

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION V

IN THE MATTER OF:

RESPONSE OF CHRYSLER CORPORATION  
TO INFORMATION REQUEST OF  
JULY 21, 1983

ROSE TOWNSHIP DUMP  
ROSE TOWNSHIP, MICHIGAN

QUESTION A.1:

State the location and the full address of of the present company headquarters and all company facilities within 200 miles of Detroit which were in existence during the period between January 1966 and December 1971. Briefly describe the nature of business conducted at such facilities during that period, including the material used in the operation and the product made or service provided.

ANSWER:

The headquarters of Chrysler Corporation (herein referred to as Chrysler) are located at 12000 Chrysler Drive, Highland Park, Michigan with a mailing address of P. O. Box 1919, Detroit, Michigan 48288. While the headquarters of Chrysler has been at this location at all times relevant to this inquiry, its address has been variously described as 341 Massachusetts Avenue, Highland Park; 12000 Lynn Townsend Drive, Highland Park; and 12000 Oakland Avenue, Highland Park.

Attached as Exhibit A is a listing of Chrysler facilities located within 200 miles of Detroit during the 1966-1971 period

and a description of the business conducted at these facilities. For the purpose of identifying facilities within 200 miles of Detroit we have listed those facilities within 200 miles by roadway reasonably used for commercial purposes. We have excluded offices and other facilities such as our credit and zone sales offices, which would be unlikely to generate waste other than normal office refuse.

QUESTION A.2:

Identify the person primarily responsible within the company corporate headquarters and within each facility identified in No. III.A.1. for compliance with environmental laws including solid waste disposal between the period between January 1966 and December 1971.

ANSWER:

During the period 1966-71 there was no specific officer or employee at Chrysler headquarters responsible for compliance with environmental law or regulation pertaining to solid or hazardous waste disposal. At that time, responsibility for waste disposal rested with the individual facilities. No record exists identifying the person responsible for waste disposal at each of the facilities listed on Exhibit A. However, based on the recollection of people familiar with the disposal practices of Chrysler, the people identified on Exhibit B may have from time to time advised various facilities on waste disposal practices or were involved in procuring waste disposal services.

QUESTION A.3:

Identify the person primarily responsible for fiscal matters within the company corporate headquarters and within each facility identified in No. III.A.1. between January 1966 and December 1971.

ANSWER:

The parties ultimately responsible for fiscal matters relating to waste disposal would have been the plant controllers responsible for each facility listed on Exhibit A. These individuals are listed on Exhibit C.

QUESTION A.4:

Identify the person primarily responsible for managing the day to day operation for each facility listed in No. III.A.1. during the period between January 1966 and December 1971.

ANSWER:

The Plant Managers responsible for each facility listed on Exhibit A are listed on Exhibit C.

QUESTION A.5:

Identify those officers and employees of the company employed during the period between January 1966 and December of 1971 at the facilities listed in No. III.A.1. who had anything to do with the management or handling of solid waste. Indicate the period of their employment and describe the nature of their responsibilities.

ANSWER:

Chrysler has no records which would provide information responsive to this Question A.5.

QUESTION B.1:

Briefly describe the nature of the solid wastes that were generated by the facilities identified in No. III.A.1. during the period between January 1966 and December 1971. Include the chemical composition and average weekly volume for each solid waste stream.

ANSWER:

Chrysler has no records describing or identifying the nature, chemical composition or volume of wastes generated by its facilities for the period 1966-1971 and has no basis for realistically estimating such information.

Generally, the bulk of the wastes generated would be the type of scrap and other waste generated by foundry, stamping, machining, electroplating, metal finishing, paint and surface coating and assembly operations. In addition the Chemical Division would have produced wastes typically associated with the manufacture of sealants, coatings and solvents and Chrysler Plastic Products the type of wastes associated with the manufacture of vinyl coated fabrics. While no records exist it is believed these wastes likely would include the following: scrap metal, paper, plastic and wood; grinding sludge; paint sludge; waste oil; cutting and quenching oils and spent solvents such as Toluene, Xylene, Methyl Ethyl Keytone, Alcohols and Mineral Spirits.

QUESTION B.2:

Describe the recordkeeping procedures related to those who provided waste disposal services to the Chrysler Corporation, including the facilities identified in No. III.A.1. during the period between January 1966 and December 1971. Include a description of the documents used in the contracting for services, documents used in payment and corporate records of the expense. Produce several typical examples of the documents described. Identify those instances where the procedures were not followed. Explain if these procedures differed from the procedures related to contracting for other types of services. Identify those differences and reasons therefor.

ANSWER:

Except for the documents attached as Attachment 1, Chrysler has no records relating to waste disposal activities for the period 1966-1971 covered by this request.

The basic procedure followed in disposal activities was for the plant to requisition Purchasing for a disposal service, and Purchasing to solicit competitive bids and award a purchase order. Payment would be made on the basis of the disposal service suppliers invoice and a payment request. Records relating to and supporting payment, including any manifests and shippers, are retained for no more than seven years pursuant to standard corporate procedures.

QUESTION B.3.

Describe the company's handling, disposal, sale and/or other method of deposition of all solid wastes from those facilities listed in No. III.A.1. during the period between January 1966 and December 1971.

ANSWER:

Chrysler's procedure for handling wastes during the period 1966-1971 is as follows:

1. Plant made a decision to dispose of waste material.
2. Requisition from plant to Purchasing to purchase disposal service for waste material.
3. Purchasing solicited bids from prospective disposal contractors.
4. Award made by Purchasing to most qualified and most competitive contractor. Contractors were screened to determine that environmentally sound disposal methods were used. No distinction between hazardous and non-hazardous material although some distinction may have been made between dry and wet waste and, as noted below, recyclable material. Copy of purchase order to plant to notify of award.
5. Purchase order established routine pickup of all waste material by contractor.
6. Contractor assumed full responsibility by virtue of purchase order specifications, and material became the property of the contractor. F.O.B. plant.

In addition, certain type of wastes such as oils and solvents would have been recycled where economically feasible.

QUESTION B.4.

Identify and produce all documents related to the solid waste from the facilities listed in No. III.A.1. including the sale, storage, processing, treatment, recycling, generation, or disposal of such during the period between January 1966 and December 1977.

ANSWER:

See Attachment 1.

QUESTION B.5.

Identify the nature, character, type, chemical properties, source and quantity or volume of any material containing hazardous substances that were used by the facilities listed in No. III.A.1. during the period between January 1966 and December 1971. Describe how they were used in the industrial process and the waste products generated by such process.

QUESTION B.6.

Identify and produce all documents relating to the nature, character, type, chemical properties, and quantity or volume of hazardous waste that was in anyway handled at Chrysler facilities listed in No. III.A.1 during the period between January 1966 and December 1971.

QUESTION B.7.

Describe the company's handling, disposal, sale or other method of deposition of hazardous wastes including those which have any hazardous substance from those facilities listed in No. III.A.1. during the period between January 1966 and December 1971.

ANSWER:

Chrysler has been unable to locate any records relating to the use of hazardous materials, the handling, disposal, sale or

method of deposition of hazardous wastes or the volumes involved. While a limited number of purchasing records exist on microfiche relating to production and non-production materials purchased since approximately 1969, these records cannot be used to establish the use of these materials at any facility or the generation of any waste or hazardous waste. Any attempt to generate estimates from this limited data would require several man years of effort and would result in total speculation.

QUESTION B.8.

Identify and produce all documents relating to any activity by the company at the facilities listed in No. III.A.1., its officers, directors, agents, contractors, or employees, concerning the sale, processing, recycling, storage, transport, generation, or disposal of material containing hazardous substances during the period between January 1966 and December 1971.

QUESTION B.9.

Describe any relationship between Chrysler Corporation, including the facilities listed in No. III.A.1. and [REDACTED], or any company with which they were associated.

QUESTION B.10.

Identify and produce all company documents mentioning, discussing or relating to those persons identified in No. III.B.9.

QUESTION B.11.

Identify all company personnel or agents who had any involvement in, or knowledge of, any dealings with the persons

listed in No. III.B.9. For all the persons identified in this question, describe the nature of their involvement in, or knowledge of, such dealings.

QUESTION B.12.

Describe the chemical properties, quantity/volume, nature, form of any substance given, sold, or otherwise presented by the company including all those facilities listed in III.A.1., to the persons listed in No. III.B.9.

QUESTION B.13.

Describe any payments made by the company to any persons listed in No. III.B.9. Explain the reason for the payment.

QUESTION B.14.

Identify and produce any document related to said payments in question No. III.B.13.

ANSWER:

Chrysler has no record, recollection or knowledge of any dealings, directly or indirectly, with [REDACTED] or [REDACTED].

P. R. Gilezan being duly sworn states that:

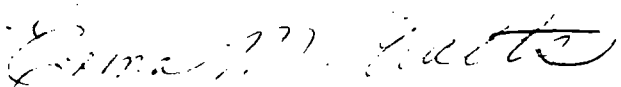

1) He is Manager-Manufacturing Engineering and Environmental Planning in the Quality and Productivity Office of Chrysler Corporation;

2) The information used in preparing the Response to Request for Information was obtained under his supervision and;

3) To the best of his information and belief the attached requested information is correct based on the books and records of Chrysler.

## EXHIBIT A

The location and address of each company facility located within 200 miles of Detroit is set forth below. The nature of business conducted is generally self-explanatory. The listed assembly plants, including Clairpoint Preproduction, assembled and painted Chrysler Corporation cars and trucks; the engine and axle plants manufactured engines and axles; the forge, foundry, machining and stamping plants produced major vehicle components; the trim plants produced trim and upholstery for such vehicles; the glass plant produced automotive windshields, backlights and other glass; the Amplex Division produced powered metal parts for Chrysler vehicles and general commercial distribution; the Introl Division produced certain vehicular controls; the Detroit Universal Division produced universal joints, and the tool and die plants produced some of the tooling used in the production of vehicles. The Chemical Division produced chemicals such as adhesives, sealers and solvents and Chrysler Plastic Products (CPP) produced vinyl coated fabrics used in the production of vehicles. Both the Chemical Division and CPP made some commercial sales of their products. The Industrial Products Marine Division sold vehicle engines modified for Marine and Industrial usage. Interplant and Air Transportation served as a source of transportation for both vehicle components and personnel. The various parts Depots were parts distribution centers for the distribution of vehicle service and replacement parts. Defense related operations produced tanks and missiles. These defense operations have either been deactivated or, in the case of the Tank Plant sold to General Dynamics.

<u>Facility</u>	<u>Address</u>
Chrysler Center	341 Massachusetts Avenue Highland Park, Michigan
Engineering locations	12800 Oakland Avenue Highland Park, Michigan
Chrysler Detroit Tank Plant	28251 Van Dyke Road Warren, Michigan
Defense Engineering	7000 E. Eleven Mile Road Center Line, Michigan
Amplex Division	6501 Harper Avenue Detroit, Michigan
Chemical Division	1165 Ford Avenue Wyandotte, Michigan
Chrysler Plastics Corporation	3130 W. Monroe Street Sandusky, Ohio
Industrial Products/ Marine Division	830 Huron Boulevard E. Marysville, Michigan
Export/Import Division	6000 Wyoming Avenue Detroit, Michigan
Air Transportation	
Interplant Transportation	8555 Lynch Road Detroit, Michigan
Clairpointe Preproduction	12217 Freud Avenue Detroit, Michigan
Hamtramck Assembly Plant	7900 Joseph Campau Avenue Hamtramck, Michigan
Introl Division	315 South First Street Ann Arbor, Michigan
Jefferson Assembly Plant	12200 E. Jefferson Avenue Detroit, Michigan

Lynch Road Assembly Plant	6334 Lynch Road Detroit, Michigan
Lyons Trim Plant	Lyons, Michigan
Vernor Trim Plant	12025 E. Vernor Highway Detroit, Michigan
Detroit Forge Plant	6600 Lynch Road Detroit, Michigan
Eldon Avenue Axle Plant	6700 Lynch Road Detroit, Michigan
Huber Avenue Foundry	6425 Huber Avenue Detroit, Michigan
Detroit Universal Division	6455 Kingsley Avenue Dearborn, Michigan
Highland Park Machining Plant	12340 Oakland Avenue Highland Park, Michigan
McGraw Glass Plant	9400 McGraw Avenue Detroit, Michigan
Mound Road Engine Plant	20300 Mound Road Detroit, Michigan
Trenton Engine Plant	2000 Van Horn Road Trenton, Michigan
Toledo Machining Plant	8000 Chrysler Drive Perrysburg, Ohio
Eight Mile Stamping Plant	6450 E. Eight Mile Road Detroit, Michigan
Mack Avenue Stamping Plant	11631 Mack Avenue Detroit, Michigan
Sterling Stamping Plant	35777 Van Dyke Road Sterling Twp., Michigan
Vernor Tool and Die Plant	12026 E. Vernor Highway Detroit, Michigan

Warren Stamping Plant

22800 Mound Road  
Warren, Michigan

Warren Truck Assembly Plant

21500 Mound Road  
Warren, Michigan

Parts Division Depots:

Allen Park Parts Depot
