use that has been set aside for the purpose of receiving, using, or storing radioactive material.

- (d) "Authorized medical physicist," means an individual who:
1. Meets the requirements in Rules .05(23)(a) and .05(27); or
 2. Is identified as an authorized medical physicist on a license or equivalent permit issued by the Director, Nuclear Regulatory Commission or Agreement State; or
 3. Is identified as an authorized medical physicist on a permit issued by the Director, Nuclear Regulatory Commission or Agreement State specific license of broad scope that is authorized to permit the use of radioactive material.
- (e) "Authorized nuclear pharmacist," means a pharmacist who:
1. Meets the requirements in Rules .05(24)(a) and .05(27); or
 2. Is identified as an authorized nuclear pharmacist on a license or equivalent permit issued by the Director, Nuclear Regulatory Commission or Agreement State; or
 3. Is identified as an authorized nuclear pharmacist on a permit issued by the Director, Nuclear Regulatory Commission or Agreement State specific license of broad scope that is authorized to permit the use of radioactive material.
- (f) "Authorized user," means a physician, dentist, or podiatrist who:
1. Meets the requirements in Rule .05(27) and .05(43)(a), .05(47)(a), .05(52)(a), .05(53)(a), .05(54)(a), .05(63)(a), .05(66)(a), or .05(84)(a); or
 2. Is identified as an authorized user on a license or equivalent permit issued by the Director, Nuclear Regulatory Commission or Agreement State; or
 3. Is identified as an authorized user on a permit issued by the Director, Nuclear Regulatory Commission or Agreement State specific license of broad scope that is authorized to permit the use of radioactive material.
- (g) "Brachytherapy," means a method of radiation therapy in which plated, embedded, activated, or sealed sources are utilized to deliver a radiation dose at a distance of up to a few centimeters, by surface, intracavitary, intraluminal or interstitial application.
- (h) "Brachytherapy source," means a radioactive source or a manufacturer-assembled source train or a combination of these sources that is designed to deliver a therapeutic dose within a distance of a few centimeters.

- (i) "Client's address," means the address of use or a temporary jobsite for the purpose of providing mobile medical service in accordance with Rule .05(38).
- (j) "Dedicated check source," means a radioactive source that is used to assure the consistent response of a radiation detection or measurement device over several months or years.
- (k) "Dentist," means an individual licensed to engage in the practice dentistry under the Authority of O.C.G.A. [43-11-40](#).
- (l) "Diagnostic clinical procedures manual," means a collection of written procedures that describes each method (and other instructions and precautions) by which the licensee performs diagnostic clinical procedures; where each diagnostic clinical procedure has been approved by the authorized user and includes the radiopharmaceutical, dosage, and route of administration, or in the case of sealed sources for diagnosis, the procedure.
- (m) "High dose-rate remote afterloader," (HDR) means a device that remotely delivers a dose rate in excess of 12 gray (1200 rad) per hour at the treatment site.
- (n) "Low dose-rate remote afterloader," (LDR) means a device that remotely delivers a dose rate of less than or equal to 2 gray (200 rad) per hour at the treatment site.
- (o) "Management," means the chief executive officer or other individual having the authority to manage, direct, or administer the licensee's activities, or those persons' delegate or delegates.
- (p) "Manual brachytherapy," means a type of therapy in which brachytherapy sources are manually applied or inserted.
- (q) "Medical institution," means an organization in which several medical disciplines are practiced.
- (r) "Medical use," means the intentional internal or external administration of radioactive material or the radiation from radioactive material to patients or human research subjects under the supervision of an authorized user.
- (s) "Medium dose-rate remote afterloader," (MDR) means a device that remotely delivers a dose rate of greater than 2 gray (200 rad), but less than, or equal to, 12 gray (1200 rad) per hour at the treatment site.
- (t) "Misadministration," means an event that meets the criteria in Rule .05(115)(a).
- (u) "Mobile medical service," means the transportation of radioactive material or its medical use at the client's address.

- (v) "Nuclear medicine technologist," means an individual who meets the requirements of Rule .05(25)(a) and, is under the supervision of an authorized user, to prepare or administers radioactive drugs to patients or human research subjects, or perform *in vivo* or *in vitro* measurements for medical purposes.
- (w) "Nuclear medicine technology," means the science and art of *in vivo* and *in vitro* detection and measurement of radioactivity and the administration of radioactive drugs to patients or human research subjects for diagnostic and therapeutic purposes.
- (x) "Output," means the exposure rate, dose rate, or a quantity related in a known manner to these rates from a brachytherapy source, or a teletherapy, remote afterloader, or gamma stereotactic radiosurgery unit for a specified set of exposure conditions.
- (y) "Patient intervention," means actions by the patient or human research subject, whether intentional or unintentional, such as dislodging or removing treatment devices or prematurely terminating the administration.
- (z) "Pharmacist," means any individual who is licensed to practice Pharmacy in this State by the Georgia State Board of Pharmacy.
- (aa) "Physician," means any person who is licensed to engage in the practice of medicine under the Authority of O.C.G.A. [43-34-20](#) or the limited practice of medicine under O.C.G.A. [43-35-1](#).
- (bb) "Podiatrist," means an individual licensed by the appropriate authority to practice podiatry in the state of Georgia.
- (cc) "Positron Emission Tomography (PET) radionuclide production facility" is defined as a facility operating a cyclotron or accelerator for the purpose of producing PET radionuclides.
- (dd) "Preceptor," means an individual who provides, directs or verifies training and experience required for an individual to become an authorized user, an authorized medical physicist, an authorized nuclear pharmacist, an Associate Radiation Safety Officer or a Radiation Safety Officer.
- (ee) "Prescribed dosage," means the specified activity or range of activity of radioactive drug as documented:
 - 1. In a written directive; or
 - 2. In accordance with the directions of the authorized user for procedures performed pursuant to Rule .05(41), (44) and (48).

- (ff) "Prescribed dose," means:
1. For gamma stereotactic radiosurgery, the total dose as documented in the written directive;
 2. For teletherapy, the total dose and dose per fraction as documented in the written directive;
 3. For brachytherapy, either the total source strength and exposure time or the total dose, as documented in the written directive; or
 4. For remote brachytherapy afterloaders, the total dose and dose per fraction as documented in the written directive.
- (gg) "Pulsed dose-rate remote afterloader," (PDR) means a special type of remote afterloading device that uses a single source capable of delivering dose rates in the "high dose-rate" range, but:
1. Is approximately one-tenth of the activity of typical high dose-rate remote afterloader sources; and
 2. Is used to simulate the radiobiology of a low dose rate treatment by inserting the source for a given fraction of each hour.
- (hh) "Radiation Safety Officer," means an individual who:
1. Meets the requirements in Rule .05(22)(a) or .05(22)(c)1. And .05(27); or
 2. Is identified as a Radiation Safety Officer on a Nuclear Regulatory Commission or Agreement State license or other equivalent permit or license recognized by the Division for similar types and uses of radioactive material.
- (ii) "Radiation therapist," means an individual who meets the requirements of Rule .05(25)(b) and is under the supervision of an authorized user to perform procedures and apply radiation emitted from sealed radioactive sources to human beings for therapeutic purposes.
- (jj) "Radiation therapy technology," means the science and art of applying radiation emitted from sealed radioactive sources to patients or human research subjects for therapeutic purposes.
- (kk) "Radioactive drug," means any chemical compound containing radioactive material that may be used on or administered to patients or human research subjects as an aid in the diagnosis, treatment, or prevention of disease or other abnormal condition.

- (ll) "Sealed source," means any radioactive material that is encased in a capsule designed to prevent leakage or escape of the radioactive material.
- (mm) "Sealed Source and Device Registry," means the national registry that contains the registration certificates maintained by the Nuclear Regulatory Commission, that summarize the radiation safety information for the sealed sources and devices and describe the licensing and use conditions approved for the product.
- (nn) "Stereotactic radiosurgery," means the use of external radiation in conjunction with a stereotactic guidance device to very precisely deliver a dose to a treatment site.
- (oo) "Structured educational program," means an educational program designed to impart particular knowledge and practical education through interrelated studies and supervised training.
- (pp) "Teletherapy," as used in this Rule, means a method of radiation therapy in which collimated gamma rays are delivered at a distance from the patient or human research subject.
- (qq) "Temporary jobsite," as used in this Rule, means a location where mobile medical services are conducted other than the location(s) of use authorized on the license.
- (rr) "Therapeutic dosage," means a dosage of unsealed radioactive material that is intended to deliver a radiation dose to a patient or human research subject for palliative or curative treatment.
- (ss) "Therapeutic dose," means a radiation dose delivered from a sealed source containing radioactive material to a patient or human research subject for palliative or curative treatment.
- (tt) "Treatment site," means the anatomical description of the tissue intended to receive a radiation dose, as described in a written directive.
- (uu) "Type of use," means use of radioactive material as specified under Rule .05(41), (44), (48), (55), (65), (67) or (85).
- (vv) "Unit dosage," means a dosage that:
1. Is obtained or prepared in accordance with the regulations for uses described in Rule .05(41), (44), (48); and
 2. Is to be administered as a single dosage to a patient or human research subject without any further manipulation of the dosage after it is initially prepared.

(ww) "Written directive," means an authorized user's written order for the administration of radioactive material or radiation from radioactive material to a specific patient or human research subject, as specified in Rule .05(19).

(xx) "Associate Radiation Safety Officer," means an individual who:

1. Meets the requirements in 391-3-17-.05(22) and .05(27); and
2. Is currently identified as an Associate Radiation Safety Officer for the types of use of byproduct material for which the individual has been assigned duties and tasks by the Radiation Safety Officer on:
 - (i) A specific medical use license issued by the Commission or an Agreement State; or
 - (ii) A medical use permit issued by a Commission master material licensee.

(yy) "Ophthalmic physicist," means an individual who:

1. Meets the requirements in 391-3-17-.05(27) and 391-3-17-.05(64)(c)2.; and
2. Is identified as an ophthalmic physicist on a:
 - (i) Specific medical use license issued by the Commission or an Agreement State;
 - (ii) Permit issued by a Commission or Agreement State broad scope medical use licensee;
 - (iii) Medical use permit issued by a Commission master material licensee; or
 - (iv) Permit issued by a Commission master material licensee broad scope medical use permittee.

(3) **Maintenance of Records.** Each record required by Rule .05 must be legible throughout the retention period specified by each Division Rule. The record may be the original, a reproduced copy, or a microform provided that the copy or microform is authenticated by authorized personnel and the microform is capable of producing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records such as letters, drawings, and specifications, must include all pertinent information such as stamps, initials, and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.

(4) **Provisions for Research Involving Human Subjects.** A licensee may conduct research involving human subjects using radioactive material provided:

- (a) That the research is conducted, funded, supported, or regulated by a Federal agency that has implemented the Federal Policy for the Protection of Human Subjects. Otherwise, a licensee shall apply for and receive approval of a specific amendment to its Division license before conducting such research. Both types of licensees shall, at a minimum, obtain informed consent from the human subjects and obtain prior review and approval of the research activities by an "Institutional Review Board" in accordance with the meaning of these terms as defined and described in the Federal Policy for the Protection of Human Subjects;
- (b) The research involving human subjects authorized in .05(4)(a) shall be conducted using radioactive material authorized for medical use in the license; and
- (c) Nothing in Rule .05(4) relieves licensees from complying with the other requirements in Rule .05.

(5) **U.S. Food and Drug Administration, Federal, and State Requirements.** Nothing in Rule .05 relieves the licensee from complying with applicable U.S. Food and Drug Administration, other Federal, and State requirements governing radioactive drugs or devices.

(6) **Implementation.**

- (a) A licensee shall implement the provisions in Rule .05 on July 1, 2003.
- (b) When a requirement in Rule .05 differs from the requirement in an existing license condition, the requirement in Rule .05 shall govern.
- (c) Any existing license condition that is not affected by a requirement in Rule .05 remains in effect until there is a license amendment or license renewal.
- (d) If a license condition exempted a licensee from a provision of Rule .05 on July 1, 2003, it will continue to exempt a licensee from the corresponding provision in Rule .05.
- (e) If a license condition cites provisions in Rule .05 that will be deleted on July 1, 2003, then the license condition remains in effect until there is a license amendment or license renewal that modifies or removes this condition.
- (f) Licensees shall continue to comply with any license condition that requires it to implement procedures required by Rule .05(70), (76), (77) and (78) until there is a license amendment or renewal that modifies the license condition.

(7) **License Required.**

- (a) A person may manufacture, produce, prepare, acquire, receive, possess, use, or transfer radioactive material for medical use only in accordance with a specific license issued by the Director, the Nuclear Regulatory Commission or an Agreement State, or as allowed in Rule .05(7)(b) or (7)(c).
- (b) An individual may receive, possess, use, or transfer radioactive material in accordance with the regulations in Rule .05 under the supervision of an authorized user as provided in Rule .05(18), unless prohibited by license condition.
- (c) An individual may prepare unsealed radioactive material for medical use in accordance with the regulations in Rule .05 under the supervision of an authorized nuclear pharmacist or authorized user as provided in Rule .05(18), unless prohibited by license condition.

(8) Application for License, Amendment, or Renewal.

- (a) An application must be signed by the applicant's or licensee's management.
- (b) An application for a license for medical use of radioactive material as described in Rule .05(41), (44), (48), (55), (65), (67) or (85) must be made by:
 - 1. Filing an original Application for Radioactive Materials License, and
 - 2. Submitting procedures required by sections Rule .05(70), (76), (77), and (78), as applicable.
- (c) A request for a license amendment or renewal must be made by:
 - 1. Submitting an original in letter format.
 - 2. Submitting procedures required by sections Rule .05(70), (76), (77) and (78), as applicable.
- (d) In addition to the requirements in (8)(b) and (8)(c), an application for a license or amendment for medical use of radioactive material as described in (85) of Rule .05 must also include information regarding any radiation safety aspects of the medical use of the material that is not addressed in Rule .05(1) through Rule .05(40), as well as any specific information on:
 - 1. Radiation safety precautions and instructions;
 - 2. Training and experience of proposed users;
 - 3. Methodology for measurement of dosages or doses to be administered to patients or human research subjects; and

4. Calibration, maintenance, and repair of instruments and equipment necessary for radiation safety.
- (e) The applicant or licensee shall also provide any other information requested by the Division in its review of the application.
- (f) An applicant that satisfies the requirements specified in Rule .02(10)(b) may apply for a Type A specific license of broad scope.

(9) Mobile Medical Service Administrative Requirements.

- (a) The Director shall license mobile medical services or clients of such services. The mobile medical service shall be licensed if the service receives, uses or possesses radioactive material. The client of the mobile medical service shall be licensed if the client receives or possesses radioactive material to be used by a mobile medical service.
- (b) Mobile medical service licensees shall obtain a letter signed by the management of each location where services are rendered that authorizes use of radioactive material at the clinic's address of use. This letter shall clearly delineate the authority and responsibility of both the client and the mobile medical service. If the client is licensed, the letter shall document procedures for notification, receipt, storage and documentation of transfer of radioactive material delivered to the client's address for use by the mobile medical service.
- (c) A mobile medical service shall not have radioactive material delivered directly from the manufacturer or the distributor to the client unless the client has a license allowing possession of the radioactive material. Radioactive material delivered to the client shall be received and handled in conformance with the client's license.
- (d) A mobile medical service shall inform the client's management who is on site at each client's address of use at the time that radioactive material is being administered.
- (e) A licensee providing mobile medical services shall retain the letter required in (9)(b) in accordance with Rule .05(97).
- (f) A mobile medical service licensee shall maintain on each mobile unit:
 1. The current operating and emergency procedures;
 2. A copy of the license;
 3. Copies of the letter required by .05(9)(b);

4. Current calibration records for each survey instrument and diagnostic equipment or dose delivery device in use; and
 5. Survey records covering uses associated with the mobile unit during, at a minimum, the preceding 30 calendar days.
- (g) A mobile medical service licensee shall maintain records required by Rules .03 and .05 of this Chapter at a location within the Division's jurisdiction that is:
1. A single address of use:
 - (i) Identified as the records retention location; and
 - (ii) Staffed at all reasonable hours by individual(s) authorized to provide the Division with access for purposes of inspection; or
 2. When no address of use is identified on the license for records retention, the mobile unit:
 - (i) Identified in the license; and
 - (ii) Whose current client's address schedule and location schedule is reported to the Division.
- (10) **License Amendments.** A licensee shall apply for and must receive a license amendment:
- (a) Before it receives, prepares or uses radioactive material for a type of use that is permitted under Rule .05, but that is not authorized on the licensee's current license issued pursuant to Rule .05;
 - (b) Before it permits anyone to work as an authorized user, authorized nuclear pharmacist, or authorized medical physicist under the license, except an individual who is:
 1. For an authorized user, an individual who meets the requirements in Rule .05(27) and (43)(a), Rule .05(47)(a), (52)(a), (53)(a), (54)(a), (63)(a), (64)(a), (66)(a), or (84)(a) or;
 2. For an authorized nuclear pharmacist, an individual who meets the requirements in Rule .05(24)(a) and (27);
 3. For an authorized medical physicist, an individual who meets the requirements in Rule .05(23)(a) and (27);

4. Identified as an authorized user, an authorized nuclear pharmacist, or authorized medical physicist on a Nuclear Regulatory Commission or Agreement State license or other equivalent permit or license recognized by the Division that authorizes the use of radioactive material in medical use or in the practice of nuclear pharmacy, respectively; or
 5. Identified as an authorized user, an authorized nuclear pharmacist, or authorized medical physicist on a permit issued by a Nuclear Regulatory Commission or Agreement State specific licensee of broad scope that is authorized to permit the use of radioactive material in medical use or in the practice of nuclear pharmacy, respectively.
- (c) Before it changes Radiation Safety Officers, except as provided in (15)(c);
 - (d) Before it receives radioactive material in excess of the amount, or in a different physical or chemical form than is authorized on the license;
 - (e) Before it adds to or changes the areas of use identified in the application or on the license, except as specified in (11)(b)4.;
 - (f) Before it changes the address(es) of use identified in the application or on the license;
 - (g) Before it changes statements, representations, and procedures which are incorporated into the license; and
 - (h) Before it releases licensed facilities for unrestricted use.

(11) Notifications.

- (a) A licensee shall provide to the Division a copy of the board certification, the Nuclear Regulatory Commission or Agreement State license, or the permit issued by a licensee of broad scope for each individual no later than 30 days after the date that the licensee permits the individual to work as an authorized user, an authorized nuclear pharmacist or an authorized medical physicist, pursuant to (10)(b).
- (b) A licensee shall notify the Division by letter no later than 30 days after:
 1. A Radiation Safety Officer permanently discontinues performance of duties under the license or has a name change;
 2. The licensee's mailing address changes;

3. The licensee's name changes, but the name change does not constitute a transfer of control of the license as described in Rule .02(13)(b) of these regulations; or
4. The licensee has added to or changed the areas where radioactive material is used in accordance with Rule .05(41) and (44).

(12) **Exemptions Regarding Type A Specific Licenses of Broad Scope.** A licensee possessing a Type A specific license of broad scope for medical use is exempt from:

- (a) The provisions of (8)(d) of these regulations, regarding the need to file an amendment to the license for medical uses of radioactive material, as described in .05(85);
- (b) The provisions of (10)(b) regarding the need to file an amendment before permitting anyone to work as an authorized user, an authorized nuclear pharmacist or an authorized medical physicist under the license;
- (c) The provisions of (10)(e) regarding additions to or changes in the areas of use at the addresses specified in the license;
- (d) The provisions of .05(11)(a) regarding notification to the Division for new authorized users, new authorized nuclear pharmacists and new authorized medical physicists; and
- (e) The provisions of .05(21)(a) regarding suppliers for sealed sources.

(13) **License Issuance.**

- (a) The Director shall issue a license for the medical use of radioactive material if:
 1. The applicant has filed Application for Radioactive Materials License in accordance with the instructions in .05(8);
 2. The applicant has paid any applicable fee;
 3. The applicant meets the requirements of Rule .02 of this Chapter; and
 4. The Director finds the applicant equipped and committed to observe the safety standards established by the Division in these Rules for the protection of the public health and safety.
- (b) The Director shall issue a license for mobile services if the applicant:
 1. Meets the requirements in .05(13)(a); and

2. Assures that individuals to whom radioactive drugs or radiation from implants containing radioactive material will be administered, may be released following treatment in accordance with .05(37).

(14) **Specific Exemptions.** The Director may, upon application of any interested person or upon its own initiative, grant such exemptions from the regulations in Rule .05 as it determines are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest.

General Administrative Requirements

(15) **Authority and Responsibilities for the Radiation Protection Program.**

- (a) In addition to the radiation protection program requirements of Rule .03(4), a licensee's management must approve in writing:
 1. Requests for license application, renewal, or amendments before submittal to the Division;
 2. Any individual before allowing that individual to work as an authorized user, authorized nuclear pharmacist or authorized medical physicist, and
 3. Radiation protection program changes that do not require a license amendment and are permitted under .05(16);
- (b) A licensee's management shall appoint a Radiation Safety Officer, who agrees in writing to be responsible for implementing the radiation protection program. The licensee, through the Radiation Safety Officer, shall ensure that radiation safety activities are being performed in accordance with licensee-approved procedures and regulatory requirements. A licensee's management may appoint, in writing, one or more Associate Radiation Safety Officers to support the Radiation Safety Officer. The Radiation Safety Officer, with written agreement of the licensee's management, must assign the specific duties and tasks to each Associate Radiation Safety Officer. These duties and tasks are restricted to the types of use for which the Associate Radiation Safety Officer is listed on a license. The Radiation Safety Officer may delegate duties and tasks to the Associate Radiation Safety Officer but shall not delegate the authority or responsibilities for implementing the radiation protection program.
- (c) For up to sixty days each year, a licensee may permit an authorized user or an individual qualified to be a radiation safety officer to function as a temporary Radiation Safety Officer and to perform the functions of a Radiation Safety Officer, as provided in .05(15)(e), provided the licensee takes the actions required in .05(15)(b),(d),(e) and (h). A licensee may simultaneously appoint more than one temporary RSO, if needed, to ensure that the licensee has a

temporary RSO that satisfies the requirements to be an RSO for each of the different uses of radioactive material permitted by the license.

- (d) A licensee shall establish in writing the authority, duties, and responsibilities of the Radiation Safety Officer.
- (e) A licensee shall provide the Radiation Safety Officer sufficient authority, organizational freedom, time, resources, and management prerogative, to:
 - 1. Identify radiation safety problems;
 - 2. Initiate, recommend, or provide corrective actions;
 - 3. Stop unsafe operations; and,
 - 4. Verify implementation of corrective actions.
- (f) Licensees that are authorized for two or more different types of radioactive material use under Rule .05(48), (55), (67), and (85), or two or more types of units under Rule .05(67) shall establish a Radiation Safety Committee to oversee all uses of radioactive material permitted by the license. The Committee must include an authorized user of each type of use permitted by the license, the Radiation Safety Officer, a representative of the nursing service, and a representative of management who is neither an authorized user nor a Radiation Safety Officer, and may include other members as the licensee deems appropriate.
- (g) A licensee's Radiation Safety Committee shall meet as necessary, but at a minimum shall meet at intervals not to exceed six months. The licensee shall maintain minutes of each required meeting in accordance with Rule .05(86)(c).
- (h) A licensee shall retain a record of actions taken pursuant to Rule .05(15)(a), (15)(b) and (15)(d) in accordance with Rule .05(86)(a) and (b).

(16) Radiation Protection Program Changes.

- (a) A licensee may revise its radiation protection program without Division approval if:
 - 1. The revision does not require an amendment under Rule .05(10);
 - 2. The revision is in compliance with the regulations and the license;
 - 3. The revision has been reviewed and approved by the Radiation Safety Officer, licensee management and licensee's Radiation Safety Committee (if applicable); and

4. The affected individuals are instructed on the revised program before the changes are implemented.

(b) A licensee shall retain a record of each change in accordance with Rule .05(87).

(17) Duties of Authorized User and Authorized Medical Physicist.

(a) A licensee shall assure that only authorized users for the type of radioactive material use:

1. Prescribe the radiopharmaceutical dosage and/or dose to be administered through the issuance of a written directive or reference to the diagnostic clinical procedures manual;
2. Direct, as specified in Rule .05(18) and (19), or in license conditions, the administration of radioactive material for medical use to patients or human research subjects; and
3. Prepare and administer, or supervise the preparation and administration of radioactive material for medical use, in accordance with Rule .05(7)(b) and (7)(c) and (18).

(b) A licensee shall assure that only authorized medical physicists perform, as applicable:

1. Full calibration measurements as described in Rule .05(73), (74), and (75);
2. Periodic spot checks as described in Rule .05(76), (77), and (78); and
3. Radiation surveys as described in Rule 5(80).

(18) Supervision.

(a) A licensee that permits the receipt, possession, use, or transfer of radioactive material by an individual under the supervision of an authorized user or as allowed by Rule .05(7)(b) shall:

1. In addition to the requirements in Rule .07(3) of this Chapter, instruct the supervised individual in the licensee's written radiation protection procedures, written directive procedures, regulations of Rule .05, and license conditions with respect to the use of radioactive material; and
2. Require the supervised individual to follow the instructions of the supervising authorized user for medical uses of radioactive material, written radiation protection procedures, written directive procedures,

regulations of Rule .05, and license conditions with respect to the medical use of radioactive material.

- (b) A licensee that permits the preparation of radioactive material for medical use by an individual under the supervision of an authorized nuclear pharmacist or physician who is an authorized user, as allowed by Rule .05(7)(c), shall:
 - 1. Instruct the supervised individual in the preparation of radioactive material for medical use, as appropriate to that individual's involvement with radioactive material; and
 - 2. Require the supervised individual to follow the instructions of the supervising authorized user or authorized nuclear pharmacist regarding the preparation of radioactive material for medical use, the written radiation protection procedures, the regulations of Rule .05, and license conditions.
- (c) Unless physical presence is required in other sections of Rule .05, a licensee who permits supervised activities under Rule .05(18)(a) and (18)(b) shall require an authorized user to be immediately available to communicate with the supervised individual, and when a written directive is required, be able to be physically present within one hour of notification; and
- (d) A licensee that permits supervised activities under Rule .05(18)(a) and (18)(b) is responsible for the acts and omissions of the supervised individual.

(19) Written Directives.

- (a) A written directive must be dated and signed by an authorized user prior to administration of I-131 sodium iodide greater than 1.11 megabecquerel (30 μ Ci), any therapeutic dosage of radioactive material or any therapeutic dose of radiation from radioactive material.
 - 1. If, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patient's health, an oral directive will be acceptable, provided that the information contained in the oral directive is documented as soon as possible in writing in the patient's record and a written directive is prepared within 48 hours of the oral directive.
 - 2. A written revision to an existing written directive may be made provided that the revision is dated and signed by an authorized user prior to the administration of the dosage of radioactive drug containing radioactive material, the brachytherapy dose, the gamma stereotactic radiosurgery dose, the teletherapy dose, or the next fractional dose.

3. If, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive will be acceptable, provided that the oral revision is documented as soon as possible in the patient's record and a revised written directive is signed by the authorized user within 48 hours of the oral revision.
- (b) The written directive must contain the patient or human research subject's name and the following:
1. For an administration of a dosage of radioactive drug containing radioactive material, the radioactive drug containing radioactive material, dosage, and route of administration;
 2. For gamma stereotactic radiosurgery, the total dose, treatment site, and number of target coordinate settings per treatment for each anatomically distinct treatment site;
 3. For teletherapy, the total dose, dose per fraction, number of fractions, and treatment site;
 4. For high dose rate remote afterloading brachytherapy, the radionuclide, treatment site, dose per fraction, number of fractions, and total dose;
 5. For all other brachytherapy including LDR, MDR, and PDR:
 - (i) Prior to implantation: treatment site, the radionuclide, and dose; and
 - (ii) After implantation but prior to completion of the procedure: the radioisotope, treatment site, number of sources, and total source strength and exposure time (or, the total dose), and date; or
 6. For permanent implant brachytherapy:
 - (i) Before implantation: The treatment site, the radionuclide, and the total source strength; and
 - (ii) After implantation but before the patient leaves the post-treatment recovery area: The treatment site, the number of sources implanted, the total source strength implanted, and the date.
- (c) The licensee shall retain the written directive in accordance with Rule .05(88).

(20) **Procedures for Administrations Requiring a Written Directive.**

- (a) For any administration requiring a written directive, the licensee shall develop, implement, and maintain written procedures to provide high confidence that:
 - 1. The patient's or human research subject's identity is verified before each administration; and
 - 2. Each administration is in accordance with the written directive.

 - (b) The procedures required by Rule .05(20)(a) must, at a minimum, address the following items that are applicable for the licensee's use of radioactive material:
 - 1. Verifying the identity of the patient or human research subject;
 - 2. Verifying that the specific details of the administration are in accordance with the treatment plan, if applicable, and the written directive;
 - 3. Checking both manual and computer-generated dose calculations;
 - 4. Verifying that any computer-generated dose calculations are correctly transferred into the consoles of therapeutic medical units authorized by Rule .05(67);
 - 5. Determining if a medical event, as defined in Rule .05(115), has occurred; and
 - 6. Determining, for permanent implant brachytherapy, within 60 calendar days from the date the implant was performed, the total source strength administered outside of the treatment site compared to the total source strength documented in the post-implantation portion of the written directive, unless a written justification of patient unavailability is documented.

 - (c) A licensee shall retain a copy of the procedures required under subparagraph (a) in accordance with 391-3-17-.05(20) and (88).
- (21) **Suppliers for Sealed Sources or Devices for Medical Use.** For medical use, a licensee may only use:
- (a) Sealed sources or devices initially manufactured, labeled, packaged, and distributed in accordance with a license issued pursuant to Rule .02 of this Chapter or the equivalent requirements of the Nuclear Regulatory Commission or an Agreement State; or
 - (b) Sealed sources or devices non-commercially transferred from Rule .05 licensee or a Nuclear Regulatory Commission or an Agreement State medical use licensee.

(22) **Training for Radiation Safety Officer.** Except as provided in Rule .05(26), the licensee shall require an individual fulfilling the responsibilities of the Radiation Safety Officer (RSO) or an individual assigned duties and tasks as an Associate Radiation Safety Officer as provided in Rule .05(15) to be an individual who:

(a) Is certified by a specialty board whose certification process includes all of the requirements in Rule. 05(22)(d), and whose certification has been recognized by the Nuclear Regulatory Commission or an Agreement State. (The names of board certifications that have been recognized by the Nuclear Regulatory Commission or an Agreement State will be posted on the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

1.
 - (i) Hold a bachelor's or graduate degree from an accredited college or university in physical science or engineering or biological science with a minimum of 20 college credits in physical science;
 - (ii) Have 5 or more years of professional experience in health physics (graduate training may be substituted for no more than 2 years of the required experience) including at least 3 years in applied health physics; and
 - (iii) Pass an examination administered by diplomates of the specialty board, which evaluates knowledge and competence in radiation physics and instrumentation, radiation protection, mathematics pertaining to the use and measurement of radioactivity, radiation biology, and radiation dosimetry; or
2.
 - (i) Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;
 - (ii) Have 2 years of full-time practical training and/or supervised experience in medical physics:
 - (I) Under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the Nuclear Regulatory Commission or an Agreement State; or
 - (II) In clinical nuclear medicine facilities providing diagnostic and/or therapeutic services under the direction of physicians who meet the requirements for authorized users in Rule .05(26), .05(47) or .05(52); and

- (iii) Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in clinical diagnostic radiological or nuclear medicine physics and in radiation safety; or
- (b) 1. Has completed a structured educational program consisting of both:
- (i) 200 hours of classroom and laboratory training in the following areas:
 - (I) Radiation physics and instrumentation;
 - (II) Radiation protection;
 - (III) Mathematics pertaining to the use and measurement of radioactivity;
 - (IV) Radiation biology; and
 - (V) Radiation dosimetry; and
 - (ii) One year of full-time radiation safety experience under the supervision of the individual identified as the RSO on a Nuclear Regulatory Commission, Agreement State license or permit issued by a Commission master material licensee that authorizes similar type(s) of use(s) of radioactive material. An Associate Radiation Safety Officer may provide supervision for those areas for which the Associate Radiation Safety Officer is authorized on a Nuclear Regulatory Commission, Agreement State license or permit issued by a Commission master material licensee that authorizes similar type(s) of use(s) of radioactive byproduct material. The full-time radiation safety experience must involve the following:
 - (I) Shipping, receiving, and performing related radiation surveys;
 - (II) Using and performing checks for proper operation of dose calibrators, survey meters, and instruments used to measure radionuclides;
 - (III) Securing and controlling radioactive material;
 - (IV) Using administrative controls to avoid mistakes in the administration of radioactive material;

- (V) Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures;
 - (VI) Using emergency procedures to control radioactive material; and
 - (VII) Disposing of radioactive material; or
2. This individual must obtain a written attestation, signed by a preceptor Radiation Safety Officer or Associate Radiation Safety Officer who has experience with the radiation safety aspects of similar types of use of byproduct material for which the individual is seeking approval as a Radiation Safety Officer or an Associate Radiation Safety Officer. The written attestation must state that the individual has satisfactorily completed the requirements in subparagraphs (b)1. and (d) of this section, and is able to independently fulfill the radiation safety-related duties as a Radiation Safety Officer or as an Associate Radiation Safety Officer for a medical use license; or
- (c)
- 1. Is a medical physicist who has been certified by a specialty board whose certification process has been recognized by the Nuclear Regulatory Commission or an Agreement State under Rule .05(23)(a) and has experience in radiation safety for similar types of use of byproduct material for which the licensee is seeking the approval of the individual as Radiation Safety Officer or Associate Radiation Safety Officer and who meets the requirements in .05(22)(d); or
 - 2. Is an authorized user, authorized medical physicist, or authorized nuclear pharmacist identified on a Commission or an Agreement State license, a permit issued by a Commission master material license, a permit issued by a Commission or an Agreement State license broad scope permittee, has experience with the radiation safety aspects of similar types of use of radioactive byproduct material for which the licensee seeks the approval of the individual as the Radiation Safety Officer or Associate Radiation Safety Officer, and meets the requirements in subparagraph .05(22)(d); or
 - 3. Has experience with the radiation safety aspects of the types of use of byproduct material for which the individual is seeking simultaneous approval both as the Radiation Safety Officer and the authorized user on the same new medical use license or new medical use permit issued by a

Commission master material license. The individual must also meet the requirements in subparagraph .05(22)(d).

- (d) Has training in the radiation safety, regulatory issues, and emergency procedures for the types of use for which a licensee seeks approval. This training requirement may be satisfied by completing training that is supervised by a Radiation Safety Officer, an Associate Radiation Safety Officer, authorized medical physicist, authorized nuclear pharmacist, or authorized user, as appropriate, who is authorized for the type(s) of use for which the licensee is seeking approval.

(23) **Training for Authorized Medical Physicist.** Except as provided in Rule .05(26) the licensee shall require the authorized medical physicist to be an individual who:

- (a) Is certified by a specialty board whose certification process includes all of the training and experience requirements in .05(23)(c) and whose certification has been recognized by the Nuclear Regulatory Commission or an Agreement State. (The names of board certifications that have been recognized by the Nuclear Regulatory Commission or an Agreement State will be posted on the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

1. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;
2. Have 2 years of full-time practical training and/or supervised experience in medical physics:
 - (i) Under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the Nuclear Regulatory Commission or an Agreement State; or
 - (ii) In clinical radiation facilities providing high-energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services under the direction of physicians who meet the requirements for authorized users in Rule .05(26), .05(63) or .05(84); and
3. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in clinical radiation therapy, radiation safety, calibration, quality assurance, and treatment planning for external beam therapy, brachytherapy, and stereotactic radiosurgery; or

- (b) 1. Holds a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university; and has completed 1 year of full-time training in medical physics and an additional year of full-time work experience under the supervision of an individual who meets the requirements for an authorized medical physicist for the type(s) of use for which the individual is seeking authorization. This training and work experience must be conducted in clinical radiation facilities that provide high-energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services and must include:
- (i) Performing sealed source leak tests and inventories;
 - (ii) Performing decay corrections;
 - (iii) Performing full calibration and periodic spot checks of external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and
 - (iv) Conducting radiation surveys around external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and
2. Has obtained written attestation that the individual has satisfactorily completed the requirements in .05(23)(b)1. and .05(23)(c) of this section, and has achieved a level of competency sufficient to function independently as an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status. The written attestation must be signed by a preceptor authorized medical physicist who meets the requirements in Rule .05(23), .05(26), or equivalent Nuclear Regulatory Commission or Agreement State requirements for an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status; and
- (c) Has training for the type(s) of use for which authorization is sought that includes hands-on device operation, safety procedures, clinical use, and the operation of a treatment planning system. This training requirement may be satisfied by satisfactorily completing either a training program provided by the vendor or by training supervised by an authorized medical physicist authorized for the type(s) of use for which the individual is seeking authorization.
- (24) **Training for an Authorized Nuclear Pharmacist.** Except as provided in Rule .05(26), the licensee shall require the authorized nuclear pharmacist to be a pharmacist who:

- (a) Is certified by a specialty board whose certification process has been recognized by the Nuclear Regulatory Commission or an Agreement State. (The names of board certifications that have been recognized by the Nuclear Regulatory Commission or an Agreement State will be posted on the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:
1. Have graduated from a pharmacy program accredited by the American Council on Pharmaceutical Education (ACPE) or have passed the Foreign Pharmacy Graduate Examination Committee (FPGEC) examination;
 2. Hold a current, active license to practice pharmacy;
 3. Provide evidence of having acquired at least 4,000 hours of training/experience in nuclear pharmacy practice. Academic training may be substituted for no more than 2,000 hours of the required training and experience; and
 4. Pass an examination in nuclear pharmacy administered by diplomates of the specialty board, that assesses knowledge and competency in procurement, compounding, quality assurance, dispensing, distribution, health and safety, radiation safety, provision of information and consultation, monitoring patient outcomes, research and development; or
- (b)
1. Has completed 700 hours in a structured educational program consisting of both:
 - (i) 200 hours of classroom and laboratory training in the following areas
 - (I) Radiation physics and instrumentation;
 - (II) Radiation protection;
 - (III) Mathematics pertaining to the use and measurement of radioactivity;
 - (IV) Chemistry of radioactive material for medical use; and
 - (V) Radiation biology; and
 - (ii) Supervised practical experience in a nuclear pharmacy involving:
 - (I) Shipping, receiving, and performing related radiation surveys;

- (II) Using and performing checks for proper operation of dose calibrators, survey meters, and, if appropriate, instruments used to measure alpha or beta-emitting radionuclides;
- (III) Calculating, assaying, and safely preparing dosages for patients or human research subjects;
- (IV) Using administrative controls to avoid misadministrations in the administration of radioactive material; and
- (V) Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures; and

- 2. Has obtained written attestation, signed by a preceptor authorized nuclear pharmacist, that the individual has satisfactorily completed the requirements in Rule .05(24)(b)1. and has achieved a level of competency sufficient to independently fulfill the radiation safety-related duties as an authorized nuclear pharmacist and operate a nuclear pharmacy, and

(c) Licensed as a Nuclear Pharmacist by the Georgia Board of Pharmacy.

(25) Training and Technical Requirements for Nuclear Medicine Technologists and Radiation Therapists.

- (a) The licensee shall require a nuclear medicine technologist using radioactive materials under the supervision of an authorized user to be an individual who:
 - 1. Is certified in:
 - (i) Nuclear Medicine by the Nuclear Medicine Technology Certification Board;
 - (ii) Nuclear Medicine by the American Registry of Radiologic Technologists with competency in Nuclear Medicine; or,
 - 2. Is board eligible to take the CNMT or ARRT(N) examinations; or,
 - 3. Has successfully completed a training program in nuclear medicine which has resulted in a certificate, associate degree, or baccalaureate degree in a nuclear medicine technology program from an accredited institution; or,

4. Has performed as a full-time nuclear medicine technologist for a minimum of two years during the past five-year period under the supervision of an authorized user who attests the experience in writing; or,
5. Has completed 80 hours of training and experience in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material that includes:
 - (i) Classroom and laboratory training in the following areas:
 - (I) Radiation physics and instrumentation;
 - (II) Radiation protection;
 - (III) Mathematics pertaining to the use and measurement of radioactivity;
 - (IV) Chemistry of radioactive material for medical use; and
 - (V) Radiation biology; and
 - (ii) Work experience, under the supervision of an authorized user involving:
 - (I) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - (II) Quality Control checking of instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
 - (III) Calculating, measuring, and safely preparing patient or human research subject dosages;
 - (IV) Using administrative controls to prevent a misadministration involving the use of unsealed radioactive material;
 - (V) Using procedures to contain spilled radioactive material safely and using proper decontamination procedures;
 - (VI) Administering dosages to patients or human research subjects; and
 - (iii) Has obtained written attestation, signed by a preceptor authorized user that the individual has satisfactorily completed the

requirements of this section and has achieved a level of competency sufficient to independently function as a nuclear medicine technologist.

- (b) The licensee shall require a radiation therapist using radioactive materials under the supervision of an authorized user to be an individual who:
1. Is certified in Radiation Therapy by the American Registry of Radiologic Technologists (ARRT(T)); or
 2. Is board eligible to take the ARRT(T) examination; or,
 3. Has successfully completed a training program in radiation therapy which has resulted in a certificate, associate degree, or baccalaureate degree in a radiologic technology program that complies with the requirements of the Joint Review Committee on Education in Radiologic Technology¹; or,
 4. Has performed as a full-time radiation therapist for a minimum of two years during the past five-year period under the supervision of an authorized user who attests the experience in writing; or
 5. Has completed 200 hours of training and experience in basic radionuclide handling techniques applicable to the medical use of radioactive material that includes:
 - (i) Classroom and laboratory training in the following areas:
 - (I) Radiation physics and instrumentation;
 - (II) Radiation protection;
 - (III) Mathematics pertaining to the use and measurement of radioactivity; and
 - (IV) Radiation biology; and
 - (ii) Work experience, under the supervision of an authorized user involving:
 - (I) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - (II) Assisting the authorized user in simulating the patient for treatment;

- (III) Preparing the patient for treatment;
 - (IV) Implementing treatment plans as prescribed by the authorized user;
 - (V) Providing written documentation of treatment setup and patient treatments;
 - (VI) Quality control checks to determine that devices used to deliver the radiation doses are in compliance with institutional standards and performing checks for proper operation of survey meters;
 - (VII) Preparing or assisting in the preparation of sources, and implantation and removal of sealed sources;
 - (VIII) Delivering doses to patients or human research subjects under the supervision of the authorized user;
 - (IX) Preparing, implanting, and removing sealed sources;
 - (X) Delivering dose to patients or human research subjects;
 - (XI) Maintaining running inventories of material on hand;
 - (XII) Using administrative controls to prevent a misadministration involving the use of radioactive material; and,
 - (XIII) Properly implementing emergency procedures and
- (iii) Has obtained written attestation, signed by a preceptor authorized user that the individual has satisfactorily completed the requirements of this section and has achieved a level of competency sufficient to independently function as a radiation therapist.
- (c) Individuals working as nuclear medicine technologists or radiation therapists prior to July 1, 2003 for a facility holding a Division license need not comply with the training requirements of this section.
- (d) The licensee shall maintain records of the above training as specified in Rule .05(100).

(26) Provisions for Experienced Radiation Safety Officer, Teletherapy or Medical Physicist, Authorized Medical Physicist, Authorized User, Nuclear Pharmacist, and Authorized Nuclear Pharmacist.

- (a)
1. An individual identified as a Radiation Safety Officer, a teletherapy or medical physicist, an authorized medical physicist, a nuclear pharmacist or an authorized nuclear pharmacist on a Division, Nuclear Regulatory Commission or Agreement State license or on a permit issued by the Division, Nuclear Regulatory commission or Agreement State broad scope licensee or master material license permit or by a master material license permittee of broad scope before the effective date of this rule, need not comply with the training requirements of Rules .05(22), .05(23), or .05(24), respectively except the Radiation Safety Officers and authorized medical physicists identified in this paragraph must meet the training requirements in Rule .05(22)(d) or .05(23)(c), as appropriate, for any material or uses for which they were not authorized prior to this date.
 2. Any individual certified by the American Board of Health Physics in Comprehensive Health Physics; American Board of Radiology; American Board of Nuclear Medicine; American Board of Science in Nuclear Medicine; Board of Pharmaceutical Specialties in Nuclear Pharmacy; American Board of Medical Physics in radiation oncology physics; Royal College of Physicians and Surgeons of Canada in nuclear medicine; American Osteopathic Board of Radiology; or American Osteopathic Board of Nuclear Medicine on or before October 24, 2005, need not comply with the training requirements of Rule .05(22) to be identified as a Radiation Safety Officer or as an Associate Radiation Safety Officer on a Division, U.S. Nuclear Regulatory Commission or an Agreement State license or U.S. Nuclear Regulatory Commission master material license permit for those materials and uses that these individuals performed on or before October 24, 2005.
 3. Any individual certified by the American Board of Radiology in therapeutic radiological physics, Roentgen ray and gamma ray physics, x-ray and radium physics, or radiological physics, or certified by the American Board of Medical Physics in radiation oncology physics, on or before October 24, 2005, need not comply with the training requirements for an authorized medical physicist described in Rule .05(23), for those materials and uses that these individuals performed on or before October 24, 2005.
 4. A Radiation Safety Officer, a medical physicist, or a nuclear pharmacist, who used only accelerator-produced radioactive materials, discrete sources of radium-226, or both, for medical uses or in the practice of nuclear pharmacy at a Government agency or Federally recognized Indian Tribe

before November 30, 2007 or at all other locations of use before August 8, 2009, or an earlier date as noticed by the NRC, need not comply with the training requirements of Rules .05(22), .05(23) or .05(24), respectively, when performing the same uses. A nuclear pharmacist, who prepared only radioactive drugs containing accelerator-produced radioactive materials, or a medical physicist, who used only accelerator-produced radioactive materials, at the locations and time period identified in this paragraph, qualifies as an authorized nuclear pharmacist or an authorized medical physicist, respectively, for those materials and uses performed before these dates, for purposes of this chapter.

- (b)
1. Physicians, dentists, or podiatrists identified as authorized users for the medical use of radioactive byproduct material on a license issued by the Division, Nuclear Regulatory Commission or an Agreement State, a permit issued by a Nuclear Regulatory Commission master material licensee, a permit issued by a Division, Nuclear Regulatory Commission or an Agreement State broad scope licensee, or a permit issued by a Nuclear Regulatory Commission master material license broad scope permittee on or before March 17, 2020, who perform only those medical uses for which they were authorized on that date need not comply with the training requirements of Rules .05(43), .05(47), .05(52), .05(53), .05(54), .05(54.1), .05(63), .05(64), .05(66), and .05(84), respectively.
 2. Physicians, dentists, or podiatrists identified as authorized users for the medical use of radioactive byproduct material on a license issued by the Division, Nuclear Regulatory Commission or Agreement State, a permit issued by a Nuclear Regulatory Commission master material licensee, a permit issued by a Division, Nuclear Regulatory Commission or Agreement State broad scope licensee, or a permit issued by a Nuclear Regulatory Commission master material license broad scope permittee who perform only those medical uses for which they were authorized on or before October 24, 2005, need not comply with the training requirements of Rules .05(43), .05(47), .05(52), .05(53), .05(54), .05(54.1), .05(63), .05(64), .05(66), and .05(84), as follows:
 - (i) For uses authorized under Rules .05(41) or .05(44), or oral administration of sodium iodide I-131 requiring a written directive for imaging and localization purposes, a physician who was certified on or before October 24, 2005, in nuclear medicine by the American Board of Nuclear Medicine; diagnostic radiology by the American Board of Radiology; diagnostic radiology or radiology by the American Osteopathic Board of Radiology; nuclear medicine by the Royal College of Physicians and Surgeons of Canada; or

American Osteopathic Board of Nuclear Medicine in nuclear medicine;

- (ii) For uses authorized under Rule .05(48), a physician who was certified on or before October 24, 2005, by the American Board of Nuclear Medicine; the American Board of Radiology in radiology, therapeutic radiology, or radiation oncology; nuclear medicine by the Royal College of Physicians and Surgeons of Canada; or the American Osteopathic Board of Radiology after 1984;
 - (iii) For uses authorized under Rules .05(55) or .05(67), a physician who was certified on or before October 24, 2005, in radiology, therapeutic radiology or radiation oncology by the American Board of Radiology; radiation oncology by the American Osteopathic Board of Radiology; radiology, with specialization in radiotherapy, as a British "Fellow of the Faculty of Radiology" or "Fellow of the Royal College of Radiology"; or therapeutic radiology by the Canadian Royal College of Physicians and Surgeons; and
 - (iv) For uses authorized under Rules .05(65), a physician who was certified on or before October 24, 2005, in radiology, diagnostic radiology, therapeutic radiology, or radiation oncology by the American Board of Radiology; nuclear medicine by the American Board of Nuclear Medicine; diagnostic radiology or radiology by the American Osteopathic Board of Radiology; or nuclear medicine by the Royal College of Physicians and Surgeons of Canada.
3. Physicians, dentists, or podiatrists who used only accelerator-produced radioactive materials, discrete sources of radium-226, or both, for medical uses performed at a Government agency or Federally recognized Indian Tribe before November 30, 2007 or at all other locations of use before August 8, 2009, or an earlier date as noticed by the NRC, need not comply with the training requirements of Rules .05(43), .05(47), .05(52), .05(53), .05(54), .05 (54.1), .05(63). .05(64), .05(66), and .05(84) respectively, when performing the same medical uses. A physician, dentist, or podiatrist, who used only accelerator-produced radioactive materials, discrete sources of radium-226, or both, for medical uses at the locations and time period identified in this paragraph, qualifies as an authorized user for those materials and uses performed before these dates, for purposes of this chapter.

- (c) Individuals who need not comply with training requirements as described in this section may serve as preceptors for, and supervisors of, applicants seeking authorization on the Division licenses for the same uses for which these individuals are authorized.
- (27) **Recentness of Training.** The training and experience specified in Rule .05 must have been obtained within the 7 years preceding the date of application or the individual must have had related continuing education and experience since the required training and experience was completed.

GENERAL TECHNICAL REQUIREMENTS

- (28) **Quality Control of Diagnostic Equipment.** Each licensee shall establish written quality control procedures for all diagnostic equipment used for radionuclide studies. As a minimum, quality control procedures and frequencies shall be those recommended by equipment manufacturers or procedures that have been approved by the Division. The licensee shall conduct quality control procedures in accordance with written procedures.
- (29) **Possession, Use, and Testing of Instruments to Measure the Activity of Unsealed Radioactive Materials.**
- (a) For direct measurements performed in accordance with Rule .05(31), a licensee shall possess and use instrumentation to measure the activity of unsealed radioactive materials prior to administration to each patient or human research subject.
 - (b) A licensee shall test the instrumentation required in Rule .05(29)(a) in accordance with nationally recognized standards or the manufacturer's instructions.
 - (c) The tests required in Rule .05(29)(b) shall include tests for constancy, linearity, accuracy and geometry dependence, as appropriate to demonstrate proper operation of the instrument.
 - (d) A licensee shall retain a record of each instrument test required by Rule .05(29) in accordance with Rule .05(91).
- (30) **Calibration of Survey Instruments.**
- (a) A licensee shall ensure that the survey instruments used to show compliance with Rule .05 and Rule .03 of this Chapter, have been calibrated before first use, annually, and following any repair that will affect the calibration.
 - (b) To satisfy the requirements of Rule .05(30)(a), the licensee shall:

1. Calibrate all required scale readings up to 10 millisievert (1,000 mrem) per hour with a radiation source;
 2. Have each radiation survey instrument calibrated:
 - (i) At energies appropriate for use and at intervals not to exceed 12 months or after instrument servicing, except for battery changes;
 - (ii) For linear scale instruments, at two points located approximately one-third and two-thirds of full-scale on each scale; for logarithmic scale instruments, at mid-range of each decade, and at two points of at least one decade; and for digital instruments, at 3 points between 0.02 and 10 millisievert (2 and 1,000 mrem) per hour; and
 - (iii) For dose rate instruments, so that an accuracy within plus or minus 20 percent of the true radiation dose rate can be demonstrated at each point checked; and
 3. Conspicuously note on the instrument the date of calibration.
- (c) The licensee shall not use survey instruments if the difference between the indicated exposure rate and the calculated exposure rate is greater than 20 percent.
- (d) A licensee shall check each survey instrument for consistent response with a dedicated check source before each use. The licensee is not required to keep records of these checks.
- (e) The licensee shall retain a record of each survey instrument calibration in accordance with Rule .05(92).

(31) Determination of Dosages of Radioactive Material for Medical Use.

- (a) A licensee shall determine and record the activity of each dosage prior to medical use.
- (b) For a unit dosage, this determination must be made either by direct measurement or by a decay correction, based on the measurement made by a manufacturer or preparer licensed pursuant to Rule .02 of this Chapter or equivalent provisions of the Nuclear Regulatory Commission or Agreement State.
- (c) For other than unit dosages, this determination must be made by direct measurement of radioactivity or by a combination of measurements of radioactivity and mathematical calculations or combination of volumetric measurements and mathematical calculations, based on the measurement made

by a manufacturer or preparer licensed pursuant to Rule .02 of this Chapter or equivalent provisions of the Nuclear Regulatory Commission or Agreement State.

- (d) Unless otherwise directed by the authorized user, a licensee shall not use a dosage if the dosage differs from the prescribed dosage by more than 20 percent.
 - (e) A licensee shall retain a record of the dosage determination required by Rule .05(31)(a) through (31)(c) in accordance with Rule .05(93).
- (32) **Authorization for Calibration, Transmission and Reference Sources.** Any person authorized by Rule .05(7) for medical use of radioactive material may receive, possess, and use the following radioactive material for check, calibration and reference use:
- (a) Sealed sources manufactured and distributed by persons specifically licensed pursuant to Rule .02 of this Chapter or equivalent provisions of the Nuclear Regulatory Commission or Agreement State and that do not exceed 1.11 gigabecquerel (30 mCi) each;
 - (b) Any radioactive material with a half-life of 120 days or less in individual amounts not to exceed 555 megabecquerel (15 mCi);
 - (c) Any radioactive material with a half-life greater than 120 days in individual amounts not to exceed the smaller of:
 - 1. 7.4 megabecquerel (200 μ Ci); or
 - 2. 1,000 times the quantities in Schedule B of Rule .02(21)(b) of this Chapter; and
 - (d) Technetium-99m in amounts as needed.
- (33) **Requirements for Possession of Sealed Sources and Brachytherapy Sources.**
- (a) A licensee in possession of any sealed source or brachytherapy source shall follow the radiation safety and handling instructions supplied by the manufacturer or equivalent instructions approved by the Division.
 - (b) A licensee in possession of a sealed source shall:
 - 1. Test the source for leakage in accordance with Rule .03 of this Chapter.
 - 2. Test the source for leakage at intervals not to exceed 6 months or at other intervals approved by the Division, an Agreement State, or the Nuclear Regulatory Commission in the Sealed Source and Device Registry.

- (c) If the leak test reveals the presence of 185 becquerel (0.005 μ Ci) or more of removable contamination, the licensee shall:
 - 1. Immediately withdraw the sealed source from use and store, dispose, or cause it to be repaired in accordance with the requirements of Rules .02 and .03 of this Chapter; and
 - 2. File a report with the Division within 5 days of receiving the leak test results in accordance with Rule .05(117).

- (d) A licensee in possession of a sealed source or brachytherapy source, except for gamma stereotactic radiosurgery sources, shall conduct a semi-annual physical inventory of all such sources. The licensee shall retain each inventory record in accordance with Rule .05(94).

- (34) **Labels.** Each syringe and vial that contains a radioactive drug shall be labeled to identify the radioactive drug. Each syringe shield and vial shield shall also be labeled unless the label on the syringe or vial is visible when shielded.

- (35) **Vial Shields.** A licensee shall require each individual preparing or handling a vial that contains a radioactive drug to keep the vial in a vial radiation shield.

- (36) **Surveys for Ambient Radiation Dose Rate and Contamination.**
 - (a) Except as provided in Rule .05(36)(h), a licensee shall survey with a radiation detection survey instrument at the end of each day of use all areas where radioactive drugs containing radioactive material requiring a written directive were prepared for use or administered.

 - (b) A licensee shall survey with a radiation detection survey instrument at least once each week all areas where radioactive drugs or radioactive wastes are stored.

 - (c) A licensee shall conduct the surveys required by Rule .05(36)(a) and (b) so as to be able to measure dose rates as low as 1 microsievert (0.1 mrem) per hour.

 - (d) A licensee shall establish dose rate action levels for the surveys required by Rule .05(36)(a) and (36)(b) and shall require that the individual performing the survey immediately notify the Radiation Safety Officer if a dose rate exceeds an action level.

 - (e) A licensee shall survey for removable contamination each day of use all areas where generators and bulk radioactive drugs are prepared for use or administered and each week where radioactive materials are stored.

 - (f) A licensee shall conduct the surveys required by Rule .05(36)(e) so as to be able to detect contamination on each wipe sample of 33.3 becquerel (2,000 dpm).

- (g) A licensee shall establish removable contamination action levels for the surveys required by Rule .05(36)(e) and shall require that the individual performing the survey immediately notify the Radiation Safety Officer if contamination exceeds action levels.
- (h) A licensee does not need to perform the surveys required by Rule .05(36)(a) in area(s) where patients or human research subjects are confined when they cannot be released pursuant to Rule .05(37).
- (i) A licensee shall retain a record of each survey in accordance with Rule .05(95)

(37) Release of Individuals Containing Radioactive Drugs or Implants.

- (a) A licensee may authorize the release of any individual who has been administered radioactive drugs or implants containing radioactive material if the total effective dose equivalent to any other individual from exposure to the released individual is not likely to exceed 5 mSv (0.5 rem).
- (b) For patients administered radioactive material for which a written directive is required, a licensee shall provide the released individual, or the individual's parent or guardian, with instructions, including oral and written instructions, on actions recommended to maintain doses to other individuals as low as is reasonably achievable. If a breast-feeding infant or child could receive a radiation dose as a result of the release of the patient, the instructions shall also include:
 - 1. Guidance on the interruption or discontinuation of breast-feeding; and
 - 2. Information on the potential consequences, if any, of failure to follow the guidance.
- (c) The licensee shall maintain a record of the basis for authorizing the release of an individual in accordance with Rule .05(96).
- (d) The licensee shall maintain a record of instructions provided to breast-feeding women in accordance with Rule .05(96).
- (e) Notwithstanding Rule .05(37)(a), the licensee may be held responsible for the proper disposal of any individual's radioactive waste discovered in a solid waste stream that can be traced to the licensee.
- (f) The licensee shall immediately notify the Division in accordance with Rule .05(118) if a patient departs prior to an authorized release.
- (g) The licensee shall notify the Division in accordance with Rule .05(119):

1. When they are aware that a patient containing radioactive material and who has been released in accordance with Rule .05(37) dies; and,
2. If it is possible that any individual could receive exposures in excess of 5 millisievert (500 mrem) as a result of the deceased's body.

(38) **Mobile Medical Service Technical Requirements.** A licensee providing mobile medical service shall:

- (a) Transport to each client's address only syringes or vials containing prepared drugs or radioactive materials that are intended for reconstitution of radioactive drug kits;
- (b) Bring into each client's address all radioactive material to be used and, before leaving, remove all unused radioactive material and associated radioactive waste;
- (c) Secure or keep under constant surveillance and immediate control all radioactive material when in transit or at a client's address;
- (d) Check instruments used to measure the activity of unsealed radioactive material for proper function before medical use at each client's address or on each day of use, whichever is more frequent. At a minimum, the check for proper function shall include a constancy check;
- (e) Check survey instruments for consistent response with a dedicated check source before use at each client's address;
- (f) Prior to leaving a client's address, perform area surveys and survey for removable contamination in all areas of use, to ensure compliance with Rule .03 of this Chapter;
- (g) Use radioactive gases only in areas of use and under conditions which have been evaluated and approved by the Division for compliance with airborne release standards; and,
- (h) Retain a record of each survey required by Rule .05(38)(f) in accordance with Rule .05(97)(b).

(39) **Storage and Control of Volatiles and Gases.**

- (a) A licensee shall store volatile radioactive materials and radioactive gases in the shippers' radiation shield and container.
- (b) A licensee shall store and use a multi-dose container in a properly functioning fume hood.

- (c) A licensee who administers radioactive aerosols or gases shall do so with a system that will keep airborne concentrations within the limits prescribed in Rule .03 of this Chapter.
- (d) The system shall either be directly vented to the atmosphere through an air exhaust or provide for collection and decay or disposal of the aerosol or gas in a shielded container.
- (e) A licensee shall check the operation of collection systems monthly. Records of these checks shall be maintained for 3 years.

(40) Decay-in-Storage.

- (a) A licensee may hold radioactive material with a physical half-life of less than 120 days for decay-in-storage before disposal without regard to its radioactivity if the licensee:
 1. Monitors radioactive material at the container surface before disposal and determines that its radioactivity cannot be distinguished from the background radiation level with an appropriate radiation detection survey instrument set on its most sensitive scale and with no interposed shielding;
 2. Removes or obliterates all radiation labels, except for material that will be handled as biomedical waste after release; and
 3. Separates and monitors each generator column individually with all radiation shielding removed to ensure that its contents have decayed to background radiation level before disposal.
- (b) For radioactive material disposed in accordance with (40)(a) of this section, the licensee shall retain a record of each disposal in accordance with Rule .05(98).

SPECIFIC REQUIREMENTS FOR THE USE OF RADIOACTIVE MATERIAL WRITTEN DIRECTIVE NOT REQUIRED

- (41) Use of Unsealed Radioactive Material for Uptake, Dilution, or Excretion Studies for which a Written Directive is Not Required.** A licensee may use any unsealed radioactive material, in quantities that do not require a written directive, for a diagnostic use involving measurements of uptake, dilution, or excretion that is:
- (a) Obtained from a manufacturer or preparer licensed pursuant to Rule .02 of this Chapter or equivalent regulations of another Agreement State or the Nuclear Regulatory Commission; or
 - (b) Excluding production of PET radionuclides, prepared by an authorized nuclear pharmacist, a physician who is an authorized user and who meets the

requirements specified in Rule .05(47) or .05(52) and .05(47)(c)1.(ii)(VII), or an individual under the supervision of either as specified in Rule .05(18); or

- (c) Obtained from and prepared by a Division, Nuclear Regulatory Commission or Agreement State licensee for use in research in accordance with a Radioactive Drug Research Committee-approved protocol or an Investigational New Drug (IND) protocol accepted by FDA; or
 - (d) Prepared by the licensee in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA for use in research.
- (42) **Possession of Survey Instrument.** A licensee authorized to use radioactive material for uptake, dilution, and excretion studies shall possess a portable radiation detection survey instrument capable of detecting dose rates over the range 1 microsievert (0.1 mrem) per hour to 500 microsievert (50 mrem) per hour. The instrument shall be operable and calibrated in accordance with Rule .05(30).
- (43) **Training for Uptake, Dilution, and Excretion Studies.** Except as provided in Rule .05(26), the licensee shall require an authorized user of a unsealed radioactive material for the uses authorized under Rule .05(41) to be a physician who:
- (a) Is certified by a medical specialty board whose certification process has been recognized by the Division, Nuclear Regulatory Commission or an Agreement State. (The names of board certifications that have been recognized by the Commission or an Agreement State will be posted on the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:
 1. Complete 60 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies as described in Rule .05(43)(c)1.(i) through .05(43)(c)1.(ii)(VI); and
 2. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or
 - (b) Is an authorized user under Rule .05(47) or .05(52) or equivalent Agreement State or Nuclear Regulatory Commission requirements; or
 - (c)
 1. Has completed 60 hours of training and experience, including a minimum of 8 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies that includes:

- (i) Classroom and laboratory training in the following areas:
 - (I) Radiation physics and instrumentation;
 - (II) Radiation protection;
 - (III) Mathematics pertaining to the use and measurement of radioactivity;
 - (IV) Chemistry of radioactive material for medical use; and
 - (V) Radiation biology; and
 - (ii) Work experience, under the supervision of an authorized user who meets the requirements in Rules .05(26), (43), (47) or (52) or equivalent Agreement State or Nuclear Regulatory Commission requirements, involving:
 - (I) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - (II) Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
 - (III) Calculating, measuring, and safely preparing patient or human research subject dosages;
 - (IV) Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
 - (V) Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and
 - (VI) Administering dosages to patients or human research subjects; and
2. Has obtained written attestation that the individual has satisfactorily completed the requirements in Rule .05(43)(c)1. and is able to independently fulfill the radiation safety-related duties as an authorized user for the medical uses authorized under Rule .05(41). The signed attestation must be obtained from either:

- (i) A preceptor authorized user, who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements; or
- (ii) A residency program director who affirms in writing that the consensus of the residency program faculty where at least one faculty member is an authorized user who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements, and concurs with the attestation provided by the residency program director. The residency training program must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Council on Postdoctoral Training of the American Osteopathic Association and must include training and experience specified in subparagraph .05(43)(c)1.

(44) **Use of Unsealed Radioactive Material for Imaging and Localization Studies for Which a Written Directive is Not Required.** A licensee may use, for imaging and localization studies, any radioactive material (except aerosol or gaseous forms) prepared for medical use, in quantities that do not require a written directive as described in Rule .05(19) that is:

- (a) Obtained from a manufacturer or preparer licensed pursuant to Rule .02 of this Chapter or equivalent regulations of another Agreement State or the Nuclear Regulatory Commission; or
- (b) Excluding production of PET radionuclides, prepared by an authorized nuclear pharmacist, a physician who is an authorized user and who meets the requirements specified in Rule .05(47) or .05(52) and .05(47)(c)1.(ii)(VII), or an individual under the supervision of either as specified in Rule .05(18); or
- (c) Obtained from and prepared by the Division, Nuclear Regulatory Commission or Agreement State licensee for use in research in accordance with a Radioactive Drug Research Committee-approved protocol or an Investigational New Drug (IND) protocol accepted by FDA; or
- (d) Prepared by the licensee in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA, or
- (e) Provided the conditions of Rule .05(39) are met, a licensee shall use radioactive aerosols or gases only if specific application is made to and approved by the Division.

(45) **Permissible molybdenum-99, strontium-82, and strontium-85 concentrations.**

- (a) A licensee shall not administer to humans a radioactive drug containing:
 - 1. More than 0.15 kilobecquerel of molybdenum-99 per megabecquerel of technetium-99m (0.15 μ Ci of Mo-99 per mCi of Tc-99m); or
 - 2. More than 0.02 kilobecquerel of strontium-82 per megabecquerel of rubidium-82 chloride injection (0.02 μ Ci of Sr-82 per mCi of Rb-82 chloride); or
 - 3. More than 0.2 kilobecquerel of strontium-85 per megabecquerel of rubidium-82 chloride injection (0.2 μ Ci of Sr-85 per mCi of Rb-82);
- (b) To demonstrate compliance with Rule .05(45)(a), the licensee preparing radioactive drugs from radionuclide generators shall:
 - 1. Measure the molybdenum-99 concentration in each eluate from a generator to demonstrate compliance with subparagraph .05(45)(a);
 - 2. Before the first patient use of the day, measure the concentration of radionuclides strontium-82 and strontium-85 to demonstrate compliance with subparagraph .05(45)(a).
- (c) A licensee who must measure radionuclide contaminant concentration shall retain a record of each measurement in accordance with Rule .05(99).
- (d) A licensee shall report immediately to the Division each occurrence of radionuclide contaminant concentration exceeding the limits specified in Rule .05(45)(a).

(46) **Possession of Survey Instruments.** A licensee authorized to use radioactive material for imaging and localization studies shall possess a portable radiation detection survey instrument capable of detecting dose rates over the range of 1 microsievert (0.1 mrem) per hour to 500 microsievert (50 mrem) per hour, and a portable radiation measurement survey instrument capable of measuring dose rates over the range 10 microsievert (1 mrem) per hour to 10 millisievert (1,000 mrem) per hour. The instruments shall be operable and calibrated in accordance with Rule .05(30).

(47) **Training for Imaging and Localization Studies.** Except as provided in Rule .05(26), the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under Rule .05(44) to be a physician who:

- (a) Is certified by a medical specialty board whose certification process has been recognized by the Division, Nuclear Regulatory Commission or an Agreement State. (The names of board certifications that have been recognized by the Nuclear Regulatory Commission or an Agreement State will be posted on the

NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

1. Complete 700 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for imaging and localization studies as described in (c)1.(i) through (c)1.(ii)(VII) of this rule; and
 2. Pass an examination, administered by diplomates of the specialty board, which assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or
- (b) Is listed as an authorized user under Rule .05(52) and meets the requirements in .05(47)(c)1.(ii)(VII) or equivalent Agreement State or Nuclear Regulatory Commission requirements; or
- (c)
1. Has completed 700 hours of training and experience, including a minimum of 80 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for imaging and localization studies that includes, at a minimum:
 - (i) Classroom and laboratory training in the following areas:
 - (I) Radiation physics and instrumentation;
 - (II) Radiation protection;
 - (III) Mathematics pertaining to the use and measurement of radioactivity;
 - (IV) Chemistry of radioactive material for medical use;
 - (V) Radiation biology; and
 - (ii) Work experience, under the supervision of an authorized user, who meets the requirements in Rule .05(26), .05(47) or .05(47)(c)1.(ii)(VII) and Rule .05(52), or equivalent Agreement State or Nuclear Regulatory Commission requirements. An authorized nuclear pharmacist who meets the requirements in 391-3-17-.05(24) or 391-3-17-.05(26) may provide the supervised work experience for subparagraph .05(47)(c)1.(ii)(VII). Work experience must involve:
 - (I) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;

- (II) Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
 - (III) Calculating, measuring, and safely preparing patient or human research subject dosages;
 - (IV) Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
 - (V) Using procedures to contain spilled radioactive material safely and using proper decontamination procedures;
 - (VI) Administering dosages to patients or human research subjects; and
 - (VII) Eluting generator systems appropriate for preparation of radioactive drugs for imaging and localization studies, measuring and testing the eluate for radiochemical purity, and processing the eluate with reagent kits to prepare labeled radioactive drugs; and
2. Has obtained written attestation that the individual has satisfactorily completed the requirements in Rule .05(47)(c)1. and is able to independently fulfill the radiation safety-related duties as an authorized user for the medical uses authorized under Rules .05(41) and .05(44).

The signed attestation must be obtained from either:

- (i) A preceptor authorized user, who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements; or
- (ii) A residency program director who affirms in writing that the consensus of the residency program faculty where at least one faculty member is an authorized user who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements, and concurs with the attestation provided by the residency program director. The residency training program must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and

Surgeons of Canada or the Council on Postdoctoral Training of the American Osteopathic Association and must include training and experience specified in subparagraph .05(47)(c)1.

**SPECIFIC REQUIREMENTS FOR THE USE OF
UNSEALED RADIOACTIVE MATERIAL WRITTEN
DIRECTIVE REQUIRED**

(48) **Use of Unsealed Radioactive Material for Which a Written Directive is Required.** A licensee may use any unsealed radioactive material identified in subparagraph (52)(b)1.(ii)(VII) prepared for diagnostic or therapeutic medical use for which a written directive is required that has been:

- (a) Obtained from a manufacturer or preparer licensed pursuant to Rule .02 of this Chapter or equivalent regulations of another Agreement State or the Nuclear Regulatory Commission; or
- (b) Excluding production of PET radionuclides, prepared by an authorized nuclear pharmacist, a physician who is an authorized user and who meets the requirements specified in Rule .05(47) or (52), or an individual under the supervision of either as specified in Rule .05(26); or
- (c) Obtained from and prepared by the Division, Nuclear Regulatory Commission or Agreement State licensee in accordance with a Radioactive Drug Research Committee-approved protocol or an Investigational New Drug (IND) protocol accepted by the FDA for use in research; or
- (d) Prepared by the licensee in accordance with a Radioactive Drug Research Committee-approved application or an IND protocol accepted by FDA for use in research.

(49) **Safety Instruction.** In addition to the requirements of Rule [.07\(3\)](#) of this Chapter:

- (a) A licensee shall provide radiation safety instruction to personnel caring for patients or human research subjects that have received therapy with a radioactive drug, and cannot be released in accordance with Rule .05(37). The training must be provided initially and at least annually. The instruction must be appropriate to the personnel's assigned duties and include the following:
 - 1. Patient or human research subject control;
 - 2. Visitor control to include the following:

- (i) Routine visitation to hospitalized individuals in accordance with Rule .03 of this Chapter;
 - (ii) Contamination control;
 - (iii) Waste control; and
 - (iv) Notification of the RSO, or his or her designee, and the authorized user if the patient or the human research subject dies or has a medical emergency.
- (b) A licensee shall retain a record of individuals receiving instruction in accordance with Rule .05(101).

(50) Safety Precautions.

- (a) For each patient or human research subject receiving radiopharmaceutical therapy and hospitalized for compliance with Rule .05(37), a licensee shall:
1. Quarter the patient or the human research subject either in:
 - (i) A private room with a private sanitary facility; or
 - (ii) A room, with a private sanitary facility, with another individual who also has received radiopharmaceutical therapy and who cannot be released in accordance with Rule .05(37); and,
 2. Visibly post the patient's or the human research subject's room with a "Radioactive Materials" sign and note on the door or in the patient's or human research subject's chart where and how long visitors may stay in the patient's or the human research subject's room; and
 3. Either monitor material and items removed from the patient's or the human research subject's room to determine that their radioactivity cannot be distinguished from the natural background radiation level with a radiation detection survey instrument set on its most sensitive scale and with no interposed shielding, or handle such material and items as radioactive waste.
- (b) The Radiation Safety Officer, or his designee, and the authorized user shall be notified immediately if the hospitalized patient dies or has a medical emergency. The licensee shall also notify the Division in accordance with Rule .05(119) if it is possible that any individual could receive exposures in excess of the limits in Rule .03(5)(i) of this Chapter as a result of the deceased's body.

- (51) **Possession of Survey Instruments.** A licensee authorized to use radioactive material for which a written directive is required shall possess a portable radiation detection survey instrument capable of detecting dose rates over the range of 1 microsievert (0.1 mrem) per hour to 500 microsievert (50 mrem) per hour, and a portable radiation measurement survey instrument capable of measuring dose rates over the range 10 microsievert (1 mrem) per hour to 10 millisievert (1,000 mrem) per hour. The instruments shall be operable and calibrated in accordance with Rule .05(30).
- (52) **Training for Use of Unsealed Radioactive Material for Which a Written Directive is Required.** Except as provided in Rule .05(26), the licensee shall require an authorized user of radioactive material for the uses authorized under Rule .05(48) to be a physician who:
- (a) Is certified by a medical specialty board whose certification process has been recognized by the Division, Nuclear Regulatory Commission or an Agreement State, and who meets the requirements of Rule .05(52)(b)1(ii)(VII). (Specialty boards whose certification processes have been recognized by the Nuclear Regulatory Commission or an Agreement State will be posted on the NRC's Web page.) To be recognized, a specialty board shall require all candidates for certification to:
 - 1. Successfully complete residency training in a radiation therapy or nuclear medicine training program or a program in a related medical specialty. These residency training programs must include 700 hours of training and experience as described in Rule .05(52)(b)1.(i) through .05(52)(b)1.(ii)(V). Eligible training programs must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education, the Royal College of Physicians and Surgeons of Canada, or the Council on Postdoctoral Training of the American Osteopathic Association; and
 - 2. Pass an examination, administered by diplomates of the specialty board, which tests knowledge and competence in radiation safety, radionuclide handling, quality assurance, and clinical use of unsealed radioactive material for which a written directive is required; or
 - (b)
 - 1. Has completed 700 hours of training and experience, including a minimum of 200 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material requiring a written directive that includes:
 - (i) Classroom and laboratory training in the following areas:
 - (I) Radiation physics and instrumentation;
 - (II) Radiation protection;

- (III) Mathematics pertaining to the use and measurement of radioactivity;
 - (IV) Chemistry of radioactive material for medical use; and
 - (V) Radiation biology; and
- (ii) Work experience, under the supervision of an authorized user who meets the requirements in Rule .05(26), .05(52) or equivalent Agreement State, or Nuclear Regulatory Commission requirements. The work experience must involve:
- (I) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - (II) Performing quality control procedures on instruments used to determine the activity of dosages, and performing checks for proper operation of survey meters;
 - (III) Calculating, measuring, and safely preparing patient or human research subject dosages;
 - (IV) Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
 - (V) Using procedures to contain spilled radioactive material safely and using proper decontamination procedures.
 - (VI) Reserved.
 - (VII) Administering dosages of radioactive drugs to patients or human research subjects involving a minimum of 3 cases in each of the following categories for which the individual is requesting authorized user status. This experience may be obtained concurrently with the supervised work experience required by Rule .05(52)(b)1.(ii):
 - (i) Oral administration of less than or equal to 1.22 gigabecquerel (33 millicurie) of sodium iodide I-131, for which a written directive is required;

- (ii) Oral administration of greater than 1.22 gigabecquerel (33 millicurie) of sodium iodide I-131²;
 - (iii) Parenteral administration of any radioactive drug that contains a radionuclide that is primarily used for its electron emission, beta radiation characteristics, alpha radiation characteristics, or photon energy less than 150 keV, for which a written directive is required; and/or
 - (iv) Parenteral administration of any other radionuclide, for which a written directive is required; and
2. Has obtained written attestation that the individual has satisfactorily completed the requirements in Rule .05(52)(b)1., and is able to independently fulfill the radiation safety-related duties as an authorized user for the medical uses authorized under Rule .05(48).

The signed attestation must be obtained from either:

- (i) A preceptor authorized user, who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements and has experience in administering dosages in the same dosage category or categories (i.e., in Rule .05(52)(b)1.(ii)(VII)) as the individual requesting authorized user status; or
- (ii) A residency program director who affirms in writing that the consensus of the residency program faculty where at least one faculty member is an authorized user who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements, have experience in administering dosages in the same dosage category or categories (i.e., in Rule .05(52)(b)1.(ii)(VII)) as the individual requesting authorized user status, and concurs with the attestation provided by the residency program director. The residency training program must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the

Council on Postdoctoral Training of the American Osteopathic Association and must include training and experience specified in subparagraph .05(52)(b)1.

- (53) **Training for the Oral Administration of Sodium Iodide I-131 in Quantities Less than or Equal to 1.22 Gigabecquerel (33 millicurie) for which a Written Directive is Required.** Except as provided in Rule .05(26), the licensee shall require an authorized user for the oral administration of sodium iodide I-131 in quantities less than or equal to 1.22 gigabecquerel (33 millicurie), for which a written directive is required, to be a physician who:
- (a) Is certified by a medical specialty board whose certification process includes all of the requirements in .05(53)(c)1. and .05(53)(c)2. and whose certification has been recognized by the Division, an Agreement State or the Nuclear Regulatory Commission. (The names of board certifications that have been recognized by the Nuclear Regulatory Commission or an Agreement State will be posted on the NRC's Web page.); or
 - (b) Is an authorized user under Rule (52) for uses listed in (52)(b)1.(ii)(VII)(i) or (ii), or (54), or equivalent Agreement State or Nuclear Regulatory Commission requirements; or
 - (c)
 - 1. Has successfully completed 80 hours classroom and laboratory training, applicable to the medical use of sodium iodide I-131 for procedures requiring a written directive; the training must include:
 - (i) Radiation physics and instrumentation;
 - (ii) Radiation protection;
 - (iii) Mathematics pertaining to the use and measurement of radioactivity;
 - (iv) Chemistry of radioactive material for medical use; and
 - (v) Radiation biology; and
 - 2. Has work experience, under the supervision of an authorized user who meets the requirements in Rule .05(26), (52), (53) or (54), or equivalent Agreement State or Nuclear Regulatory Commission requirements. A supervising authorized user, who meets the requirements of Rule .05(52)(b) must have experience in administering dosages as specified in Rule .05(52)(b)1.(ii)(VII)(i) or (ii); the work experience must involve:

- (i) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - (ii) Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation for survey meters;
 - (iii) Calculating, measuring, and safely preparing patient or human research subject dosages;
 - (iv) Using administrative controls to prevent a misadministration involving the use of radioactive material;
 - (v) Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and
 - (vi) Administering dosages to patients or human research subjects that includes at least 3 cases involving the oral administration of less than or equal to 1.22 gigabecquerel (33 millicurie) of sodium iodide I-131; and
3. Has obtained written attestation that the individual has satisfactorily completed the requirements in Rule .05(53)(c)1. and (53)(c)2. and is able to independently fulfill the radiation safety-related duties as an authorized user for medical uses authorized under .05(48).

The signed attestation must be obtained from either:

- (i) A preceptor authorized user, who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements and has experience in administering dosages in the same dosage category or categories (i.e., in Rule .05(52)(b)1.(ii)(VII)) as the individual requesting authorized user status; or
- (ii) A residency program director who affirms in writing that the consensus of the residency program faculty where at least one faculty member is an authorized user who meets the requirements in Rules .05(26), (43), (47), or (52), or equivalent Agreement State or Nuclear Regulatory Commission requirements, have experience in administering dosages in the same dosage category or categories (i.e., in Rule .05(52)(b)1.(ii)(VII)) as the individual requesting authorized user status, and concurs with the attestation provided by

the residency program director. The residency training program must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Council on Postdoctoral Training of the American Osteopathic Association and must include training and experience specified in subparagraphs .05(53)(c)1. and 2.

(54) Training for the Oral Administration of Sodium Iodide I-131 in Quantities Greater than 1.22 Gigabecquerel (33 millicurie) for which a Written Directive is Required.

Except as provided in Rule .05(26), the licensee shall require an authorized user for the oral administration of sodium iodide I-131 in quantities greater than 1.22 gigabecquerel (33 millicurie), to be a physician who:

- (a) Is certified by a medical specialty board whose certification process includes all of the requirements in Rules .05(54)(c)1. and .05(54)(c)2. and whose certification has been recognized by the Division, an Agreement State or the Nuclear Regulatory Commission. (The names of board certifications that have been recognized by the Nuclear Regulatory Commission or an Agreement State will be posted on the NRC's Web page.); or
- (b) Is an authorized user under Rule .05(52) for uses listed in Rule .05(52)(b)1.(ii)(VII)(ii), or equivalent Agreement State or Nuclear Regulatory Commission requirements; or
- (c)
