VOCs	Volatile Organic Compounds

I. INTRODUCTION

The purpose of a Five-Year Review (FYR) is to evaluate the implementation and performance of a remedy in order to determine whether the remedy is and will continue to be protective of human health and the environment. The methods, findings, and conclusions of reviews are documented in FYR reports such as this one. In addition, FYR reports identify issues found during the review, if any, and document recommendations to address them.

The United States Environmental Protection Agency (EPA) is preparing this FYR pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 121, consistent with the National Contingency Plan (NCP)(40 CFR Section 300.430(f)(4)(ii)), and with EPA policy.

This is the 5th FYR for the E.H. Schilling Landfill Superfund Site (Site). The triggering action for this statutory review is the completion date of the previous FYR. The FYR has been prepared due to the fact that hazardous substances, pollutants, or contaminants remain at the Site above levels that allow for unlimited use and unrestricted exposure (UU/UE).

The completion of the current FYR confirms that components of the remedies selected in the 1989 E.H. Schilling Landfill Record of Decision (ROD) have been implemented and remain effective under the 1991 E.H. Schilling Remedial Design/Remedial Action (RD/RA) Consent Decree (CD) and RA Plan.

The E.H. Schilling Landfill Superfund Site FYR was led by Scott Hansen, EPA. Shannon Cook, State Project Manager with the Ohio Environmental Protection Agency (Ohio EPA), assisted in the review. Ohio EPA was notified of the initiation of the five-year review. The review began on 7/11/2016.

Site Background

The Site is located in Hamilton Township, Lawrence County, Ohio, approximately four miles southwest of the City of Ironton. It is situated in a valley draw incised into the west slope of a ridge separating Winkler Hollow (west of Site) from Schilling Hollow (east of Site), 0.8 miles north of the Ohio River, and approximately 0.5 miles north of U.S. Route 52. Vegetation over the landfill consists of poor quality grass and shrubs. The adjacent valley sides are heavily wooded. A tributary of Winkler Run extends from the base of the earthen dam along the valley floor to Winkler Run. The Site has rugged topography with high relief. Slopes in the area are generally steep with narrow ridge tops. It is estimated that 23,000 persons live within a four-mile radius of the Site.

The landfill was operated by E.H. Schilling and Son, General Contractors, Inc. The landfill began receiving waste in January 1969. It was developed largely as an exclusive landfill for the Dow Chemical plant in Hanging Rock, Ohio, and the USS Chemical (Aristech) plant in Haverhill, Ohio. In August 1971, Lawrence County licensed the landfill to accept non-hazardous dry industrial waste. Records indicate that Aristech Chemical Corporation, the Dow Chemical Company, Ashland Chemical Corporation, Associated Metals & Minerals, Inc. and Matlack, Inc. deposited hazardous waste at the landfill. During its operation, the landfill accepted a wide variety of hazardous industrial and non-hazardous wastes. The waste consisted of styrene monomer, phenol, acetone, alcohol, wastewater treatment sludge, coal tar compounds, polystyrene, and foam material. Following a series of permit violations, the Site ceased operations in July 1980.

The landfill was created by filling the valley draw with waste, and then constructing a steeply sloping earthen dam, about forty-five feet high, in a north-south orientation across the draw to contain the waste. The earthen dam is about sixteen feet wide along the crest.

The current land use of the surrounding area consists of a few residential properties located to the north and east of the Site. The Wayne National Forest extends north-south about 400 feet east of the Site. The Site itself is currently fenced.

FIVE-YEAR REVIEW SUMMARY FORM

SITE IDENTIFICATION		
Site Name: E.H. Schilling Landfill		
EPA ID: OHD980509947		
Region: 5	State: OH	City/County: Ironton/Lawrence County
SITE STATUS		
NPL Status: Final		
Multiple OUs? No	Has the site achieved construction completion? Yes	
REVIEW STATUS		
Lead agency: EPA <i>If "Other Federal Agency", enter Agency name:</i>		
Author name (Federal or State Project Manager): Scott Hansen		
Author affiliation: Remedial Project Manager		
Review period: 7/11/2016 - 5/18/2017		
Date of site inspection: 5/10/2017		
Type of review: Statutory		
Review number: 5		
Triggering action date: 7/11/2012		
Due date (five years after triggering action date): 7/11/2017		

II. RESPONSE ACTION SUMMARY

Basis for Taking Action

During the Remedial Investigation (RI), two sampling rounds were conducted. The first round of sampling was conducted in the spring of 1988 for landfill waste, leachate, surface soils, surface water, sediment, benthic organisms, and groundwater. A second round of sampling was performed in mid-December of 1988 for groundwater, leachate, and surface water.

The results of the RI revealed the following analytical results by media type in the vicinity of the landfill:

Surface Soils

A total of 35 surface soil samples were collected and analyzed for Target Compound List (TCL) chemicals. The analysis detected the presence of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), seven metals, and cyanide. The extent of contamination of surface soils on the landfill and dam primarily consists of those areas which are exposed to landfill leachate. Contamination of surface soils outside of the immediate landfill area is primarily limited to metals, which occur naturally in this region.

Sediments

Stream sediment samples were collected at six sample locations. The analysis of the sediment samples for TCL chemicals detected the presence of VOCs, SVOCs, and metals. This analysis revealed that the extent of the contaminated sediments is limited to the mid- to upper reaches of Winkler Run.

Surface Water

A total of six surface water samples were collected and analyzed for TCL chemicals. Test results detected the presence of metals.

Groundwater

Groundwater samples were collected from the eight monitoring well clusters at the Site. The groundwater samples were analyzed for TCL chemicals. Analysis of the groundwater samples detected the presence of VOCs, SVOCs and dissolved metals.

Air

Site-specific air quality data were collected and analyzed for total suspended particulates, heavy metals, and VOCs. Test results detected the presence of twenty metals. No VOCs were detected in the air samples collected.

Contaminants of Concern

The media affected by the Site's contamination include groundwater, surface water, sediments, leachate, landfill waste, soil and air. Since a significant number (74) of chemicals were detected at the Site, a

subset of indicator chemicals which represent the highest risk potential to human health and the environment was used. The following is a list of the indicator chemicals.

- 1,2 Dichloroethane
- Benzene
- Benzo(a)pyrene
- Ethylbenzene
- Heptachlor
- Phenol
- Styrene
- Arsenic
- Manganese
- Nickel

Risk Characterization

Potential Receptors

A four mile radius surrounding the Site was used to determine potential human receptors. The area is primarily undeveloped land and the area immediately surrounding the Site is rural. It was estimated that 23,000 persons live within the four-mile radius. Potentially sensitive subgroups of the population are children, (0-14 years), women of child-bearing age (15-34 years), and elderly (65 years and greater).

Exposure Routes

An exposure route is the mechanism by which a chemical within an environmental transport medium at an exposure point can enter the receptor. For example, an exposure route would be ingestion of water from a contaminated well. An exposure pathway consists of four components:

- A source and mechanism of chemical release to the environment.
- An environmental transport medium (groundwater, surface water, etc.).
- A point of potential receptor contact with the contaminated medium.
- A receptor exposure route (ingestion, inhalation, and dermal contact).

Risk Assessment

The risk assessment for the Site evaluated the site-specific physical and analytical data in characterizing potential risks to human health and the environment in the absence of any RA at the Site. Twenty-nine complete human receptor and thirty-seven complete environmental receptor exposures pathways existed at the Site based on ten indicator chemicals.

The potential risks to human health were determined for dermal exposure, oral ingestion and inhalation on a media-specific basis for each of the indicator chemicals. EPA determined that the upper bound acceptable risk for exposure to carcinogens at the Site was 1×10^{-6} . In addition, EPA determined that the upper bound acceptable risk for exposure to non-carcinogens at the Site was a Hazard Index (HI) of less than 1.

The risk characterization exposure via inhalation was evaluated by summing over all media (i.e. most conservative approach). The results indicated that inhalation did not present an unacceptable risk to human health. Exposure via ingestion and dermal contact was also summed over all media. The results indicated that exposure via ingestion and dermal contact potentially posed unacceptable risk. The site-specific and national average natural background concentrations of arsenic and manganese, the two inorganic indicator chemicals which exceed groundwater screening levels, were within the expected ranges for those metals in all media types at the Site.

Given the results of the risk characterization, and considering the conservative assumptions that were used throughout the risk calculation process, unacceptable risks were present. Detailed risk calculations were not developed for the environmental receptors because it was assumed that the risks determined for human exposure would be protective for both receptor types.

Response Actions

EPA and Ohio EPA involvement dates back to 1979 when preliminary Site studies and limited data collection was conducted. In 1983, an Ohio EPA letter identified a number of listed hazardous materials as being present in samples collected at the base of the earthen dam. These samples were taken from soil, leachate, and surface water. At that time, active leachate seeps were noted at several points along the base of the earthen dam.

In September 1983, EPA placed the Site on the National Priorities List (NPL). The final Remedial Investigation/Feasibility Study reports were released in August 1989.

On September 29, 1989, EPA signed a ROD that included the following remedy components:

- Dewatering and treating of approximately 7,000,000 gallons of leachate and liquid waste from within the landfill. The on-site treatment system consists of metals precipitation using sulfide, air stripping and carbon adsorption.
- Construction of a 3-acre Resource Conservation and Recovery Act (RCRA) Subtitle C cap over approximately 100,000 cubic yards of waste.
- Consolidation under the landfill cap of 500 cubic yards of sediment and 750 cubic yards of soil downgradient from the earthen dam.
- Construction of a perimeter cut-off wall, consisting of a grout curtain for the bedrock and a slurry wall for the unconsolidated zones. The cut-off wall prevents lateral infiltration of groundwater into the landfill.
- Installation of a perimeter interceptor drain outside the cut-off wall to control overtopping of the cut-off wall and drain groundwater away.
- Construction of a clay berm to obtain the required factor of safety of greater than 1.5 for long-term stability of the earthen dam.

- Long-term maintenance, security and restrictions on future land use. The ROD stated that, in this case, a deed restriction is required as long as the landfill cap is necessary to prevent unacceptable exposure. Furthermore, the deed restrictions for the Site dictate that: 1) there shall be no tampering with, or removal of, the containment or monitoring systems that remain on the Site as a result of implementation of remedial action under the CD; and 2) there shall be no other interference with the performance of work and remedial action, or with the maintenance of remedial measures implemented pursuant to the CD.
- Treatment and discharge of water under the National Pollutant Discharge Elimination System (NPDES) effluent limitations.
- Quarterly monitoring of all monitoring wells. If groundwater exceeds action-based levels, groundwater will be collected and treated in the on-site treatment system.
- Cleanup levels are to correspond to the elimination of all cumulative carcinogenic risks greater than 1×10^{-6} and a remaining cumulative non-carcinogenic HI of less than or equal to 1.

The selected remedy uses permanent treatment systems to eliminate the principal threat posed to human health and the environment by extracting the leachate and treating the contaminated groundwater.

In addition, during the early stages of the RD, a treatability study was performed on the leachate and liquid waste from within the landfill. The results from the treatability study suggested that there would be significant improvement in the treatment system if the air stripping tower were replaced with a biological system. The treatability study also indicated that metals precipitation with sulfide would not be as effective as using sodium hydroxide as the reagent. Therefore, after review of the analysis, EPA determined that an Explanation of Significant Differences (ESD) was needed to change the treatment system technology. EPA signed the ESD on February 28, 1992.

Status of Implementation

On-site remedial activities began on June 17, 1992. EPA used the United States Army Corps of Engineers (USACE) to oversee the potentially responsible parties' (PRPs) construction activities. The PRPs also used a remedial design firm to ensure the contract specifications were adhered to by the construction firm.

During the RA activities, three major changes occurred: 1) at the start of the construction, in preparation for the grout curtain/slurry wall, an area outside the landfill limits was discovered which contained degraded drums and contaminated soil. Approximately 5,000 cubic yards of the newly discovered contaminated soil was excavated along with clean surrounding soil and used as fill material to bring the landfill up to grade. The perimeter cut-off wall and landfill cap were extended to near the newly excavated area; 2) pursuant to the ROD, an estimated 1,300 cubic yards of soil and sediment downgradient from the earthen dam was scheduled to be excavated and consolidated under the landfill cap. After soil and sediment analysis, the volume consolidated under the cap increased to 3,070 cubic yards; 3) during the perimeter cut-off wall installation, rock elevation was higher than anticipated which decreased by one-half the length of the slurry wall through the unconsolidated zones surrounding the landfill. In addition, more than 3,100 cubic yards of grout was pumped into the bedrock fractures under and surrounding the landfill, over five times the estimated amount.

For the contaminated groundwater and leachate extraction and treatment system, the PRPs installed a total of four extraction wells (EW-1 through EW-4). A treatment plant was constructed on-site, where the extracted groundwater and leachate is treated prior to discharge to an adjacent creek in accordance with NPDES discharge requirements. The ROD estimated that the groundwater extraction and treatment system would need to operate for a period of 30 years. EPA conducted a final inspection of the groundwater extraction and treatment system on August 3, 1993. At that time, it was determined that the groundwater and leachate extraction and treatment system was constructed as designed. The system began operation on August 3, 1993.

In August 1993, with the signing of the Preliminary Close-Out Report, EPA determined that the Site achieved construction completion status. EPA and the state determined that all RA construction activities were performed according to specifications. EPA will issue a Final Close-Out Report after groundwater and soil cleanup levels have been met. This will require that all areas of the Site with contamination be verified as clean through soil sampling.

Institutional Controls

Institutional controls (ICs) are non-engineered instruments, such as administrative and legal controls that help to minimize the potential for exposure to contamination and that protect the integrity of the remedy. ICs are required to assure long-term protectiveness for any areas which do not allow for UU/UE. ICs are also required to maintain the integrity of the remedy. The 1989 ROD included the imposition of proprietary restrictions and other ICs to prevent future development of the Site and assures the integrity of the RA. The restrictions, denoted as "Deed Restrictions," were attached to the 1991 RD/RA CD. They were recorded in Lawrence County in September 1993. A copy of the restrictions is included as Attachment 1. While the restrictions implemented under the RD/RA CD have served the valuable function of notice, in the exercise of caution, in 2012 EPA sought to replace those restrictions with a covenant that complied with Ohio's version of the Uniform Environmental Covenants Act (UECA), and, after determining that the Site owner was deceased, sought his beneficiary's assistance. EPA was not able to obtain that individual's signature on the UECA covenant. However, as they provide notice to future users, the deed restrictions currently in place are expected to protect the integrity of the landfill cap, the leachate extraction system and all other components of the RA.

The Site is fenced and the gate is locked. The gate is checked as part of the Site operator's daily duties, and the fence is subject to regular inspections. A use restriction for the Site property has been recorded. The restriction was intended to prevent the development and use of land within the Site boundary, assures the integrity of the landfill and other remedy components, and prohibits use of the groundwater.

The following table summarizes the ICs that are in place at the Site.

Table 1: Summary of Planned and/or Implemented ICs¹

Media, engineered controls, and areas that do not support UU/UE based on current conditions	ICs Needed	ICs Called for in the Decision Documents	Impacted Parcel(s)	IC Objective	Title of IC Instrument Implemented and Date (or planned)
Site boundary/site area	Yes	Yes	See Attachment 1	Prohibits use of land underlying the Site	Deed restriction recorded at Lawrence County Recorder's Office on 9/23/1993
Groundwater area that exceed cleanup levels	Yes	Yes	See Attachment 1	Prohibits consumptive or other use of groundwater until cleanup standards met	Deed restriction recorded at Lawrence County Recorder's Office on 9/23/1993
Subtitle C landfill	Yes	Yes	See Attachment 1	Prohibits use of land underlying the Site, and assures integrity	Deed restriction recorded at Lawrence County Recorder's Office on 9/23/1993
RA components such as wells, berm, and cut-off wall	Yes	Yes	See Attachment 1	Prohibits use of land underlying the Site, and assures integrity of remedy components	Deed restriction recorded at Lawrence County Recorder's Office on 9/23/1993

A map showing the area in which the ICs apply is included as Figure 2.

Current compliance

Based on inspections and interviews, EPA finds there is no evidence of a cap breach and the existing use is consistent with the objectives of the landfill cap and land use restrictions. Also, there is no evidence of groundwater uses at the Site which are inconsistent with the IC objectives.

Long-Term Stewardship

Long-term stewardship (LTS) procedures are not yet in place. Since compliance with ICs is necessary to assure the protectiveness of the remedy, LTS is required to ensure that the ICs are maintained, monitored and enforced so that the remedy continues to function as intended. LTS involves assuring effective procedures are in place to properly maintain and monitor the Site, such as regular inspection of engineering controls and access controls at the Site and review of the ICs at the Site. Annual IC reports

¹ Please refer to "*A Guide to Preparing Superfund Proposed Plans, Records of Decision, and Other Remedy Selection Decision Documents.*" USEPA. July 1999. Also please refer to "*Institutional Controls: A Guide to Planning, Implementing, Maintaining, and Enforcing Institutional Controls at Contaminated Sites (PIME).*" USEPA. December 2012; and "*Recommended Evaluation of Institutional Controls: Supplement to the 'Comprehensive Five-Year Review Guidance'*" USEPA (September 2011).

with review of and certification to EPA that ICs are in place and effective are provided. Development of a communications plan and use of the State's one call system should be explored.

Plans incorporating LTS procedures (e.g., an LTS Plan or incorporation of LTS procedures into the Site Operation and Maintenance (O&M) Plan) should include the mechanisms and procedures for inspecting and monitoring compliance with the ICs as well as communications procedures. An annual report should be submitted to EPA to demonstrate that the Site was inspected to ensure no inconsistent uses have occurred, to certify that ICs remain in place and are effective, and to document that any necessary contingency actions have been executed.

IC Follow-up Actions Needed

A LTS Plan will be developed, or the O&M Plan will be updated to include procedures for long-term stewardship.

Systems Operations/Operation & Maintenance

The PRPs are performing O&M of the groundwater extraction and treatment system in accordance with the Leachate Treatment System Operation and Maintenance Plan. Pursuant to that plan, the effluent from the treatment system is monitored on a monthly and semi-annual basis. Inspections of the physical plant are also carried out during those monitoring events.

Groundwater monitoring has been performed pursuant to the details outlined in the Groundwater Monitoring Plan to ensure hydraulic capture and removal of leachate is occurring and that chemical levels in the groundwater are decreasing. Analyses being performed include the chemicals of concern listed in the ROD and CD and those parameters required under the NPDES discharge requirements issued by Ohio EPA. EPA, in consultation with Ohio EPA, will certify completion of the groundwater remediation once it has been demonstrated that cleanup levels have been attained and maintained for all chemicals of concern listed in the ROD and CD.

Based on the operating flow data, as of March 2017 the groundwater and leachate collection and treatment system has pumped approximately 5.5 million gallons of contaminated water and treated approximately 5 million gallons. Since the fourth quarter of 1993, the monitoring network of wells has been sampled quarterly through 1996, and semi-annually since then.

Landfill cap maintenance involves inspection and repair of any soil burrowing or erosion locations, and mowing of the landfill surface as needed.

III. PROGRESS SINCE THE LAST REVIEW

This section includes the protectiveness determinations and statements from the last FYR as well as the recommendations from the last FYR and the current status of those recommendations.

Table 2: Protectiveness Determinations/Statements from the 2012 FYR

OU #	Protectiveness Determination	Protectiveness Statement
OUI & Sitewide	Short-term Protective	The assessment of this five-year review has found that the remedy at the E.H. Schilling Landfill Superfund site is protective of human health and the environment in the short term since all known exposure pathways have been eliminated. However, in order for the remedy to be protective in the long term, groundwater cleanup standards based on Safe Drinking Water Act MCLs, risk-based levels, and State of Ohio criteria for protection of groundwater quality will need to be met, and a legally effective use restriction that protects the integrity of the landfill cap and other remedy components and prohibits site groundwater use will need to be implemented and maintained. Long-term protectiveness requires compliance with effective ICs, which for the E.H. Schilling Landfill include groundwater use restrictions and land use restrictions that prohibit interference with the landfill cap and on-site soil.

Table 3: Status of Recommendations from the 2012 FYR

OU #	Issue	Recommendations	Current Status	Current Implementation Status Description	Completion Date (if applicable)
1/ Sitewide	Erosion on the face of the dam and near the gabion wall and a blowout/erosion area near the north side culvert/ditch is occurring	Implement erosion control measures	Ongoing	See Recommendation #1 below	9/29/2017
1/ Sitewide	Gas monitoring needed	Sample gas vents	Completed	See Recommendation #2 below	6/27/2014
1/ Sitewide	Institutional controls need to be implemented	Sign and record a UECA covenant	Considered but not implemented	See Recommendation #3 below	6/30/2013

Recommendation # 1

Due to the steep bank on the face of the dam, erosion problems will likely continue. Therefore, fixing the eroded areas will be an ongoing O&M activity.

Recommendation # 2

The PRPs prepared a landfill gas monitoring plan at the request of Ohio EPA to monitor potential soil gas migration. This request was raised during the May 2, 2012 Site inspection and in the 2012 FYR Report. Ohio EPA's concern was to evaluate potential off-site migration of gas and specifically to assess possible migration of vapors from the landfill to structures within 1,000 feet of the boundary of the buried waste (landfill boundary). The PRPs evaluated the area around the landfill to account for all occupied structures within 1,000 feet of the landfill boundary. This evaluation included: the on-site treatment building and two residences. Each residence also had a garage and out-building within the threshold distance.

Gas monitoring was conducted in two areas: (1) inside the on-site treatment building and (2) from three shallow sampling points located within the Site boundary between the landfill boundary and the occupied structures. Two explosive gas alarms were installed inside the on-site treatment building, as specified in the Plan. Gases are still monitored in the treatment building. To date, no vapors have been detected above alarm thresholds. Three shallow soil gas points were installed in May 2013. Ohio EPA was on-site to observe the locations of the shallow gas points and the installation methodology.

The PRPs monitored the soil gas points on a semi-annual basis from May 2013 to May 2014 to evaluate explosive gas migration by measuring and recording extracted volatile vapors using a field-calibrated PID.

Key observations and PRPs' conclusions from the Landfill Gas Monitoring include:

- Gas monitoring within the Treatment Building is ongoing with two explosive gas alarms. These explosive gas alarms will continue to be operated. To date, no alarms have ever been recorded.
- The results of the soil gas sampling using a MultiRAE Pro were mixed:
 - At least one sample was successfully collected from each sample location ;
 - All photoionization detector (PID) readings have been zero or very close to background readings;
 - Two sample locations stopped producing vapor despite our significant efforts to evaluate and repair the sample locations; and
 - Based on the information collected over the past year and operation of the landfill for over 20 years, there is no indication that explosive gases have migrated towards nearby structures.

In 2014, the PRPs and Ohio EPA mutually agreed that no additional soil gas sampling appeared necessary; however, written documentation should be prepared and submitted to Ohio EPA that includes the historical monitoring results of each constituent measured during each of the previous gas monitoring events (e.g., Lower Explosive Level [LEL], hydrogen sulfide, carbon monoxide, percentage oxygen, and volatile organic compounds). See summary of soil gas sampling in Table 6.

Recommendation # 3

In 2012, EPA attempted to replace the deed restrictions with a covenant that complied with Ohio's version of the UECA, and sought the current owner's consent, the original owner having passed away. EPA was not able to obtain the current owner's signature on the UECA environmental covenant. However, the deed restrictions currently in place are expected to protect the integrity of the landfill cap, the leachate extraction system and all other components of the RA, and prohibit use of the groundwater.

IV. FIVE-YEAR REVIEW PROCESS

Community Notification, Involvement & Site Interviews

The completed fifth FYR Report and background data will be available in the Site information repository at the Briggs Lawrence County Public Library, 321 S. 4th St., Ironton, OH and on EPA's website for public viewing. EPA intended to place an advertisement notice regarding the five-year review process in the local newspaper, but due to an administrative error the public notice advertisement was placed place in the Ironton Tribune newspaper for public review. EPA will place a public notice in the newspaper regarding the completion of the FYR after the report is issued.

Data Review

Groundwater monitoring has been occurring at this Site since November 1993. As part of this FYR, EPA reviewed comprehensive Site reports including the Semi-Annual Groundwater Monitoring Results from 2013 through 2016 and the Monthly Status reports. These reports include the most recent results from the Site groundwater monitoring wells along with groundwater effluent data. To help facilitate access to the groundwater monitoring wells and ensure quality of environmental data from groundwater sampling, all the Site's monitoring wells were inspected, assessed, and refurbished where necessary in May 2013. This involved disassembling and removing the protective wooden structures and all the associated pumps, electrical wiring and piping from each of the sixteen (16) Site monitoring wells. Seven (7) of the 16 monitoring wells were re-developed in June 2013 (prior to sampling due to silt accumulation) to allow all monitoring wells to be sampled again which allowed for a better understanding of the groundwater quality conditions across the Site.

Sampling was conducted quarterly from 1993 to 1996 and semi-annually since then. Analysis of the samples includes VOCs, SVOCs, and metals. Table 4 includes the semi-annual groundwater monitoring results from 2013 - 2016. The monitoring results show that the parameter results are staying consistent or decreasing. Table -52 includes the effluent sample results from 2013 - 2016. The effluent sample results show that the treated groundwater meets the discharge requirements.

Water treated and discharged at the landfill since 1993 has been regulated under the NPDES discharge requirements issued by Ohio EPA. Samples of effluent are collected prior to discharge and analyzed for VOCs, SVOCs, pesticides/polychlorinated biphenyls (PCBs), total metals, free cyanide, ammonia nitrogen, pH, total suspended solids (TSS), biological oxygen demand (BOD), and oil and grease. Historically the discharge has been in compliance with the exception of one exceedance recorded in March 1993, for oil and grease. As a result of this exceedance, carbon filter units were changed out and no problems have been encountered since.

In June 2015, the PRPs submitted a request to EPA to idle the landfill dewatering and treatment system. The PRP's request is currently under review. EPA and Ohio EPA have recommended that gas sampling be conducted during the pilot test for idling the landfill dewatering and treatment system. The three soil gas locations remain in-place with the ability to conduct further vapor sampling upon request of EPA or Ohio EPA.

Site Inspection

The inspection at the Site as part of this FYR was conducted on May 10, 2017. In attendance were: Scott Hansen, EPA; Shannon Cook, Ohio EPA; Ross Tabachow, Excalibur Group; and James Scherer and Jeremy Blevins, IMC, Inc. The purpose of the inspection was to assess the protectiveness of the remedy, including the presence of fencing to restrict access, the integrity of the landfill cap, and general conditions of the Site treatment system.

A walk was taken around the surface of the landfill as well as areas on the face of the dam. Site access is available through a locked gate which secures the Site landfill and the treatment building. The Site Inspection Checklist was completed by EPA and is included as Attachment 2.

The landfill cap over most of the Site appeared to be in good condition and well vegetated. However, soil erosion and soil burrowing were noted on the face of the dam.

V. TECHNICAL ASSESSMENT

QUESTION A: Is the remedy functioning as intended by the decision documents? **Yes**

Question A Summary:

Remedial Action Performance: The remedies selected in the 1989 ROD have been implemented and remain functional, operational and effective. Continued maintenance and monitoring of the Site hazardous waste cap and groundwater/leachate extraction and treatment system inside the security perimeter fence, and groundwater monitoring will ensure that the remedy remains protective.

Cost of System Operations/O&M: Current annual O&M costs are not available since the Site is an enforcement lead and the PRPs are not required to provide that information. The 1989 ROD estimated that annual O&M costs would be approximately \$100,000.

Opportunities for Optimization: Due to the steep bank on the face of the dam, erosion problems will likely continue. Therefore, fixing the eroded areas will be an ongoing O&M activity.

Early Indicators of Potential Remedy Failure: No early indicators of potential remedy failure were noted during the review. Maintenance activities have been consistent with expectations, and groundwater monitoring results from the semi-annual monitoring reports show that the parameter results are staying consistent or decreasing.

Implementation of Institutional Controls and Other Measures: The 1989 ROD required imposition of proprietary use restrictions and other ICs to prevent future development of the Site, assure the integrity of the RA, and prohibit groundwater use. Site access and use is restricted with a security perimeter fence. Deed restrictions for the Site property which provide notice of

the need to restrict development on the landfill cap and protect the integrity of remedial components have been in place.

QUESTION B: Are the exposure assumptions, toxicity data, cleanup levels, and remedial action objectives (RAOs) used at the time of the remedy selection still valid? **Yes**

Question B Summary:

Changes in Standards and To Be Considered: Standards outlined in the 1989 ROD and the 1997, 2002, 2007 and 2012 FYR reports are still valid at the E.H. Schilling Site.

Changes in Exposure Pathways: No changes in the Site conditions that affect exposure pathways were identified as part of the FYR. There are no current or known planned changes in the Site land use.

Changes in Risk Assessment Methodologies: Changes in risk assessment methodologies since the Fourth FYR are not significant and do not call into question the protectiveness of the remedy.

QUESTION C: Has any other information come to light that could call into question the protectiveness of the remedy? **No**

No other information has come to light that calls into question the protectiveness of the remedy.

VI. ISSUES/RECOMMENDATIONS

Issues/Recommendations	
OU(s) without Issues/Recommendations Identified in the Five-Year Review:	
None	

Issues and Recommendations Identified in the Five-Year Review:				
OU(s): Sitewide	Issue Category: Operations and Maintenance			
	Issue: Erosion and soil burrowing at the face of the dam.			
	Recommendation: Fix areas as needed.			
Affect Current Protectiveness	Affect Future Protectiveness	Party Responsible	Oversight Party	Milestone Date
No	Yes	PRP	EPA/State	9/29/2017

OU(s): Sitewide	Issue Category: Institutional Controls			
	<p>Issue: Documents and procedures should be developed and implemented to ensure that implemented ICs are effective and properly maintained, monitored, and enforced.</p>			
	<p>Recommendation: Develop a LTS Plan, or incorporate LTS procedures into the Site O&M Plan.</p>			
Affect Current Protectiveness	Affect Future Protectiveness	Party Responsible	Oversight Party	Milestone Date
No	Yes	PRP	EPA/State	9/28/2018

VII. PROTECTIVENESS STATEMENT

OU1 and Sitewide Protectiveness Statement
<p><i>Protectiveness Determination:</i> Short-term Protective</p>
<p><i>Protectiveness Statement:</i> The remedy at the E.H. Schilling Landfill Superfund site is currently protective of human health and the environment because the remedy is functioning as intended and all known exposure pathways have been eliminated. However, in order for the remedy to be protective in the long term, the following actions need to be taken to ensure protectiveness: areas of erosion and burrowing on the face of the dam need to be repaired, and a LTS Plan or an amendment to the O&M Plan incorporating LTS procedures needs to be developed and implemented.</p>

VIII. NEXT REVIEW

The next FYR report for the E.H. Schilling Landfill Superfund Site is required no less than five years from EPA's signature date of this review.

APPENDIX A – REFERENCE LIST

- Fourth Five-Year Review Report, July 2012
- Third Five-Year Review Report, July 2007
- Second Five-Year Review Report, September 2002

Notes:

Blank cell - No data available Bold - Exceeds Maximum Contaminant Level (MCL)

J - Estimated Value

X - Detected in the Method Blank between the MDL and PQL

Blue font - Detected above method detection limit

NA - Not Analyzed

Table 4 - Groundwater Analytical Results

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

H - Analyzed outside of Holding Time

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

H - Analyzed outside of Holding Time

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level

Notes

- - - indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

H - Analyzed outside of Holding Time

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

H - Analyzed outside of Holding Time

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background

or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

H - Analyzed outside of Holding Time

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

H - Analyzed outside of Holding Time

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

N/A - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background

or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background

or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level

Notes

--- Indicates no Established Effluent Criteria

NA - Not Analyzed

J - Analyte is present at an estimated concentration between the MDL and Report Limit

X - Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background

or reagent contamination at the observed level

TABLE 6

Summary of Soil Gas Sampling Results

Table 6 - Summary of Soil Gas Sampling Results
Schilling Landfill
Ironton, Ohio

Sample Point	Sample Date ^a	VOCs measured with PID (in ppmv) ^b	Lower Explosive Limit (%) ^c	O ₂ (%)	Carbon Monoxide (in ppm)	Hydrogen Sulfide (in ppm)	Observations
SVP-1	5/8/2013	1 7	0	17 8	165	0	Extracted vapor flow stopped after several minutes of pumping Background PID readings of ambient air were recorded at 0 2 ppm
SVP-1	5/30/2013			Unable to measure			Unable to establish vacuum to extract vapor
SVP-1	11/26/2013			Unable to measure			Unable to establish vacuum to extract vapor
SVP-1	5/29/2014			Unable to measure			Unable to establish vacuum to extract vapor
SVP-2	5/8/2013	1 5	0	13 4	0	0	Consistent vapor flow which allowed for PID readings Background ambient air PID readings were recorded at 0 2 ppm
SVP-2	5/30/2013	0	0	16 4	0	0	Consistent vapor flow and PID readings
SVP-2	11/26/2013	0	0	14 4	0	0	Consistent vapor flow and PID readings
SVP-2	5/29/2014			Unable to measure			Unable to establish vacuum to extract vapor (recent heavy rainfall is suspected to have temporarily submerged SVP-2)
SVP-3	5/8/2013	0 2	0	20 9	2	0	Consistent vapor flow which allowed for PID readings Background ambient air PID readings were recorded at 0 2 ppm
SVP-3	5/30/2013			Unable to measure			No measurable vacuum due to moisture
SVP-3	11/26/2013			Unable to measure			No measurable vacuum due to moisture
SVP-3	5/29/2014			Unable to measure			No measurable vacuum due to moisture

a - On 8/6/13, the three sample points were tested with a vacuum pump to determine whether they were producing consistent vapor flow Only SVP-2 was observed to produce consistent vapor.

b - VOCs measured with PID (ppmv) = Volatile Organic Compounds (VOCs) measured with a Photo Ionization Detector (PID) which measures in parts per million by volume (ppmv)

c - The Lower Explosive Limit is sensitive to a range of gases including methane

APPENDIX IV

DEED RESTRICTIONS

E. H. Schilling & Son, General Contractors, Inc., owner in fee simple of the real estate described below, hereby imposes restrictions on the described real estate, also known as the E.H. Schilling & Son, General Contractors, Inc. landfill facility (the "Schilling Facility"), in Hamilton Township, Lawrence County, State of Ohio:

That property situated in Section 9, Township 1, Range 19, Hamilton Township, Lawrence County, Ohio and being a part of the E.H. Schilling & Sons, General Contractors, Inc. 15.08 acre tract as recorded in Volume 509, page 90 and also being a part of the Earl H. Schilling tract as recorded in Volume 418, page 179 of the Lawrence County Deed Records and being more particularly bound and described as follows:

Beginning at a railroad spike (found, September 1990) in the centerline of Winkler Hollow Road, said railroad spike being the westernmost corner of the aforementioned E.H. Schilling & Sons, General Contractors, Inc. tract,

Thence, following along the Westerly property line of said E.H. Schilling & Sons, General Contractors, Inc. tract North 36 degrees 34 minutes 01 seconds East, 231.55 feet to a railroad spike in the centerline of Winkler Hollow Road (found, September 1990),

Thence, South 84 degrees 40 minutes 39 seconds East, 383.03 feet to an iron pin (set, September 1990),

Thence, South 53 degrees 48 Minutes 04 seconds East, 261.26 feet to an iron pin (set, September 1990),

Thence, South 80 degrees 31 minutes 02 seconds East, 322.09 feet to an iron pin (set, September 1990),

Thence, North 57 degrees 40 minutes 56 seconds East, 206.35 feet to a chiseled "X" on rock in small drain (found, September 1990),

Thence, South 70 degrees 40 minutes 48 seconds East, 93.65 feet to an iron pin (set, September 1990),

Thence, South 43 degrees 57 minutes 21 seconds East, 254.25 feet to an iron pin (set, September 1990),

Thence, South 22 degrees 19 minutes 22 seconds East, 89.90 feet to an iron pin (set, September 1990),

Thence, South 15 degrees 51 minutes 37 seconds East, 118.72 feet to an iron pin (set, September 1990),

Thence, South 4 degrees 07 minutes 26 seconds West, 118.51 feet to an iron pin (found, September 1990),

Thence, South 57 degrees 55 minutes 34 seconds West, 54.43 feet to an iron pin (set, September 1990),

Thence, South 35 degrees 26 minutes 06 seconds West, 40.73 feet to an iron pin (set, September 1990),

Thence, South 51 degrees 56 minutes 17 seconds West, 88.76 feet to an iron pin (set, September 1990),

Thence, South 52 degrees 21 minutes 08 seconds West, 91.36 feet to an iron pin (set, September 1990),

Thence, North 71 degrees 10 minutes 00 seconds West, 63.16 feet to an iron pin (set, September 1990),

Thence, South 46 degrees 18 minutes 41 seconds West, 46.99 feet to an iron pin (set, September 1990),

Thence, North 42 degrees 40 minutes 56 seconds West, 76.63 feet to an iron pin (set, September 1990),

Thence, North 41 degrees 54 minutes 20 seconds West, 57.34 feet to an iron pin (set, September 1990),

Thence, North 60 degrees 16 minutes 26 seconds West, 78.39 feet to an iron pin (set, September 1990),

Thence, South 87 degrees 14 minutes 36 seconds West, 118.22 feet to an iron pin (set, September 1990),

Thence, North 76 degrees 11 minutes 25 seconds West, 130.02 feet to an iron pin (set, September 1990),

Thence, North 59 degrees 15 minutes 37 seconds West, 973.56 feet to the ORIGINAL POINT OF BEGINNING containing 15.317 acres, more or less of which 14.089 is out of the E.H. Schilling & Sons, General Contractors, Inc. tract as recorded in Volume 509 Page 90, 0.11 acre is out of 3.67 acre tract as recorded in 527, Page 241 and 1.118 acres is out of the Earl H. Schilling tract as recorded in Volume 418 Page 179.

The following restrictions are imposed upon the Schilling Facility, its present and any future owners, their authorized agents, assigns, employees or persons acting under their direction or control, for the purposes of protecting public health and the environment, preventing interference with the performance of work and remedial action, and ensuring the maintenance of the remedial measures pursuant to the Consent Decree in United States v. E.H. Schilling & Son, General Contractors, Inc., et al., Civil Action no. C-1-90-705, approved by the United States District Court for the Southern District of Ohio on May 31, 1991 (the "Consent Decree"), and are required by paragraph 9 of the Consent Decree:

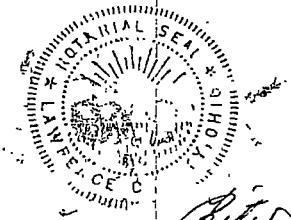

1. There shall be no consumptive or other use of the groundwater underlying the Schilling facility that could cause exposure of humans or animals to the groundwater underlying the Schilling facility;
2. There shall be no residential, commercial or agricultural use of the Schilling Facility, including but not limited to the construction, installation or use of any structures or buildings for residential, commercial or agricultural purposes;
3. There shall be no use of the Schilling Facility that would allow the continued presence of humans at the Schilling Facility, other than the presence necessary for implementation of remedial action under the Consent Decree. Prohibited uses which would allow the continued presence of humans at this particular real estate will include but not necessarily be limited to recreational or educational uses.
4. There shall be no installation, removal, construction or use of any buildings, wells, pipes, roads, ditches or any other structures at the Schilling Facility except as approved by the United States Environmental Protection Agency ("U.S. EPA") as consistent with the Consent Decree and the Scope of Work which is Appendix 2 to the Consent Decree.
5. There shall be no tampering with, or removal of, the containment or monitoring systems that remain on the

VOL 0013 PAGE 012

Schilling Facility as a result of implementation of
remedial action or other work under the Consent Decree.

All of the above restrictions shall run with the land and
continue in perpetuity.

IN WITNESS WHEREOF, Earl H. Schilling has caused these
Deed Restrictions to be executed this 21st day of September,
1993.

APPENDIX IV

DEED RESTRICTIONS

Earl H. Schilling, owner in fee simple of the real estate described below, hereby imposes restrictions on the real estate situated in Section 9, Township 1, Range 19, and being a part of lot 5 in Hamilton Township, Lawrence County, State of Ohio, except for:

That property situated in Section 9, Township 1, Range 19, Hamilton Township, Lawrence County, Ohio and being a part of the E.H. Schilling & Sons, General Contractors, Inc. 15.08 acre tract as recorded in Volume 509, page 90^{1/2} and also being a part of the Earl H. Schilling tract as recorded in Volume 418, page 179^{1/2} of the Lawrence County Deed Records and being more particularly bound and described as follows:

Beginning at a railroad spike (found, September 1990) in the centerline of Winkler Hollow Road, said railroad spike being the westernmost corner of the aforementioned E.H. Schilling & Sons, General Contractors, Inc. tract,

Thence, following along the Westerly property line of said E.H. Schilling & Sons, General Contractors, Inc. tract North 36 degrees 34 minutes 01 seconds East, 231.55 feet to a railroad spike in the centerline of Winkler Hollow Road (found, September 1990),

Thence, South 84 degrees 40 minutes 39 seconds East, 383.03 feet to an iron pin (set, September 1990),

Thence, South 53 degrees 48 Minutes 04 seconds East, 261.26 feet to an iron pin (set, September 1990),

Thence, South 80 degrees 31 minutes 02 seconds East, 322.09 feet to an iron pin (set, September 1990),

Thence, North 57 degrees 40 minutes 56 seconds East, 206.35 feet to a chiseled "X" on rock in small drain (found, September 1990),

Thence, South 70 degrees 40 minutes 48 seconds East, 93.65 feet to an iron pin (set, September 1990),

Thence, South 43 degrees 57 minutes 21 seconds East, 254.25 feet to an iron pin (set, September 1990),

Thence, South 22 degrees 19 minutes 22 seconds East, 89.90 feet to an iron pin (set, September 1990),

Thence, South 15 degrees 51 minutes 37 seconds East, 118.72 feet to an iron pin (set, September 1990),

Thence, South 4 degrees 07 minutes 26 seconds West, 118.51 feet to an iron pin (found, September 1990),

Thence, South 57 degrees 55 minutes 34 seconds West, 54.43 feet to an iron pin (set, September 1990),

Thence, South 35 degrees 26 minutes 06 seconds West, 40.73 feet to an iron pin (set, September 1990),

Thence, South 51 degrees 56 minutes 17 seconds West, 88.76 feet to an iron pin (set, September 1990),

Thence, South 52 degrees 21 minutes 08 seconds West, 91.36 feet to an iron pin (set, September 1990),

Thence, North 71 degrees 10 minutes 00 seconds West, 63.16 feet to an iron pin (set, September 1990),

Thence, South 46 degrees 18 minutes 41 seconds West, 46.99 feet to an iron pin (set, September 1990),

Thence, North 42 degrees 40 minutes 56 seconds West, 76.63 feet to an iron pin (set, September 1990),

Thence, North 41 degrees 54 minutes 20 seconds West, 57.34 feet to an iron pin (set, September 1990),

Thence, North 60 degrees 16 minutes 26 seconds West, 78.39 feet to an iron pin (set, September 1990),

Thence, South 87 degrees 14 minutes 36 seconds West, 118.22 feet to an iron pin (set, September 1990),

Thence, North 76 degrees 11 minutes 25 seconds West, 130.02 feet to an iron pin (set, September 1990),

Thence, North 59 degrees 15 minutes 37 seconds West, 973.56 feet to the ORIGINAL POINT OF BEGINNING containing 15.317 acres, more or less of which 14.089 acres is out of the E.H. Schilling & Sons, General Contractors, Inc. tract as recorded in Volume 509 Page 90, 0.11 acre is out of 3.67 acre tract as recorded in 527, Page 241 and 1.118 acres is out of the Earl H. Schilling tract as recorded in Volume 418 Page 179.

The following restrictions are imposed upon the above-described real estate, its present and any future owners, their authorized agents, assigns, employees and anyone acting under their direction or control, for the purposes of protecting public health and the environment, preventing interference with the performance of work and remedial action, and ensuring the maintenance of the remedial measures pursuant to the Consent Decree in United States v. E.H. Schilling & Son, General Contractors, Inc., et al., Civil Action no. C-1-90-705, approved by the United States District Court for the Southern District of Ohio on May 31, 1991 (the "Consent Decree"), and are required by paragraph 9 of the Consent Decree:

1. There shall be no tampering with, or removal of, the containment or monitoring systems that remain on the above-described real estate as a result of implementation of remedial action under the Consent Decree.
2. There shall be no other interference with the performance of work and remedial action, or with the maintenance of remedial measures implemented pursuant to the Consent Decree.

The above restrictions shall run with the land and continue in perpetuity.

2. **O&M Cost Records**

- Readily available Up to date
 Funding mechanism/agreement in place

Original O&M cost estimate _____ Breakdown attached

Total annual cost by year for review period if available

From _____ To _____	Date	Date	Total cost	<input type="checkbox"/> Breakdown attached
From _____ To _____	Date	Date	Total cost	<input type="checkbox"/> Breakdown attached
From _____ To _____	Date	Date	Total cost	<input type="checkbox"/> Breakdown attached
From _____ To _____	Date	Date	Total cost	<input type="checkbox"/> Breakdown attached
From _____ To _____	Date	Date	Total cost	<input type="checkbox"/> Breakdown attached
From _____ To _____	Date	Date	Total cost	<input type="checkbox"/> Breakdown attached

3. **Unanticipated or Unusually High O&M Costs During Review Period**

Describe costs and reasons: _____

V. ACCESS AND INSTITUTIONAL CONTROLS Applicable N/A

A. Fencing

1. **Fencing damaged** Location shown on site map Gates secured N/A
 Remarks _____

B. Other Access Restrictions

1. **Signs and other security measures** Location shown on site map N/A
 Remarks _____ *Signs*

C. Institutional Controls (ICs)

1. **Implementation and enforcement**

- Site conditions imply ICs not properly implemented Yes No N/A
 Site conditions imply ICs not being fully enforced Yes No N/A

Type of monitoring (e.g., self-reporting, drive by) _____

Frequency _____

Responsible party/agency _____

Contact _____

Name	Title	Date	Phone no.
Reporting is up-to-date	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
Reports are verified by the lead agency	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
Specific requirements in deed or decision documents have been met	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
Violations have been reported	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A
Other problems or suggestions: <input type="checkbox"/> Report attached			
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

2. **Adequacy**

ICs are adequate

ICs are inadequate

N/A

Remarks _____

D. General

1. **Vandalism/trespassing** Location shown on site map No vandalism evident

Remarks _____

2. **Land use changes on site** N/A

Remarks _____

3. **Land use changes off site** N/A

Remarks _____

VI. GENERAL SITE CONDITIONS

A. Roads Applicable N/A

1. **Roads damaged** Location shown on site map Roads adequate N/A
 Remarks _____

B. Other Site Conditions

Remarks _____

VII. LANDFILL COVERS Applicable N/A

A. Landfill Surface

1. **Settlement (Low spots)** Location shown on site map Settlement not evident
 Areal extent _____ Depth _____
 Remarks _____

2. **Cracks** Location shown on site map Cracking not evident
 Lengths _____ Widths _____ Depths _____
 Remarks _____

3. **Erosion** Location shown on site map Erosion not evident
 Areal extent _____ Depth 1 ft
 Remarks Erosion on slope of dam face. Holes from burrowing animals

4. **Holes** Location shown on site map Holes not evident
 Areal extent _____ Depth 1 ft
 Remarks Holes from burrowing animals

5. **Vegetative Cover** Grass Cover properly established No signs of stress
 Trees/Shrubs (indicate size and locations on a diagram)
 Remarks Area w/ erosion not established

6. **Alternative Cover (armored rock, concrete, etc.)** N/A
 Remarks _____

7. **Bulges** Location shown on site map Bulges not evident
 Areal extent _____ Height _____
 Remarks _____

8.	Wet Areas/Water Damage	<input type="checkbox"/> Wet areas/water damage not evident <input type="checkbox"/> Location shown on site map Areal extent _____ <input type="checkbox"/> Location shown on site map Areal extent _____ <input checked="" type="checkbox"/> Seeps Areal extent _____ <input type="checkbox"/> Soft subgrade Areal extent _____ Remarks <i>Seeps are monitored</i>
9.	Slope Instability	<input type="checkbox"/> Slides <input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> No evidence of slope instability Areal extent _____ Remarks _____
B. Benches <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A (Horizontally constructed mounds of earth placed across a steep landfill side slope to interrupt the slope in order to slow down the velocity of surface runoff and intercept and convey the runoff to a lined channel.)		
1.	Flows Bypass Bench	<input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> N/A or okay Remarks _____
2.	Bench Breached	<input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> N/A or okay Remarks _____
3.	Bench Overtopped	<input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> N/A or okay Remarks _____
C. Letdown Channels <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A (Channel lined with erosion control mats, riprap, grout bags, or gabions that descend down the steep side slope of the cover and will allow the runoff water collected by the benches to move off of the landfill cover without creating erosion gullies.)		
1.	Settlement	<input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> No evidence of settlement Areal extent _____ Depth _____ Remarks _____
2.	Material Degradation	<input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> No evidence of degradation Material type _____ Areal extent _____ Remarks _____
3.	Erosion	<input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> No evidence of erosion Areal extent _____ Depth _____ Remarks <i>erosion on face of dam</i>
4.	Undercutting	<input type="checkbox"/> Location shown on site map <input checked="" type="checkbox"/> No evidence of undercutting Areal extent _____ Depth _____ Remarks _____

5.	Obstructions	Type _____	<input checked="" type="checkbox"/> No obstructions <input type="checkbox"/> Location shown on site map	Areal extent _____
	Size _____	Remarks _____		
6.	Excessive Vegetative Growth	Type _____	<input checked="" type="checkbox"/> No evidence of excessive growth <input type="checkbox"/> Vegetation in channels does not obstruct flow <input type="checkbox"/> Location shown on site map	
		Areal extent _____	Remarks _____	
D. Cover Penetrations <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A				
1.	Gas Vents	<input type="checkbox"/> Active <input checked="" type="checkbox"/> Passive <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input type="checkbox"/> Routinely sampled <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> Good condition <input type="checkbox"/> N/A	
	Remarks _____			
2.	Gas Monitoring Probes	<input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input type="checkbox"/> Routinely sampled <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> Good condition <input type="checkbox"/> N/A	
	Remarks _____			
3.	Monitoring Wells (within surface area of landfill)	<input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> Good condition <input type="checkbox"/> N/A	
	Remarks _____			
4.	Leachate Extraction Wells	<input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> Good condition <input type="checkbox"/> N/A	
	Remarks _____			
5.	Settlement Monuments	<input type="checkbox"/> Located <input type="checkbox"/> Routinely surveyed	<input checked="" type="checkbox"/> N/A	
	Remarks _____			
E. Gas Collection and Treatment <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A				
1.	Gas Treatment Facilities	<input type="checkbox"/> Flaring <input type="checkbox"/> Thermal destruction <input type="checkbox"/> Collection for reuse <input type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance	Remarks _____	
2.	Gas Collection Wells, Manifolds and Piping	<input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance	Remarks _____	

3.	Gas Monitoring Facilities (e.g., gas monitoring of adjacent homes or buildings)		
	<input type="checkbox"/> Good condition	<input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> N/A
	Remarks _____		
F. Cover Drainage Layer <input type="checkbox"/> Applicable <input type="checkbox"/> N/A			
1.	Outlet Pipes Inspected	<input type="checkbox"/> Functioning	<input type="checkbox"/> N/A
	Remarks _____		
2.	Outlet Rock Inspected	<input type="checkbox"/> Functioning	<input type="checkbox"/> N/A
	Remarks _____		
G. Detention/Sedimentation Ponds <input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A			
1.	Siltation Areal extent _____	Depth _____	<input checked="" type="checkbox"/> N/A
	<input type="checkbox"/> Siltation not evident		
	Remarks _____		
2.	Erosion Areal extent _____	Depth _____	
	<input type="checkbox"/> Erosion not evident		
	Remarks _____		
3.	Outlet Works	<input type="checkbox"/> Functioning	<input checked="" type="checkbox"/> N/A
	Remarks _____		
4.	Dam	<input checked="" type="checkbox"/> Functioning	<input type="checkbox"/> N/A
	Remarks _____		
H. Retaining Walls <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
1.	Deformations	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Deformation not evident
	Horizontal displacement _____	Vertical displacement _____	
	Rotational displacement _____		
	Remarks _____		
2.	Degradation	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Degradation not evident
	Remarks _____		
I. Perimeter Ditches/Off-Site Discharge <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
1.	Siltation	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Siltation not evident
	Areal extent _____	Depth _____	
	Remarks _____		

2.	Vegetative Growth	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> N/A
	<input checked="" type="checkbox"/> Vegetation does not impede flow		
	Areal extent _____	Type _____	
	Remarks _____		
3.	Erosion	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Erosion not evident
	Areal extent _____	Depth _____	
	Remarks _____		
4.	Discharge Structure	<input type="checkbox"/> Functioning	<input type="checkbox"/> N/A
	Remarks _____		
VIII. VERTICAL BARRIER WALLS <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
1.	Settlement	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Settlement not evident
	Areal extent _____	Depth _____	
	Remarks _____		
2.	Performance Monitoring	Type of monitoring _____	
	<input type="checkbox"/> Performance not monitored		
	Frequency _____	<input type="checkbox"/> Evidence of breaching	
	Head differential _____		
	Remarks _____		
IX. GROUNDWATER/SURFACE WATER REMEDIES <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
A. Groundwater Extraction Wells, Pumps, and Pipelines <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
1.	Pumps, Wellhead Plumbing, and Electrical		
	<input checked="" type="checkbox"/> Good condition	<input type="checkbox"/> All required wells properly operating	<input type="checkbox"/> Needs Maintenance
	<input type="checkbox"/> N/A		
	Remarks _____		
2.	Extraction System Pipelines, Valves, Valve Boxes, and Other Appurtenances		
	<input checked="" type="checkbox"/> Good condition	<input type="checkbox"/> Needs Maintenance	
	Remarks _____		
3.	Spare Parts and Equipment		
	<input checked="" type="checkbox"/> Readily available	<input checked="" type="checkbox"/> Good condition	<input type="checkbox"/> Requires upgrade
	<input type="checkbox"/> Needs to be provided		
	Remarks _____		
B. Surface Water Collection Structures, Pumps, and Pipelines <input type="checkbox"/> Applicable <input type="checkbox"/> N/A			
1.	Collection Structures, Pumps, and Electrical		
	<input type="checkbox"/> Good condition	<input type="checkbox"/> Needs Maintenance	
	Remarks _____		

2. Surface Water Collection System Pipelines, Valves, Valve Boxes, and Other Appurtenances	
<input type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks _____	
3. Spare Parts and Equipment	
<input type="checkbox"/> Readily available <input type="checkbox"/> Good condition <input type="checkbox"/> Requires upgrade <input type="checkbox"/> Needs to be provided Remarks _____	
C. Treatment System <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
1. Treatment Train (Check components that apply)	
<input checked="" type="checkbox"/> Metals removal <input type="checkbox"/> Oil/water separation <input type="checkbox"/> Bioremediation <input checked="" type="checkbox"/> Air stripping <input checked="" type="checkbox"/> Carbon adsorbers <input type="checkbox"/> Filters _____ <input type="checkbox"/> Additive (e.g., chelation agent, flocculent) _____ <input type="checkbox"/> Others _____ <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance <input checked="" type="checkbox"/> Sampling ports properly marked and functional <input checked="" type="checkbox"/> Sampling/maintenance log displayed and up to date <input checked="" type="checkbox"/> Equipment properly identified <input type="checkbox"/> Quantity of groundwater treated annually _____ <input type="checkbox"/> Quantity of surface water treated annually _____ Remarks _____	
2. Electrical Enclosures and Panels (properly rated and functional)	
<input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks _____	
3. Tanks, Vaults, Storage Vessels	
<input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Proper secondary containment <input type="checkbox"/> Needs Maintenance Remarks _____	
4. Discharge Structure and Appurtenances	
<input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks _____	
5. Treatment Building(s)	
<input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition (esp. roof and doorways) <input type="checkbox"/> Needs repair <input type="checkbox"/> Chemicals and equipment properly stored Remarks _____	
6. Monitoring Wells (pump and treatment remedy)	
<input checked="" type="checkbox"/> Properly secured/locked <input type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks _____	
D. Monitoring Data	

1.	Monitoring Data	<input checked="" type="checkbox"/> Is routinely submitted on time	<input checked="" type="checkbox"/> Is of acceptable quality
2.	Monitoring data suggests:	<input checked="" type="checkbox"/> Groundwater plume is effectively contained	<input checked="" type="checkbox"/> Contaminant concentrations are declining

E. Monitored Natural Attenuation

1.	Monitoring Wells (natural attenuation remedy)	<input type="checkbox"/> Properly secured/locked	<input type="checkbox"/> Functioning	<input type="checkbox"/> Routinely sampled	<input type="checkbox"/> Good condition
		<input type="checkbox"/> All required wells located	<input type="checkbox"/> Needs Maintenance		<input type="checkbox"/> N/A
Remarks	<hr/>				

X. OTHER REMEDIES

If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction.

XI. OVERALL OBSERVATIONS

A. Implementation of the Remedy

Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).

*Erosion will be ongoing issue
due to the slope on the
face of the dam.*

B. Adequacy of O&M

Describe issues and observations related to the implementation and scope of O&M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.

C. Early Indicators of Potential Remedy Problems

Describe issues and observations such as unexpected changes in the cost or scope of O&M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future.

D. Opportunities for Optimization

Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy.
