Site Investigation Section

Subject: Lead Contamination Investigation

Anaconda Lead/Carrie Gosch School - East Chicago

The second round of surface soil sampling is now complete. Of the six (6) on-site soil samples collected, it appears that lead levels above 400 ppm are limited to a small area at the south western portion of the site. Of the two (2) samples collected in the West Calumet Housing Complex, neither had lead levels of concern.

Based on the above mentioned data generated during our site assessment, the environmental supervisor for Bittner & Detella, Inc. (the Carrie Gosch School Systems contractor) will be contacted and advised to address the small area of contamination located at the southwest portion of the property. No further assessment is planned for the West Calumet Housing Complex.

All interested parties will be contacted and informed of the results.
