Thursday, October 11th, 2018 from 2p.m.-7p.m.  
4802 Melville-Martin Luther King Center Parking Lot

## Where and how can I test my child?

A HealthLinc Provider can do a simple blood test for your child (age 6 months to 7 years) through a heel stick, finger prick, or by drawing blood from their arm. You will be informed if we find a high lead level.

## Tips to reduce lead exposure:

- Do not let kids play in bare dirt.
- Wash children's hands after they've been outside.
- Children and adults should remove shoes before going inside.
- Damp mop floors and damp-dust furniture often.
- Find out if your home has old paint that may contain lead.
