

NATIONAL PRIORITIES LIST (NPL)

Final Site

September 2011

GARY DEVELOPMENT LANDFILL | **Gary, Indiana**
*Lake County*** Site Location:**

The Gary Development Landfill site is located at 479 Cline Avenue, in the City of Gary, Lake County, in northwest Indiana.

 Site History:

The Gary Development Landfill site is comprised, largely, of a permitted solid waste landfill that operated from approximately 1975 to 1989. The landfill accepted hazardous waste for disposal without having obtained a Resource Conservation and Recovery Act (RCRA) permit or achieving interim status under RCRA.

 Site Contamination/Contaminants:

The landfill accepted materials including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), asbestos, metals, and pesticides.

 Potential Impacts on Surrounding Community/Environment:

A release of site contaminants, including metals, SVOCs and pesticides, has been observed in a wetland adjacent to the southeastern portion of the landfill. Elevated levels of lead, chromium, zinc, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzofuran, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene and pyrene were detected in the wetland.

This wetland borders the Grand Calumet River, is designated as freshwater palustrine emergent wetland, and is within habitats known to be used by several state endangered species, including the Marsh Wren.

 Response Activities (to date):

An administrative complaint was filed against the operator in 1986 for RCRA violations, and a consent decree was finalized in 1996 that included a fine and establishment of a trust for maintenance of the landfill. As estimated costs for maintaining the landfill greatly exceed that of the trust, RCRA deferred the site to Superfund in 1997.

In 2002, a Time Critical Removal Action was conducted at the Gary Development Landfill by EPA. Numerous containers of substances including oils, paint, insecticides, antifreeze, and electrical capacitors were removed from the site.

 Need for NPL Listing:

The State of Indiana referred the site to EPA because response actions are required to maintain the landfill and there are insufficient funds from a settlement with the former operator to conduct maintenance. There is no responsible party currently maintaining the landfill. EPA received a letter of support from the state for placing the site on the NPL.

[The description of the site (release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination.]

For more information about the hazardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry (ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at <http://www.atsdr.cdc.gov/toxfaq.html> or by telephone at 1-888-42-ATSDR or 1-888-422-8737.
